The larger unperforated pans are now brought into use for the final out-door occupation of separating the gold from the sifted gravel; a portion of which being placed in a pan till it be about a third filled, and well covered with water, it is briskly shaken about to the right and left, to cause the gold to fall to the bottom, which, from its great density, it is always very ready to do. The water is next carefully poured off, and with it a portion of the gravel is suffered to escape. The pan is again half filled with water, shaken agitated, and then the water and more of the gravel are carefully poured off. This is repeated again and again till the whole of the gravel and sand escape; and nothing then remains behind but the gold, mixed with a very small quantity of black, magnetic iron sand, which, from its weight, always falls to the bottom along with the gold; except that metal, it is invariably the last thing left in the pan; and most of this iron sand is, in the end, got rid off in the same way as the gravel—namely, by putting in more water, and teeming it off. It, however, always passes off with great reluctance, and the finger is frequently required to force it out. The gold will never leave the pan, in washing, if ordinary care be used to retain it. If any be wasted, it is usually by throwing it out with the gravel, which is not unfrequently the case when handled by careless washers.

Nothing is now left but gold, and such slight particles of clay as will continue sticking to it, while wet, in spite of all efforts to clean it away. The same is also the case with an exceedingly minute quantity of iron-sand, which also remains behind, but seldom a grain weight of it.

All that remains to be done now is to dry and clean the gold, and these labours are usually performed in the tent after the day's work outside is over. The metal is dried by placing it for a few minutes over the fire in a common shovel, made perfectly hot; and it is finally cleaned by placing it, when dried, on a clean plate, which is gently shaken about to cause the gold to spread itself well over the bottom of it. Such particles of dirt as continued sticking to it while wet, are now found to be completely separated from it by the intense heat it has just been exposed to. These are blown off the plate by the breath; the remaining magnetic iron-sand, which cannot be thus expelled, is easily extracted by means of a common horse-shoe magnet; and then the gold is ready for the market.

Articles of tin-ware, such as tin plates or dishes, are sometimes used for drying, instead of the shovel; but they are not exactly suited for it, for when heated they oxydise the metal.

By the digging regulations, each person is entitled to work on a square of eight feet every way. This (as also many other matters, which are perfectly understood at the diggings) is not stated in the printed regulations, but it is nevertheless sound law. A party of four licensees (the most usual number of persons in a party) are therefore entitled to work on a square of 16 feet each way, or of 256 square feet; and you may occupy as many of these squares, or "claims," as you think fit, during your stay at the diggings, so long as you do not work at more than one claim at a time. If you abandon your claim for 24 hours, you forfeit it, except, indeed, the weather is too strong for work. Any person who likes can then take possession of the hole, and you have no redress; you cannot turn him out, for the Commissioner and his police will protect him against you. But the smallest amount of work done at the hole, secures it to you for that day. You need not go down into the hole for this purpose, as the turning over of one spade-full of earth on the surface of your claim is enough.

Before despatching this part of the subject, it may be as well to say, that every one should obtain a license * to search for gold, the same being necessary whatever be his occupation in the gold fields—whether a digger, butcher, baker, cook-shop-keeper, or what not. This costs every one thirty shillings a month. Many persons evade the regulation altogether; but they are liable to a heavy penalty, which is often enforced.

The following is the form of licenses, to which the principal regulations relating to searching for gold are appended:—

VICTORIA

GOLD LICENSE.

No. 418. 3rd August, 1852.

The bearer, James Erskine Calder, having paid to me the sum of one pound ten shillings, on account of the Territorial Revenue, I hereby license him to dig, search for, and remove gold, on an † from any such Crown lands within the district of Bunninyong and Loddon, as I shall assign to him for that purpose during the month of August, 1852, not within half a mile of any head station.‡

This license is not transferable, and to be produced whenever demanded by me or any other person acting under the authority of the Government, and to be returned when another license is issued.

ONSLEY COLBURN, Commissioner

REGULATIONS TO BE OBSERVED BY THE PERSONS DIGGING FOR GOLD OR OTHERWISE EMPLOYED AT THE GOLD FIELDS.

1 Every licensed person must always have his license with him ready to be produced whenever demanded by a commissioner, or other person acting under his instructions, otherwise he is liable to a penalty not exceeding £10, nor less than £2 2s.

2 Every one digging or searching for gold without a license, is liable by law to be fined for the first offence any sum not exceeding £50, and for a second offence any sum not exceeding £100.

3 A space of ten feet is to be allowed within ten feet of the edge of any public road, for the roads to be understood.

4 Tents or buildings are not to be erected within twenty feet of each other, or within twenty feet of any creek.

5 It is required that all persons at the gold fields maintain, and assist in maintaining a decent proper observance of Sundays.

In digging for gold a person must never be disheartened by any number of failures. He must make up his mind from the first to persevere, even in the face of long continued ill success, for certain he may be of having his turn of fortune in due time. As far as I saw, it ap-

* This is furnished on application to the commissioner's tent at the diggings.

† That is from the boundaries of any settler on Crown lands.

pears to me to be a farce, calling gold-digging a lottery. On the contrary, I believe it to be quite as legitimate an occupation as any of the more ordinary pursuits of life. To a man of perseverance and ordinary intelligence, the chances are in his favour of its proving quite as gainful as any other business. Those who speak disparagingly of it are generally of that class whose want of industry and energy has caused them to be unfortunate. True it is, that at all diggings there are more bad holes than good ones; but then holes are soon sunk, generally in less than a week, and often in two days; and if they don't turn out well you must go to work cheerfully, and with good heart, and sink more, till you do get a good one, and then one prize will be found to pay amply for twenty blanks.

Gold-digging, it may be as well to observe, is a most severe labour, and life at the diggings is certainly like no other life for discomfort. Those persons who are not thoroughly convinced of their ability to go through almost anything, will do well to stop at home. I have heard some persons affect to describe the work as light, and even agreeable; but this I believe to be mere bravado, or gross affectation. True it is that at some of the diggings the labour is lighter than at Ballarat, and true it also is that even here I met with those who contrived to make that labour comparatively light, by idling away one-half of their time. But to carry it on with proper energy that if, to work from dawn to dark, and each working day of every week—then, indeed, it will be found that a digger's life is one of toil

If a party will not work actively, they have but a sorry chance with such of their neighbours who will. For instance, several parties set in to work about the same time, and it's best men are almost sure to go *down with their holes* first, and then it's the deuce take the hindmost; for they are as sure to have their claims undermined as that they are living men. They have a saying here, that "there is no friendship in gold-digging," which they lose no opportunity of proving whenever they can get a chance.

"Working off one's Jaam" (which in plain English signifies borrowing under another digger's title before he is down) is no uncommon occurrence, and one which leads to never-ending squabbles and scuffles. To adjust these interminable disputes the Commissioner is sometimes called in; but they are more frequently decided by the parties themselves, whose way of doing this sort of business, is often rather summary though strictly legal, that is, by hard words and hard blows; and no race of men were ever more gifted with the former than those who frequent the gold fields. The diggers do not generally like appeals to the Commissioner, and seldom seek his interference, until they have had three or four fights over the matter. But it is the best way to call him in; for to say truth, his decisions are generally agreeable to the erring party, and there is no appeal from them; and he exercises almost unlimited authority—much beyond what one would suppose he could from the printed regulations respecting digging. Far unlike him of whom Shakspeare speaks, he is not dressed in authority who has either brief or little. He is, indeed, a most extraordi nary personage; and in keeping the peace of the diggings, sometimes proceeds to lengths which are rather apt to startle a law loving Englishman. But, if he did not occasionally carry his power to the extreme limits, there would really be no living at some of the diggings His severities are, therefore, regarded as anything but a curse by the well-disposed. Selling grog is strictly prohibited; the fine for the first offence being £50, and increasing rapidly to Heaven only knows the amount. I have been told, however, that at many places this is not the only punishment inflicted on the venders of illicit stores; and that, if a commissioner knows a certain tent to be a sly grog shop, he will stand in no ceremony with the owners thereof, but, leaving with him a party of his mounted police, he sets the tent on fire, and burns it to the ground, with all it contains; and concludes the business by ordering all the offenders from the ground This process is rather over summary, is regarded with entire satisfaction by the great body of diggers However, on the whole, things go on much more smoothly at the gold fields than one would expect. Thefts, except of horses, are very infrequent; and, though the properties of nearly every one on the field are absent from them all day long, no one ever thinks of entering them

The regulations with respect to digging, though good as far as they go, are by no means complete The prevalent practice of working the holes by night, when a great deal of fair play goes on, ought to be strictly prohibited. Nor are there any regulations to restrain the diggers from impurifying the drinking water, which is scarcely useable; and the practice of it follows firing of their guns every minute of the day. Firing by night should certainly be restrained as far as possible. It is no easy matter to sleep amidst the continual volleys of fire-arms, joined as they are to the perpetual howling and barking of more dogs than one would think all the world contained

Though I am one of those who think favourably of gold digging, I would nevertheless, advise none to emigrate who have not given the matter the fullest and most mature consideration "Can I stand hard labour? Can I live contentedly under the discomforts of the gold-fields and bear the many disappointments I shall be liable to there, without losing heart?" These are questions the intending emigrant should decide to answer before he finally decides on a change. Persons who have never left home are apt to think too lightly on the subject of emigration, and picture to themselves nothing but scenes of prosperity and happiness in the prospect before them, which they often learn, too often, are fallacious. The beginning of life anew, and in a strange land, is generally attended with more troubles and difficulties than the world wots of, or than emigration agents choose to declare If, however, the die be cast, and the golden continent of the Pacific be your destination, it is then as well to inform intending diggers how to reach them (after landing in either Melbourne or Geelong) with the least difficulty; and what will be their probable wants in Victoria. The emigrant will discover that to reach the gold-fields is not so easy a matter as he may have anticipated. He will learn that the roads are every in getting a conveyance for his baggage up. To meet the demands where villainous, and that there is an almost insuperable difficulty of the diggings, as they are even at present, every disposable horse, bullock, dray, and cart seem pressed into the service; and over and over again £100 was offered last winter to carry a ton to Mount Alexander from Melbourne, and £50 was the ordinary charge for the same from Geelong to Ballarat. Placards are seen all over the streets of Melbourne, advertising for the means of transport; some offering to engage 100 teams at once to one place; others 70 to another; and so on. The intending digger will possibly say, "Well, I need not mind this; for, as my baggage only weighs about a hundred-weight, I can, even at these prices, get it to Mount Alexander for £5, or to Ballarat for about 50s" My answer to such would be, "No such thing, my dear f.llow; you will most probably find no one to take a hundred-weight at any price for you. You must provide the carter with a full load, or he will only sneer at your proposal." Even after the traveller to the diggings has secured a conveyance, his troubles are generally very far from having an end The roads, as before stated, are wretched; so much mud was surely never seen since the subsidence of Noah's flood; and this in the summer is converted into dust. Then, as the whole country is unenclosed, the cattle are very apt to stray away in nights, and are often lost for weeks at a stretch amidst the interminable prairies and woods of the provinces

His last annoyance I am determined never to experience in any future journey I may make to the gold-fields; and I would advise travellers, especially strangers, to adopt some such means of rendering themselves independent of them, as I intend to do. In my professional capacity of surveyor, I have made many hundreds of long journeys, through the worst parts of the wooldy and mountainous island of Tasmania, without either horse or cart, carrying all the baggage I wanted into the bargain; and I can see no good reason for not doing the same in Victoria. If a person chooses, he can reduce his baggage to a weight he can easily carry himself in a good-sized knapsack; that is, if he can only make up his mind to dispense, for a season, with every thing which he can do without. All that a party of four require on the journey up, are—one tent, their bedding; a couple of tin boilers, holding each about three gallons; a small frying-pan, a carpenter's axe, a tin drinking-pot, knife, fork, spoon, and tin plate for each; a single change of clothing for every man, with towel, comb, razor, and a few boxes of lucifers; finally, the provisions, if proceeding to Ballarat (from Geelong); and about seven, if from Melbourne to Mount Alexander

The question now is, what will all these things weigh? A tent which will turn any quantity of rain, and accommodate four persons (of the construction of the same hereafter), ought not to weigh more than 20 lb (such is the exact weight of mine), four large painted knapsacks, made of No 1 canvas (navy canvas) will not exceed 24lb more; twelve blankets, 36lb; two tin boilers, 3 lb.; small frying pan, 3 lb.; carpenter's axe, 4 lb.; four changes of clothes and boots, 50 lb, and the remaining small articles, about 8 lb; or, in all, 157 lb., being much about 30 lb for each man. Now add to this, four days' provisions, if going to Ballarat (10 lb.), or seven days', if to Mount Alexander (17 lb.), which will make each man's load 45 lb. if proceeding to the first-named place; or if to the latter, 52 lb. To the above should be added the weight of a pistol each and half a dozen rounds of ammunition; for, though rare indeed are the occasions for their use, still it is just as well to carry them, for, like money, they never come wrong. Now, in travelling in Van Diemen's Land, I always require each man to carry 60 lb., and oftener 70 lb; have myself frequently backed 80lb.; and, on one occasion, more than 90 lb. Any able-bodied person can, however, walk comfortably with 60 lb. It is certainly a somewhat troublesome, back-breaking business at first; but he must not mind this. He can comfort himself with the reflection that he will have worse work at the diggings

This, I am persuaded, is a far better arrangement than waiting about for a means of conveyance till one's little stock of money is half spent in the expensive town of Melbourne; where every inn is filled to overflowing with returned diggers, whose society, during their intermittable revels, is what no decent person would sigh for. I would not remain in the town a moment after purchasing my provisions for the journey up, and inquiring my road; for every hour passed in Melbourne unnecessarily is just so much time m spent.

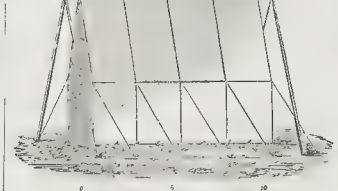
It may be asked, are there no inns on the road, whereby the labour of carrying provisions would be saved? There are, certainly, and go to them if you choose, but, like those in Melbourne, they are absolutely crammed; and it may be added that comfort is unknown at most of them, and ordinary civility at all.

The articles I have enumerated I would bring direct from home, so as to have no expensive delays in the town after disembarking. All arrangements about the organization of the party should also be perfected before reaching Victoria; as for a person fancying he can either make up a party when he reaches the gold fields, or get admitted into one already formed, he must be at least half crazy to entertain the idea.

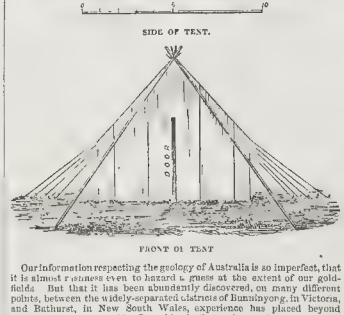
I would not recommend any person to take a single tool with him to the scene of his labours, for the same are purchaseable on the spot, though certainly at a most enormous advance on cost price. For instance, where I was, we paid 12s for either spade or shovel; as for a pickaxe from 18s. to 20s. for a puddling tub, the only article there is any difficulty to procure. For provisions, the prices were as follow:—Flour, from £6 to £8 the bag of 200 lb; mutton, 7s the half carcase (by which it is always sold, as the butchers will not retail a less quantity); beef, 6d. a pound; tea, 3s.; sugar, 9d.; tobacco, 8s.; candles and soap, 9d.; raisins and currants, 1s. Of clothing I never bought much, but I know that the commonest Blucher, or ankle boots, were 30s. a pair; moleskin trousers, 25s.; stockings 4s.; sailors' blue serge shirts 8s. or 10s.; but these prices are about as subject to variation as the weather.

I would advise every party to have about £50 with them on reaching the gold fields Then you can purchase all the tools you require, and be independent for several months into the bargain. And this will enable you to keep all your gold; for if you have to sell it on the spot, you must do so at a great loss When I was there it varied from £2 17s. to £3 1s 6d the ounce. Numbers, however, came up with hardly £10, and often with less

The best tents are those of a square shape. Round, military bell tents are not suitable They should be constructed according to the diagrams below; that is, to pitch on a ridge pole and four forked sticks. These sticks, as also the pole, need not be provided; they must be cut in the bush when wanted Unless you desire your tent to weigh about three times as much as you can carry, don't have it made of heavy canvas, but of a much lighter material. It is quite a mistake to suppose it requires thick, heavy stuff, to turn rain. Good unbleached calico, with the roof only lined with light duck, will keep out all the rain that ever fell from the heavens; and this you will readily believe when you come to think what the commonest calico umbrella will do in this way, and which is not lined at all. As a surveyor, I have lived under canvas, or rather calico, almost wholly for the last quarter of a century, and therefore speak from the most ample experience Such a tent will, if the outer material be of the best quality, last good for a twelvemonth. To accommodate four persons, it should measure ten feet in length, nine in width, and be nine feet high when pitched—that is from the ground to the ridge pole. The walls should be three feet six inches high. All unnecessary ropes should be dispensed with "Storm guys," and the like, are a great mistake, and only add to the weight, without being necessary; for, in bad weather, you can put an additional prop to your tent, if required The best rope you can have is what is called "patent-line," which is the material house-builders use for the pulleys of window sashes.* Round the bottom there should be numerous small loops of the same, so as to peg the tent down to the ground. My tent is made of a stronger material than calico, namely, the best "Forfar," the roof only being lined, as this is quite unnecessary for the ends and walls, which are perpendicular.



SIDE OF TENT.



FRONT OF TENT

Our information respecting the geology of Australia is so imperfect, that it is almost a chance even to hazard a guess at the extent of our gold-fields But that it has been abundantly discovered, on many different points, between the widely-separated districts of Bunnihyorp in Victoria, and Bathurst, in New South Wales, experience has placed beyond doubt. Is it unreasonable, I would ask the geologist, therefore, to conjecture, that the line of gold is continuous between these places? And many of the diggers I met with, who had come from the Moreton Bay districts, declared their positive belief that the gold was there also; though, from their ignorance of the peculiar character of a gold-field, they did not suspect the fact when there. And some very intelligent persons I saw at Eureka (Ballarat), but whose home was in the remote north of Australia, 200 miles beyond Moreton Bay, were now also sure that the gold was even there In Tasmania it has been also discovered and worked If, then, all these statements be correct, the gold regions must cover a thousand miles of latitude. One is startled at the very idea of such a thing, and even the most apathetic will scarce avoid to reflect on the matter, and inquire what motions are to follow the wonderful discoveries we have made and what are the influences that, long fettered Australia is destined to exercise on the future destinies of our race?

THE NEW CRYSTAL PALACE.

A BELIEVER in omens would be apt to predicate nothing but failure for the Crystal Palace Company; for most assuredly the elements could not have been more unpropitious to any undertaking than they have to the progress of the works at Sydenham.

We have from time to time put our readers in possession of the leading points of interest connected with this project, which must command respect and admiration as a great educational movement, and one which, if rightly carried out, cannot fail to provide an elevating and useful resort for all classes of the community.

Notwithstanding the obstacles arising from the unfavourable weather, the works have been carried on, since we last referred to them, with vigour and resolidity. The building itself appears to have made less progress, comparatively, than other departments. The immense central transept, which is to be so much larger than that of the original building, is still a blank; but the semicircular ribs are in preparation, and the first of them will very soon be raised. Nearly all the ribs of the southern transept, and of the southern half of the nave, are fixed; and a large proportion of the walls, and of the ridge-and-furrow roofing of the aisles and galleries, is completely glazed and painted. About a thousand workmen are constantly employed upon the building alone, and their operations are characterised by the same order and discipline which marked the proceedings in Hyde park.

In the park and grounds at Sydenham the genius of Sir Joseph Paxton is rapidly developing itself. The Company's act for diverting the neighbouring roads has passed both Houses of Parliament, and much progress has been made in making the substituted roads; as well as in forming the paths within the Palace grounds, turfing the lawns, planting trees and shrubs, forming flower-beds, &c. The magnificent terraces, which extend the whole length of the building, with their long flights of granite steps, are far advanced towards completion. An abundant supply of water has been obtained, and the excavations and masonry for the cascades and fountains are in a very forward state.

Without asserting that the gardens will surpass the building and its contents in beauty and variety, we may assume that they will possess a degree of novelty which will render them peculiarly attractive; and that, in the few months of sunshine with which our isle is favoured, their general effect, heightened by the "thousand and one" fountains, which will gush under the superintendence of Sir Joseph Paxton, will equal any thing of the kind in Europe

The above remarks and conclusions are patent to any casual visitor to the Crystal Palace in its present state; but there is much in progress which is not generally accessible. It will not be forgotten that one great feature of the internal arrangement of the Palace is to be an assemblage of representations of the different races of mankind; the trees, flowers, birds, animals, insects, and other natural products of various regions, arranged (not according to the dry rules of scientific classification, but geographically) so that the visitor will see the natives of each distant region, surrounded by the objects with which they are necessarily familiar. To accomplish this end, and which is likely to ensure popularity and much benefit, models of mammoth, large collections and strenuous exertions have been made by the officers in charge of the respective departments—Geology, Zoology, Ornithology, Ethnography, and the collateral sciences will thus be materially advanced. The Picturesque Court Department will be especially inviting to the generality of visitors, from the very singularity of the extraordinary antediluvian creatures, whose external form and substance will be here re-produced. Among these, the gigantic Iguanodon will be pleasing as it is remarkable. In the Fine Arts Department, the Egyptian, Grecian, and Pompeian Courts present the greatest amount of progress The casts of Egyptian antiquities are exceedingly perfect, and Mr. Owen Jones is making rapid strides in fine arrangement. The casts of classical sculpture from Rome, Florence, and Paris have nearly all arrived, and furnish tempting and gratifying foresights of the ar ·education to be derived from the collection. Mr. Digby Wyatt's Pompeian Court is proceeding very satisfactorily; as are also Sig. Abbati's re-productions of frescos

The applications for space for exhibitors (for which a rental is charged) are daily increasing, and a very large income is expected by the Directors from this source. Mr. Belshaw, the manager of the Exhibitors' Department, is at present, by permission of the Company, rendering his valuable aid to the committee of the Dublin Exhibition. Important arrangements are in progress at the Company's station on the Railway by the Brighton Railway, and by the projected line from the new Battersea bridge; and an immense field of speculation has been opened for building operations in the neighbourhood of the works, including hotels, villas, and every conceivable kind of property; but we are informed that a judicious and powerful control will be exercised to prevent the accumulation of nuisances in the vicinity of the Palace

The question of the Sunday opening question continues rife, but the Directors have wisely resolved on neutrality and obedience to the law.

CHESS NOMENCLATURES.

(To the Editor of the ILLUSTRATED LONDON NEWS *)*

SIR,—The remarks on the above subject which appeared in your paper lately induce me to offer a few others. It is evident that the game was intended to be a type of an actual battle; and its rules, and certain of the terms used in it, varying as they do in different Eastern nations, afford a good illustration of the art of war as practised by those nations.

Let us take, for instance, the ancient Hindoostanee game, in which, instead of two opposing parties, there are four—black, white, yellow, and green—each consisting of four pieces and four Pawns. Two of these are united against the other two, and each army has not only to provide against the attacks of those opposed to it, but also against the treachery of its ally; for the rules of the game permit the King of either party to destroy by stratagem the one in alliance with him, and thus settle both armies under one command. Could a more vivid illustrat on of the fraud and treachery of human nature and camps have been devised?

In no variety of game as played in the East, I believe, is such a piece as the Queen to be found. There are, indeed, pieces which may be considered as corresponding; but they are either Ministers, Lieutenants-General, or, as in the Chinese game, Counsellors or Imperial Commissioners, whose duty is to watch and advise the General The Chinese term *Jiang* applied to these pieces, means literally men of great experience in war

The Chinese game is played on the lines of division, and not in the squares, and the board is divided across the centre by a blank space, the breadth of a square. This space represents a river or trench, which the elephants are supposed to cross on temporary bridges. The General and the Counsellors cannot move out of a space of four squares crossed by diagonal lines) in the centre of the side. The *Pawn*, or rocket-men, are placed per rear to China. They move in a straight line across the board, in any direction, but cannot take, except when a piece or Pawn inter venes, when they capture the one immediately behind it. Hence their name, Four Knight and Pawn are known by names signifying in all cases cavalry and infantry. The former is styled, in Sanscrit, *Asven*, in Hindoostanee, *Ghorri* in Persian, *Asp*, in Chinese, *Mai*, and in Burmese, *Mhee*. In the latter, as in the same languages, respectively, *Padeea*, *Peon*, *Pendeh*, *Pyg*, and *Yein*. The pieces by no ridiculous term termed *Castles*, are known by the terms *Ratha*, *Rath Rukh*, *Tshe*, and *Rutha* meaning in each case a *chariot*. In the Sanscrit, the terms *Nemee* and *Teere* are also used, meaning a *Ship* or *Boat*

The English *Bishop* (now somewhat out of its element in a battle, one would think) is universally and more appropriately represented in the east by an *Elephant*, named in the before-mentioned languages *Hasti*, *Hust*, *Fil*, *Tsiang*, and *Chebi*.

I remain, Sir, &c.,

Brighton, April, 1853. HORACE J. ROCKWELL.

(To the Editor of the ILLUSTRATED LONDON NEWS *)*

SIR,—An article on your paper of the 2nd April, on "the Nomenclature of Russian Chessmen," has reminded me that, when in Archangel, some years ago, I saw a set rudely carved, in walrus-tooth, by some native artist, in which the modern Queen, Knight, and Bishop, were severally represented by a ship, a monster sea-dog, and an elephant.

I have written out for a similar set, and, when received, shall be happy to present them to the Reading, or to whatever chess-club or Society in London you may suggest, in the hope that they may prove interesting to [illegible], and, perhaps, by their evidence, from a remote part of Russia, show that its traditions, character is of one.

I have put to the less learned "Conseil or," when we refer to the article to which I have referred, to decide whether the purloyed works an has copied from [illegible] model, [illegible] as [illegible] [illegible] [illegible]

EXHIBITION OF THE ROYAL ACADEMY.

NO. 611. "FRUIT."—PAINTED BY G. LANCE.

(*Continued from page 385.*)

542. "The brave old Hound." By R. Ansdell.

> How oft has thy voice made the hunter rejoice,
> When thy deep mellow notes he heard;
> For well did he know that thy fullest foe
> Was the finest red deer of the herd!—*Old Song.*

This is, indeed, a masterly production, which may challenge comparison with the most successful efforts of its kind. "The brave old Hound" is the first in at the death, in a wild rocky dell, where a mountain stream gushes past; and gives "cry" heartily to his comrades

554. "New College Cloisters, 1852." By W. H. Hunt. Under this title, we have the portrait of a college "don," in canonicals, painted after the modern pre-Raffaelite style. There is a good deal of character about it.

"A Scene from the 'Midsummer Night's Dream.'"—*Titania, Bottom, Mustard Seed, Peas Blossom, Moth,* and *Cobweb.* By G. Cruikshank.

> Nod to him, elves, and do him courtesies.

Our friend George Cruikshank distinguishes himself in this little picture, evincing the same amount of exuberance of fancy, the same gusto for the supernatural as he has shown on other occasions, but in a more subdued and graceful style.

557. "Waiting." By F. M. Browne. This is a clever little piece of exaggeration. A lady "waiting" (for the return of her husband, we presume) in a very neat parlour, by lamp-light; still stitching or crocheting; with a baby in long clothes across her lap; a very strong red glare upon which indicates that there is a roaring fire in the grate, which, however, itself is out of sight

559. "Katherine's Dream." By H. O'Neil. An admirable picture (which we engraved in our last) upon the scene described in the second scene of the fourth act of "Henry VIII.," where Queen Katherine sees a beautiful vision in her sleep. Fine taste is displayed in the treatment of this little work, which is conscientiously finished in every part

560. "The Incident which led to the Great Reformation." By W. J. Grant. In this picture we have represented Queen Katherine discovering the attachment of her faithless Lord for Anne Boleyn. The groupings of the several principals, and their expression as they watch one another, and the expression of the attendants who look on at the little domestic drama, are highly imaginative and artistic.

580. "A Forest Road." By J. Linnell. This is a landscape in the true old English style; representing a broken woodland, with sheep and cattle herded together in the centre; a horseman, and one or two other figures. The aspect is exquisitely real, and the tone harmonious and agreeable in the extreme

581. "Life amongst the Gipsies at Seville." By J. Philip. We have here the court-yard of a Spanish hostelry, where are congregated a great number of gipsies of the real Spanish race, of both sexes, and all ages; some dancing, others playing upon instruments of music, others smoking and lounging about; and amongst them a newly-arrived pair of English travellers (dressed rather in the cockney tourist fashion), who are the especial objects of the natives' attention. A very sprightly young lady, in a gay pink dress, is inviting one of the two gentlemen to the dance; his companion is accosted by an old crone, who whilst she pretends to beg, is picking his pocket. There is more of life, variety of grouping, and of spirit study in this picture than we have seen in any work of a similar class for a very long time. It must be admitted, however, that the namby-pamby-looking English tourists "spoil the harmony of the meeting"

582. "Death of Thomas à Becket, Archbishop of Canterbury, December 29, 1170-71." By J. Cross. A picture of large dimensions, upon a very remarkable incident in the barbarous period of our history. The figures all display great energy and character; and the terrible features of the event are well realised. Thomas à Becket stands proudly erect before the altar, his face covered with deadly pallor, but yet with an expression of great firmness and moral courage. Two of his assailants are aiming at him furious blows, one of the attendant monks alone striving to repel them; whilst another monk averts his head with an expression of almost abject terror; a third is preparing to remove the Host, &c., from the altar. We present an Engraving of this very clever picture

588. "Scene from the 'Tempest.'" By C. Rolt. A very spirited and carefully-painted picture (which we have much pleasure in engraving), illustrative of the following passage in the "Tempest."

> (*Prospero, Miranda, and Caliban.*)
> *Prospero.* Hag-seed, hence!
> Fetch us in fuel; and be quick, thou wert best,
> To answer other business. Shrug'st thou, malice
> If thou neglect'st, or dost unwillingly
> What I command, I'll rack thee with old cramps;
> Fill all thy bones with aches, &c.
> * * * * *
> *Caliban.* No, pray thee.
> I must obey, his art is of such power.
> * * * * *
> Ariel. (*singing and playing.*)
> Come unto these yellow sands,
> And there take hands

The figure of Miranda is extremely graceful, and that of Prospero dignified and impressive. The dance of fairies in the distance is original and pretty in conception

590. "Isabella." By C. Earles.

> She weeps alone for pleasures not to be;
> Sorrow she wept until the night came on,
> And then, instead of love, O misery
> She brooded o'er the luxury alone
> His image in the dusk she seemed to see,
> And to the silence made a gentle moan.

A graceful little study of a female, seated in a balcony *à la Juliet*, contemplating the stars

595. "The Awakened Conscience." By T. Brooks. A group of more than ordinary, and at the same time painful, significance. What may have been the previous history of the young female, and of her reckless companion, who are near the door of the honest yeoman's home, where they are receiving hospitality; why she should weep, and he scowl, at the sight of a young child saying his prayers, the artist leaves us to

NO. 1438. "MARBLE BUST OF H.R.H. THE DUCHESS OF GLOUCESTER IN HER SEVENTY-SEVENTH YEAR."—BY MRS. THORNYCROFT.

imagine. Certain it is that the picture realises with great power the beautiful lines of Moore, which are quoted in the catalogue:

"There was a time, thou blessed child!
When young, and happy pure as thou,
I look'd and pray'd like thee but now.

(See Engraving)

600. "A Mountain Town in Calabria, above the Gulf of Tarento—Brigands Driving off Cattle." By W. Linton. A wild bit of mountain scenery, treated with a broad and masterly hand; a cool grey tone pervading the whole. The figures very spirited. Altogether, one of the very best landscapes which have lately been produced

608. "Metastasio, when a Child, Singing extemporaneous Verses in the Streets of Rome." By R. M'Innes. A poetical and graceful little picture. It is recorded of the learned Gravina, that, upon hearing the boy Metastasio singing extemporaneous verses in the streets of Rome, he was so struck with the talent of the young poet, that he took him to his own home, educated him, and, in the end, made him his heir. The picture represents the philosopher listening to the well-turned phrases of the young extemporiser, who is holding forth in the midst of a miscellaneous group, including a soldier, a monk, a fruit-seller, and others of various denominations. The expression of the boy's face is extremely intellectual and engaging.

611. "Fruit." By G. Lance. Mr. Lance, in this gorgeous picture, has thrown into the shade all his previous admirable productions in the same line, and has left nothing further to be achieved in softness and prettiness of surface, brilliancy of colouring, and tasteful arrangement. We present an Engraving of this tempting morceau.

NORTH ROOM.

1061 "Field-Marshal the Duke of Wellington, K.G., Commander-in-Chief, Returning from his Daily Visit to the Horse Guards." By J. W. Glass. A well-painted picture, of what was once a daily occurrence. The old Duke is seated on his favourite horse, and is emerging from beneath the gateway of the Horse Guards into the Park. Two Chelsea pensioners standing by salute him; and some young ladies look on with evident interest at the gallant old Commander.

1062. "The City of Syracuse, from the Ancient Quarries, where the Athenians were Imprisoned, B.C. 413." By E. Lear. A very remarkable view, admirably painted.

1081. "The Toilet."—by W. D. Kennedy—represents a lady sitting before a glass, combing her hair, in such wise, that it altogether conceals her face. A strange conceit

1083. "Under the Hawthorn." By J. Linnell. A rich landscape composition; the foreground in warm tints, variously broken; the distance a clear cool sky.

1084. "The Ivy Mantled Tower—Remembrance of Maxtoke Priory, Warwickshire." By M. Anthony. This is a little picture, in the artist's own peculiar style—a ruin thickly covered with foliage, and he has been eminently successful in it

1216. "An Artist's Studio." By J. D Watson. A carefully painted little picture, worthy of a more distinguished place than it now occupies. The artist is represented in profile, hard at work before his easel, whilst a brother artist looks over his shoulder. Before the fire-place are his wife and child. The walls of the room are furnished with unframed pictures, and sketches of various degrees of merit, and the chimney-piece with paint-pots, tobacco-jars, &c.: every object being painted with great minuteness and delicacy.

1222. "Llyny Ddinas, North Wales." By S. R. Percy. A fine bit of Welsh scenery, rendered with all the fine feeling of a real artist.

1224. "Tête à Tête." By R. Hannah. A caprice, representing a lady and gentleman, whom we judge, from the title on the play-bill ("The Honeymoon"), to be a newmarried couple; very elegantly dressed; the former looking up and showing little more than her chin, the latter looking down to listen to what she says, and showing only the top of his head (hair blessed with "natural curl") and the tip of his nose.

1226 "On the Banks of the Thames." By H. J. Boddington.

"MARINO FALIERO."—PAINTED BY CARL HAAG.—(EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.)—(SEE PAGE 392.)

NO. 1331. "THE INTRODUCTION OF MUSIC TO THE ARCADIANS."—BY H. H. ARMSTEAD.—(EXHIBITION OF THE ROYAL ACADEMY.)

One of those cheerful little bits of scenery which this artist so well appreciates, and into which he always infuses so much fine feeling. It was "painted on the spot," and under the full influence of a hearty enjoyment of nature in one of her most generous moods.

OCTAGON ROOM.

It is almost a mockery to pretend to notice anything in this miserable, ill lighted closet; still, in justice to the unfortunate exhibitants, we will mention two or three productions which appeared to us to possess claims to attention, supposing them to be viewed under more favourable circumstances.

1207 Another "Scene in the Play of 'Measure for Measure,'" where *Isabella* says to the *Duke*—

Look for't.
Sign me a present pardon for my brother,
Or with an outstretch'd throat I'll tell the world aloud
What man thou art.

This picture appears to be nicely treated; the two figures displaying energy without exaggeration; and the colouring in good keeping.

1239. "Spring." By M. J. Webb. A group of sheep turned out in the hardest style of the modern antique school.

1241. "A Medical Consultation." By J. M. Joy. "Who shall decide when doctors disagree?" The poor old patient in the inner room has small chance of experiencing relief at the hands of those now engaged in violent disputation round the table. There is fun in this picture, but a little exaggerated.

1254 "Crossing the Common—Winter." By G. A. Williams. A snow-clad common, exhibiting great harmony of colouring.

1259. "The Hope Beyond." By J. Thompson. A scene of emigrants preparing to embark; many of the groups and incidents in which are touchingly rendered

1287 "A Fair in the Champs Elysées, Paris." By W. Parrott.

"*Grand'tantarare*) Voila, voila, vâ, vâ, it execute! Venez vite, venez vite, Madlle. Rose, la femme la plus étonnante du monde par sa force de la voix, la nature et les dieux l'ont pour leur délice doué, et pour les ravir de son gosier. Jolie, est accompagnée par deux grands sapeurs."

"Loulotte, mon chou, couvre ton epaule: ne vois tu pas ce grand nigaud Anglais qui te lorgne?"

"Lire la ficelle, ma femme, et montre à ces messieurs et dames les grandes événements du temps de l'Empereur Napoleon le Grand!"

A bustling scene, full of diversity; all the fun and spirit being capitally hit off.

SCULPTURE.

1305. "Venus." Statue in marble. By E. Bandel. The goddess has a graceful figure, her head turned a little on one side, whilst she ties up her curly hair.

1306. "The Brothers' Little Pet. Children of Herbert Ingram, Esq." By A. Munro.

Nearest of blood should still be next in love,
And when I see these happy children playing
(While *Willie wreathes his little sister Annie*
With flowers, and Charlie kisses her soft cheek),
I scarce can think that, in advancing life,
Coldness, unkindness, interest, or suspicion,
Will e'er divide that unity so sacred
Which nature bound at birth
Sir Walter Scott.

A charming little group, in which the artist has shown equal taste and power of execution; and of which we present an Engraving.

1307. "The Maid of Saragossa—a Reminiscence of the Peninsular War, January, 1809." A very spirited, but somewhat theatrical figure.—"She is supposed (says the catalogue) to be on the ramparts. A lighted fuse is in her hand. She is about to fire a gun on the besiegers. A monk has just been killed by her side: catching up his crucifix, she incites the people to defend the walls." We give an Engraving of this production.

1308 "Night—a Statuette in Marble." By J. Thomas.

Hes silent night proclaims my soul immortal
Hes silent night proclaims eternal day.

Another example of the face-veiling trick, not very successfully carried out.

1310. "Two Boys with a Pipe—a Group, Plaster." By F. Thrupp. A very clever little group. The elder displaying great intelligence in the use of the instrument, which the younger eagerly seeks to obtain from him.

(*Continued on page 392.*)

THE GREAT INDUSTRIAL EXHIBITION OF IRELAND.

But a few years since the Sister Isle was plunged in misery and degradation; her landed proprietors were ruined, and her people were crowding the work-houses or were dying of starvation. Little did we then think that after so short an interval the pleasing duty would devolve upon us of recording the efforts of the Irish people not only to rise superior to present difficulties, but to elevate their country to a position it had never before attained.

The great Irish Industrial Exhibition stands prominently forward as one of those many proofs of the progress of Ireland which might easily be adduced. It is true it owes its existence altogether to the patriotism of a single individual; but it is no less true that the particular state of the country almost invited an enterprise, which at any other period of her history would have terminated in disappointment.

Mr. Wilham Dargan, even without any reference to his connection with the Exhibition, is one of the most remarkable men in Ireland. He commenced the world without capital, and has already constructed upwards of 600 miles of railways, besides nearly 100 miles of canals, embankments, tunnels, bridges, basins, and other works, in addition to those now in hand. Whilst his countrymen were declaring that Ireland was rapidly going to ruin, and were bent upon Repeal as the only panacea for her ills, Mr. Dargan pursued his own course, promoting industry by his example and by the employment he gave, and at the same time accumulating for himself a princely fortune.

Having amassed this large fortune in his native country, Mr. Dargan anxiously watched for an opportunity of conferring a great practical benefit upon his countrymen. He saw that prejudice was the principal obstacle to Ireland's improvement British merchants, he remarked, were often more willing to embark their capital in distant lands than in the Sister Isle; and this feeling he justly referred to a want of unity and mutual interchange between the two countries. With a view to promote this feeling, he determined to found a great Industrial Exhibition in Ireland, upon terms the liberality of which have never been exceeded. He placed a sum of money in the hands of a special Executive Committee, consisting of the leading citizens of Dublin. He empowered them to erect a building for the forthcoming Exhibition, and to defray all the necessary expenses. The sum he placed at first in their hands amounted to £20,000, but he promised to advance any further sum they might require; and he imposed but one condition—a very necessary one in Ireland—that the begging-box should not be handed round. Before the Exhibition opened, the sums actually advanced by Mr. Dargan did not fall far short of £100,000. The conditions upon which he advanced the money were three: if the net profit at the close of the Exhibition were sufficient, he was to be repaid his advances, with five per cent interest; if they were insufficient, he alone was to bear the loss: if there were a surplus, after paying him, such surplus was to be at the disposal of the Committee.

As soon as the necessary arrangements were completed, the public were invited to send in designs for the Exhibition building. The first prize was awarded to Mr J. Benson—I am whose design, and under whose superintendence, the present building has been erected, and the second prize was awarded to Messrs. Deane and Woodward, of Cork, the eminent architects. The site selected for the building was the piece of ground known as Leinster-lawn, which the Right Hon. Sidney Herbert kindly consented to place at the disposal of the Committee. The Exhibition building presents a front to Merrion-square of 300 feet. The main or centre feature of the elevation consists of a semi-circular projection, which forms the eastern termination of the central hall. This is a noble apartment of 425 feet in length, and 100 feet in height, covered by a semi-cylindrical roof upon trellis ribs, in one span of 100 feet. On each side of the centre hall, and running parallel to it for the same length, are two halls 50 feet wide, with domed roofs, one larger than that which covers the mai nave of the building. The height from the floor to the roof of each of these halls is 65 feet. They are approached through passages from the centre hall. In addition to these are four compartments of 25 feet wide, running the whole length of the building: two are placed between the centre hall and the side halls, and two on each side of the latter, divided into sections of 25 feet square, forming convenient divisions for the purposes of classification. Over these compartments are spacious galleries, also running the length of the building, which not only afford increased space for exhibition, but form an agreeable promenade, from whence the effect of the three halls may be seen to great advantage. The east ng is divided into panels by the trellis rob, providing ample opportunity for effective decoration. Light is admitted from above in one unbroken and equally distributed body. There are external galleries, which form attractive features, and will be useful in providing access to the roofs for cleaning. The roof of each of the principal roofs to the east and west is semi-spherical, giving strength as well as effect.

There are three principal entrances to the building from Merrion-square, under a range of arcades. In the interior of the building, the light blue, and the ribs are buff, picked out with scarlet. On entering the main hall a splendid organ faces the visitor. This fine instrument is the third largest in the empire, and was built four years ago by Mr. Telford, of Dublin, and improved by the present builder. The Committee having made many unsuccessful efforts to procure an organ of sufficient tone and power, at last deputed Mr. Deane, the secretary, and Mr. Telford, to wait upon the Very Rev. Hamilton Worthington, Abingdon College, to request the college authorities to lend it for such time as the Exhibition should continue open, to which they most generously consented. The roof of the central hall rests upon semicircular ribs, or arches of wood, each weighing something more than seventy tons, and of 100 feet diameter. These rests upon massive iron pillars forty feet high, which run along the whole length of the central hall, at equal distances, coupled, and the effect of which is very striking. The plan has been carefully inspected and approved by the well known names of Mr. Peter Fairbairn, of Manchester; Munyon, of Belfast; Hemans, engineer of the Irish Midland Great Western Railway, and several other distinguished engineers; and there can be little doubt but that timber will be more extensively used than hitherto for the future in works of a similar kind.

The principal portions of the building consist of the Grand Central Hall, and the Northern and Southern Halls, and the Fine Arts Court, and Machinery Court. The Central Hall is filled with articles nearly similar to those that occupied the nave of the Crystal Palace, but all the goods are not yet distributed, as nearly the entire of the available space in the Central Hall was required for the ceremony of the inauguration. Two rows of statues, which we shall have occasion to notice more minutely, range along the sides. Among the other conspicuous objects is Chance's lighthouse, which stands almost in the centre of the upper part of the hall; and which, in addition to being an interesting object of exhibition, will also fill the important function of lighting the building at night. The centre of the hall is occupied by an unsightly erection of cast iron, belonging to the Columbidæ Company, and probably intended for a summer house in a pleasure garden; but, certainly, as it stands at present, it is anything but elegant. The interior of this erection contains several grates and other metal works of no small merit. A singular looking glass case, the sides supported by palm-trees of bronze, contains specimens of patent cards, and forms a very characteristic object. Grubb's telescope, and several other engraving-looking articles, and large glass cases, &c., occupy the other most prominent places in the Central Hall, of which they completely mar the effect. Here, also, the famed Irish poplins are displayed, and several looms may be seen busily at work.

In the Northern Hall are exhibited all the textile fabrics. From its proximity to the Machinery Court, it also contains several small machines of various descriptions at work. This hall also contains leather, in all its stages of manufacture, hardware, manufactures from mineral sub-stances, and raw materials. The Southern Hall contains generally the productions from France, Belgium, a few from America, Prussia, India, and China.

The Northern Galleries contain a very fine collection of glass and china, lace, embroidery, sewed muslin, &c.—branches of industry in which Ireland has made very creditable progress.

The Southern Gallery contains the philosophical, surgical, and other instruments; models of vessels, and several articles connected with civil engineering; wearing apparel, musical instruments, miscellaneous goods

The Machinery Court contains some implements and articles of that class exhibited. A fine steam-engine, of forty horse power, acts upon a shaft of 300 feet in length, which runs down the centre of the Machinery Court. To this shaft is attached the driving machinery, which puts in motion the majority of machines, &c., at work in the building; and pipes connected with the boiler of this engine convey steam to the various machines requiring it. This splendid steam-engine is supplied to the Exhibition by Mr. Fairbairne, of Manchester, the eminent engineer. A steam-engine of the same power, from Messrs. Grendon and Co., of Belfast, is also erected in the same court. This engine will be principally employed in pumping up water to two large cisterns, erected upon the roofs of the galleries, and each capable of containing 20,000 cubic feet of water, to supply the various fountains, &c., throughout the building.

At the opposite side of the Palace; and in a hall similar in its position and proportions, is the Fine Arts Court. This is one of the most novel and beautiful features in the Dublin Exhibition. In the Crystal Palace paintings were not admitted as works of art, but only as illustrative of certain processes; nor was this very necessary in England, where so many splendid public galleries and private collections existed, many of them open to the public: but in Dublin the case is different: for the country that has given birth to Moore, M'Dowel, Hogan, West, Maclise, Danby, and a number of other names equally distinguished, cannot boast of a single national collection, however humble. Every day the fine arts are becoming more intimately connected with the practical purposes of life; and a collection of the products of industry would have been very incomplete without a display of some of those masterpieces of genius from which the merely useful borrows all its elegance and grace. Hence lingly the Committee determined to allocate a separate hall to the fine arts; and we are gratified to say that, beyond all question, their efforts to assemble together the *chefs-d'œuvres* of modern and ancient masters have proved eminently successful. It is only necessary, as a guarantee for this statement, to mention the names of some of those whose works grace the walls of the Fine Arts Court: Cuyp, Titian, Melville, Rembrandt, Hogarth, Eastlake, Etty, Danby, West, Cooper, Pyne, Stanfield, Mulready, Maclise, Landseer, and a number of other distinguished masters, whose works will presently require a more distinct notice at our hands.

The building also contains spacious refreshment rooms, courts for the exhibition of carriages, of furniture, of agricultural implements, and of antiquities; and several other apartments for various purposes.

The structure was commenced upon the 16th of August last, and was completed and opened to the public upon Thursday, the 12th inst. When we take into account the extent of the building, the ground space of which exceeds 250,000 square feet, it is impossible to withhold our admiration at the manner in which the works were conducted—more particularly when we remember that this gigantic work was accomplished in so short a time in a country hitherto almost altogether a stranger to such enterprises.

Next week we shall illustrate the ceremony of opening the Exhibition.

DOMESTIC ARCHITECTURE OF THE MIDDLE AGES.

A VALUABLE addition to artistic literature has just appeared in a hand some volume, entitled "Some Account of Domestic Architecture in England, from Edward I. to Richard III., with Notices of Foreign Examples, and numerous Illustrations of existing Remains, from Original Drawings. By the Editor of the 'Glossary of Architecture;'" being a continuation of the volume from that work. The first volume was produced by the late Mr. Hudson Turner." The author of the present portion informs us that he "has travelled many hundred miles, never being contented to take from other sources anything which he had the opportunity of verifying for himself." There cannot be a better assurance of accuracy than the latter precaution, and we have here unmistakeable evidence of this painstaking zeal

The period comprehended in this volume is the most important in the history of the art. The reign of Edward I. was one of the most brilliant and flourishing epochs in the whole career of England: at home the people enjoyed peace and prosperity, and rapidly progressed in civilisation; abroad, some of the finest provinces in France owed obedience to the English Crown; they prospered under its rule, and Edward laboured to introduce and encourage the arts in England by bringing over choice workmen and artists from France. A marked change in the style of architecture took place, and the new style, though of French origin, was brought to greater perfec ion in England; as we see in the window-tracery in geometrical forms, which originally appeared in France, but, when introduced into England, soon took root, and flourished in a wonderful degree. Simultaneously with the rapid development of Ecclesiastical architecture, similar progress was made in Domestic buildings: no only were the halls enriched by the introduction of the new style of windows, but the plans of the houses themselves were improved, and the number of offices increased.

The reigns of the Second and Third Edwards are scarcely less distinguished in the annals of architecture than that of the First; and there is abundant evidence that these Monarchs took a warm interest in the progress of Domestic Architecture. The favours, the honours, and the emoluments heaped upon William of Wykeham by Edward III., were chiefly earned by his skill as an architect displayed in building the Royal Palace at Windsor. Many of the buildings erected are still by some antiquaries the Edwardian period; which cer ainly comprises the most brilliant and glorious epoch in the whole history of the art. It was exactly for this period, and no longer, that the Decorated style prevailed, in other words, the art was then in the highest state of perfection: and immediately afterwards it began to decline. The Domestic Architecture of this epoch is scarcely less worthy of attention than the Ecclesiastical: considered as mere masonry, it is impossible to surpass the accuracy, the firmness, the high finish of the work; and the sculpture is equally beautiful. Nor was the skill of the architect behind that of his workmen; the admirable manner in which the plans and designs are arranged, and the frequent difficulties are overcome, may be equalled, but cannot be surpassed.

In the reign of Richard II. the decline had scarcely commenced, as shown in the Colleges of Wykeham, the roof of Westminster-hall, and many other structures. But there an overlapping of styles must be looked for; and, just as, in the reign of Edward I., the Early English and Decorated styles are singularly intermingled, so it is, in the time of Richard II., with the Decorated and the Perpendicular. The existing remains of the fourteenth century are more numerous than those of the preceding periods; and many of the houses magnificently testify to the wealth of their owners. The bishops' palaces at Wells, Lincoln, St David's, Southwell, and Norwich, are among the most important examples, so are also the houses and castles of the nobility. Penshurst has a glorious hall of the time of Edward II., and some other parts of the same period. Town-houses of the fourteenth century in England are remarkably defective; and, no doubt, owing to their being built of wood, and so frequently destroyed by fire; but this deficiency is abundantly supplied by the English towns in France, mostly founded by Edward I., to which a chapter of the present work is specially devoted.

The documentary evidence of the period is abundant: building accounts are more numerous, and better preserved than at any preceding time; the descriptive poems of Chaucer, and the sparkling chronicles of Froissart, impart a literary charm to the foundation of the subject; and at the commencement of the century we have inventories taken from the lands and houses of the suppressed order of the Templars. Whatever variations there may have been in the plans of houses during this epoch, it is quite certain that the great chamber, or hall, was still a prominent feature in every building, even in farm houses. Thus in the reign of Edward III., a large sale took place of certain unnecessary houses in the King's manor of Folly-John, Winkfield, Ascot, New Windsor, Old Windsor, Slough, and Eton, after the superintendence of William of Wykeham, then clerk of the works at Windsor. Master William sold to one William de Combe, one of the King's cooks, "a hall with two chambers annexed, a granary, with a grate-way built over it, a stable and two barns," in the manor of New Windsor.

Here it may be interesting to quote an outline of a mansion of the period:—

"It sometimes occupied the whole height of the house, sometimes had a low ground story under it. The lodge were commonly of two stories only, the cellar below and the solar over it. In other instances they form towers of three or four stories. The other buildings for offices and stables were so arranged as to form either a perfect quadrangle or three sides of a quadrangle, with the hall in the centre of the principal front, and the gate-house in the centre of the open side opposite to it. These outbuildings were frequently of wood, and surrounded the hall area. The whole was surrounded by a moat, usually enclosing a quadrangular space, whether the whole of the premises were occupied by buildings or not. Sometimes, as at the Moat, Ightham, it actually washes the outer walls of the house and offices; in other instances, as at Penshurst, there is a space between the moat and the buildings, in which case there was often a wall, or a mound and palisading immediately within the moat, to enclose the baileys or court yards. The entrance was protected by a gate-house, with a portcullis and drawbridge. From the dilapidated state of the moat, every house of importance was formerly fortified; and it was necessary to obtain from the Crown a licence to crenelate or fortify, before any house, at least any manor house or principal residence, could be built. It is sometimes not easy to distinguish between a fortified dwelling-house and a castle or fortress, which generally has habitable parts, such as Carnarvon and Caerphilly, and the manor houses which are built in a manner of both characters, that is, originally belonging rather to the class of castles than of houses. On the other hand, many dwelling-houses in the border counties were so strongly fortified as to be hardly distinguished from them, and yet do not lose their character of dwelling-houses, of which class Brougham Castle is a fine example.

Houses with towers attached to them, as places of security, or a mark of rank, are of this transition century. In the border-counties these are called Pele towers, and they answered the same purpose as the keep of a castle—the strongest point for the last desperate defence. The ground-room was vaulted, the staircase in the thickness of the wall, and the two upper stories had wooden floors and roof. There is a very perfect specimen of a small Pele tower of the time of Edward I., at Corbridge, in Northumberland; the whole of the walls being original and entire, the roof and floor only having been destroyed. Tower-built houses are of a distinct class: they consisted of a central tower, with four turrets, one at each corner; these turrets being large enough to contain—one, bedrooms; another, offices; the third, closets; and the fourth, the principal staircase. Dacre Castle, Cumberland, and Langley Castle, Northumberland, are good examples of this class; which, however, are not confined to the border-counties, as seen in Nunney Castle, Somerset. The magnificent brick house of Tattershall, in Lincolnshire, of a later period, is also on this plan. These towered built houses were generally surrounded by moats, like other manor-houses; and were sometimes defended by a wall within the moat, with a gate house, portcullis, and drawbridge: but in other instances by wooden palisadoes only. The towers were frequently of wood, as in all castles and large houses of this period. The country-house, whether of the great baron or of the more humble squire, still partakes of the castellated character, in its battlements and towers, bridge and barbican—a picturesque feature which became general; but, on a closer examination, the domestic features become apparent. In the stronger fortresses, however, the domestic portions have sometimes a semi-military character, as in the kitchen of Roby Castle, which is in itself a strongly-fortified tower, with the fire-place at the top of the vault in the form of a turret.

We have mentioned wooden palisades as the defence of the moat; and they are continually so represented in the illuminations of manuscripts of the period, as in one of the "Romance of Sun Graal and the Round Table," in the British Museum, which bears the date of 1316. Again, in a "Roll of Expenses of King Edward I., at Rhuddlan Castle," we find "for seven empty casks for the paling for the bridge, 7s. 1d." The reader may smile at the economy, when he is reminded that the staves of casks are often used in fencing the suburban gardens of our own time.

The chief reliance seems, however, to have been upon the wide and deep moat, which continued as a protection to the manor house until the time of Elizabeth, or later. The moat often remains when the house has disappeared, as in the palace of Richard King of the Romans, at Beckley, in Oxfordshire, of which no other vestige remains to mark the site, beyond the uneven ground where the grass has grown over the ruins: and in the village of Appleton Berkshire, the moats of the three manor houses still exist, or may be distinctly traced. "The Mote," near Ightham, in Kent, has a hall and some other parts of this period.

At the beginning of the century the only edifices really entailed to the name of castles were fortresses built in the Norman period, but rendered habitable for ordinary use by the construction of additional buildings: when the old keep was deserted for the more recent habitations reared within its enclosures or baileys. The Norman keep was, however, sometimes refitted and adapted to the improved style of living of the period; as at Brougham Castle, where the upper story, with its oratory, and the whole of the interior walls, are of the fourteenth century. As we advance into the century examples arise of castellated buildings erected by private individuals, both for domestic purposes and for military defence. The castle of Newcastle-on-Tyne, with its "King's lodgings," is an important example. The same arrangement exists in Bamborough Castle, where is an Edwardian house in the court-yard, quite distinct from the Norman keep; as also in Carlisle Castle.

Illuminated MSS. of the fourteenth century show us truthfully, in architectural details, the external features of the houses in towns during this period, with their gables and crockets—barge-boards richly carved. Cylindrical chimneys and their jointed masonry, are shown; and the roof have a somewhat lower pitch than hitherto, and are occasionally covered with leaden tiles instead of slates. Wooden porches, generally painted, and porch-like projections over the windows, are common, and the town house has its windows protected by shutters, projecting externally, attached by hinges to the transoms. The gables-ends, it should be observed, are frequently drawn with corbie-steps, borrowed from the Flemish street architecture of the period. That corbie-tables should be so common in Scotland is accounted for by the close alliance between that country and France up to the period of the union of the crowns, to this day many of the street cries of the good town of Edinburgh are of pure French origin."

The subject of external decoration of houses would lead us far and wide; but it will be remembered that in London, in earlier times, the citizens of London were of the exterior of their habitations, and how much they objected to the introduction of coal for fuel. They were compelled by their magistrates to whitewash even the thatches of their houses—a custom observed to this day in Wales, where plastered thatches are common. When coal became the ordinary fuel, instead of wood, in the fourteenth century, the white walls of their dwelling-houses suffered by the change; and it is reasonable to suppose that the scrupulous citizens resorted by those means of beautifying the exterior of their dwellings, which had been in use among the wealthy for more than two centuries before.

From the accounts of the works at Windsor Castle, in the time of Edward III., preserved in the Record Office at Carlton Ride, it is evident that parts of the new buildings were painted externally. Thus we find, in 1366, mention of several colours and varnish and gold leaf, for painting and decorating the Round Tower, or La Rose, in imitation of the flower from which it was named. The materials were white lead, verdigris, red lead, vermilion, brown and blue, &c. The metal work was then executed on the spot, and forges and furnaces were built for the smiths and plumbers. Coal had already been found more efficient fuel than wood; but it could not be procured from London, and the King's master of the works was compelled to buy a cargo of coal at the pitmouth in the county of Durham; and the greater part of a cargo was often thrown overboard during a mighty tempest at sea." Within a page the author narrates the voyage of a ship chartered to carry coals for the works at Windsor in 1367; curious enough, at this time, when thousands of vessels and many miles of railroad railway are daily employed in bringing this important necessary of life to the capital.

The custom of painting the outsides of houses in gay colours, as red, green, or blue, still remains in some parts of Holland—as in the villages of Broek and Saardam, a few miles from Amsterdam—as in all probability, the continuation of a custom of the middle ages; which we trace also in Lancashire and Cheshire where timber houses abound, and the timbers are usually painted black, and the interstices white, with extremely picturesque effect.

Timber houses of the fourteenth century are, however, fast disappearing. The hall at Malvern, a fine specimen, has been wantonly destroyed within these few years; Bayard's Castle, Penshurst, a rare example, still exists, though in sad neglect and annihilation. Of the numerous other timber houses of Lancashire and Cheshire, the great majority are of the time of Elizabeth or James I., or later; and, though the use of carpented timbers, pierced trefoils, and other features, gives them at first sight an earlier appearance, the richest are of the time of Henry VII. There are many beautiful and perfect specimens of Elizabethan work, of which, perhaps, Speke Hall, near Liverpool, is one of the most perfect. In the time of Elizabeth and James I. the woodwork of the fourteenth century was frequently imitated, but very clumsily; though occasionally it is difficult to decide whether they are merely imitations, or old materials used up again, which was always a common practice

Such is an outline of the period of the art illustrated in the work before us. The author then proceeds to detail the Hall, with its open timber roof, often richly ornamented; its windows, the glass of which was not considered at all valuable till the reign of Henry VIII; its fire on the middle hearth, continued in many college halls in Oxford and Cambridge until about 1620, and in Westminster College hall until 1850; the arrangement of the dais, or high table; the screens and lavatory—the latter richly sculptured; and the private walks, of which the Painted Chamber at Westminster was a fine example; the tapestry, and furniture—consisting of boards laid across trestles for tables, benches, chairs, low settles, or credes, or central hearth; a few joint and mugs, &c. The dining table at which the lord and his dependants sat down to dinner, at ten or eleven in the morning, is described, as also the mode of its plate and garniture, festal customs, &c. The chamber or bedroom of the mansion are then illustrated with many a picture in illustration of mediæval manners. To these succeeds a chapter on Towns; another on Existing Remains, classed in counties; and of Foreign Examples, in France, Flanders, Germany, and Italy. The engravings are on wood and copper have been carefully selected with a view to the illustration of the subject, principally from existing remains. As an example of the author's scrupulous accuracy, we may instance that he has not met with any known remaining of the period here treated of; but he has engraved that on Westminster Hall, which is an exact copy of the original one erected towards the end of the 14th century.

* Oxford: John Henry Parker; and 377, Strand, London.

LITERATURE.

HISTORY OF THE PROTESTANTS OF FRANCE FROM THE COMMENCEMENT OF THE REFORMATION TO THE PRESENT TIME. Translated from the French of G. DE FÉLICE, D.D., Professor of Theology at Montauban. Two volumes. London: Longman and Co.

The religious wars of France have frequently been written, and in various memoirs ample materials may be found to illustrate this interesting portion of history; but the records of French Protestantism, from the dawn of the Reformation to our days, had never been printed in a continuous form till the appearance of the present volumes. In this point of view Dr. Félice has supplied a desideratum in modern literature. He states, that "the plan at first contemplated was far more extended than that which has been actually followed;" and in more extended than that which has been actually followed;" and in many respects, unsatisfactory. It is too rapid, too meagre; a mere outline, indicating the march of events, without sufficiently explaining their causes or their results. It more nearly resembles a chronology than a history. These are the defects of the method adopted, and it is to be lamented that the author has abandoned his original design, for excessive brevity is as great a fault as redundancy However, the work has its merits: it contains generous sentiments and shrewd remarks, its tone is liberal and dignified; and the spirit of the times, and of the leading personages who figured in them, is frequently portrayed with a vigorous pencil. These touches alone give a charm to the book.

The doctrines of the Reformation were introduced into France about the commencement of the sixteenth century, during the reign of Francis I. Meaux was the first city in which they gained a footing, and, according to Dr. Félice, Jacques Lefevre and Guillaume Farel were its first apostles. They were soon joined by Guillaume Briçonnet, Count de Montbrun, Bishop of that diocese. Their zeal soon authority was the four Gospels, published in French. These were sent to Margaret de Valois, sister to Francis I., who took the reformers under her protection The King himself had no fixed principles of religion, regarding all modes of faith with equal indifference; but, two years after Luther had denied the infallibility of the Church of Rome, the Faculty of Theology at Paris denounced the new opinions, and, in 1521, the Sorbonne published their famous condemnation of the Lutheran heresy. If Francis had any views whatever of Christianity, they were political; for he never only favoured the Protestants of Germany, because he hated the King of Spain, their most bitter enemy; and our author observes, "that he never knew what he was, or what he wished, in matters of religion." Brantoun relates that the Constable, De Montmorency, conversing with the King on the most effectual mode of extirpating heresy, made no scruple of saying, "that his Majesty should begin with the Court and his own relations," naming his sister as one of the most dangerous; to which Francis replied, "Speak no more of her: she loves me too well not to believe what I believe; nor will she ever adopt a creed incompatible with the dignity and safety of my throne." Yet he is reported to have said, that, "if he thought the blood in his own arm was tainted with the Lutheran heresy, he would order it to be cut off." Of the Chancellor, Antoine Duprat—created a Cardinal for having degraded his country, and who had amassed enormous wealth by the sale of benefices, but built an additional ward for the sick at the Hôtel Dieu—Francis sarcastically said, "It must be a very large one, if it is to contain all the poor he has made." It was, however, under his reign that the massacre of the Vaudois was perpetrated, and for this he has been severely censured; but all the historians admit that his orders were cruelly exceeded; and that, on his death bed, he commanded his son to punish the assassins. Dr. Félice gives an interesting sketch of the Vaudois, whom he describes as containing a population of about 18,000 souls, who had dwelt for three centuries in Provence: they found the land sterile, and brought it into the highest state of culture. They built several towns and villages. Their morals were pure; they only were in a court of justice, never blasphemed: and, what deserves special mention in their history, they "caused the first edition of the Bible in the French language, translated by Robert Olivetan, to be printed at Neufchatel in 1535." These industrious people were absolutely exterminated by Baron D'Oppede. "At Merindol," says our author, "but one poor idiot remained, who had promised a soldier two crowns for his ransom D'Oppe de gave them out of his own purse. He is rid of the last creature; and having had him tied to a mulberry-tree, he shot him with an arquebuse." Another incident paints the character of this military butcher, whose bigotry made him a disgrace to the profession of arms. Many of the prisoners begged to depart with only a change of linen. "I know," said he in reply, "what is my duty towards those of Merindol and such as they; I shall send them to dwell in the infernal regions, them and their children." Let it not be supposed that such atrocities were personal to Oppede; far from it, he only enforced the orders of the Parliament of Aix, which had ordered the houses in Merindol to be burnt and razed to the ground, the fruit-trees torn up, and the place rendered uninhabitable; and further forbade any one, on pain of death, giving the inhabitants either shelter or food

Every one knows that John Calvin was the apostle of France, as Luther was of Germany. His "Institutes of the Christian Religion," published in 1535, became the text-book of the reformers, and the most powerful of preachers. Dr. Félice can see no fault in his hero, and even excuses his share in the horrible murder of Servetus. "It is not Calvin," says the Doctor "who roused the pile for Michael Servetus, it was the whole sixteenth century." But, even if we bring in this accomplice, it is certain that Calvin applied the torch to the pile. This is so bold a defence of intolerance that, in justice to Dr. Félice, we must place before our readers his vindication of the French reformer:—

First, Servetus was no ordinary heretic; he was a daring Pantheist, who outraged the creeds of all the great Christian communions, by saying that three persons in one God was a Cerberus, a monster with three heads. Secondly, he had already been condemned by the Catholic doctors at Vienne, in Dauphiny. Thirdly, the affair was judged, not by Calvin but by the magistrates of Geneva; and if it be objected that his opinion necessarily influenced their decision, we ought to remember that the councils of the other reformed Cantons of Switzerland unanimously approved of the sentence. Fourthly and lastly, it was of the last importance, for the information to reprobate its cause entirely from the Church, that such like Servetus. The Catholic Church, which now blames Calvin for having had a share in his condemnation, would have blamed him far more loudly in the sixteenth century had he solicited on his behalf a verdict of acquittal.

This vindication will, we believe, find no approving response in England. Calvin claimed liberty of conscience for himself, and denied it to his opponent; and while he condemned the Romish priests for murdering his own disciples, he consigned a rival teacher to the flames. This is the simple state of the case, and no sophism can wipe the foul stain from the memory of the French reformer

The historic periods into which this work may be divided are easily classified. The first ranges from the first propagation of the reformed opinions to the peace of Vervins, in 1598, when Henry IV., having conquered the League, was firmly seated on the throne of his ancestors. This is the warlike epoch of the Guises and the Colignys, and of the atrocious Massacre of St. Bartholomew The second extends from the promulgation of the Edict of Nantes to the conquest of La Rochelle by Cardinal Richelieu, in which feth the Duke of Rohan, the Duke of Bouillon, De Rohan, and Duplessis Mornay, were the leading men among the reformers. The third ranges from the fall of La Rochelle to the Revocation of the Edict of Nantes, in which we view the intrigues and machinations of the Jesuits, their disputes with the Jansenists, the first dragonades in Poitou and Bearn, and the gradual extinction of religious liberty. This is the epoch of the hypocritical Madame de Maintenon, of the mental imbecility of Louis XIV., of the cunning and cruel Le Tellier, and of the brutal and unprincipled Louvois; but it is somewhat redeemed from these infamies by Arnauld and Nicole, Pascal, Bossuet, and Fenelon. The fourth epoch extends to the Edict of Toleration in 1787. is illustrated by the fame of the great Protestant writers, such as Basnage and Beausobre, the affair of Calas, in which Voltaire behaved so nobly; the heroic resistance of La Chalotais, and the influence of the Encyclopedists in preparing the revolution. The last period, commencing with that memorable event, is continued down even to the *coup d'etat* of Louis Napoleon.

The transition periods of history are perhaps the most interesting and most exciting. It is then that the human mind displays all its energies, and urges society to advance from a lower to a higher degree of civilisation. It is then that virtue is displayed in its most heroic forms, and vice exhibits its most odious features. In reference to that transition period which shook the authority of Rome, and laid the foundations of the reformed code, we clearly observe that the old Church fell from its internal corruptions as much as from the blows of its external enemies. At the assembly of the Notables at Fontainebleau, held in 1560, with a view to reconcile the discords which threatened civil war, Jean de Montluc, Bishop of Valence, made a remarkable speech, which paints the epoch and the degraded condition of the Church. His testimony is unimpeachable, as he was compelled reluctantly to denounce his own order. We give some extracts:—

The Bishops—for the most part, I mean—have been idle, having no fear of the account they have to give to God of the flock they have undertaken. The greater part of their *grands vicaires* have been more careful of their revenues and squander them on foolish and scandalous extravagance. Thus forty of them have been seen residing in Paris while their dioceses were in a blaze, and, at the same time, the bishops es have even lived by mimers and by ignorant persons, who had neither the will nor the knowledge requis te to perform the duties of the office The ministers of this sect have not failed to point this out to those who would listen to them The *curés* are avaricious, ignorant, bussed about anything rather than their duty, and most of them have got their livings by illegal means. There is not a house where we had need to call to our aid men of learning, virtue, and zeal, for every two crowns we have sent to Rome they have sent us back as many *carlis*. The Cardinals and Bishops make no scruples of inducting into benefices their *nourrices (Nadi)*; and what is worse, their very valets, cooks, barbers, and lawyers. The inferior priests, by their avarice, ignorance, and dissolute lives, have rendered themselves odious and contemptible to everybody. These are the good remedies that have been adopted to procure the peace of the Church!

Montluc pointed out reforms. One was to have "sermons preached daily before the King, the Queen, and the Lords of the Court; and to replace the vain songs of the maids of honour by the psalms of David." But this was not palatable to a corrupt age. Here is a sketch of morals under the Royal house of Valois, and explains why the advice of the good and zealous bishop was treated with ridicule and scorn.

The Cardinal of Lorraine (says Dr. Félice), and most of the prelates, outraged all the rules of decorum. The Duke of Guise had returned from a night of debauchery when he was assassinated. Margaret of Valois the Princess de Condé, the Duchesse of Nemours, Gaston, Montpensier, and Nevers, led a life of impurity. Two of these ladies, after their lovers had been beheaded, had their heads brought to them, which they kissed, and then embalmed and kept as relics. The manner in which the Duchess of Montpensier, sister to Henry of Guise, preserved the arm of Jacques Clement is well known. Everywhere there was a disgusting combination of blood and superstition The great Lords retained assassins and duellists in their pay, who fought with and killed each other for pastimes, without remorse or pity, being prized against each other daily two and two, four and four, and even by the hundred. It was as easy, at that time, to get the address of an assassin, or a poisoner as it is now-a-days to obtain that of an innkeeper To complete the picture, we will merely add that the regicide, Jacques Clément, was canonised in all the pulpits as the blessed son of St. Dominic, the holy martyr of Jesus Christ. His portrait was set upon the altars, with these words: "St. James Clement, pray for us." When his mother came to Paris, the monks applied to her the words of the Gospel—"Blessed is the womb which bare thee, and the paps which thou hast sucked;" and Pope Sixtus V., to complete the infamy, declared, in full consistory, that the martyrdom of Jacques Clement was comparable, in its bearings on the salvation of the world, with the incarnation and resurrection of Jesus Christ.

This Jacques Clément, our readers are aware, was the assassin of Henry III. The Protestants were persecuted by Louis XIV. that the courtiers might get hold of their confiscated estates at a cheap rate; and, thus, religious zeal was the pretext for indulging avarice. Madame de Maintenon thus wrote to her brother, who was to receive a gratification of 168,000f

I have to employ the money you are going to receive advantageously for some Poitou are going for nothing. The dear season of the Huguenots will not be still more to be sold. You may easily establish yourself handsomely in Poitou.

Dr. Félice gives a heart-rending account of the horrors that ensued on the Revocation of the Edict of Nantes the emigration of the people, loss of their property, and the sufferings they endured. The narrative of the war of the Camisards is well related; and the biographical sketches of the refugee pastors form an interesting chapter. Succeeding, as later times, we see the efforts made by Turgot, the Baron de Breteuil, and Malesherbes, to persuade Louis XVI to correct the monstrous injustice of Louis XIV., and Lafayette, returned from the American War of Independence, added their persuasions to those of Rabaut St. Etienne, to receive the Royal signature in 1787; but it was a very partial measure, for the first article enacted "That the Catholic, Apostolic, and Romish Church shall continue to enjoy *alone* the rights of an established religion." This exclusiveness was not put an end to by the Constituent Assembly in 1789: for, though Article XVIII. was intended to secure liberty of conscience and worship, yet an amended clause was carried in the following terms: "No one shall be disquieted on account of his opinions, even religious ones, *provided* that the manifestation of them does not disturb the public order by law established." However, the Constitution of 1791 restored all liberties to the reformers The Constitution guarantees to every man the exercise of that religious worship to which he is attached."

Here we must close our remarks, for we live too near the times which are treated of in the concluding chapters to comment on them with the strict impartiality and unbiassed judgment that historic truth demands.

LORENZO BENONI; or, Passages in the Life of an Italian. Edited by a Friend. Edinburgh: Constable and Co. London: Hamilton, Adams, and Co. 1851.

In one passage of this amazingly clever volume, the author quotes Mansoni's word for describing the human mind—*guazzabuglio*—a jumble of many things. That is just his own book. We proceed to speak of it with mixed and conflicting feelings—and these occasioned by what some of our readers may not improbably regard as a very secondary and trivial defect, running blent, like an inferior strand or thread through a woof of great general beauty. The defect to which we allude is that of self-sufficiency. Whatever talents the writer may possess he has the further gift or light to see them, and to know them, without the art to conceal this rampant consciousness—and, indeed, to all appearance, without the desire. The life is a real and genuine experience, whoever he may be; but he is too solicitous to impress this from the very outset upon his reader's mind. His account of his school-days, at an excellent establishment in Genoa, is by no means the least interesting part of his rather discursive and fragmentary autobiography. But this account is peculiarly defaced by the blemish we have mentioned—a provoking and, if we may so speak, almost insolent vanity. The prizes and honours he obtained are very well, and considerable art into a pleasing and even exciting narrative; but not with so much art as to forbid or rebuke the suspicion that an uncontrollable sense of self-importance was the uppermost feeling in the author's bosom. He comes before us, we imagine, anonymously (for doubtless *Benoni* is an assumed patronymic); and therefore what design of puffery, it may be asked, could be propose to himself? We answer, first, that if the several charming qualities of his production bear it into popularity, his paternity is still easy to assert at any time; and, secondly, that it is not of any formal plan of inditing his own panegyric that we accuse this concubitor to our miscellaneous literature, but rather of instinctive, inherent, habitual self-admiration. The following is a specimen of an unsuccessful and calamitous attempt at revolution, leaving no traces of abiding influence in his country's history, ought not, perhaps in fairness, to be compared to an author who had deeds of his own to tell which took the whole literary world at the time, and will not be forgotten in any age. But, on the other hand, if, in one sense, it would be absurd to ask the perfection of "Cesar's Commentaries," in every work which professes to give "*passages in the life*" of the writer, yet it is not absurd to remind him of the surpassing modesty of that wonderful production. It is curious that, while secondary ability seems in general to be prone to the art and adroit in the practice *de se faire valoir*, genius of the highest order alone rises above the temptation. Take

(Continued from page 387.)

1321 "Pandora." By W. C. Marshall, R.A. A graceful figure.

1325. "Hercules and Iphicles"—Group, in Marble. By E. Bandel. A very spirited group. The two brothers are represented in the cradle—Iphicles reclining and helpless, whilst the stout little Hercules strangles the two serpents sent by Juno to destroy them.

1331. "The Introduction of Music to the Arcadians." By H. H. Armstead. This is one of two very clever bas-reliefs exhibited by this artist. It consists of three figures: one of them, Apollo, holds a lyre, the chords of which an Arcadian woman ventures to strike; and the effect produced by the sound upon the feelings of the man who is in the rear, between them, is powerfully exemplified in the expression of his features. The outline throughout is extremely graceful.

1333. "Egeria." Sketch for a Fountain. By A. Munro.

The marble statue of a nymph antique
Stood in the shadow: radiant were her limbs
With modesty: her upturned face was bright
With mental glory and serene repose;
The full round arms and figure to the midst
Displayed the charm of chastest nudity;
A flowing drapery round her lower limbs
In ample folds concealed the loveliness,
The majesty, and glory of the form.
One hand was raised, and pointed to the stars,
The other, resting on her snow-white breast,
Seemed as it felt the pulsing of her heart
She stood the symbol of enraptured thought
And holy musing. At her feet, an urn
Poured in a marble fount a constant stream
Of limpid water.

A very graceful little figure, accurately modelled upon the beautiful description in Mackay's poem of the same name.

1346. "Monumental Group of Percy Bysshe Shelley and Mary Woolstonecroft Shelley." By H. Weekes, A. A powerful, but painful composition; representing the dead body of Shelley—the face fearfully death-like, supported on the knees of his widow. The boat, and indications of the sea-shore in the background. It is intended to be executed in marble, and erected in the Priory Church, Christchurch, Hants.

1348. Marble Bust of H.R.H. the Duchess of Gloucester, in her 77th year. By Mrs. M. Thornycroft. A very fine piece of workmanship; the expression bland, and breathing of life; and the flesh admirable for softness and roundness of surface.

NO. 1336 (SCULPTURE). "THE BROTHERS' LITTLE PET."—PORTRAIT GROUP OF THE CHILDREN OF HERBERT INGRAM, ESQ.—BY A. MUNRO.

MARINO FALIERO AND THE SPY.

BY CARL HAAG.

The above-named picture (engraved at page 389) is one of the most spirited and ably-executed productions in this year's Exhibition of the Water-Colour Society. It represents the incident described in Byron's play of "Marino Faliero," where the unhappy old Doge, surrounded by enemies, is watched in his sleep by a spy. The attitude of the former is full of repose and dignity; the latter, by his stealthy walk on tiptoe, and cautious inclination of the head, palpably indicates the mission upon which he is engaged. As a specimen of colouring, this is one of the richest and most harmonious we have ever met with in this medium.

HAPPY TIMES.

BY WILLIAM LEE.

Under the above title is an extremely pretty picture in the New Water-Colour Exhibition, by William Lee (of which we give an Engraving). It represents a group of females, with children, occupied in straw plaiting, at a cottage-door, near St. Albans. The figures are very nicely drawn, and the landscape, and all the et ceteras, thoroughly English and real.

"HAPPY TIMES: STRAW-PLAITING, NEAR ST. ALBANS."—PAINTED BY WILLIAM LEE.—(EXHIBITION OF THE NEW SOCIETY OF PAINTER IN WATER-COLOURS.)

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, May 14, 1853. Supplement.

THE ILLUSTRATED LONDON NEWS

No. 623.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, MAY 21, 1853. [SIXPENCE.

THE DUBLIN EXHIBITION.

It is often said of a too generous but reckless and unthinking man that he has no enemy except himself. Something of the same kind might be said of the Irish people. Their virtues are many, and their failings, like those of the good vicar in Goldsmith's poem of the "Traveller," "lean to virtue's side." Certainly, as far as regards the experience of the present generation, Ireland has had few real enemies, except those born upon her own soil. Were it not for Irishmen, Ireland would not have been so misrepresented as she has been. She has drawn her own portrait for the most part, and the "Saxon" can scarcely be blamed for having believed it to be authentic. It was only when the Saxon visited the country for himself, that he discovered the virtues of the people. So much was this the case, that it became a proverbial saying that every new visitor to Ireland was a new friend. Especially was the country maligned by intriguers and adventurers, whom in former days, not long past, if not at the present time, she permitted to be her representatives in the long-abused Parliament of the "Saxons." While her agitators and demagogues have, even within the last few weeks, been representing her as a bankrupt and utterly ruined country, whose magnates, proprietors, traders, and professional people of all grades possessed merely nominal incomes, and who were unable to bear the extreme hardship of an annual three per cent—though easily borne by similar classes in England and Scotland—Ireland has been endeavouring to prove to all the world that these mischievous declamations were almost, if not entirely, baseless. The Dublin Exhibition is of itself sufficient to show that the Irish have the will and the power to help themselves, and that public spirit is not defunct among them.

Though a consequence, and, to a certain extent, an imitation, of the Great London Exhibition of 1851, that of Dublin in 1853 may claim, in some important respects, a moral pre-eminence over it. London is the metropolis of the world—has a population equal, if not superior, to a third of the whole of Ireland—is the seat of a splendid Court and of a magnificent nobility—is situated on a river into which at every tide enter ships from almost every nation under the sun—and is not only the largest and most populous, but the richest city in either hemisphere. Dublin, on the other hand, though a metropolis in name, is but a provincial city in fact; and, instead of a crowned Queen and her resplendent Court, possesses but a small and shadowy vice-regal establishment, which is supposed to inflict more moral degradation than social benefit. It can boast no wealthy resident nobles; has no merchant princes, to vie with, or excel her patricians in splendour and expense; while her river does not harbour in a twelve-month as many vessels as enter London in a day. And yet, while the Great Exhibition of 1851 needed and obtained Royal patronage, and the subscriptions of the wealthy and well-disposed in all the principal cities and towns of England and Scotland, before its success could be safely predicted by the most sanguine, the Dublin Exhibition, without Royal or patrician support, or any such aids or appliances to establish it, has become what it is the fashion to call "a great fact." At the cost and risk of a single Irishman, whose name until within the last few weeks was scarcely known beyond the circle of the workmen whom he employed, and of the districts in which he laboured as a railway contractor, a new Crystal Palace has been designed, built, opened, and filled with a rich and varied display of objects of art and industry, such as were never before gathered together in any edifice in any part of the world, except at the first Crystal Palace in Hyde-park. To Mr. Dargan, a gentleman who has constructed Irish railways and employed Irish labour to a larger extent than any other Irishman ever did, and who has thus acquired a noble and well-earned fortune, belongs the eminent merit of carrying out the idea. With an impulsive generosity characteristic of even the humblest of his countrymen, he made himself liable at first for £10,000, and ultimately for £100,000, for the construction of the building. Had the Dublin Exhibition proved a failure, Mr. Dargan would have been the loser of this princely sum. If it prove a success, Mr. Dargan will doubtless be reimbursed for his outlay; but, though reimbursed to the full, he will be the gainer of nothing but the gratitude of his countrymen and the esteem of the well-minded in every part of the empire, where his liberality shall be made known. These, however, will be ample rewards to a mind like his. With a zeal as great as that of Mr. Dargan, though displayed in a different manner, Mr. C. P. Roney traversed Europe in every direction, and with almost incredible personal exertion, sought and obtained audiences of Emperors and Kings, and induced them to embellish the Exhibition with some of the choicest treasures of their cabinets, and with some of the finest productions of the art and industry of the countries which they govern. Wherever an object was to be obtained that might be supposed conducive to the success of this great national project, *there* was to be found the indefatigable Mr. Roney, until it seemed to the readers of foreign and local journals that he realised the fable of Sir Boyle Roche's bird, and was in two places at once. The result of these applications to the Royal and other owners of works of art is, that the Dublin Exhibition has been rendered, in one important particular, superior to that of London. Whilst the Hyde Park Exhibition professed to be a collection of the Art and Industry of all nations, it excluded art in that manifestation of it which almost monopolises the name, and admitted no pictures, unless they happened to be executed upon stained glass, when

OPENING OF THE DUBLIN INDUSTRIAL EXHIBITION.—(SEE NEXT PAGE.)

they were tolerated as specimens, not of painting, but of glass manufacture. The promoters of the Dublin Exhibition have avoided this mistake; and the consequence is, an Exhibition within the Exhibition of unrivalled interest and value, and which of itself, independently of other attractions, is sufficient to bring to Dublin many thousands of persons from every part of the British isles.

It may be said that the Irish people count as little or nothing in this matter; and that, had it not been for the accident that Ireland possessed a man like Mr. Dargan, with a liberality as profuse as his means, there would have been no Exhibition in Dublin. But this we cannot admit. The thing might not have been so speedily done; but the enthusiasm that pervades Ireland upon the subject shows that at a period somewhat later it would have been equally well done. Give an Irishman a thing to do, and, if his self-interest or his patriotism be excited or involved, he will do the work with an alacrity seldom surpassed. The blight of apathy and indolence, if it lie at times upon a peasantry fed upon a scanty, precarious, and enervating diet, has never affected the commercial and professional classes; it disappears even from the peasantry whenever a well-founded hope is placed before them, to awaken them from the mental drowsiness produced by that worse than the Lotus—the Potato. The sum already realised by the sale of season-tickets proves that the Irish are in earnest upon the subject, and goes far to justify the expectation that, before it close, the Exhibition will meet with sufficient support from the bulk of the people to pay its expenses.

Though differing from the London Exhibition in one respect, the Dublin Exhibition resembles it in one important defect of management. It was opened at the appointed time, but was opened before it was ready. Scarcely one-tenth of the articles to be exhibited were classified or placed on the inaugural day, and the manufacture of packing-cases was that which was most widely represented in almost every department or the building. Hence, we are unable to state what display of her own peculiar art and industry Ireland has herself contributed to this gathering from all nations. In the Fine Arts we know that her reputation will be nobly sustained; but we have yet to learn what response has been made by her various manufacturers. We do not doubt, however, that the specimens of the useful, as well as the fine arts, which Ireland will contribute, will disprove the assertion of demagogues that Great Britain, the Plague, and the Famine—which they politely class together—have quite ruined the land, and made her people too poor to pay their fair share towards the necessary expenses of the Empire.

THE DUBLIN EXHIBITION.

In our Journal of last week we described the ceremony of the Opening of the Exhibition on Thursday, the 12th inst.; and, upon the preceding page, our Artists have illustrated the impressive scene.

This ceremonial differed slightly from that at the opening of the Crystal Palace in Hyde-park. The music was altogether sacred; but, on the other hand, no public prayer was offered. This arose altogether from motives to which we must accord our praise. Whilst all parties admitted the propriety of opening the Exhibition with prayer, there was a great difference of opinion as to who should officiate; the Roman Catholics objecting to the Primate of Ireland, and insisting upon the right of the head of their Church. Under these circumstances, it became necessary, in order to prevent a religious ceremony becoming the occasion of discord, to compromise the matter, and instead of a prayer pronounced by an Ecclesiastic, to open the Exhibition with hymns and sacred music.

During the week the visitors to the Exhibition have been very numerous, excepting on Monday, when the weather was very unfavourable. The sale of season tickets proceeds satisfactorily. The sum realised by their sale is £16 695. The Fine Arts Hall continues to be the centre of attraction. The arrangements aroused with marvellous rapidity under Mr. Thompson's excellent management, and in the course of a few days, the whole of the articles sent for exhibition will be in their proper places.

In the Southern Hall additional stalls have been fitted up; and further contributions, including some beautiful castings and various other specimens of art and manufactures, have been displayed.

Several additional packages have arrived at the building, including a portion of the French collection and numerous works of art. Amongst the latter are painting by Pickersgill and Frederick Lee, and one by Samuel Lover, which has been suspended under Burton's celebrated picture of "The Blind Girl at the Holy Well." The splendid collection of pictures, which forms so interesting a feature in the Exhibition, has increased even the spacious dimensions of the Fine Arts Court, that the committee have found it necessary to devote additional space to their display.

The floor of the Great Nave is strewn in all directions with packing-cases ready to be opened. In the centre of the hall, the east compartment of Cubitt's double Crystal Dome is filled with a very handsome and elaborately finished specimen of its class. It has been placed and occupies a somewhat smaller space than it will when the transepts, in which arrangements are being made, is in progress of completion. Below the centre dome, at the entrance, a large clock is suspended; and numerous other improvements have been effected throughout the hall. On Monday, the contributions raised in the Royal plate-chest was displayed in the centre of the dais at the western end, and was an object of great admiration and interest. It consists of a magnificent ornament, standing about 24 feet in height, and nearly 20 feet in diameter at the base, representing a Moorish temple, with silver pillars, supporting a richly-gilt dome, and having a fountain in the centre; while around it is a hippodrome, in which are models in silver of the Arabian steeds presented to her Majesty by the Pacha of Egypt. The Arab attendants are also represented, and other devices, elegantly chased and adorned with brilliant enamels, embellish the whole design, of which his Royal Highness Prince Albert is the originator. This beautiful work is a splendid example not only of the Prince's artistic genius, but of his munificent patronage of our Industrial Exhibition, having been expressly manufactured for it by the eminent firm of Garrard, of the Haymarket, London, at a cost of £2000. There is an additional circumstance, however, which renders this princely contribution peculiarly gratifying: the artist who carried out the design, modelled, and finished it, is an Irishman.

In the Northern Hall exhibitors are still busily engaged unpacking and arranging their various productions. The display of textile fabric in this department will be extremely ample and creditable. In the Machinery Court, also, the work of adjusting the immense mechanical combinations proceeds with proportionate rapidity. We may here state that in order to render our forthcoming account of the Exhibition the more perfect than it could be made at present, we have deferred the publication of our Extra Number for a week, until Saturday, June 4.

The Illustrated London News Printing Machine is an object of great attraction in the Exhibition. Next week a Large View of the City of Dublin may be seen working in the building.

A special meeting was held on Monday, in the City-hall, to receive and do all necessary acts upon or in relation to a report from a committee of the entire council in relation to the proposed tribute to Mr. Dargan. The report having been read, proposed, seconded, and spoken to by several members of the corporation, it was unanimously agreed to.

Archæology at the New Crystal Palace.—Mr. Richardson, the sculptor, who restored the Temple Church effigies, has just received the permission of the Masters of the Bench of the Inner and Middle Temple to take casts of these interesting effigies for the adornment of the Mediæval Court of the Crystal Palace, at Sydenham. Thus, the effigies of the great Pembroke, and other illustrious noblemen of that stirring period, will again be side by side with their former Sovereigns—the lion-hearted Richard, King John, and Henry III., casts of whose effigies from Westminster, Fontevraud, and Worcester, are to form part of the archæological collection.

Paris Daily Journal, Edited by the Count De Villedeuil.—This new Parisian paper is devoted to light literature and the fine arts. Among the list of the contributors appear the well-known names of Alexander Dumas, father and son, Paul de Kock, Méry, Gozlan, Karr, C. Terrier, De Goncourt, Roger De Beauvoir, Gaife, and the Count de Villedeuil. The musical department is under the superintendence of the well-known amateur Gatayes. The illustrations are from the pencil of Gavarni. A somewhat new feature in the journal is the publication of a series of portraits of the most eminent living *litterateurs* of France, drawn by the above popular artist. We are able to speak to the fidelity of some of these portraits which occur amongst the numbers which have been sent to us—those of MM. Alphonse Karr, Henry Monnier, De Goncourt, Forgues, and De Banville.

The Caloric Ship "Ericsson."—This ship is now lying at her dock in Williamsburgh. Important alterations are going on in her machinery, which the owners are confident will considerably increase her speed. She is to be ready to sail for London. Captain Ericsson will go out in her to Europe.—*New York Paper*, April 26.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

Paris, Thursday

The health of the Empress is so far re-established as to enable her to drive out in an open carriage; and it is confidently hoped that she will soon be restored from the results of the unfortunate accident which has caused such disappointment to herself and the Emperor—though it will for some time be necessary for her to guard against fatigue or over-exertion.

Although not officially announced, or even acknowledged, it seems probable that the Emperor and Empress will shortly visit the south. We have it on good authority that M. Darral, the physician of Eaux-Bonnes, sent for to Paris to consult with the Empress's physicians in ordinary, has returned to the Pyrenees, with directions to prepare at Eaux-Bonnes a house for the reception of their Majesties. From thence, it appears likely that they will visit St. Sauveur, Bagnères, and other cities, which must, independently of their beauty, have a personal interest for Louis Napoleon, being closely connected with the souvenir of his mother, whose memory is still most popular in that part of the country.

It appears that the ex-Roi Jerome does not at present intend to enter the Palais Royal, but purposes to pass some time in the country, previous to taking possession of his official residence. The Prince Napoleon, contrary to expectation, has decided on shortly entering his apartments there, and, we believe, expresses an intention of fixing a day for regular weekly receptions.

The return of mild weather giving hopes that spring really means to set in, most of the private houses are following the "closing movement," and few, except Ministerial and Ambassadorial receptions now take place.

A rumour that Lord Cowley intends giving a dinner, instead of a ball, on the Queen's birthday, is received with tokens of decided dissatisfaction. The report may, however, be unfounded, and the displeasure premature. The Dit Marquis de Vilumа has been appointed to replace the Marquis de Valdegamas, at the French Court. The Marquis de Vilumа is at present at Naples, where, it is said, he is to be succeeded by M. Salvador Bermudez de Castro, brother of the Minister of Finance.

There is not at this moment a *salon* in Paris where the experiments of the moving table, the hat, the key, the watch, are not nightly tried.

The Porte St. Martin Theatre has just obtained one of the most signal and brilliant successes recorded in its annals, in a drama written by MM. Dumanoir et Dennery, for Frédérick Lemaître, in whose inimitable acting consists the thrilling interest of a piece; in which Frederick Lemaître, supposed to be far advanced in the decline of his powers, has once more placed himself at the summit of his glory, and equalled, if not surpassed, his former self.

It is said that Rossini, requested by the Emperor to compose a new opera for the Académie de Musique, has declined, asserting that his musical career is terminated; but, adding with what sounds a somewhat contradictory proposal—an offer of a mass for the coronation.

FRANCE.

The symptoms of opposition displayed lately in the Legislative Body have become more marked in the debate and division on the Civil Pensions Bill. The Government proposed to take possession of all the pension funds, consisting of drawbacks on salaries, to credit itself with them, and to pay pensions out of the Budget. This would add largely to the estimates. The Civil Pensions Bill was carried by a large majority. The new project of law, which proposes to introduce the penalty of death for political offences into the penal code, from which it had been effaced by the Provisional Government, was, on Saturday last, discussed in the Bureaux very warmly. The deputy who was distinguished by this humane opposition is the Viscount Laguerronière, who, by his writings as by his acts, has rendered no inconsiderable service to the Imperial Government. The Opposition members do not generally object to the restoration of the 86th article of the penal code—which inflicts capital punishment for an attempt to assassinate the Chief of the State, and on the members of his family; but the same terrible penalty awaits all who shall attempt to destroy or to change the Government, or the order of succession to the Throne, or to excite the citizens or inhabitants to arm themselves against the Royal authority." The commissioners of the *Corps Législatif* appointed to examine the bill is composed of MM. Laguerronière, Colonel Regnier, Evariste Bavoux, De Flavigny, and Perret. The majority of the committee are said to be opposed to the bill.

The Empress of the French is so far advanced in convalescence that she has already accompanied the Emperor in a drive to the Bois de Boulogne two or three times.

The Duke de Rianzares, husband of Queen Christina, is now in Paris. Some accounts state that his journey is unconnected with politics, and that he comes up to look after the property of the Queen-Mother. But it is generally believed that one object of his journey is to open negotiations with General Narvaez, by which he may be wanted to uphold royalty in Spain against the friends of constitutional government.

The non-official portion of the *Moniteur* contains an article on the Eastern question, which affirms that there was some reason to fear that one of the results of Prince Menschikoff's mission would be the cancelling of part of the concessions obtained in 1852 by M. de Lavalette for the fathers of the Latin church of the Holy Land. The Cabinet of St. Petersburg has, however, transmitted to the Cabinet of the Tuileries the assurance that it was by no means its intention to compel the Porte to revoke any of the concessions made to us. As to the Prince's demand for a treaty which would place under the protection of Russia the rights and privileges of the Greek church and clergy, the *Moniteur* hints that if Turkey should see its own interest sufficiently to refuse this demand, France and the other European powers would support her in that refusal.

GERMANY.

The Prussian Chambers have been dissolved in a speech from M. de Manteuffel.

The visit of the King of the Belgians to Vienna is regarded by the German press as an event of the highest importance. The Sovereigns of Continental Europe appear at last to have acknowledged the great services which King Leopold has rendered to the cause of peace and order by his skilful solution of two of the most difficult problems in the art of government—to maintain the constitutional liberty of a people surrounded by absolute Powers, and to maintain the national independence of a small country by means of the jealousy of its neighbours. For the first time since he ascended the throne, he has visited the Courts of Berlin and Vienna, to receive there the honours paid to the most eminent Princes of Europe. Leopold has presented his son in person to the Sovereigns who are interested in the maintenance of the rights and the independence of the nations, and he has taken rank in that great confederacy of kings whose throne is the surest pledge of peace. At Vienna the meeting was more than cordial—it was enthusiastic and brilliant. The King of Prussia will return the visit paid him by the Emperor Francis Joseph at Berlin; and it is not improbable that the Emperor of Russia will join the party.

The King of the Belgians, with his son, the Duke of Brabant, were received at Vienna by the Emperor in a way which attracted great attention. The two monarchs walked hand in hand down from the terminus to the place where the Imperial equipages were waiting.

The Duke of Brabant is a handsome, manly but strong-looking youth, who has quite outgrown his strength. His delicacy of health induces his Royal father to take unusual precautionary measures for its preservation.

ITALY.

The Minister of State, Baron Thomas Ward, arrived at Parma, from Florence, on the 12th inst.

By a decree of the Roman Inquisition, dated April 24th, Macaulay's "History of England" is placed in the index of forbidden writings; "Uncle Tom's Cabin" has been prohibited by the Pope. Nine editions of a translation of "Uncle Tom's Cabin" have been published at Naples.

M. Mazzini intended to publish a book at Genoa; but, no sooner had a copy been deposited in the Governor's office than the police waited on the editor and seized the entire edition.

SPAIN

The Marquis of Vilumа is appointed Spanish Ambassador to Paris.

In a Cabinet Council, held on the 12th, under the presidency of the Queen, various measures were submitted by the Minister of Finance. They referred to the suppression of useless functionaries, to improvements in the management of tobacco and salt monopolies, to modifications in the Customs tariff with regard to the importation of certain prohibited articles, &c. The Treasury would probably lose by these changes 800,000 reals annually; but the Minister of Finance was of opinion that the increase in the Customs receipts would more than compensate that temporary loss.

TURKEY

We hear from Constantinople that the Russian Ambassador has been less successful than is generally supposed, and that, in fact, he has been recalled. The French Government have received the assurance that the *status quo* will be maintained in Jerusalem. Prince Menschikoff has demanded the conclusion of a treaty, placing under the protection of Russia the Church and clergy of the Greek persuasion. This is a different question from that of the Holy Places, as it affects Turkish interests. If this question of Protectorate of the Greek Church were to bring about a complication, it would become a European question, engaging on the same grounds France and all the Powers signatories of the treaty of 1841. Meanwhile the armaments in the ports of the Black Sea continue in a state of activity.

In a letter published in a Buckinghamshire paper, dated April 24, Dr. Layard says:—

I hope that all will end peaceably, and that ere long. The Russians have made warlike preparations to a very considerable extent on the Turkish frontiers; but there is every reason to believe that they are merely intended to intimidate, and that no actual employment of these forces is intended. As far as the Christian population of this country is concerned, I find a considerable improvement since my last visit. The Greeks especially are showing great commercial industry, and are making great efforts to acquire knowledge. They are a singularly active and intelligent race, and could be trained to almost anything. Among other signs of the times is a remarkable spirit of religious inquiry, which leads a large number of the Christians of Turkey, especially the Armenians, to Protestantism.

In consequence of the peaceful turn of affairs, Dr. Layard has set out for England to resume his Parliamentary duties.

AMERICA.

By the *Arabia*, we have advices from New York to the 6th inst. The Government expeditions for the survey of the Chinese Seas and the Northern and Southern Pacific Oceans was equipped and nearly ready to start from New York, under the command of Captain Ringgold. The squadron comprises four sailing-vessels and one screw steamer, all armed. The expedition is expected to be absent about three or four years.

The King of the Sandwich Islands has applied to the United States' Government for protection against the designs of France, which threaten his dominions.

Brief accounts from Mexico mention that the United States' Minister had given assurance to the Mexicans that his Government would discountenance the acts of governor Lane, of New Mexico, in regard to the Mesilla Valley. Mr. Bartlett, the United States' Boundary Commissioner, had given his opinion in favour of the Mexican claim.

Santa Anna was still in Mexico on the 17th of April, and was received with great rejoicings, firing of cannon, illuminations, &c.

The accounts from the River Plate are of a most unfavourable character. General Urquiza, having refused to ratify the convention of the 9th of March for a suspension of hostilities, preparatory to a treaty of peace, had marched upon Buenos Ayres and effected a junction with the rebellious forces encamped outside that city. All hopes of a pacific settlement of the dispute had therefore vanished, and both sides were preparing for active warfare.

By the *Humboldt*, we have dates from New York to the 7th inst. A frightful railway accident had occurred on the New York and New-haven Railroad, caused by the carelessness of the engineer. A train from Boston, comprising four passenger and two baggage cars, ran off a draw bridge into the Norwalk River. The whole train was signalled, and the passengers either crushed to death or drowned. Forty-five men were killed on the spot, and many others wounded. This horrible catastrophe had created an indescribable sensation. The draw-bridge over the River Norwalk was raised to admit the passage of a steamer, and the driver of the train, instead of stopping, continued his course at a rate of twenty miles an hour; the whole train then descended bodily a distance of sixty feet into the water below.

Hon. Don. David Merewether had been appointed Governor of New Mexico by President Pierce.

WEST INDIES.

By the *Orinoco* we have news from Jamaica to the 27th April. The Council having rejected the Assembly's Import duty, in consequence of the appropriation clauses tacked to it, the Governor prorogued the Assembly to the 29th, on which day the new session was opened. The Opposition party had determined to re-introduce the bill for the reduction of all public salaries, to the extent of 20 per cent, and not to raise any revenue until the bill were passed. The Council were certain again to reject the retrenchment bill, and public opinion was still more decided against the Governor would then pursue. The House of Assembly, previous to its rupture with the Executive, had, in the vindication of its privileges, imprisoned in the county gaol of Middlesex a personage than the Hon. William Stevenson, one of the Judges of the Supreme and Assize Courts, and had ordered up to the bar of their House Mr. John Castello, the editor of the *Falmouth Post*, for a similar offence to that committed by Mr. Stevenson—namely, a libel upon the Assembly. The Judge, it seems, wrote a letter in the Kingston papers, taunting the Assembly with their "with defeat in the "seven years' war," in allusion to the throwing out of the bill to reduce public salaries for the sixth time. After plainly telling the House that they could not do this "unparalleled and unmitigated wrong," he called them spoliators, violators of public faith, &c. The House of Assembly voted the letter a breach of privilege, and ordered the sergeant-at-arms to take Mr. Stevenson into custody. When the county gaol, and a riot was apprehended. Mr. Stevenson, however, quietly went to the gaol, and the next day he was ordered to be discharged from custody, without any apology. Mr. Stevenson then resigned his commission into the hands of the Governor; and, as Sir Joshua Rowe, the Chief Justice, is absent in England, the whole work of the two courts fell upon Mr. Justice Macdougall. The ship *Lieutenant* had left for Australia, with upwards of 100 emigrants, principally belonging to the substantial middle class. Several ships had also sailed for Calcutta, with hundreds of coolies on board. Discoveries of copper were still being made in different parts of the island.

CAPE OF GOOD HOPE.

The submission of Kreli has been followed by the termination of hostilities with the more powerful Gaika chief Sandilli, and the Kaffir war is now therefore considered. There is no longer any enemy in the field. The despatches previously received reported Sandilli as still withholding his submission; but we now learn that this Abd-el-Kader of the Kaffirs has sued for peace, has presented himself in person before General Catheart, and has accepted for himself and his people the terms imposed by the British Commander. These conditions are to the following effect: The Gaikas, Sandilli's tribe, originally inhabited the highlands of the British Kaffraria, including the Amatola Mountains, and it was in these natural fastnesses that they first defied and afterwards eluded the force of the British arms. Having at length been dislodged from their positions, they were driven across the great river Kei, and, until the late arrangement, were altogether outlawed and proscribed. They are now pardoned; that it is to say, they are released from all personal liabilities on account of the insurrection, and are permitted to recross the Kei and settle themselves anew in British territory. Their old lands and possessions, however, are held to be forfeited; and they are quartered in a fresh district assigned to them by the Governor. Here they are to remain at peace; it being understood that Sandilli, on his part, shall be responsible for the good conduct of his tribe and his subordinate officers; shall answer for the security of the roads and passes in his country; and shall acknowledge allegiance to the British Crown. These terms the Kaffirs have accepted, and the colony, therefore, is once more at peace.

INDIA.

We published in our last the telegraphic message from Trieste in anticipation of the Overland Mail. The letters and papers since received give us further details of the combined attack made for the third time upon the stronghold of the robber chief Myah Thoon (formerly spelled Meeatoun). The attack was made by 1500 troops under Sir J. Cheape, the boats of the Queen's and Company's men-of-war under Captain Tarlton, and a body of Karians under Captain Fyfe. The attack was made on the 19th of March by Sir John Cheape's force, which had to cut a road through a dense jungle in order to approach the Burmese position, the outlets of which were guarded by Captain Tarlton and Captain Fytche to prevent the enemy's escape. After four hours' hard fighting, and after sustaining a loss of 102 rank and file killed and wounded (including thirteen officers), Sir J. Cheape succ-

ceeded in carrying the enemy's position and bayonetting its defenders. Myah Thoon unfortunately escaped for the time with 100 or 200 followers, but Captain Eyche and his harkara went off immediately in pursuit The two field guns, rocket tubes, and rockets, which unfortunately fell into the enemy's possession on the 6th of last month, were re captured, the guns having been used against us in the action. It is to these guns mainly that the heavy loss on the British side is attributed. Lieutenant Cockburn, 18th Royal Irish, is described as being mortally wounded; one letter even places him among the killed. The sergeant-major of the 4th Sikhs is also reported killed, and Conductor Lisbey, of the Rocket Troop, severely wounded. The operations commenced at nine a.m., and ended at one p.m. The sick and wounded have been sent to Rangoon in the steamers Pulagchun and Mahanuddy. Great mortality from cholera and dysentery had prevailed among both troops and camp followers during the expedition.

Much uncertainty prevails regarding the actual state of affairs at Ava. The late King's brother is now believed to be fully established in power, but it is said that he will not hear of any cession of territory, that he is endeavouring to gain time "at any expense of truth and promises;" and that, flushed with his recent success over his own Sovereign, he manifests no anxiety regarding our threatened advance on his capital. The confidence of his advisers, moreover, appears to have been greatly increased by the recent affair at Donabew, and by the desperate resistance of the Danubi leader, who repulsed our troops on that occasion. This chief, Myah Thoon, was an outlaw during the reign of the old King, but his recent success, and the desperate stand which he is still making in the jungle, have wiped away the recollection of his crimes. The Court have not only sent him, as a recompense for his fidelity, a string of titles the highest in their power to bestow, but have invested him with legal authority over the entire district to which his operations have been confined; and this since the publication of the Governor-General's proclamation. The recent defeat of Myah Thoon by Sir J. Cheape will probably induce the King to alter his tone; if not, as the rains will set in very shortly, and Ava will be in six weeks as accessible as Frome, our troops will advance on his capital, and the fact of additional troops having been ordered up to Prome appears to indicate that such a measure is already in contemplation.

The recent legalisation of the trade in opium by the Emperor of China may possibly be attended with very serious results to India. The financial position of the Company's Government is so anomalous that to make its income meet its expenditure it is dependent on two circumstances—first, that the Chinese should persist in eating opium; and secondly, that the Emperor should prohibit the home production or importation of the drug. The China merchants of Bombay appear, however, to doubt whether the Chinese Government will be able to enforce at so distant a port as Canton (9000 miles from Pekin by sea, and not much nearer by land) an edict which would curtail so considerably the perquisites of the mandarins of the coast provinces

CHINA

The rebellion has now assumed a most formidable aspect. The insurgents have traversed the empire from the south west to the north-east. They have hitherto repulsed the Royal troops—they have either captured, or are on the point of capturing, the city of Nankin—they are menacing Pekin with a similar fate; and, according to all computable chances, they will succeed thus far in subverting the Government of China. The Chinese empire is irregularly bisected by a great river called the Yang-tse-Kiang, towards the mouth of which Nankin, the southern Imperial capital, is situated The rebels were masters of the whole course of this stream, and, as it was added, of the whole country to the south of it, excepting a portion of the seaboard. The army of the insurgents was undoubtedly on the advance—its right wing from Nankin and its left from Vou-tchan or Woochang the destination of the whole force being Pekin, the northern capital of the empire, and its centre of operations The forces were to be composed by two Imperial armies, directed against their right and left divisions respectively, and on the event of this collision depended the fate of the dynasty, and, perhaps, the prospects of China. Meanwhile the rapid advance of the rebels had spread consternation and alarm through Nankin and other wealthy cities, and the Imperial officials seemed entirely paralyzed and powerless. It appears that application had been made by the Viceroy of Soochau to the English Consul at Shanghai to co-operate against the rebel force for the protection of Nankin Our latest advices from Shanghai report the rebel force as investing Nankin, which it was expected would fall; and it is further stated that delegates had been sent from Soochau to the rebel leaders, offering a large sum to secure that wealthy city from molestation and plunder. There are also reports that a portion of the rebel force had proceeded north. The native bankers and wealthy people were removing their families and treasure into the country, and goods had been sent from Soochau to Shanghai for safety At Shanghai there was a general panic; bankers' and merchants' houses were shut up, and an entire stoppage was put to trade. Money was so scarce that the duties of exports had to be arranged by giving security, in bills and other property to the Consul. The naval force that must now be off Shanghai is calculated to restore confidence in that vicinity, and if the rebels proceed north, and do not delay round Nankin and the neighbouring country, internal trade may be resumed sooner than the present state of affairs would lead one to expect.

It is not probable that anything will be attempted by the British force beyond the protection of British property. A war-steamer, the *Hermes*—in which was Sir G. Bonham, her Majesty's Plenipotentiary—left Hong-Kong for Shanghai on the 12th inst., in aid of the small force already in that port; and the French and American navies are also represented as on the spot. No doubt more urgent applications will be made to the global French and American naval commanders, by the Imperial authorities, for their interference and protection; and the next advices will, accordingly, be awaited with great interest.

PROVINCIAL INTELLIGENCE.

THE LIVERPOOL ELECTION.—It is expected that the Parliamentary inquiry into the last Liverpool election will prove it to be one of the worst cases yet brought to light. Persons have been for some time past in Liverpool collecting evidence. It is said that between £10,000 and £12,000 was spent one forenoon.

BARNSTAPLE ELECTION.—There are already three candidates for the representation of this borough, both seats for which have been declared vacant, in consequence of the bribery committed at the last election Lord Ebrington, the son of the Lord Lieutenant, who was defeated at the last election, has again come forward, as an avowed Ministerialist. Mr. Tite, an eminent architect, has also issued an address, in which he declares himself to be a supporter of the Government The only Conservative candidate is Mr. Gulmess, who comes forward on the same principles as those which were advocated by the late members.

GLASGOW SUSPENSION-BRIDGE.—The roadway of this bridge is now completed, and was opened to the public on Wednesday last. In passing across, the undulation is very slightly observed, but the, which cannot altogether be avoided in suspension-bridges, will be considerably remedied by the additional back-stays.

LUNAR RAINBOW.—On Monday evening last this rare and beautiful phenomenon was visible in the heavens, and excited a considerable degree of interest. At Woodford, in Essex, it was distinctly seen from a quarter to half-past twelve a.m. The arch was as perfect as though formed by the sun.

VERDICT OF MANSLAUGHTER AGAINST RAILWAY DIRECTORS.—On the 6th inst. an accident occurred on the York and North Midland Railway, by which John Thompson, an engine-driver, and Joseph Sykes, a stoker, met their deaths. The inquest has been adjourned from time to time, until Tuesday last, when the Government inspector having been examined, stated that the rails were not quite in proper order, but that the train was driven too fast for safety. The Coroner then left it to the jury to determine whether the accident arose from excessive speed or from any defect in the engine or line. If they were of opinion that the former was the case, that was the act of the driver now dead; but if they adopted the latter position, he considered the directors of the company were criminally responsible. The jury, after about twenty minutes' deliberation, found a verdict of manslaughter against the directors. A sufficient number had agreed, but there were two who dissented from the rest of the jurymen.

THE ISLE OF WIGHT SAVINGS-BANK.—The accounts of the Isle of Wight Savings bank, which has recently been prebated, have been audited, and the particulars made known. The amount of 2646 banbooks due to depositors is £66,778 12s. 10d. The available assets amount to £68,622 11s. 10d. Amount of defalcations, £3156 1s. The depositors will receive a dividend from this mismilled savings-bank of 17s. 6d. in the pound.

DECREASE OF PAUPERISM AND NOVEL APPLICATION.—The master of the Shepton Mallet Union, in consequence of the limited number of women therein, was under the necessity of applying to the board of guardians for permission to hire such as were required to perform the necessary washing &c., in the house, the inmates consisting almost entirely of aged persons, children, and sick. There has been no able-bodied man in the house for a considerable time, and the number in this union is less than that of the preceding year by nearly 30 per cent.

THE COURT.

OSBORNE.—The arrival of her Royal Highness the Duchess of Kent at Osborne, on Wednesday, on a visit to her Majesty and the Prince Consort, has given the only incident giving variety to Court life during the past week. The Queen and his Royal Highness have taken their accustomed driving and walking exercise daily, generally accompanied by the Royal children. On Tuesday Sir James Graham and Captain Shepherd, Deputy-Chairman of the East India Company, arrived at Osborne, and had the honour of dining with her Majesty. On Wednesday morning, the Prince Consort, accompanied by Sir James Graham, embarked in the *Fairy* Royal yacht, and proceeded towards the Needles. The Prince returned to Osborne early in the afternoon. Their Royal Highnesses the Duchess of Cambridge and the Princess Mary are expected to arrive at Osborne early in the ensuing week, on a visit to her Majesty.

The Marchioness of Ely has succeeded the Countess of Mount Edgecumbe as Lady-in-Waiting to the Queen.

Her Majesty has announced that her birthday will be celebrated on Tuesday, the 24th inst. Her Majesty has also been pleased to announce her intention of holding Drawing-rooms at St. James's Palace, on the following days, at two o'clock:—Thursday, 2nd June; Tuesday, 14th June; and Thursday, 23rd June next.

Her Royal Highness the Duchess of Kent, and her Serene Highness the Princess Adelaide of Hohenlohe, left town on Wednesday morning, by the London and South Western Railway, for Osborne, Isle of Wight, on a visit to the Queen. The Royal Duchess was attended by Lady Anna Maria Dawson and Lieut.-Colonel F. Seymour.

His Excellency the Portuguese Minister and the Countess de Lavradio have returned to the residence of the Portuguese Legation, in Gloucester place, from St. Leonard's-on-Sea, where his Excellency had been staying for some time for the benefit of his health.

The Marquis of Londonderry has returned to Holderness House from Brighton. The noble Marquis's grand annual military banquet will take place this evening (Saturday).

The Marquis of Westminster has been suffering from a severe attack of gout for some days past. The family have arrived at Motcombe from Eaton-hall.

The Countess Frances Waldegrave and Mr. Harcourt, M.P., have left town for Nuneham park, where they will pass the recess. On their return to town, they will occupy the Earl of Warwick's mansion in Carlton-gardens, which Mr. Harcourt has taken for a term of years

ST. GABRIEL'S CHURCH, PIMLICO.—At the consecration of this new church, last week, the musical arrangements were under the direction of Mr. Brownsmith, the organist of the church; and not of Mr. Best, as stated at page 374.

LONDON AND SOUTH-WESTERN RAILWAY.—On Thursday a special meeting of this company was held at the Assembly-rooms, Yorkroad the Hon. Francis Scott, M.P., in the chair when, after a long and animated discussion, it was resolved to oppose the Great Western Devon and Dorset scheme, and support a coast line from Dorchester, via Bridport, to Exeter.

A meeting of bankers, merchants, and others took place on Tuesday afternoon at the London Tavern, when a series of resolutions in support of the establishment of a Mercantile and Maritime College were unanimously carried.

The American steam-ships *Albatross* and *Canonicus* have been lost: the former near Vera Cruz, and the latter near the Brazos.

A correspondent states that, if the decimal standard should be adopted, all the gold and silver coinage will have to be re-melted to the new measure.

Six hundred slaves were landed in Cuba the latter end of April last by the notorious barque *Lady Suffolk*.

Mr. Alexander Somerville, "one who has whistled at the plough," is about to emigrate to Australia, and a committee of friends are raising the means. The Earl of Aberdeen has forwarded £100 from the Royal bounty fund, with a very complimentary letter.

The clipper barque *Record*, of Teignmouth, was totally lost off Penguin Island, Patagonia, on the 17th January last—crew saved.

DESTRUCTION OF THE NORTH SHORE COTTON-MILL, AT LIVERPOOL, BY FIRE

GREAT FIRE AT LIVERPOOL

On the night of Tuesday last, the North Shore Mill, on the banks of the Canal, near Vauxhall-road, the only cotton factory Liverpool possessed, was totally destroyed by fire. The building was an immense structure, even of its kind, and about 1000 people were employed within its walls. The factory, which was cruciform, was eight stories in height, and, after stretching a long front to the bank of the canal, extended backwards the same length for a considerable distance; some idea of the extent of the place may be formed probably from the fact that there were 365 windows in it. The building belonged formerly to Mr. R. F. North, but is now the property of Messrs Brogden. Attached to it, a long low cotton shed stretches to the southward, and in this was stored cotton valued at from £12,000 to £20,000. Parallel with this shed were a series of terraced cottage-houses, four stories in height, erected for the use of the workpeople, and the only effort that could be made was the endeavour to save the shed and these.

Being holiday time, no one was on the property when the fire was first discovered; but Mr. Harrison, the cashier, was quickly on the spot.

In its suddenness and violence the fire exceeded any which has been witnessed in Liverpool for many years The only symptom of the impending destruction visible a little before nine o'clock appeared to be an unusually brilliant gaslight in the mixing-room, on the top story. In half an hour after the whole of the immense structure was one mass of flame. The fire-engines arrived with their usual promptitude, but the building was already doomed, and Mr. Hewitt's judicious care was to prevent the extension of the mischief. Every minute showed the hopelessness of attempting to save any portion of the twin building. Floor after floor disappeared, till at last it became evident that, so far as the mill itself was concerned, it was fated to total destruction.

Owing to the dryness of the canal, there was to some degree an insufficiency of water, but what could be had, all other efforts being hopeless, was judiciously applied to save the cotton-shed and the cottages. The neighbouring cottagers were necessarily alarmed, but it was not till the fire actually caught one of the proximate houses that the inmates thought seriously of removal. Then nothing could exceed their panic; and all ages and sexes were to be seen struggling with their moveables through the congregated crowd.

The fire can only be said to have really lasted two hours; but at its climax, about half-past 10 o'clock, the sight was one of the most astounding grandeur. For an hour before, the heavens had been illuminated, and an immense concourse (estimated at 10,000) assembled at the scene of the disaster. The unfortunate factory, with the exception of the dark outline of walls not yet fallen, seemed one mass of burnished gold The police arrangements were excellent, and the multitude were most obedient.

The origin of the fire is at present involved in mystery; but we believe that, during the cessation of the ordinary labour, some bricklayers and joiners had been employed, and that they were working on the previous evening till eight o'clock.

The value of the mill, machinery, and stock, were estimated from £70,000 to £80,000; and insurances in a great variety of offices have been effected, it is understood, to about half the full amount. Undoubtedly, in one sense, the greatest loss is that sustained by the 1000 workpeople by unexpectedly thrown out of bread.

"BILLY BOWLEGS" AND SUITE.

THE aboriginal group portrayed upon the next page represents a party of Indians, as they lately appeared in New York, in their native costume, from the western wilds. The party consists of the famous Billy Bowlegs, four Indian chiefs, and an interpreter (here represented), besides two other chiefs not included in the picture. Billy is himself a short, stout built, and ordinary looking man, of about forty years of age; and was clad in a calico frock, leggings, a belt or two, and a sort of short cloak. On his head he wore a kind of turban, enclosed in a broad silver band, and surmounted by a profusion of black ostrich feathers, by which he is distinguished from the other chiefs. Billy is the hereditary chief of the Seminoles, and nephew of Micconopy, the old chief, who ruled the tribe at the commencement of the Seminole War in 1835; he is also a relative of King Payne, who gave the Americans so much trouble in Georgia and its vicinity in 1812. Another of the party is John Jumper, a subordinate chief of the Seminoles. Necose Emanthla is likewise a Seminole chief whose people are yet in Florida. Necose dresses in a calico shirt, fringed and ruffely embroidered around the edges; he also wears a turban, formed of a narrow shawl, wound several times around his head. Chocote Tustenuggee, a Micosaukie chief, living at Sam Jones's settlement, is also one of the members, and is, perhaps, the best-looking of the whole delegation. Fusatchee Emanthla is another of the red skin visitors; he is probably a subordinate chief of the Seminoles, to which tribe he belongs. Sarparkee Yoholo and Fasachemilla are two Seminole chiefs, who, with their people, have removed from Florida to Arkansas. They visited Florida for the purpose of inducing the Indians to emigrate to the West. They say there is better hunting and more comfort in their new home than the Florida Indians can possibly form. All together form a wild group of the red race of America. Abram, the Negro interpreter, is no unimportant personage in the suite.

The whole delegation appears to look up to Billy Bowlegs as their leader, and he is not at all modest in the matter, for he always assumes the chief prerogatives. Nor does he do this with any show of overbearingness. He is surly, and at all times cross and unmanageable. There seems to be but little of the "noble Indian" about him. When Osceola was alive, Billy Bowlegs was hardly known, except among his own people. After the death of that celebrated chief, however, Billy took rank, and soon became known as a wily, dangerous foe of the white man. He soon gained the reputation of being treacherous and cruel; and has, down to the present time, proved a troublesome fellow. He now pretends that he is willing, and, in fact, desirous to emigrate; he says that game is getting scarce in Florida, and he thinks he can do much better at the West. He is utterly surprised at what he has seen since he came North; and is perfectly satisfied that, with the big guns, powerful steamboats, and "much fellow" which he finds, the great Seminole nation itself must yield before the white man.

The several Portraits are from Daguerréotypes, by Meade Brothers, New York

BUDDHU'S TOOTH, CEYLON.

THE Delada, or Sacred Tooth of Buddhu, the holy relic of the Slughalese, is deposited in a small chamber of one of the temples, which is termed the Malegawa, close to the palace of Kandy, the mountain capital of the kings of this celebrated *eastern city, island of Ceylon*. Round the doorway are exquisite carvings of elephants, and various other devices, executed on ivory; while on one side stands an altar covered with sweet-smelling flowers, placed as an offering to their god. The apartment is brilliantly lighted by oil lamps, and is lined with rich figured brocade, interwoven with threads of gold; in the centre of which, on a table of solid embossed silver, stands the sacred relic, encased within six shrines of pure gold, the innermost containing the Delada, lying in the heart of a golden lotus

The largest *caranduo* (which means shrine) is upwards of five feet in height, of the *dagoba* form, and is loaded with a profusion of massy gold chains, ornamented with the most rare and costly gems, rubies, sapphires, emeralds, amethysts, cat's eyes, and other stones of immense value; all of which have been presented, from time to time, as offerings to the sacred relic. The apartment is strongly impregnated with the scent of the sweet-smelling Buddhu flowers, which are tastefully arranged in various devices around the object of their worship. In front of the silver table, and imme-

"BILLY BOWLEGS," AND HIS SUITE OF INDIAN CHIEFS.—FROM A DAGUERREOTYPE BY MEADE, BROTHERS, NEW YORK.—(SEE PRECEDING PAGE.)

diately opposite to the shrine, is placed an oval table, on which the devotees deposit their offerings. The Tooth of Buddhu was originally deposited in the great Temple of Juggernath, and, according to the "Mahawanso" (one of the native ancient histories), was first brought to Ceylon A.D. 400, and is considered their most holy relic, being visited by pilgrims from the remotees parts of India, Burmah, and Siam.

The genuineness of the Delada has been doubted. So far from its being the tooth of a man, it is said to be a piece of discoloured ivory, about two inches in length, and one inch in diameter, slightly curved; yet it is considered by the Kandians the palladium of the country. The Buddhists have a superstitious belief, that whatever people or nation may become possessed of it, have a right to govern Ceylon. In 1815, when the British forces, after a severe struggle, overcame the Kandians and captured their chiefs, the taking of the tooth at once restored peace, and put an effectual stop to the rebellion. The natives exclaimed that "the English were masters of the country," as they had obtained possession of the Delada. On the 5th of October, 1847, Lord Torrington desired it to be handed over to two Kandian priests and one Kandian chief; at which time a deal of excitement prevailed in Kandy. The rebellion broke out in July, 1848; but whether this circumstance had anything to do with the disturbance, I do not pretend to say.

According to one of the native historians—

Goutama Buddhu died 543 years before the Christian era. His remains were consumed on a funeral pile, out of which King Khoima rescued the Delada. It was afterwards sent to India, and treated with much respect for centuries; was afterwards carried to Poelalup; and here commence what the Buddhists term "the trials of the tooth." It was here ordered to be thrown into a pit, filled with burning charcoal, whence, they assert, "it burst forth in rays of light, which illumined the universe. It was afterwards buried deep in the earth, and trodden down by elephants, but reappeared in the heart of a golden lotus flower. It was then cast into a filthy pool, which instantly became a clear pond, covered with the beautiful lotus flowers, on one of which it was found; but the Ahollakes believed these wonders to be deceptions, and placed the Delada on an anvil; the hammer was raised to destroy it, when it instantly sank into the iron. The King now permitted the Buddhists to prove the truth of their faith, who [illegible] who built the temple, and had made many oblations to the Delada, [illegible] to remove with great effulgence from the anvil and float in water in a golden cup, which he held in his hand. [illegible]

THE DELADA, OR SACRED TOOTH OF BUDDHU.

acknowledged that these trials were the means of procuring a triumph to true religion.

THE EXHIBITION OF THE DELADA.—The Tooth of Buddhu was exhibited, and the offerings continued, for three successive days. On the [illegible] and day were [illegible] wretched specimens of the science of defence were exhibited before the Governor, both with the fists and wooden swords and targets. [illegible] was a display of native fireworks, well made [illegible] without intermission, during the continuance of this festival, there was kept up a continual din of tom-toms, and sounding of Kandian pipes and chonque-shells. The Kandian pipe is a musical instrument in power and melody nearly resembling a penny whistle; but the chonque is a shell, with a mouth-piece attached, and, under the influence of powerful lungs, is a most effective instrument for producing a [illegible] which was [illegible] resembling between the bellowing of a [illegible] and the howling of a forsaken dog. I presume the natives considered these sounds peculiarly adapted for their sacred music, as such instruments are to be found in all temples, and may be heard at all hours, to the dire annoyance of any European who attempts to sleep in their neighbourhood. The principal temporary building was 200 feet in length, of proportionate breadth, and supported by six lines of pillars; it was under this that the tooth was exhibited, and the whole was ornamented with [illegible] and flowers. So gracefully were these [illegible] that the [illegible] of their decorations, [illegible] which, if transposed to stone, would [illegible] Corinthian [illegible] the [illegible] rich abaci, [illegible] elegant [illegible] of the temporary [illegible] picturesque dress [illegible] of people [illegible] and the [illegible] and [illegible] the [illegible] and the wind [illegible] the [illegible] Kandian capital formed an appropriate landscape.—*Forbes's Ceylon.*

In the month of August, 1847, through the kindness of Sir J. Emerson Tennant, the Colonial Secretary, I obtained admission to the Malegawa (Temple), at Kandy, where I made the above Sketch; but was, however, obliged several times to leave the sanctuary on the approach of devotees, who came to lay offerings before the shrine, as they would not permit me to witness the ceremony; and the patience of the priests seemed pretty well exhausted before my drawings were completed.

A. NICHOLL.

THE MALEGAWA TEMPLE, IN CEYLON, THE DEPOSITORY OF "BUDDHU'S TOOTH."

NEW HIGH-WATER LANDING-PIER, AT MARGATE.

MONUMENT TO THE LATE SIR ROBERT PEEL, AT FORFAR.

WERE anything wanting to testify to the wide appreciation of the statesmanship of the late Sir Robert Peel, it would be found in the circumstance that the small county town of Forfarshire, with a population of some 9000 inhabitants, the bulk of whom are weavers, was the first to erect a memorial to his name. As our Illustration will show, their tribute, considering the means of those who raised it, is very creditable as a work of art.

The memorial was begun and finished during the summer of 1850, with the exception of the bust, which was placed on its pedestal a few weeks ago. The monument occupies a very commanding site, within the new cemetery to the south of the town, and is a conspicuous object for miles around. It stands about forty-five feet high, and is built of freestone ashlar, brought from the neighbourhood of St. Andrews. The bust is cut from a block of Craigleith stone, and is the production of Mr. William Anderson, of Perth, a young sculptor of promise, to whose

MONUMENT TO THE LATE SIR ROBERT PEEL, AT FORFAR.

liberality in executing it, at an almost nominal charge, the committee are indebted for being able to complete the structure, which otherwise they could not have accomplished with the funds at their disposal. The architect of the monument is Mr. James Maclaren, of Dundee, who design was selected by the committee from thirty-one submitted in competition.

NEW HIGH-WATER LANDING-PIER, MARGATE.

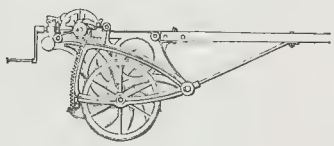
THERE are some events of so great an importance to the locality in which they occur as to call forth one undivided feeling of interest; and this was manifested on driving the first pile of the proposed High water Landing-pier at Margate, on Tuesday, the 3rd instant. From an early hour in the morning it was quite evident that some event of an unusual character was about to take place; flags were hoisted at every prominent part of the town, and the church bells rang their merriest peal. From the head of the present jetty, and extending far into the sea, festal flags of various hues and devices were seen rising, as it were, from the still waters, marking both the direction and extent of the proposed structure. The day was singularly unpropitious; but this, if it cast some damp on the spectators, certainly had no effect on the proceedings. At twelve o'clock the whole of the shops were closed, so as to afford every person an opportunity of witnessing the ceremony; and of this they generally availed themselves: every desirable spot near the scene of action was crowded with spectators, the windows of the houses in the neighbourhood were lined with anxious faces, and even the summits of the neighbouring cliffs were fully occupied. The Duke's Head Hotel had been engaged by the Directors of the Pier Company for those ladies who were pleased to grace the ceremony with their presence. At two o'clock the procession moved from the above hotel. It was headed by the Vicar (the Rev. J. F. Lingham), accompanied by the Rev. F. Prosser, Incumbent of Trinity Church, and the rest of the local clergy; and followed by the Chairman of the Pier Directors, G. Y. Hunter, Esq.; with the High Constable, F. W. Cobb, Esq. After these came the Directors and the officers of the Company, the magistrates, and the other authorities of the town. On arriving at the spot where the first pile was to be placed (around which a suitable platform had been erected), a prayer composed for the occasion was offered up by the Rev. the Vicar, which was listened to by the large concourse assembled with becoming attention. The powerful driving machine was next put into motion by the Chairman of the Directors; and, by its aid, the first pile was driven into its place. A salute then told to the spectators that this work, so necessary to the prosperity of their town, had fairly commenced; and the cheers with which they responded showed that they fully appreciated the importance of the event.

In the evening upwards of a hundred gentlemen dined at the Town-hall. The chair was occupied by G. Y. Hunter, Esq., supported by the clergy, magistrates, &c.; and the day, so auspiciously begun, was concluded with a hearty wish from all, that those interested in the work might, at the fitting time, re-assemble to celebrate its completion.

This Pier, when completed, will stretch out into the sea nearly 1300 feet. It is in spans of 60 feet each, the superstructure resting upon piers formed by clusters of iron columns, as will be seen by the Sketch. The width is 20 feet; and it is increased to 40 feet at the head, which is a substantial timber structure, for the accommodation of steam-vessels and shipping, the foundations of which will be formed of wrought-iron screw piles. In all other respects, the structure is of iron, with the modern wrought-iron plate girders, recently so much used in railway bridges, which are of great strength. The approach will be on either side of the present Droit Office, and will be a bold and commodious entrance, being 80 feet in width at the shore. The Pier will be accessible to steam and other vessels at all states of the tide, the height of the flooring being 15 feet above high water. It will be one of the handsomest landing-places on the coast; and, as a pier, the first of its construction erected. The work is being carried out by Messrs. Birch, the engineers, of London; and Mr. Bastow, of Hartlepool, as contractor.

SAMUELSON'S PATENT DIGGING MACHINE.

IT is well known that the produce of land cultivated by market-gardeners and by cottagers far exceeds that obtained from the same area by the farmer. That excess is obtained chiefly at the expense of increased labour in deep tillage, irrigating, singling, and cleansing. It is only of late that a serious effort has been made to assimilate our practice as farmers to that of the gardener. In the growth of root crops the water-drill is but just beginning to perform that in the field, the omission of which in the garden would be considered as the height of neglect. In growing corn, we still adhere to the extravagant practice of thick sowing, whether broad cast or by the drill; though we may see in the labourer's allotments how much superior, both in the straw and in the ear, is the crop which he has "dibbled" with one-third the quantity of seed. The value of horse-hoeing is doubted by many who would not allow a weed to remain in their gardens; and we still endeavour to



SAMUELSON'S PATENT DIGGING MACHINE.

make up by waggon-loads of manure and by tons of guano for imperfect tillage and want of drainage, which permit their most valuable constituents to be washed off the surface into the ditches and streams; whereas, by converting our fields by deep tillage into one vast filtering bed for their retention, we should not only avoid this waste, but avail ourselves to the utmost of the valuable dressings that descend with the rains of heaven, the ammonia contained in which, according to our chemists, represents an annual value of quite twenty shillings per acre, estimated at the price of guano

It is to the latter element of cultivation, namely the effective pulverization of the soil and preparation of the seed-bed, that Mr. Samuelson, the well-known agricultural engineer of Banbury, has contributed the invention of his digging-machine, which has been for some time past at

SAMUELSON'S PATENT DIGGING MACHINE.

work in that neighbourhood, and which we illustrate as it appeared in operation on the farm occupied by Mr. Wm. Calese, at Adderbury, Oxfordshire. It consists essentially of several series of slender steel prongs, so shaped in curve and section as to penetrate the soil easily by the mere weight of the framing, which contains them; each series resembling the spokes of a wheel without the tyre, and all the wheels being caused to revolve by the draught of the horses, whilst imbedded in the earth up to what may be called their naves. The spokes or prongs bring up the soil, and allow it to fall backward, thoroughly pulverized and mixed, in a form not unlike the back-water from a paddle-wheel. In the upper portion of their revolution they pass between a corresponding number of strong iron bars which scrape away any earth or weeds adhering to them. Although, like all other tillage implements, it works best in dry weather, the digger was used with advantage during the early spring, when it was hardly possible to plough at all; it also clears itself well of any stones which it may pick out of the ground.

From the description which we have given, it will appear that it is, in fact, a trenching implement, propelled by horses—locomoting, and partially bringing the subsoil to the surface, and thoroughly reducing the whole. like the fork; and not merely clearing off a slice, and reversing it like the plough: but, as it only requires four or five horses to work it when set to dig ten inches deep by three feet in width, being equal to four acres dug in a working day of seven hours, in soils where it is rare to see less than three horses ploughing only one-fourth of that breadth to a depth of barely six inches, it is obvious that, apart from the superiority of the result, there is positive economy in the power applied. Circular motion, which general accompanies the application of steam-power, will, we trust, in this instance, as in that of the horse-power thrashing machine, prove to be only its precursor, meanwhile, it is perhaps quite as well, with reference to the speedy and general adoption of this new cultivating machine, that its introduction is not dependent, in the first instance, upon that of the steam-engine.

In conclusion, we must not omit to notice the application of the "Digger" to works of road formation and excavating generally. It moves as much surface soil in a day as would require forty to sixty men with the spade.

CALENDAR FOR THE WEEK.

SUNDAY, May 22.—Trinity Sunday. Alexander Pope born, 1688.
MONDAY, 23.—Francis attempted to shoot the Queen, 1842. Dr. Paley died, 180
TUESDAY, 24. Queen Victoria born, 1819. Calvin died, 1564
WEDNESDAY, 25. Princess Helena born, 1846. Sir H. Davy died, 1829.
THURSDAY, 26. St. Augustine, first Archbishop of Canterbury.
FRIDAY, 27. Daniel Burn, 1766.
SATURDAY, 28.—William Pitt born, 1759.

THE DUBLIN GREAT EXHIBITION.

In order to render our Illustrated Account of the DUBLIN EXHIBITION the more complete, the publication of the DOUBLE NUMBER, announced for MAY 28, is deferred until JUNE 4.

This Double Number will contain Splendid Engravings of the most interesting objects exhibited.

Subscribers in Ireland are requested to apply early to W. H. SMITH and SON, to secure copies. New Subscribers should send subscriptions for a term of not less than Thirteen Numbers. Single Copies. Sixpence each; Double Numbers, extra.

W. H. SMITH and SON, Publishers for Ireland, Eden-quay and Dublin Exhibition; and at the Office, 198, Strand, London

A Large View of the City of Dublin, printed in the Exhibition Building, price Sixpence.

TO CORRESPONDENTS.

A READER.—The only way in which the tone of the negative can be darkened is by using the mixture of gallic acid and nitrate of silver of greater strength.

EAST NORFOLK.—Oxide of silver cannot be dissolved in cyanide of potassium, unless the latter be in solution.

MINNIE.—The daughters of Lord Seymour bear the courtesy title of "Lady" as the grand daughters of a Duke. We apprehend, however, that this courtesy custom is scarcely tenable.

HERALDRY.—On marrying any daughter of a gentleman entitled to ARMS, you must *impale* her coat with your own, unless the lady be an heiress or co-heiress, and then you carry your wife's arms on an escutcheon of pretence

A.—Our space forbids us to enter on the genealogical details necessary to supply our correspondent with the desired information.

C. S. M. (an old subscriber).—The title of "Captain" is seldom or never borne by a Captain of Militia except on actual duty. It scarcely seems correct for him to do so, and is certainly not in good taste.

JURIST.—There would be no impropriety in your adding your Christian names in the way you state

T. T. S. and W.—We cannot ascertain the arms of the family named.

INVESTIGATOR.—Arms of Edy and Edye: Gu. three boys' heads couped at the shoulders arg.

NEANIAS.—A reference to the family pedigree and old family papers might indicate the origin and the alterations of a surname

PENDGER.—John Nevill, last Lord Latimer, was fifth in descent from Ralph, 1st Earl of Westmorland. Sir George Nevill, who was summoned to Parliament as Baron Latimer in 1432, was son of Ralph, 1st Earl of Westmorland, by Joan, his second wife, daughter of John of Gaunt. There was a previous Lord Latimer, of the House of Nevill—viz., John Nevill, son of Lord Nevill, of Raby, by Elizabeth his wife, only daughter and heiress of William Latimer, Lord Latimer. His Lordship's Barony seems now to be vested in Lord Willoughby de Broke.

A CONSTANT READER.—The Royal pedigree of the late Duke of Wellington, showing his Grace's descent through the Hills, Boyles, O'Bryens, Butlers, and Bohuns, from King Edward I, was given in our Journal in October last. Helen, present Countess of Mornington, has also a direct descent from the same source, through the families of Porterfield, Boyd, Cunninghame, Hamilton, Beaufort, and Holland.

A FIVE YEARS' SUBSCRIBER.—*Arms of Greaves*: Quarterly gu. and vert, an eagle displayed, holding in its beak a slip of oak fructed or. *Crest*: On a mound vert, a stag trippant, holding in its mouth a slip of oak fructed ppr. *Motto*: In veritate triumpho.

A SUBSCRIBER.—Burke's "Peerage"

A CONSTANT SUBSCRIBER.—Quakers never use the designations of "Esquire" or "Rev."

OXO.—A county magistrate is an Esquire

A CONSTANT SUBSCRIBER.—The wife of an eldest son, when her husband becomes, by the death of his father, head of the family, loses the prefix of the Christian name. The widow of the father is styled "senior" or "Dowager Mrs."

W. B. D.—Penny of Elizabeth coined for Ireland, the legend on the reverse is "Posui Deus adjutorem meum;" and the other is a small brass coin of Tetricus.

H. F. of Holloway, has well argued the controversy between the e and the o in the Collier amendment of *Lady Macbeth's* speech:—"What *beast* was it then that made you break this enterprise to me?" The sole difficulty lies in the *grammatical* construction. If the amendment be permitted, the word "beast," by a metonomy usual in Shakspeare, is used for the "spirit of beast," or "Correspondent, is curious:—

question means simply, "Why then did you boast that you *would* murder *Duncan*, and propose to me to become your accomplice?"—We take this opportunity of correcting an error of the press in our article on Mr Collier's volume of "Emendations." In the following sentence, "But the most notable of this class of errata occurs in one of the plays not [out] of the quarto list of forgeries, namely "Cymbeline:" the small word in brackets should be omitted. In another place, "Heminge and Collier" is misprinted for Heminge and Condell.—The following information, received from a Correspondent, is curious:—

In an edition of Shakspeare, published at London in 1747, by J. and P. Knapton, S. Birt, T. Longman, and T. Shewell, in "Cymbeline," it is printed

bone lay of Italy,

Whose feathers are her patrimony, hath betray'd him.

Poor I am stale, &c.

(Alluding, probably, to the bird that borrowed its feathers from the peacock, as the female of many kind would not be so shy from her painted fere).

"Without more quality."

In the text it is printed in mine—

"Like a full-acorn'd boar, a *German* one,
Cry'd oh!" &c

That edition of 1747 is, however, of no authority. None, indeed, is of the slightest, except the folio of 1623, and the elder quarto.

KIRATA.—In "Owen's Nomenclature," page 387—for Pavo, read *Pavo*; for Vindex, read *Pindex*.

DECENS ET COMES ought to know the text—"To the pure all things are pure."

NEMO.—The fact of being in the Commission of the Peace does not confer the right of a cockade in the servant's hat.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MAY 21, 1853.

THE Provisional Government of the French Republic, which started into such sudden existence in February, 1848, astonished the world by most of its acts, grieved it by a few, and gratified it by several. Its generous and wise abolition of the punishment of death for political offences, was hailed with lively satisfaction throughout France; and with minor, but decided approbation, in every part of Europe. It gave a pledge that, however deplorable might be the consequences of street-fighting, and of insurrections behind the barricades, there would be no Reign of Terror in the new revolution. It proved that, if it were not always possible to avoid the murderous assault of armed citizens against one another, it was possible to abolish the practice of judicial massacres. Louis Napoleon has deemed it necessary to re-enact the punishment which the Provisional Government abolished. At a time when he is all powerful—when his word is the undisputed law—when slavish functionaries vie with each other in abject submission to his authority—and when the whole nation awaits with patience, and even with cheerfulness and hope, the results of the new system of government of which his name is the type and his person the representative, he has caused a project to be laid before the Legislative Body for re-enacting, in its worst form, the law against treason. If he had contented himself with having it declared that an attempt against the life of any member of the "sacred" House of Bonaparte—for such he is evidently desirous that the French nation should consider it—should be punished as parricide, there would have been no real objection. But Louis Napoleon has not confined himself to so small a demand. The punishment of death is to be decreed not only against those who actually attempt the life of the Archbishop, or that of any member of his family, but against every person who shall attempt to change or overthrow the existing form of Government. Consternation prevails throughout Paris in consequence. In that city every man of note or mark has at one time or another rendered himself liable to a charge of conspiracy against an established Government. The Emperor himself is the most noted conspirator in France. He waged war twice against the Government of Louis Philippe, and was defeated. He waged war against the Republic, which he solemnly swore to maintain, and was successful. But if Louis Philippe had meted out to him the same measure of punishment which he wishes to employ against others, he would never have been President of a Republic or Autocrat of an Empire. Louis Philippe was too merciful. He spared a life that was justly forfeited, and thus brought upon unhappy France the *coup d'état* of 1851, and the sacrifice of at least a thousand lives, to say nothing of countless other evils attendant on a state of revolution. It cannot be imputed to Louis Napoleon that he possesses the faults of Louis Philippe. There is nothing merciful about the Emperor. All is harsh, stern, and unyielding, and it would almost seem as if he had never forgiven Louis Philippe for having put him in prison, instead of sending him to the scaffold. Though little accustomed to endure opposition to his will, the announcement of this sanguinary intention to re-enact a law which bears a Reign of Terror in its ferrile bosom, has created such alarm among all the most eminent and intelligent men in France, and even in the *Corps Legislatif* itself, that a hope is entertained by the Emperor's friends that he will be induced to give way. We trust that it will prove so. It is necessary for France that the Empire should have a fair trial. It would be a misfortune for that country if the present Government were to come to a premature and violent end. It cannot be denied, whatever faults may justly be charged against the Emperor, that he has many merits and even virtues. The great Napoleon himself did not better understand the French people, or better know how to govern them, than Napoleon III. If he have abridged public liberty, he has maintained public peace—a matter about which the French of the present day are peculiarly anxious. His proposed new law, instead of strengthening, will weaken his throne and dynasty if he persist in it. As no former measure that he ever attempted to carry excited half as much distrust and opposition as this, it is not unlikely that his prudential will prevail over his revengeful feelings, and that he will yield before it be too late to do so with dignity.

The inquiry into the conduct of the late Secretary of the Admiralty, has been highly damaging to more persons than Mr. Stafford. Not only has it brought home the charge of political jobbing of the worst kind to the Secretary, and exposed political incompetency the most deplorable on the part of the Duke of Northumberland, but it has tainted the character of the whole Derby Administration. But these mal-practices, though some apparent evils in the moral government of the world, are likely to produce good results. For the future the service of the national dockyards will be conducted without reference to party politics, and with no other object than efficiency. Lord John Russell has given notice of his intention to introduce a bill for the correction of the evils of which the public and workmen of these national establishments, thus placing them upon the same footing as those of the Post office. It is, perhaps, somewhat hard upon any public servants that their acceptance of employment at the hands of the State should deprive them of one of the most valued rights of free citizenship; but future candidates for work and wages in the dockyards will at least know the bargain they make. They will enjoy the freedom of choice between their pottage and their privilege. It is possible that in some large scheme of Parliamentary reform a means might be suggested for purifying the dockyards without depriving the labourers of their votes; but as no such large scheme is likely to be carried, or even introduced, the venal labourers of Chatham, Portsmouth, and other equally useful but notorious places, must be content to bear the punishment of their past transgressions. And yet, if the subject be fairly considered, there is no necessity for Parliamentary reform to remedy the glaring abuses which Mr. Stafford's and the Duke of Northumberland's mismanagement have brought to light. The Government has but to adopt a measure which has long been urged upon it, and cease to be a ship-builder. Private enterprise and competition, which produce so many splendid ships for the mercantile service, would produce ships for the service of the State equal, if not superior, to any that were ever launched from a national dock-yard, and at a cost considerably less. Were such a practical reform adopted, there would be no necessity for depriving any man or body of men of the suffrage; and political corruption, if it did not disappear from the boroughs where ships of war are built, would, at all events, have nothing to do with the art and mystery of ship-building. The measure to be introduced by Lord John Russell, though not the best that might have been adopted, will be better than none at all. If it do not lead to economy in the dockyards, it will lead to efficiency; and will, in all probability, be considered no hardship by the most intelligent of the persons employed in the docks. Under the ancient *régime*, such persons had no security that a violent partisan would not be appointed first Lord or Secretary of the Admiralty; and that they would not be summarily dismissed from their employment. To such honest public servants a vote for a borough too often proved a nuisance and a snare. Lord John Russell's measure will be considered by them rather as a benefit, for which they ought to be grateful, than as an injury, of which they have reason to complain.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, MAY 19.

Month and Day.	Correcte. Reading of Barometer at 9 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Departure Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.

" 17	29.646	68·1	48·8	58·6	+ 5·7	67	E.	0·00
" 18	29.561	70·1	47·4	60·0	+ 6·8	61	E.	0·00
" 19	29.935	72·1	43·5	57·7	+ 4·3	61	W.	0.00

Note. The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated for the supposition that the saturation of the air is represented by .00.

The reading of the barometer increased from 30.04 inches by 9h. a.m. on the 13th, to 30.10 inches by 6h. p.m. on the same day; decreased from that time to 29.70 inches by 6h. p.m. on the 16th, and increased to 30.09 inches by the end of the week. The mean reading for the week at the height of 82 feet above the level of the sea, was 29.942 inches. The mean daily temperature on the 15th was 66°, and is the highest mean daily temperature recorded as having occurred on that day since the year 1835, when it was 61·2°. The mean temperature of the week was 55·9°, being 2·7° above the average of the same week in thirty-eight years, and presents a remarkable contrast to that of the early part of the month, which from the 3rd to the 12th exhibited an average daily deficiency of temperature to the amount of 4·9°. The range of temperature during the week has been rather large, the highest reading (72·1°) being on the 19th, and the lowest (42·2°) on the 14th; showing a range of 32·4°. The difference of temperature daily has also been large, that on the 15th being 24·1°; and the mean of the week 22·2°. In the early part of the morning of the 15th, rain fell to the depth of 0·15 inch.

Lewisham, May 20th, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending May 14, the births of 1676 children were registered in the metropolitan districts: of these 870 were boys, and 806 were girls. In the eight corresponding weeks of the years 1845-52, the average number was 1636. The number of deaths reg stered in the week was 1099; which exhibits a decrease of mortality, as compared with that of the preceding week, when the number of deaths was 1159; but a considerable increase upon that which is usual in the middle of May. The average number of deaths in the corresponding weeks of the ten preceding years, corrected for the increase of population, was 1037; consequently, the deaths registered are in excess of the estimated number by 72. Of deaths caused by zymotic diseases there were 235 (their average is 187); of these, 3 only were due to small pox (its average is 18); to scarlatina 36 (its average is 27), to looping cough 59 (its average is 44), to typhus 71 (which is no less than 33 above its average). To tubercular diseases 212 (their average is 154); of these 144 are due to consumption. To diseases of the brain, nerves, &c., 116 (which is their average), and includes apoplexy 49, paralysis 17, and convulsions 40. To diseases of the heart and blood-vessels, 49 (their average is 32); of these 42 were d seases of the heart. To diseases of the lungs and of the other organs of respiration, 199 (which number exhibits a considerable increase upon the average, which is 130). To bronchitis, 87 are due (its average is 44); and to pneumonia, 86 (its average is 63). To diseases of the stomach, &c., 70, to violence, &c., 23 deaths are attributed.

THE QUEEN'S BIRTHDAY.—The anniversary of her Majesty's birthday will be celebrated with great *eclat* at Woolwich on Tuesday next, the 24th instant, and the detachments of troops will be present shortly after eleven o'clock:—The Royal Horse Artillery, the Field Batteries, the whole of the Foot Artillery, the Royal Sappers and Miners, the Royal Marines of the Woolwich division, and the Woolwich division of Chelsea Pensioners. The young recruits of the Royal Artillery in the garrison were exercised with small-arms on Wednesday, Thursday, and Friday, to enable them to join in the celebration of her Majesty's birthday

THE PHARMACEUTICAL SOCIETY OF LONDON.—On Tuesday this society held a soirée at their house in Bloomsbury-square, which was numerously attended by the professors. The rooms were well arranged; and the display of scientific apparatus, together with a curious collection of botanical specimens, contributed by N. B. Ward, Esq., proved very attractive. Many of the most eminent in the chemist and druggist from the scientific character of such an exposition as the above, which must eventually elevate them from the trading class of former days.

REBUILDING THE ROYAL EXCHANGE.—The members of the Stock-Exchange, having obtained a suitable plot of ground from the City Corporation, consequent on the improvement now effecting in Throgmorton-street, and contiguous to the old edifice in Capel-court, have determined to erect a new and commodious building with handsome architectural frontage to Throgmorton-street, for the transaction of their business

THE WHITSUNTIDE HOLIDAYS were welcomed in the metropolis in a way worthy of the delightful weather which so suddenly burst upon us. Below bridge, the steamers to Woolwich, Erith, Grays, Greenhithe, and Gravesend, with the opportunity of a visit to Tilbury Fort, were crowded to a most inconvenient extent. The various steam boats on the river plying to Hammersmith, Kew, Richmond, Twickenham, and Hampton Court, were also densely crowded. On the railways, special trains, or trains with special advantages, were provided for the purpose of conveying holiday-makers to the bay and the beach, the forest, the park, or the pleasure gardens. To the more proximate popular resorts was added the site of the New Crystal Palace at Sydenham, which was visited by a large number of persons, attracted thither to create astonishment. The strictly metropolitan exhibitions owed least of all to the fineness of the weather. These, however, were well patronized, especially the Zoological Gardens, which, as stated in figures, would

MUSIC.

PHILHARMONIC SOCIETY.

Mendelssohn's Italian symphony in A, No. 2: Beethoven's symphony in F, No. 8: Spohr's picturesque "Jessonda" overture, and Handel's stately "Esther" overture, with its quaint oboe obligato, so admirably played by Nicholson. Mozart's vivacious "Figaro" overture, and a violin concerto by Viotti, encore, executed by the emperor of violinists himself in imperial style;—such was the dainty dish for the musical epicureans at the fifth concert, last Monday. The force, brilliancy, delicacy, and precision of the execution by the splendid band, under Costa's artistic guidance, left nothing to be desired; and the usual encores followed the favourite symphonic movements.

The vocal selection was rendered remarkable by the presence in the orchestra of Sir Henry Bishop, England's greatest operatic composer since Purcell. He conducted his own cantata, "The Departure from Paradise," which was sung by England's sweetest singer, Miss Louisa Pyne. The amateurs cordially greeted both the composer and the vocalist. The former, not merely for "auld lang syne," but also for the poet's production of Eve's lament, and the latter for the truly tasteful style with which she delivered the interesting text she was allotted. Miss William's developed her handsome contralto tones in Mozart's aria, "Lento il pie;" and Gardoni, who made his first appearance this season, warbled an innocent air by Stradella, in a manner to have disarmed any hearer, even with the most murderous intent.

This was not only a fine but a great concert.

THE MUSICAL UNION.

The third meeting, last Tuesday, at Willis's Rooms, attracted upwards of 600 amateurs, to hear a most interesting selection. Onslow's Quintet No. 5, in D, and Mendelssohn's (posthumous) Op. 87, in B flat, were played to perfection by Vieuxtemps, Goffrie, Hill, Webb, and Piatti Vieuxtemps, inspired by the sublimity of Mendelssohn's music, was greater than ever, and produced the most profound sensation on his aristocratic auditory. Mdlle. Cruse and the Belgian violinist gave a magnificent reading of Beethoven's Sonata in E flat (dedicated to Salieri). The fair pianist also charmingly performed solos by Mendelssohn and Stephen Heller. The sonata by Yarnni was played by Piatti and Rotay, and the great violoncellist was not at home in the composition. At the end of the programme, a Portuguese youth, named Napoleon, only eight years of age, performed on the pianoforte one of Thalberg's fantasias, to the great astonishment of a large circle of connoisseurs who waited to hear this precocious phenomenon. This boy produced a marked sensation last winter in Paris.

HARMONIC UNION

Mr. Pierson's oratorio, "Jerusalem," was performed, for the first time in London, on Wednesday night, at Exeter-hall, under the able direction of Mr. Benedict; with Miss Louisa Pyne, Mrs. Anderson, Mr. Lockey, Signor Gardoni, Messrs. Lockey and Lawler, and Herr Staudigl, as the principal vocalists. This work was originally produced, last September, at the Norwich Festival, Madame Viardot being the chief singer on that occasion. A lengthened notice of the oratorio, and its execution, appeared in the ILLUSTRATED LONDON NEWS at the time; and the verdict of the Norwich connoisseurs, in condemnation of Mr Pierson's peculiarities, will not be reversed in London. He has great abilities, which have been directed into a wrong channel. Fascinated by the eccentricities of the later Wagner-Schumann school, ugly and deformed as it is, Mr. Pierson has given to the world a work, the ungrateful character of which for the orchestra and vocal executants is indiscernible, and which certainly only fatigues and distracts the ear. Gardoni won an encore in the air, "Oh! that my head were waters," and he deserved the compliment.

NOTES OF THE WEEK.

Herr Molique, one of the greatest of living German composers and violinists, commenced his annual concerts of chamber music on Saturday evening, at Willis's Rooms, assisted by Herr Pauer, pianist; Messrs. Mellon, and Hill. Molique's finished playing and admirable compositions render his soirées of more than ordinary interest to the cultivated amateur and professor.

The second soirée of the Misses Cole, the vocalists, and Mr. Alfred Gilbert, the pianist, took place at the Queen-Anne-street Rooms, on Tuesday; with the co-operation of Miss Bassano, Messrs. Mac Ursula Barclay, Messrs. A. Pierre, Wallworth, Bodda, Williams, Nicholson, F. Chatterton, and B. Gilbert.

Haydn's "Creation" was performed, under Costa's direction, last night, at Exeter-hall, by the Sacred Harmonic Society, with Madame Clara Novello, Gardoni, Mr. Williams, and Herr Formes as principal vocalists. The friends of this admirable institution will be glad to learn that the subscriptions for the testimonial to Mr. Bowley, the respected librarian, have progressed so rapidly that the presentation will probably take place at Exeter-hall.

Madame Schwab, the pianiste, gave her annual evening concert last Tuesday, at the Princess's Concert-room; assisted by Herr Ernst Hill, harp; M. Roussilot, violoncello; Herr Lidel, flute; Mr. Nabich, trombone; Bottesini, contra-basso; Mdme Dora, Mdlle. Labische, Mdlle. Lavanti, Miss Messent, Miss Williams, Herr Reichart, Mr. A. Pierre, Mr. Bodda, and Mr. F. Mori.

Mercadante's opera, "Il Bravo," originally produced at Milan in 1839, for Madame Tadolini and Donzelli, has just been produced in Berlin, with great success, with Madame De Grange, Madame Bertrandi (Beltramelli), Bottesti and Bettini. The *Bravo* is one of Roncom's famous parts, and the opera was to have been produced at the Royal Italian Opera in 1848. Mercadante has been strangely neglected in this country; his "Elisa e Claudio" and the "Vestale" ought to be mounted

Madame Viardot has arrived in Berlin, on her way to London.

The Musical Concordia held a meeting on Thursday, for the performance of glees and madrigals of the English and Italian schools, under the direct on of Mr. G. M. King.

Miss Lizzy Stuart gave an evening concert on Thursday, at the Athenæum Literary Institution; assisted by Mesdams. Sainton, Rose Braham, Anstey, G. A. Cooper, Messrs. Jonghmans, Barnett, Cotton, and G. Tedder.

THE THEATRES.

ROYAL ITALIAN OPERA.

Verdi's career in this country has been curiously chequered. If artificial anæsthesia could have annihilated his fame, then would he have long since ceased to have been heard of; but he appears to enjoy a singular vitality amongst our amateurs. Never was there one of his works produced, either at her Majesty's Theatre or at the Royal Italian Opera, but he received a terrific castigation from criticism, and the musical public were assured, after these awful denunciations of indignant journalism at the performance of such "manufactured trash," that the name of Verdi would be no more uttered in this musical metropolis. And yet the thus extinguished composer—on paper—the very next season was sure to be brought forward, in the shape of a revival of one of his "failures," or in the representation of his latest continental novelty. What, then, is the key to this anomalous state of things—wherein it is found that Verdi's defenders amongst writers are so few and his partisans still more rare, and still Verdi is not shelved? Is it that amongst opera frequenters there is a fiat in his favour, which is so strongly strong to maintain his name in the repertory? or is it that the general body of amateurs feel that the dead set against the only composer of merit left to Italy is based on prejudice, bitterness, and malignity? Whatever may be the solution of these questions, it is, at all events, satisfactory to find that the spirit of justice is sufficiently powerful amongst English audiences not to be carried away by mere clamour; and "Rigoletto," the three-act lyric drama, put on the stage for the first time on Saturday, with such magnificent resources, will secure an impartial hearing from those connoisseurs who are not led away by popular names only. We have never been the champions nor the detractors of Verdi, and we recognise in "Rigoletto" a higher order of beauty than struck us even in "Ernani" and the "Due Foscari," or as abandonment at the same time of his most palpable defects. "Rigoletto" cannot be ranked, however, as a masterpiece; it is full of plagiarisms and faults, and yet abounds with most captivating music. Verdi must be classed as a highly dramatic writer of melodramatic music. He is the Victor Hugo (from whom he has selected his book) of the setting of the French classics—the Porte St. Martin to the Théâtre Français. But then it is pretended that, to "sup full of horrors" is not legitimate! This is true, but it is, perhaps, very fastidious criticism to go to see an opera, as to the play, to get up a sensation, and not to yawn. Everybody knows Victor Hugo's tragedy, "Le Roi s'amuse;" and that it was suppressed because the principal part—that of *François Premier*—was such a depraved libertine, that the tendency to bring Royalty into disrespect was feared. The Italian librettist has closely followed the incidents of the play, only changing the names of the principal characters, from Francois to Mantua. There is the deformed jester, or fool of the Court, who is prostrated by a malediction from a father whom he had mocked in parental sorrow, and who is punished by his villainy, not by having his own daughter, *Gilda*, made the victim of his sovereign; and there is this unfortunate girl, giving up her own life to save that of her betrayer—the Duke of Mantua—precipitated into a lone house, to be assassinated, by the jester's orders. These dramatic situations supply a subject for musical illustration of which Verdi has fearlessly availed himself in many points, and they have also given to Ronconi the opportunity of displaying his varied comic and tragic powers to an extent that has quite distanced even the solemn effects he realised in his *Nabuco*, *Ouvrieres*, and the *Doge*; and the risible one he created in his *Figaro*, *Lorgnez*, and *Dulcamara*. In fact, great as was the histrionic genius of Rubini admitted to be, his "Robert le Diable" was combined displays of tender and tragedy that can only recall the well known picture of Garrick between Tragedy and Melpomene. Let us instance the scene in the *Duke's* palace, in the second act, in which *Rigoletto* arrives to amuse with the courtiers, whilst his heart is breaking at the abduction of his child—an abduction in which he himself had been made innocently to assist—the expression of Ronconi's face in this scene—one half of the face that of the court-jester, the other half that of the bereaved father—can never be forgotten. To follow this great actor and singer throughout his wonderful delineation would form an essay of itself, and within these limits but a bare reference to the opera at large can be afforded.

Verdi has not gained ground in learned contrivance and ingenious construction, but he has skilfully blended with the Italian school the loftiness of declamation and the piquancy of orchestration of the French masters. The colloquies of *Rigoletto*, prior to his resolve to be the brave *Sparafucile* (Tagliafico) to kill the *Duke of Mantua* (Mario), are fine specimens of declamatory recitative; and the duo finale of death, between father and daughter, is also graphically expressed; although the *denouement* of dragging the body of *Gilda* (Madame Bosio) in the sack across the stage is as repulsive as the bolster smothering of *Desdemona* in the sight of the audience.

The prominent pieces in "Rigoletto" which strike the ear and fix the attention are the air of Mario, "La Donna e Mobile," rapturously encored; the romance of Mdme. Bosio in the second act; the duos between her and Ronconi and Mario in the same act, the chorus of courtiers, and the quatuor in the last act. This last-mentioned concerted piece is a perfect gem, and merits especial mention. The scene is a double act—in the foreground is a double-storied house, separated by a wall from the road, and the river Mincio flowing through the background. In the lower room of this lone house are the Duke with *Magdalen* (Mdlle. Didiee), the Bravo's sister, who has enticed him therein to be murdered; at the outside are *Rigoletto* and his daughter *Gilda*, who are flying from Mantua. Whilst the Duke is making love to *Magdalen*, the forsaken *Gilda* overhears him making use of the same language he had formerly addressed to her, and *Rigoletto* mutters vengeance against his child's betrayer. The amatory strains in the interior of the hovel are intermingled with the broken hearted sobs of *Gilda*, and the choked exclamation of revenge from *Rigoletto*—all the conflicting emotions expressed up into a climax of surpassing vigour and intense passion. The house rang with acclamations at the close of the quartet, which alone would stamp Verdi as a composer of high genius and imagination if no ordinary pasture.

The principal artists in the cast—Madame Bosio as *Gilda* (in a character ever worshipped in the opera), Mdlle. Didiee as *Magdalen*, Mario as the Duke, and Ronconi as *Rigoletto*—were supported by Tagliafico, Marini, and Soldi. Mario and Ronconi were greeted on their entrance with the loudest applause, and the latter was especially remarkable. Mr. Beverley's debut as the scene painter was quite successful. The elaborate street scenes, the rich interior and distant palaces, were painted and set with the eye of a master of effect, light and shade.

"Rigoletto" was repeated on Tuesday night, to a house crowded with Royalty, rank, and fashion; and again on Thursday, for the extra night, being preceded by the first act of "Norma," with Grisi and Lamberlik.

HAYMARKET.

A new comedy in three acts, by the Rev. Mr. White, was produced on Saturday last, entitled "The Mouse-trap." The story is complex in the extreme, the characters most numerous and eccentric, and the incidents exceedingly involved. The title of the piece is due to the circumstance of *Lord Winterdell* (Mr. Tilbury) planning himself on being an aristocrate in all societies and the inventor of a mouse trap, the novel construction of which is compared with that of the play, and thus made a sort of symbol of the drama. But the main interest rests with a friend of his, *Sir Clerimont Waldron* (Mr. Chippenda.e), who, having had a *liaison* in Spain some twenty-five years ago, and having given a promise of marriage to the lady, is in great fear lest an inquiry sat on foot by the Consul in search of a father and child answerable to the particulars contained in a certain box stolen by a gipsy, should have relation to his adventure. He learns that such a person would be held by Spanish law to be legal, and thus, as he suspects the mother is still alive in the person of the gipsy aforesaid, that the child in her daughter, there is no hope of his being able to marry his friend's daughter, *Helen Dallmore* (Miss Louisa Howard), and a scheme of his being disgraced in his social relations. A queer character, one *Obadiah Jack Marling* (Mr. Buckstone), however, gives a new turn to the affair. He is a sailor, half drunk, sets up a claim in favour of one *George Marling* (Mr. W. Farren), *Sir Clerimont's* secretary, whom he insists is *Sir Clerimont's* son. The Consul's inquiries relate to this boy, and not to the girl; but the boy himself proves to be the son of *Sir Clerimont's* friend, *Mr. Dallaway*, who had accompanied him on his tour and engaged in similar adventures with a similar result, but travelling under the same cognomen of *Captain Smith*. The distress of *Sir Clerimont* under these circumstances constitutes the theme of the play; and the character was cleverly and efficiently interpreted by Mr. Chippendale, and the piece owed its success to the broad and extravagant humour of Mr. Buckstone. Under the Friend's broad brim, the naval spirit and manner contributed to break out, making a series of whimsical contrasts; and the announcement of the piece for repetition was received with mingled laughter and applause.

ASTLEY'S.

A new hippo-drama for Whitsuntide has been produced at this theatre, entitled "The Chase, or *Life on the Turf*," and brings out the peculiar resources of this establishment. The theme of the piece is the sporting life in London, into which a country sporting gentleman is seduced by a fast acquaintance. But this is preceded by a fox-hunt, a steeple-chase, and other rustic pageantries, which are all admirably placed on the boards. The piece concludes happily, and is not without literary merit. The author is Mr. W. G. Suter.

ADELPHI.—The revival, on Wednesday, of "The Merry Wives of Windsor," with Mr. Webster as *Falstaff*, is a significant fact, which we here record. The scenery was decidedly good, and the costumes accurate The acting, also, was capital, though, in some points, peculiar; and, as we shall, probably, recur to the subject, we refrain at present from further detail.

SURREY.—The "Siege of Rochelle" was the opera which first gave Mr. Balfe his name as a composer in this country. It was orig nally produced at Drury-lane Theatre, under Mr. Bunn's management, and has maintained its place in the repertory of English operas. It was performed last Monday night, at the Surrey Theatre—now open under the direction of Miss Romer, for the summer operatic season—met with the warmest approbation from the holiday visitors, who thronged the house to suffocation; and Miss Romer was called for at the conclusion of the opera. She was ably supported by Mr. Travers, the tenor, and Bernard, the bass.

STRAND.—A new musical two-act drama, "The Dream of the Irish Emigrant; or, the Lady May"—the music selected from Tom Moore's melodies—was successfully produced last Monday; Miss R. Bateman, Miss Richardson, Mdme. Hammond; Messrs. Manley, Fraser, Hodson, Harrison, and Leffler, sustaining the chief characters.

CREMORNE GARDENS.—These delightful gardens have during the recess been greatly improved and many artistic embellishments made, amongst the most prominent of which are adm rably executed statues of Wellington and Napoleon, and several specimens of the Warwick vases. The new kaleidoscope is a marvellous display of the effects of the illuminations, both in colour and intensity. An important addition has been made to the already powerful and effective musical corps by the engagement of the Hungarian band, whose performances have hitherto been very popular. These improvements, with a programme of unusual attraction, brought together on the commencement of Whitsuntide visitors in the last week, whose satisfaction and delight at the amount of amusement afforded, augurs well for the success of the season.

ZULU KAFFIRS.—A complete picture of Kaffir life is exhibited at St. George's Gallery, Hyde-park corner, with such accurate accessories in the way of scenic illusion, that it may rather be described as a picturesque drama illustrative of Kaffir manners and customs. The actors are selected from men, with a woman and child, who, in the costume of their tribe, hunt, eat, sing, dance, make love, and fight, in a series of scenes which charm by their spirit and *verisimilitude*. The principal figure has its counterpart in the Zulu poet-laureate wears a leopard's head and collar of tiger's tails, when he chants the king's praises; and the entrance of the witch doctor, in pursuit of his sorcery with the natives, and illness of a sick man—for the Zulus believe that all illness is the result of witchcraft—is more amusing than anything in a farce. The cries, songs, and dance of these extraordinary people are extremely amusing; and the pencil of Mr. C. Marshall enables the visitor to realise the scenery of Port Natal, Pietermaritzburg, the Basuta country, &c

THE PANORAMA.—We gave in the ILLUSTRATED LONDON NEWS of November 6 (page 372), an engraving of two young specimens (male and female) of the Kaffirmen of the Orange River, South Africa These two interesting children were then reading with Mr. George, near Croydon, to whom they were entrusted by the agent of a mercantile house at Natal, by whom they were purchased (their parents being dead), and sent over to be educated. They name of exhibited in the Zulu war, and the pencil of Mr. C. Marshall enables the visitor to realise the scenery of Port Natal, Pietermaritzburg, the Basuta country, &c

NATIONAL SPORTS.

BATH AND SOMERSET RACES.

TUESDAY.—There was a large attendance of company, and the weather most delightful. The supply of sport moderate, but the racing good.

Lansdowne Trial Stakes.—Gossip, 1. Lamarsfire, 2
Second Year of the Biennial Stakes.—Glenavon, 1. Massena, 2
Biennial Stakes Diana, 1. Mome Moses, 2.
Somersetshire Stakes.—Red Lion, 1. Audubon, 2.
Selling Stakes.—Bloomer, 1. b. g. by Idas, 2.

WEDNESDAY

City Cup.—Dabchick, 1. Audubon, 2.
Weston Stakes Mouser, 1. Nightshade, 2.
Dytham Park Stakes.—Gossip 1 The Arrow, 2
Historic Handicap.—Montague, 1. Waterfall, 2.
Sweepstakes.—Henrietta, 1. Ariette, 2
A better meeting at Bath has seldom, if ever, been known. The weather was all that could be desired, most of the racing excellent, and the attendance of company very great.

MANCHESTER.—WEDNESDAY.

Meklam Handicap.—Longlow, 1. The Hatchet, 2.
Sapling Stakes.—Arthur Wellesley, 1. Barrel, 2
Union Cup.—Longbow, 1. King of Trump, 2
Produce Stakes. Augusta, 1. Georgey, 2
The Maiden Plate.—Florist. 1. Jaquenetta, 2.

THURSDAY

Handicap Stakes.—Evadne. 1. Oshaldeston, 2.
Two-Year-Old Stakes. Wild Huntsman, 1 Bridesmaid, 2.
Tradesmen's Cup.—Chief Justice, 1. Lady Evelyn, 2

LATEST BETTING AT TATTERSALL'S ON THURSDAY

5 to 2 agst West Australia (t)	10 to 1 agst Umbrid (t)
6 to 1 — Rosewood (t)	100 to 6 — Newcastle (t)
9 to 1 — Pharos (t)	33 to 1 — Chedder (t)
	40 to 1 agst Vanderdecken
	40 to 1 — Barbatus

PRINCE OF WALES'S YACHT CLUB.—The opening match of this club took place on Wednesday, under the most favourable auspices. There were three classes of prizes—1, for vessels not under seven tons. 2, ditto, five tons; and, 3, not over three tons. The distance appointed was from Blackwall to Gravesend and back; and the *Truant*, although of the second class, was backed by her friends to eclipse any on the larger list She was considered to be an American clipper, that possessed the advantage of a shifting keel: and she proved her superiority from the start, for she took the lead of the whole of the fleet, and never forfeited her proud position. Her rig was of the sloop character, her foresail and jib being in one, and, like the *America*, laced to her boom. The prizes were duly presented, with appropriate speeches, to the owners of the *Truant*, *Julia*, and *Calliope*.

CRICKET.—The season of this truly English sport was opened on Whit-Monday, in Lord's ground, the first match being the County of Nottingham against All England. The "Notts" made 63 in their first innings, and 129 in their second; in all, 192. All England, 117 in the first, and 46 in the second: thus losing the match by 27 runs.

THE "FAID RABANI."

THIS beautiful steamer, named "Faid Rabani," or "Divine Favour," has been built as a river pleasure-yacht, for the Pacha of Egypt, by Messrs. Tod and Macgregor, of Glasgow. She is an exquisitely-modeled vessel, of the following dimensions, viz.—Keel and fore-rake, 180 feet; breadth of beam, 26 feet; depth of hold, 9 feet. Draught of water, 5 feet. Power of engines, 160 horse.

The yacht is furnished with oscillating engines by Todd and Macgregor; has feathering paddles; and performs 13 knots an hour, without the slightest perceptible vibration. These engines are built with brass and steel work, and are finished with the same taste and care used in turning out a gold watch. Although the vessel has an ordinary draught of water, it will not be used; for the steam will be blown into the water from the sides of the yacht. She has three safety-valves, and a beautiful small brass donkey engine, quite independent of the others, which is used for supplying the boilers with water, when the large engines are still.

The principal features of the *Faid Rabani*, however, are her splendid interior furnishings and decorations; including no fewer than 450 pictures of separate subjects, set in frames. His Highness' reception-room, which is in the poop, is an apartment of the most splendid description, fitted up with the richest rosewood bulkheads, door, &c., the panels of which are filled with beautiful pictorial designs on papier-maché. The divans, which extend round the saloon, are covered with costly cloth of gold, from the front of which is suspended gold embroidered needlework, and massive gold bullion fringe. Between the windows are pictures of fruit and flowers, birds, &c., and vases enriched by precious stones, executed by the new patent gem-setting process. The ceiling between the beams (which are of mahogany, French polished) is filled with designs of fruits and flowers, on papier-maché panels, painted with gold bunch-bead moulding. His Highness's bed-room is fitted up in a corresponding style of elegance.

The lower cabins are, if possible, decked out in a style of still greater costliness and magnificence. The ceilings are covered with gold damask, worked in appropriate designs with flowers, &c., and hung from the highness's crest in the centre. The locks, hinges, and handles of the doors are richly plated on German silver, and they, as well as the finger plates, are exquisitely chased.

The lower cabin contains twelve separate apartments, for the accommodation of the Pacha's officers and suite. A magnificent awning covers the main deck and poop. It is of rich silk damask, worked to an original design, with deep silk fringe and hangers. It is covered with fireproof cloth, to guard against any damage by sparks from the funnel The quarter-deck and poop are covered with oil-cloth.

In point of decoration, the outside of the yacht is worthy of the interior. Round all the windows, from stem to stern, are carved and gilt architraves; and the bulwarks are ornamented with carved fret-work, relieved with gold. The paddle-boxes are also highly ornamented; and have a shield in the centre in the vessels name in Arabic, viz., the *Faid Rabani*. The figure-head is composed of his Highness's crest, supported by two lions, richly gilt. The hull is painted a rich green colour, and is literally one blaze of gold from stem to stern.

The yacht was obliged to be put back to Crookhaven, in the south of Ireland, after sustaining considerable damage, whilst attempting to make her way to the Nile. We understand she was much strained, and that the heavy gale she encountered caused the craft to leak considerably, to the no small injury of all the gilding and mashed papers which embellished her cabins. However, the necessary repairs have been made; and the vessel sailed from the Clyde for Lochryan, towards the close of last month, where she anchored during the passage, at an average speed of fourteen miles an hour. Being built for sailing on the Nile, she draws only 5½ feet of water, and, in consequence, strict orders were given that she was not to sail until the weather should have become quite settled, as she is unfit for contending with the waves of the open sea. She is boarded over to preserve her highly painted and gilt sides from the effects of the weather.

SALE OF THE SPANISH COLLECTION OF THE LATE KING LOUIS-PHILIPPE.

THE long-announced sale of the collection of Paintings by the Spanish Masters, formed by the late king Louis Philippe, commenced at Christie and Manson's on the 6th inst., and was continued on the 7th, 13th, 14th, and 20th, and will be concluded to-day, the 21st instant: in all, six days' sale. This upon all accounts, is one of the most important events in art-history that has taken place since the distribution of the great French collections—the Orleans, Calonne, and others, half a century ago, by which, as is well known, England became possessed of an amount of pictorial wealth, particularly in the Italian schools, unequalled by that of any other country in the world. For, notwithstanding those important acquisitions, we have still remained but poorly supplied with works of the Spanish school; and, in consequence, the merits of that school have remained almost unknown to the great mass of our countrymen: only the travelled few, who had explored these treasures in the very country of their production, having any idea of their extent, variety, and value.

The importation of the Orleans Collection of Spanish pictures, will probably do as much towards the cultivation of art-knowledge amongst us, as that of the more celebrated "Orleans Collection" of Italian art at the close of the last century; and the circumstances under which the collection was formed, and how it came to be brought to our shores, is a singular instance of the vicissitudes of arts and of states. In 1835, when the decree was passed for the suppression of the religious orders in Spain, and when the sale of the effects belonging to the convents immediately followed upon that decree, Louis Philippe, though having quite enough state cares around his newly-erected throne to occupy his time and attention, saw the importance of taking advantage of the opportunity so offered for increasing the art-treasures of France, and at once commissioned Baron Taylor, assisted by M. Dauzats, to proceed to Spain for the purpose of making purchases of pictures in all parts where they might

be obtainable, whether of the religious orders themselves, or of those who might already have purchased their effects. A very numerous collection was thus formed, in which—though undoubtedly including many works of inferior merit (a necessary consequence of having sometimes to buy the good and the bad, together with all the other effects of a convent in a lot)—there are found many of the most celebrated works of the principal masters of the different Spanish schools, from the times of Pedro de Cordova (who lived in 1520), Sanchez Coello, Correa, Morales, Navaretto, Blas de Prado, Joannes Vicente, Louis del Vargas, Velasquez, Murillo, Zurbaran, &c. to that of Goya, who lived in our own day. This collection Louis Philippe placed in certain rooms of the Louvre—called the Spanish Gallery—for the study and inspection of the artist and the amateur; and it would have remained there to this day, but for the political events which deprived that monarch of his throne. These pictures, having been purchased out of the King's personal income, became, upon his death, the property of his heirs, by whom they have now been brought to sale.

The auction sale-room has been very fully attended daily—not only on the days fixed for the sale, but on those set apart for view. In proceeding to notice at random some of the principal lots, we are glad to be able to state that two important works—a Velasquez and a Zurbaran (the former a *chef-d'œuvre*)—have already (Wednesday) been purchased for the nation; and we trust that some of those in the last two days' sale may be added to them.

The Velasquez just mentioned deserves priority of notice, both for its intrinsic merit and the fact of its being now the national property. The subject (Lot 220) is "The Adoration of the Shepherds" a celebrated work, known as "The Manger." It is one of this artist's earliest works, executed at a time when his original genius had received no external impulse or tuition, and for his first patron, the Count d'Aguilar, in whose family it remained as an heirloom down to the time when Baron Taylor purchased it for the King of the French; and, were it not for the act abolishing the law of entail, then recently passed, it would not have been sold out of the family at all. The colouring of this picture is very clear and brilliant; but the figures have been charged with coarseness of execution. This lot was the subject of a spirited contest. Mr. Walesby bid for it up to £2000; Mr. Uwins then offered £2050, at which price it was knocked down. The announcement that it was purchased for the National Gallery was received with considerable applause. Another important work by this artist—perhaps, in internal interest, the next in importance to the last mentioned—was Lot 151, "The Portrait of Gaspar Guzman Count and Duke d'Olivarez, the Minister of Spain under Philip IV." This was painted in 1623, upon the first visit of the artist to Madrid, at the summons of Olivarez, who immediately became his firm patron, introducing him to the King, whose portrait he next took, and whose portrait painter he ever after was, and by whom honours were heaped upon him to the day of his death. And it is a pleasing reflection that Velasquez never forgot the debt of gratitude which he owed to his early friend, and that when, in 1645, the latter was disgraced and banished to Toro (where he shortly afterwards died), Velasquez continued to show respect and admiration for the fallen favourite; it is equally creditable to the King also to add that he never rebuked him for this evidence of fidelity to his former patron. This fine portrait, which is full of character and dignity (and of which we give an Engraving), was purchased by Mr. Farrer for 310 guineas. By the same master, we may mention the following, with their prices:—150, A Portrait of Mary Anne of Austria, said to be by the same artist—£185. 78, Portrait of Philip IV. of Spain, copied from the celebrated original of the Madrid Museum, in the third or vague manner of the painter—£260. 235, Portrait of Elizabeth of Bourbon, married in 1615 to Philip IV. King of Spain, by the same master—£300. 251, "Jesus and the Disciples at Emmaus," obtained for the Spanish Gallery from a canon at Seville—£236.

Of Murillos there were several of great importance; amongst them:—244, "The Magdalen"—a most beautiful figure, which was engraved as a half-length by Mr. Collier, in 1845: this was obtained for the Louvre from a canon of the cathedral at Seville. It was purchased by Mr. Williams, for £840. 246, "St. Augustine at Hippona," fetched £680. The anecdote which it illustrates was as follows:—St. Augustine, walking upon the sea-shore, saw a child endeavouring to fill a hole in the sand with water which he brought in a shell from the sea. To the Bishop's inquiry as to what he intended to do, the child replied, "That he intended to remove into that hole all the water of the sea." "It is impossible," said the Divine. "Not more impossible," replied the child, "than for you to explain the mystery of the Holy Trinity, upon which you are this moment meditating." 248, "St Joseph and the Infant Christ," though much damaged, sold for £440. 162, "The Conception," life-size, though deprived in many parts of its glazings, fetched £810. 164, a smaller "Conception," in which the characteristics of the master were also distinguishable, was sold for £270. 73, "The Virgin and Child," fetched £1550. 167, "St. Joseph and the Infant Christ," fetched £300. 74, "Jesus and St. John on the Banks of the Jordan," obtained from a canon at Seville, was bought by Mr. Farrer, on commission, we understand, for a gentleman at Manchester, for £660. This picture is grand in character and admirable in design, and may be taken as a fair specimen of the efforts of the master in the very highest walks of art. 328. "Portrait of Don Andreas, of Andrada, who was Leader of Processions of the Cathedral of Toledo," obtained from a canon of Seville, and of undoubted authenticity, was purchased by Messrs. Graves for £1020. The portraits by Murillo are not numerous, but what exist of them are of great beauty and interest, making one believe that this would have been the field in which he would have been even more pre-eminently at home than in historical art, had he condescended to adopt it as the field of his operations. The portrait now in question is very forcible and true in character; in this respect very much after the style of Velasquez; but with more richness of colouring and softness of finish than he bestowed. The head is almost buried in a thick crop of black hair, and he stands with great firmness upon a pair of very ugly legs; and by his side is a white mastiff of undeniable breed and gameness. The celebrated portrait of Murillo, by himself, in an oval (339) was also purchased by Messrs. Graves, for £420.

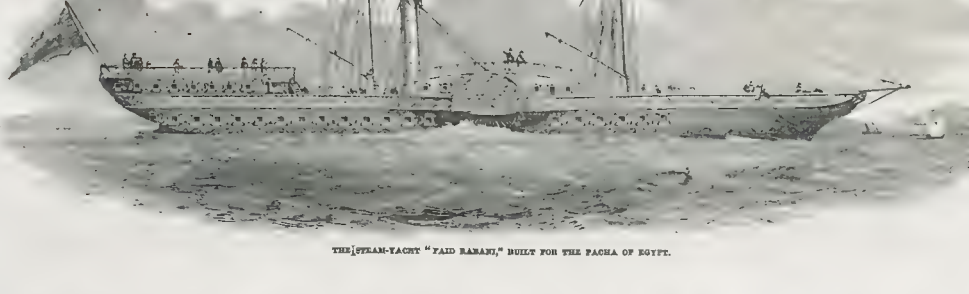
Of Zurbaran, the painter of monks and saints, several works were disposed of, but none at very high prices; not probably, in some cases, for half of what they would have fetched in Spain. Four of the finest were taken in a lump, among which were the splendid "Adoration of the Shepherds" (159), signed and dated, and almost as fine as Velasquez in his first style; (140) the "Circumcision," (158) the "Conception," (160) the "Adoration of the Magi"—all of which were sold for a grand total of £1700. 206, a fine composition, known as "St. Francis Refusing the Tiara," only realised £68. In this the saint is on his knees, with his hands clasped in supplication. His expression is replete with holy fervour, and the whole of his attention is directed to an angel who from the sky is addressing him, without heeding the Papal crown which lies before him. 225, "A Dog Asleep," sold for £25; and 226, "A Portrait of Himself," for £27. 50. "St. Francis with the Stigmata," was purchased for the National Gallery for £268. This picture has been often copied and engraved.

58, by Roelas, the first master of Zurbaran, was sold for £22 10s.: an interesting picture, in which may be traced the source of Zurbaran's manner, together with a certain imitation of Guido and the Bolognese school. All the pictures of Castillo sold on this occasion are of a painter similar in name but not in style to the master of Murillo. 154, A "Sleeping Jesus," not unlike in manner to Castillo, whose style was formed on the model of the declining schools of Bologna, hard, and heavy in colour, was sold for £22. 56, "St. John the Baptist," in imitation of Murillo's style, was sold for £28. 53, A similar imitation, "Virgin and Child," fetched £210. 55, "The Deposition from the Cross," sold for £50. One among the pictures of Herrera, representing "St Isadore, Bishop of Seville" (122), realised £11. 137, "Portrait of Charles II., King of Spain," by Maso, is unworthy of the best pupil of Velasquez; it was sold for £10. Two or three genuine specimens of Coello, one of which, signed "Alfonsus Sanctus," of which the hands were repainted, sold for £64; but none of the pieces by that master were favourable examples of his manner. A picture by Arregio sold for £10. "San Sebastian" (10), given to Vouet, of whom many panels are still in numbers at Valentia, sold for £10.

By A. Cano were several very good specimens. 220, "The Ass of Balaam" (from a convent at Cadiz), sold for £240. 224, "The Virgin and Infant Jesus," very richly coloured, and agreeable in character, was sold for £200, to Messrs Graves; who also purchased a very fine "Ecce Homo," by Morales, for £110.

There were included in the sale a few pictures not of the Spanish school, but which happened to be met with in the course of the researches of Baron Taylor, and many of which had long formed portions of Spanish collections. Amongst these is one of deep historic interest, viz. (184) "The Virgin and the Infant Jesus and an Angel," by an artist "of the school of Van Eyck," probably Van de Goes—a very fine specimen of that school, being richly and delicately painted. This picture formed part of the oratory of Charles V. It was purchased by Messrs. Graves, for Mr. W. Stirling, M.P. the author of "Cloister Life in Spain."

PORTRAIT OF THE DUKE D'OLIVAREZ, BY VELASQUEZ.—FROM THE COLLECTION OF LOUIS PHILIPPE.



THE STEAM-YACHT "FAID RAHANI," BUILT FOR THE PACHA OF EGYPT.

RESTORATION OF BOSTON CHURCH.

GAS STANDARD, BOSTON CHURCH.

THE restoration of this venerable edifice having been completed, it was re-opened by the newly-elected Bishop of the diocese, on Thursday (last week), when the event was commemorated in a very impressive manner. Before we describe the new works, it may be as well to narrate the history of the Church. The present building appears to have been commenced very early in the fourteenth century; but a church is believed to have occupied the same site, and named after St. Botolph, for some centuries prior to that period. Mention is made of the gift of the Church of St. Botolph to the Abbey of St. Mary of York as early as the year 1090.

The Church is stated to have occupied a considerable time in the process of erection, and to have undergone several changes from the original style. The tower is in the Perpendicular style; the nave and the north and south aisles are in the Decorated style; and in some places the rich Tudor Gothic of the time of Henry VIII. is introduced. The height of the tower is 209 feet, and it is ascended by 365 steps, as many as there are days in the year. The length of the Church is 245 feet in the clear, and is 98 feet broad. The following description of the edifice is principally extracted from Mr. Britton's "Architectural Antiquities of Great Britain."

The architecture of this noble Church is of the description generally called the Ornamental or Middle Gothic. The nave is supported by seven arches on each side, with two clerestory windows over each arch. The choir has five windows on each side, with a large one behind the altar. The windows of the aisles and of the upper story are respectively of two different patterns, varied alternately; those of the choir are also of different designs, and the tracery on the parapets of the aisles is counterchanged in the same manner as the windows; which circumstances show the building to have been erected about the middle of the fourteenth century. The chief entrance is by the south door, which has a large porch, with a chamber above, and a vaulted crypt underneath, now used as a cistern for rain-water. Adjoining to this porch is a chapel, in which was formerly a chantry. There were anciently two small buildings adjoining the choir, now pulled down: one stood across the upper end of the aisle, with a gable towards the south. The other building ranged under three of the choir windows on the same side, which were partly blocked up by its roof. The buttresses of the choirs, and those of the corners of the nave and aisles, are furnished with large pinnacles. The little buttresses of the upper story have had each a statue in front, several of which still remain, especially on the north side: over the gable of the nave is an open niche, in which anciently hung the sanctus bell. The parapet over the east end of the north aisle is very curious and elaborate, being pierced with tracery of nearly the same design as the arch-buttresses of Henry the Seventh's Chapel at Westminster.

The general view of the interior of the Church is grand and striking—an effect arising from the ample size and proportion of every part, rather than from any peculiar elegance. Almost all the original decorations have given way to the ravages of time, or the ruthless progress of repair. Not the slightest fragment of painted glass is left; and, what is worse, the windows are glazed in squares instead of the old lozenge panes. The floor is full of grave-stones, most of which have been stripped of their brasses; and the few that have escaped plundering are worn illegible.

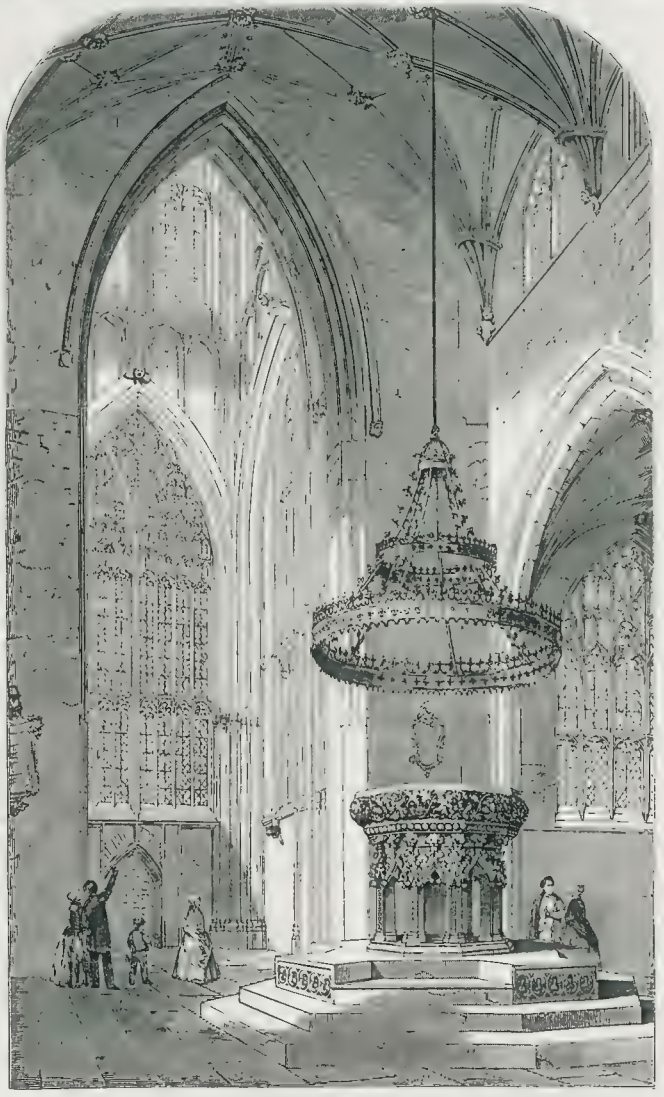
The columns of the nave are tall and well wrought, with plain capitals. The roof is of wood, in form of a groined vault, adorned with ribs and carved knobs; but the arches are too flat to look handsome; and a sort of impost moulding, placed a little above their springing, has a very ill effect. The aisles were originally ceiled with flat panels, painted with historical subjects, but are now arched in imitation of the nave. The workmanship is excellent, and great ingenuity is displayed in the finishing of the groins; the choir was also new roofed at the same time as the aisles, and by the same artist. It is arched across without groins, and the sides spring from stone cornices of ancient work: it is decorated with carved bosses and ribs, in a very good style. Rather more than the space of four arches of the body of the Church is furnished with pews: the western part, forming an open area, is separated by a wooden palisade and gates. The pulpit is of very dark-coloured oak, embossed with carving in the style of Queen Elizabeth's time, and partly gilt: the whole is very curious. The choir has been highly magnificent, but modern alterations have sadly disfigured it. The rood-loft is totally destroyed, and a large gallery, supported by wooden pillars, is put up instead of it. The ancient stalls have had their canopies cut away; and their desks and subtillia, beautifully carved, are daubed over with coarse paint, of a very wretched colour. The altar-piece is of oak, in the Corinthian order, which appears very discordant with the architecture of the Church.

As time wore on, the interior of the Church required refitting; and the necessary steps were taken in 1851, when at a public meeting it was resolved that a subscription should be entered into to provide the requisite funds; and the following gentlemen were requested to co-operate with the Vicar (the Rev. G. B. Blenkin, M.A.), and the churchwardens (Thos. Wise, jun., Esq., Mr. W. Simonds, and Mr. H. T. Harrap), as a committee for the management and execution of the work:—The Mayor, B. B. Cabbell, Esq., M.P., the Rev. J. H Oldrid, the Rev. P. Alpe, J. B. Millington, Esq., Thomas Gee, Esq., Frederick Cooke, Esq., Thomas Garfit, Esq., B. S. Simpson, Esq., J. C. Calthrop, Esq., C. Yeatman, Esq., Mr. Joshua Beverley, and Mr. T. Gask: F. C. Wise, Esq., was appointed honorary secretary. The sum subscribed at the meeting amounted to £2235 12s.; and the subscription list was from time to time augmented, until, at the close of 1852, the fund thus collected amounted to £3261 os. 8d. It was found necessary, however, to undertake extra works to those originally contemplated, for which the funds fell short of the additional expense by about £700. The entire works have, however, been completed in a satisfactory manner, and the committee rely with confidence upon an extension of the generous feeling they have already experienced.

BENCH END, BOSTON CHURCH.

The restoration (under the superintendence of Mr. G. G. Place, architect, of Nottingham) was commenced about September, 1851, and at a meeting held in March last, the committee were enabled to fix the day for re-opening the church.

The restoration has been one of great magnitude and effect. The works comprise the substitution of elegant oak benches in the place of the old pews throughout the church; the addition of a large stained glass window by O'Connor at the east end of the chancel; the removal of the organ to an external chamber built for its reception at the north-west angle of the chancel; the restoration of the fine oak stalls of the chancel, and the addition of seven new highly-carved canopies. The chancel is also tastefully paved with Minton's encaustic tiles. At the west end of the nave, opposite the south door, upon its proper complement of steps, is placed the font, a new and exceedingly beautiful one—



BOSTON CHURCH, RESTORED.

the gift of A. J. B. Hope, Esq. The communion-table is also a new one; it is formed of massive oak, weighs above a ton, and is approached by eleven steps from the chancel, which is itself higher than the body of the Church. But the greatest work is a beautifully groined ceiling in the tower. Formerly there existed here a ringing chamber, so placed as to block up the lower lantern. This has now been removed, and the architect has been enabled to form probably the finest vaulted roof of the kind in the kingdom. It is 156 feet from the ground, being twenty feet higher than any other in England. The central boss, which bears the emblem of our Lord, weighed before being carved, six tons; it is surrounded by four smaller ones, bearing the emblems of the Evangelists, as well as by four angels, each holding a portion of a scroll. Around the sacrarium are retained the iron rails of 1740, which are now blue and gold. The altar hangings are red and gold. The floors of the body of the church are almost entirely composed of ancient ledger-stones, all of great interest, some few magnificent. The pulpit is of carved oak, of the time of James I., and is placed against the easternmost pillar on the north side of the nave: it is tastefully ornamented gilt, and is approached by a light and elegant iron spiral staircase. The arrangement of the lights is novel and successful. Instead of the usual plan of solitary brackets scattered ineffectively over the church, there are rich brass standards, each bearing a considerable number of jets, and producing a vista of light. Over the font is suspended a magnificent corona bearing nearly a hundred lights. The adaptation of the modern invention of gas to ancient churches, so as not to destroy the effect of their architectural structure by incongruous fittings, has long been one of the most vexed problems of church restoration. The most fastidious stickler for ancient precedent would acknowledge that the richly decorated standards and the crown of light at the western end harmonise so entirely with the whole building in its restored aspect, that they might almost be deemed part of the original design. The whole of the alterations have been executed from the designs, and under the superintendence, of Mr. Place. Messrs. Cooper of Derby, were the contractors.

Next week we shall engrave the superb Great East Window.

At the re-opening on Thursday week, besides the Bishops of Lincoln and Quebec, there was a very large attendance of the clergy of the diocese and the neighbourhood, about 200, as well as a large body of the laity and numerous friends. A full cathedral service was performed, the lay vicars and choristers from Lincoln assisting. The Lord Bishop of Lincoln read the communion service, and afterwards preached from the 12th chapter of the 1st Corinthians, 7th verse, "But the manifestation of the spirit is given to every man to profit withal." At the close of an eloquent and impressive sermon the Hallelujah Chorus was sung.

In the afternoon, a déjeûner was served in a pavilion erected in the rear of the National Schools: there could not be less than 1000 ladies and gentlemen; the Mayor, Mr. F. T. White, presiding.

After the customary loyal toasts, and the Bishop of Lincoln had responded to "the Bishop and Clergy of the Diocese," his Lordship proposed "the Health of the Subscribers to the re-pewing of the Church." Boston, his Lordship said, might well be proud of its church, and he thought that Boston might be equally proud of those who had subscribed so liberally towards so great a purpose (Cheers). It was a most pleasing sight to see the church so well filled in the morning; and it had been a sight to make him take courage for the future, and thank God for the Church of our day. His Lordship then alluded with satisfaction to the fact of his attendance at Boston on this occasion being his first official act, and he could not help considering it as a special favour. The large number of clergy present he considered as a good augury for the future, and he trusted they would work together for many years with mutual benefit. Mr. T. Garfit responded; and, after some other speeches, the company separated.

In the evening the Church was again crowded. The Rev. G. Hills Vicar of Great Yarmouth, preached an eloquent sermon.

BUCKINGHAM PALACE.—The façade of this Royal edifice, where the suite of apartments are usually allotted to her Majesty's illustrious visitors, is undergoing a thorough course of re-embellishment, and the repairs are very [illegible] completed by the return of Mr. Grant from Osborne on the [illegible] instant.

THE CHAMBERLAINSHIP OF THE CITY.—Mr. Anthony Brown, who was elected in [illegible] Chamberlain, died on Sunday last. He had been alderman of the ward of Billingsgate from the year [illegible] time of his election to the high office. The [illegible] City for the situation are—Aldermen Sir John Key, Bart., Farebrother, Humphery, and Sir William Magnay, Bart.; Mr. Wilson Hayes, who is not connected with the corporation; and Mr. Benjamin Scott, who is designated in the "City Pocket-Book" as "clerk to prepare accounts for auditors," and has been several years performing the laborious duties of the office of Chamberlain, are also candidates. It has long been the custom of the livery to appoint to the office a member of the Court of Aldermen.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—FRIDAY, MAY 13.

On the motion of Lord SHAFTESBURY, the Common Lodging-houses Bill was read a second time. This is a bill for carrying out the noble Lord's former measure on this subject, by which common lodging-houses are explored by authorised persons; houses are no longer permitted to take in more than as many as can breathe properly in them; lodging in cellars is prohibited; the rooms are properly cleaned and whitewashed; ventilation, lighting, and drainage are provided for; and the furniture of the houses sufficient for the authorised number of lodgers. There was much inconvenience at first, and the lodging-house keepers remonstrated, as did many of the poor creatures who had grown in hateful familiarity with this existence; but, now that the change has been effected, it appears that the lodgers and lodging-house keepers give their free testimony in its favour. They find health and strength, greater comfort of body and peace of mind, in air, light, space, and cleanliness. Medical officers discover that lodging houses under this control are no longer hotbeds of fever, and the police and parish officers find they are not so much nurseries of vice. Lord Shaftesbury now asks for some further powers, such as disqualification to keep a lodging-house after the third offence, inspection, removal of nuisances, registration, removal of sick lodgers to hospitals, regular reports from houses for beggars and vagrants, and some provisions of less importance.

The neglect shown by the East India Company in developing the natural resources of India, was again brought before their Lordships by the EARL of Albemarle, the Earl of Ellenborough, and Lord Wharncliffe. The occasion of the discussion was a petition from Manchester, complaining of the Government of India, and praying for a reform in its constitution.

The Cathedral Act Appointments Bill was read a third time, and their Lordships adjourned until Monday the 23rd inst., for the Whitsuntide holidays.

HOUSE OF COMMONS.—FRIDAY, MAY 13.

Sir W. MOLESWORTH, in reply to a question, stated that Dr. Reid, who had charge of the ventilation of the House of Commons, had been removed from his office by the late Government. He demanded £10,250 for compensation, and the matter having been referred to arbitration, the arbitrators awarded him only £3240.

Mr. WILSON, in answer to a question, stated that frauds by grocers having been committed upon a large scale by the words "chicory and coffee mixture" being placed upon packages intermingled with other printing, the Board of Inland Revenue had issued a circular requiring that every package of a mixture of chicory and coffee which was sold should have printed legibly on one side of the package, without any other printing, "This is sold as a mixture of chicory and coffee." It was provided that no other printing of any description whatever, except the name of the vendor, should be upon the package or canister containing the mixture.

THE BUDGET

The debate upon the Legacy-duties was resumed by Sir J. PAKINGTON, who opposed the extension to real property, on the ground that, although real property was nominally exempt, there were full equivalents in burdens cast exclusively upon ratcable property. Lord GOODRICH defended the extension of the Legacy-duty to real property. Mr. CAYLEY thought that a large portion of personal property which was invisible and evanescent, escaped its fair proportion of taxation. Mr. PETO approved of the Budget as a whole, because it approached to a balance of interests, and tended to multiply the comforts of the poor. Mr. NEWDEGATE declared it at our financial legislation was tending rapidly to confiscation. Mr. BRIGHT thought it wise and just to extend the succession tax to all descriptions of property, but he wished Mr. Gladstone had touched the Probate-duty, and he saw no reason why the property of corporations, whether aggregate or sole, should not be brought within the scope of the Legacy-duty. At the suggestion of Mr. STUART, the division was deferred until the second reading of the bill; and the resolution in favour of the new Legacy-duties was agreed to.

The issue of the writ for a new election for the borough of Rye was carried, on a division, by 118 votes against 99.

The House then adjourned until Thursday.

HOUSE OF COMMONS.—THURSDAY.

In reply to Mr. M. GIBSON, Lord J. RUSSELL said he did not think it would be advisable to introduce another bill to remove the Jewish Disabilities, but that a measure should be introduced to alter the oath taken by members. He believed that this object might be obtained by the passing of a bill now before the other House

The EXCISE Duty on Spirits Bill, and the Customs Duty on Spirits Bill, were severally read a second time.

Lord J. RUSSELL stated that the President of the Board of Trade would, on the 2nd of June, state to the House the nature of the measure intended to be introduced for the future government of India.

On the motion for going into Committee of Ways and Means, Mr. RICH called the attention of the House to the present state of India, and complained of the deficient state of information in which the House stands in reference to the manner in which India has been governed. Sir C. WOOD said he considered it would be most inconvenient to enter into a discussion upon this subject, until he had stated the nature of the measure he intended to introduce, in respect to which notice had just been given for the 2nd June.

The House then went into Committee of Supply, when several votes in the Civil Service Estimates were agreed to.

MAYNOOTH

On the vote of £45,000 for the repairs of Public Buildings in Ireland, Mr. SPOONER took exception to a portion of that vote, amounting to £1255 13s. 0d., for the repairs of St. Patrick's Roman Catholic College, at Maynooth. He considered it a national sin for a Protestant country, and a Protestant Parliament, to grant any sum of money for the encouragement of Popery. Upon principle, he protested against this portion of the vote, and moved as an amendment that the grant be reduced by this sum of £1255 13s.

Mr. W. WILLIAMS did not think it right after so magnificent a provision had been made for the support of Maynooth by the late Sir R. Peel, that any more money should be asked by the Government for this purpose. He would, therefore, support the amendment

Sir J. GRAHAM said, when the late Sir R. Peel proposed to endow the College of Maynooth, it was determined that the sum of £30,000 a year should be devoted for the support of that institution; but that whatever outlay was considered necessary from time to time for the repairs of the College, should be submitted annually to the consideration of Parliament.

Mr. A. PELLATT would support the amendment, but on different grounds to those stated by Mr. Spooner. He objected to all endowments

Mr. COBBY would support the amendment on the ground that he believed the original endowment granted to Maynooth was understood to be sufficient to cover all demands, not only for the maintenance of the College, but for its repairs.

Mr. MIALL would support the amendment, because he was opposed to all endowments.

Mr. SIDNEY HERBERT quoted an extract from the speech of the late Sir R. Peel for the purpose of showing that in proposing to endow Maynooth with the grant of £30,000 a year, he did not intend that it should include the cost of necessary repairs

Sir W. VERNON was opposed to any grant for the education of Roman Catholic priests, believing as he did that those priests took an oath of allegiance, not to the Sovereign of this country, but to the Pope of Rome.

Sir J. WALMSLEY was opposed to all endowments; but thought that it was most unjust to be nibbling with this paltry sum, when they granted, without a murmur, large sums for other religious institutions

Mr. LUCAS was perfectly willing to vote against all endowments, if the question were fairly raised. But he observed, in the vote before the committee, other items for religious purposes besides that for repairs of Maynooth College.

After a few words from Mr. Hadfield, Sir John Shelley, and Mr. W. J. FOX,

Mr. W. WILLIAMS proposed, as an amendment, that the items referred to by Mr. LUCAS, amounting to £356 3s. 8d., for the repairs and furniture of the chapels at Dublin Castle and Kilmainham Hospital, be also reduced. The total reduction which he proposed in the vote would therefore be £1491 16s. 8d.

The Committee then divided, when the numbers were:—For Mr. W. Williams's amendment, 43; against it, 80: majority against the amendment, 37.

The Committee then divided upon Mr. Spooner's amendment, when there appeared:—For the amendment, 54; against it, 74: majority against Mr. Spooner, 20

The original vote was then agreed to.

On the vote, £3368, for the Ecclesiastical Commission, being proposed, Mr. W. WILLIAMS objected to the vote.

The Committee again divided, when there appeared—For the vote, 83; against it, 44: majority in favour of the vote, 19.

The vote was then agreed to.

The remainder of the evening was occupied in the consideration of other estimates on the paper.—Adjourned.

ELECTION INTELLIGENCE.

MESSRS. Majoribanks and Forster have been returned for Berwick by a large majority—nearly double the votes for the Tory candidate.

Mr. Lee, the Liberal candidate for Maidstone, has been returned. He polled 748 votes; his opponent, Mr. Martin, 715.

The nomination for Dover took place on Friday, and the polling is fixed for to-day (Saturday). Mr. Mackinnon is the Liberal, and Mr Pomfret the Tory candidate

Mr. Braine met the electors of Plymouth in the Freemason's-hall on Tuesday. The meeting was unanimous in his favour. 600 electors have signed the requisition to him

The New Bill to diminish Election Expenses has been printed Should it pass it will not only diminish expense, but excitement, as no band is to be engaged to play—no flag exhibited—or the candidates are to be disqualified. A person playing in such a band, or mounting a flag, is to be liable to £10 penalty Any agent of a candidate employed in getting up a band or flag to forfeit £50. The fees of returning officers are not to exceed £10 besides the stamp-duty; and in future special constables are only to be paid 5s. a day

The Canterbury Bribery Commission commenced its sittings on Monday, at the Guildhall, of that city. The commissioners are Messrs Slade, Anstey, and Burcham The witnesses examined were Mr. Alderman Brent, Mr. J. Rutter, two of the recent candidates, Colonel Romilly, and the Hon Mr Smythe, and other persons

The Committee on Dockyard Appointments in connexion with elections have closed their examinations, and their report is daily expected.

AMENDED CUSTOMS RESOLUTIONS.

An amended Schedule of the alterations in the Customs Duties proposed in the Budget has been laid on the table of the House of Commons On a close comparison with the original Schedules, the following alterations in the new and amended schedules will be found:

1. In the case of clover, grass, and other seeds, the duty is proposed to be wholly repealed, except on canary seeds, which are used in the confectionery only The duty obtained from canary seeds last year was £40,000, of which £37,000 will be thus relinquished.

2. In the case of nutmegs, in place of a uniform duty of 1s. a lb. on all kinds, the present duty on cultivated nutmegs will be reduced from 2s. 6d. per lb. to 1s.; and the duty on the sort known as wild nutmegs will remain as heretofore, 5s. per lb.

3 Silk plush used in making hats will be reduced from 2s. the lb to 1s.; and varnish made from alcohol, &c. spirit, from 50s. to 12s. the gallon.

4. With regard to starch, the duty will remain as proposed in the first schedule; but the duty on rice, as a raw material, will be reduced from 1s per cwt to 6d.

5. With regard to Guinea grains and the extracts, they will be struck out of the schedule, and will remain the same as heretofore

6. With regard to iron and steel wrought, iron wire and rough iron castings will be admitted free; and machinery, wrought or partially wrought iron, tools, cutlery, and other manufactures of iron and steel not enumerated, at 2s 6d. the cwt., instead of 5s., as in the first schedule

7. Walking-sticks will be charged at 4s. the 100, in place of 4s. the dozen.

8. Chicory, dried and raw, will be charged 4s a ton till Oct. 10, 1854, and will then be free. Chicory, roasted and ground, will be charged at 6d the lb, in place of 6d. Coffee, roasted and ground, will also be charged 6d., in place of 6d.

9. Vinegar, in place of being admitted *free*, will be charged with a duty of 3d. a gallon, to countervail the duty on malt, &c.

10. Soap will be charged with an import duty of 2s. 6d a cwt., to countervail the duty on malt; and stearine will also be charged 2s. 6d. the cwt., for the same purpose.

11. Morphia will be struck out of the schedule altogether, and remain as at present.

12 Corks are again will remain as in the schedule first published, reduced from 16s. to 4s. 6d. the cwt.; but corks wholly made will be reduced from 8d. the lb. to 6d.—in place of 8d.

13. Silk velvet ribbons, with cotton backs, will be charged 3s. 6d. the lb., and broad silk velvets, with cotton backs, at 2s. the lb

14. Confectionery, sucrades, &c.—In place of 4d. the lb., the duty will be 2d. till July 31, 1854, when the sugar duties will be equalised, and 1½d. the lb. after that date

16. Toys and turnery to be charged at 4d. the lb., in place of 6d.

16. Liquorice root.—In place of being *free* at once, to be charged 5s the cwt. for four years, and after that to be free.

17. Paper, books, &c.—In place of 2d. a lb. to countervail the Excise duty, it is to be placed at 2½d. All books published prior to 1851 to be admitted *duty free*. All books published since (not reprints) and at 10s., from countries with whom we have treaties of international copyright; from others, 20s. the cwt.

18 Oil of cloves to be admitted at 1s. the lb., in place of 2s.

19. Tobacco struck out of the new schedules, and remains as heretofore

20. Window glass.—The duty to be 2s. the cwt. to April, 1855, and 1s. to April 1, 1857, and then free

21. Beer, by pure Beer, &c., withdrawn from the schedules, and will remain as heretofore

22. Bran and pollard to be admitted free.

23. Albumen to be free.

24 Mustard, when manufactured, except mustard flour, 5s. a cwt.

25. Raisins, in place of a reduction from 15s. to 10s. per cwt., remain at 15s. the cwt.

The following additions are made to the resolutions affecting the regulations for paying duties

1. With regard to cheese, the new duty of 5s. 6d. the cwt. is to be paid on the landing weights in place of re weights.

2. The 1lb. pet chest on tea in Bonds of more than 2s 8d., allowed hitherto as a deduction from the quantity on which the duty is paid, is no longer to be made, but the duty will be levied on the full weight of the tea

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories* The Rev. R. Holmes, M.A., to Wakerley, Northamptonshire; Rev. J. Bridge, to Ballycommon, Kildare; Rev. C. H. Heath, to Bucknall, near Newcastle-under-Lyne; Rev. T. H. Sisly to Lackford. *Vicarages*: Rev. G. C. Ne ve to Aston, Northampton; Rev. R. Bowcott to Llanllwnly; Rev. R. J. Green to Llanwardine, Ludlow; Rev. F. Margetts to St. John's, Cambridge Shire Rev. B. Belcher to the incumbency of the new church in Warwick Square, Pimlico.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem: The Rev. O. Clayton, by the parishioners of Ironbridge and Coalbrookdale, Herefordshire, on his leaving the Rev. W. Whiteley, perpetual curate of St. George's, Hulme, by the congregation, the Rev. E. R. Stock, by the incumbent, teachers, and schools of the Incorporation of the Trinity Church, Hanley, Staffordshire; the Rev. E. Burnwell, by his friends at Osbourne St. George, near Madeley, Salop, on his leaving that curacy; the Rev. James Bonwell, M.A., by the congregation of St. Philip's, Salford, as a token of their admiration of his talents, and gratitude for his ministerial labours; the Rev. Owen Jones, by the congregation (consisting of a watch and other articles, value about £40) by the Accrington, Great Haworth, and Baxenden Church Sunday-schools, as a "token of esteem for his prompt and energetic services in connexion with the said schools"

ST. JAMES'S CHURCH, BRADFORD.—Two very beautiful windows, by Mr. Wailes, of Newcastle, have been placed in the chancel of this church by the congregation, to the memory of the late Rev. William Sherwood, M.A., nearly forty years perpetual curate; one contains a figure of St. James, with a medallion underneath of the dispersion of the Apostles by our blessed Lord. The other contains a figure of St. John, with a medallion representing the charges to St. Peter, "Feed my Sheep," &c.

TRIBUTE TO THE MEMORY OF A GOOD LANDLORD AND MASTER.—The tenants, farmers, servants, and labourers on the Duke of Wellington's Hampshire estate, have presented an address to his Grace, with a subscription of £1000 to be applied to the erection of a monument to the late Duke in the neighbourhood. They say: "Anxious to pay the greatest respect to your Grace's feelings, we would very briefly state the motives by which we have been severally actuated in subscribing to the proposed monument As gentlemen-stewards residing under the late illustrious Duke, we most gratefully acknowledge the many acts of great kindness and condescension so invariably displayed towards us the re collection of which can never be effaced from our memory. As tenant farmers, our habits of industry and mode of living are well known to your Grace who has lived so long amongst us As servants, we have passed the greatest portion of our lives, under a most just and indulgent master, in a service we have loved and prized. As labourers, we have always received constant employment, and a fair remuneration for honest work. Our cottages have been rendered comfortable, our families have been cared for, and our children have benefited by a sound religious education, far beyond that which we had received in our youth; the benefits of which have of late been more particularly apparent, inasmuch as many of them, having left this country for far distant lands, are now enabled to communicate with us in their own handwriting, and we thus have received the expression of their genuine feelings"

FINE ARTS.

EXHIBITION OF PAINTINGS BY MODERN GERMAN ARTISTS.

Whatever difference of opinion may exist in regard to the claims of German artists in classic subjects, their merit in the landscape department cannot for a single moment be disputed by any one who has even casually examined the small collection forming "the first annual Exhibition of the works of Modern German Artists," now open at 168, New Bond-street. This collection we have visited three several times since it was opened; and upon each occasion have been more and more struck with the mastery of colour, and the poetic feeling displayed by the several artists; and the freshness and grandeur of the subjects which they have selected for treatment. Without at all wishing to disparage native talent, we must say that there is no landscape painter amongst us who may not study the contents of this small gallery with advantage. It would appear from the subjects here presented, that German artists, tired of constant repetition of the features of their beloved Rhine, have gone further afield, and have adopted Norway and Sweden as a new ground for study; and certainly the fjords and fir-clad mountains of that comparatively virgin soil have yielded subjects of poetic beauty and interest, which we have nowhere else seen equalled, and which, unseen, it would be impossible to conceive. In dealing with these subjects, the artists whose works are before us display a feeling for harmony and a power of realising the combined effects of nature on the grandest scale, which, altogether, we have never seen surpassed.

Amongst the artists whose works are here exhibited are several of the first note in their native land; and we believe that we ought to add, in order that no undue comparisons may be made between their works, and the general productions of native art, that especial care has been taken by the promoters of the present Exhibition, to include none but the choicest works of men of the highest repute: those of an inferior class not being considered worth the expense, trouble, and risk of importing. First in rank stands Andreas Achenbach, of Dusseldorff—an artist known throughout continental Europe, and the author of celebrated works in the collections of the Emperor of Russia and the Prince of Prussia. His Swedish Landscape, with a wild torrent rushing headlong through a wooded mountain pass, is a magnificent production, exhibiting a knowledge of effect, and a power of handling, impossible to be surpassed. His sea piece, "In a Storm," is also a masterly effort. Tidemand and Gude, two artists also of Dusseldorff, have produced several works, which hold distinguished places in the galleries of Vienna and Berlin. The former is a painter of figures, and the latter of landscape. The artist exhibits merit of a high order, resulting from a ripe study of nature; but the former gives a character to his figures, an amount of life-like expression, rendered with a softness of treatment, which at once charm and captivate the beholder. These qualifications are particularly exemplified in the groups introduced into the picture of the "Peasant's Funeral at the Sogne Fjord, Norway," and in an intensely interesting group of "Norwegian Peasant Children," whose pale blue eyes seem to melt through the canvas. Schirmer, the Professor at the Academy at Dusseldorff, has a quiet picture of "Moonshine," and a wonderfully-powerful "Land-storm;" the play of the blast upon the trees and upon the running stream being admirably realised. A. Lee, also of Dusseldorff whose works are better known in England, perhaps, than those of any other German artist, and who is remarkable for truthfulness of character and extreme finish, has here four pictures: "A Scene in Norway approaching Thundersdalen Fjords;" "Norwegian Fjords;" "A View of the Jungfrau Mountain, in Switzerland,' and another landscape, the property of her Majesty. The view of the Jungfrau—the ice-capped mountain-crests in the distance, and in the front the stunted firs and other foliage—is one of the most striking pictures it would be possible to conceive. A. Weber, of Dusseldorff, has two Italian landscapes, treated with high poetic feeling—a medium between Poussin and Claude. A. Siegert, of Munich, has two very clever *genre* pieces "Sunday" and "The Trumpeter's Children." Camphausen, of Munich, also has a very spirited and careful picture of "Charles I. on the Battle of Naseby." E. Bodom, of Dusseldorff, has a Norwegian landscape of striking and romantic beauty; presenting in the foreground a headlong torrent, and in the middle and extreme distances glimpses of the quiet winding river, with various nicely distinguished gradations of atmosphere. We conclude our notice by expressing a hope that the interchange of art examples between the Continent and ourselves, of which the precedent is here set, may be followed up upon a larger scale; convinced that it cannot but tend to the ultimate advantage and honour both of native and foreign talent.

EXHIBITION OF DRAWINGS AND SKETCHES BY AMATEUR ARTISTS.

This Exhibition, which was first established two years ago, has already assumed a very firm and satisfactory position. The display for the present year, now on view at the Gallery of Illustration, consists of 100 drawings and sketches, contributed by 230 amateurs, many of whom might fairly assume the title of artist if they thought proper. At the same time, the promoters expressly guard themselves against the supposition of having undertaken their annual Exhibition with any feeling or intention of entering the lists in competition with professional artists; and their explanations upon this head are very gracefully expressed in in the Preface to the Catalogue

Amongst the most successful exhibitors on the present occasion are Captain Lumley, 2nd Life Guards (who has two charming domestic interiors); the Hon. Eliot York; Lieut. Tower, R.N. (who has an extensive and very clear view of "The Alhambra, the City, and Vega of Granada"); Mr. T. Macdonald, Mr. W. Baddock, Sir R. G. A. Levinge, Mrs Bridgeman Simpson, the Hon. Mrs. Carew St. John Mildmay, Miss Nicholas Smith, Miss Ada Bicknell, Miss H. J. Campbell, Miss Bonham Carter, and Lady Susan Vernon Harcourt.

THE PARIS EXHIBITION.

PARIS, MAY 17, 1853.

WHEN the annual Exhibition of the Works of Living Artists was held at the Louvre, and admittance was gratis, crowds thronged the avenues to the gallery long before the hour of opening. Times have changed, and that luxury is now a thing of the past. From the Louvre the Exhibition was transferred, since the Revolution of 1848, to the Tuileries, then to a temporary building in one of the courts of the Palais Royal. That building was pulled down the other day, and this year the locality is again changed. At the corner of the Faubourg Poissonnière and of the Rue Richer, stands an edifice where, in former days, the supernumerary arm-chairs and washing-stands of the Royal family of France were preserved. It was the *garde-meuble*, or furniture-warehouse of the French Kings. It has been this year appropriated to the productions of French artists, and of those foreigners who choose to risk comparison with them. There was a notable difference in the affluence of visitors upon the first day of opening this year, and in former years that I remember at the Louvre. A very small number of persons was gathered together at the doors when ten o'clock struck on Sunday, the 15th inst., and until late in the day the irregular and rather complicated suite of rooms could not be said to be at all full. At no time were they crowded.

There are two distinctive features in this year's Exhibition. The first is the absence of most of the leading French painters—Ingres, Delaroche, Scheffer, Decamps, Vernet, &c.; the other is the large number of foreign artists, especially Belgians, who have sent pictures, amongst which are some of the best in the Exhibition. Another circumstance to be noted, and which is probably attributable to the unusual severity of the winter, is the much smaller number than usual of landscapes and portraits We know, by experience of our own Royal Academy Exhibition, how vast an extent of wall is apt to be engrossed by portraits of Mr. A., and Mrs. B.—not invariably of such high artistic merit as to redeem their want of public interest, or even to explain their admission. At Paris, in most previous Exhibitions, landscapes have been very numerous; and as that is the style of art in which the French are, upon the whole, least successful, they have comprised many pitiable displays of clumsiness and inadvertancy, shading from the semi-naive, and designated, in French painters' parlance, as "plates of spinage." This year there are very few landscapes, and most of those few are at least highly respectable, whilst some are very much merit

We have not room this week for any detailed criticism upon the pictures, but shall return to the subject next week.

LITERATURE AND SCIENCE AT HULL.—On Tuesday last, the foundation-stone of a public subscription library, was laid at Hull, by the Lord of Carlisle; and upon the same day, the first stone of a new hall and museum for the Hull Literary and Philosophical Society, was laid by Lord Londesborough. The last-named ceremony, being performed with masonic honours, was the chief point of interest, and attracted a large number of visitors. We shall engrave this scene next week. In the afternoon the events of the day were commemorated by a dejeûner at the Public Rooms, Hull.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The Chief Baron of the Exchequer has appointed Mr. J. Templar, who has for some time practised as a special pleader, to the vacant Mastership of the Exchequer.

It is estimated that there lies, from time to time, in the Dead-letter Office, undelivered, the pecuniary offering of nearly £11,000 annually, in cash alone. On the 17th July, 1847, there were lying in the Dead-letter office bills of exchange for the immense sum of £40,410.

A slight shock of earthquake was experienced in different parts of the city of Washington on the 2nd instant.

The regency of Upper Franconia has given orders to have all placards relative to emigration removed from the walls of the public buildings.

The Lord Chancellor has appointed Graham Wilmore, Esq., Q.C., to be Judge of the County Court in Circuit 57 (Somersetshire), in the room of J. H. Warren, Esq., deceased.

It is not generally known that Lord Ellesmere has again liberally opened his gallery to the public on a certain day or days in the week. Artists, on the 1st of each month, have cards of admission.

Two women, who were defendants at the County Court, in Leicester, on Tuesday week, employed themselves vigorously during the sitting, while waiting for their turn—the one in seaming hose, and the other in making lace and brace ends.

The Ordnance survey of the county of Ayr is proceeding. A party of Sappers and Miners has arrived in Ayr for that purpose.

The singing clubs have been dissolved throughout the Electorate of Hesse-Cassel.

On Tuesday week a shoemaker, named Hope, belonging to Glasgow, who had just taken his seat in a private carriage at Greenock, expired. Hope had come to Liverpool on the previous day on his return.

The *Reindeer* left Rio Janeiro on the 24th March. When she left, the fever was raging to an alarming extent among the shipping there.

Baronet, Allan, Bartholomy, and Monnet, the Frenchmen convicted of being concerned in the late duel, near Windsor, were liberated on Monday from Horsemonger-lane gaol, their term of imprisonment having expired.

Mr. James Plunkett, Q.C., the newly-appointed clerk to the Insolvent Courts in Dublin, is not son to the venerable Lord Plunkett, nor in any way connected with that eminent personage

The Queen of Prussia was to arrive at Vienna on the 17th inst. from Potsdam. The Queen of Greece, *en route* from Trieste to Germany, was also expected to pass a few days in the Austrian capital.

On Sunday five lads, who had hired a boat at Hungerford-stairs, upset it, by some mismanagement, at Battersea, and all were in an instant string ling in the stream. Four were saved, but the fifth was lost.

The remains of Lieutenant-General Sir W. R. Gilbert, G.C.B., were interred in Kensal green Cemetery on Monday. Lord Hardinge, (Comm anding-in-Chief) and Lord Gough (who came from Ireland on purpose) taking a part in the ceremony.

A company is being organised for the purpose of establishing a Crystal Palace in Glasgow, on the plan of the great institution at Sydenham.

A grand reception was given on Tuesday, at Leicester, by the inhabitants, to Sir Joshua Walmsley and Mr Gardner, the members for the borough; and Mr Kossuth was a spectator of the procession, and was loudly cheered at the close.

A boiler explosion at the fire-iron and glass-cutting factory of Messrs. Davis, at Dudley, on Saturday, resulted in the death of the engineer and three men. The devastation of property is extensive.

The mother of the Sultan died on the 1st inst.; her age was about fifty. She has always been known as a most amiable woman, and was greatly beloved by her son. She was originally a Circassian slave

The American ship *Georgia* arrived in the Thames on Thursday, from Sydney, with half a ton of gold-dust on board

A new college is to be founded near the terminus of the Kendal and Windermere Railway, for the county of Westmoreland: it is to be dedicated to St. Mary.

On Thursday at noon a clerk of the Joint Stock Banking Company entered the City police station in an interesting condition, and stated that he had lost 1000 sovereigns while riding in a cab from the Pallamall to Princes-street. Huggett, an active officer, was immediately despatched in search of the cab, and within fifty-three seconds returned as pilots, twenty-three at Southampton, and forty-three at Portsmouth.

On Tuesday Alympius, the son of a Tartar chief, and late an officer in the Russian army, gave an interesting lecture in Belvoir street, Leicester, on the customs, manners, and religion of Independent Tartary

The Lord Chancellor will receive the Judges, Queen's counsel, &c., at twelve o'clock on Monday next, the first day of Trinity term, at his Lordship's residence, Upper Brook street.

The cholera, which had been raging with great violence at Moscow, had re-appeared in St. Petersburg, where several persons had died.

Some workmen, while removing an old thatched roof at Alne, near Easingwold, discovered an old linen bag, containing a large number of ancient silver coins, which were shilling-pieces of the reigns of Elizabeth, James, and Charles

The steamer *Ocean Wave* was destroyed by fire on Friday night, the 29th ult., fifty miles above Kingston, Canada West. She had fifty persons on board, twenty of whom only were saved, including Captain Wright, the mate, and the purser

Advices from Stutgard, Westphalia, state that the two Chambers have decided that capital punishment shall be inflicted on any one who attempts to assassinate the King.

Government has offered a reward of £200, together with a free pardon to any accomplice (not the murderers), for such information as will lead to the apprehension and conviction of the murderers of Maria Stiggall, housekeeper to the Rev. B. Barker, at Barton, Suffolk, on the 8th inst. The joiners in Lancaster ceased work on Monday last and have not yet returned to business. Their demands are an increase of wages of 2s. a week, and two hours less work during the six days.

Lieutenant and Adjutant Harrison has been appointed to the Governorship of the Oxford County Gaol

A letter from Philadelphia says:—"The 1st of May has passed by, and yet the Crystal Palace at New York is far from being complete. From appearances, it will hardly be ready until the end of June."

Letters from St. Petersburg of the 6th inst. state that owing to the setting in of mild weather the navigation was expected to open in a day or two

A dreadful hurricane occurred on the coast of Madras in March last: twenty square-rigged vessels, and twice that number of native craft, were wrecked or lost.

Some of the palms at Kew Gardens have grown so rapidly as to reach the roof (sixty-six feet), and two of them have been sunk in the ground in order to retain them a few years longer in the present building.

Sir Robert Pee. delivered a lecture on "Switzerland," in the Town Hall, at Birmingham, last week, to a very crowded audience.

The following notice has been sent to the provincial post-offices:—"The Postmaster General has been pleased to withdraw the restriction which precludes letter-carriers and other employed in country offices from soliciting Christmas gratuities

Sir J. W. Ramsden, Bart., the new M.P. for Taunton is the youngest member in the House of Commons (being only twenty-one years of age). he is said to be one of the wealthiest commoners in England.

It is expected that the census papers of 1851 will be ready to be laid before Parliament immediately after the recess

The Lord Chief Justice said in Court, a few days ago:—"I am sorry to say, we are obliged to take the oath now against the descendants of James, there being no descendants of that person

There is now living in Morriston, near Swansea, an old woman named Elizabeth Evans, who has attained the extraordinary age of 104 years. She can read her Bible without the use of spectacles, and occasionally smokes her pipe of tobacco, a practice commonly indulged in by matrons in Wales.

CHESS.

TO CORRESPONDENTS.

H J C A.—Received, with thanks

I N C, Leicester.—You may obtain them through any newsman.

J M, of Manley.—You can claim a second Queen while the first is on the board.

H W, of Walsall.—It shall have attention speedily

RICARDO.—We suppose it was not meant.—not knowing wrong.

G E H, Kimbolton.—The "Staunton" wooden men, in mahogany box, common size, are, we believe, a guinea a set. Write to the manufacturers, Messrs. Jaques, of Hatton-garden, London.

STUDENT.—No, but that is the key-move

A. G., Chatham.—The Problem in question was, as you suggest, taken from our paper, and marred in the transfer. We published it correctly. The solution is, 1. Q to Q Kt 3rd; 2. Q to Q Kt 2nd. 3. Q takes P, and 4. Kt to Q Kt 3rd—Mate.

DR. EBERLE.—Black can exert upon giving perpetual check, if he pleases, and thus draw the game.

A. F., Florence.—Highly interesting, and very acceptable

J. H. F., Glasgow.—Unless specially agreed otherwise, drawn games do not usually count in a match. In the instance you mention we should consider the contest was not finished until one party scored two games.

B. I. G.—Received with thanks. The omission you speak of must have first occurred, we should think, at Y.

P. C., Sark.—The move suggested would have given Black the advantage. 2. For an answer to any of queries, we must refer you to the account which we published last week of the Manchester Chess Meeting

HARMONIA.—I. If you will send a copy of the solution referred to, we will again look at it. 2. If a pawn, No. 8, a Black Pawn at Black's K R 6th, appears in some of the improvements as now been omitted.

E. H. E.—You may have played the game wrongly. Try it once more. 2. The Review

LANCASTER.—We have not seen this week to give an account of the new established Chess Club at St. Petersburgh. But we hope to do so next, and to give the names of the Gentlemen whose order whose diagnose the society probably the most brilliant of its kind in Europe, we believe, formed

J. G., Exeter.—Is to be examined in the meantime, send us the particulars of your club.

J. J., Bristol.—Look at the position again. If Black move as you propose, he is mated at the next move.

QUINA.—Problems will be sent through the channel indicated three weeks ago

Your problems are under consideration.

SOLUTIONS OF PROBLEM No. 483, by Mekir, of Sandgate; Darven, T. G., of Wells; Farmborough, J. G., of Norwich; G. A. B., Monnie Osbornton, Aberdeen, Jaques, Edmonton; L. of Oxford, Agnes, Mr Jolfrey, Ricardo, Harrovensis, J. P., of Bristol green, J. M., of Maldon, Valle field, Mathews, H. R., Brompton; E. H., W. A. A., are correct

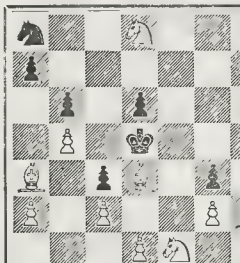
SOLUTIONS OF PROBLEM No. 484, by Kappa, Surveyor, Farnwood, R. B., Lex, Philip, M. P., D. D., Ernest, P. O., Darward, S. W., C. P. Q., Delta, Chappell, Juvenile, Henry, T. P., are correct

SOLUTIONS OF ENIGMAS, by T. A., of Norwich, J. P., of Bothnal green, Kappa, E. H., of Norwich, Etienne J. C. H., Harrovensis, Anne, Armada, R. B., Tox, Romeo, R. B. T., Jerry, D. L. S. F. Q. R., are correct All others are wrong

PROBLEM No. 485.

By J. C. W.

BLACK.



WHITE.

White, moving first, to checkmate in five moves.

CHESS IN THE PROVINCES.

Game between MR. LÖWENTHAL and MR. BIGLAND, of Leamington; the former giving the odds of the Pawn and two moves.

(Remove Black's K P from the board.)

WHITE (Mr. L.)	BLACK (Mr. L.)	WHITE (Mr. B.)	BLACK (Mr. L.)
1. P to K 4th		26. Q to her 2nd	Q to K B 3rd

White playing first, mates in three moves

THE CHESS MEETING AT MANCHESTER.—The great length to which the notice of this meeting ran in our last Number compelled us to omit the names of many well known players, whom we noticed as being either at the tourney or the dinner. Among the visitors were Messrs Staunton, Löwenthal, Harrwitz, Horwitz, and Williams, from London; Messrs. Cronhelm (sen. and jun.), Craven, Gardiner, and Thomas, of Halifax; the Rev. S. Burnell and the Rev. Mr. Owen, from Warrington; Sir George Stephen, Mr. Morton Sparke, and Mr. Cox, of Liverpool: Mr Morecroft, of Rock Ferry; Mr. Newham and Mr. Marc, of Nottingham; Sir John Blunden, Bart., of Kilmany; Mr. Stanley, of Preston; Mr. Robinson, from Wakefield; the Rev. G. Smith, of Leamington; Mr. Cadman, of Leeds. The Manchester amateurs mustered, of course, in great strength; amongst them we observed Messrs. Lee, Birch, James Birch, C. A. Duval, Mr. Shipping, Hans Hasché, C. Halié, Rath, Lamport, Bellman, Boyle, Francis, Beaver, Turner, Schwyter, Reiss, Wansley, Hirst, Chilie, Cohen, Bay, Sedona, Allen, Greg, Stora, King, &c.

TABLE-MOVING.

WE find from an article in our Paris contemporary, the *Illustration*, that the attempts at table-moving made at Bremen, Leipsic, and other German towns, have entirely succeeded. One of the editors of our German contemporary, the *Illustrirte Zeitung*, asserts that he himself followed the rotatory movement of one of these tables until he fell down from exhaustion. The process, according to him, was of the simplest character. Five or six persons, some of whom were ladies, sat round a mahogany table, with their hands upon the table in such a manner that the little fingers of the right and left hand of each person touched those of his two neighbours. At the end of five-and-twenty minutes a magnetic current, as it is thought, was developed, which the persons sitting round the table communicate to it. "The table then begins to raise itself, to move to and fro, at first slowly and slightly, then turning more and more rapidly from left to right, directing itself towards the north. The company may push back the chairs, and turn the table as long as they please." It is necessary that the table should stand upon the bare floor, for the carpet weakens the magnetic force, and, for the same reason, it is better there should be nothing upon the table, although an eye-witness declares that he has seen a table support with the lamp upon it, and what seems incredible is, that the lamp moved also, but was not upset.

These are the facts inserted in the German journals. It would appear, from the explanations they give, that the phenomenon is occasioned by animal magnetism. According to the last advices, it is necessary that all the persons forming the magnetic chain should be previously magnetised, or, at all events, that the conductor of the chain should enjoy great magnetic properties, which he is able to communicate to others. The experiments are multiplying themselves. And not only are tables made to move, but chairs, presses, sideboards, and other moveable articles. Grave accidents have notwithstanding happened. We do not here speak merely of headaches and nervous attacks, inevitable results of these experiences, but of epileptic convulsions. The life of a youth of sixteen is said by our Paris contemporary to be in danger, in consequence of the violent and renewed three attempts he made to succession.

The German *savans* are agreed that these remarkable phenomena can only be explained by animal magnetism. But after what laws this mysterious fluid develops itself in order to put in motion inert bodies, is as yet unknown. The German philosophers are attentively studying this new problem of science, which is beginning to attract some attention also in England. Mr. W. Radcliffe Birt, a gentleman well known in the scientific world, has written to a contemporary to detail an experiment made by him in the course of the present week:—

On Monday evening last, two gentlemen and myself manipulated on a globe frame; the upper portion was varnished, and on this we laid our hands not in contact. The globe frame and operators were insulated from the floor by a sheet of gutta percha. In this case each person was completely insulated, and no effect was produced, except that one gentleman exhibited evident indications of vertigo or giddiness; he experienced a profuse perspiration, accompanied with paleness, and was obliged to relinquish his position at the globe frame. From some experiments which I had made in the early part of the day, I had every reason to believe that the rotation was first induced in the bodies of the operators, and suggested that we should join our fingers in the usual way, but not in contact with the globe frame. We did so, but the same gentleman was again obliged to break contact. The remaining two joined their opposing little fingers, and the result was a revolution of one gentleman round the other in the same direction as mentioned in the experiments. The time occupied was 37 minutes, contact being maintained during the whole of this time.

Mr. Birt thinks that a vital force of a very low order is developed.

Some experiments, which took place within the last few days in the Minories, are thus described by Mr. Bates, of the Nautical Academy:—

Experiment 1.—A small round mahogany table, about 3 in. diameter, was employed; five gentlemen sat around it, with their hands (fingers) so placed that a ring of fingers surrounded the table, the little fingers of each neighbour being joined, also the thumbs of each operator. During the period of about half an hour, sensations of throbbing in the fingers and thumbs, pains in and about the region of the elbows were experienced, and a perceptible vibration of the table observed. The table was placed on the floor *uninsulated*.

Experiment 2.—The same table, under the same circumstances, was employed, but instead of five, seven gentlemen operated: on this occasion an electrometer was employed (a delicate form, which would receive an electric charge. While the table remained *uninsulated* no effects were perceptible during half an hour beyond the throbbings and pains mentioned above.

Experiment 3.—The table was now *insulated* by being placed solely on an ordinary thick oil stool about 1 foot square, a party of seven stood around and before it, the same gentlemen as before, for the sake of experiments, pains in the elbows, &c., were observed; at length two gentlemen, sitting opposite each other, experienced similar phenomena, especially a particular sensation on the balls of the thumbs in one instance the ball of the thumb was in contact with the table, in the other in contact with the operator's other thumb. About this time a remarkable vibration of the table was observed; its peculiar character was perhaps noticed more distinctly by the threads of the electrometer exhibiting a tremulatory motion not observed before. The next phenomenon observed, about twenty minutes after the commencement of the experiment, was remarkable. The operators, without being sensible of any motion, observed the motion of their hands to be influenced—they found the hand moved towards the right, so that while they remained in a sitting posture a kind of hoisting was produced. The motion of the table now became apparent, for while the position of the hands on the table was necessary for the operators to rise; a rotatory motion was indicated, which from commencing very slowly and gradually accelerating, obliged the operators to follow the rotating table, first at a slow and afterwards at a brisk walk.

Experiment 4.—The table was now insulated as before, so that it was insulated as regarded the operators, by the glass stool, and *the table was* insulated, as regarded the earth, by the gutta percha. In three minutes the rotation was induced; it was in the same direction as before, viz., contrary to that in which the hands of a watch move, and was maintained during six minutes, in which the table made upwards of six revolutions.

Experiment 10.—The table being *insulated*, the party sat round as before; in two or three minutes the rotation commenced, at first slowly, but accelerated so rapidly that the operators were obliged fairly to run, till at length, being exhausted, their hands were removed from the table, and the motion stopped.

Experiment 11.—An iron chain was extended round and upon the table, two or three persons placed their fingers lightly upon it, and in a few minutes the motion was induced.

The above experiments were connected with these experiments are, without doubt, the absence of the motion of the table when *uninsulated*, and the production of motion upon the insulation being effected. Experiments 1 and 2 exhibited a motion, when the table was under peculiar atmospheric circumstances; the time required to induce the motion was, however, very different in the two cases. It is to be borne in mind here that the table had been sat mitted to the influence of the operators' hands for the period of upwards of an hour. Experiment 5 is very important, as establishing the influence of the *standing* both table and operator; in Experiment 4, and in other experiments in less, the motion was induced. Not of the parties taking part in the above experiments were more or less incredulous as to the published statements, but all expressed themselves perfectly convinced of the reality of the motion being induced by other influence than ordinary muscular energy.

The following persons, having been present at the above-mentioned experiments, have certified the above report of them to be correct.—W. Ratcliff Birt, Henry Rosser, Isaac Bates, Frederick Wiggins, William Reynolds, John Brixey, J. Jones.

A French journal publishes the following:—

Yesterday afternoon our friend, M. Edward Boyer, professor of natural philosophy and chemistry, came to our office to satisfy our curiosity respecting the reported phenomenon of the motion of a table under the influence of electricity. A round walnut-tree table served for the experiment. Six gentlemen placed themselves round the table, and formed the electrical chain with their hands placed flat on the edge, and each person in contact with the small finger of the right hand laid on the small finger of the left hand of his neighbour. A few minutes only elapsed, when a slight movement of the table revealed the commencement of the phenomenon. Two or three oscillations succeeded at short intervals. Shortly after the persons placed in contact felt tingling in the fingers, and slight nervous contortions and precipitate pulsations in the arterial veins. In about seven minutes the table was in movement. The rotation, at first slow, became so rapid as to occasion giddiness to some of the persons who formed the chain, and they were obliged to remove their hands. The table then stopped. The chain having again been formed, the circular movement became renewed in less than two minutes. The magnetic fluid, disengaged in abundance, manifested a series of extraordinary phenomena. This it was enough for M. Boyer to place his hands on the table in order to give it the most energetic impulsion. A young man of twenty years of age, of very great corpulence, seated himself on the table without arresting the movement. It has been said, in other accounts, that the current is invariably established from the south to the north pole. This is an error. When once the chain is broken it follows opposite directions: it goes from the left to the right, and from the right to the left alternately. The experiment made on that account is perfectly conclusive. In less than three minutes it became instantaneously rapid. The same was the case with a new series.

Another French journal, *La Patrie*, publishes a letter from Alençon,

THE LATE SIR WALTER RALEIGH GILBERT, BART., G.C.B.—FROM A PAINTING BY G. F. ATKINSON. ENGRAVED BY F. J. SMYTH.

bearing the signature of a Dr. Prevost, and the attestation of the mayor, the deputy-mayor, the Substitut of the Procureur Imperial, and several other persons of the highest respectability, stating that they and others made a billiard-table advance four feet, and that at the command of one of the party the table returned to its original position.

The *Eleinore Aire* informs us that a lady in that town, who had taken part in a 'moving table' sitting, was suddenly seized with a violent headache. Two other ladies, who had also assisted at the table, put their hands to her head, when she immediately fell into a deep magnetic sleep, from which no one could wake her. While in this state she answered all questions put to her, even as to absent persons and their employments.

THE LATE LIEUTENANT-GENERAL SIR WALTER RALEIGH GILBERT, BART., G.C.B.

The family, of which this distinguished soldier was a descendant, possessed lands in Manadon, county Devon, as far back as the time of Edward the Confessor; and Prince, the old Devonshire historian of the "Worthies of that County," commemorates the alliances of the Gilberts with "the honourable houses of Champernon, Croker, Hill, Chudleigh, Agar, Molineux, Pomeroy, Compton, and Valetort," and refers to the martial renown of the race. In the reign of Elizabeth lived Sir Humphrey Gilbert, Knt., so eminently distinguished by his discoveries in the Northern Seas (where "Gilbert's Straits" are called after him to this day), and by the establishment of the colony of Newfoundland. Sir Humphrey was half brother of Sir Walter Raleigh. By Anne, his wife, daughter of Sir Anthony Aucher, or Ager, he left Sir John Gilbert, an officer of reputation, and eight other sons, who all died *s.p.* except Raleigh Gilbert, Esq., of Compton, from whom the gallant commander, Sir Walter Gilbert, was sixth in lineal descent. His father, the late Rev. Edmund Gilbert, Rector of Helland, Vicar of Constantine, and Prebendary of Exeter, was great-grandson of John Gilbert, Esq., of Compton Castle; who sold the ancient mansion of Greenway, so long the residence of his ancestors, a seat beautifully situated on a bold elevation overhanging the river Dart, about four miles from Dartmouth.

Brilliant though the lineage of the Gilberts is thus shown to be, future genealogists will point out the name of the hero of the Punjaub as the proudest on the family tree.

Sir Walter Gilbert was born 18th March, 1788; and, at the early age of fourteen, entered the Bengal army. In the following year (1802) he was posted to the 15th Regiment of Native Infantry, commanded by Colonel (afterwards Sir John) Macdonald; and with this distinguished corps he was present at the defeat of General Perron's Brigade, at Coel; at the siege of Allyghur, at the battle of Delhi, at the storming of Agra, and at the memorable conflict of Laswaree: in this battle, the 15th Native Infantry took a prominent part. Not long after, Lieutenant Gilbert shared in the victory of Deig, and assisted at the desperate though unsuccessful assaults on Bhurtpore, under the personal command of Lord Lake, who noticed and commended the young soldier for his gallantry. In all these arduous services Lieutenant Gilbert exhibited the same heroism which, at a later period, induced him to dismount when he found that his horse would not approach a huge boar which threatened the life of his friend, and to attack the enraged animal on foot with his single spear

As Captain, Major, and Colonel, he was subsequently employed in various responsible offices; but it was in the Sutlej and in the Punjaub that the fame of Sir Walter Gilbert as a great military commander was achieved. These are the words of Lord Gough, after the battle of Ferozeshah, referential to the heroic services of General Gilbert:

I want words to express my gratitude to Major-General Gilbert. Not only have I to record that in this great fight all was achieved by him which, as Commander-in Chief, I could desire to have executed; not only on this day was his division enabled by his skill and courageous example to triumph over obstacles from which a less ardent spirit would have recoiled as insurmountable, but since the hour when our leading columns moved out of Umbalah I have found in the Major-General an officer who has not merely carried out my orders to the letter, but whose zeal and tact have enabled him, in a hundred instances, to perform valuable service in exact anticipation of my wishes.

The same brilliant conduct, the same energetic and judicious action, the same untiring spirit, distinguished Gilbert at Moodkee, Sobraon, Chillianwallah, and Goojerat. At the last-named conflict he commanded a division of the army, and afterwards, by rapid marches, eventually overtook the retreating Sikh forces, and finished the last campaign of the Punjaub, by compelling 16,000 old and tried Sikh soldiers to surrender their arms. For the indefatigable zeal and exertions "thus displayed, the gallant officer received the thanks of Parliament, as well as of the Hon. East India Company." His last appointment was that of Member of Council, to which he was named in April, 1850.

Sir Walter married, 1st June, 1814, Isabella Rose, daughter of Major Thomas Rose, R.A., by Isabella, his wife, daughter of John Macleod, Esq., tenth Baron Reay; and leaves one son, now Sir Francis Hastings Gilbert, Bart., born 19th July, 1816, late her Majesty's Consul at Alexandria; and two daughters, Flora Anne, married first in 1844 to Captain Roderick Norman Maclean, and, secondly, in 1849, to Captain Richard Shubrick; and Geraldine Adelaide Elizabeth, married in 1848 to Charles Russell Colt, Esq.

The death of Sir Walter Gilbert occurred on the 10th inst., at Stevens's Hotel, Bond-street; he had only just returned from India.

The accompanying portrait, a characteristic likeness, is from a picture recently painted by Mr. G. F. Atkinson, engraved by Lupton, and published by Dickinson and Co.

MONUMENT AT ALBUERA.

This interesting structure has just been erected by order of the Spanish Government, in testimony of the bravery of the officers whose names it bears. The locality has been well chosen, as the scene of one of the great events of the Peninsular War—the village of Albuera, about twelve miles from Badajoz, on the road from that fortress to Seville. Albuera has been characterised as "a glorious field of grief;" it owes its renown to the murderous conflict, May 16th, 1811, between Soult and Beresford. The monument is, indeed, commemorative of this great fight; when of the 57th, "out of 1400 men, 1050 were killed and wounded," "the dead lay in their ranks, every man with a wound in the front;" and when 1580 unwounded men, the remnant of 7000, stood, says Napier, "triumphant on the fatal hill"—the little battalion alone holding its ground against all the French *colonnes en masse*. It must be gratifying to the survivors and the relatives of those who fought on that day to know that (although forty-two years have elapsed since the battle) a slight tribute has at length been paid to their valour.

MONUMENT ERECTED BY THE SPANISH GOVERNMENT, AT ALBUERA.

It will be remembered that, at Albuera, Lord Hardinge (at present Commanding-in-Chief) first gave proof of his great talent for command, by advising and directing an important movement at a very critical period of the battle, and which mainly contributed to the victory. The Monument is a substantial erection of stone, and surrounded with an iron railing of appropriate design. The inscriptions are as follow:—

On the top, encircled with a wreath of laurel, "Albuera." Under this, "A los Valientes, del 16 Maio, 1811." On the columns, the names of the Generals commanding:

Generals Espanoles.		Generals Anglo-Portuguese.	
Castanos.	Blake.	Beresford.	Stewart.
Lardazabel.	Ballasteros.	Lumley.	Alten.
Zupa.	Espana.	Cole.	Hamilton.
Penne.	Underneath, "Mando Xefe Beresford."		

The Monument was not quite completed when our Artist passed through, on the 9th April last.

"TABLE-MOVING."

THE COUNTESS OF CLARENDON'S BALL, AT THE OFFICIAL RESIDENCE, DOWNING-STREET.

NOOKS AND CORNERS OF OLD ENGLAND.

OLD HOUSE AND "PLAGUE-STONE," CHESHIRE.

This curious relic, known as the "Plague-Stone," formed the corner coping-stone of a garden-wall, in the Wash-lane, near Warrington, Cheshire, immediately above the spot indicated in the Engraving by the letter A. It is traditional in the neighbourhood that about the middle of the seventeenth century (probably in the year 1665) several cases of the plague occurred in this house. All direct intercourse with the neighbours being prohibited, the money paid for provisions and other necessaries was deposited in the square dish seen in the Stone, which was kept filled with vinegar and water for the purpose of disinfection. Those who died of the pestilence are said to have received interment in a field near the house; and here the remains of three bodies were discovered in the year 1843. The Stone was exhibited at a late meeting of the Historic Society of Lancashire and Cheshire, held at the Royal Institution, Liverpool.

OLD HOUSE AND "PLAGUE-STONE," WASH-LANE, NEAR WARRINGTON.

The Wash-lane was formerly often flooded with water; and in the accompanying Illustration it is thus represented, with the stepping stone for foot-passengers. The dwelling is an interesting specimen of the half-timbered house, now comparatively rare.

Curious and Important Invention.—An ingenious mechanic of this town, Mr. John Craig, has invented a machine for raising weights, which he deems analogous in construction to the appliances adopted by the builders of the Egyptian pyramids. Mr. Craig did not feel bound to explain the principle and mode of action of his invention, but the results obtained we had an opportunity of witnessing. By means of a model, a small weight was made to raise and sustain another of five times the size. The apparatus is capable of being applied, the inventor informed us, to the steam-engine, and with such success that twenty-horse power of steam and fuel would be equal to one hundred-horse under present circumstances. "With this machine," said Mr. Craig, "a small chain, capable of bearing six hundred weight, and a small winch, to give the first motion, I could raise five tons." We are informed that there is not a wheel or block about the apparatus, and that the power is not gained by any modification of the lever—which latter seems a paradox certainly; but the results speak for themselves.—*Liverpool Times.*

THE COUNTESS OF CLARENDON'S BALL.

The Countess of Clarendon gave a magnificent ball on Thursday evening (last week), at the official residence of the noble Earl, in Downing-street.

The preparations for the fête were upon a scale of great splendour: the whole suite of saloons was thrown open, and beautifully decorated for the occasion.

The invitations included upwards of a thousand members of the aristocracy. The company began to set down at half-past ten o'clock, and from that hour until long after midnight, a continued succession of arrivals took place.

The ball was opened at eleven o'clock, to the music of Coote and Tinney's orchestra. The festivities were kept up with great spirit until an hour after midnight, when a superb supper was served in one of the lower saloons.

Dancing was subsequently renewed, and the morning was far advanced before the company separated.

The supper, which displayed the choicest delicacies, was supplied by Messrs. Gunter. The mansion was beautifully illuminated.

The Scientific Societies of London.—On Wednesday week a meeting of the gentlemen who have signed the memorial to her Majesty's Government praying for a central site on which to establish the scientific societies of the metropolis, was held in the meeting-room of the Royal Society; when the subjoined resolution was agreed to:—"That the following noblemen and gentlemen be appointed a deputation to present the memorial to her Majesty's Government:—viz., the Earl of Rosse, the Lord Wrottesley, the Earl of Harrowby, Sir R. H. Inglis, Bart., Sir Philip Egerton, Bart., Sir R. I. Murchison, Thomas Bell, Esq., Edward Forbes, Esq., Thomas Graham, Esq., W. R. Grove, Esq., H. Hallam, Esq., L. Horner, Esq., Colonel Sabine; and to act as a committee; with full power to take any steps in furtherance of the objects of the memorial which may seem to them expedient."

Mrs. Stowe.—Professor and Mrs. Stowe, the Rev. C. Beecher, and the Rev. Samuel Ward, are now residing with the Rev. J. Sherman. The Professor leaves next week for America; and the Rev. C. Beecher, with his sister, Mrs. Stowe, will visit Switzerland, before they return to America.

Relic of Columbus.—The *Espana* announces that the general autograph chart of the pilot Juan de la Cosa, the companion of Columbus in his discovery of the New World, has been purchased in Paris, by order of the Spanish Government, for the sum of 4000*l*. It lately belonged to Baron Walkenaer, whose library was sold some weeks ago in Paris.

EXETER TRAINING COLLEGE.

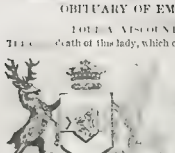
On Thursday last, was laid the foundation-stone of a new Diocesan Training College, to be built from the designs of Mr. John Hayward, on a piece of land on the south side of the road, leading from Exeter to Heavitree, and commanding a beautiful view of the Haldon Hills. The college will contain accommodation for forty students, and although called diocesan, it will, in fact, be the training establishment for national schoolmasters in the four western counties. The building will be erected of lime-stone, with slated roofs; and ample provision made for effective ventilation, as well as for the comfort and convenience of the Principal and students. The Principal is the Rev. William David, under whom the college has obtained a high reputation.

DIOCESAN TRAINING COLLEGE, FOUNDED AT EXETER, ON THURSDAY.

OBITUARY OF EMINENT PERSONS

LORD VISCOUNTESS FEILDING.

The death of the lady, which occurred at Naples on the 1st inst., from consumption, is deeply lamented. She had only attained the age of 34. Her Ladyship's family, the Pennants, of Downing, of whom she was so illustrious and accomplished a representative, was one of the most [illegible] Wales, being in direct descent from the renowned Tudor Trevor, Lord of Hendwr, the founder of the tribe of the Marches. A junior branch was ennobled under the title of Penrhyn, and its vast estates are now possessed by the Hon. Colonel Douglas Pennant, of Penrhyn Castle, co. Carnarvon.

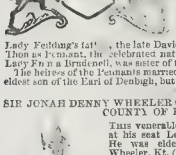


Lady Feilding's father, the late David Pennant, Esq., was grandson of Thomas Pennant, the celebrated naturalist and traveller. Her mother, Lucy Ann, a Prudential, was sister of the present Earl of Cardigan.

The heiress of the Pennants married, June 18, 1846, Viscount Feilding, eldest son of the Earl of Denbigh, but has not left any issue.

SIR JONAH DENNY WHEELER CUFFE, BART., OF LEYRATH, COUNTY OF KILKENNY.

This venerable Baronet died on the 8th instant, at his seat Leyrath, in the 86th year of his age. He was eldest son of the late Sir Richard Wheeler, Bart. (who assumed the surname of Cuffe on succeeding to the estates of his mother's family, Cuffe of Sandhill, county of Carlow), by Rebecca, his wife, daughter of Jonah Mossom, Esq., of Eland, county of Kilkenny. The Wheelers of Leyrath were established in Ireland by Dr. Jonah Wheeler, consecrated Bishop of Ossory in 1613. The Baronetcy was conferred October 1, 1799, on the gentleman whose death we record. Sir William married Elizabeth, daughter of William Browne, Esq., of Browne's hill, county of Carlow, and leaves, with other issue, a son and successor, the present Sir William Wheeler Cuffe, Bart.



LIEUT.-GENERAL SIR CHARLES MACLEOD, K.C.B.

This distinguished Indian officer, whose death has just occurred, was brother of the late gallant Sir John Macleod, K.C.B., and son of Donald Macleod, Esq., of Bernera—a scion of Macleod of Macleod. He entered the Madras army sixty-seven years ago, and served in the Mysore campaign, under Harris; and the Mahratta, under Wellesley, with whom he was present at the battle of Argaum. In the subsequent Mahratta War of 1817-18, he bore a conspicuous part, as Quartermaster-General of the Bengal Subsidiary Force; and particularly distinguished himself at the siege of Nagpoor.

The late Sir John Macpherson, who succeeded Warren Hastings as Governor-General of India, and died an old man more than thirty years ago, was struck to say, Sir Charles Macleod's mother, being grandson of Lord Macpherson's father, by the issue of an early marriage; while Sir Charles was the son of a marriage made late in life.

GEORGE PALMER, ESQ., OF NAZING-PARK, ESSEX.

The death of the above-named gentleman, late M.P. for South Essex, occurred at Nazing-park on the 11th inst., after a short illness. He was born Feb. 11, 1779, and was second son of William Palmer, Esq., a merchant of London, by Mary, his wife, only daughter of the Rev. John Horsley, M.A. His family was a branch of the old Leicestershire stock "Palmer of Wanlip," and had long resided high among the great mercantile houses of the City of London. The first who settled at Nazing was the late Mr. William Palmer, who served at one time as High Sheriff of Essex. The southern division of that county, his second subject of our present notice represented in Parliament from 1835 to 1847, when advanced age and increasing infirmities caused him to resign his seat.

W. Palmer will be long remembered for his exertions as Chairman of several select Committees on Shipwrecks in the House of Commons, to lessen disasters at sea, and to improve the qualifications of merchant seamen. It was the result of a valuable plan of Mr. Sharp, which, under the auspices of the Royal National Institution for the Preservation of Life from Shipwreck, has been the means of saving hundreds of persons, and he bore a conspicuous part, as Chairman of the Committee, in presenting the gold medallion of the society. In earlier years he had been extensively engaged as a merchant and ship owner in London.

Mr. Palmer married, 29th Dec. 1796, Anne Maria, daughter and co-heir of William Bund, Esq., of Wick, county Worcester, and leaves a son and heir, George Palmer, Esq., now of Nazing-park, and other issue.

Mr. Palmer's brother, John Horsley Palmer, was formerly Governor of the Bank; and his nephew, Roundell Palmer, Esq., Q.C., is the eminent Chancery barrister.

WEARS.—The late Mr. E. J. Dent, chronometer-maker, of the Strand, the Royal Exchange, and Cockspur-street, who died on the 8th of March last, has left personal property amounting to £70,000; and has bequeathed his business and stock-in-trade, Frederick and Richard Rippon (who are to take and use the name of Dent), viz., to Frederick, the business in the Strand and Royal Exchange; and to Richard, that in Cockspur-street, which also includes the relief £500 a year thereupon. Mr. Dent is also to receive a further annuity of £500 a year from funded property, making £1000 a year; and to her is also bequeathed the dwelling-house at Kensington-gravel, furniture, &c.; and the estate in Bayswater. The residue to be divided into four equal parts between Frederick Dent, Richard Dent, Elizabeth Buckney, and Amelia Gardiner. The will bears date December, 1848; and there are three codicils made on the present year.

THE YORKSHIRE SOCIETY held its anniversary dinner at the London Tavern, on the 4th inst.; Viscount Goderich in the chair. In the course of the evening, the Rev. H. Christmas read the list of admirable principles on which the society's school is conducted, and stated that the most assiduous attention was paid to the religious and secular education of the children. Prizes, consisting of books presented to the society by Mr. Hutchinson, were distributed by the chairman to some of the boys who had most distinguished themselves. Subscriptions received during the evening amounted to £550.

TESTIMONIAL.—The British residents of Moscow and the neighbourhood have lately presented to the pastor of the British Chapel there, the Rev. Mackenzie Walcott, on the occasion of his silver wedding and conference, value 600 silver rubles (upwards of 80 guineas), as a token of their warm approbation of the zeal and kindness displayed by them in promoting the education of their children, and the religious welfare of the whole community. The service was furnished by M. Cazikoff, of Moscow; and was enclosed in a neat chest, covered with morocco leather, with an appropriate inscription.

THE EGYPTIAN YACHT, which was run into in the Channel, and was obliged to put into Southampton about a week since, has been built and fitted for the journey. She belongs to Said Pasha, uncle of the Pacha of Egypt. After whole framework about the spot where she was struck was fully twisted with the force of the concussion. Had she not been built she must have sunk. Her costly and magnificent furniture, such as sofas, chairs, &c., have been taken from her much damaged, and are now in the charge of Mr. Buchan, the ornamental carver of Southampton, to be repaired. The tassels of the sofas and other articles of furniture are of gold.

A MONSTER SALMON.—The largest fish of the above description captured for many years past was taken, a few days since, from the river Lyne, near Longhoe, weighed 36 lbs., being upwards of nine inches in length. It has been exhibited at Mr. Grove's, in New Bond-street, and has proved a source of vast attraction; Mr. Grove avers that it is by far the largest that has entered the London market for the last nineteen years, when he exhibited a salmon weighing 67 pounds, which was captured in the Clyde.

By accounts received from Port Phillip, *viâ* Ceylon, it is stated that a successful mining [illegible] had obtained possession of a large lump of gold of the weight of [illegible] 8028.; and that it was to be shipped by the *Sorath* from Melbourne which was to leave Melbourne on the 10th of February, and may, therefore, be considered as now overdue.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The week opened late on Friday evening last, to the effect that all Exchequer Bills, whether issued prior to June or March, might be converted into Exchequer Bonds, bearing 2½ interest, from the 5th of June next until the 1st September, 1854; and 2½ per cent thereafter till the 1st September, 1854, somewhat relieved the public mind in reference to the next issue of those securities; in other words, many parties were led to the conclusion that Mr. Gladstone would increase the rate of interest to 1¼d. per diem. The consequence was, that Exchequer Bills became in improved request, and at one time they touched 6s premium; but a notice having since been issued, stating that June Bills will bear interest only at the rate of 1d. per diem, the price has fallen 9s., or to 5s. discount. It is a question with us how far it is justifiable to make a usury too cheap. In the instance, the effort has unquestionably failed. Mr. Gladstone appears to rely upon the Bank of England for aid in purchasing a portion of the Exchequer bills now afloat. Whether he will be able to raise the bills with respectable premium remains to be seen. In addition to the notices above referred to, it has been officially intimated that the Exchequer Bonds to be offered to the holders of South Sea Stock and other annuities to be paid off, as well as to the proprietors of Consols and Reduced, are to bear interest at the rate of 2½ per cent until the 1st of September, 1854; and 2½ per cent thereafter till the last September, 1855, when the Government is to have the power of redeeming them at par. Notwithstanding that money is still very plentiful, it has become tighter. The demand for it is very active, and the rates of discount are somewhat higher.

The business doing in Consols, this week, has been by no means large. On the whole, prices have continued steady. The leading quotations have been as follows: Three per Cents, 100¾ ⅛; Ditto, for the account, 100¾ ⅛; Three per Cents Reduced, 99½; and the New Three-and-a-Quarter per Cents, 102¾. India Stock has sold at 263; Bank Stock, 208. New Five per Cents have been 125; Long Annuities, 1860, 5⅞; ditto, 1885, 6⅛; ditto, 1860, 6 1 16ths; South Sea Stock has marked 11⅝. India Bonds have been as low as 22s. premium.

On Thursday Consols ruled steady, and prices were on the advance. The Three per Cents marked 100¾ ⅜ for Money, and 100¾ ⅜ for the Account. The New Three-and-a-Quarter per Cents, 102¾ ⅛; and the Three per Cents Reduced, 99¾ ⅝. Bank Stock was firm, at 209½; and India Stock, 263. Exchequer Bills were at par to 3s. premium; and India Bonds, 2s. to 20s. premium.

Up to the present time only about £1,350,000 of the new stocks has been taken in lieu of the old securities.

Owing to the unfavourable news from Monte Video, Buenos Ayrian Bonds have suffered a considerable decline, viz., from 72 to 65. In most other foreign securities only a limited business has been transacted. Bargains have been done in Brazilian Five per Cents at 103; the Four-and-a-Half per Cents, New, 101; Buenos Ayres, 72 to 65; Ecuador, 6 to 6½; Greek, 16 to 16½; Mexican, 20¾ to 21; Peruvian Four-and-a-Half per Cents, 88¾; Portuguese Four per Cents, 39¾ to 40¼; Russian Five per Cents, 120½ to 120; Ditto, Four-and-a-Half per Cents, 104½; Sardinian, 91 to 91½; Spanish Three per Cents, 48¾; the New Deferred, 24; Swedish, 14 to 2 dis.; Dutch Two and a Half per Cents, 61¾; Dutch Four per Cents, [illegible]; Spanish Certificates, 6¾ per cent; Venezuela, 3 to 3½; and Austrian Five per Cents, [illegible].

The news from the interior continues to [illegible] dearer in Mark Lane, and dearer at Bristol than in London, and dearer at Hull than at either of the above places. Wheat has risen 2s. per quarter in Liverpool.

The average weekly circulation of the private and joint-stock banks in England and Wales, which the last returns were made up, was £6,984,614. These banks are below their fixed issues by £1,070,972.

Miscellaneous business has been very moderate request. Australasia Bank have sold at 87, Bank of India, Australia, and China, 53; English, Scottish, and Australian, 11¼; London Chartered of Australia, 15½; Union of Australia, 37¾; Australian Agricultural, 70; Crystal Palace, 6⅞; Ditto, of France, 5¾; North British Australian, 1¾ ex new; Port Phillip Land and Mineral, 9¼; Peninsular and Oriental Steam, 88; Ditto, New, 46¾; South Australian Investment, 2¾; South Australian Land, 4⅝; St. Katharine's Dock, 102; Victoria Dock, 62; Ditto, New, 4¾; Van Diemen's Land, 2½; Albion Insurance, 90; Atlas, 22½; Argus, 24½; County, 121; Globe, 90; Guardian, 61; Law Life, 60; Pelican, 48; Royal Exchange, 226; Sun Life, 65; Universal, 45½; East London Waterworks have been 124; Grand Junction, 72½; Kent, 84½; Southwark and Vauxhall, 90; West Middlesex, 93; African Steamship, 4½; British American Land, 7½; Canada Five per Cents, 102½; Canada Six per Cents, 117; General Screw Ship, 1¾; General Navigation, 3½; Hudson's Bay, 4½; and Royal Mail Steam, 77.

The last return from the Bank of France shows a further increase in the stock of bullion of £562,000. The bills discounted have fallen off by £582,000.

The imports of the precious metals have been 291,000 dollars from New York, £200,000 from Australia, and £1,258,886 (or £251,450 sterling) from Mexico, the West Indies, &c. The shipments have continued liberal, especially to France and Holland.

Railway Shares have been dull for [illegible]. The principal dealings have been in North Westerns, Great Westerns, Lancashire and Yorkshire, and Norfolk. The receipts upon most lines, last week, were in excess of 1852 to some extent. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction, 6¾; Bristol and Exeter, 107; Caledonian, 70¾; Chester and Holyhead, 24½; Cork and Bandon, 2; Dublin and Belfast Junction, 49¼; Eastern Counties, 13¾; Eastern Union, B and C, 7¾; Lancashire, 73; Edinburgh and Glasgow, 74; Great Northern, Original Stock, 83½; Ditto, A Stock, 86; Great Southern and Western (Ireland), 71½; Great Western, 81; Lancashire and Yorkshire, 79¾; Leeds Northern, 16¾; London and Blackwall, 6¾; London, Brighton, 11¾ ex new; Ditto, £10 Shares, M. and B. C. 9¾; London and South Western, 90¾; Manchester, Sheffield, and Lincolnshire, 20¾; Midland, 74¾; Norfolk, 54; Oxford, Worcester, and Wolverhampton, 11; Scottish Central, 97; Shrewsbury and Birmingham, 65¾; South Devon, 5; York, Newcastle, and Berwick (G. N. E. Purchase), 9¾; York and North Midland, 65¾.

LOAN SHARES AND FIXED RENTALS.—Buckinghamshire, 10½; East Lincolnshire, Six per Cent, 150½; Gravesend, Four per Cent, 98; Manchester, Buxton, and Matlock, 9¾.

PREFERENCE SHARES.—Aberdeen (No. 2), Seven per Cent, 4½; Caledonian, 109; Eastern Counties Six per Cent Stock, 15; Eastern Union, Six per Cent, 18; Great Northern, Four and-a-Half per Cent Scrip, 5¾; Ditto, Five per Cent, 12; Ditto, Four and a ten per cent premium, 113; Great Western, irredeemable Four per Cent, 104; London and Blackwall, Six per Cent, 156; Consolidated Bristol and Birmingham, Six per Cent, 151; Ditto, Four-and-a-Half per Cent, 115; Ditto, Four per Cent, 115.

FOREIGN.—Antwerp and Rotterdam, 2; East India Extension, ¼; Great Western of Canada, 20¾; Luxembourg Six per Cent Preference, 5; Namur and Liege, 10¾; Northern of France, 15¾ ex div.; Sambre and Meuse, 9¼; Upper India Scrip, ¼ prem.; West Flanders Four-and-a-Half per Cent Preference, 9¾; and Western of France, 21¾.

MINING SHARES have improved slightly, and prices have trended downwards. On Thursday, Agua Fria were 2¾; Anglo Californian, 1; Australian Freehold, 2; British Australian Gold, 1¾; St. John del Rey, 31¾; Caven's Creek, 4; Copiago, 3; English and Australian Copper Smelting Company, 8¾; Nouveau Monde, 2¾; Port Phillip, 1¾; Tin Croft, 9¾; West Mariposa, 1¼.

THE MARKETS.

[illegible] since our last report, the arrivals of both [illegible] moderate and by [illegible] have been on liberal sale, and full average quality [illegible] kinds the [illegible] at a decline in the quotations of from 1s to 2s. per quarter. [illegible] but give way fully 1s., with a very moderate inquiry. Fine English barley has retained former terms, but other qualities have fallen in value 1s. per quarter. Malt has sold slowly, at late rates. The oat trade has ruled dull, at a decline of from 6d. to 1s. per quarter. Beans and peas have moved off steadily, at full prices. Flour has been quite neglected.

English.—Wheat, Essex and Kent, red, 37s. to 47s; ditto, white, 39s. to 51s; Norfolk and Suffolk, red, 32s. to 47s; ditto, white, 36s. to 50s; rye, 28s. to 30s; grinding barley, 20s. to 23s; distilling ditto, 23s. to 26s; malting ditto, 30s. to 34s; Lincoln and Norfolk malt, 52s. to 58s; brown ditto, 48s. to 53s.; Kingston and Ware, 57s. to 60s.; Chevalier, 58s. to 62s.; Scotch and Lincolnshire feed oats, 17s. to 20s.; potato ditto, 20s. to 23s.; Youghal and Cork black, 16s. to 19s.; ditto, white, 18s. to 21s.; Dublin and Belfast ditto, new, 24s. to 26s.; ditto, old, 25s.; grey peas, 30s. to 33s.; maple, 33s. to 36s.; white, 30s. to 33s.; beans [illegible] tick, 30s. to 34s.; red and grey flour, 26s. to 28s.; Stockton and Yorkshire, 28s. to 30s. per sack.

Foreign.—American flour, [illegible] per barrel; Canadian, [illegible] per sack.

Arrow.—For all kinds the demand is in a very inactive state. In prices we have no notice. Oats are held at full prices.

Linseed.—English, sowing, 54s. to 56s.; Baltic, crushing, 47s. to 50s.; Mediterranean and Odessa, 46s to 48s. hempseed, 37s. to 39s. per quarter. Rapeseed, English, pale, brown mustard-seed, 7s. to 8s.; white ditto, 7s. to 9s.; and tares, 3s. 6d. to 4s. 6d. per bushel. English rapecake, £7 to £7 5s. per ton. Linseed cakes, English, £9 5s. to £9 10s.; foreign, £7 10s. to £8 10s. per ton. Rape cakes, £4 10s. to £5 0s. per ton. Canary, 40s. to 47s. per quarter. Rapeseed, 60s. to 64s.; white ditto, 62s. to 66s. per last.

Brazil.—The prices of whatever brand in the metropolis are from 7d. to 8d. ; of household 4d. to 4½d. per lb. [illegible].

Imperial Weekly Average.—Wheat, 44s. 7d.; barley, 31s. 5d.; oats, 18s. 9d., rye, [illegible]; beans, 35s. 3d.; peas, 35s. 5d.

The Six Weeks' Average.—Wheat [illegible]; barley, 31s. 1d.; oats, 18s. 10d., rye, [illegible]; beans, 34s. 10d.; peas, 37s. 0d.

Foreign.—Barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Hops.—Since our last report [illegible] have been offered. About 1850 have sold at [illegible]. In the pockets the market is steady business is doing to a fair extent. Sussex, 80s. to 90s. Yearlings, 100s. to 120s. per cwt. Kent has advanced on its value, 110s. to 130s. Mid and East Kent pockets, 120s. to 140s.; Weald of Kent, 110s. to 130s.; Sussex, 100s. to 120s. per cwt.

Potatoes.—The supplies coming in are good whilst the demand is inactive, at prices varying from 90s. to 110s. per ton.

Smithfield.—Although the supplies have been tolerably good, the general demand has ruled active, on higher terms.

Beef, from 3s. 2d. to 4s. 6d.; mutton, 3s. 10d. to 4s. 6d.; lamb, 5s. 0d. to 6s. 8d.; veal, 4s. 6d. to 5s. 6d.; pork, 3s. 6d. to 4s. 4d. per 8lb.; to sink the offals.

Newgate and Leadenhall.—These markets continue very firm, on high terms.

Beef, from 3s. 8d. to 3s. 10d.; mutton, 3s. 8d. to 4s. 6d.; lamb, 4s. 10d. to 6s. 8d.; veal, 3s. 10d. to 4s. 10d.; pork, 3s. 6d. to 4s. 6d. per 8 lbs., by the carcase. ROBERT HERBERT

THE LONDON GAZETTE.

FRIDAY, MAY 13

WAR-OFFICE, MAY 13

2nd Life Guards: H. J. L. Wynne to be Cornet and Sub-Lieutenant, vice Jameson.

1st Dragoons: H. M. Sykes to be Cornet, vice Marsh. 3rd: H. W. Birkeley to be Cornet, vice Hill. 4th: Lieut. J. R. Scott to be Captain, vice Lowe. Cornet C. Pearson to be Lieut., vice Scott; Cornet the Hon. M. Fitz Roy to be Cornet, vice Pearson; J. A. Bragge to be Cornet, vice Coppage. 7th: J. W. M. Walker to be Cornet, vice Decimar. A. F. R. Cunningham to be Cornet, vice Clevland.

1st Foot.—R. A. Mainwaring to be Ensign, vice Cunninghame. M. Alsalde to be Ensign, vice [illegible]. G. J. A. Oakley to be Ensign, vice Legge. Sub. H. M. Beresford to be Ensign, vice [illegible]. 8th: H. J. Spencer to be Ensign, vice Hamilton. 19th: Hon. J. C. Dormer to be Ensign, vice Goulding; H. L. Fitzgerald to be Ensign, vice Ballabriggs; F. F. Everett to be Lieutenant, vice [illegible]; Ensign Johnstone to be Ensign, vice Rockingham. 31st: Lieut. T. Clark to be Lieutenant, vice Richards. 33rd: S. Mostyn to be Second Lieutenant, vice [illegible]. 36th: R. H. Hale to be Ensign, vice Story. 39th: G. W. F. D. [illegible], to be Ensign, vice Page. 51st: F. B. Bassard to be Ensign, vice Cassidy. [illegible] Gerrick to be Ensign, vice Linton. 56th: F. J. Pill to be Ensign, vice [illegible]. 61st: Lieutenant T. B. Richards to be Lieutenant, vice Clarke. 64th: Lieutenant the Hon. [illegible] Lindsay to be Captain, vice [illegible]. 66th: W. A. Wood to be Ensign, vice Richardson. 72nd: T. A. Julius to be Ensign, vice Fremantle. 82nd: J. G. Harcourt to be Ensign, vice Wingfield; W. H. Richards to be Ensign, vice Massey. 85th: G. Thackeray to be Ensign, vice Coghlan. 86th: J. T. Rogers to be Ensign, vice Mountain; T. B. Wardlaw to be Ensign, vice Williams. 89th: [illegible] to be Ensign, vice Hudson. 93rd: Sir A. Forster, Bart., to be Ensign, vice Fraser. 97th: T. B. Batchelor to be Ensign, vice Brown. The [illegible] Ensign to be Lieutenant, vice [illegible]. Ensign W. Campbell to be Lieutenant, vice [illegible].

[illegible] Lieutenant W. B. C. G. Trebell to be Captain, vice Alford. [illegible] Cornet Fenwick C. G. Bowden to be Lieutenant, vice [illegible]. [illegible] Lieutenant W. H. Farmar to be Captain, vice Montrosor, [illegible]. Ensign, vice Farmar. J. S. Hazel to be Ensign, vice [illegible]. Ensign, vice Rowland. 97th: W. B. Northey to be Second Lieutenant, vice Meredith. 99th: Ensign, vice Foster; R. Macpherson to be Ensign, vice [illegible]. Staff: W. E. Newall to be Ensign, vice Kennedy; J. E. Allen to be Lieutenant, vice Leith. H. Wallace to be Ensign, vice Greenhill. 8th: E. Gaggin to be Lieutenant, vice Malyneux. 97th: J. P. Campbell to be Ensign, vice Holmes. 98th: Ensign [illegible] Lieutenant, vice Lambton.

Rifle Brigade: Hon. H. W. Campbell to be Second Lieutenant, vice Lethbridge.

1st West India Regiment: H. F. Lake to be Ensign, vice [illegible].

2nd West India Regiment: C. A. Beeston to be Ensign, vice [illegible].

Royal Canadian Rifle Regiment: E. M. Saltzer to be Ensign, vice [illegible].

Royal Canada Rifle Regiment: E. Woolley to be Ensign, vice Wilson.

Memorandum: Lieutenant-Colonel Farmar, C.B., Head to be Assistant-Surgeon to the Forces, vice Daniell; C.C. Read to be Assistant-Surgeon to the Forces, vice Mansfield.

BREVET.—Lieut.-Col. Kenny (Major in the East Indies) to have the local rank of Lieut.-Colonel in that country.

BANKRUPTS AND ANNULLED.

W. MARSH, Dudley, Worcester, beer-seller.

BANKRUPTS.

A. C. LARKAN Greenwich, coffee-house keeper [illegible]. R. H. [illegible] Hoxton victualler. R. SANDERSON, Oxford-street, tailor. H. [illegible], Fitzsalore, draper, J. FOULKES, Ruthin-castle, Denbighshire, dealer and [illegible]. L. Worton-under-Edge, tailor. S. H. WATTS, Exeter, baker.

TUESDAY, MAY 17

WAR-OFFICE, MAY 17

76th Foot: Major-General W. Jervois to be Colonel, vice Lieutenant-General Sir R. Arbuthnot, K.C.B., deceased.

BANKRUPT.

W. BAKER, Surrey-lane, Battersea, Surrey, builder. Y. DEPOTTU, Market-[illegible], merchants and commission agents. W. COLDER, Newman-yard, Old Bailey, and Aldgate, wine merchant. J. [illegible], Old Broad-street, City, merchant. H. EDWARDS, Wheatsheaf, and Powis-road, Brighton, Sussex, builder. J. WATTS, Tiverton, Devon, hatter and draper.

SCOTCH SEQUESTRATION

J. and D. BLACK and COMPANY, Glasgow, warehousemen.

BIRTHS

On the 11th inst., at Portland-place, on the 14th inst., Lady De L'Isle and Dudley, of a son and heir.

On the 7th inst., at the Mayoralty, Dublin, the wife of the Rev. J. Vivian Vivian, Carlingford Rectory, of a son.

On the 16th inst., at 8, Carlton-house-terrace, the Lady Londesborough, of a daughter.

At Wimbledon, Surrey, the wife of Mr. Lovell, of a daughter.

May 14th, at Rusthope Rectory, Salop, Frances, the wife of Rev. E. Bascon, of a daughter.

MARRIAGES.

On the 12th instant, Samuel Bright Esq., of Carshalton, to Selina Mary, eldest daughter of the late Charles Cobbe, Esq., of Piccadilly.

At St. Clement's, Strand, Edward Cardigan Bligh Fortescue, R.I.C.S., of Northernhay-house, Exeter, to Mary, daughter of the Rev. William Pulsford, Vicar of St. Anthony, Hoxton, and widow of Major Richard Cornwall Fortescue, of Fortescue, Cornwall.

At St. George's, Hanover-square, Hugh Francis Lethbridge, son of Sir Francis D. Astley, Bart., to Augusta Ellen, daughter of the late Admiral Cockburn, and granddaughter of the Duke of York.

At Accrington, near Gainsborough, on Wednesday the 11th instant, by the Rev. Joseph Bonghen, Rector of Accrington, Alfred, youngest son of Thomas Rawson, Esq., of the former place. On the 17th inst., at the Parish Church, Cockburn, Leeds, and a descendant of the Duke of York.

At Accrington, near Gainsborough, on Wednesday the 11th instant, by the Rev. Joseph Bonghen, Rector of Accrington, Alfred, youngest son of Thomas Rawson, Esq., of the former place.

On the 17th inst., at the Parish Church, Cockburn, Leeds, and a descendant of the Duke of York.

At St. Clement's, Strand, Edward Cardigan Bligh Fortescue, R.I.C.S., of Northernhay-house, Exeter, to Mary, daughter of the Rev. William Pulsford, Vicar of St. Anthony, Hoxton, and widow of Major Richard Cornwall Fortescue, of Fortescue, Cornwall.

At St. George's, Hanover-square, Hugh Francis Lethbridge, son of Sir Francis D. Astley, Bart., to Augusta Ellen, daughter of the late Admiral Cockburn, and granddaughter of the Duke of York.

On the 12th inst. Samuel Bright Esq., of Carshalton, to Selina Mary, eldest daughter of the late Charles Cobbe, Esq., of Piccadilly.

DEATHS

On the 4th instant, at his residence, Kingsdown, near Walmer, Kent, W. Carling, Esq., late of Limehouse and Rotherhithe, aged 69.

On the 26th inst. [illegible] Vincent Wilkinson, of Liverpool, late of Lisbon, and formerly of Yeovil, Somerset, aged 67.

On the 28th inst., at Aigburth, near Liverpool, aged thirty, Mr. Thomas Hope, of London, late secretary to the Manchester, Sheffield, and Lincolnshire Railway Company.

On the 14th inst., at Ashwicke, near Marshfield, in the sixteenth year of her age, Jane [illegible] D. W. Trigg, Esq.

On the 12th inst., at Wyke Regis, Dorset, Caffe, Bart., in his 38th year.

On the 12th inst., W. Haigh, Esq., of the Shay, Halifax, and of Grimsby-hall, Lincolnshire, one of her Majesty's Justices of the Peace for the West Riding of the county of York.

At Bologna-place, the Lady Harriet Eden, aged 72.

On the 15th inst., at Grosvenor-house, Kensington, Elizabeth, Lady Marquess of [illegible], aged 50.

On the 18th inst. Mr. Gr[illegible] Wheatsheaf, at his residence in the county of Nottingham A few days since Major-General [illegible], aged 92.

GREENWICH PARK.—WHITSUNTIDE FAIR.

THERE are alarmists who, amongst other calamities national and universal—such as the end of the world, the decline of England's glory, the destruction of the Thames, the Jungfrau, &c.—see the fiend of prophesying speedy downfall of Greenwich fair. The doom of this time honoured institution, they tell us, is sealed. It has fulfilled its destiny—has outlived its welcome, and must die.

With all due respect for the opinion of those gentlemen, we can only say that if Greenwich Fair be really at its last gasp, it seems determined to die hard. For a public amusement to hopelessly given over, we never saw one in such excellent spirits, or one to all appearances so likely to continue going well for some time to come. The fact is, Greenwich Fair is *not* going down. The fatalists have fallen into the huge error of judging it by ordinary standards—to which it has proved itself in any way amenable; of supposing it subject to the vulgar laws of change and decay, which in reality affect it not.

In support of our assertion, the festival of the past week—the Whitsuntide or second edition of the Cockney carnival in question—has gone off with an *eclat* greater than has been known for years. On Monday no less than 80,000 persons came down from London by train alone—the supply of steam-boat passengers being in proportion, and the attendance on the succeeding days has been scarcely less numerous. It may be urged that this is attributable to the fine weather. Very good. But it is nevertheless proved that Greenwich Fair, in fine weather, is still an attraction. Some of the time-honoured features of the fair are changed their character, to keep pace with the improving spirit of the age. Not in the least: there are the same booths, the same giants, the same nut-targets. Not a single additional character has made his appearance among the unwholesome Dutch-pretzled *romantis personæ* of the gingerbread stalls. The learned pig has not only read a solitary trick within the last twenty years. There now happens to be at Greenwich's play-bill; not a single new feature in the way of pastel-cord dancers; "all the fun of the fair" scrapes down the visitors' back, with its pristine brilliancy of practical humour; and the visitors eat the gingerbread with the same appetite, look at the giants with the same interest, dance in the booths with the same energy, and wear the pasteboard noses with the same enjoyment as ever. All this is very benighted, and very stupid for an enlightened British public in the nineteenth century, no doubt; but so it is.

There must be a reason for this persistence, year after year, in the pursuit of an enjoyment of such questionable rationality, by a people now blessed with so many more exalted means of amusing themselves. There is a reason—and a very good one. It may be given in two words —the Park!

It is the glorious Park the people really go to enjoy. Had there been no Greenwich Park, Greenwich Fair would long have ceased to exist. As it is, leaning on it as a powerful *point d'appui*, hanging on to its magnificent forest skirts, Greenwich Fair will long flourish, and may continue to be as senseless and as antiquated as ever it pleases. It is a mere outlet for the exuberant animal spirits, excited by the pure air and intoxicating beauty of the sylvan scenery, viewed in which light the wildest species of tomfoolery is elevated into absolute sublimity.

The aspect of Greenwich park at fair-time has been often described. It is a scene which foreigners, who believe Englishmen have no

(Continued on page 408.)

AMUSEMENTS, &c.

ROYAL ITALIAN OPERA.—COVENT GARDEN.—SECOND SCRIPTION NIGHT. MONDAY NEXT, MAY 23, will be performed (for the first time this season) Meyerbeer's Grand Romantic Opera ROBERTO IL DIAVOLO. Alice, Mdme. Jullienne (her 1st appearance this season); Isabella, Madame Castellan; Rosina, Mdme. Rosa; Bertramo, Herr Formes; Raimbo, Signor Polonini; Adelaide, Mdme. Rounel. In Scene 3, Pedrino, Signor Gardoni; Grand Ballet, and Solo, Rustinhale, Signor Saint-Leon; Roberto, Signor Tamburini. Conductor, Meyerbeer. Director of the Music, and Conductor, Mr. Costa. Acting Manager, Mr. Gye. Private Boxes can be had of the Box-keeper, Mr. Benson, Mr. Beyer, Mr. Jaenisch, Mdlle. Barrelet, Mr. Sams, Mr. Mitchell, Kalkenbrenner, and Mr. Deacon. Commence at Eight. To be Published, Price 2s., Amphitheatre Stalls, 7s.; Pit, 5s.; Amphitheatre, 3s. 6d.

ROYAL PRINCESS' THEATRE.—Monday, May 23, and Tuesday, Wednesday, Thursday, Friday, and Saturday, Mr. Charles Kean will appear in Shakspeare's Tragedy of KING RICHARD THE THIRD. Duke of Gloucester, Mr. Charles Kean; Queen Elizabeth, Miss Heath; Queen Margaret, Miss Cooper; Duchess of York, Miss Reynolds; Lady Anne, Miss Fitzwilliam; Richmond, Mr. Graham; Buckingham, Mr. Ryder; Catesby, Mr. Cooper; Ratcliffe, Mr. Addison; Lord Stanley, Mr. Rogers; Lord Mayor, Mr. Franks; Tressel, Mr. Granby; Brakenbury, Mr. Hemsley; Blunt, Mr. Hicks; Page, Miss Rose Leclercq; Lord Hastings, Mr. Leclercq; Lord Derby, Mr. Ternan; Lord Stanley, Mr. Ternan; Lord Oxford, Mr. Ternan; Lord Surrey, Mr. Ternan; Lord Rivers, Mr. Ternan; Lord Grey, Mr. Ternan; Lord Dorset, Mr. Ternan; Lord Hastings, Mr. Ternan

WHITSUNTIDE IN GREENWICH PARK.—DRAWN BY PHIZ.

(*Continued from page 406.*)

other escape from that prevalent and well-known malady "the spleen," than those furnished by Waterloo bridge and the nearest chemist's shop, would do well to contemplate. We should like to place such a man on One Tree Hill, right in face of an excited party of six running down the slope, hand in hand. We imagine he would meet with a forcible illustration of British exuberance, by which he would be quite carried away; or, in the way of an orange, hurled with a view to a scramble, which might furnish him with proofs still more striking.

The walk across the Park from Greenwich to Blackheath is truly delightful—presenting some of the finest specimens of forest trees (especially of the elm and Spanish chesnut) in the country. On a holiday the ascent is fraught with considerable danger; first, from the runners and oranges; secondly, from fictitious gipsies, who wish you to listen to your fortune; thirdly, from the pensioners, who wish you to listen to passages in their's generally about as truthful. The first-mentioned class there is no avoiding; as a rule it is better to succumb to the first attack: the pensioners, being generally infirm, and, in some cases, providentially hampered by wooden legs, may be beaten by a sharp run across the country. You will be tempted by the dense shade of some magnificent Scotch firs at the top of the Observatory to stop and rest yourself. Do not attempt it. A band of ruthless marauders inhabit this peaceful spot. They are old, but cruel. They will seize upon you and hold you captive till you have taken an interest in the aspect of the Blackwall Railway Station, as seen through telescopes and glass mediums of various colours, or have listened to narratives of the battles of the Nile and Trafalgar, from their own personal experience—jarring discordantly with your preconceived notions of those great victories, as derived from printed records.

You are pretty safe till you get to Blackheath. Here new perils await you. As, in the neighbourhood of the Observatory, telescopes and coloured mediums are supposed to be the first and indispensable necessaries of life; so is it believed among the wandering tribes of Blackheath that the pinnacle of human happiness is the saddle of a donkey or pony. You are first entreated to ride—then ordered—finally forced. We have tried the experiment, and have not found it in any way conducive to our enjoyment, or even comfort; but have submitted to a sort of black-mail—or probationary ceremonial insisted on by the customs of the country. The means of enforcing submission to the iron will of the pony or donkey driver are various: persuasion, graceful badinage, and trenchant sarcasm being the chief, but physical compulsion being by no means discarded. Extemporary Derbys and St. Legers between the riders are frequent, the distance being from where you get up to where you are pitched off, as many ponies starting as can be prevailed upon to do so—a task usually of some difficulty. One of these sporting events our Artist has chosen as a subject for an Illustration.

PONY-RACES ON BLACKHEATH.—DRAWN BY LEECH.

THE ILLUSTRATED LONDON NEWS

No. 624.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, MAY 28, 1853. [SIXPENCE { WITH SUPPLEMENT GRATIS.

THE PUBLIC CONVEYANCES OF THE METROPOLIS.

THE present Government eminently deserves praise for the practical character of its measures. Its principal departments are filled by men of an ability equal to their high reputation. In the Finance department Mr. Gladstone is a worthy successor to Sir Robert Peel. In the Foreign department Lord Clarendon commands not alone the respect of Europe for high talent, but its confidence for sound judgment and discretion. In the Colonial department the Duke of Newcastle shines in highly favourable contrast with his predecessors under the last two administrations. Sir Charles Wood, although he failed to give satisfaction as Chancellor of the Exchequer, under the Government of Lord John Russell, bids fair as President of the Board of Controul, under the Earl of Aberdeen, to re-establish a damaged reputation, and to prove himself equal to the task which the approaching termination of the East India Company's Charter has thrust upon him. Under the auspices of Lord Palmerston the Home Department is conducted with a wholesome vigour, which almost makes us fancy that his Lordship mistook his vocation in ever devoting the energies of his mind to Foreign Affairs.

Nor is it only in measures of importance sufficient to warrant their introduction to Parliament by her Majesty's principal Secretaries of State, but in minor measures affecting the health, comfort, and security of the people, that the present Government seems determined to prove its administrative efficiency. Among these measures, especial attention is due to a bill introduced by the Under-Secretary for the Home Department. Mr. Fitzroy's bill for the better regulation of the cabs and cab-drivers of the metropolis is not to be understood as one introduced by a private member, but as one introduced with the sanction of the Government, and to be supported in its various stages by the whole weight of Ministerial authority. Such a measure has long been urgently demanded; and, though we are not prepared to say that Mr. Fitzroy's bill is perfect, or that it will prove a complete remedy for the various and aggravated evils that it is designed to meet, we think its provisions will prove adequate to the abatement, though not to the suppression, of a grievous public nuisance. Had the metropolis been one single municipality, as it ought to have been constituted twenty years ago, the cab infliction and many others would, long ere this, have been remedied. But the old Corporation of London has stood in the way; and not until it is removed and a new municipality created which shall comprise within its jurisdiction the whole of the metropolitan boroughs, will there be a proper and effective agency for the regulation of cabs and omnibuses; as well as for the cheap and adequate supply of such prime municipal necessities as water and gas, to say nothing of drainage and sewerage, and great and obvious street improvements. In the meantime, however, Mr. Fitzroy's bill will prove both acceptable and useful. In Paris, if any one looks at a public vehicle, he finds it driven by a well-clad and respectable-looking driver, and drawn by a strong horse. The vehicle itself he will discover to be clean and comfortable. If he engage and enter it, he will find at the end of his journey that there will be no dispute about the fare. All is regulated according to a tariff approved and enforced by the municipality of Paris. With three *sous* as a *pour-boire*, somewhat less than three halfpence, in addition to his regular charge, the respectful and respectable driver will be perfectly satisfied. In London the case is very different, as natives and foreigners know by sad experience. Any crazy and wheezy old horse is considered good enough to draw a cab. Any rotten, broken-windowed, foul-smelling, and battered vehicle, is held by the cab-owing fraternity to be good enough for the public, while a respectable driver is but an exception to the rule that no man is too disreputable in behaviour and brutal in character to be a cab driver. The over-charges of most of these men are proverbial; and so gross is their language, so insulting their conduct, that weak and defenceless women, as well as men who detest wrangling in the public streets, would rather walk in the wildest weather than entrust themselves to their guidance. In Paris, it is a privilege to drive a public conveyance, which none but responsible and highly-recommended persons can obtain. In London, a man who can obtain no employment in any other capacity, can obtain it from the patronage of a cab-owner. The Bill of Mr. Fitzroy will strike at the root of many of these abuses, and if it do not render the cab-system of London as complete and comfortable as that of Paris, will do much towards improving it. Public carriages, whether omnibuses or cabs, are to be inspected and certified by the Commissioners of Police as to their cleanliness, size, and commodiousness. Horses are also to be certified by the same authority as fit for the work to which they are put. If either carriages or horses be used before police inspection, or after they shall have been declared unfit, the owner of vehicle or animal may be fined £3 for every day in which either may have been so employed; or, he may be imprisoned for a month. Omnibus fares (and this is one of the defects of Mr. Fitzroy's bill) are to be left to the discretion of proprietors, as before; while cab-fares are to be reduced to sixpence a mile. At every stand where we now find some superannuated cabman, who acts as waterman, and looks for a gratuity for opening the cab door, there is to be stationed in his room a sturdy police-constable, to act as superintendent and referee. That disputes about distances may not occur, a large board, with a table of distances and of fares, is to be erected at the head of every cab-stand; a printed copy of the same useful information is to be affixed in the interior of every vehicle; and, in imitation of the example first set by the authorities of Paris, the driver is to hand to the person hiring his cab a card or ticket, with his number legibly printed upon it. All these are undoubted improvements. We wish Mr. Fitzroy had gone a little further, and had provided for the amenity and health of our streets by the abolition of public stables in the middle of the thoroughfares, and for the comfort of the cab-drivers, by rendering the erection of covered and enclosed stables or stands in off-streets and stations, compulsory upon the cab-owners. Perhaps, however, this reform will be carried at some future period, and in the meantime the public will be too grateful to Mr. Fitzroy for what he has done to find any serious fault with him for what he has left unattempted.

We are glad to see that an effort is to be made by one of the clauses of the bill to abolish the growing nuisance of advertising

ZULU KAFFIRS AT THE ST. GEORGE'S GALLERY, KNIGHTSBRIDGE.—(SEE NEXT PAGE.)

vans, and to prohibit the proprietors of cabs and omnibuses from defacing their vehicles with placards, bills, and other advertisements. As long as newspapers are taxed for the advertisements which they publish, every other mode of advertisement ought in common justice to be taxed at a similar rate. It is in fact a palpable loss to the revenue to permit railways, cabs, and omnibuses to trade in advertisements, and to pay no duty upon them. But, independently of this consideration, neither the interior nor the exterior of public vehicles ought to be used for such a purpose. Railway directors and officials seem to be aware of the fact that first-class passengers would not approve of such a practice in first-class carriages. The impertinence is, therefore, confined to second and third-class travellers, who are presumed to be too poor to be indulged in the amenities of life, though wealthy enough to purchase the quack medicines and the slop garments of pertinacious advertisers. We hope Mr. Fitzroy may be able to accomplish his purpose, and to put an end to the advertising vans, which endanger public safety in the streets, and to the new advertising trade of the railway, cab, and omnibus proprietors. They disfigure duly-licensed public vehicles, and deprive the Exchequer of money which it might fairly claim as long as the advertisement duty upon newspapers is considered either equitable or profitable.

THE ZULU KAFFIRS,

AT THE ST. GEORGE'S GALLERY, KNIGHTSBRIDGE.

THIS band of wild but interesting savages are taking such high rank among the metropolitan exhibitions of the present season, and represent so faithfully the manners, habits, and costume of their tribe, that we give an illustration of a scene in their performances. A number of huts, such as they occupy, are placed upon the stage, with an African landscape in the background; and, one by one, the savages make their appearance, engaged in the pursuits of their every-day life. After a supper of meal, of which the Kaffirs partake with their large wooden spoons, an extraordinary song and dance are performed, in which each performer moves about on his haunches, grunting and snorting the while like a pair of asthmatic bellows. We mentioned one or two of the more ludicrous scenes last week; but no description can give an idea of the cries and shouts—now comic, now terrible—by which the Kaffirs express their emotions. The scene illustrative of the preliminaries of marriage and the bridal festivities might leave one in doubt which was the bridegroom, did not that interesting event announce his enviable situation by screams of ecstacy which convulse the audience.

The Zulus must be naturally good actors; for a performance more natural and less like acting is seldom if ever seen upon any stage. The hunting expedition and the fight between hostile tribes, have each an interest of their own; and the glimpse of the Bushmen in their trees is exceedingly interesting.

We stated last week that the exhibition is illustrated by some excellent panoramic scenery, painted by Marshall, from sketches made in Kaffirland; and that the various scenes in the entertainment are explained by an intelligent young lecturer.

Natives of South Africa have been before exhibited in the metropolis, but we do not recollect to have seen the people either so numerously or so efficiently represented as in the present exhibition. These Kaffirs (twelve in number) have been brought from Natal, by Mr. A. T. Caldecott, who, for this purpose, memorialised the colonial authorities at Natal for permission to ship the natives; which application was complied with, on Mr. Caldecott having entered into a recognizance, himself in a sum of £500, and two sureties in £200 each, that such natives as were willing to accompany him to England would be properly treated on the voyage, duly reported, and, if required, produced to the Secretary of State for the Colonies, and finally brought back to Durban; and the natives were further, previous to their embarking, taken before the diplomatic agent to testify their full and voluntary concurrence.

Muzoo, the chief of the party, stands 5 feet 9 inches without his shoes, and he has been twelve months from the Zulu country. He was, before his desertion, a soldier in one of King Panda's regiments: he is the son of a Zulu chief, under Chaka and Dingaan, who was slain in an engagement between the Maawawas and the Zulus, in the reign of Ackigean. The son of Maxoe has also been in battle, and has been wounded several times: an assagai wound above the left eye, and one in the back, are still to be seen.

Next is *Kapoonan*, a cousin of Faku, the chief of the Umopondas. He stands six feet without shoes, and is a very powerful man, and violent tempter, if excited. He left his country nine months ago; he talks little; and, though he appears to be a man who has seen and done much in his time, he will never speak of his past life: his age is about twenty-nine.

Umlow (the wizard doctor), a middle-sized man, is active, and of a very excitable disposition. He, like Maxoe, was formerly a soldier in one of King Panda's regiments. He is famous for using the knob kerry, or short club, a weapon used by the Zulus in war, which he throws with great accuracy and force.

The others of the company are of middle stature, from 5 feet 6 inches to 6 feet 10 inches, and of strong muscular frames. The party are accompanied by a woman named *Somdela*, who is about sixteen years of age, and is the wife of one of the troupe, a man named Encoolee Colo. They have with them a child, a girl, called after her mother, and about fourteen months old, but not yet weaned.

A variety of implements displayed during the performances of the troupe add much to their interest. Thus, one of the Zulus, in the prefixed illustration, bears a large oval war shield, 4 feet 6 inches high, and 2 feet 3 inches wide across the middle: it is made of ox-hide. Their hunting shield is 3 feet high, 18 inches across the middle, and of the same material and form as the war shield. The assagai, of which there are specimens, is a wooden rod or lath, 5 feet 4 inches long, into which the spear is fixed: the point being ground sharp, and fixed to the wood with cat-gut: the spear is from 12 to 15 inches long. There are also wooden assagais, beautifully carved; but these are used only for exciting purposes.

Next are baskets for carrying their produce. These are made of COMMON GRASS, strongly plaited together. Their calabashes consist of a vegetable of the pumpkin kind, scooped out, and the shell dried and hardened in the sun. Their pots are made of black clay, baked in an oven. The Zulu huts are constructed of twigs, thatched with grass, 7 feet high in the centre; about 14 feet in diameter.

HALO OF THE SUN, SEEN AT HAMPSTEAD.—Mr. PAXON describes this phenomenon, as it appeared at Hampstead, at about a quarter past ten o'clock a.m. on Wednesday, the 25th and continued more or less beautiful till past one o'clock in the noon. The sun was quite bright (although surrounded by light transparent clouds), and was encircled by a brilliant halo, of the colours of the rainbow; and this halo was intersected in the centre by a second, of a brilliant white appearance, perfectly clear and white. The latter had the sun on its margin—the two extending a considerable number of degrees. At one time the rainbow-coloured halo was slightly reflected, forming three halos. Another correspondent, Mr. C. De Cossen, writes from Hampstead-heath, that he witnessed very remarkable halos on the same day, and, circling from it, on the morning of the 26th, from ten a.m. to mid-day. The sky was clear, with thin transparent clouds spread over it. The sun shone very brightly, and was surrounded by an iridescent halo, most presented all the prismatic colours; whilst the silvery-white halo that intersected the smaller one was equally distinct in all its periphery.

REGISTRATION OF ASSURANCES.—The important Government bill for the registration of assurances in England has been printed. It contains 308 clauses. A land register-office is to be established, and proper buildings provided. A registrar and assistant-registrars are to be appointed. The whole of England is to be divided into districts for the registration of property. The time when registration is to commence under this measure is to be published in the *London Gazette*; and, after the time specified, assurances of land executed after the commencement of registration may be registered by depositing the original, or a copy of the document, and by making proper entries. Wills affecting lands at law or in equity in England are to be registered, and indices are to be kept. An index, to be called "The Index to Bankrupts and Insolvents," is to be kept at the register-office for the whole of England. It is provided that assurances authorised to be registered are to be void as against purchasers, unless registered. Regulations are to be made under the act, and the Treasury is to fix the fees to be taken. The new law is not to affect any copyhold estates, nor shares in companies, &c.

THE ORLEANS FAMILY.—The Duchess of Orleans intends to quit Kibley at the end of May, for London, where the Count de Paris will receive the sacrament of confirmation; while his younger brother, the Duke de Chartres, will make his first communion. The ceremony will take place upon the 2nd of June, in the French Chapel, and Cardinal Wiseman is to officiate. The Duchess of Orleans will afterwards pay a visit to the ex-Queen of the French, at Claremont, previous to her return to Devonshire

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The principal subject of attention and conversation at this moment, among all classes, is, as may be supposed, the question of the re-establishment of the punishment of death for political offences. The journals are of necessity mute as concerns the violent dissatisfaction almost universally experienced on the subject—the *Presse* alone excepted, which quotes the decree of the Government Provisoire, abolishing the punishment of death under such circumstances, and that now proposed for restoring it, with a few words, singularly audacious for the times, drawing a comparison between the two. It is not for us to enter into all the discussions—if discussions they can be called, where in general one opinion is expressed on the subject; but that an immense step, backwards, has been taken is a fact that admits not of denial. The letter of the Maréchale Ney, refusing the sum proposed to be accorded to her by the Government, on the plea that the question leads to painful discussions on the memory of her husband, has also created much sensation; particularly among the Corps Législatif, who are of opinion that its tone was much too proud and independent to make it advisable that it should be inserted in the *Moniteur*. It is said that the Maréchale wrote another infinitely more decisive and haughty, which the Government induced her to withdraw, and for which the present is a substitute. It is stated that the project of the law of copyright, by which the widow of an author enjoys the exclusive proprietorship of her husband's work during her life and the children for thirty years, is to be sent before the Corps Législatif during the short period that remains before its closing—principally at the instance of M. Scribe, whose active interference in the matter has, we are told, induced the Emperor to interest himself personally in it.

The Ministries and some few private *salons* continue open, notwithstanding the lateness of the season. The reception of the Duchesse Ridolfo Sforza, sister of M. Berryer, and that of the Marquise de Boissy—la Gulecioli in other days—were particularly brilliant. In both cases the magnificence of the habitations, and the richness of their arrangement and decoration added not a little to the effect.

The announcement of the marriage of the Emperor of Austria with the daughter of the King of the Belgians was received at the Bourse on Tuesday, and was the cause of considerable consternation. Great anxiety continues to be felt on the subject of this alliance, strengthening so powerfully as it must the interests of the Orleans family.

On Tuesday night closed the representation of "Lady Tartuffe," after a constant run of upwards of three months, and a success, both as to reputation and receipts, of a most unusual brilliancy. Mdlle. Rachel, whose approaching departure has alone caused the interruption, threw all her force into this valedictory representation, and was listened to with breathless interest, only broken by bursts of applause from the house, crowded to overflowing; while the childish *naïveté* of the pretty little *blonde ingénue*, Mdlle. Emilie Dubois, and the consummate acting of Mdme. Allan, seconded the efforts of the great tragedian.

"Les Filles de Marbre," succeeding at the Vaudeville "La Dame aux Camelias," bids fair to rival the success of that too-popular piece—a result much to be desired, as its tendency is meant as an antidote to the highly objectionable one of its predecessor: rendering vice odious, in stead of interesting; and showing the woman of the degraded class of which both treat in her true colours, in place of investing her with a halo of false charms, which change her very sins into the semblance of virtues, or, at least, convert them into new attractions. Great originality, freshness, and force, are the elements of this work in which the principal character is admirably sustained by Mdlle. Farguell, well seconded by Mdlle. St. Marc, Mdme. Chambery, and MM Félix and Fechter. The piece is written by MM. Barrière and Thibaut.

The re-opening of the Cirque, under the title of Cirque de l'Impératrice, adds a new attraction to the Champs Elysées. Its inauguration was brilliant and deservedly successful; a number of *tours de force*, both by the equestrian troop and the jugglers and clowns being singularly effective.

The Gaîté gives the exhibition of M. Sands, who walks on the ceiling without the aid of any machinery whatever. (This is the feat lately performed at Drury-lane Theatre.) At the same theatre a new drama, "Les Œuvres du Démon," has just made its appearance, of which more next week.

At the Variétés "Les Trois Suitanes" is in preparation; at the Folies Dramatiques, a piece entitled "Les Chansons Populaires." The Théâtre Lyrique has just brought out, to finish its season, an operetta, in one act, by a young composer, M. Wekerlin, called "L'Organiste dans l'Embarras." The amusing parts, whose talents in that branch forms a powerful element of success. The work has much merit, and what is better for the general public, much attraction.

A work by Thalberg called "L'ART DU CHANT Appliqué au Piano," excites considerable attention in the musical world, which is a valuable acquisition, full of remarks and counsels, precious to students, and even to professors.

A most interesting discovery has been made accidentally at the Royal Library, at Brussels, of a copy of Sophocles, with autograph marginal notes, by Racine. M. Brunel, a French *bibliophile*, having asked for the edition in question—that of Henry Estienne—found, to his surprise, that he had seen the same copy some thirty years previously in Paris, and had been struck by the notes. His suspicions as to their author being excited, he compared the writing with a fac-simile of that of Racine, and by the words Iphigénie and Diane, the fact was proved beyond a doubt.

The Eastern difficulty is exciting great attention and some misgivings at Paris. It is stated that at an interview between the Emperor of the French and the Russian Ambassador, the former declared that his most earnest desire was to maintain the peace of Europe, and that he had let no opportunity pass of giving proofs that such was his desire; but, he added, that he should not hesitate to change his policy should Russia advance pretensions which were contrary to the interests of France and of the East. The truth seems to be that France and Russia, by their successive attempts to bully the Turks, have brought themselves within sight of hostilities with one another, which neither side is probably very ready to engage. In spite of the declaration published by the *Moniteur*, that none of the rights conceded by the Porte to the Latin Church were touched by the subsequent firmans granted to the Greeks, the recent publication of those documents has effectually dissipated that illusion, for they do undoubtedly make over to the Greeks several of the most important distinctions which the French had contended for and obtained.

The French Ambassador has already adopted the bill which provides for the construction of a line of telegraphs between Paris and Algiers by way of Corsica and Sardinia. The numbers were—For the bill, 209; against it, 1.

The unfavourable news received from Constantinople by private despatches produced a disastrous effect at the Bourse on Wednesday. The Three per Cents opened at 80f. 80c., and fell to 80f. 50c., at which they closed for the end of the month. The Four-and-a-Half per Cents closed at 102f.

The budget has been discussed in the Corps Législatif, and the debate was signalized by a very spirited speech from M. Montalembert, who opposed the budget "because confiscation was there." The rejection of his amendment for ensuring the annual arising from the sale of the property of the house of Orleans had obliged him to that course. What was asked of the Chamber was to participate in the most serious attack which had ever been made in the nineteenth century upon the principle of property, and in the revival of confiscation under its most odious form. The President, interrupting, said it was impossible to allow such expressions to be uttered. M. de Montalembert said he would appeal to the President's delicacy, to his fair renown, to his whole past life. He could not understand how he who had been the advocate of the Duke d'Aumale could shut his (M. de Montalembert's) mouth when he was the advocate of a king who died in exile. The budget of receipts was carried by 238 against 40. The whole budget has been carried with only four opponents—Count de Montalembert, the Duke d'Uzès, the Marquis Talhouet, and M. Charlier.

HOLLAND.

The elections for the Second Chamber of the States-General of Holland—a Chamber dissolved by the new Cabinet in order to give the country the opportunity of declaring whether the Constitution allows of the restoration of the Roman Catholic episcopacy—took place on the 17th throughout Holland. The majority of the elections already known show results favourable to the new Ministry. Thorbecke, the late Prime Minister, has been defeated at Leyden. The new Cabinet, it is now certain, will have a majority.

GERMANY.

Letters from Berlin state that the German Governments have coalesced for the purpose of dissolving all associations of students. Papers and other documents have been seized in all the Universities of Germany. The congress on a uniform monetary system will assemble in June. The adoption of the decimal method is spoken of.

AUSTRIA.

Count Karnicki, the Austrian Chargé d'Affaires at Berne, has received orders to leave his post, and to return to Vienna as soon as he had notified the rupture of diplomatic relations between Austria and Switzerland. The Federal Council in turn has resolved to terminate the mission of the Swiss Envoy at Vienna.

Upon the arrival of the Belgian and Prussian Monarchs at Vienna, there was celebrated an uninterrupted series of fêtes. At a great Prater promenade, the Duke of Brabant and the Archduchess Marie appeared together in the same carriage with the Archduchess and her youngest son. The Viennese loungers observed "that the bridegroom looked as happy as could be expected under such trying circumstances." This was a malicious allusion to the enormous bear-skin cap which the Prince, as a Colonel of Guards, was compelled to wore in public, notwithstanding that the Emperor and the King of Prussia, after the arrival of the latter in the palace, at once exchanged "Pickelhaube" and "Czako" for the common military cap.

The presence of the King Frederick William within the walls of Vienna was regarded as a satisfactory proof of the intimate connection now existing between the two great German powers. The King of Prussia and the King of the Belgians left Vienna at the beginning of the present week.

The recently-arranged marriage between the Duke de Brabant and the Archduchess Marie is highly satisfactory to the Austrian Court, inasmuch as it forms a new link in the great chain which Austria has long aimed at extending from the Adriatic and Mediterranean to the German Ocean. The future bride, the Archduchess Marie Henriette Anne, daughter of the Archduke Joseph, is not quite seventeen. The Duke de Brabant is just eighteen.

TURKEY.

We hear from Constantinople that Prince Menschikoff was preparing to quit that city, in consequence of the definitive refusal of the Porte to accept the propositions contained in the ultimatum of the Russian Envoy. The French Ambassador at Constantinople has, it is said, sent a steamer to the Balaclava roads, for the French fleet to the Dardanelles. A Ministerial crisis had brought Redschid Pacha to the Ministry of Foreign Affairs in Turkey. Redschid Pacha is at the head of Turkish statesmen. He was ejected from office by Russian influence, and the first step towards resistance was to restore him to the position which no one else could fill with equal efficiency. We have thus, on the one hand, a diplomatic rupture between Russia and the Porte; and on the other, an intimation that if Russia is prepared to proceed to actual hostilities she will encounter the forces of France in the Turkish waters.

AMERICA.

Since the adjournment of the United States' Senate, and the inauguration of the new Administration, there has been the usual lull in political excitement. The President has been constantly and anxiously occupied with foreign affairs.

Santa Anna has formed his new Cabinet, and promulgated a new and stringent edict against the Peers.

INDIA AND CHINA.

The steamer *Bombay* arrived at Trieste on the 26th of May, at 7.30 a.m., in 110 hours from Alexandria. The India mail has arrived. The news from Burmah, to the 15th of April, is unfavourable, and more troops are wanted. There is no prospect of peace short of Ava. The Burmese Commissioners had refused to sign the treaty.

The latest dates from China are to the 11th of April. The American, French, and English ships-of-war on the coast of China have, on the urgent requisition of the Chinese authorities, consented to guard Nankin, Shanghai, and the mouths of the Great Canal, against the rebels.

It appears that the revolt, which now threatens to become a revolution, has the double significance of politics and religion—that it aims to upset a parvenu dynasty some two hundred years old, and to substitute for the ancient paganism of Confucius a form of Christian faith and worship. Lord John Russell has informed the House of Commons that Sir G. Bonham was in possession of sections "illustrating the deplorable interference in civil war;" and the intelligence of his interference with literature, probably take the Ministry by surprise. Tien-Teh and his lieutenants have issued proclamations, in which the Old Testament and the name of the Lord Jesus are appealed to as the basis of their faith and authority. There are evident traces of the writer having been a member of Gutzlaff's Christian union. It is also clear that Tien-Teh is a great iconoclast—that the rebel army are very zealous in the destruction of images, the purification of the temples from idolatrous symbols, and the punishment of demon worship. In a letter to the Secretary of the London Missionary Society, the Rev. Dr. Medhurst, medical missionary at Shanghae, expresses a strong opinion as to the anti-idolatrous character of the movement.

It has shaken not only the empire, but idolatry to the very base, and may be the prelude to the thorough opening of the country, when the messengers of mercy will be permitted to travel through the length and breadth of the land, binding up the wounds that have been made, and proclaiming that Gospel which is glory to God in the highest, peace on earth, and good-will towards men. In the meantime, it is ours to stand still.

AUSTRALIA.

The advices from Australia came down to May 3. A lump of gold exceeding in size any former discovery had been found by four men about two miles from Ballarat, its weight being upwards of 130lb. General production at the mines had been very favourable. At Sydney business was exceedingly active, and money plentiful. The immigration at Melbourne had been continously heavy, and some cases of death from exhaustion and destitution are said to have occurred. The total arrivals had been 11,699 in December, and 8,101 in January; and this pressure of population, without any adequate preparation for it, appears subsequently to have caused many to resolve upon seeking more quiet pursuits in the adjoining colonies. There had been a rapid advance in the price of gold to 77s., and in the exchange on London to par, so that shipments of coin from this country may now be expected wholly to terminate. Flour was 27l to 27l per ton; the 4lb. loaf, 1s. 6d.; beef and mutton, 4d. to 6d. per lb.; cabbages, 2s. each; eggs, 6s. per dozen. The colony was flourishing.

EXTRAORDINARY ACCIDENT.—An accident of a singular and dangerous nature recently befell the celebrated surgeon, Professor Langenbeck, in Berlin. Having been called in to attend a lady of high rank in a most advanced and perilous stage of dropsy, Dr. Langenbeck deemed it necessary to proceed without the least delay to puncturation, and this without waiting for other assistance. The operation was, therefore, instantly and successfully performed; and the patient, previously at death's door, relieved and saved. During the operation, however, some of the acrid discharge fell upon his hand, and was of course washed off when the work was completed; but, ere long, the hand, arm, throat, and neighbouring region became inflamed, and all the febrile and inflammatory symptoms of animal poison ensued. Vigorous remedies were forthwith employed, and the danger averted; but the Professor is not yet so entirely recovered as to enjoy the full use of the side affected, whilst the venom has shown its lurking agency by causing eruptions on other parts of the body. Even the unmitigated it cannot fail to appear surprising that an individual saturated internally with most putrid and active poison should live and recover, whilst a few drops of this venomous matter touching an opera-tor's hand externally should have produced rapid and nearly mortal effects.

PROFESSOR AYTOUN'S LECTURES.—On Friday week Mr. Aytoun delivered his fifth lecture—the subject being "Shakspeare and the Poets of Professor's England." After glancing at the miracle plays, and a few remarks on Shakspeare's contemporaries, Mr. Aytoun complimented Shakspeare on having lived a more respectable life than they usually do, and on having written more purely. "Hamlet," and "Romeo and Juliet," were the plays cited. Ben Jonson was spoiled by learning, and Beaumont and Fletcher by the stage. Massinger and Decker had brilliant passages. The dramatists of the Restoration were only to be condemned. Properly speaking, the drama was a moralizing agent. Living dramatists should not write for actors, nor depend upon the French. The subject of the Professor's next lecture was to be the modern poets—Scott, Wordsworth, Byron, Shelley, Keats, Coleridge, Campbell, and Southey. The palm was awarded to the first, because he was the poet of action; and was, moreover, national. Oriental subjects, such as Byron's and Southey's, were to be reprehended. For the rest, Wordsworth was too contemplative, and Shelley too dreamy, but Keats had a fancy of remarkable exuberance; Coleridge, in his best works, was inimitable; and Campbell, as a lyric and didactic poet, was always eloquent. The mechanical skill of modern poets is a favourable circumstance and condition for the future development of the poetic spirit. But the "coming man" must be proportionally great, and do justice to the faculties which he will inherit

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—FRIDAY, MAY 20.

The House resumed the consideration of the Miscellaneous Estimates. In the course of some remarks upon the Government defeat of the previous evening, on the Maynooth Grant, Lord J. RUSSELL said he believed that religious endowments were of very great use to a nation; and he would be quite willing—if there were occasion for such a measure—to vote for grants to the Roman Catholics, not only with respect to Maynooth, but for other objects.

HOUSE OF COMMONS.—MONDAY.

Lord SEYMOUR brought up the report of the Dockyards Appointments Committee, strongly condemnatory of the conduct of Mr. Stafford.

On the order for going into committee on the Income-tax Bill, Col. DUNNE moved for a Select Committee to consider the relative taxation of Great Britain and Ireland. After a debate the motion was negatived by 194 votes against 61.

The House having gone into committee,

On the first clause, Lord C. HAMILTON moved an amendment for the exemption of Ireland from the tax, which he finally withdrew. Mr. FREWEN then proposed an amendment, limiting the duration of the tax to two years, which, on a division, was negatived by 223 to 82.

On the second clause, Mr. MITCHELL moved an amendment to substitute the word "profits" for "property," which was of course resisted by the Chancellor of the Exchequer, and was withdrawn. On an amendment proposed by Mr. Walpole, to insert the word "net" before "profits," the House divided, when the amendment was lost by 194 to 74.

The second clause was then agreed to, and the committee reported progress.

HOUSE OF LORDS.—THURSDAY.

The *Aggravated Assaults Bill* was read a second time.

The Sheriffs and Commissary Courts (Berwickshire) Bill was read a third time and passed.

The County Elections Polls (Scotland) Bill passed through Committee, as did also the Common Lodging Houses Bill.

The Chimney-sweepers Regulation Act Amendment Bill was referred to a Select Committee.

The Evidence and Procedure Bill was read a second time.

On the motion of the Earl of ABERDEEN, the Commons' Address to the Crown for a Commission of Inquiry into the practices at the election for the borough of Malden, was agreed to.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

It was reported by the Cork Election Committee, that Mr. Serjeant Murphy and Mr. Fagan were duly elected for Cork city.

Mr. GLADSTONE announced his intention to bring in bills on the subject of savings-banks and Government annuities.

CHURCH-RATES.

Mr. PHILLIMORE, in asking leave to introduce a bill to alter and amend the law relating to Church-rates, entered into a history of Church-rates from the time of Canute down to the present period, and adverted to the inconveniences attending their enforcement, and to the hostile feelings engendered thereby. He proposed, as a remedy, that the Church should, for the sake of peace, make a large sacrifice of that which was really its own—that all Dissenters should be exempted from the payment of church-rates, by stating in writing that they were Dissenters, and handing such writing to the churchwardens, who should keep such writing, and give a certified copy of it upon demand. Upon giving such written declaration no Dissenter have any right to receive any of the rites of the church, and should also cease to have the right of voting in vestry upon any question relating to the ecclesiastical management of church property. He also proposed a new mode of recovering church-rates, which had left, under the sanction of the authorities of the Church, on his withdrawal of the written declaration left in the custody of the churchwardens.

Sir W. CLAY moved, as an amendment, "that this House do resolve itself into a Committee, to consider whether Church rates should not be abolished, and provision made for the charges to which such rates are at present applicable from pew-rents and the increased value which inquiries instituted by the authority of Parliament have shown may be derived, under better management, from Church lands and property.

Mr. PETO complained of the gross injustice of the present law, and urged the wisdom and propriety of legislation upon the subject.

Mr. COLLIER thought that the proposed measure, if passed, would hold out a premium to dissent from the Church of England, and he would therefore support the amendment in preference.

Mr. E. BALL said, however anxious he was to remove all such subjects of religious discord, he thought that the proposed bill, if carried, would only increase the difficulties with which the question of church-rates was surrounded.

Mr. HUME supported the amendment.

Sir E. H. INGLIS thought it would be unjust to abolish church-rates, inasmuch as they were always looked upon as an impost upon property, which was bought and sold subject to it

After some discussion, Sir G. GREY said that he entertained the same objections to the propositions as he had stated on former occasions, when motions of a similar character were brought before the House.

Lord J. RUSSELL said he had no objection to the introduction of the bill, but it must be considerably modified in order to obtain his support.

Mr. BRIGHT charged Lord J. Russell with inconsistency, in saying the contrary to what he had before stated on the subject.

The House then divided, when the numbers were—For the original motion, 185; against it, 207: majority against the original proposition, 22.

The HOUSE again divided, on the amendment, when there appeared—For the amendment, 172; against it, 220: majority against the amendment, 48.—Adjourned.

ELECTION MATTERS.—*Canterbury.*—The commission closed their inquiry on Monday, at Canterbury, and adjourned to Westminster, *pro formâ*, for a few days, to give an opportunity for printing and digesting the voluminous evidence already taken, and the commission will, on re-assembling, bring the inquiry, in a few sittings, to completion. *Kingston-upon-Hull.*—The bribery commission commenced, on Monday, their examinations at Hull, and many witnesses have been examined. The details are much the same—bribery, promises, treating, &c. It is expected the inquiry will last the week. *Harwich.*—Mr. Bagshaw has addressed the electors, at a general meeting, and has been fully approved of. The meeting passed the following resolution: "That this meeting, in again welcoming their old and tried friend, Mr Bagshaw, desire to assure him of their devotion to his interest and the glorious cause he espouses, and of their determination to secure his return by every legal means at the ensuing election." *Cork.*—The committee have, after several days' examination, decided that Francis Stack Murphy, Esq., and William Trant Fagan, Esq., are duly elected citizens to serve in this present Parliament

NEW ELECTION COMMITTEES APPOINTED.—*Liverpool.*—Mr. Ingham (chairman), Mr Heathfield, Mr. Williams, Hon. J. F. Maxwell, and Mr. J. Ball. Members petitioned against, Mr Forbes Mackenzie and Mr. Turner. *Bury St. Edmunds.*—Mr. Spencer Walpole (chairman), Lord William Graham, Mr. Martin, Mr Anthony O'Flaherty, and Mr. John Whitehall Dod. *Peterborough.*—Mr. Ker Seymer (chairman), Mr. Phillips (Haverford West), Mr. Shafto, Mr. J. Hans Hamilton, and Mr. Grant. *Durham (City).*—Mr. Brannon (chairman), Colonel Gamfield, Hon. W. S. Knox, Mr. George Duncan, and Mr. Vance. *Clare.*—Mr Miles (chairman), Mr. M Milnes, Mr. W. E. Wynne, Mr. Warner, and Colonel North. Member petitioned against, Mr. F. O'Brien. *Sligo.*—Mr. Divett (chairman), Mr C. Hindley, Sir E. Filmer, Hon. Mr. Fortman, and Mr. W. J. Evelyn. Member petitioned against, Mr. Towneley.

CLITHEROE.—The nomination of candidates for this borough took place yesterday, and the polling takes place this day (Saturday).

THE ADMIRALTY PATRONAGE.—The committee which has been so many days employed on the subject of the dockyard and Admiralty promotions, have made their report, which occupies three and a half columns of the morning papers. It brings home many facts, but offers no suggestion, leaving the House of Commons "who appointed the committee to deal with the subject as it may think best

DESTRUCTION OF OLD SHELTON HALL, NEAR STOKE-UPON-TRENT.—On Sunday last, this building, celebrated as the birthplace of Ralph Fenton, the poet, was totally destroyed by fire.

We read the following in the *Bilancia* of Milan, under the date of Rome, 2:—"A very painful discovery was made the other day in the Basilica of Laterau. Those who are acquainted with the locality, will recollect that Pope Martin V. lies buried in the nave. The body having to be removed in consequence of certain architectural repairs in progress, the coffin was opened in the presence of the Chapter. To everybody's surprise, nothing was found but the bones of Martin V.; the rings, the gold and silver cloaks, the tiara, all studded with precious stones, had disappeared. Their existence in the coffin had been verified about fifty years ago

NAVAL AND MILITARY INTELLIGENCE.

THE CAMP AT CHOBHAM

The camp in progress of formation on Chobham-common promises to be the great feature of the present season. The novelty in England of any great military display invariably attracts vast crowds of spectators, and this season we have been anticipated by the inhabitants in their selection of Chobham-common as the scene of the encampment.

The preparations for the encampment are rapidly proceeding, although the progress yet made is not very perceptible to the spectator. Standing upon the ridge of high ground running across the centre of the common, the eye clearly takes in the line of the field, which is already marked out by hitty poles inserted in the ground, showing the position of the various regiments. The cavalry will occupy the extreme right of the field. The Sappers and Miners will occupy a position next to the cavalry, and they are to be followed by the troops of the Household Brigade, who will occupy the centre. The other foot regiments will come next, and the Rifle Brigade and the Royal Artillery are to form the extreme right. The troops will be arranged in the form of a half circle or crescent, and the lines will probably exceed three miles in length. Only the south-western portion of the common will be occupied. The opposite side being very damp, and, from its marshy character, unsuited to military operations The irregularity of the surface, and the broken character of the ground will render the evolutions of the troops, especially the cavalry, difficult, if not dangerous; but, as the object of the camp is to improve and perfect the military education of the soldiers, rather than to afford them a summer's holiday, this circumstance has not been considered objectionable at the Horse Guards.

It has already been stated that Lieutenant-General Lord Seaton, G.C.B., G.C.M.G., G.C.H., an officer of great distinction, is to have the command of the camp. His Royal Highness the Duke of Cambridge will command the cavalry. In order to be within reach at any moment, both officers have secured residences in the immediate vicinity.

The preparations for the encampment have been entrusted to Colonel Edward Vicars, an officer of distinction in the Engineers, who is already actively engaged on the spot. The commissariat will be under the control of [illegible]

The following [illegible] regiments and battalions [illegible] the camp:—Two battalions of the Coldstream Guards, the 1st battalion of the Grenadier Guards, the 1st battalion of the Scots Fusilier Guards, the 1st battalion of the 1st or Royal Regiment of Foot, the 2nd battalion of the 3rd or Buffs, the 1st battalion of the 4th or King's Own, the 1st battalion of the 7th or Royal Fusiliers, the 1st battalion of the 23rd or Royal Welch Fusiliers, the 1st battalion of the 33rd Regiment, the 1st battalion of the 50th Regiment, the 1st battalion of the 95th Regiment (the Derbyshire [illegible] will be divided into three brigades—the first composed of the three battalions of Foot Guards; the second, of the 33rd Regiment, the 50th Regiment, and the Rifle Brigade; and the third, of the 42nd and 93rd Highlanders and the Rifle Corps. The muster-roll of the whole camp will amount to someth ng less than 10,000 men.

It is intended that, after the 1st battalion of the Household regiments have served for a certain period, their places shall be supplied by the remaining battalions of their respective corps, so as to give every soldier the chance of doing duty in the field.

The force employed under Colonel Vicars at the present moment in carrying out the preparations for the encampment is not large. It consists only of 100 Sappers and Miners from Chatham, and about the same number of the 30th Regiment, with twenty-two picked men of the Scots Fusilier Guards, under Sergeant Knox. The latter are employed in marking out the position of the various regiments. The principal work upon which the Sappers and the men of the 30th Regiment are now engaged is the erection of camp stables for 1200 horses. This will be a heavy work, as, with a view to protect the animals as much as possible, Lord Seaton has insisted that a sufficient amount of building material shall be supplied. The other principal work has been the sinking of wells, of which no less than ten have been completed in various parts of the common. The water has generally been found to be pretty good; but an unexpected difficulty has arisen which will delay the completion of the necessary number of wells for some short period. The subsoil being of a sandy nature, it is absolutely necessary to shore up the sides of the well as the men dig. In this barren district there is scarcely any other timber than fir procurable; of that there is plenty on Government ground, and the first supply of wood for shoring up their work until it was discovered that the turpentine in the green wood gave a brackish and very disagreeable taste to the water. Well-sinking was then stopped, and it will not be resumed until a supply of beech timber is obtained. Each regiment will bring its own tents; and even the Household Brigade will, it is expected, be able to pitch them with very little intrusion from the Ordnance.

The camp will be formed on the 16th of June. Orders have been issued for all the troops engaged to be upon the ground on that day, and it is understood that a grand review of the whole force will follow immediately.

A series of magnificent festivities are spoken of as likely to take place during July and August. The officers of the Household Brigade have determined upon keeping up the brilliant character of their mess.

There are scarcely any poisonous plants in the district, and whatever requirements arise on the part of the public must be satisfied under marquees. With this view several have already been engaged by speculators—one of them having taken a large farm house, with the intention of converting it into a tavern.

The old parish workhouse of Chobham is to be made into a military hospital. It has been purchased from a farmer for 800*l*., and will soon be in full operation. It stands in a very convenient position in the rear of the camp.

The contract for bread and flour has been taken by Mr. John Gillett, of Silver-street, Bloomsbury; who has also undertaken to furnish 600 sacks of corn, 80 loads of hay, and 60 loads of straw. The meat is to be supplied by [illegible]. The contract for supply of 6000 lbs. of fresh meat daily has been taken by Messrs. Charles Baker and son, of Newgate-market.

On Monday last, at a Court Baron of the Manor of Chobham, held at Onslow, lord of the manor of Chobham, Mr. Hockley, of Guildford, the steward of the manor, stated that the authorities at the Horse Guards had no right to destroy the herbage and commit trespasses on the waste land without the consent of the copyholders, and that every copyholder was entitled to compensation for the injury done to the waste; and that if any booth or tent, &c., was erected, any copyholder had the power to pull it down; and he advised the homagers to adopt a resolution, that application should be made to the Horse Guards for compensation, which was accordingly done, and the result is looked forward to with much anxiety. It appears that the Earl of Onslow gave his permission, so far as his right extended, to Lord Hardinge to camp the troops on Chobham-common; and a weighty meeting of the inhabitants has been held, and a committee appointed for the purpose of letting the ground for booths, &c; but Mr. Hockley stated at the court that the parish had nothing to do with it, and that it rested with the copyholders.

SUDDEN DEPARTURE OF STEAM-FRIGATES FOR THE MEDITERRANEAN.—Considerable activity was caused amongst the naval authorities of Portsmouth, in the course of Saturday last, by the receipt of orders, directing the departure of the store ship, *Wellesley*, screw-steamer (steamer), 71, from Spithead, for the Mediterranean. The *Highflyer* (steam frigate), 21, and *Orion* (steam frigate), 16, are under orders for sea, and have the Blue Peter flying at the main.

The *Black Eagle*, Admiralty yacht, Master Commander John E. Petley, came into Portsmouth harbour on Monday evening, from Devonport, with the Master-Attendant, Mr. Bartlett, of the Ordnance Afloat, and engineering officers, from their official inspection of the western fortifications

The *Duke of Wellington*, screw, 131, Captain H. B. Martin, is bending sails, and using every energy in getting ready for sea. The new proposal for the better manning of the navy has worked its magic upon the British sailor, and its immediate effect is shown by the number of good men who are already entered, and daily threatened.

The Channel squadron, consisting of the *Sanspareil*, *London*, *Prince Regent*, *Impérieuse*, *Amphion*, *Leopard*, and *Highflyer*, left Plymouth Sound on Wednesday, it is said for Gibraltar, touching at Cork and Lisbon by the way.

THE ARCTIC EXPEDITION.—On Saturday morning her Majesty's ship *Phœnix*, 8, screw steam-sloop, 280-horse power, Commander Edward A. Inglefield; *Desperate*, 8, screw steam-sloop, 280-horse power, Captain William W. Chambers; and *Barracouta*, 6, paddle-wheel steam-sloop, 300-horse power, Commander George Parker; arrived off Haulbowline, on their projected expedition to the Arctic regions, in search of the missing ships *Erebus* and *Terror*. The vessels in conjunction with the *Phœnix* are for the purpose of towing the *Breadalbane*, Captain M'Kenzie, *Diligence*, Captain Ellis, store ships, which are laden with provisions as far as Beechy Island, Lancaster Sound, for the supply of the expedition.

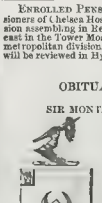
The 21st Fusiliers, now stationed at Hull, will proceed to Dublin to relieve the 62nd Light Infantry, under orders for India

A letter from Portsmouth says:—"We have had a mimic encampment to day on the Governor's-green. The 38th have been practised in setting up and striking tents; the proceeding excited a good deal of interest. After some dozen trials the men became exceedingly expert. We noticed that in the first place markers were sent out, then followed a couple of file, taking six for each tent, at proper distances apart. Surrounding the tent, which is in a bag the size of a seaman's, a couple of poles, each 5 feet 6 in., socketed, lay alongside. At the word of command, the poles are put in socket, making 11 feet in height, the tent is run up, and the toggles made fast to the ground. In less than five minutes the tents were a fixture, and habitable. Again the word, and the tents were struck and packed in their bags—the whole time of so doing being three minutes, and the soldiers supposed to be on their march."

ENROLLED PENSIONERS.—On Tuesday the enrolled out-pensioners of Chelsea Hospital commenced their annual drill—the north division assembling in Regent's Park, the south on Kennington Common, the east in the Tower Moat, and the west in Hyde-park. The whole of the metropolitan divisions, including those from Greenwich and Woolwich, will be reviewed in Hyde park on Wednesday, June 1.

OBITUARY OF EMINENT PERSONS.

SIR MONTAGU LOWTHER CHAPMAN, BART.



INTELLIGENCE has reached London of the decease abroad of this respected gentleman. Sir Montagu was born 10th December, 1806, the eldest son of the late Sir Thomas Chapman, Bart., of Killua Castle, county Westmeath, by Margaret, his wife, daughter of James Fetherston, Esq., of Brockley, Oxford. The family of Chapman was established in Ireland by John and William Chapman, under the auspices of their cousin-german, Sir Walter Raleigh, though whose influence they obtained considerable grants of land. The property in Westmeath, however, was not acquired until the time of Cromwell. Of that county, the Baronet, whose death we record, was for several years from 1830 to 1841 representative in Parliament. Having died unmarried, Sir Montagu is succeeded by his brother, now Sir Benjamin James Chapman, Bart., who is married to Maria, daughter of Richard Fetherstonhaugh, Esq.

SIR ROBERT BUCKLEY COMYN, KNIGHT, D.C.L.,

LATE CHIEF JUSTICE OF THE SUPREME COURT AT MADRAS.

SIR ROBERT COMYN died on the 22nd instant, at his residence in Newtreet, Spring-gardens, aged sixty one. He was the youngest and last surviving son of the late Rev. Thomas Comyn, Vicar of Tottenham, Middlesex, by Harriet Charlotte Stables, his wife; and grandson of Stephen Comyn, Esq., barrister-at-law. Having completed his education at St. John's College, Oxford, he was called to the bar in 1814; and appointed a Puisne Judge of the Supreme Court of Madras in 1826, when he received the honour of knighthood. In 1834 he became Chief Justice, and continued to fulfil that high station until his retirement in 1842. Sir Robert was made a Doctor of Civil Law by the University of Oxford in 1842, and a Bencher of the Middle Temple in 1843. He was author of "A History of the Western Empire, from the birth of Charlemagne to the accession of Charles V."

MR CONWAY.

THIS gentleman, whose name has been connected for upwards of half a century with the newspaper literature of Dublin, expired on the 24th inst. Mr. Conway had reached the advanced age of seventy-six years, and was for the greater part of his life editor and proprietor of the *Dublin Evening Post*, the acknowledged organ of the Irish Whig party. Pending the question of Catholic Emancipation, the *Dublin Evening Post* enjoyed the unbounded confidence of the Roman Catholics and Mr O'Connell. The *Post*, however, subsequently joined in the opposition to the Repeal policy, and contained pretty constant to its adverse opinion of that question.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. W. Cooper, to Biggin-gate, Lincolnshire; the Rev. R. Gilde, to Broughton subney, Notts; the Rev. M. Jeffery to South Thoresby, Lincolnshire; the Rev. T. Langley, to Whitchurch-with Ganarew, Herefordshire; the Rev. T. H. Sisly, to Lackford, Bury St. Edmunds; the Rev. T. F. Mason, to St. Edmund the-King, Norwich, the Rev. F. A. Crowle, to Kingsdowne, Kent; the Rev. H. R. B. Fiddes, to Houghton, Norfolk; the Rev. J. Wilson, to Mersey, Hampton; the Rev. G. Harrison, to Sidmouth, Devon. *Vicarages:* The Rev. S. Hobson, to Tuttington, Norfolk; the Rev. A. Neely, to Ashton, Northamptonshire, the Rev. S. Stonehy, to Melton Mowbray; the Rev. J. Matthew, to Knowstone and Molland, Devon; the Rev. R. H. Bovard, to Dalston, Cumberland; the Rev. J. Jones, to Burden, near Bridgend, Glamorganshire. *Incumbencies:* The Rev. T. B. Stocks, to St. Anne's Church, Highgate-rise; the Rev. H. P. Thomas, to Upton, Pembrokeshire; the Rev. A. H. Grant, to St. Michael's Church, Aldersgate; the Rev. J. Lindsay, to Arundel-street, Strand. *Perpetual Curacies:* The Rev. G. Caldrop, M.A., to be Chaplain to Trinity College, Cambridge.

TESTIMONIAL.—The Rev. R. G. Caldrop, B.A., on his resignation of the curacy of Newburn, Northumberland, from the parishioners of that place

LONDON ORDINATION.—On Trinity Sunday the Bishop of London held a general ordination in St. Paul's Cathedral, and delivered an important charge to the newly-ordained clergy. Full choral service was performed, the prayers being intoned by the Rev. J. Howard, M.A., and the lessons read by the Rev. W. C. F. Webber, M.A.

AT CRAYFORD.—A new church has been erected for the district of Rosherville, in the parish of Gravesend, and is to be consecrated by the Bishop of Rochester, on Thursday, June 2. The Rev. Frederick Southgate, M.A., formerly curate of Hickingwell St. Peter, Suffolk, has been appointed to the incumbency of the new church and district

NEW CHURCH AT CHATHAM.—On Tuesday the Earl of Sheppey laid the foundation-stone of a new church, dedicated to St. Paul, in the parish of Chatham, in the presence of a large number of the clergy and lay inhabitants of the neighbourhood.

THE QUEEN'S BIRTHDAY IN EDINBURGH.—The anniversary of her Majesty's birthday was celebrated in Edinburgh by a general holiday. Lord Belhaven, her Majesty's Lord High Commissioner to the General Assembly of the Church of Scotland, which is now holding its annual sittings at Edinburgh, held a levee in honour of the occasion in Holyrood Palace. His Grace afterwards went in procession to the General Assembly. As his Grace reached the Assembly at half past twelve o'clock, a Royal salute was fired from the batteries of the Castle. In the evening Lady Belhaven entertained a party of about 600 ladies and gent on at Holyrood-house

LOUIS PHILIPPE'S PICTURES.—The last portion of the late King Louis Philippe's pictures, which is to be sold to-day (Saturday), comprises the collection left him by Mr. Standish. It is a miscellaneous character, containing examples of the Spanish, Italian, Dutch, and Flemish schools, with a sprinkling of English paintings—among them some by Landseer, Morland, Wilson, and Rosse. This collection was, we believe, bequeathed to Louis Philippe by Mr. Standish with the view of his being kept together; but circumstances have now obliged his family to dispose of it, as well as of the Spanish collection of pictures belonging to the late King of the French

THE CRYSTAL PALACE AT SYDENHAM.—In addition to the east which the managers of this company have for some weeks past been taking of the equestrian statue of the Duke of Trafalgar, for the purpose of exhibition, that of James II., in Whitehall gardens, nearly opposite the residence of the late Sir Robert Peel, has been undergoing, during the past week, the process of hoarding, preparatory to taking the cast, for the same establishment.

INDIAN JUSTICE.—A gentleman who has recently returned from a tour in the Holland, has given the following description of a scene witnessed by him in one of the Company's courts to the *United Service Gazette*, from whose pages we take it:—"The judge, who was but too apparently ignorant of the language of the district, directed one of the native officers of the court to put a question to a witness, and not obtaining any reply, repeated it; but the witness, returning no answer, and his silence being looked upon as a contumacious one, the judge ordered the summary infliction of the rattan, which was accordingly administered in open court, as the readiest mode of eliciting his evidence. It proved, however, a total failure, as the same question being been put again and put without effect, it was at last discovered that the poor fellow was deaf and dumb."

MAILS BETWEEN NEW YORK, CALIFORNIA, AND JAPAN.—Arrangements had been made for the transmission of a weekly mail between California and New York, the importance of the trade justifying the more frequent communication. A trading company had been established for opening up commerce with Japan: and four vessels, capable of carrying 1000 men and a proportionate quantity of goods, laid on.

PASSPORTS.—The Prussian authorities, and those on the Continent have given notice at the various railway-stations and steam-packet offices, that travellers from England will not be permitted to enter the Prussian territory unless their passport, granted by the Secretary of State for the Foreign Department, is countersigned by the Ambassador or Consuls in the United Kingdom. On the other hand, the British Secretary of State advertises that such a visa is not required; and the Prussian Minister in London declares that no such instructions have been forwarded to London, and that, therefore, his signature is not needed.

SALE OF ENCUMBERED IRISH ESTATES.—The Commissioners continue to knock down estates like ripe pears. On Tuesday the sales amounted to £67,986. A property in the county Westmeath, containing 334 acres, and producing £236 a year, one head-rent and tithe-rent charge, realised £3500, or 35 years' purchase. It was bought for the Hon. Henry Parnell.

LAUNCH OF "THE HIMALAYA" SCREW STEAM-SHIP, AT BLACKWALL.

LAUNCH OF THE "HIMALAYA" SCREW STEAM-SHIP.

THIS leviathan screw steam-ship which in the course of her construction has excited very considerable interest, more especially among the visitors to Blackwall, was launched on Tuesday afternoon (the Queen's birthday anniversary), from the premises of her builders Messrs C J Mare and Co The spectacle was witnessed by the Duke of Leinster, Lord and Lady Naas, Lord and Lady de Tabley, Miss de Tabley, Mr T Russell, M.P., Sir James and Lady Matheson, Lord Alfred Paget, M P, Col Boldero, M.P., Mr. O'Brien, M.P., Mr. Wyndham Goold, M P, Sir James Emerson Tennent, M.P, Mr A Hastie, M P, Mr B Wilson, M P, Mr. James Allen, and other Directors of the Peninsular and Oriental Company, for which this splendid vessel has been built. The ceremony of naming the *Himalaya* was performed by Lady Matheson, wife of Sir James Matheson, chairman of the Company The arrangements were very complete, and reflected the highest credit on all concerned with the establishment of her eminent builder On a given signal, at half-past two o'clock (shortly before high water), when the axe fell, the lowering vessel glided gently and smoothly into the water, amid the cheers of the numerous spectators, and by an excellent arrangement of ropes attached to the eastern bank of the creek, which were made of sufficient strength to turn her a little to the eastward at the moment of the launch and then break, the launch was most satisfactorily effected

The *Himalaya* was designed and built under the inspection of Mr. F. Waterman, jun., at Messrs. Mare's establishment, at Blackwall. The vessel was commenced in November, 1851, and her length between perpendiculars is 340 feet, breadth, 46 feet 2 inches, depth of hold, 31 feet 9 inches, and she is 3550 tons burden, with engines of 700 horse power, by John Penn and Son. She was originally intended to have paddle wheels, with engines of 1200 horse power, but subsequently, and before she was too far advanced, it was decided that she should be fitted with a screw propeller and engines of 540-horse power on the most approved principle. Thus will her efficiency for ocean steaming be proportionately increased, carrying, as it is intended, some 1200 tons fuel, with accommodation for 400 cabin passengers, 700 tons measurement goods, and ample space for mail-rooms, &c.

In regard to strength of build and form for speed, the *Himalaya* is unrivalled; having six water tight bulkheads, and otherwise fitted with every appliance to safety She will be provided with an entire outfit of "Trotman's improved Porter's" anchors, the excellency of which have been fully proved in numerous instances on board the Peninsular and Oriental Company's extensive fleet, and affirmed also by the "Committee's Report on the merits of Anchors of all Nations," to possess 132 per cent superiority over the Admiralty anchor in respect to holding power and strength The bower anchors will be respectively 48 and 50 cwts, in lieu of ordinary anchors, of five tons each Thus a saving equal to that enormous weight upon the bows will be effected.

The cabin arrangements of this vessel with regard to ventilation are most effective, combining elegance and simplicity in its application. The merit of the invention is due to Mr J. Robinson, under whose auspices the plan is in course of application to fourteen other new steam-ships now constructing for the Peninsular and Oriental Company

We understand it is intended, on Saturday week next, to launch the *Jason*, 2600 tons, and successively, on completion, three others of like tonnage, rendered necessary by the increasing development of screw-steaming under the auspices of the General Screw Steam Shipping Company.

COMMENCEMENT OF THE LISBON RAILWAY.

THERE is a plethora of English capital seeking profitable investment, and judicious railway undertakings offer so reasonable an assurance of pecuniary success, that nothing but the indifferent reputation of the Governments of Siam and Portugal has prevented English capital from flowing like a fertilising stream into those countries. We have to offer them not only money, engineering skill, and the thews and sinews of our sturdy labourers, wherewith to construct their railways, but we can even supply them with a large portion of the passenger traffic which would make them pay, for Italy and Germany are beaten ground for our tourists, and thousands of travellers would gladly penetrate into the picturesque recesses of Iberia and Lusitania, if the large cities of the Peninsula were connected by railways But what can be done for Governments which evade their most solemn obligations? If they repudiate the fair claims of the public creditor, they cannot wonder if the committees of the London Stock Exchange refuse in any way to recognise their attempts to obtain English capital for constructing the railways which are so much needed to develop their resources

Nevertheless, the inhabitants of Lisbon are, it seems, to have a railway, and, more wonderful still, appear likely to be largely indebted to English enterprise and skill for the means of constructing it. In order to give the greater eclat to the event, her Majesty the Queen of Portugal condescended to turn the first sod. The ceremony took place on Saturday, the 7th instant, in a quinta belonging to Lieut. Cunha, at Beato Antonio, about two miles from Lisbon, on the margin of the Tagus. The day was observed as a gala, and a large assemblage of the rank, fashion, and beauty of Lisbon was collected The Queen, on her way to the scene of the day's proceedings, passed under three triumphal arches the first at the Grillo, where a number of children, dressed in white, with garlands of flowers round their heads, stood, with baskets of flowers, with which they sprinkled her Majesty and the King Consort At Alto de Grillo, a second triumphal arch, of gorgeous character, was erected, at the expense of an English gentleman (Mr. Kerr). Here a regimental band of whose was stationed; and, on the approach of the Royal escort, their Majesties were covered by little fairies, dressed in white, with roses, carnations, &c Having passed through a third triumphal arch at Beato Antonio, their Majesties arrived at a few minutes before eleven o'clock at the quinta, on entering which the Royal cortège ascended a hill, where a magnificent tent was erected, containing seven divisions The centre compartment contained the Royal saloon, the next on its right and left respectively, the places allotted to the Chamber of Peers and the Chamber of Deputies; while the others were reserved for dignitaries of the state and ladies. The marquee was capacious enough to contain 700 persons without inconvenience Portuguese regimental and municipal flags floated gaily from the roof, while the interior was decorated with festoons of flowers and evergreens, and the front of the marquee was covered with tapestry Immediately before the marquee was a half-oval space enclosed, at the end of which was a staff surmounted by a flag, which marked the spot for the inauguration. On the margin of the enclosure the flags of all nations were tastefully displayed. In addition to the spectators in the marquee, the field exhibited a large concourse of persons. Troops were drawn up on the ground, as well to increase the splendour of the pageant as to preserve decorum.

The arrival of their Majesties was announced by discharges of rockets, and the bands played the National Hymn. The Queen was handed to her box by the Duke of Terceira, and was also attended by the Minister of Public Works, who holds the Portfolio of Finance, and the Minister for Foreign Affairs, who holds also the post of Marine and Colonies. The Queen and the King having had explained to them the various points connected with the solemnity, and having most graciously received the gentlemen concerned in the ceremony—namely, Mr. Hardy Hislop, Mr. Charles Waring, Mr. John S. Valentine, and Lieutenant Cunha (the owner of the ground)—a carpet was spread from the spot to the Royal box, which her Majesty left, resting on the arm of the King, and attended by the respective Ministers, the directors, engineers, and others, as well as by the peers and deputies. The cortège proceeded to the scene of the operation, for the performance of which her Majesty received a magnificent silver spade from the hands of the Minister of Public Works The earth being turned into a handsomely ornamented wheelbarrow, with gilded mountings, the Queen returned to her box, attended as before, amidst discharges of rockets, accompanied by the most animating martial music The sturdy English navvies now went to work with a will, and came in for no small share of admiration as they exhibited their brawny arms and muscular development. While this was going on the King conversed with Mr. Hislop and Mr. Valentine, expressing his hope to the

COMMENCEMENT OF THE LISBON RAILWAY, BY THE QUEEN OF PORTUGAL.

ormer that he would use every exertion to carry out the desired undertaking. The Queen then partook of refreshment. Ices and pastry were liberally provided and handed to the ladies at their seats. Their Majesties then left, and the company dispersed. Certain savoury smells about this time began to proceed from tents in the rear of the great marquee, and a banquet was shortly afterwards prepared, in which fish, flesh, and fowl, and other delicacies, and some excellent champagne, served to renew the strength and exhilarate the spirits of the *convives*. Mr. Hislop and the operative engineers were here warmly complimented for their exertions in breaking ground. The weather had for two or three days previous been cloudy and inclining to rain; but on the morning in question a breeze sprang up, the clouds dispersed, and the sun shone most benignly upon the scene, and upon the beautiful landscape spread out at the feet of the spectators.

Time was when fleets of a hundred sail of merchantmen used to float upon the bosom of the magnificent and capacious Tagus. A system of railways in the Peninsula might enable a large share of the commerce of America, and of those nations whose vessels now traverse the Atlantic, to avoid the dangers of the Bay of Biscay and the British Channel, for the merchandise destined for the continental ports.

But whether English capitalists can safely entrust their property to the tender mercies of a repudiating Government is a question which we must leave our readers to decide for themselves.

GRAND MASONIC CEREMONY AT HULL.

Last week we briefly recorded the ceremony of the laying of the foundation-stones of the Hull Subscription Library, and the Literary and Philosophical Society's Hall and Museum, on Tuesday, the 17th instant. the first by the Earl of Carlisle; and the second by Lord Londesborough, the senior Grand Warden of the Masons of England. The latter ceremony was in due Masonic form; his Lordship being surrounded by the brethren of the Humber Lodge—the richest and most important in the provinces—arrayed in their picturesque costume, and bearing the imposing insignia of their order. At half-past ten, the Masons assembled at their handsome lodge-room in Orange-street, and Lord Londesborough officiated as Provincial Grand Master. At eleven o'clock the Masonic procession moved from the Lodge for the Public Rooms, headed by the splendid band of the 21st Regiment. The ancient standard, and the official costumes and paraphernalia, had a very splendid effect in the bright sunlight; and the display derived additional interest from its being the first "Provincial Masonic Procession" ever witnessed in Hull. At the public rooms it was joined by the Earl of Carlisle, the Mayor, Magistrates, Vicar, Clergy, Consuls, and corporate bodies of the town. The combined procession then advanced to the site of the proposed buildings, where the first stone of the Subscription Library was laid by the Earl of Carlisle, at the request of the President, Mr. Frost.

At the close of this ceremony the Earl of Carlisle, escorted by the Mayor, the President of the two Institutions, and heads of public

LORD LONDESBOROUGH LAYING THE FOUNDATION-STONE OF THE HULL LITERARY AND PHILOSOPHICAL SOCIETY.

bodies, followed Lord Londesborough, and the worshipful fraternity, of Masons, to the extreme north-east corner of the two united sites where preparations had been made for laying the first stone of the Literary and Philosophical Institution. Here Lord Londesborough, officiating as Provincial Grand Master, took his station at the stone, having around him the Provincial Grand Sword and standard-bearers, the P. G. Chaplain, Deputy P. G. Master, and other leading officials; besides the square, compass, level, plumb, &c. The P. G. Treasurer and Secretary took their position on the ground close by the stone; where, on a signal from the P. G. Master, the P. G. Chaplain commenced the ceremony by reading a portion of Scripture from the Psalms, "Except the Lord build the house;" after which he offered up a prayer; to which the brethren responded, "So mote it be."

P. G. then deposited a bottle containing the coins of the reign, and a scroll bearing an inscription, which the Provincial Grand Secretary read, and concluded by saying, "Right Worshipful Provincial Grand Master, I have deposited the inscription-plate over the mouth of the cavity."

The P. G. Grand Master then called the operative masons, who descended and spread the mortar on the lower stone, and fixed the upper stone, which was slowly lowered, and tested by the proper officers, the band striking up "Rule Britannia."

The President of the Literary and Philosophical Institution, Charles Frost, Esq., F.S.A., then presented the trowel to Lord Londesborough, and requested his Lordship to do the society the honour of laying the foundation-stone.

The Provincial Grand Master then proceeded to his task, which (says the *Hull Packet* report) his Lordship executed in a most expert and workmanlike style, which elicited general applause. At his command, the Junior Warden, the Senior Warden, and the Deputy Grand Master, in succession tested the stone, with plumb, level, and square, and reported in masonic phraseology, that the craftsmen had done their duty. His Lordship then took three several instruments into his own hands, and, having therewith in all respects tested the stone, said—"I declare this stone to be correctly set, according to the rules of our craft." He then gave it three raps with his gavel, and returned to the platform. The Provincial Grand Officers then came forward with the magnificent paraphernalia belonging to the grand lodge of England, consisting of a rich and massive cornucopia and two ewers, each vessel being of solid gold—the cornucopia alone being estimated, we believe by competent judges, at upwards of a thousand guineas, and which, through the extreme courtesy of the Earl of Zetland, was brought down for the occasion by Brother White, grand secretary of England. The cornucopia was then handed by Brother Brandheest, Past Provincial Grand Sword Bearer to the Grand Master, the Earl of Londesborough, who, taking a handful of corn therefrom, threw it on to the stone, at the same time saying "I sprinkle this corn as an emblem of plenty; may the blessings of bounteous Heaven be showered down upon us, and may our hearts be filled with gratitude." To which the brethren responded, "So mote it be." Then taking the ewer of oil from Brother Claffer, Past Provincial Standard bearer, and sprinkling it in like manner on the stone, said, "I pour this oil as an emblem of peace: may peace and harmony, good-will and brotherly love abound among us." To which the same response was made, "So mote it be." His Lordship then said, "Brethren, having now, by permission of our right worshipful Grand Master, and with the assistance of the Freemasons of the North and East Ridings of Yorkshire, duly laid, according to the rules of the art, our ancient corn, this first stone, it only now remains to implore the blessing of the Great Architect of the universe, and to implore that He will be pleased to bless this great building, not to grant that it may tend to the advancement of the interests of this great town."

Brother Sutton, Provincial Grand Chaplain, then offered a prayer after which Lord Londesborough inspected the plans.

The band then played the National Anthem; and at the suggestion of Lord Londesborough, hearty cheers were given for her Majesty; the town and trade of Hull, Lord Londesborough, the Earl of Carlisle, and the Ladies were also honoured.

A procession was again formed, and returned to the public rooms, where a sumptuous public breakfast was served to 122 guests, of whom 20 were Masons. The President (Mr Frost) ably filled the chair; and the after breakfast proceedings, including a variety of appropriate toasts and eloquent addresses, were of an unusually interesting character, more especially in connection with the intellectual advancement of the city of Hull.

CENTRAL LONDON DISTRICT SCHOOL.

On Monday, the 23rd instant, his Grace the Archbishop of Canterbury attended at the above school, at Weston-hill, Norwood, to open a handsome and spacious new school, erected under the auspices of the Board of Management, from a design by Messrs. Richard Tress and Chambers, the architects of St. Thomas Apostle Chambers. The service commenced at twelve o'clock, prayers being read by the Rev. J. Goldham, the chaplain, after which the archbishop preached an appropriate sermon to the children, in a style suited to their capacities. There were about 900 children present, and they looked and conducted themselves remarkably well. The Archbishop was attended by his chaplain, the Rev. Mr Thomas, Rector of Allhallows, Barking, in the City; and by the Rev. Dr. Russell, of Bishopsgate (the chairman), and Mr. R. B. Wilkside, Common-councilman (the vice-chairman), and Messrs. Thornton, Cazet, Harris, Greenaway, Conder, J. M. John-on, Dodd, Raymond, Read, Bowditch, Lewis, and Greig, members of the Board of Management; with Mr. John Rowsell (their clerk). Mr. Richard Tress (one of the architects), and numerous visitors, ladies and gentlemen. Amongst the visitors we noticed the Rev Edward Standen, of All Saints', Norwood; the Rev. Mr. Pococke, chaplain to the City of London Union; the Rev. Joseph Brown, vicar of Christchurch (formerly chaplain to the Sclools); Mr. Tufnell, one of the Inspectors of Schools, appointed by the Privy Council; Mr. Street, consulting surgeon to the establishment, and others.

After the service his Grace and the company partook of refreshments, and then proceeded to inspect the establishment, which excited much interest. The Schools are admirably conducted, the masters and mistresses most efficient, and the children well disciplined and very attentive. The Infant School, containing about 300 children, was particularly attractive; and his Grace seemed surprised by the happiness and readiness with which the little pupils answered questions upon an endless variety of subjects, and performed the various evolutions in infant school teaching. The archbishop questioned the children; and the kind manner of his Grace was very attractive to them.

The Central London District School was the first District School established: and the whole system there has been so well arranged that it has been taken as the model for all others. In addition to the instruction in the schools, the children are taught needlework, tailoring, shoe-making, &c; and are employed in agricultural pursuits. Every article of clothing is made in the establishment. The district consists of the Poor-law Unions of the city of London, the East London, West London, St. Saviour's, Southwark, and St. Martin's-in-the Fields. We wish success to the efforts of the Board of Management, and express our hope that similar establishments may be speedily formed throughout the country.

NAPOLEON III. AND HOMŒOPATHY.—The advocates of the homœopathic system are making strenuous efforts to induce the Emperor to establish a professorship of homœopathy in the faculty of medicine Marshal St. Arnaud has returned, and declares to the Emperor that he owes his life to the "glorious discoveries of Hahnemann." The Emperor has sent to Marseilles to beg the professor of homœopathy who cured the Marshal to come to Paris. M. Paul Dubois will, it is said, beg the Emperor to accept his resignation as *accoucheur* to the Empress, in case her Majesty should be subjected to the treatment of the coming homœopathic professor.

MESMERISM AND ARCHBISHOP WHATELY.—The Archbishop of Dublin presided at a meeting of the Dublin Mesmeric Association a few days since, and observed "that he was aware he had placed himself in a position which would draw upon him much obloquy, and ridicule, but he believed that he had sufficient moral courage to bear it. He also observed "that he was known, in connection with a family of persons, having suffered severely for many years from rheumatism. When the doctors had done their best, which is the case with the, he was forced to have recourse to mesmerism as a last resource. In the course of one week he was perfectly cured, and had never since experienced any severe return of the complaint."

AUSTRALIAN MAILS.—The Postmaster-General has accepted the tender of Messrs. Blyth and Green, for the conveyance of the mail to Australia, which it is intended shall leave England on the 4th June next. The vessel selected is the *Stratford*.

CALENDAR FOR THE WEEK.

SUNDAY, May 29.—First Sunday after Trinity. Charles II. restored, 1660.
MONDAY, 30.—Pope died, 1764. Joan of Arc burnt, 1431.
TUESDAY, 31.—Anne Boleyn crowned, 1533.
WEDNESDAY, June 1.—Lord Howe's victory of Ushant, 1794.
THURSDAY, 2.—The Lord George Gordon riots commenced, 1780.
FRIDAY, 3.—William Harvey died, 1657.
SATURDAY, 4.—Kingdom of the Netherlands divided, 1831.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JUNE 4, 1853.

TO CORRESPONDENTS.

ELECTRUS.—The present sovereign is of the same standard and fineness as the old guinea; the difference of colour is occasioned by the latter being alloyed with copper, and the former with silver only.
H. N. G., Tiverton.—The old brass coin is a Nuremburg counter.
J. W. C.—We cannot inform you.
NEW SARUM.—"Flama semper vivet." (Fame is always verdant).
ERRATUM.—In the report of the debate on Mr. Spooner's amendment in the House of Commons, on Thursday the 19th, the numbers were incorrectly stated to be:—For the amendment, 74; against it, 74: majority against the amendment, 7. The numbers were, in fact—For Mr. Spooner's amendment, 74; against it, 61. The mistake was not that of our reporter, but of the messenger who happened to be in charge of the reporters' gallery. The morning papers were equally misled; but, as they did not go to press so soon after the division as the ILLUSTRATED LONDON NEWS, they were enabled to rectify the error. These mistakes are of frequent occurrence, and they will continue to be made so long as the absurd custom prevails of compelling the reporters to withdraw during a division. At present the reporters are not responsible for the correctness of the numbers upon divisions; and when, as in the present case, an usher unaccustomed to the duty happens to have charge of the gallery, we need not wonder at the mistake.

THE DUBLIN GREAT EXHIBITION.

NEXT SATURDAY, JUNE 4, will be Published,

A DOUBLE NUMBER
OF THE
ILLUSTRATED LONDON NEWS,
CONTAINING
SPLENDID ENGRAVINGS
OF THE
MOST INTERESTING OBJECTS EXHIBITED,
AND
VIEWS OF THE MOST ATTRACTIVE PORTIONS OF THE EXHIBITION BUILDING.

The Series of Illustrations will include—

Large Exterior and Interior Views of the Building: the Fine Arts Court; the Chinese Court; Japanese Contributions; Irish Bog-oak Casket; Terra Cotta Court, Bronzed Statuettes, by Moyes; Vases from the Berlin Royal Foundry, Berlin Porcelain; Statue of Mr. Dargan; Interview of Mr. Roney with the Emperor Louis Napoleon, and other Illustrations. With a copious Report of the Exhibition, written expressly for the ILLUSTRATED LONDON NEWS, occupying One entire Sheet.

The accompanying Number of the ILLUSTRATED LONDON NEWS will also contain a variety of Engravings of News of the Week.—Price of the DOUBLE NUMBER, One Shilling.

Subscribers in Ireland are requested to apply early to W. H. SMITH and SON, to secure copies. New Subscribers should send subscriptions for a term of not less than thirteen Numbers. Single Copies, Sixpence each; Double Numbers, extra.

W. H. SMITH and SON, Publishers for Ireland, Eden-quay and Dublin Exhibition; and at the Office, 198, Strand, London.

A Large View of the City of Dublin, printed in the Exhibition Building, price Sixpence.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MAY 28, 1853.

THE visit of King Leopold and the Duke of Brabant to the Courts of Berlin and Vienna is an event of European importance. Until the re-establishment of the Bonaparte dynasty in France, and the promulgation of threats more or less overt against the independence of Belgium by the French Emperor, and by the public writers, who are notoriously known to be in his pay, and to write under his inspiration, the little, compact, free, and well-governed Monarchy of Belgium was looked upon by the Northern Powers with distrust, if not with aversion. The Belgic kingdom is the result of a successful revolution that disturbed the European settlement of 1815, and as such was not unnaturally regarded by the great continental Powers with coldness and disfavour; but time, the redressor of all injuries, the soother of all calamities, and the obliterator of all jealousies, has passed over the asperities of 1830; and the terrors of a new revolution have effaced the animosities, if not the remembrances, of the old. The hostility expressed by the French Emperor towards Belgium, achieved the reconciliation which time had begun; and Prussia, Austria, and Russia have at last seen the policy and necessity of imitating the examples set them by England, cordially recognizing and supporting the independence of Belgium. The brilliant reception which the King of Prussia and the Emperor of Austria have given to King Leopold and his son, not only shows how thoroughly they appreciate the fact that the stability of his throne and dynasty is essential to the peace of Europe, but it also hinters a warning to the French Emperor against any attack upon the honour or the territory of that near neighbour whose kingdom he covets. We may be sure that Russia is a party to the adoption of this new line of policy, for in a matter of such importance, it is not likely that Austria, which would have crumbled to pieces but for the support of Russian armies, would have taken such a step without the approval of her ally and protector. The future Sovereign of Belgium has found a consort in the Imperial circle of Vienna, and if the rumour prove true that the Emperor himself is inclined to choose an Empress in the family of King Leopold, the policy of the Northern Powers will be more significant. We cordially hope that these Royal alliances may take place; for, if there exist any aggressive ambition on the part of the French people and of its rulers, it will be checked by the knowledge that the slightest movement against Belgium would array against France the whole might of continental Europe, as well as of Great Britain. King Leopold is a shrewd, politic, and successful Sovereign; and there seems every likelihood that his shrewdness and his policy will not only be as successful as they have been in former times, but that they will prove as beneficial to all Europe as to himself and his dynasty.

DURING the last two or three years, rumours, always vague and unintelligible, and often conflicting, have reached this country of insurrections and attempted revolutions in China. So little is known of the interior of that vast empire, and of the political and social condition of its inhabitants, that but slight interest was felt in these rumours in any part of Europe. Lately, however, the information has been assuming a more definite shape. We now learn from various sources that a great revolution is in progress; that the revolutionary leaders have already received the adhesion of more than one half of the empire; that their armies command all the great lines of internal communication; that wherever they go they are received with submission, if not hailed with enthusiasm; that they menace and command the capital; and that a final and decisive conflict with the forces of the reigning Emperor is a question of time, of which the decision rests, not with the Emperor, but with the revolutionary chief, Tien-Teh. The object of the insurgents appears to be the expulsion from the Empire of the dominant Tartar race—a small minority that have governed China since the seventeenth century, and the establishment of a native dynasty and Government. The most extraordinary part of the intelligence is a statement, warranted to some extent by a proclamation of one of Tien-Teh's Generals, that the movement is a religious, as well as a political one; and that it aims at nothing less than the subversion of Buddhism and the introduction of a purer faith, founded upon the doctrines of Christianity. The proclamation, if genuine, recognises some of the fundamental truths of the Old and New Testament: but, in other respects, expresses sentiments which are far from being Christian or humane. We shall doubtless be better informed upon this and other points at no distant period. In the meantime, without expressing any decided opinion in favour of revolutionists of whose grievances we as yet know so little, we may be permitted to express the hope that the result of this long and apparently desperate conflict, may tend to the introduction or increase of true religion among the Chinese; and to the abolition of those barriers of barbarous and narrow-minded prejudice which for so many ages have shut that empire from the communion, the commerce, and the civilisation of Europe. Such a consummation would be a benefit not only to China, but to the human race; and it must be the hope of every true lover of his kind that so beneficent a result may be accomplished.

It appears that Tien-Teh desires, and has already sought, the aid of the British Government. The lesson we gave to the self-sufficient vanity of the Chinese during what has been called the "Opium War," has impressed all classes of the people with a strong idea of our power; and if such overtures have really been made by the insurgents, that fact alone would betoken that the ancient jealousies entertained towards Europeans were beginning to wear away. Lord John Russell, upon being questioned as to the subject in the House of Commons, has disclaimed, on the part of the British Government, all right or intention to interfere. This is, no doubt, the sound and the wise policy. England can recognise no Government but a Government *de facto*. To pursue any other course would lead to perpetual wars and embroilments. But, while the Government is judiciously, if not imperatively, neutral, the natural sympathies of the English people will no doubt be attracted towards the insurgents. The Tartar Emperors of China have evidently governed with the strong hand of conquerors; and neglected, or been ignorant of, the true interests of the Chinese people. Their fall, if it excite little regret in China, will excite none out of it. Should the Christian character of the revolution be confirmed, it will be impossible not to wish success to a movement having such grand objects as the opening up of China to the rest of the world, and the introduction of the Gospel to a region so densely, and until the present time so hopelessly, benighted.

THE COURT.

BUCKINGHAM PALACE.—Her Majesty the Queen and his Royal Highness Prince Albert, with the youthful members of the Royal family, returned to Buckingham Palace from Osborne yesterday (Friday) afternoon. The Court season may now be said to have commenced, and its festivities will be inaugurated by the first Drawing-room on Thursday next.

Her Majesty's birthday on Tuesday last was celebrated quite privately. In the morning, the band of the Royal Marines performed a selection of favorite music on the terrace. In the evening, a performance of vocal and instrumental music took place before her Majesty and the Royal family.

On Wednesday morning, the band of the Royal Marines played a selection of music on the terrace, in honour of the birthday of her Royal Highness the Princess Helena.

The Prince Consort went to Portsmouth on Saturday to witness the gunnery practice on board the *Excellent*.

Viscountess Jocelyn has succeeded the Marchioness of Ely as Lady in Waiting.

The christening of the Infant Prince has been postponed from the 27th until the 28th of June, in consequence of the Prince of Hohenlohe not being able to reach this country before the latter date.

Their Royal Highnesses the Prince and Princess of Prussia, attended by a brilliant suite, are expected to arrive in London, from Germany, on a visit to her Majesty and his Royal Highness Prince Albert, on the 21st proximo, in order to attend the christening of the infant Prince.

The marriage of the Princess Amelia of Saxe Weimar with his Royal Highness Prince Henry of the Netherlands, took place on the 19th inst., at Weimar, amidst great rejoicings, and in the presence of a brilliant circle of the bride's relatives. The Queen-mother of the Netherlands went expressly to Weimar to be present at the ceremony.

Their Royal Highnesses the Hereditary Grand Duke and Duchess of Saxe Weimar have arrived in England on a visit to the Duchess of Cambridge and the Princess Mary.

The Countess Colloredo's ball, on Thursday evening, proved one of the most brilliant rumours of the season. The Duchess of Cambridge and other members of the Royal Family honoured the Countess with their presence.

The *Morning Post* says:—"We are authorised to contradict a rumour that has been prevalent in fashionable circles, during the last few days, of an alleged separation between the Duke and Duchess of Marlborough."

The Duke of Wellington is suffering from an attack of ophthalmia, which has occasioned his Grace's confinement to his room.

The Marquis of Londonderry gave a superb entertainment on Saturday evening, at Holderness House, to a large and distinguished party of noblemen and gentlemen, invited to meet the officers of his Lordship's regiment, the 2nd Life Guards.

The Marchioness of Breadalbane gave a grand ball on Tuesday night, at the family mansion in Park-lane.

The Marquis and Marchioness of Abercorn, accompanied by the Ladies Hamilton and Lady Rachel Russell, are expected to arrive at Chesterfield House, to-day, from Nice, where they have been resident during the last six months.

The Earl and Countess of Eglinton have returned to town from the seat of Lady Jane Hamilton, in the county of Ayr.

Viscountess Jocelyn has arrived in town, after an absence of several months, during which period her Ladyship has been sojourning at Nice and Paris.

Mrs. W. E. Gladstone has issued cards for an assembly, on the 1st proximo, at the official residence of the Chancellor of the Exchequer in Downing-street.

We regret to learn that Mr. E. Stanley met with a serious accident in Rotten-row on Tuesday afternoon. While cantering down the "Ride," he came in contact with another gentleman, and unfortunately fractured the upper portion of the tibia. The parts suffered considerable displacement. Dr. J. Bampfylde Daniell was passing near the spot, and accompanied Mr. Stanley in a cab to his residence. Sir Benjamin Brodie was immediately sent for, and remains in attendance.

DURING the last two or three years, rumours, always vague and unintelligible, and often conflicting, have reached this country of insurrections and attempted revolutions in China. So little is known of the interior of that vast empire, and of the political and social condition of its inhabitants, that but slight interest was felt in these rumours in any part of Europe. Lately, however, the information has been assuming a more definite shape. We now learn from various sources that a great revolution is in progress; that the revolutionary leaders have already received the adhesion of more than one half of the empire; that their armies command all the great lines of internal communication; that wherever they go they are received with submission, if not hailed with enthusiasm; that they menace and command the capital; and that a final and decisive conflict with the forces of the reigning Emperor is a question of time, of which the decision rests, not with the Emperor, but with the revolutionary chief, Tien-Teh. The object of the insurgents appears to be the expulsion from the Empire of the dominant Tartar race—a small minority that have governed China since the seventeenth century, and the establishment of a native dynasty and Government. The most extraordinary part of the intelligence is a statement, warranted to some extent by a proclamation of one of Tien-Teh's Generals, that the movement is a religious, as well as a political one; and that it aims at nothing less than the subversion of Buddhism and the introduction of a purer faith, founded upon the doctrines of Christianity. The proclamation, if genuine, recognises some of the fundamental truths of the Old and New Testament: but, in other respects, expresses sentiments which are far from being Christian or humane. We shall doubtless be better informed upon this and other points at no distant period. In the meantime, without expressing any decided opinion in favour of revolutionists of whose grievances we as yet know so little, we may be permitted to express the hope that the result of this long and apparently desperate conflict, may tend to the introduction or increase of true religion among the Chinese; and to the abolition of those barriers of barbarous and narrow-minded prejudice which for so many ages have shut that empire from the communion, the commerce, and the civilisation of Europe. Such a consummation would be a benefit not only to China, but to the human race; and it must be the hope of every true lover of his kind that so beneficent a result may be accomplished.

It appears that Tien-Teh desires, and has already sought, the aid of the British Government. The lesson we gave to the self-sufficient vanity of the Chinese during what has been called the "Opium War," has impressed all classes of the people with a strong idea of our power; and if such overtures have really been made by the insurgents, that fact alone would betoken that the ancient jealousies entertained towards Europeans were beginning to wear away. Lord John Russell, upon being questioned as to the subject in the House of Commons, has disclaimed, on the part of the British Government, all right or intention to interfere. This is, no doubt, the sound and the wise policy. England can recognise no Government but a Government *de facto*. To pursue any other course would lead to perpetual wars and embroilments. But, while the Government is judiciously, if not imperatively, neutral, the natural sympathies of the English people will no doubt be attracted towards the insurgents. The Tartar Emperors of China have evidently governed with the strong hand of conquerors; and neglected, or been ignorant of, the true interests of the Chinese people. Their fall, if it excite little regret in China, will excite none out of it. Should the Christian character of the revolution be confirmed, it will be impossible not to wish success to a movement having such grand objects as the opening up of China to the rest of the world, and the introduction of the Gospel to a region so densely, and until the present time so hopelessly, benighted.

PROVINCIAL INTELLIGENCE.

EXPORT TRADE OF IRELAND.—Some idea of the enormous traffic between the northern ports of Ireland and Liverpool, may be formed from the fact, that within the last twelve months there were exported from the small port of Dundalk, for that place, 40,950 pigs, 10,000 head of horned cattle, 24,000 firkins of butter, and 55,000 crates of eggs.

PLYMOUTH GREAT WESTERN DOCKS.—The contractors for the completion of the Great Western Docks seem to be availing themselves to the fullest extent of the present favourable weather, as above 1000 men are employed on the works.

THE COAL-FIELDS OF LANCASHIRE.—The Lancashire coal-field produces about 4,000,000 tons annually, viz., in the Wigan district, 2,000,000; Bolton, 1,000,000; and St. Helens, 1,000,000, altogether covering an area of 600 square miles. The cost of getting it to the surface in Lancashire averages less by 1s. 6d. per ton than it does in the Newcastle districts. The cost of carriage from the Lancashire pits to Liverpool, twenty-four miles, is 2s. per ton, being 9d. less than from those of Durham to the eastern seaports.

AFFAIRS OF INDIA.—BRISTOL.—On Monday afternoon a highly-influential public meeting was held at the Victoria Rooms, to consider the important question of the future government of India. The Mayor of Bristol (M. R. G. Harrow) presided; and upon the platform we noticed Mr. J. Bright, M.P., Alderman Vining, Mr. W. Tothill, Mr W. Nash, Mr. R. Leonard, Mr. H. Visger, Mr. R. J. Mills, and other influential personages. A petition to the House of Commons, embodying their views on the subject, was proposed, and unanimously agreed to.

THE NEW EAST GREENWICH FLOATING PIER.—Arrangements have been completed to run four new and very fast steam-boats from the Adelphi, Blackfriars, and London-bridge piers to the new pier at East Greenwich, and direct, at the reduced fare of 3d. The pier belongs entirely to Thames free watermen; who, having raised the necessary funds in a very short time, purchased their barges, brows, and moorings in one day, and got out their pier the next.

PROPOSED RAILWAY BETWEEN TONBRIDGE WELLS AND LEWES. A committee has been formed for the purpose of promoting, railway to connect Tonbridge Wells and Tonbridge Wells with Lewes. Plans and sections have been given for a preliminary survey of the country. All the landowners in the neighbourhood have signed an agreement to take a fair agricultural price for such of their land as may be required for the railway, at a valuation, so that no unnecessary expenses may be incurred by legal proceedings.

THE SOUTH-WESTERN RAILWAY ACCIDENT.—A coroner's inquest has been sitting, with adjournments, at the London and South-Western Railway Arms Hotel, Farnham, respecting the death of Charles Canning, aged twenty, who was killed by being run over, on the 4th instant, by a special survey train from the Farnham station of the London and South Western Railway. On Tuesday the inquiry came to a close; and the coroner stated it became his painful duty to announce that the jury had found a verdict of "Manslaughter" against the Hon Francis Scott, M.P., and Mr. Beattie—the verdict having been agreed to by twelve jurymen and there being five dissentients. Both gentlemen have been admitted to bail.

RYE ELECTION.—At eight o'clock on Saturday last the polling was recommenced, and at nine o'clock Mr. Mackinnon had a considerable majority, which he continued to maintain until the close of the poll, when the numbers were given were: Mackinnon (Liberal), 218; Pomfret (Derby-Liberalite), 187: majority for Mackinnon, 31.

PERJURY AT SOUTHAMPTON.—George Warren and Samuel Masters, the two men who were ordered to be prosecuted on the charge of having been guilty of perjury in their evidence before the Southampton Election Committee, were apprehended on Friday week by the borough police. They were brought up before the magistrates next day, preliminary to being called upon to take their trial for perjury at the Assizes-stings at Westminster next term.

GLASGOW.—Thursday night week an accident occurred at the work's of the Glasgow Gas Company, by which four persons were almost instantly deprived of life. At six o'clock a ponderous brick wall of about 20 feet in length suddenly came down with a fearful crash, and buried Mr Ritchie, assistant engineer, and five workmen in the ruins. Mr. Ritchie and one of the labourers were taken out quite dead, two others died immediately afterwards; but the remaining two escaped with little injury.

AFFRAY WITH THE MILITIA.—Macarte's company of equestrians performed twice in this town on Tuesday last. The performers were one of the cleverest that we have ever seen. Tom Barry, the celebrated clown, is a great acquisition to the company. In the afternoon one of the militiamen endeavoured to steal a view of the performance by peeping through the canvas, when a man, belonging to the company, jerked him, thrust a knife or some sharp instrument into the soldier's forehead, inflicting a horrible wound. The fellow is in custody. The militiamen afterwards collected in great numbers, broke the cages of the beasts, overturned the waggons, and made a general attack on the performers. A picket was ordered out, and the officers interfered; but in the meantime the original offender order was restored.—*Sheffield Journal.*

DESTRUCTION OF THE ADELPHI THEATRE, EDINBURGH.—This house was completely destroyed by fire on Thursday evening week; only the bare walls being now left. As the fire broke out before the performances commenced, the building was almost wholly unused, and Mr. Wyndham's moveable property in it was also, we believe, nearly covered by insurance. The building was erected about 30 years ago, and was long known as Corri's Rooms. It had been used as a circus and a circus previously to its conversion into a theatre. When opened on that purpose it was first called the Caledonian Theatre, but it was afterwards altered to the Adelphi, under which title it has been known to the less fastidious portion of playgoers as a summer theatre.

EXTRAORDINARY CASE OF HYDROPHOBIA.—In January last a girl named Taylor, twelve years of age, was bitten in the hand by a mad dog, at Pillingham, Lincolnshire. She was taken to a surgeon, who cauterised the wound, and applied the cupping-glasses. She then went to the house of Luckesley, where medicine supposed to be a certain cure was administered to her. After returning home she remained apparently good health until Tuesday week, when she was attacked by pains in the head and throat. She was perfectly sensible when free from the pains to cautions. The paroxysms were distressing, and she ultimately died in three days. The wound in the hand of the deceased was small, and had healed.

FATAL BLOW.—An inquest was held on Tuesday, by Mr. Herford, at Manchester, on the body of a man, named James Heath, who had been killed by John Ashcroft, while engaged in a boat. The two men had quarrelled about money, at a tavern in Liverpool road, and got up to fight. Ainscow struck his antagonist on the left jaw, and the blow proved mortally fatal. The jury found a verdict of "Manslaughter" against Ainscow, and he was committed for trial at the next Liverpool Assizes.

SHOCKING ACCIDENT.—A dreadful accident took place in Coopland during the past week. Cooke's Hippodrome arrived in that town for exhibition, and some horses, together with an elephant, were taken to feed, at the Cleabury Arms, in West-street. On their arrival the young man Austin, and Thomas Austin, who was employed as assistant, commenced playing with and teasing the elephant, whose keeper (the celebrated man) and requested him to refrain. Austin and Austin kept on teasing the elephant, and, during the absence of the keeper for a few minutes, proceeded to groom it with a brush which the keeper had been using. The elephant rushed at him, and pierced him dreadfully in the breast with his tusks. Hearing Austin's cries, the keeper hastened back and prevented the elephant making a second attack. The poor fellow died most frightfully. He was immediately taken to Mr. Bullock's surgery, where every attention was paid to him. The Lord Mayor was also summoned, but it was then found that the elephant had been seriously injured; and it was feared that the unfortunate young man's life would be the penalty of his indiscretion.

LAUNCH AT NEWCASTLE-UPON-TYNE.—On Monday an immense concourse of spectators was attracted to the docks, on the Messrs. Hawks and Co.'s premises, to witness the launch of the war-frigate *Carlo Alberto*, built for the Sardinian government. Her dimensions are—Length extreme, 215 feet; length between perpendiculars, 210 feet; breadth extreme, 36 feet; extreme depth of hold, 22 feet. Burden, according to the builder's measurement, 2000 tons. She is fitted with an auxiliary two-bladed screw, weighing eight tons and half, of brass; and driven by two engines, of 400-horse power, manufactured by Messrs. Stephenson and Co. The *Carlo Alberto* is completely decked throughout, and will be mounted with 32 guns. She has three decks, and the uppermost two will mount an armament of 50 guns. Though at present a mere shell, such is her beautiful and true model, that she draws upwards of 17 feet of water. The launch took place a few minutes after five o'clock, and the ebb had then commenced, the water having fallen nearly six inches. She quitted the stocks in excellent style; but her momentum through the water after leaving the slipway brought too heavy a strain upon the check-warps, which snapped in consequence. Her waste anchor, weighing upwards of 27 cwt., failed to bring her up, and she grounded with her keel on the south shore. Nine powerful steamers were attached to her, but their united efforts failed to bring her off. On the rising of the tide, however, on Tuesday morning, she was floated into deep water, without having sustained any damage. The *Carlo Alberto* is, perhaps, the strongest ship ever built in a mercantile yard. Her lower ornamented with a beautifully-carved head of Charles Albert, King of Sardinia. Her keel was laid on August, 1852, and she has been built under the inspection of Mr. Dudgeon, who was present at the launch.

CHESS.

TO CORRESPONDENTS.

G. R., of Manchester.—Too simple for our columns.

"Caissa."—We have to acknowledge the receipt of a MS. volume, containing "Fifty Games of Chess played by Signor Dubois, and other Gentlemen in Rome, during the year 1851, and 1852," respectfully declined by B. Baxendale. This volume, with a short of original Chess Problems, by a few of the leading composers of Italy, has been for weeks awaiting the reveal of the author.

W. H. Bristol.—Many sincerely, and the game was, as it ought to have been, drawn.

J. A. (Perth).—The sequel is correct; many thanks.

F. L., Prussels.—Many thanks for your attention. The numbers, except the current one, have all come to hand at last.

J. J., St. Petersburgh.—The three letters were safely received. Need we say the intelligence it contained was highly gratifying? A reply has been returned by post.

ABBOTSLEY, Salisbury.—The Rathmore Chess-club is now in full working order. President, Mr. Newman; Vice-Presidents Sir T. E. Reeves and Mr. C. H. Lacy. For further particulars apply to the indefatigable secretary, Mr Harris, chemist and druggist, Richmond.

D. B. Telford, Ireland.—It is impossible to make out your initials. In answer to your inquiry, we cannot see how Red a to win in the position sent.

A BEGINNER.—You may have half a dozen Queens on the board at once.

J. M'G.—We are gratified to find our last correspondent and ourselves as taste and skill in the particular problem of hers Knight.

D. D.—See the note as above to "Subscriber." We are tired of answering the question

J. W., of Liverpool, must have the goodness to send the position he refers to again. If we retained copies of all the communications we receive a warehouse would be required to contain them.

D. D. B.—We have received no perfect yet correct solution of Stella's "difficult."

BISHOP AUBER.—Russell's new position. [H. H. The old "Pilgrim's Legacy."

SOLUTIONS OF PROBLEM No. 480, by J. J., Edinburgh; Boddington, Falcon, Nemo, Student, and others.

SOLUTIONS OF ENIGMAS, by Deveron Regiensis, Rising, M. P., B. P., A. R., Philip, Nemo, D. P. H. B., Lacon, Beatrix, Falstaff, P. Q., Rob, are correct. All others are wrong.

SOLUTION OF PROBLEM NO. 483.

ONE DIFFICULTE.

WHITE.	BLACK.
1. B takes P	K to his B 4th; or *
2. Kt to Q 7th (discg. ch)	K to his Kt 5th

(If 2. King to his Kt 3rd or 4th, White plays 3. R to K 8th (ch), and mates within the stipulated number of moves; and, if 2. R to his 4th, then White plays 3. K to Q 7th, and mates next move.)

3. R to K B 4th (ch)	K to his R 6th or Kt 6th
4. B to K B 2nd	K moves
5. Kt to R 3rd	K moves
6. R mates	

(The variations in this ingenious Problem are too numerous to publish, but those given will suffice, we believe, to enable any player to discover the remainder.)

* 1. B takes P	K to his B 3rd
2. Kt to Q 5th (ch)	K to his 3rd

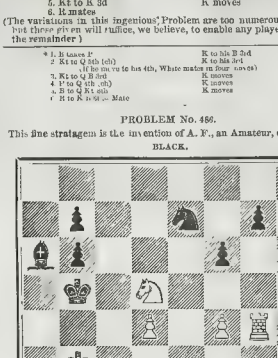
(If he move to his 4th, White mates in four moves)

3. Kt to Q B 3rd	K moves
4. P to Q 4th (ch)	K moves
5. B to Q Kt 4th	K moves
6. R to K 6th.—Mate	

PROBLEM No. 486.

This fine stratagem is the invention of A. F., an Amateur, of Florence.

BLACK.



WHITE.

White, playing first, is to give mate in five moves.

CONSULTATION MATCH.

Among the many contests that took place at the Manchester meeting, the two following games, which were played simultaneously by Messrs. Löwenthal and Horwitz on the one hand, and Messrs. Harrwitz and Williams, also in consultation, on the other, excited more than ordinary share of attention from the assembled amateurs.

FIRST GAME.

(Irregular Opening.)

WHITE (Messrs. L. & H.)	BLACK (Messrs. H. & W.)	WHITE (Messrs. L. & H.)	BLACK (Messrs. H. & W.)

White playing first, mate in four moves.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

During the last year the quantity of foreign butter in bond destroyed by the admixture of tar, was 1,022 cwt, 9 qrs, and 4 lb.

The printers in most of the large cities of America are on a "strike" for wages. In Boston hundreds of women are employed in setting type, and the example is likely to become general.

The Marquis Dalhousie, it is said, returns to England immediately on the close of the war in Burmah, and it is probable that the demise of the Marchioness may hasten his departure from India.

The King of the Belgians has conferred the Order of Leopold on Prince Frederick William of Prussia: the Duke de Brabant invested the Prince with the decoration

His Royal Highness the Duke of Genoa, who has just arrived in Kent from Turin, is expected shortly to visit this country.

The following are the votes for the harbours of refuge for 1853-4:

Dover, £34,000; Harwich, nil; Alderney, £62,000; Jersey, £40,000; Portland £60,000.

Dr. Cockburn, Dean of York, is suffering from severe indisposition, which confines him to his room.

Two shocks of earthquake were felt in Naples recently. There is evidently much volcanic action going on in that part of the world.

In the year ended the 29th of September last, the expenditure for Poor-law relief in Ireland was £971,070 11s. 7½d. The number relieved was—In-door, 504,804; and out-door, 14,911

The steamer *S. S. Lewis* got ashore north of Bolinas Bay, on her passage from San Juan to San Francisco, and became a total wreck: passengers and crew saved. Lost about 200,000 dollars.

The Queen has appointed the Earl of Home to be Keeper of the Great Seal, and Lord Panmure to be Keeper of the Privy Seal, for the kingdom of Scotland.

From a return it appears that 1200 appeals against the Income-tax have been made by tenant-farmers. Of these only 736 were allowed, and deductions made to the amount of £3419 8s. 7½d.

The grand jury at the Middlesex Sessions have returned true bills against William Hale, Robert Hale, and James Boyle, for making rockets at Rotherhithe. The case will not be tried at these sessions.

The first report of the Select Committee on Indian Territories, for the session, has been published. The committee merely state that they have decided to report the evidence. The evidence and appendix extend to 572 pages.

The returns of passengers between England and France, for the last year, 1852, are—to France, 85,838; from France, 81,661: the returns of goods for 1851 (those for 1852 not being as yet ascertained) are—exports, £4,416,198; imports, £3,683,113.

The steamer *Jenny Lind* has burst her boiler near San Francisco, terribly scalding fifty or sixty passengers, twenty of whom have since died.

The vast territory of the Western Australian Land Company will probably be sold by auction on Tuesday, the 31st inst.

The quantity of tea on which duty has been paid in the five principal ports of Great Britain, up to the 14th inst., shows the large falling off of 4,685,976 lbs., as compared with last year.

The re-opening of the Guildhall as Stirling was celebrated on Tuesday week by the Guild brethren dining together, along with the magistrates and Town council.

Messrs. Hutcheson and Co. have adopted the system of return tickets, of fare and a half, to and from Glasgow and the Highlands.

The Lord Chancellor has appointed James Losh, Esq., to the Judgeship of the Northumberland County Court, rendered vacant by the resignation of Mr. G. R. Wilkinson

The evidence before the Canterbury Commission discloses the fact that the elections for that city since 1835 have cost sums amounting to £4,086 12s. 7d.

On Sunday evening the roof and stout wall of a building in Cloth-street, in the occupation of Mr. Wickens, horse-dealer, of Longlane, Smithfield, who used it as a granary and hay-store, fell to the ground. No personal injury was sustained.

The Plymouth Election Committee met on Tuesday for the purpose of further prosecuting their inquiry into the extent of illegal practices at the last election; but, after a short consultation, the committee adjourned to the 14th of June

Mr. Barnum, the great American showman, has been elected a representative in the State Legislature of Connecticut.

The number of houses licensed in Scotland last year for the sale of intoxicating liquors was 15,044.

Mr. Patrick O'Donoghue, one of the Irish State prisoners, has effected his escape from *surveillance* in Australia, and is probably now in America.

A Court of Common-council has adopted a resolution in favour of the re-peal of the City Railway Bill this session, by 47 to 41.

A recent Parliamentary return shows that in 1851 the declared value of the exports to Turkey was £2,681,430; to Russia, £1,280,704; and to Austria, £812,942

A boy, aged 15, who was badly treated by his master, drowned himself in the Thames, near the Commercial-road, Lambeth, on Saturday.

The Baptist Chapel at Bourton, Berkshire, has been registered for the solemnisation of marriages

William Hurst, a farm-labourer, died at Micklefield, Yorkshire, on the 6th instant, at the great age of 107 years. He could read a newspaper without glasses, and his memory was unimpaired until just before his death.

Miss Wetherell, the author of "Queechy" and the "Wide Wide World," is the daughter of Henry W. Warner, Esq., a distinguished member of the New York bar. Her name of "Wetherell" is a *nom de plume*.

Another division of 150 picked policemen is about to be sent out to Australia.

The *Sydney Empire* says, that arrow-root, equal to that produced from the South Sea Islands, has been prepared from some wild plants which grow abundantly near Sydney.

At Valparaiso, on the 30th of March last, a severe "northener" occurred, which destroyed a considerable quantity of shipping in the bay.

The reigning Duke of Brunswick has introduced the establishment of a discount bank, as proposed by the commercial community of Brunswick.

It has been decided at the Middlesex Sessions Court not to allow costs to radles who carry their purses in pockets in front of their dress, which affords so much facility to pickpockets.

A deputation, respecting the City Terminus Railway, had an interview with the Right Hon. E. Cardwell, on Saturday, at the Board of Trade.

The Lord Chancellor of Ireland has appointed George Johnson, Esq., of Portarlery, to the commission of the peace for the county Louth.

Lord Augustus Loftus, now Secretary to the Legation at Stuttgardt, has been appointed secretary to the Legation at Berlin

The new Roman Catholic church, in process of erection in the Commercial-road East, was laid on Tuesday by Dr. Wiseman.

The municipal council of Havre has voted an address to the Emperor of the French, thanking his Majesty for ordering the removal of the fortifications of Havre.

The Welsh papers state that in Carnarvon hire the slate trade, the great staple of the county, is in a highly prosperous state; no stocks on hand, and the demand greater than can be met.

A deputation respecting the savings-banks had an interview with the Chancellor of the Exchequer on Tuesday.

The Royal Academy of History of Madrid has nominated Dr. Patrick Colquhoun a member of that society.

The Earl de Grey, as president of the Institute of British Architects, held a conversazione on Wednesday night, at his mansion, in St. James's-square

A dreadful calamity had occurred in Buffalo (U.S.), by the falling of a building, occupied as a banking-house, by which upwards of 30 persons were killed and wounded.

The bill (by Sir William Molesworth) for transferring Westminster-bridge to the Commissioners of Works and Public Buildings, and to enable them to remove the present bridge, and to build a new one, has just been printed.

The ceremony of laying the foundation-stone of the new Lecture-hall at Leamington was took place on Monday, with masonic honours.

The first flower exhibition of the Royal Botanic Society took place on Wednesday, in Regent's-park. The company were very numerous, though it was not too apparent that the Epsom races had drawn off many of the most distinguished visitors.

Mr. Edward Compton Dyson, a scholar of Corpus Christi College, Oxford, was drowned in the river Cherwell, by the upsetting of a canoe, on Friday week

M. Madiai and his wife passed through Pont-du-Var a few days ago, on their way from Hyeres to Nice, from whence they were to proceed to take up their residence at Geneva.

M. [illegible] arrived in England, and is now in London.

MARINE ANIMALS IN THE AQUATIC VIVARIUM, AT THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S PARK.

THE AQUATIC VIVARIUM AT THE ZOOLOGICAL GARDENS, REGENT'S PARK.

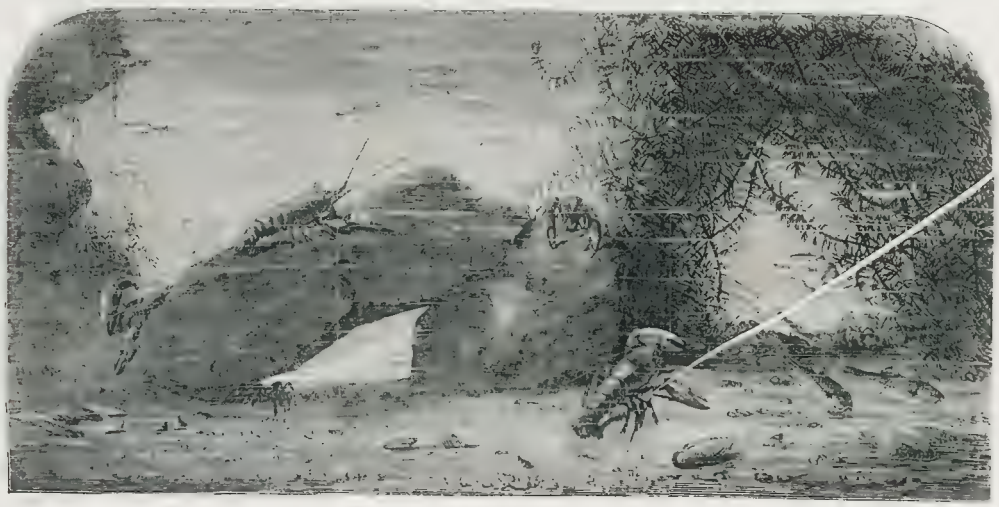
The accompanying Illustrations represent a pair of the water scenes, inclosed between walls of plate glass, of which more than a dozen are now presented to visitors to the Zoological Gardens, in a building which the Society have erected for the novel and ingenious purpose of exhibiting, under natural conditions, an amazingly curious and beautiful division of the animal kingdom which, hitherto but little known to the popular observer, people the endless regions of the lake, the river, and the sea.

The exquisite colour and the singular forms of the zoophyte, or plant-like animals, which abound upon the English coasts, have always attracted more or less attention from the sea-side visitor; and of late years a considerable impulse has been given to the study of their habits and organization by the works of Sir John Dalyell, Professor Forbes, Dr. Johnson, Messrs. Alder and Hancock, Dr. Harvey, and other authors, who have handled the subject with various degrees of minuteness, and with all the aid which the improving talent of our naturalists' draughtsmen now afford to works of this nature. But, in this new undertaking of the Zoological Society, we have not only an illustration of the colour and form of these animals, which no pencil can approach, but a means of observing their habits and economy which far surpasses any opportunity which has been within the reach even of the authors to whom we have referred; and the student may now, without the expense of a journey to the sea, without the use of the dredge, or any other exertion than that of a visit to the Regent's-park, find himself, in a museum of living nature, where he will find, from time to time, all the rarest as well as the most common of the inhabitants of the British seas whose size will admit of the possibility of their existing in the beautiful and capacious glass ponds to which the operations of the Society have been at present limited. For the method which is employed in their management appears to succeed equally well with fish, with crustacea, shells, and zoophytes; numerous examples of all being already well established in their artificial home, which is so admirably equivalent to their requirements that we see no reason why even the gorgeous species which inhabit the most distant corners of the ocean should not be hereafter added to the ever-varying and ever-interesting assemblage of which the Society have now presented the first glimpse to their visitors. The arrangement is simple enough, and the effect of it is altogether charming. The whole length of the ponds is about eighty feet; they occupy two sides of a building of glass and iron, constructed expressly for this purpose at the beginning of 1852. Each pond is six feet in length, and the water is enclosed by walls of plate-glass, each in a single piece. At the bottom of these translucent ponds, rocks, shingle, and sand, with seaweed growing in it, present a model of some nook at the bottom of the sea; and there we have a group of shell-fish, of living shells, of star-fish, of sea-anemonies, or of nudibranchs, as the case may be, disporting themselves in precisely the same manner as if they were still uncaptured and free in the depths whence they were borne. The singular mechanism by which these creatures move—by which they seize and devour their prey—the extraordinary changes of colour and form which some of them undergo, render each of these ponds the occupation of a day for a close observer; for, however long he may stand, contemplating the wonders which they inclose—some new action, some movement which he has not seen before, is constantly presented to him. The abundance of specimens which each pond contains, the numerous retreats which the rocks and plants afford to them, and of which a portion of the inhabitants appear to avail themselves successively, will always prevent the exhaustion of the subject by the visitor; and we foresee in this fact, as well as in the extreme beauty of the objects themselves, a power of attraction which no previous work of the Society has ever yet attained; and we heartily congratulate them upon the success which cannot fail to attend so spirited, so interesting, and so instructive an attempt to carry out the most elevated principles of the science which they are associated to render popular.

That the people of this country are not only willing to appreciate such attempts, but anxious to benefit by them, is satisfactorily shown by the crowds who throng the Gardens on all public holidays; and that this feeling has not yet by any means reached its full development is evident from the result of Whit-Monday, when even the best days of 1851 were far exceeded, and the number of visitors amounted, as we are officially informed, to upwards of 22,000.

The first Illustration gives an idea, as far as an engraving without colour can, of one of the groups of *actinias*, or sea anemonies, of which there is now a large collection of species, drawn from different parts of the British coast, and especially remarkable for the excessive brilliance of their colour. These animals, as visitors to the sea-side may have noticed, when disturbed, or when left high and dry by the receding tide close themselves into a smooth hemispherical mass, which presents but little to attract attention. It is only in still water, and in perfect security, that they unfold their myriad tentacles and display the beautifully-organised disk which has so much resemblance to a flower, both in form and in the harmonious arrangement of its coloration; and, as their natural localities are either inaccessible under these circumstances, or limited to the rock-pools, into which the sea-shore wanderer may look vertically when the tide is out, the true beauty of these lowly, but most exquisite forms of creation, are now for the first time revealed to the public eye; because the plate-glass wall allows us to see the animals much more closely than possible in a rock-pool, under a more favourable effect of light, and in every direction, instead of only from above.

The second Engraving represents one of the fresh-water divisions, in which either pond or river-fish appear to live with equal facility. The craw fish, which figure in it, have afforded a delicate test of the capabilities of the plan which has been adopted in this unique and beautiful exhibition; and we observed in another of the divisions which adjoin it, that perch had not only spawned, but that the young fish had been actually hatched, and were, when we made our first visit, swimming about in hundreds among the sheltering branches of the *myriophyllum*, which forms the vegetable portion of their habitation.



FRESH-WATER FISH IN THE AQUATIC VIVARIUM, AT THE ZOOLOGICAL SOCIETY'S GARDENS.

GREAT EAST WINDOW, ST. BOTOLPH'S CHURCH, BOSTON.

This magnificent Window, which we noticed last week, in our account of the church restoration, is filled with elaborately-painted glass, by M. and A. O'Connor, designed with a view of combining the genealogy of our Blessed Lord with His great and everlasting glory; and the artists have availed themselves of the architectural disposition of the openings to produce the best arrangement possible

There are seven main lights of large dimensions; and through the three central openings there is a treatment of the "Jesse Branch."

The subject of the window commences at the base of the centre opening, with the figure of "Jesse," from whom issues the "Radix Jesse," enclosing above the figures of "David" and St. Joseph, at each side of the Blessed Virgin, who is represented as holding the infant Jesus, to whom the Magi, or three Eastern Kings, are offering gifts. Immediately over this is Our Blessed Lord, crucified: at each side of Him are standing figures of the four Evangelists—the great recorders of the sacrifice, and of the events relating to it. Above the Crucifixion is a grand figure of Our Blessed Lord seated in majesty upon his throne: He holds the orb and cross in one hand, whilst the other is raised in the typical act of benediction. At each side of this representation are two angels, gracefully grouped, bearing palms in their hands, and in attitudes of adoration. Full front figures of the Apostles standing under good early canopies, in the four outer openings, form an appropriate finish to this part of the general design. All these figures are nearly life size, in proportion alike with the openings of the window and the magnificent building they are placed in.

The subject of the tracery (which is very rich, and well filled with openings, flowing and elegant) is a representation of the "Heavenly Hierarchy," founded on good ancient examples, consisting of the Archangels St. Michael, St. Gabriel, and St. Raphael; cherubim and seraphim: and over these, a choir of angels with musical instruments

The combination of foliage and canopy work—an abundance of most carefully-worked *grisaille* (a most successful effort), great richness, purity, and peculiarity in the tints—shows how much artistic effect may be produced with this difficult material in the style adopted.

Ancient authorities from works of art in the county have been freely used; for the *grisaille*, from Lincoln Cathedral; for details and treatment of foliage in the "Jesse Branch," from Gedney, and the border from Pinchbeck—all in the same county.

The character of the drawing throughout is severe, without grotesqueness; and we are truly glad to find Messrs. O'Connor setting such a good example in the free and courageous manner in which they have used *grisaille* glass; and thus avoided the error so frequently fallen into by certain of our modern artists, of supplying its place by some deep meaningless coloured glass, thus flying in the teeth of all ancient l[illegible]

The beautiful gas standards in the above church, noticed last week, were designed and manufactured by Messrs. Skidmore and Son, of Coventry.

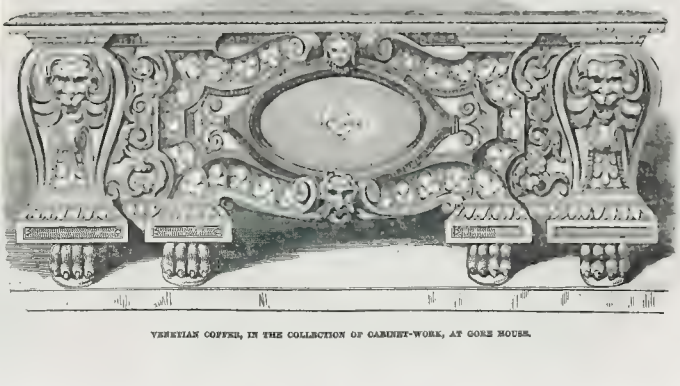
THE NEW EAST WINDOW OF BOSTON CHURCH, BY MESSRS. O'CONNOR.

EXHIBITION OF CABINET WORK, AND STUDIES UNDER THE DEPARTMENT OF SCIENCE AND ART.

A very interesting Exhibition will be opened this day, at Gore-house, Kensington, under the direction of the Government Department of Science and Art, divided into two distinct classes of objects. The one consists of works of the students of the Schools of Art of the metropolis, and several provincial towns, including Belfast, Birmingham, Cork, Coventry,

CARVED AND GILT FLOWER-STANDS, IN THE COLLECTION OF CABINET-WORK, AT GORE HOUSE.

Glasgow, Leeds, Manchester, Newcastle, Norwich, Nottingham, the Potteries, Sheffield, &c., illustrative of the progress made in decorative art; the other of a Collection of Cabinet-work, comprising the choicest specimens and styles, from the fifteenth to the nineteenth century, which have been lent for purposes of public instruction, by her Majesty the Queen, and a considerable number of the nobility and gentry, distinguished for the taste and splendour of their establishments. The former displays—though by no means so costly as the latter—will be viewed with great interest by those who have watched the progress of art culture in this country, and who are aware how materially our industrial position and prospects depend upon that culture being soundly and successfully carried out. As yet, however, we have no means of forming a critical opinion upon the merits of the various exhibits, which were not far enough arranged for inspection when we visited [illegible] and in order to take a proper survey of the collection [illegible] and many cabinet work [illegible] and which has been contributed [illegible] We [illegible] we were permitted to inspect, and we were much struck and gratified both with the beauty of the various objects and the admirable practical illustration which they afford of the history of decorative art, as applied to furniture, and the distinguishing features of particular periods. The nicer distinctions are endless in variety, and can only be appreciated by a careful examination and comparison of individual examples in which they occur. On the other hand, the most casual observer, after a survey of the works of various periods, will be struck with the strongly-marked changes in the principles of decoration which occurred from time to time. Beginning with the purest examples of the Louis Quatorze period, we find smoothness of surface and directness of outline prime considerations; the object produced pleasing by its symmetry and lightness of form, combined with great richness in the treatment of the surface of material: buhl and other inlaid work, for instance, being most prominently in use. In the time of Louis XV. the forms were varied by the adoption of a curved outline, and the design, by the introduction of



VENETIAN COFFER, IN THE COLLECTION OF CABINET-WORK, AT GORE HOUSE.

devices of various kinds, superadded: and, eventually, simplicity of design was altogether lost, and the *rococo* style was in the ascendant At the time of the Revolution the Classic model was adopted as a caprice, with much stiffness and blandness of effect, and afterwards that of the Empire, which was an obvious improvement. Since this period all has been work at random—now following the Louis Quatorze models, now those of the Empire; but the greater number of cases presented a redundancy and obtrusiveness of ornament utterly inconsistent with utility of purpose and general elegance of effect.

Amongst the contributors to the present Exhibition her Majesty has been most liberal, and has also sent in some of the best-selected examples. Regarded simply as a piece of furniture, the most magnificent of the articles exhibited by her Majesty is a cabinet by Gaulicher, produced about the time of the end of the French monarchy, and probably manufactured for some member of the French Royal Family, as the arms of France and Savoy, with their quarterings, would indicate. This ebony cabinet is very elegant in its form and proportions, and is lavishly adorned with festoons of flowers, most exquisitely finished, in gilt bronze, and bas-reliefs in the same material, representing groups of children studying the sciences Her Majesty also exhibits the following articles: An ebony cabinet, richly covered with gilt or moulu devices, the work of some German artist, similar in style to the decorations in the palace at Dresden: a very handsome table, of about the period of the Revolution, with a bas relief in white, upon a blue ground of Wedgewood ware; a large looking glass in a richly-carved frame, white and gold; two very elegant buhl coffers and stands, a pier table (of about the period 1770-80), very elegant in structure; and a cabinet, inlaid with devices in Sèvres china, designs probably by Greuze or Watteau.

Next in number and interest are the contributions of Earl Amherst In the first room is a very curiously-carved coffer, in pear-tree-wood, date 1560, with alto-relievos of the triumphs of Julius Cæsar, executed with admirable spirit. Also a very fine Venetian coffer of which we give an Engraving. In the same room Lord Ashby exhibits a silver pier-table, a silver looking-glass, and two silver candelabra, richly executed in beaten work, probably by Venetian artificers, and of date about 1670; also a table of about the time of the end of the French monarchy. Some of these articles we engrave.

Baron Lionel de Rothschild exhibits a cabinet of choice Florentine mosaic: Mr. Henry Farrer, a richly-decorated cabinet, illustrative of the transition from buhl work to that of applied ornament; and Mr. J. Morison, a cabinet combining buhl work with applied ornament: the last two admirable as illustrations of the distinct modes of decoration. Sir A. Rothschild exhibits a very beautiful cabinet, inlaid with Venetian glass, in imitation of lapis lazuli; and Earl Spencer and Mr. Mills, two console tables in rose-wood, set with ornaments in Sèvres china, produced about 1770 80. Mr Davidson contributes a pair of carved and gilded flower-stands, triple-footed, the top in each supported by a cherub, of Venetian workmanship, about the end of the time of Louis XIV.; a very rich piece of ornamented furniture, of which we give an illustration. Mr. Webb also exhibits a pair of carved and gilded flower-stands, of about the same period, but of French workmanship One of these we also engrave; and the result of a comparison between it and that last engraved will, we think, tell in favour of the stately simplicity of the French school of ornament of the period.

Amongst other contributors of beautiful objects are the Dukes of Hamilton and Devonshire, Earl Granville, Lord Ward, Messrs. J. Auldjo, R Holford, H. Magniac, &c.

The walls of the rooms are hung with choice specimens of tapestry, of various periods—some, of the sixteenth century; others, after designs by Berrein, who flourished at the beginning of the eighteenth century.

We have no doubt that this interesting Exhibition will be numerously and fashionably attended during the season; and, if the lessons it affords be properly recollected and applied, not without advantageous effect upon the taste of the country in decorative matters.

STATUETTE OF COUNT D'ORSAY.—M. Gardie has just completed a very clever statuette of the late elegant and accomplished Count D'Orsay, which he purposes publishing shortly. It represents the Count full length, in fashionable evening attire, one hand lightly resting on a cane. The likeness of features and character of the original are such as will at once satisfy his most intimate associates.

PORTRAIT OF THE EARL OF STRAFFORD. BY VANDYCK.—A very interesting portrait of Wentworth, Earl of Strafford, which bears ample and internal evidence of having by the hand of Vandyck, is at present on view at Mr. Anthony's, in Duke-street, St James's: to whom it has been intrusted by the owner, Mr. E. Andrews, of Guildford, for the purpose of cleaning and restoration. The gallant statesman is represented in full military costume of steel armour. The face wears a stern but manly expression; the various surfaces—steel flesh, and drapery—are admirably truthful; and the whole treatment masterly in the extreme.

MUSIC.

MR. BRINLEY RICHARDS'S CONCERT.—At the Hanover-square Rooms, last Saturday, Mr Brinley Richards, the clever composer and accomplished pianist gave the first of his annual series of concerts of classical and modern pianoforte music. A numerous and fashionable audience assembled on this occasion, to acknowledge the abilities of Mr. Richards, who took the pianoforte part in Beethoven's trio in E major in admirable style. He also performed an selections from Mendelssohn, Moscheles, Stephen Heller, and Sterndale Bennett, in a manner to prove that he was equally versed in all styles of composition. Of his own works he was rather sparing in his programme, confining himself to the solo in which he has treated with such taste—the Rossinian air, "Cujus anima," and to the "Reine Blanche"—a digital display of no ordinary difficulty. Mr. Richards was assisted by V Billet, Sainton, and Lucas, in the instrumental pieces, and by Mr. Lucky, Miss Freeman and Mr. Benson in the vocal gleanings: Mr Walter Macfarren officiating as accompanyist. A graceful ballad, by Mr. Henry Smart, "Oh! do not chide me," sung by Miss Dolby, and Halfcen's charming melody, "Song should breathe of scents and flowers," given by Mr Benson, must be cited as unmistakable evidence of the imaginative powers of our native composers; and the name of Miss Freeman, as one of the many vocalists of the day, must not pass unrecorded.

MUSICAL DOINGS.

The sixth concert of the Amateur Musical Society took place last Monday at the Hanover-square Rooms, under the direction of Mr. Osborne.

Haydn's "Creation" was performed on Monday by the London Sacred Harmonic Society, at Exeter-hall, under the direction of Mr. Surman, for whose especial benefit the oratorio was given. Dr. Elvey's cantata was also executed. The vocalists were the Misses Birch, Stewart, M. Wells; Messrs. Lockey, Lawler, and Phillips.

Mrs. W. Dixon gave a concert at the Music-hall, Store-street, last Monday; aided by Mrs. A. Newton, Miss Thornton, Mrs. John Roe, Messrs. J. Kinsey, Gadsby, F. Bodda, J. Ward, and Dando.

Mdlle. Gabrielle Delamotte, a pianist of Continental repute, gave a morning concert on Monday, at Willis's Rooms, at which she performed pieces by Thalberg, Prudent, Beethoven, Mendelssohn; with Vieuxtemps and Piatti as allies in the instrumental selections.

Mr. Henry Blagrove gave one of his interesting violin soirées on Wednesday, at the Mornimer-street Rooms.

The Sacred Harmonic Society repeated Haydn's "Creation" last night, at Exeter-hall, under Costa's bâton; with Madame Clara Novello, Gardoni, and Formes as principal vocalists.

Mdlle. Graever, the pianist, performed (for the last time in this country) at a soirée given by Mr. Ella (the director of the Musical Union), on Wednesday. Mdlle. Graever is a most accomplished pianiste in all schools.

Next week there will be divers musical attractions. On Monday will be Madame Puzzi's morning concert, and the sixth Philharmonic Concert. On Tuesday, the fifth meeting of the Musical Union; and a concert at the Eyre Arms, in aid of the Portland Town Charitable Institutions. On Wednesday will be Mrs. Anderson's annual grand morning concert, at the Royal Italian Opera; and on Friday, the concert of Miss Rosse and Herr Kuhe.

Mr. Albert Sobloss has announced his annual musical festival at Exeter-hall, which will take place on Monday, the 6th of June. Among the singers announced are the names of Anna Zerr, Gardoni, Standigl, and Puschel; and among the instrumentalists those of Miss Arabella Goddard, Vieuxtemps, Romberg, and Bottesini. A programme which contains the names of such eminent *artistes* cannot fail to be attractive.

THE THEATRES.

ROYAL ITALIAN OPERA.

Rossini's "William Tell" was announced to be repeat d on Saturday night; but, owing to the hoarseness of Ronconi, the opera was changed to Auber's "Masaniello."

On Monday, Auber was given for the last subscription night of August 27th, Meyerbeer's "Roberto il Diavolo" was revived Madame Jullienne making her first appearance this season as *Alice*. The cast was the same as last year—namely, Madame Castellan, the *Princess*; Tamberlik, *Roberto*; Formès, *Bertram*; and Stigelli, *Rambaldo*.

On Tuesday "William Tell" was repeated Tamberlik was in magnificent voice, and was finely supported by Madame Castellan and Ronconi. M. Zelger, the Belgian basso, made his first appearance, after an absence of two seasons, in the character of *Walter*, in which he made a favorable impression.

For the extra night on Thursday, Donizetti's "Lucrezia Borgia" and the cast of "Roberto" were put in requisition to remember; thus bringing into his first brief, *Quarterly Asst., Esq.*, is performed by Mr. C. Mathews, who has the character admirably We doubt, however, if it will restore the fallen fortunes of this house.

BAL-MASQUE AT CREMORNE.—A grand wind-up to the pleasures of the Derby Day (Wednesday), a grand Bal-Masque was given at Cremorne-gardens, which was brilliantly attended. The illuminations, decorative devices, and music were alike agreeable: and the Italian opera band, in addition to M. Bosisio's orchestra, discovered their lively strains until bright morning.

BAL MASQUE AT VAUXHALL.—The fine weather drew an unusually large num ber of masquers on Wednesday evening to the ball with which the "Derby day" is annually wound up and the season inaugurated at Vauxhall The dresses and dresses were very gay, the illuminations brilliant, and the routine of amusements highly delightful.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the news from Turkey, in reference to the Holy Places, is unsatisfactory, and that we have received rather hurry ur ful advices from the East, in reference to Burmah, the market for Consols has been very steady this week, and the transactions have been quite to the extent of a fair average business. Indeed, the fluctuations in the quotations for Consols have been trifling, and the closing prices of Saturday and Monday were precisely the same. Yesterday there was a slight improvement, but the business done was not large. The Bank of England has not altered its rate of discount, which remains at 2½ per cent. The Directors have, however, intimated that they are prepared to lend money at 2 per cent, on the deposit of Exchequer Bills. The Bank has also intimated that it will lend money on Government securities at 2½ per cent. The Bank has also intimated that it will lend money on Government securities at 2½ per cent. The Bank has also intimated that it will lend money on Government securities at 2½ per cent

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE.—Monday, Wednesday, and Friday, Macbeth Tuesday and Saturday, Marco Spada. Thursday, the Corsican Brothers (for the benefit of Mr Lambert, Treasurer). And the Nautical Drama of Black-eyed Susan every evening.

PRINCESS' THEATRE.—Mr. and Mrs. C. KEAN respectfully announce that on MONDAY EVENING, MAY 30, and during the following week, will be presented Lord Byron's Tragedy of SARDANAPALUS, KING of ASSYRIA (considerably abridged for stage representation). The costumes and architecture throughout the play selected from Layard's discoveries of the Monuments of Nineveh. Together with other new

FRENCH PLAYS.—ST. JAMES'S THEATRE.—Last Two Nights of the Company's Performances.—LA JEUNESSE DE RICHELIEU, and LE MARI A LA CAMPAGNE, TO-MORROW (SATURDAY) EVENING. MONDAY EVENING, June 6, Scribe's Comedy of LE VERRE D'EAU, and LE MARI A LA CAMPAGNE. Mdlle RACHEL will have the honour of making her first appearance on WEDNESDAY NEXT in Racine's Tragedy of PHEDRE (for the only night only). Boxes and Stalls at Mr. MITCHELL'S Royal Library, 33, Old Bond-street; and at the Box-office.

MDLLE. RACHEL.—FRENCH PLAYS.—Mr. MITCHELL respectfully announces that the engagement of the eminent tragedienne, Mdlle. Rachel, will commence on Wednesday next, June 1, and that it is expected she will continue to be given in London this season by that great artiste will positively terminate at the end of the month. Mr. Mitchell begs also to announce that he has succeeded in obtaining a prolongation of the congé accorded to M. Regnier by the Comédie Française, for the more effective representation of characters of Arnolphe, Leroquevaux, and the popular new Piece of [illegible] as Adrienne Lecouvreur, the character of Mithridate. The engagements of Mdlle. Rachel and M. Regnier being limited to one month, the performances will be given four times a week, on the Monday, evenings—Monday, Wednesday, Friday, and Saturday. The [illegible] Mdlle. Rachel and M. Regnier. And subsequently will be presented Louise de Lignerolles, which has been recently performed in Paris by Mdlle Rachel, with so much success. The additional plays of Les Horaces Auvergnates, and Virginie may be each presented for one representation only during the present engagement. A subscription for Mdlle. Rachel's performances, for two or three representations a week, may be had at Mr. Mitchell's, and information upon the nightly admission—either to the Stalls, Boxes, or Pit—at Mr. Mitchell's Library, 33, Old Bond-street.

KOLNER MANNER-GESANG-VEREIN, or COLOGNE CHORAL UNION, HANOVER-SQUARE ROOMS.—Sole Appointment.—Mr. KENNEDY has the honour to announce that the above Society has been honoured with the highest and most distinguished approbation throughout Prussia, Germany, and Belgium. The Concerts will be under the immediate direction of the Professors.

PARIS FASHIONS FOR JUNE.

At the recent race meetings we have had opportunities of observing the newest Spring fashions, and have had the satisfaction of seeing our predictions of the last two months generally realised. The winter materials, which, on account of the unseasonable weather, had been retained in use, have now completely disappeared; and have been replaced by summer dresses. A preference is shown for taffetas, worn plain, except that the borders of the flounces, or volants, are ornamented with plaid Scotch patterns, of decided colours, or simply a band of a different colour from the dress woven into the silk, as is also the Scotch pattern. When the taffetas is quadrillé or chiné, the volants are bordered by a plain even band, also woven into the silk. Until lately, on the borders of the volants was placed a rather deep band of velvet, or narrow velvet ribbons; but this last trace of winter is no longer to be seen.

Barèges are made up like taffetas. Grenadines are much in favour for dinner dresses and for theatres. A variety of light muslins for dresses are being prepared for summer; the grounds are plain, and covered with small, lightly-worked patterns, embroidered; the borders of the volants having Plumetis and English embroidery.

For morning *negligé* dresses, Piqué quadrillé is used, with patterns rising from the bottom of the dress upwards, and smaller towards the top. Dresses are still made *à Basques*, with pagoda sleeves, more or less open, and often slit on the side, and tied with ribbons, similar to the trimming of the body or corsage. The jocqueys have re-appeared, but we cannot predict their lasting. The volants are most frequently three in number. A great many pelisses are seen; but, be they ever so much covered with lace, and elaborately ornamented, they will be but very ugly garments. Nevertheless, a great many have been made, and they may be adapted for the country or evening wear.

Mantelets Echarpes, or Scarf Mantelets, are much preferred, and deserve to be so, as they give much grace to the *tournure*. The most elegant mantelets are made in plain tulle or lace: on which is placed, from the border to the top, lace, or velvet ribbons, of all heights; or lozenges of velvet, separate, or forming a line; then two volants of lace, much deeper or higher, the heads of which correspond with the velvet ornament of the mantelet: suitable for morning visiting dress.

Bonnets are worn very small, and in front the edge of the poke does not go beyond the *tour de tête* which ornaments the inside. They are generally made of open straw-work, trimmed with lace, blonde, and crape, ornamented with coloured taffetas ribbons and flowers, placed on the poke itself, very near the edge. The crown is round, and inclines far back, almost upon the neck of the wearer. Bonnets are also made in horsehair, with some embroidery, and with volants of white lace from the front to the back. They are ornamented with flowers and foliage in crape; which is new, and has a charmingly light effect.

PARIS FASHIONS FOR JUNE.

THE ILLUSTRATIONS.

Dinner and Evening Dress.—Dress of white muslin, small pattern, and having two petticoats, each finishing by a deep hem; the body ornamented with falling lace on the edge, and having a small "Valenciennes" on the head of the lace; three large bows or knots of wide ribbon on the front of the corsage, and one on the sleeves. The corsage *à pointe*. Head-dress of flowers, mounted on a ribbon, which confines the hair, combed back, and raised in the Marie Stuart style. Dress of plain taffetas, with volants, ornamented with a Scotch plaid pattern, woven into the stuff. Corsage *à Basque*, with jocqueys; and trimming on the front, sleeves, and basques.

The Electric Light at Hungerford Suspension-bridge is, at present, one of the novel sights of the metropolis. Two miniature suns—one in each tower—converge their intense rays on the centre of the bridge, and effectually illuminate the whole of the intervening space, feebly lighted in general by about 100 gas-lamps. The lights remain in continuous operation from nine o'clock p.m. till past midnight. It is said that the light is most economically produced, and that the electric force is applicable as a motive power, as a substitute for steam, and as a means of street illumination. Every shilling's worth of material used in Dr. Watson's batteries returns, it is said, half-a-crown in the shape of valuable pigments (which can be sold pure and unadulterated at a lower price than the adulterated articles in the market), bleaching powder, and other commercial products readily saleable. The various other uses to which this new power can be made subservient embrace the desulphurisation of coke (of which about £600 000 worth is consumed yearly by railway companies alone), telegraphing, electrotyping, smelting, and the manufacture of steel.

THE SURREY ZOOLOGICAL GARDENS.

The Dioramic Picture of the present season (which commenced on Whit Monday) represents the Bay and Forts of Chusan, modelled from drawings made on the spot by Lieutenant White, R.M. The hills at the back of the town, stretching away into the extreme distance, are a masterpiece of scenic delusion. The effect is greatly heightened by the shipping in the bay. Lieutenant White, in his journal, dated April, 1842, says:—"No place in the world can present to the lover of beautiful scenery a greater treat than the bay and harbour of Chusan, formed as it is by numerous picturesque islands, whose rugged mountains tower to the clouds in every variety of form, tint, and distance, completely land-locking the harbour, in which is to be seen every description of vessel, from the tiny sam-pan to the junk of 800 tons, and these of every build and rig." At dusk the feast of lanterns is seen celebrating in the town and bay. A pyrotechnic attack is then made upon the British fleet, which forthwith blazes away upon the Chinese fire-rafts and junks. The Chinese fire-ships explode, and a splendid tableau is produced. The Gardens are fairly attended by holiday-seekers.

THE PARIS EXHIBITION.

WE briefly noticed, in last week's ILLUSTRATED LONDON NEWS, the opening of the annual Exhibition of the Works of Living French Artists. We now resume our account of the principal and most striking pictures.

Passing, as one is apt to do on first entering this Exhibition, through the first small room into the much larger one that succeeds it, one of the first things that catches the eye—producing, certainly, no pleasant effect—is a very large painting by Matout, intended for the decoration of the great amphitheatre of the Ecole de Médecine. There it will be appropriate enough; but really the public might have been spared its view. The subject is "Ambrose Paré applying Ligatures for the first time to the Arteries after an Amputation." Actual cautery was previously used. The scene passes on a battle-field, at the siege of Danvilliers: in the background are smoke and slaughter; on a fragment of a parapet a wounded gentleman has just had his leg amputated above the knee; a leech approaches, offering a red hot iron, which Paré rejects, exhibiting a bunch of ligatures, and confining the artery with forceps. In the foreground, a surgeon is probing a wound in the side of another patient. The amputated leg lies upon the ground. The expression of the faces of the sufferers is painful to contemplate, and the accessories most repulsive. Whatever its artistic merit, which is considerable, the jury would have shown discretion in preserving the public from its view. It is by no means the only instance of bad taste in selection of subjects, and it has the excuse which certain other disgusting pictures in the gallery have not, that it is painted for a special purpose, and will be quite appropriate within the walls of the medical school. The incident is striking, and interesting to humanity: the tortures of cauterisation being, from that day forward, spared in all the numerous surgical cases in which they had previously been inflicted. In his "Apology and Travels" (1552), Ambrose Paré relates the story in his usual quaint style, telling how "he attended the patient, and God cured him, and how the gentleman at last went joyfully home with a wooden leg, greatly contented not to have been miserably burned to stanch the blood."

Although, as we have already remarked, the most distinguished French painters of the day have contributed nothing to this Exhibition, we yet find in the catalogue not a few familiar names, those of artists of great ability. Eugène Delacroix, Philippotiaux, Alfred De Dreux, Dubufe, Winterhalter, Rigo, Muller, Biard (we name them as they occur to us, and without reference to their respective degrees of talent), are names that give promise of good pictures, a promise kept in the case of most of them. To begin, we may take Delacroix, who has three pictures—the largest number any one artist is allowed to exhibit. One records an incident subsequent to the martyrdom of St. Stephen. After his lapidation, disciples and pious women came and fetched his body for burial. The subject is treated with judgment, the more painful details being kept out of sight as much as is consistent with truth to nature. A second picture represents the moment when, after the walk at Emmaus, the disciples recognise our Saviour as he breaks bread and blesses it. The third, a small painting, very vigorous and truthful, represents the carrying off of a young girl from a shore of the Mediterranean, by African pirates. Dubufe has a portrait which certainly no one will miss looking at, both on account of the merit of the painting and of the interest attaching to the very pretty woman depicted. We need hardly say that it is the Empress Eugénie. Although many prints of her have been published, this is the first opportunity the public has had of seeing her painted the size of life, by a first-rate artist to whom she has given abundant opportunity to study her countenance. She is represented standing, in a dark dress, richly embroidered, her neck and wrists adorned with strings of beautiful pearls tastefully arranged. Good taste is, in fact, the great characteristic of the picture, out of which the Empress looks, nearly, but not quite, full at the spectator. The intelligent and fascinating expression of her beautiful blue eyes is admirably rendered, and the graceful oval lines of her countenance carefully preserved. Her eyes are very peculiar. They are prominent—not unpleasantly protruding, but set, so to say, forward in the head, so that no shadow falls upon the lids. Her beautifully-pencilled eyebrows are of a rare form; prolonged at the inner extremities, they would form one curve across the forehead. Her hair, we fear it must be admitted, is of a reddish tint, but by no means red, nor, to our thinking, at all of an ugly colour. It much resembles those red auburns one often sees in pictures by the Venetian masters. After admiring the Empress, who is certainly a very lovely and amiable-looking person, it is natural to step past the few intervening pictures to the place where hangs her consort, a far less successful picture by Lépaulle, a painter of some reputation, but who has certainly not flattered his Imperial Majesty. Napoleon III. is, as might be expected, again and again repeated in the Exhibition. Two equestrian portraits of him (one by Alfred de Dreux, the other by Lansac) hang almost side by side. They are neither of them good likenesses. In both he is taking off his hat to the persons who look at the picture, apparently. This is a stupid fashion the painters have got into, of representing him hat in hand, whilst they neglect to give a pretext by the introduction of troops saluting, or of something equivalent. Then we have several episodes of his recent life; his visit to the School of St. Cyr; pupils practising with artillery in his presence; and then during his excursion in the district of La Sologne, where he rambled about in plain clothes, with only a few equally plainly-dressed gentlemen, visiting the villages and examining with his own eyes the state of the country and the improvements in progress or prospect. The best of the episodes by a great deal—although we do not there see him, but only the huge war-steamer that conveys him—is a marine by Morel Fatio (his only picture in this Exhibition), representing the Prince President passing from Marseilles to Toulon, in August, 1852, amidst ships, saluting. It is a light and pretty picture, the water beautifully transparent—some say a shade too blue, but I think I have seen it as much so in the Mediterranean in August. M. Morel Fatio is a painter of high merit. Like him, Winterhalter exhibits but one picture, "Florinda," the subject taken from one of Deschamps' poems on "Rodrigo, the Last of the Goths." It is really a charming thing; a group of lovely women, semi-nude, their tresses unbound and floating. The lights are admirably distributed, and the whole effect artistical and very pleasing. M. Winterhalter well sustains his reputation as one of the best French painters of women. We must pass a very different opinion on Chassériau's "Tepidarium" (a hall in which the women of Pompeii were wont to rest and dry themselves on issuing from the bath). This painter is a native of Spanish America; he is a pupil of Ingres, and an imitator of Eugène Delacroix, but an imi-

"A CORNER IN SPAIN."—PAINTED BY JOHN ABSOLON.—FROM THE EXHIBITION OF THE NEW SOCIETY OF PAINTERS IN WATER-COLOURS.

(SEE NEXT PAGE.)

tator at a distance. There is not a single pretty face or graceful attitude in the picture.

Historical pictures are numerous in this Exhibition; there is a good sprinkling of subjects taken from Scripture, and what are called *genre* pictures abound. These and the historical are the most interesting both to look at and describe. At some of the latter we will glance, taking them in the order they occur in the catalogue, where the artists are alphabetically arranged. Passing over a most unpleasant "Crucifixion of St. Peter" (that saint, it will be remembered, was crucified with his head downwards), and a very ugly "Dissolution of the Parliament of Paris by Louis XIV. in 1668" (one of the earliest acts of vigour of the *Grand Monarque*), the first pictures before which we are tempted to pause are by a very good artist, Bellangé, who paints military subjects. Here are three—all from the wars of the Empire. The largest and most remarkable is the charge of the cuirassiers on the great redoubt at the battle of Borodino, when Caulaincourt was killed. Montbrun had just been knocked over by a cannon-ball. Murat ordered Caulaincourt to take the redoubt in rear, whilst the light cavalry pursued an advantage they had obtained over the 26th division of Russian infantry. "You shall soon see me in the redoubt," said Caulaincourt, "either dead or alive." And, starting off at the head of his dragoons, he made a sudden wheel to the left, and entered the redoubt like a whirlwind. There a ball struck him; his conquest was his tomb. The moment of the charge is here represented. To the left, Eugène Beauharnais is seen advancing against the other side of the redoubt at the head of three divisions of infantry. The picture is very spirited, and gives a capital idea of the action. The two other pictures by this artist are smaller and less striking, but both are good, especially the one where "Victorious French Troops are Defiling after a Victory," apparently in one of the Italian campaigns, flushed with triumph, and bearing captured Austrian banners and other trophies. Under the name of Cermak, a Bohemian painter, I come to a picture recording a little-known and not very important episode of German history. It is entitled "The Old Age of Lomnicky." This Bohemian gentleman, poet to King Rodolph II., was stripped of his lands and honours for having taken part in the armed attempt of Bohemia to conquer its independence of Austria. Reduced to the utmost poverty, he was compelled, in his old age, to beg for a livelihood, and was used to sit upon the bridge at Prague, singing his own poetry and receiving alms. This is one of the most interesting pictures in the Exhibition—every face is so full of expression. There are several persons in the painting—some commiserating the unfortunate nobleman, some curiously gazing at him—but in all there is a remarkable intensity of look. The least natural face is that of an old patrician who is passing by, and who turns up his nose with an affectation of contempt that is, perhaps, rather exaggerated. But it is a picture that none can look at, we think, without pleasure and strong interest. Pierre Comte, an artist whom we do not remember to have met with before, and who certainly is not a celebrity, has two historical pictures of some merit and promise; one is "Admiral Coligny Wounded from a Window by the Assassin Maurevel," the other "The Council held before the Massacre of St. Bartholomew, by Catherine de Medicis, Charles IX., the Duke of Anjou (afterwards Henry III.), Albert de Gondi, and Three other Statesmen." There is spirit in the first picture (Coligny has just been hit in the arm whilst riding through the street; the blood is pouring out of his sleeve, he looks indignantly up at the house, whose door his attendants are forcing. The second picture seems to me an imitation of Delaroche's manner. The faces of Catherine and Charles IX. are very expressive. The Queen-Mother appears to be urging her son to the horrible deed, from which he still recoils. She has the true Medicis countenance—passion and crime in every one of its lines. Henry III. has his back turned to the spectator, but there is character in his figure, and in the small portion of his face of which a glimpse is obtained.

It is rather a long leap from the days of the bloody and bigoted Valois to those of Louis Philippe; but the catalogue bids us take it, and alight in the defile of the Bibans (Algeria), through which French troops are marching. It is one of a class of pictures of which there are several in this Exhibition, but Horace Vernet has rather spoiled us for anything that is not first-rate in this style. Moreover, the African campaigns have been quite overdone in the way of artistical commemoration. More paintings and engravings have been devoted to their small victories, cruel razzias, surprises of smalas, and captures of tents and umbrellas, than in England were ever given to the whole of our Peninsular War. M. Dauzats' "Bibans," however, is interesting. It shows a very extraordinary defile, extremely narrow, and of prodigious height, on the summit of which are seen the shadowy figures of Bedouins in their white burnouses. Below, the troops are passing through the gully, for such it is, where one would think a few stones hurled from above would suffice to crush them. His feet resting on the backs of two of his comrades, a soldier is cutting, high up upon the rock, the words "French army," and the date. There is animation and ability in the picture. Here is another military piece, by Duvaux, a "Combat in a Wood near Paris, at Velizy, between French and Prussian cavalry—the former commanded by Exalmans; and here, from the brush of M. Espinassy, is the "Battle of Austerlitz" not an episode, as is usually given of large battles, but an attempt, and rather a successful one, to give a general idea of the action at one of its most important moments, when, Soult having carried the plateau of Pratzé, the Emperor advanced at the head of the Imperial Guard, directing the operations of the 4th corps, and the Russian centre and reserve were driven pell mell into the valley of Lathowa. Military scenes, however, have but a limited class of admirers, and I pass over some others to get to a first-rate picture by Gallait, the Belgian artist:—"The Last Moments of Count Egmont." After his condemnation to death by the Duke of Alba, the Count passed the night preceding his execution in an apartment of the house known as the Maison du Roi, in the great square at Brussels. The artist has selected the hour of daybreak. The Count, after a sleepless night, beholds from his window the preparations for his execution. He gazes on them sadly, but very calmly, like a brave man for whom death has no terrors. The Bishop of Ypres, his confessor, sits beside him, with tears upon his cheeks, and tries to turn his attention from the mournful sight. A second picture, "Tasso," by the same artist is also highly to be commended. I have rarely seen anything happier and more truly poetical than the effect of light. Into the darkened room a bright gleam breaks and falls upon the poet's hands. One feels as if it were a gleam of hope making its way into his saddened heart. Both pictures are sold, and their possessors are to be envied. Another Belgian, Hamman, exhibits "The Doge's Visit." The Doge Mocenigo, a great lover and patron of art, goes, accompanied by Titian, to pay a visit to Paul Veronese, who, with all his family, receives him at the entrance to his house. The colouring is good and the picture spirited, and surely a painter can hardly better employ his talent than in depicting incidents in the lives of his illustrious predecessors. The period of the pre-eminence of Venetian art is full of romantic associations, and rich in episodes and incidents admirably suited to the painter's purpose. And this is a fit place to remark that this year's Exhibition does credit to the research and literary acquirements of the French and Belgian artists, as well as to their judgment; for I do not remember to have seen at any former Exhibition here a better selection of subjects for historical pictures. With the exception of M. Matout's horrible amputating scene, and one or two others, at which I will presently glance, the subjects chosen are generally pleasing, interesting, and remarkable for freshness and novelty. The subject of Hesse's very good picture of the "Two Foscari" is not extremely new; but it is very interesting. Its richness of colouring is remarkable; and, although this remark may seem hypercritical, that very richness and vividness seems in some way to impair the interest of the picture, by distracting the eye from the expression of the faces. It is the interview of Jacques Foscari (on the eve of his exile to Candia) with his wife, children, and parents. Holding out his hands, dislocated by the torture, he implores his father to solicit some diminution of his punishment. But the old Doge has the courage to refuse, and to exhort his son to submit to his doom, and obey the republic without a murmur. There is much expression on the faces in this picture. "Antigone, in spite of King Creon's prohibition, goes to bury her brother Polynices" such is the title of a very good and artist-like picture by Labbé-Duval, a pupil of Paul Delaroche. It is a night scene, star-lit; Antigone advances stealthily and hurrying, as if dreading pursuit. The painter has given her a fine expressive countenance. But, in point of beauty, the most lovely face, perhaps, in the entire Exhibition, is that of Cleopatra, in a picture by Picou, another of Delaroche's pupils. The Egyptian Queen is exercising her seductions on Octavius Cæsar, and is by him disdained. His disdain certainly reflects infinite credit upon his virtue, if Cleopatra was half as beautiful as M. Picou has made her. The loveliest of the two, perhaps, in point of forms. She is nearly nude, but decently so; and the whole effect of the picture is very attractive. Octavius has a calm, cold, intellectual expression of countenance—such as well suits the stoic who could resist such a syren.

Rigo, a good artist, has but one picture this year, "the Assault and Capture of Zaatcha (Algeria)." The Zouaves are hard at work, and falling fast under the Bedouin bullets. It is a good enough picture; and the view over the town, on whose terraces the Arabs are posted with their long guns, is rather striking; but we have already adverted to the very moderate degree of interest possessed by pictures of this class, at least for foreigners. But what can I say to M. Charlet's "Napoleon and the Pallahs, an episode of the Egyptian Campaign"? Such a ruffian as he has made of the Emperor—a real caricature, with a short face, and a hat pressed down over his eyes. The same artist gratifies the public with a portrait of himself; and on beholding his very unintellectual features, few perhaps will wonder at his deficiency of talent. But, as we said before, there are people who will be artists, and persist in exposing themselves. A picture to be noticed, notwithstanding its very painful and unpleasing subject, is the execution of the French Queen Brunehaut, who, for conjugal infidelity, was tied to a wild horse's tail, which was then driven forth. One man is restraining the horse, another adjusting the rope, which is already tied round the unhappy woman's ancles, chafing the delicate skin till the blood is near flowing, and round the root of the horse's tail—whence, if such was really the way it was fastened, it seems to me it would have been extremely likely to slip off. The horse is a fierce and powerful beast, furious at this unaccustomed treatment, and plunging and neighing for release. Another moment, and that fair and graceful form, nurtured in down, will be trained and dashed over rock and pebble. And oh! the sehy paleness and frantic expression of the woman's face and eyes, as she clutches the earth with her hands, as though any force of hers could restrain the terrible courser. It is a sort of picture one cannot help looking at, but the interest it inspires is of an extremely painful kind.

And, since we are on disagreeable subjects, we may say a word of Verdier's "Scene of Modern Jacquerie," suggested by extracts from the *Moniteur* of the 11th and 12th December, 1851, describing the excesses of insurgent peasants in the province. The authorities and clergy are being ill-treated, and the wife of a sub-prefect grossly insulted. The French are not generally given to illustrate their own revolutionary excesses. With the exception of Duplessis's "Bertaux," a series of small engravings, there is scarcely any pictorial record of the horrors of the first revolution; and perhaps it would be as well to continue the same system of abstinence with respect to excesses so recent that the bad blood they occasioned is still far from forgotten.

Here is a pretty thing by Vinadon—"Three Christian Martyrs"—young girls of Thessalonica, awaiting the doom awarded them by a barbarous edict of Diocletian. They are to be burned alive, and their executioners are entering their prison to fetch them. They are resigned to death, and faith and hope beam in their countenances; but yet, it is hard to die so young, and by so cruel a torture: and no wonder that in the face of the youngest there is more terror and less of ecstatic calm than in those of her older sisters. It is a sweet group.

Ziegler has a picture of the "Signing of the Peace of Amiens. Joseph Bonaparte, Lord Cornwallis, and the Spanish and Dutch Ambassadors." Bonaparte and the English Ambassador are holding each other's hands, and in the background an English officer is hugging and kissing a Frenchman—a most improbable incident, considering the dislike Englishmen generally entertain at that mode of salutation between men.

We have noticed most of the historical pictures that struck us as possessing particular interest, but I dare say some have escaped me, for twelve hundred pictures, distributed through eight or ten rooms, are not to be got through very thoroughly in a couple of days. At the Louvre, where one long gallery contains the whole, it is much less chance of overlooking good things. Altogether, and independently of its rather inconvenient situation, the *Garde Meuble* is not very well adapted to an exhibition of this kind. The light is pretty good upon the whole; although it is difficult, owing to the smallness of some of the apartments, to get far enough from the large pictures placed high up. The general appearance of the suite is very pretty, baskets of beautiful flowers being distributed where there is convenient room for them, and the whole place looking gay and pretty. The entrance is at once from the street, and there are no stairs to ascend. Persons who wish a quiet turn may go in from eight till ten in the morning by payment of a franc, as long as the Louvre does which would be a fact that in this busy One shall room a sort of ante chamber between two flats, but having an excellent light, is set aside entirely for fruit and flower-pieces, which fill it. It might have been thought that such an arrangement would be monotonous and undesirable, but the effect is extremely pretty. There are some excellent fruit and flower-pieces—the French are very clever in this style—but such pictures, however charming to look at, have little interest as description. There is one picture in this room, however, which will well bear describing. It is one of the comical fancies of an esteemed artist and humourist whose productions have sometimes been displayed upon the walls of the Trafalgar-square gallery. M. Biard has the largest picture in the flower-room, and a very odd, original thing it is, at which everybody looks, laughs, and is pleased. "Gulliver in the Island of the Giants; Studies after Nature, and through a Microscope made in the vicinity of Fontainebleau" is the name the painter describes it under—a most grotesque corn poppies as big as salad bowls, beetles and insects as large as human, and all manner of exaggerated dimensions, but perfectly true to nature in their respects—little Gulliver, in the costume of that period, is wearily endeavouring to escape the pursuit of the Brobdignagian farmer, whose huge face and hand appear in the oddest manner possible, in the top corner of the picture. Gulliver is shouting with terror and the farmer with fury and laughable air, seems to be afraid to touch him, lest the little animal should hurt or sting. The effect of the picture is most ludicrous, and at the same time very pretty, but it must be seen for the comicality of the thing to be fully appreciated. The same artist has another droll picture in the Exhibition, which we may mention in a future article, with the class (*genre*) to which it belongs. For the present we must conclude.

The money derived from the admissions, sale of catalogues, &c., is to be applied to the purchase of some of the best pictures in the Exhibition. A very considerable number are marked in the catalogue as having been painted to order, or since purchased, for the Emperor, Minister of State, and Prefect of the Seine.

A CORNER IN SPAIN.

BY J. ABSOLON.

We have already mentioned, in terms of praise, this very clever production, forming part of the Exhibition of the New Society of Water Colours, and we have great pleasure in now engraving it. The subject-matter is simple, but full of quiet interest. The artist also has displayed a shrewd knowledge of character in his treatment of it. The scene, as is indicated by the title, is the corner of a street in a Spanish town; a swarthy young man is making ardent professions of love to a black-eyed damsel, profession so flattering that she hesitates to believe them all; and yet, whilst her hand hanging listlessly within his grasp, leads us to guess that she is not convinced by his arguments, the attentive expression of her face shows that she does not lend an unwilling ear to them. The national character, as well as the individual expression, is admirably realised in these two figures; the various details nicely executed, and the colouring throughout is rich and harmonious.

Literature.

SAM SLICK'S WISE SAWS AND MODERN INSTANCES; or, What he Said, Did, or Invented. Two Volumes. Hurst and Blackett.

The penultimate period on the last page gives an impartial critique upon this work; for "Well (says Eldad to the author) you are the man for my money after all. You talk the most sense and the most nonsense of any person I ever see. You play with the galls, take purses out of the men, tell stories by the hour, and seem made on purpose for rollickin'. In these remarks we entirely agree, only putting in our caveat that there is far less nonsense in the composition than superficial folks might fancy from its frequently burlesque and humourously exaggerated tone. Sam Slick is no fool; but, on the contrary, full of "wise saws," and in the soft sawder line of "modern instances" beats all contemporary natur holler.

We presume we must have had a presentiment of this kind, when, ten years ago, in the youthful No. 63 of the ILLUSTRATED LONDON NEWS (July, 1843), we presented an engraved portrait of Judge Haliburton, and spoke in eulogistic terms of his sagacious views of human nature, and the overflowing humour with which he delineated them. We also characterised the hearty mellow spirit and shrewd caustic properties which he exhibited, his quiet truth and force, his fanciful comparisons and pungent satire all which qualities are so fully exhibited in his new production, that every syllable of our praise may with equal justice be transferred to it.

Mr. Haliburton, though so admirable a limner of the peculiarities of the Yankee and British colonial characters or, as he designates them, Uncle Sams and Blue Noses is himself of Scottish origin. He descends from the ancient Border family of the Haliburtons, whose seat he explored in his former visit to the mother country; and, we believe, traced his family pedigree as succinctly as if he had been born and brought up on the banks and braes of bonny Tweed.

Our distinguished home family of Burtons, architects, are of the same race, and dropt the *Hall* in order to render the name more pronouncably English. But this by the way; and to illustrate the literary fame of the Burtons and Haliburtons, who, though chiefly divines and philosophical writers, did furnish the type for the "Anatomy of Melancholy" above two hundred years ago, and has now supplied us with a Medicine for Melancholy in the laughable lucubrations of the "Clock-maker," whose pleasant *fiat mixture* it is our agreeable duty to describe.

The covers are adorned with the golden letters S. S., standing for "Sam Slick," and once worn out in the service of Huntingdon, the founder of a sect, and, as applied by him, meaning no less than "Sinner Saved:" which is the preferable collar of cases, who shall decide? We shall only suggest that as an honour to both his native and adopted countries, Mr. Haliburton is well entitled to wear it.

An introductory letter, addressed to Alexander Haliburton, Esq., opens the design thus:—

> My Dear Squire,—Since I parted with you I have led a sort of wanderin' ramblin' life, browsin' here to-day, and there to-morrow, amusin' myself arter my old way, studyin' human natur', gettin' a wrinckle on the horn myself for some that I gave others, and doin' a little bit of business by the way to pay charges, and cover the rides I took for pleasure, but to say that I meet it much either, for habit has more to do with business now with me than necessity. The head of idleness in a general way is apt to be stale, and sometimes I consart it is a little grain sour.
>
> Latterly I have been pretty much to Sackville, having bought the old homestead from father's heirs, and added to it considerable in buildin's and land, and begin to think sometimes o' marryin'. The fact is, it aint easy to settle down arter nineteen all over the world so many years as I have done without a petticoat critter of one's own for company, but before I ventur' on that partnership consarn I must make another tour in the provinces, for atween you and me, I reckon they raise handsomer and stronger ladies than we do in Connecticut, although we do crack for everlastin' about beatin' all the world in our "geese, galls, and onions."

In pursuance of this prudent resolve, he gets appointed a United States Commissioner, to take a cruise and investigate the grand question of the fisheries on the shores of Nova Scotia, New Brunswick, and Prince Edward's Island, and he boldly declares for "fun" in his diplomatic progress, and his resolution not to travel in the mood of an Englishman, for he tells us, "the Englishman goes through the journey of life like a bear."

Before leaving the States, Sam goes to Washington, to meet some old friends, and have a confab with the President, on receiving his commission and instructions. Proceeding onward, we are entertained with Sam's opinion of Daniel Webster. His name is as interesting to readers on this side the Atlantic as any other that America can show.

We ought to mention that the "Wise Saws" are distinguished by being printed in italics, and contrast capitally with the slang, Yankeeisms, quaint illustrations, and amusing anecdotes with which the whole is so plentifully sprinkled. And here, therefore, we may as well string together a few samples:—

"Punctuality," said I, "my Lord, is the soul of business. There is an old sayin', 'Take care of the pence, and the pounds will take care of themselves.' Now take care of the minutes," says I, "and the hours will take care of themselves. Pounds is made up of pence, and hours of minutes. Attention to one minute may be for her, and the other saved. Then two rules will make any man rich; and in fact, my Lord, they have made me considerable well to do in this world, as times go."

Thinks I to myself, a man may be a President, and no great shakes either, for after all he is only the lead horse of a team. He has got the go in him, and that's all. But he don't hold back, which is a great matter, both in state-coach and horses. For if he makes up his mind over by those behind him, and don't keep his legs, he must go under.

Why, says I, whalepers are very useful to make the pastures poor, builders grow tall. Hard times is what you thrive in, when the ponds dry up, and potees get the pollywogs.

Take your daily bread, and be thankful, but don't pray to the Lord to help us for you the loaves for years to come to make you rich. Many a man has died about the time his great baking of bread came out of his oven.

It's no use talkin'. When you are down, poverty, like snow shoes keeps you fast load, and prevents your rising. A man can't hope again hope.

Work: aim your own pork, and see how sweet it will be. Work, and see how well you will be. Work, and see how cheerful you will be. Work and see how independent you will be. Work, and see how happy your family will be. Work, and see how religious you will be; for, before you know where you are, instead of repinin' at Providence, you will find yourself offering up thanks for all the numerous blessings you enjoy.

Hope is a pleasant acquaintance, but an unsafe friend. He'll do on a march for a travelin' companion, but he is not the man for your banker.

A woman who wants a charitable heart, wants a pure mind. The measure of a female's judgment must be her own feelings; and if she judge harshly, her own feelings are not delicate. Her experience is her own, and if that is adverse, it ought at least to impose silence. Innocence is not suspicious, but guilt is always ready to turn informer.

Then there have been more than their share of one thing, commonly have less of another. Where there is great strength, there must ask to be much gumption. A handsome man in a general way aint much of a man. A beautiful one seldom does. Some men that has genius have no common sense. A feller with one idea grows rich, while he who calls him a fool dies poor. The world is like a baked pie-pan: the upper crust is rich, dry, and puffy; the lower crust is heavy, doughy, and underdone. The middle is not bad generally, but the smallest part of all is that which flavours the whole.

The number of pithy maxims contained in these volumes fully justify Sam's assumption of the title of "Wise Saws," and we opine that the subjoined examples of the other qualities we have indicated will do as much for his whims, caricatures, and anecdotes. That they are desultory we own the fact, for in truth the whole publication is so, and though it is delightful to go along with Slick, we must remark it is by no means on a straight road, but zigzag, with perhaps a touch of corduroy.

A single idea is happily illustrated by various characters; and the portraiture of the commanders of the fishing-vessels are extremely characteristic and entertaining, and not less so the stories attached to

them; and the half serious, half comic notices on the fisheries are at once important and laughable.

In volume second some love notions and notices of Indians are well worth perusal. Some remembrances of the Duke of Kent are neatly brought in; and there are bits of politics, with which we will not meddle. The chapter entitled "Our Colonies and Sailors," is suggestive of most valuable improvements of high national and colonial consequence. Had we the talent we should be tempted to overlay the clock-maker with such a load of soft sawder that he would hardly ever be able to lift him-self up and breathe again; but fortunately, not possessing this power, we had better express our hope that he may long enjoy the breath of life, and employ it in pouring other emanations of his richly-endowed mind into our listening ears. Meanwhile, we have reason to expect further illustrations of Yankee language, style, notions, and humours, from real Yankee sources; as we see it announced that a work of this kind, edited by Mr. Jerdan, is in the press.

---

1. THE PLAYS OF WILLIAM SHAKESPEARE: the Text regulated by the old copies, and by the recently-discovered Folio of 1632, containing early Manuscript Emendations. Edited by J. PAYNE COLLIER, Esq., F.S.A. Whittaker and Co.—2. THE WORKS OF WILLIAM SHAKESPEARE, the Text formed from a new Collection of the early Editions; to which are added all the original Novels and Tales on which the Plays are founded; copious Archæological Annotations of each Play; an Essay on the Formation of the Text; and a Life of the Poet. By JAMES O. HALLIWELL, Esq., F.R.S. Vol. I. Adlard.—3. THE TEXT OF SHAKESPEARE VINDICATED from the INTERPOLATIONS and CORRUPTIONS ADVOCATED by JOHN PAYNE COLLIER, Esq., in his NOTES and EMENDATIONS. By SAMUEL WELLER SINGER. Pickering.

1. In this volume Mr. Collier has had the text of Shakspeare's works reprinted in full, duly inserting—but without note or comment—the amendments of the MS. marginalia in the recently-discovered folio. The mistakes, however, of the folio are corrected, and the best readings adopted; so that the volume before us has the advantage of the most intelligible text yet extant. The preliminary matter of the folio is also given, in order that this volume may represent, "in compliment externe," the folio of 1632, as far as possible. But the drama of "Pericles" is added, which, Mr. Collier states, "unquestionably proceeded from Shakspeare's pen." On this point we are heretical. In our opinion, neither "Pericles" nor "Titus Andronicus" is Shakspeare's: both could not be. The internal style will not permit that they should be the works of the same poet, at the same period of his career. "Pericles" is the work of a poetic youth—"Titus Andronicus" that of a veteran playwright. For Mr. Collier's volume we are, nevertheless, grateful; and we have no doubt that it will be generally acceptable.

2. This work is sufficiently described in the title. It only remains to state that the first volume contains, besides the Life of Shakspeare, and an Essay on the Formation of the Text, the play of the "Tempest," with Illustrations and Wood Engravings, by F. W. Fairholt, Esq., F.S.A. Mr. Halliwell takes credit to himself for having personally inspected and tested in every possible way, the authenticity of all his documents. He rejects the Bridgewater Manuscripts: copies not genuine, of quarto and folio, according to him, abound. The plays of Shakspeare were written between the years 1580 and 1616, at a period when the English language had assumed its present form, a few peculiarities of diction and phraseology excepted. The use of the singular verb to the plural noun is one of these peculiarities. Transpositions detrimental to the sense are frequently made for the sake of the rhythm; and particles were capriciously used. In this work the blunders of the folio of 1632 are ruthlessly exposed. Mr. Halliwell expresses his opinion strongly that the MS. alterations should be carefully criticised. He is of opinion that the "indications of readings that are indisputably conjectural" are "too numerous to render the subject one of doubt." We have already taken up the opposite thesis, and still maintain it. But credit must be given to Mr. Halliwell for having brought to bear in this publication (the issue of which is limited to 140 copies) all the learning which he has accumulated. The work is magnificently produced, and, when finished, will extend to twenty volumes. The price is already increased, and in all probability will be further augmented as the list of subscribers draws to a close. This is a monument of Shakspeare which must prove hereafter of great value.

3. It will be recollected that we suggested, in relation to Mr. Collier's volume of "Emendations," that there was probably some other folio copy, whether of the first or second edition, that would be found similarly altered, and for a similar purpose. Mr. Singer, it seems, has just such a copy, not only of the second, but of the third folio; and many of the emendations in both correspond with those in Mr. Collier's copy. Strangely enough, however, Mr. Singer considers this circumstance not as corroborative of Mr. Collier's authority, but as conclusive against him. Surely, it establishes the fact, that playhouses were accustomed to form prompt books of the printed copies; and the agreement of those copies in favour of any one particular reading would rather tend to suggest the probability of their having one and the same authority, than to support the hypothesis that they were all alike conjectural, and agreed by a fortunate coincidence. Mr. Singer, indeed, indulges in a more violent hypothesis even than this, viz., the likelihood of the amendments having been made since the publication of the more modern editions, with notes, by Pope, Theobald, Warburton and Hanmer; and thus he would account for the "conjectures" of such editors being "remarkably confirmed" by these MS. alterations. The setting-up of such an hypothesis looks very much like the refuge of despair. That three persons should, at different periods, employ themselves in altering folio copies for their amusement from subsequent editions, and not for publication, is unlikely; but that three professional artists should, from authorities within reach of theatrical conductors, make a correct copy of a faulty folio, for the purpose of securing accurate performances on the stage, is both intelligible and probable. Much better would it be to collate carefully these three emendated copies, than to reject the aid of any one. Their probable use gives them a certain degree of authority, but one that fortunately does not preclude the exercise of the rational faculty. Perhaps, too, they had a common original, which now that commentators have got on the right track may yet be discovered.

We are exceedingly sorry that Mr. Singer has not, except in two or three instances, brought forward his manuscript emendations against Mr. Collier's; he might thus have added something material to the Shakspearian textual question. He has, on the contrary, satisfied himself with a passionate and vindictive repudiation of Mr. Collier's judgment, and with a vituperative nicknaming of his new publication as the "*Pseudo*-Shakespeare." This is poor work, and easily done; too poor and easy for such a man as Mr. Singer. But he is evidently angry that any readings of the text of those "magic pages" that "have been the delight of his youth and the solace of his declining years," should undergo the slightest alteration. This is, perhaps, a very natural feeling with one who is "declined into the vale of years;" and it is probably with the rising generation that will rest the ultimate reform of the Shakspearian text, in company with others of greater or less importance. But it is not on this account, much as we may compassionate the senility of Mr. Singer, that we can compliment him on having made out a good case.

In the majority of instances, on the contrary, Mr. Singer has made out no case at all. Here is a thick book, for the most part composed from Mr. Collier's book. Mr. Singer first quotes *in extenso* from his adversary, and then simply contradicts him, or sneers at him, or answers two or three lines of comment by a note of exclamation at the end of two or three words; and then evidently thinks he has won a triumph. One thing he has manifestly resolved upon; to support the old text, through thick and thin. It is not to reason that Mr. Singer appeals, but to association.

As might have been expected, Mr. Singer prefers in the celebrated Macbeth passage "beast" to "boast"—the latter he calls an "absurd change." Wherefore deponent sayeth not. Take all Mr. Singer has said—

Mr. Collier would have *Lady Macbeth* mince matters, after the passionate and intemperate remonstrance she has addressed to her husband. And then with regard to the word *beast*, what *beast* was it in *Macbeth* to break the matter to her? The almost gentle manner in which, in a former scene, he hints at his purpose in the words—

> My dearest love,
> Duncan comes here to-night.

shows that what may be supposed to have passed in their future conference would be any thing but a boast. If the correctors had no other presumptuous follies to answer for than this attempt to alter the untouched language of the poet, they would deserve our commiseration. "It is not easy to imagine (indeed) a case in which the alteration of a single letter would make so important a difference," and for the worse too!

Is this the way in which Mr. Singer would defend the old text? Why, he has not suggested a single idea or notion—not the shade of a shadow of a reason—why, either the old or the new is better or worse than the other. He has not shown that he has apprehended the no-meaning of the usual reading, or in any way appreciated the obvious signification of the amended one. Mr. Collier's own note on the proposed amendment happens to be strongly argued; but Mr. Singer has not thought it necessary to meet him on a single point. It was enough that he had himself a prejudice. Old associations must not be disturbed. It was no matter of ratiocination, but of feeling. So of "blankness of the dark:" it must be bad; and "blanket" must be the word, because "mantle of the night" is a common expression, and "blanket" has been the hitherto received reading. Other writers, too, had compared "vapours" to "rugs," and even "wrapp'd night in mistic rugge." None of these phrases is exactly "blanket," but they led to "the door or proof," though not so directly as the dream feigned by *Iago*.

With respect to the "jay of Italy, whose mother was her painting," Mr. Singer hands us over to Mr. Halliwell; himself preferring the reading that refers to "the cable of the jay dressed in the painted feathers of the peacock"—in accordance, as our readers will recollect, with the reading produced by one of our correspondents last week in a late edition of Shakspeare.

The additional lines, demanded by rhyme or reason, which Collier regards as the glory of his corrector, meet with no mercy from the hands of Mr. Singer. He calls them "impertinent and uncalled-for interpolations," and by other as vehement epithets. Doubtless, they may be both, or all of these to him; but to Mr. Collier and to many others, esteemed good judges, they have appeared most pertinent and well-timed. "Who shall decide where doctors disagree?" Let each one answer for himself. To us the lines have been welcome visitants, each with a special revelation, approved by its own proper radiance.

Of course, it will be readily conceived by our readers that we cannot pursue this inquiry through the whole of the thousand controverted passages. It is enough that we can detect the spirit of Mr. Singer's opposition to Mr. Collier; and if we find that passion or interest is the predominating motive, we have no hesitation in at once deposing of it. Mr. Singer announces his intention of producing a new edition of Shakspeare in ten volumes, and is, of course, anxious to secure a text of his own. We trust that his selection will be at least satisfactory to himself; we have small expectation that it will be so to others, unless he exercise a cooler judgment than he has shown in the manipulation of the present volume, intended to serve as an *avant-courier* for the new speculation.

Mr. Singer complains that Mr. Collier has inserted his new readings into his new Shakespeare, "without a note or mark to designate the interpolation." He forgets that their propriety had been argued in a separate volume; and that it was desirable that all such notes or marks should be withdrawn from the works themselves. The reader thereby is not interrupted by any annotation, and the readings are suffered to have their proper effect on his mind without association. If they are out of harmony with the context, he will doubtless feel it; if they render it unintelligible, he will be induced to turn to another edition, in which, if he find a clearer reading, he will be moved to repudiate what he will then be entitled to call, as Mr. Singer calls them, "crudities," "inanities," and "interpolations." These mere objections indicate a splenetic state of mind, and one little likely to serve the cause of truth.

THE DIARY AND HOURES OF THE LADY ADOLIE: A FAITHFULLE CHILDE. 1552. Addey and Co.

When a certain serious book was selling very badly, everybody remembers the expedient adopted by Defoe to render the book profitable it. A pecuniary sense, he wrote a ghost story, the dim and sheeted heroine of which was introduced to recommend the immediate, earnest, and general study of the neglected devotions. Both books now sold the second by virtue of its intrinsic attention, the first by force of the solemn authority of its successor, which, like a steamer, tugging a becalmed sailing-vessel in its wake, had force enough for itself and its consort. We fear that if the prayers and meditations contained in the "Diary and Houres of the Lady Adolie" are ever to become popular, the fair writer must imitate the irreverent and graceless, if not ungodly, artifice of Defoe, and get some uncanny thing to say a word or two in their favour. The praise of a journal will not do—even though the praise of a ghost may be unnecessary. We think this last form of the puff funereal rather beyond what will be requisite, because times are changed. Superstition has its fashions. Our modern taste demands that the terrible should be flavoured with the whimsical—that necromancers and mystics should "make things pleasant," and operate in tail-coats, about tea-time—and that, wherever there is to be a little of the preternatural, there must be *not* a little of the queer.

To return from this casual allusion back to the work before us, if the authoress wish the great mass of this busy and pre-occupied generation —"*hic aliud capere paratus*"—to bend over the gentle weakness of her production, perhaps the best thing to be done is to proceed to set up a *table*, and to get those exceedingly well-bred magicians—the American gentleman and lady to procure some uncomfortable knocks, winding up with a significant and emphatic twist or jump of the whole of the piece of furniture on which they love to operate. We really think that worse books than this pious "Diary" and these devotional "Houres" might be *rapped* into a circulation.

We have alluded to the professed "editress" as the real authoress. That much is palpable at once. The work is designed, in an artistic point of view, to effect a most innocent, and, if successful, a most sparkling illusion or imposture. The fair and unlucky writer would have the reader (at least while actually perusing her pages) to fancy that he is engaged with words penned three centuries ago, and conversing with a mind which quitted our sublunary scene for ever in the troubled year 1554. But it is in vain. In spite of the most minute attention to dates; in spite of a great amount of painstaking study of the chronicles of that epoch; in spite of antique spelling, and a venerable form of binding, and a type of letter-press no longer in vogue, the essentially modern and retrospective labour of an amiable, rather than vigorous, mind appears in every page and line; and the reader is not, even for one moment, beguiled into the pleasant credulity intended.

How different from the effect produced by those works which a horrible misnomer has termed "the forgeries" of the "Titan boy" Chatterton! Here is an equally innocent forgery, the credit of which—for it is credit, not loss, that is intended, oh! logical Walpole, by such forgeries; and it is to the forger's own benefit to recall, or to "stop" them from being paid to any but himself in the admiration of mankind—here, we say, is an equally innocent or generous forgery, the credit of which is given to a fictitious character, "a faithfulle childe" of a noble English house in the sixteenth century. If any reader may wish to assure himself fully of the counterfeit nature of the production, there is, among other genuine standards with which to compare it, Cavendish's life of his master, Wolsey, written in reality about the time at which this purports to have been composed.

Two circumstances induce us to speak with especial consideration and tenderness of the defects of Lady Charlotte Fejpys's production. In the first place, her name is of itself so great a title to respect, that we must crave pardon if it has half disarmed our judgment. In the second place, nothing can be more true than what Mr. Dickens said, on a recent occasion, that, for some time past, the general course pursued in literature, and in all that appertains to the educational movement, by the class to which the fair writer belongs—our English aristocracy—is a course so well worthy of respect and applause in principle as to silence any very rigorous criticism in details. We have among our upper classes at present a great number of laborious minds, who, instead of imagining that their position absolves them from a share in the efforts which are the necessary heritage of the less fortunate, waive all artificial distinctions, enter gallantly into the general and mixed arena of intellectual competition, contribute what they may to the sum and result of national triumphs, and appear to regard the rank which they possess, if not as a prize to be won over again, yet as a privilege to be continuously and incessantly vindicated and repeatedly deserved. We could name many. We admire their labours; and, for their sake, we will not be harsh towards one of their order, who, while animated by the same feeling as the others, happens, for the nonce, to be rather infelicitous in achievement. A word about the matter and contents of this not very enthralling incubation. First, there is a Diary embracing the last two years and seven months in the private life of a girl who died in her sixteenth year. Thirteen months of the Diary correspond with the last thirteen of the reign and life of King Edward VI. The rest, of course, is in Queen Mary's reign.

After the Diary, come prayers, ejaculations, aspirations, rules, meditations, and "thoughts," for every hour and conjuncture in the waking portion of the day. These exercises are termed the "Houres of the Ladye Adolie," and into her mouth they are put—to her their composition is ascribed. Of course, much of the language in passages so devotional is borrowed from Scripture. The same may, indeed, be said in a less degree of the narrative which precedes the direct addresses to the Almighty.

Several characters—male and female—but above all, the dear young heroine, whom the reader feels to be destined from the very outset to harrow his feelings at the close, by her painful and inevitable, yet untimely death—are used by the authoress with little or no dramatic art, but with great didactic zeal, as exponents and organs of her own religious views and spiritual sentiments, just sufficiently opposed here and there to be the more fully elucidated and developed, but never seriously contravened, discussed, or scrutinized in any part. Let us, however, not be misunderstood; the book is not by any means, theological; and much less is it polemical. Though composed of all the angriest recollections in the whole era of the controversy between Roman Catholicism and Protestantism, yet the Protestant *doctrines*, of which the authoress is a fervent adherent, are merely stated. The book is essentially "æsthetical," to borrow a word from the Roman Catholics themselves; and it enters not into the prayerful and ejaculatory plan or design of the production to discuss the logical or argumentative portions of a subject, on which reader and writer are assumed to be already at one. Under these circumstances, we need not add that the heroine is portrayed as one of those privileged souls in whom exalted sanctity seems almost instinctive. If we might venture to say so, this very sanctity of the noble "Childe," Adolie, would be more effective, if more unconscious. She appears, from the very beginning, too much alive to her own perfect state. For example—having inadvertently done something not quite right, she is punished by a grave look from her mother, which maketh her flee away: the Diary then proceeds thus:—"I am in Favour again, and glad enough to leave my Turret and wear my Kirtle and Shoes again. I did blush for very shame when the waiting woman came to tire me for the Evening, and I might not let her in. How bitter is Disgrace! *Alice of Sydenham was right well served*, only as if she had been *unlucky*, says she. Heaven make me dutiful!" &c.

Here it is hard to avoid thinking of him who, in his prayer, dwelt with complacency on the reflection, "that he was not as other men" *even as this Alice of Sydenham*.

After the heroine's death her parents fly to Holland, with this supposed production of their child; and so closes the work. Cardinal Pole, Bishop Tunstall, Gardiner, Edward VI., and Queen Mary are the principal historic characters cursorily mentioned in its pages—mentioned, however, of course, according to the laws and privileges of a book of this nature.

(*Continued on page 430.*)

THE GREAT NORTHERN RAILWAY.

FEW persons who have inspected the buildings of the Great Northern line of Railway can fail to have been struck with their vast extent and completeness; of which the pair of views upon the next page present interesting specimens. In the whole of the buildings Mr. Lewis Cubitt, the architect, has sought to combine with the greatest strength and economy of construction the utmost facilities for the transit and stowage of goods. The entire station as it stands, with coal-stores, goods offices; arrival, departure, waggon, and carriage-sheds; granary, canal-docks, and temporary passenger-station, covers a space of about forty-five acres. We have engraved the Granary and Goods' shed of the London terminus at Battle-bridge.

The Granary, which fronts the canal dock, and has water ways for barges, is 70 feet high, in six stories, 180 feet by 100 feet, and will hold 60,000 sacks of corn. On the last story are immense wrought-iron water-tanks, holding 150,000 gallons; and, from the highest floor to the ground, inclines down with the full sacks slide, without a touch, from top to bottom. From floor to floor the grain is hoisted by hydraulic apparatus, invented by Mr. Armstrong, by which contrivance the cranes in the goods-shed are also worked.

The railway is brought into direct communication with the river at Limehouse by the Regent's Canal, water ways from which, commanded by the cranes, pass under the centre of the goods-shed platform; so that timber brought in floats, hogsheads of sugar, and all articles of heavy merchandize for the use of inland towns along the line, can be carried from the shipping direct.

The Goods-shed, the largest of its kind in the kingdom, is of brick, 600 feet in length, 80 feet wide, and 25 feet high, with timber roof, glazed with the cast glass windows, 8 feet by 2 feet 6 inches. Our Engraving shows very distinctly the platforms, railway trucks, waggons, cranes, canal; and, without further explanation, will enable our readers to understand with what ease and rapidity goods can be laden or unladen, lifted from the canal, or shipped in barges.

The only part of this shed that our Engraving does not show is the stables, 300 feet by 30 feet, under each side of the goods platform, light, perfectly ventilated, and affording room for 300 horses to be employed in the delivery of coals, vegetables, meat, grain, and all goods and parcels carried by the rail.

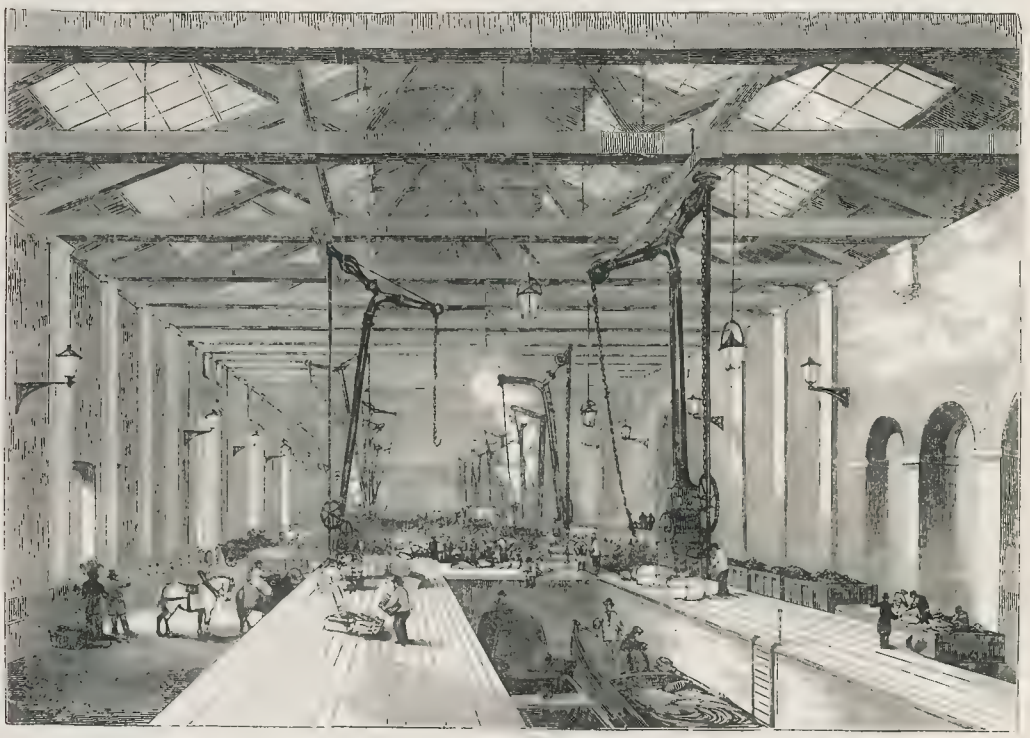
Nearly half the tonnage of the line is in grain, consisting of corn, chiefly from Lincolnshire. Until the opening of the Great Northern line, this corn was almost entirely conveyed coastwise, at great delay and risk of loss and damage. Now, within twenty-four hours it reaches its most distant market with the most perfect punctuality and safety by rail; and for the accommodation of this traffic the Company keep a stock of 100,000 sacks. The carriage of potatoes has reached 300 tons a week; hay, from 30 to 40 tons; carrots, as much as 20 tons a week; and, on a single market-day, from the neighbourhood of Biggleswade and Sandy, no less than 30 tons of cucumbers have arrived at the London stations. Vegetables can now be brought by rail from fifty to sixty miles off in as short a time, and as fresh condition, as by market cart from Barnet, Finchley, Greenwich, Hampton, or any place within eight to twelve miles of London. The rails, in short, give a radius of full fifty miles for metropolitan market-gardens; and, however great may be the present consumption of fruit and vegetables, there can be no doubt that it is infinitely below the wishes of the population. But the scarcity of such articles of food, in consequence of the narrow limits and high rent of the land on which they are grown, so raises the price as to place them out of the reach of the great majority of the population. And, for such extension of gardens, the railway affords still further facilities by carrying down in the returning coal-trucks, at a very low rate,

THE GREAT NORTHERN RAILWAY.

THE GRANARY. — SEE PRECEDING PAGE.

the fresh stable manure from London—an item of traffic as yet in its infancy, but which is rapidly gaining ground.

Our Engraving of the Goods-shed shows at one end the canal under the centre of the platform: the boats can thus come into the shed and have goods of all kinds passed to or from the railway trucks as the case may be. The canal [illegible] the Thames at Limehouse, and a branch line of rail is in course of construction to join the East and West India Dock line, so as, without any transhipment, to carry goods coming by rail direct to the ships.



THE GOODS SHED.

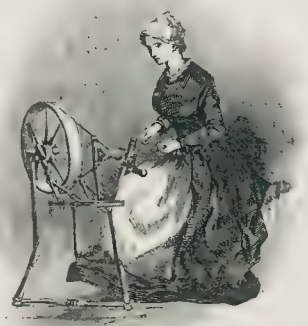
SCHOOL FOR THE INDIGENT BLIND.—FEMALES' WORK-ROOM.

THE SCHOOL FOR THE INDIGENT BLIND.

Among the various institutions, whose object, economy, and statistics at the present season of the year occupy so large a portion of the inhabitants of the metropolis and its visitors, there is none which has stronger hold upon their sympathies than the Asylums for alleviating the sufferings and diminishing the ignorance of the Blind. The largest institution, the School for the Indigent Blind, situated near the Obelisk, in St George's fields, was founded in 1799; yet Liverpool set the example to the metropolis in the first British Asylum for the Blind, established in 1791.

The inspection of the St. George's-fields Asylum, which is open to the public, will well repay the visitor. As a school of industry for instructing the inmates in various arts, with the view of wholly or partially relieving them from dependence on their friends, their parishes, or the temporary bounty of the benevolent, the Asylum we are about to describe has been very successful. To impart religious instruction is, however, a primary object; and this is conveyed, not merely by oral teaching, but also by means of books in raised or embossed letters, thus enabling the blind to acquire knowledge by their own exertions, and rendering them in some degree independent of their teachers. The Scriptures of both the Old and New Testaments, the Liturgy, together with several useful and instructive books, have been already thus printed. The education of the blind may perhaps be seen in fuller operation at the new school of the London Society for Teaching the Blind to Read, in the Avenue-road, St. John's Wood; and we understand that a well-organised society has been formed for printing and distributing books for the use of the blind. But our present purpose is to show by what efficacious means the employment of the blind is turned to account in St. George's-fields.

The school was originally commenced in a building which had been previously "the Dog and Duck" tavern, a low and profligate haunt, which supplied Hannah More with one of the scenes of her "Cheapside Apprentice" tract; and its sculptured sign-stone exists to this day in the front wall of Bethlehem Hospital, marking the site of the tavern. Here, for some time, only fifteen persons were received, and the institution was but little understood or supported. However, its promoters laboured on until the lease of the premises expired, in 1810; about which time they obtained from the City of London, to whom the ground belonged, a new lease of nearly two acres of land, for more extensive operations. Its principal frontage is towards the Obelisk, and here a plain school-house was built. In 1826, the school was incorporated; and in the two following years, three legacies of [illegible] and one of £1000 were bequeathed to the establishment. In 1841 additional ground was purchased, and the school-house was remodelled so as to form a portion of a more extensive building in the Tudor or Domestic Gothic style, designed by John Newman, F.S.A. The lofty tower and gateway in the north front are very picturesque; and right and left, for upwards of 270 feet, run the two main wings of the building. We will enter at the central door under the tower. From the head of the staircase the upper story of each wing is occupied by a wide and airy dormitory, each for about eighty pupils; returning, we find on the lower story, work-shops, class rooms, offices, central committee-rooms, &c. We then find the central position of the building to consist of a vast kitchen and offices, the chapel, and school-rooms; and, at the further boundary, the chaplain's house, more workshops, and music-rooms. In the rear is the play-ground, fitted with swings and gymnastic poles for the male pupils; and in the pleasant garden in front of the chaplain's house [illegible] delighted to see the girls and women enjoying all the ease and recreation their sad condition is capable of.



SPINNING.

We now return to the chief work-room. It is about 120 feet long by 30 wide; and in it, hard at work, may be seen upwards of seventy boys and men, all totally blind, making baskets, and in most cases cheerful and merry. Here are made and sold by thousands in each year, baskets, flower-stands, chairs, mats and screens, of various sizes and shapes. In a cleverly-written paper in the *Churchman's Magazine*, No. I., we find this interesting case, which will convey a general idea of the practice of the school:

That little boy, on the left, is a new comer. He is taking a first lesson from the foreman, and learning to split the withies. In a month from this time he will probably be able to make a rough market-basket. Two months ago he sat moping in a dark corner of a fisherman's cottage in Cornwall, in forlorn helplessness. Since then mind and body have begun to revive. He is bright, cheerful, and intelligent. He can now use his limbs, and begins to find out he has a mind—ay, and much more,—that he has a soul within him. He is learning to read, has mastered his alphabet, has commenced learning his catechism, has begun the blessed habit of saying daily prayers with his companions, and has heard God's holy word read and preached. *His education has commenced.* As he splits his withies he is very likely conning over the verses of a psalm, which his teacher in the school-room has read aloud in to-day's class. Altogether, you can see that he is learning to think, and is waking up to a new, active hope and better, life.

From this long room we pass through the washing-room to the shoe-shop, where may be seen about twenty more boys, all hammering, cutting, and sewing away. In this room are made and repaired shoes for the two hundred inmates, or thereabouts, of the school.

We now pass the weaving and mat-shops to the opposite side of the building, where we find another large room, of the same size as the basket-room. Here are upwards of seventy girls and women of all ages, but chiefly between fifteen and twenty-five years, returned from their garden walk, as busy and as cheerful as the boys and men. They are sewing, knitting, spinning, and making cords for window-blinds, &c.; and the well-

MAT-MAKING.

BASKET-MAKING.

informed writer in the *Churchman's Magazine* tells us that "the busy artisans of this room were once not a little pleased by hearing that her Majesty (the patron of their school) had ordered that her pictures at Buckingham Palace should be hung with this cord." In the extreme distance is a large glass-case, usually filled with works in silk and worsted. It had a place in the Great Exhibition of 1851, and well merited the distinction. Stockings for the whole school are made in this room; and here is also made and repaired all the household linen, besides purses, crochet mats, worsted rugs, and hair ornaments. Upon the right is the aboriginal spinning-wheel. It is the common remark of visitors how cheerful is the busy hum of this long room; and we agree with them. Every afternoon, at the appointed time, "look where you will, there is nothing to remind you of the gloomy darkness in which these poor but happy children pass the long days: they seem themselves unconscious of it." The women are remarkably quick in superintending the pupils; and both mistresses and pupils evince great animation and activity in their employment. They have mostly great taste and aptness for music; and they are instructed in it, not as a mere amusement, but with a view to engagements as organists and teachers of psalmody. Once a year they perform in a concert of sacred music in the chapel, to which the public are admitted: the proceeds being added to the funds of the institution. An organ and pianoforte are provided for teaching; and above each of the inmates of the males' working-room usually hangs a fiddle, so fond are they of playing.

The inmates of the school receive as pocket-money part of their earnings; and, on leaving, a sum of money and a set of tools for their respective trades are given to them. The pupils are clothed, lodged, and boarded, and receive a religious and industrial education; and many of them return to their families able to earn from 6s. to 8s. per week.

The several articles, we should observe, are admirably made; and the sale of the manufactures has produced in one year upwards of £1200. A "Blind School" door-mat we have found to last twice the time of a mat of ordinary make.

Applicants are not received under twelve nor above thirty years of age; nor if they have a greater degree of sight than will enable them to distinguish light from darkness. The admission is by votes of the subscribers; and persons between the age of twelve and eighteen have been found to receive the greatest benefit from the institution. The school is open to the public every Thursday; and we can scarcely imagine higher gratification to a philanthropic mind than a visit will afford.

LITERATURE.

(*Continued from page* 427.)

1. POEMS. By ALEXANDER SMITH. David Bogue.—2. POEMS. By EDWARD QUILLINAN. Edward Moxon.—3. THE SOLITARY, &c. By MARY BENN. Joseph Masters.—4. CHRISTMAS AT THE HALL, &c. By T. J. TERRINGTON. Longman and Co.—5. POEMS. By the Rev. CLAUDE MAGNAY. Pickering. 6. THE CHRISTIAN SABBATH. By JOSHUA RUSSELL. Houlston and Stoneman.—7. TEN POEMS. By HENRY RIDLEY. (No publisher named.)—8. THE POEMS OF GOETHE. Translated by EDGAR ALFRED BOWRING. John W. Parker.

Here is a goodly array of the votaries of Apollo, eager to scale the heights of Parnassus. Steep as is the ascent, bold adventurers are never wanting to seize at the laurel, which so frequently eludes the grasp. Repeated failures teach no warning lesson; and a very numerous class seem to imagine that the most difficult of literary achievements is the easiest. The distinction between versification and poetry is of very ancient date; but it has been unheeded; and, in defiance of Horace and Boileau, fresh victims continually devote themselves to self-sacrifice, querulously railing against the age in which they live as having degenerated, through material and mechanical pursuits. This is unjust, and very ridiculous. Mediocrity was never allowed to poets, though it may have been indigenously engendered by versifiers; and if the monster critics are hard to please, it is because their standard of taste is severe, through the study of perfect masters in the divine art. There is no retrogression, in an enlightened epoch, in arts or in any science; and where the law of progress ceases to act, it is evidence that a people are on the decline. So it was with the poets who succeeded the Augustan period; for, though they were applauded by their contemporaries, that was no proof of the excellence of their productions, but of the corrupt taste of their admirers. Invention is the rarest of the mental faculties; but it is essential to the poet, however smooth his verse—however brilliant his diction; without it he is but an imitator. As the world grows older, the struggle to wear worthily the poet's crown becomes more and more desperate; for the new candidate is sternly compared with those whose fame is imperishable; and great indeed must they be who pass with honour through so trying an ordeal. Passions, mental emotions, what feelings, have not been already illustrated? What external objects have not been personified? Where, then, shall the poet of our days seek his inspiration? He must quit the beaten track, and discover some unknown world of thought and imagery; and we, accordingly, have found, of late years, that strained efforts after originality merge into the erratic, sink into the burlesque, and sometimes reach that point which is nearer to the ridiculous than to the sublime. We have seen these remarks to soothe the anger of several of the writers, the titles of whose books are prefixed to this article: if we cannot praise their productions, we have at least assigned some consolatory reasons for the difficulty of their undertaking, though, indeed, without much hope that they will prove sufficiently acceptable to the *genus irritabile*. We would much rather commend than censure, but duty compels us to set on the well-known decision of Juvenal—"*Cum tot sibique satillus occurrere*."

If we are rightly informed, Mr. Alexander Smith is a very young man, about twenty-one years of age, and would, indeed, be a phenomenon were he perfect in his art. But the volume before us is strewn with beautiful passages, vivid images, and splendid diction. This gentleman has the divine *afflatus*, and promises to be a genuine poet. His principal subject, entitled "A Life Drama," appears defective in constructiveness. It is more than irregular, it is discursive to wildness, and is indeed merely a vehicle to convey the reminiscences and feelings of the writer. This fault is easy corrected; and we refer to it not in a censorious but a friendly spirit, for we expect much in a future production. We shall give specimens of his power, and many others of equal excellence will be readily discovered by those who read the poem, which we heartily commend to public patronage as a first effort, worthy of a generous encouragement:—

> The bridegroom sea
> Is toying with the shore, his wedded bride;
> And, in the fulness of his marriage joy,
> He decorates her tawny brow with shells;
> Retires a space, to see how fair she looks,
> Then proud, runs up to kiss her.
> * * * *
> See yon poor star,
> That shudders o'er the mournful hill of pines,
> Tyroud sinks make upon the moon, it seems to say
> 'Tis like an orphan trembling with the cold
> Over his mother's grave among the pines.
> Like a wild lover, who has found his love
> Worthless and foul, our friend, the sea, has left
> His paramour, the shore; naked she lies,
> Ugly and black and bare. Hark how he moans
> The pain is in his heart. Inconstant fool!
> He will be up upon her breast to-morrow
> As eager as to-day.
> * * * * *
>
> *Walter.* The sun is dying, like a cloven king
> In his own blood; the while the distant moon,
> Like a pale prophetess, whom he has wrong'd,
> Leans eager forward with most hungry eyes
> Watching him bleed to death: and, as he faints,
> She brightens and dilates: revenge complete,
> She walks in lonely triumph through the night.
>
> *Violet.* Even such hateful passion to the orb
> That cools the heated lands, that ripes the fields,
> While sleep the husbandmen, then hastes away
> Ere the first step of dawn, doing all good
> In secret and the night.

These passages indicate the true poetic temperament, deep in thought, fervid in language, glowing with rich imagery. One other short passage we cannot omit, for it is exquisitely beautiful. Walter meets a girl, and asks her to pray for him; she answers—

> Sin crusts me o'er as limpets crust the rocks.
> I would be thrust from every human door;
> I dare not knock at Heaven's.

From a memoir prefixed to the poems of Edward Quillinan, we learn that he was born at Oporto, in 1791, of Irish parents, educated in England, and designed for mercantile pursuits, but he entered the army. In 1821 he quitted the military profession, and took up his residence among the Cumberland lakes, where he became acquainted with Wordsworth; and, after the death of his first wife, married the sister of the poet of Rydal Mount. The editor of these poems does not claim for Mr. Quillinan the high rank of a poet, but praises the elegance of his versification; and to the modest eulogy we willingly subscribe, and are, indeed, disposed to place his merit at a higher elevation. His ballads are certainly of a superior order, such as the "Duke of Alba;" the "Moor of Granada and his Spanish Prisoner," a dialogue; the "Legend of St. Meinrad;" and "His Jacet Malleus Scotorum." Mr. Quillinan was an excellent Portuguese scholar, wrote an elaborate criticism on the works of Gil Vicente and the ancient Portuguese drama, and was engaged on a translation of the "Lusiad of Camoens." As a specimen of his caustic style, we give an extract from the "Wild Flowers of Westmoreland," where he describes an attorney; but we hope that few modern practitioners could sit for so ugly a portrait. A Westmoreland youth proceeds to London to win wealth:—

> Up through the slippery mazes of the law—
> That hollow, hideous, slime-covered pile,
> Which ends in jargon. Poor as he began,
> He long remained, but honest not so long.
> Keen student in a circumventive school,
> VILLAIN he soon became; and when that word
> Was writ in ink satanic on his mind,
> SATAN on his brow in capitals. He became
> So smooth all over—sentiment, voice, look.
> Were so quicksilvery smooth; and then his eye,
> Demurely bland, would ever and anon,
> Upturning, roll and quiver with a zeal
> So sanctimonious, and he so would make
> The trembling vowels bleat between his lips.
> And make some consonants so strangely twang,
> That many a worthy soul, devoid of guile,
> Was whirled into confidences rash
> And treacherous tolls of law: a fleecing caitiff,
> Fleece-clad, he keenly prowl'd among the flocks.

We now approach one of the fair sex, Mary Benn, but we know not whether to address her as maiden or wife. This lady gives abundant evidence in her poem of the "Solitary," that she has not only read, but studied "Childe Harold," and, we have little doubt, has committed many of its finest passages to memory. She tells us that "the scene of the following musings lies in the south of Ireland, on the borders of the counties Cork and Limerick," but we cannot discover very much of local colouring. One remark strikes us as curious. Addressing the famous Carthaginian general, Mary Benn exclaims:—

> Hadst thou in Erin courted victory,
> Stern Hannibal! thou ne'er had lost an eye.

On this delicate point, however unwilling to contradict a lady, we are somewhat sceptical, for it is generally believed that many heroes "courting victory" have met with similar accidents at Donnybrook fair. The stanza adopted in the "Solitary" is the Spenserian, and the poem may be classed among the didactic. It is a respectable performance, but we gladly bestow a higher commendation on Mary Benn's Carmina or Latin odes, which possess considerable merit—and we extend this praise both to the original and translated poems.

Mr. Terrington favours us with a short preface to his "Christmas at the Hall," in which he tells the public that "fame is a secondary consideration with him." All that he desires is to occupy a sphere of usefulness; and he presents his volume to the world, "to see how far criticism and public feeling may adjudge the author to possess poetic talents, which, if properly cultivated and assiduously applied, might be capable of producing works of a useful character and beneficial tendency." So much modesty disarms censure; but, as advice is distinctly asked, with a most worthy motive, we would recommend Mr. Terrington to devote his talents to some other pursuit. He is a very fair versifier, but assuredly he is not a poet. In his tale he supposes a party to meet at Christmas, at the hall of a hospitable country gentleman, and each of the company recites a short poem, several of which are interspersed and blended in the main story. At the conclusion of each recitation, there is a great applause, so that Mr Terrington has the ingenuity to secure a favourable judgment on his productions. Thus at page 47, when the audience have listened to the piece entitled "The Social Hearth," we are told

> At this sweet strain of poesy came forth,
> All felt its truth and beauty.

What more can Mr. Terrington desire? Nor is this a solitary instance; for all the other pieces introduced receive the same gratifying commendation. This is certainly a clever contrivance; but we remember something similar, in this fashion: *Populus me sibilat, at mihi plaudo.* However, we wish Mr. Terrington success in his literary career, and must speak favourably of the minor poems printed in the closing part of the volume—such as the "Fisherman," "Lines to the Sun," and "The Storm King," all of which are spirited and terse.

The Rev. Claude Magnay has quite mistaken his vocation. We respect the piety of his devotional feelings; but, *invitâ Minervâ*, let him not persist to embody them in verse. The didactic form has seduced too many to mistake their bent of their genius, and confound mere "sermones" with "carmina."

Mr. Russell is of the same school as Mr. Magnay, and has equally failed. Sacred poetry should soar as high as its lofty theme; and so it did in the Hebrew prophecies. Mr. Russell has a poem on "The Widow's Son:" and surely the resurrection of the dead should be described in the full sublimity of language. But how has Mr. Russell executed his task? Of course, he brings the Saviour on the scene, and thus writes:—

> With tranquil look He took his place;
> And then his solemn voice was heard:
> "Young man, I say, arise:"
> What wond'rous power was in the word!
> How great was their surprise

Surely, "I say" is vulgar in the extreme, and dragged in to eke out the line; while the last line is meaning grovelling bathos. Such diction degrades the subject.

The "Ten Poems" of Mr. Ridley are deeply imbued with a Christian spirit—fervent, yet melancholy, and even saddening. If we are permitted a conjecture, we should suppose "Midnight Thoughts" to be amongst his favourite books. The work will be acceptable to reflective persons in middle life, but it is too gloomy for the young. It is in blank verse—flowing, graceful, and occasionally energetic.

The last volume on our list is a translation by Mr. Edgar Alfred Bowring, of "Odes, Sonnets, Songs, Ballads, and Miscellaneous Poems," written by the celebrated Goethe. The task must have been a laborious one; if it was a labour of love, well and good. But we very much doubt whether his English version will attract new readers, and he who gets through the whole must be endowed with remarkable perseverance. It is an old remark that the spirit of an author evaporates in the process of transfusion from one language to another, and with such writers as Goethe, this danger is fearfully increased. We intend no harsh remark on Mr. Bowring in saying that the genius of a perfect translator should be nearly akin to that of his original; and this granted, then arrives the difficulty of rendering idioms for idiom. Unless this is surmounted, the zest and flavour are gone. Mr. Bowring may claim the merit of having paid homage to the greatest name in Germany; but perhaps he would have acted prudently had he been more choice in his selections.

MEMOIRS, JOURNAL, AND CORRESPONDENCE OF THOMAS MOORE. Edited by the Right Hon. Lord JOHN RUSSELL, M.P. Volumes III. and IV. 1853. Longman and Co.

The main value of the materials here accumulated lies in the illustration they afford of the private life of the time, and that of Moore in particular. One could have wished that these volumes had illustrated the relations between the poet and his great in the nineteenth century. But we should fatally err if we for one moment supposed that such here were the case. It was not as a poet that Moore sat as a guest at the tables of noblemen. His office was of a lower degree. His facility with the pianoforte, his command of a musical voice, made him a sort of professional companion—one whose services could be paid for in courtesy rather than in cash. In this relation, Moore, as we learn from the revelations before us, saw his profit. At such parties he could and did sing his own songs; and this circumstance he tells his publisher, was better than all the advertisements in the newspapers. No doubt of it. In other passages of his life we perceive, also, the ready trader. In everything, the clever, witty little versifier had an eye to business—and hurled his wit through the world with sufficient tact and acumen. Truly, the character of Moore was not dignified; and Lord John Russell has not spared it, by suppressing the evidences of this unflattering fact. We have here the unmutilated record, and may see the man as he was. We could have wished that both he and his patrons had been far other than they were. The ideal of the literary character had evidently never been conceived by either party.

The third volume of these Memoirs opens with an account of Mr Moore's travels in Italy, accompanied by Lord John Russell, Chantrey the sculptor, and Jackson the painter. The scenery of Mont Blanc and of the Simplon excited his admiration; but we meet with small power of description in the diurnal narrative. The impression of the moment is stated, but there is no minute painting. The playhouse and the opera are interesting to him, perhaps more so than the barest or wildest of the scenes of nature. The following is characteristic of the details in which the journalist delighted:—

October 1st. Left Como at nine, and arrived at Milan between two and three. Passed on the way the splendid villa called Monte Bello, where (Gaisginani says) the treaty of Campo Formio was signed. Went to the bankers' and the post-office; but no letter from home. Dined with Lord Kinnard: company, Silvertop, and a Colonel Browne, attached to our embassy at Vienna. Two Englishmen were robbed the other evening coming into Milan: nothing but robberies in the environs, and the police will give no assistance to apprehend the robbers. The fact is, Kinnaird says, the police is managed by contract, and they go to as little expense of course as they can. Colonel Browne mentioned the great wealth of Esterhazy—I think, £400,000 sterling a year. The condition of its tenure is, that every Esterhazy shall add £50,000 worth of jewels to the family stock; accordingly, the accumulation is immense. Colonel Browne saw Esterhazy and his wife at a ball, when they each had jewels about them to the amount of £500,000. In the evening we went (by great favour) to a *prova* or dress rehearsal of a ballet that is to come out the latter end of next week. We went as the party of the Comtesse di Bubna, wife of the Austrian Commander-in-Chief there. The ballet allegorical and unintelligible; but the theatre very fine, and the decorations beautiful. The subject was the "Four Ages." The Archduke Rayner (for whom the rehearsal was got up) was in his state box, and this was the only part of the house lighted up. The Palerine is the chief danseuse, or rather pantomime actress, and has a good deal of grace.

Trifles are, it is only too evident, congenial to the mind of the "little" vain author, who is continually boasting of Lord John's companionship. "Dined with Lord Kinnaird; only Lord John and myself." Think of that. Here is Moore's greatness—here his mind feels itself at home, "the world shut out."

Some criticism upon works of art at the different studios which Moore visited is in good taste. There are also several amusing particulars of the progress of "The Fudge Family in Italy." Thirty lines a day he seems to have considered rapid composition. But this was not fast enough to keep promise with the public; owing to which he complains that he is "too pressed for time to do justice to the humorous part, must therefore only publish it as a journal." In the entry from which we have just extracted, Moore speaks of a party at Madame de Flahault, saying—"Flahault sung, and so did I; very nervous about it. If I had given way, should have burst out a-crying, as I remember doing many years ago at a large party at Lady Rothes's. No one believes how much I am sometimes affected in singing, partly from being touched myself, and partly from an anxiety to touch others." This sensibility is characteristic both of the poet and artist. We get, too, some hints of the destroyed memoirs of Lord Byron. There were clearly statements in it against Lady Byron, which her Lord was desirous she should, if she could, confute—but the lady refused to peruse the MS.

The conception, and in part execution, of the proposed poem of the "Epicurean" are duly recorded: the same also of an Irish melody or two. A paragraph on one of these contains an amusing anecdote of Hazlitt:

9th. Began another Irish melody. Dined late. Kenny told me that John Lamb (the brother of Charles), once knocked down Hazlitt, who was impertinent to him, and on those who were present interfering, and begging of Hazlitt to shake hands and forgive him, H. said, "Well, I don't care if I do. I am a metaphysician, and do not mind a blow; no one but an *idiot* hurts me."

The following strain is of a higher mood:—

We dined alone with our little ones, for the first time since the 1st of July, which was a very great treat to both of us; and Bessy said, in going to bed, "This is the first comfortable day we have had for a long time." I sat up to read the account of Goethe's "Doctor Faustus" in the "Edinburgh Review." Admirable! and, before I went to bed, experienced one of those bursts of devotion which, perhaps, are worth all the church-going forms in the world. Tears came fast from me as I knelt down to adore the one only God, to whom I acknowledged and poured forth the aspirations of a soul deeply grateful for all his goodness.

Afterwards we are introduced to Wordsworth

24th. Went with Bessy to market, and afterwards called upon Wordsworth. A young Frenchman called in, and it was amusing to hear him and Wordsworth at cross purposes on the subject of "Athalie;" Wordsworth saying that he did not wish to see it acted, as it would never come up to the high imagination he had formed in reading it, of the prophetic inspiration of the priest, &c.; and the Frenchman insisting that in acting alone could it be properly enjoyed—that is to say, in the manner it was acted *now*; for he acknowledged that till the corps de ballet came to the end, it was very dull, even on the stage—*une action morte*. Saw Wordsworth's wife; she seems a comfortable sort of person enough. A note came from Lady Mary while I was there, to offer us their seat in her box at the French play; and the struggle of Wordsworth (who had already arranged to go with his wife and sister there) between nobility and domesticity was very amusing. After long hesitation, however, and having written one note to say he must attend his wife, *my* Lady carried it, and he wrote another accepting the seat. I should have liked well enough to have gone myself, but this was our dear little Tom's birthday, and I had promised to pass the evening at home. Walked with Wordsworth, who was going to call upon Canning and finding that Canning expected him, by his having left his name and Peel's with the porter, did not go up. While I was at dinner, a note arrived from Canning, to ask me to dinner to-morrow. This is excellent! Can he ever have read the verses in the later editions of the "Fudge Family"? I fear not. Wrote to say I should have the honour of waiting upon him.

A little further on we meet with a characteristic touch:—"Wordsworth rather dull. I see he is a man to hold forth; one who does not understand the *give* and *take* of conversation." One of his holdings forth is recorded, and the topics were pregnant with meaning. As a contrast to this, take an anecdote of Sheridan:—

Lord John told us a good trick of Sheridan's upon Richardson. Sheridan had been driving out three or four hours in a hackney-coach, when, seeing Richardson pass, he hailed him and made him get in. He instantly contrived to introduce a topic upon which Richardson (who was the very soul of disputatiousness) was very differently with him; and Sheridan, affecting to be mortified at R.'s arguments, said, "You really are too bad; I cannot bear to listen to such things; I will not stay in the same coach with you;" and accordingly got down and left him, Richardson hallooing out triumphantly after him, "Ah, you're beat, you're beat!" nor was it till the heat of his victory had a little cooled that he found out he was left in the lurch to pay for Sheridan's three hours' coaching.

In all his references to his wife, Moore expresses the utmost affection; and, indeed, states that after ten years' marriage, they were still more like lovers than any married couples of the same standing he was acquainted with.

The Bermuda business occupies a great deal of space, but there seems to be so much false sentiment and twaddle about the whole affair, that we are not disposed to waste sympathy on it. Moore spent a happy time in Paris; was fêted, flattered, and flustered out of his propriety; so that, in his exile, he was not to be pitied. Similar remarks are provoked by the Byron memoir affair—a breach of trust in all respects unjustifiable.

Of contemporary poets, even of Byron and Shelley, Moore formed an inadequate notion. The latter he condemns for atheism, clearly not understanding his merits or his opinions. In all things, we perceive the shallow, trifling mind. At the same time, the amiable traits are many. Moore is clearly no hero, but he is a man of society, and the name of honour is dear to his heart; but, then, it is in the sense in which the man of the world understands it, and is recognised as the means of sustaining his social position.

In regard to his poem, "The Loves of the Angels," a curious circumstance attended its announcement:—

Dec. 1st. Sent off the first sheet through Croker, who had offered me the use of his franks in town. This same day announced originally for the publication; and some people asked the Longmans (who, of course, were not aware that the 1st fell on a Sunday), whether the poem was so very sacred, that nothing less than a Sunday would do for its publication.

Moore's nervousness in regard to this poem was extreme, and the squeamishness of some of his friends scarcely less so. To use his own words, his "book was considered improper." In his own opinion, it was the best thing he had ever written. Lord Lansdowne's opinion, also, was favourable.

Moore's portrait of Wordsworth we have given: we now present the reader with his impressions of Coleridge, Charles Lamb, and their friends.

Dined at Mr. Monkhouse's (a gentleman I had never seen before), on Wordsworth's invitation, who lives there whenever he comes to town. A singular party: Coleridge, Rogers, Wordsworth and wife, Charles Lamb (the hero, at present, of the "London Magazine") and his sister (the poor woman who went mad with him in the diligence on the way to Paris), and a Mr. Robinson, one of the *minora sidera* of this constellation of the

Lakes, the host himself, a Mecænas of the school, contributing nothing but good dinners and silence. Charles Lamb, a clever fellow certainly; but full of villanous and abortive puns, which he miscarries of every minute. Some excellent things, however, have come from him; and his friend Robinson mentioned to me not a bad one. On Robinson's receiving his first brief, he called up Lamb to tell him of it. "I suppose," said Lamb, "you addressed that line of Pope's to it, 'Thou *first* best *cause*, least understood.'" Coleridge told some tolerable things. One of a poor author, who, on receiving from his publisher an account of the proceeds (as he expected it to be) of a work he had published, saw among the items, "Cellerage, £3 10s. 6d.," and thought it was a charge for the trouble of *selling* the 700 copies, which he did not consider unreasonable; but, on inquiry, he found it was for the *cellar*-room occupied by his work, not a copy of which had stirred from thence. He told, too, of the servant-maid where he himself had lodged at Ramsgate, coming in to say that he was wanted, there being a person at the door inquiring for a post; and on his going out he found it was a pot-boy from the public-house, whose cry, of "any *pots* for the Angel," the girl had mistaken for a demand for a post. Improbable enough. In talking of Klopstock, he mentioned his description of the Deity's "head spreading through space," which, he said, gave one the idea of a hydrocephalous affection. Lamb quoted an epitaph by Clio Rickman, in which, after several lines, in the usual logrot style of epitaph, he continued thus

> He well performed the husband's, father's part,
> And knew connexion dearer than the heart.

A good deal of talk with Lamb about De Foe's works, which he praised warmly, particularly "Colonel Jack," of which he mentioned some striking passages. In collecting the works of the Dunciad heroes, Coleridge said that Spenser is the poet most remarkable for contrivances of versification: his spelling especially, and the mode of *printing* it, as in putting sometimes "spake," sometimes "spoke," as it fell best on the ear, &c., &c. To show the difference in the facility of reciting verses, according as they were skilfully or unskilfully constructed, he said he had made the experiment upon Beppo and Whistlecraft (Frere's poem), and found that he could read three stanzas of the latter in the same time as two of the former. This is absurd. Talked much of Jeremy Taylor; his work upon "Prophesying," &c. C. Lamb told me he had got £170 for his two years' contributions to the "London Magazine" (Letters of Elia). Should have thought it more.

It is clear that Moore could not understand the men whom he thus describes. A great gulf divided their minds from his. He had before acknowledged that he could not interpret Wordsworth's eulogy of "Christabel." So various is taste; so indisputable its tendency.

As friends of mendacity, we fear that the two volumes of Moore's diary before us will disappoint the reader. For the most part, it is but a mere record of dates and visits received and returned. But the value of such a journal is not the enhancement of interest which it adds on its first publication, but the information it affords long subsequently. A mere item of a morning call, with the persons present, or of a dinner party, may serve hereafter to settle an important date in some historical work. And this utility in *future* may well serve to atone the want of present amusement.

Full credit, however, cannot always be given to journal entries of this kind, particularly when the small talk of certain conversational coteries is concerned. One example of this kind has just received proof. Moore, in a letter from the Marquis of Londonderry to "the Editor of the *Times*," complaining of a statement in the Diary, dated June 16th, 1825; which statement was made at a breakfast at Rogers's to the effect that Sir Robert Wilson was instrumental in the gaining of the Battle of Leipsic and that "Lord Castlereagh, in sending over to Lord Stewart the public document containing the order for thanks to Wilson, among others, on the occasion, accompanied it with a private one, desiring Lord Stewart (now Marquis of Londonderry) to avoid the thanks to Wilson as much as he could, in order not to give a triumph to his party. Lord Stewart, by mistake, showed this letter, instead of the public one, to Wilson, who has had the letter ever since in his pocket, ready to produce whenever called for." To this statement the Marquis gives an explicit denial, which he corroborates by a letter from Mr. John Bidwell, chief clerk of the Foreign-office, who "saw and read all his Lordship's letters and despatches." Doubtless, many more of these unintentional slanders will be discovered. Such a book as this must contain many; and the parties interested should, like the Marquis of Londonderry, "keep their weather-eye open."

EXTRAORDINARY MEN: THEIR BOYHOOD AND EARLY LIFE. By WILLIAM RUSSELL, Esq. Ingram, Cooke, and Co.

Though it is not stated, it can hardly be doubted, that Wordsworth's celebrated line, "the boy is father of the man," was the parent of this book. "The earlier portion of the lives of extraordinary men must have been," says Mr. Russell, a greatly influencing one, whether for good or for evil—without the careful study of which an accurate appreciation of the hero's man-life can hardly be attained." He, accordingly, gives "brief, unpretending sketches" of the boyhood of twenty two celebrated men—including Michael Angelo, Luther, Galileo, and Oliver Cromwell—which embraces poets, painters, mathematicians, generals, and preachers. No heroic class seems omitted. But many individuals might be added. The sketches are spirited, strictly confined to the period of life mentioned, and will probably be much read when more elaborate biographies may be laid down as prosaic and insipid. One great advantage of such sketches is, to place in bold relief the natural peculiarities of distinguished individuals, and trace the genius of the man to the colour of his mind in the child. It is impossible to read of the fervent aspirations of the boy Michael Angelo to attain excellence in art, and of the affectionate queries of the child Mozart, "Do you love me?" without feeling in the different manner of the two men, as they were differently created, the sources of their peculiar powers. Let us copy from the book a little trait of each:

> Michael Angelo possessed the faculties of reverence and wonder in a high degree—had it not been so, the marvels of his artist life could not have been accomplished; and the fierce diablo horoscope having been placed in his hands when he was just turned of thirteen years of age, it is not surprising that his unripe judgment was momentarily imposed upon, and that he retired to his turret chamber in the castle in a state of great agitation and distress. Night arrayed in the cloudless silver sheen and dazzling diadem of stars she wears in southern climes, surprised him, whilst still irresolutely pondering the fateful horoscope, and invited him to come and look forth with his own eyes upon the planet-scroll, wherein it was said his destiny was to be read; and presently, overwhelmed by the awe that of the ruling heavenly bodies he had been reading of, Mars alone, and in unusual splendour, was visible, he forthwith so runneth the story —declared resolved to walk for the future by the light of the hero-star, whither soever it might lead him!

> Woefer especially, from his earliest days, was one of the gentlest, most affectionate, loveable of children. Ever, as soon as he could lisp the words, his first impulse, upon the entrance of strangers, was to totter towards them, and ask with his beseeching eyes, as earnestly as with his tongue, if they loved him: "Do you love me?" and if the question was replied to coldly or indifferently, his little heart broke for fear.
>
> In the one was a stern conquering genius, in the other a soul subdued by love, and giving forth love in melody. The book which contains these and a great number of similar anecdotes of the boyhood of great men, affords valuable materials in its interesting pages for much philosophical reflection.

NARRATIVE OF A JOURNEY ROUND THE WORLD. By F. GERSTAECKER

Three volumes. Hurst and Blackett.

Voyages round the world have now become almost as frequent as voyages between Newcastle and London. Mr. Gerstaecker started from Hamburg for California, left the ship at Rio; went from a small colony to Buenos Ayres; crossed the Andes to Chili in winter—an arduous undertaking; embarked again at Valparaiso for San Francisco, sojourned some time in that gold region; departed thence for the Sandwich Islands; lived with the natives; trusting himself with three of them, in a frail boat, he visited Tahiti; proceeded to Australia, roamed about the colonies there; sailed to Java, where he investigated all that is curious in the island to entertain Europe. Mr. Gerstaecker has not made any discoveries to communicate to the world: he is not, like most of his countrymen, deeply versed in the natural sciences; but he is a bold, daring, kindly, active man, with all the vigour and freshness of young manhood: he encounters dangers fearlessly, and braves hardships and submits to privations with much cheerfulness. He tells all his adventures, and describes all he sees, in a vigorous, racy manner. His style is lively and picturesque, like that of his countrymen. His work is more like the production of one of our first-rate literary men, than of a caretaking, plodding German. It is so sparkling and so polished in places, that it generates a suspicion of unreality; and we almost doubt, as we read it, whether the traveller has not been aided by a professed and spirited author. We could fill our columns with quotations from almost every page—giving a graphic description of the Buenos Ayreans, with their disgusting slaughter-houses, of the Gauchos and their steeds, of the wild galloping across the Pampas, and of the painful but sublime crossing the Cordilleras, of the struggles and quarrels of the miners of California, of the beautiful pastoral and simple life in some of the South Sea Islands, and of bush life in Australia, of rhinoceros hunting in Java, and of the colonial Government of the Dutch; but we have not space for much, and a short extract or two would not suffice to give a fair idea of the multifarious entertainment the reader will find in the book. Everything is touched with a light and graceful hand; and, without adding very greatly to our stores of solid information, it is one of the most pleasantly-written books of travel that has for a long time fallen under our notice.

EIGHTEEN YEARS ON THE GOLD COAST OF AFRICA; including an account of the native tribes, and their chief intercourse with Europeans By BRODIE CRUICKSHANK, Member of the Legislative Council, Cape Coast Castle. Two volumes. Hurst and Blackett.

Mr. Cruickshank arrived on the coast of Africa, and landed at Cape Coast Castle in 1834, where he appears to have remained till the middle of 1852. His work says very little, though its title would lead us to expect much, of what he actually saw and did in these eighteen years, nor what was his business. He is a member of the Legislative Council at Cape Coast Castle, and he has exerted his "extensive influence in favour of Christian civilisation;" we learn incidentally that he has been commandant of the fort of Anamaboe; and we are told expressly that he was at Cape Coast Castle, on his way to England, in 1838, when Mrs. Maclean (L.E.L.) so suddenly and unexpectedly died. He has obviously had great opportunities for acquiring information concerning the Gold Coast, and his book is exclusively occupied by that. He commences by a description of the coast: "Its sunny skies—its never verdant freshness of vegetation—its wild jungle tracts—its mineral wealth—its gloomy forests, its abodes for idolatry and superstition—investing it with an indescribable charm of vague and wondering curiosity," which is pretty nearly all he tells us of its physical features. After a few words on the civilisation of Africa, he supplies us with a condensed history of the coast from the fifteenth century till the present time, including the trivial and dreary wars of the native chiefs with one another, and with the whites. The bulk of the book consists in a history of the effects of the introduction of the whites with the negroes; of the manners and customs of the natives; the origin of slavery; their progress towards civilisation—for even they have made progress; and is unquestionably the best account yet published of the present and present condition of the inhabitants of the Gold Coast. For the moment a considerable interest is attached to the subject, for our countrymen there are again threatened by the Ashantee aggression that previously broke forth in the public journals that England should extend her dominion in this part of Africa over a wild people. The feasibility of such a project, and the probable causes of the rupture, with the condition of our countrymen on the Coast, may be better learned from this than from any other book. Of personal matters, the only interesting part is the narrative Mr. Cruickshank gives of all the circumstances attending the death of Mrs. Maclean. It is too long for us to transcribe; and we can only refer such of our readers as wish for the information to the book itself.

AUSTRALIA VISITED AND REVISITED. A Narrative of Recent Travels and Old Experiences in Victoria and New South Wales. By SAMUEL MOSSMAN and THOMAS BANISTER. With Maps, by A. K. JOHNSTON. Addey and Co., Old Bond street.

It is not likely that the public will be surfeited with books on Australia as long as it feeds the voracious appetite for gold; and certainly authors are of late supplying the insatiable monster in a most copious manner. Messrs. Mossman and Banister, however, say a good deal about the gold, and have a tempting map at the beginning of their book, in which large dots and streaks of yellow designate the regions that the emigrant is sure to be enriched, the staple of their work is a quiet visit to the agricultural portions of the colonies, and a description of the manner in which fortunes were made and the colonies prospered before the gold was discovered—and in which they will prosper hereafter, when the gold is exhausted, or the appetite for it satiated. In 1830 New South Wales contained about 55,000 people; in 1851 they had increased to 273,168. At the former period the total value of the imports was £420,489, and of the exports £141,461. In 1851 the former had risen to £2,619,931, and the exports had reached the imperial sum of £3,219,862. The reader will easily imagine the immense number of houses which must have been constructed—the style of building from the log hut upwards on to lodge the large increase of people: the number of acres of land that must have been cultivated, or occupied by their cattle, to feed so many people; and to supply half a million of sheep, and 50,000 head of cattle per annum to be boiled down for the sake of their tallow; and to send upwards of 40,000,000 lb. of wool to England in a year: and will easily comprehend, by noticing what occurs amongst our own slowly-increasing population, how vast must have been the change in New South Wales between August, 1830 and 1851. It is from marking these differences, and describing the steady industry which, before the gold was discovered, had prepared Australia to be a comfortable home for millions of people, that the book of Messrs. Mossman and Banister is chiefly valuable. It is a plain, pains-taking, rather plodding description of their visit to the Diggings, to various sheep and cattle stations, and to several different towns; also of the present state of the country, and of the mode of living of the great classes of the population, and the rest of the people. This is a fair specimen of the general descriptions which the reader will find in the work.

> During our journey along the main roads of the two provinces, we encountered a travelling population, which equally surprised and delighted us. The great traffic and bustle of people *en route* to and from the various gold-fields was oftentimes a stirring and animated sight: the men, women, and children, on horseback and on foot, in various descriptions of carriages, carts, and drays, thronged the highways of the interior, independently of mail-carts and other means of postal communication between the various inland post-towns and the capitals of each colony, besides the flocks and herds seen in every direction; so that the supposed desolateness and solitariness of the interior does not exist to anything like the extent that it is supposed to do. It was thus throughout most frequently where there are well built stone, brick, and wood houses; with the usual public buildings which constitute a Government township in Australia, occasionally having some pretensions to beauty of architecture. In these towns, likewise, you will find all the elements of what constitutes agreeable society, as established in the most refined towns and cities in the mother country. Occasionally, also, you meet with, in well-chosen spots, the residences and homesteads of the squatters and other settlers, who live away from the busy world, in some of which great taste is displayed.

And this is a specimen of an individual's progress:—

> Eleven years ago (he said) I commenced the business of an Australian squatter, with 4000 sheep, for which I gave £4000, including the right of the run, and a few horses and bullocks, with a dray. This season I shall shear 30,000 sheep; and I have 1200 head of cattle, and 100 horses, besides the improvements on the station, for which I have received an offer of £10,000. The natural increase of stock since that time. About all things I would like to say, I should not have a word to say against the country, but for the absence of the comforts derived from religious worship. The number of churches and clergymen is totally inadequate to the requirements of the population. In the capital of the country we spend money, and moreover. In the bush I have been enabled to put practical the good precepts, and I never regretted that I should have come to Australia; this rude occupation that I am about, took it from off the quill and the desk for the sheep-shears and the stock-whip, and I'm the life of a squatter has made a better man of me, both mentally and bodily. Instead of being a pale and sickly ghost, toiling out the dingy courts of law, earning nothing more than a living for myself and family, here I am, as you see, a stout, all-healthful man, from which the gentle air expands to our glorious climate, and able to ride round my run, a distance of fifty miles, in six hours, while "I am master of all I survey."

The book has the great merit, for a work on Australia, of being free from exaggeration; and stating facts in a clear, though sometimes homely way.

DIGBY GRAND. An Autobiography. By G. S. MELVILLE. Parker and Son.

This book is a reprint, from *Fraser's Magazine*, of a very clever novel—or, rather, of a series of clever sketches under the name of a novel. It is entirely wanting in that continuity which the reader has a right to expect in a novel. We are not quite sure whether the author had any more ambitious object than furnishing amusement for a few hours, but if he intended to disgust his readers thoroughly with some of the worst forms of society in England, we must do him the justice to say that he has carried it out to perfection. The pictures presented in "Digby Grand" of young gentlemen at Oxford, in the Guards, in other cavalry regiments, and above all, at Ascot, Epsom, &c., are nearly as effective as any we ever met with. The father of the hero, a fashionable gentleman of George the Fourth's time, began the ruin of his family; and the son follows his example. In a long course, commenced before he was eighteen of gambling, betting, horse-racing, and of many other follies and vices less mentionable, he reduces himself at last to the condition of a penniless, friendless, and homeless beggar. We have but glimpses of the connecting links of the story, and the only gratifying circumstance in the life of Digby Grand is, that after seeking in vain for happiness in fashion, pleasure, and vice, he finds it at last in rational industry. A salutary lesson is thus conveyed quite in the spirit of the times, and therefore likely to prove acceptable.

THE AUTOBIOGRAPHY OF A MISSIONARY. By the Rev. J. P. FLETCHER. Two volumes. Hurst and Blackett.

The author of this work is of opinion that the want of the age "is a series of tales free from party opinions, yet delineating accurately and correctly the scenes, habits, and sentiments of the age we live in—tales in which most of the personages introduced should be, in the best sense of the world, Christians, yet able to open their mouths without deliverating a sermon; tales which might show the gradual quiet influence of religion down the mind, without dabbling either in either fanaticism or Pharisaism, and which every father of a family might, without hesitation or fear, place in the hands of his daughters." Such is the work which, we suppose, Mr. Fletcher has attempted in this autobiography. It is a sort of religious novel, not without merit, with little sense of character or description, but written in a free and facile style. Here and there, too, there is a touch of satire. The aim of the narrator would appear to be to expose, first, the absurdity of the working clergy in England being expected to live by something else than the altar at which they serve—by schoolkeeping, for instance—in consequence of which they have not leisure to establish a proper relation between them and their flocks; secondly, the real misery of apparently respectable and well-to-do people among the middle ranks; and, thirdly, to show that the religious sentiment is consistent with great differences of individual character. Those details are wrought out with considerable skill; and some of the Oriental scenes and situations are depicted with much humour.

A SURVEY of the SYSTEM of NATIONAL EDUCATION in IRELAND. By CHARLES BUTTON, Esq
JOHN MURRAY, Albemarle-street

NOTICE. The New and Improved Edition of

BURKE'S PEERAGE and BARONETAGE
FOR 1853,
Is Now Ready.
In one vol. royal 8vo, comprising as much matter as twenty ordinary volumes, with 1200 accurate Engravings of Arms. Price 38s. bound
The new and thoroughly revised edition has engaged the author's closest attention for a considerable time. Every page of its voluminous contents has been perused by the most minute research, and every page has been submitted to the members of the various noble and eminent families themselves. Pens, errors that have for years existed in Peerage Histories, have been discovered and corrected, and much additional information hitherto obtained of the deepest interest. The obsolete branches, too, have been fully investigated and inserted. In addition to these improvements have been made in the Heraldic illustrations, and arrangement of the printing, &c. On the whole, it is confidently presumed that the new edition of the celebrated national work will be found the most comprehensive, most interesting, and most perfect history of the titled classes ever produced.
Published for HENRY COLBURN by his successors, HURST and BLACKETT, 13, Great Marlborough-street.

GREAT ILLUSTRATED LITERATURE.
Now ready, Part I., price 1s.,

Edward Petre, [illegible] Sir Richard Sutton, Bart., [illegible] Sir Thomas Fairfax, Bart., [illegible] Sir Thomas Hesketh, Bart., [illegible] Sir Thomas Mostyn, Bart., [illegible] Sir Thomas Pilkington, Bart., [illegible] Sir Thomas Stanley, Bart., [illegible] Sir Thomas Tempest, Bart., [illegible] Sir Thomas Wilson, Bart., [illegible] Sir Thomas Wrightington, Bart., [illegible] Sir Thomas Wynn, Bart., [illegible] Sir Thomas Wynn, Bart., [illegible] Sir Thomas Wynn

THE ILLUSTRATED LONDON NEWS.

No 625.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY JUNE 4, 1853. [TWO NUMBERS, 1s.

THE TURKISH QUESTION.

THE Sultan has proved firmer than Russia anticipated. He has definitively refused the ultimatum of the Czar, and Prince Menschikoff has left Constantinople. All Europe is anxious to know what will be the next movement. The sensitive Bourse of Paris imagines that nothing less than a European war will be the result. Consternation prevails among the monied classes in that capital. So unusual is the excitement, that M. Granier de Cassagnac—the avowed spokesman, or penman of the French Government—has received orders to rebuke the Parisians for the senseless panic that has possessed them. In London, speculators, though sufficiently accessible to the influence of facts, and even rumours of great political importance, look upon this matter with more calmness than the Parisians, and scarcely anticipate so calamitous a catastrophe. Yet it must be owned that the situation is one of extreme peril. It has hitherto been the custom to extol the Emperor of Russia for his prudence and moderation. Within the last ten or twelve years he has given more than one proof of the possession of these high qualities. It cannot, however, be admitted that his present conduct towards the Sultan partakes, to the smallest extent, of either of them. Immoderate and imprudent are the very mildest epithets that can be employed to designate the demands which Prince Menschikoff was instructed to urge. No Monarch with a particle of manly or independent feeling, or with the slightest appreciation of the rights and dignity of the nation which he governs, could have acceded to a claim so preposterous as the Protectorate of an alien and inimical power over so large a portion of his subjects. The refusal of the Sultan, whatever may be the consequences, will raise him in the estimation of all Europe.

It is an old and trite proverb, that it is much easier to begin a quarrel than to end one. It is probable that the Emperor of Russia will discover the truth of this saying to his cost, whether the result of his intemperance towards Turkey be peace or war. If his object be peace, he has gone too far to escape, or even to recede without considerable difficulty, from the dilemma into which he has thrust himself. If his object be war, the chances of the issue are so terribly against him, notwithstanding the apparent weakness of the Turkish empire, that the world would be more justified in questioning his sanity than his prudence, if he finally determined to risk a European convulsion at such a time, for such a cause, and under so unjustifiable and outrageous a pretext.

But it is not alone the Czar that is to blame. The Emperor of the French is almost, if not quite, as much to be condemned for the unhappy turn which affairs have taken. Had Napoleon III. not himself urged inopportune claims against Turkey, had he not manifested so keen a desire to court a Russian alliance—had he not resorted to diplomatic arts and manœuvres to obtain so poor a tribute to his vanity as an autograph letter of congratulation from the Emperor Nicholas—had he not shown too palpably his sentimental sympathy with those military and prejudiced Frenchmen who look with hatred on the English nation, the Emperor of Russia would have been more cautious and temperate in his proceedings against the Sultan. It was Louis Napoleon that fanned the flame of his ambition. With disunion or discord between the Governments of Great Britain and France, the Russian Emperor rightly deemed that Turkey might fall an easy prey. The estrangement or hostility of two such nations is the hope and the opportunity of Absolutism. The unprovoked and unjustifiable insult which Austria has simultaneously offered to the Swiss Confederation, betrays as clearly as the Turkish *imbroglio* the animus of the despotic powers. There is reason to believe, however, that both of these assaults upon inoffending nations will prove to have been miscalculations, and that the aversion once entertained by the French Emperor towards an English alliance has given way to a sounder policy. The Turkish Government, in the unexpected vigour which it has displayed, has received the cordial support of the British Ambassador at Constantinople. We learn from a statement made to the House of Commons by Lord J. Russell, that Lord Stratford de Redcliffe has acted throughout these delicate and difficult negotiations in perfect accordance with the Ambassador of France. We infer, and every circumstance that transpires tends to confirm the belief, that as much cordiality exists between the two Governments as between the two Ambassadors. If such be the case, the Russian Emperor will scarcely venture upon a conflict in which Turkey would have two such defenders, to say nothing of the strong current of sympathy which throughout all Europe, except in the councils of one or two absolute Sovereigns, would declare itself against him. Strong as his cupidity may be—anxious as he may feel to draw the sword, and to seize the long-coveted provinces, and the capital of his neighbour—he will pause ere he encounter so heavy a responsibility. France, as all the world knows, has long been, upon the war footing, ready for any emergency. Great Britain, it appears, is in the same position. Great military authorities declare that our army is at a high point of efficiency, and Admiral Napier, a naval authority, than whom we possess none more competent to form an opinion, assures us that our navy was never in a better state than now. It is to be hoped that the services of neither will be required, not for the sake of one country only, but for the sake of all Europe, and for the great interests of civilisation and humanity that would be imperilled by a war. The situation is, indeed, a critical one. When we think what mighty issues depend upon the temper and the fallible judgment of one man, we cannot but dread that the temper may be unfortunately excited, and the fallible judgment misdirected—by pride upon the one hand, and by ambition upon the other. Whatever may ensue, a good understanding between England and France will prevent the success of a *coup de main* upon Con-

THE NEW ARCTIC EXPEDITION IN SEARCH OF SIR JOHN FRANKLIN.— H.M. SCREW STEAM-SHIP "PHŒNIX."—(SEE NEXT PAGE.)

stantinople, should so desperate an expedient enter into the mind of the Russian Emperor. But this is not likely. The present cost would be too great, and the future issues too uncertain. And although Prince Menschikoff has departed from Constantinople with as ill a grace as he entered it, to carry to his master the disagreeable intelligence that Turkey yet aspires to stand erect, and the Sultan to have a will of his own, the astuteness of diplomacy will probably discover some medium by which Turkey may concede a little, and the Emperor withdraw from an untenable position without any fatal wound to the dignity of either party. The more firmly England and France hold together, the more easy such a solution will prove. If Louis Napoleon act rightly in this matter he will achieve what is far higher than a stroke of policy—he will perform an act of wisdom of which the results will not be measured in a day. Although he has made himself an absolute Sovereign, his name, the traditionary policy of his family, and the true interests of France, make him the ally of this country. France, no less than Great Britain, is the natural opponent of every despotic state in Europe that seeks to overstep its recognised territorial limits, or to attack the rights of any free or independent nation.

THE NEW ARCTIC EXPEDITION IN SEARCH OF SIR JOHN FRANKLIN, IN H.M.S.S. "PHŒNIX."

THE Government are losing no opportunity for continuing the search for Sir John Franklin and his gallant companions, in every quarter where there seems to be the slightest prospect of success. Towards the close of last year—the authorities having received numerous voluntary applications from parties intimating their willingness to join any further expeditions they might be disposed to make for that object—her Majesty's screw steamer *Phœnix* was ordered to be commissioned and prepared for a voyage to the Arctic regions, and the command of her given to the enterprising Captain Inglefield, who in the *Isabel*, last year, at great personal expense, made a most interesting voyage in the direction which he will now follow up in the *Phœnix*. This vessel has been joined by Lieut. Beliot, of the French navy, who accompanied Mr. Kennedy in Lady Franklin's vessel, the *Prince Albert*, and has now volunteered to proceed again to the ice-fields of ocean.

The expedition left Sheerness on the 10th ult., for Stromness, in the Orkneys, where it was to remain for a short time previous to leaving for the Arctic Regions. The *Phœnix* was accompanied by her Majesty's steam-ship *Barracouta*, having the *Diligence* transport in tow with stores. Previously to her leaving the river, magnetical and astronomical observations were made at Greenhithe, where her compasses were adjusted; and similar observations will be made at Stromness, Whale Fish Islands, Disco, Cape Riley, and Cape Walsingham these places being in her route to Beechy Island, whither she will proceed, leaving the *Diligence* at Disco, in charge of Lieut. Elliott. On the arrival of the *Phœnix* at Beechy Island she will deposit the stores there which she takes out for the use of Sir E. Belcher's expedition; she will then return to Disco, and receive 100 tons of coal at present on board the *Diligence* to herself; and then proceed to explore Cumberland Sound, and carry on to the westward as far as Repulse Bay, the north side of which has not yet been searched for the missing Expedition. Should Captain Inglefield find no trace of Sir John Franklin in that direction, he will return through Cumberland Straits, and proceed through Smith's Sound, to follow out the traces of open water which he discovered there last year during his voyage in the *Isabel*, already noticed; and the stay of the *Phœnix* in those regions will depend in a great measure on the discoveries which may be made by her commander.

The equipments of the *Phœnix* are of the most perfect description, and on her trial of speed at the measured mile in Sea Reach, averaged upwards of seven knots per hour with everything on board.

Captain Penny will shortly leave England in the *Lady Franklin* sailing vessel, accompanied by the *Sophia*, to form a colony on the shores of Cumberland Sound, where the Esquimaux have reported there is abundance of plumbago, copper, and other minerals; and any letters or parcels for Captain Inglefield's expedition, if sent by Captain Penny, will be delivered to the *Phœnix* when returning from her search up Cumberland Sound.

NAVAL AND MILITARY INTELLIGENCE.

THE CHANNEL FLEET.—There is no truth whatever in the report that Rear-Admiral Corry and his ships have been sent to the Mediterranean to reinforce Vice-Admiral Dundas's fleet. Rear-Admiral Corry is on a cruise of six weeks in the Channel, and he has no orders to go through the Straits of Gibraltar. We shall most likely next hear that his squadron from Lisbon.—*Morning Herald*.

PORTSMOUTH, MAY 31.—Her Majesty's screw guard-ship *Blenheim*, 60, Captain Henderson, C.B., steamed out of Portsmouth harbour to Spithead last night, on sudden orders. Her Majesty's screw guardship *La Hogue*, 60, Captain Ramsay, arrived at Spithead this day at noon, from Plymouth, and anchored.

THE BENGAL PRESIDENCY.—Major-General the Hon. George Anson, M.P., has been appointed to succeed Major-General Sir Joseph Thackwell, G.C.B., as Commander-in-Chief in the Presidency of Bengal. Major-General Anson will leave England for the seat of his command by an early mail, accompanied by the Hon. Mrs. Anson and family.

ROYAL ARTILLERY.—Colonel C. C. Dansey, C.B., having returned to England on sick leave, Colonel Henry William Gordon will proceed from Woolwich to Gibraltar, to take the command of the Royal Artillery at that important station.

NEW KNAPSACK.—The Master-General of the Ordnance has approved of a knapsack of much smaller dimensions being issued to the corps than the kind hitherto used; and a great part of the kit at present carried by the men will be placed in a canvas bag, and carried on the baggage-waggons, or other conveyance. This new arrangement is certainly a great improvement.

IT has been reported at the naval clubs at the West-end that Rear-Admiral Sir Charles Napier will proceed to the Mediterranean, to serve as second in command on that station, in consequence of the present aspect of affairs at Constantinople.

AMERICAN STEAM-YACHT.—A splendid specimen of American naval architecture arrived at Southampton on Wednesday morning, in the shape of a noble steam-yacht, C. Vyse great London, built under the superintendence and for Commodore Vanderbilt, a large merchant and shipbuilder of New York, named the *North Star*. This noble vessel is 200 feet on the keel, 270 feet on the spar deck, and 32 feet from floor timber to lower deck beams. Her whole depth is 28 feet 6 inches. Her two engines, which were made by T. F. Secon, of the Allaire works, are upon the lever-beam principle, with cylinders 80 inches, length of stroke, 10 feet; diameter of wheels, 34 feet. All her fittings are of the most superb and complete style, and every arrangement for comfort has been studied. To give some notion of this fine vessel, we may observe that she is larger and of greater power than her Majesty's own Royal yacht, the *Victoria and Albert*. She cost 200,000 dollars, and her weekly expenses are about £360, exclusive of fuel. The crew consists of nearly 100 men, including officers, seamen, engineers, firemen, &c. Through the kindness of the owner, it is public will be admitted to view this yacht during her stay at Southampton, which is expected to be about ten days. In the meantime it is the intention of the passengers, who consist of the owner and his relatives and friends, to remain on board the vessel, to visit the principal ports of England, Ireland, London, &c. The *North Star* will then visit St. Petersburgh; and, after a short time, will go to the Mediterranean, calling at Lisbon, Gibraltar, Malta, &c.

SUPREME COUNCIL OF INDIA.—Colonel Low, at present President at the Court of the Nizam, has been appointed to the vacant seat in the Supreme Council of India, in the room of the late Sir Walter Raleigh Gilbert. Colonel Low has been distinguished for many eminent services in India; and the appointment is regarded as one made on the strength of merit.

DESPATCHES FOR TURKEY.—Captain Webster, Queen's Messenger, left town on Wednesday evening, with despatches for Constantinople.

STATE VISIT OF THE JUDGES AND CORPORATION TO ST. PAUL'S.—Sunday being the first Sunday in Trinity Term, her Majesty's Judges and the Civic Corporation attended Divine service at St. Paul's Cathedral. Shortly after three o'clock, a procession was formed in the body of the church, and moved into the choir. It consisted of Lord Campbell, Mr. Justice Coleridge, Mr. Justice Wightman, Mr. Justice Erle, Mr. Justice Talfourd, Mr. Baron Platt, and Mr. Baron Martin. Mr. Serjeant Channing and three other serjeants-at-law, Mr. Alderman Farebrother, Alderman Musgrove, Mr. Alderman Finnis, Mr. Alderman Sidney, Mr. Alderman and Sheriff Carter, Mr. Sheriff Cubitt, the High Bailiff of Southwark, and a large number of gentlemen connected with the Common-council. Full choral service was performed, and a sermon was preached by the Hon. and Rev. R. Montagu Villiers, M.A., Canon Residentiary of St. Paul's, and Rector of St. George's, Bloomsbury.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The panic at the Bourse, caused by the report that the Russians had crossed the Pruth, has been most violent; and, though the best-informed and most reasoning men here persist in believing in the continuance of peace, and in the pacific arrangement of the affair, thanks to the *entente cordiale* so distinctly established between England and France, it abates nothing of its terror, and the consequences are most injurious.

The withdrawal of the project for re-establishing the pain of death, or rather the modification of it, for political offences, has produced a certain satisfaction as far as the fact goes, but is far from reconciling the feelings of the French people to the proposers of it, it is considered merely as an acknowledgement of weakness; all the odium being retained without the securing of the advantages that they supposed it was to bring with it.

The presence of the Duke of Genoa has, of course, led to a variety of fêtes and galeties in the Court and official circles. On Friday a magnificent dinner, followed by a soirée dansante, were offered to the distinguished guest by the Princess Mathilde. On the preceding day he dined at St. Cloud (whither the Court has retired); and on Sunday the Emperor passed a grand review on the plain de Satory, accompanied by the Duke, after which followed the *grandes eaux* at Versailles. The enjoyment of the spectacle was, however, considerably impaired by the rivalry of the skies, which, resolved not to be outdone by art, treated the spectators to an exhibition of *les grandes eaux de la nature* with a liberality with which they would gladly have dispensed. A steeple-chase at La Marche constituted a part of the day's entertainment; and, in spite of the torrents of rain which fell at intervals, it was numerously attended.

The ball at the British Embassy in celebration of the Queen's birthday, was certainly calculated to satisfy those who clamoured loudest at the report that only a dinner was to be given on the occasion. Nothing was wanting to render it most brilliant. Besides the handsome saloons of the Ambassador, a temporary building was erected in the garden, the decorations of which, especially a number of pendant corbeilles, filled with illuminated flowers, were singularly novel and beautiful. We are informed, on credible authority, that the fête cost £2000.

Notwithstanding the rain on Sunday, the Fête Dieu was, in some parts of Paris, celebrated with considerable magnificence. The Madeleine was adorned with great richness; and the outer gallery or colonnade which runs round the church, and through which the religious procession passed, was hung with crimson draperies while, at the back of the church, an altar, covered with holy emblems, offerings, and flowers, was exposed to view. At the Batignolles, also, the decorations and procession were very effective.

A fact relative to the strictness of Court etiquette kept up here at present seems to us amusingly characteristic. M. Félix, the *coiffeur* of the Empress is never permitted to attend on her Majesty but in full Court suit—the combination of the sword at the side and the comb in hand, struck us as singularly felicitous.

The Minister of the Interior has just conferred on Madame De Balzac, the mother of the celebrated novelist, an annual pension of £20, a measure highly to be commended, and most approved in literary circles.

The *brochure* of the Marquis de Larochejaquelein, rejecting in the most energetic terms the idea of a fusion between the two branches, and his horror as a Legitimist of all that concerns the house of Orleans, creates a most lively sensation.

A panic prevailed at the Bourse on Tuesday, occasioned by the semi-official announcement of the arrival of the French fleet at Constantinople. It was further stated that General Castelli, one of the aides-de-camp of the Emperor Nicholas, had been recalled from Paris to St. Petersburg. The Three per Cents, which opened at 73f. fell subsequently to 72f., at which they closed for the end of the month. The utmost consternation prevailed, and it was nearly impossible to find buyers for rentes or railway shares at almost any price. On Wednesday an extraordinary change took place. A private telegraphic despatch was shown, dated Toledo, 31st May, announcing the arrival at Constantinople of Count Nesselrode from Russia. This was regarded as a concession on the part of the Emperor of Russia, and purchasers presented themselves in crowds. The Three per Cents opened at 73f., and rose to 75f. 50c., at which they closed for the end of the month. Railway shares also rose considerably in price.

The Corps Législatif has terminated its sittings. The bill respecting political offences is now passed, but was materially modified by the committee. The penalty of death is reserved for any attempt against the life of the Emperor and family; offences against the Emperor committed publicly are punishable by imprisonment varying from six months to five years; the penalty for conspiracy which is either to destroy or change the Government or the order of succession to the throne, or to excite the citizens or inhabitants to arm against the Imperial authority, is punished with the penalty of transportation to a fortified place.

The trial of the "foreign correspondents" in the Court of Cassation was signalised by a magnificent speech from M. Berryer, in defence of M. Pilodin. He insisted upon the immorality of the existing order of things, which the prisoners had made the crime of their lives. He declared that, after a long life passed in the turmoil of politics, he felt that having been arrested on the 2nd of December, on which day that "crime" the *coup d'état* was perpetrated, was the greatest honour of his whole career. At this period M. Berryer burst into tears, overcome with emotion. He went on to say that the accusations brought against Generals Bedeau and Lamoricière were miserable inventions of the police. He had been to visit those "gentlemen" in their exile, and could vouch that they were unceasing friends of monarchy, order, and society. It would be impossible to descril e the effect of this philippic upon the audience. The Court made no attempt to interrupt him. M. G. Barrot, Hebert, and Dufaure, spoke out quite as boldly as M. Berryer. M. O Barrot characterised the prosecution as an attempt to make the judges accomplices in the destruction of the miserable remnant of liberty which, in the present abject state of France was yet left. The trial terminated on Saturday. The Court has, in the main, confirmed the judgment of the tribunal of Correctional Police, which sentenced the prisoners to short periods of imprisonment, with trifling fines.

BELGIUM

The King of the Belgians returned to his capital on Saturday last. Addresses were presented to the various Belgian towns through which he passed. The approaching marriage of the Crown Prince to an Austrian Archduchess was the subject of congratulation by the municipal authorities. The King, in replying to this allusion, spoke of the event, which he said was not very remote, and which would create new guarantees for Belgium, and fortify its political situation. The marriage which it is said will take place in August—was formally announced to the Belgian Chambers on Monday.

GERMANY.

The Oriental question has strongly occupied the attention of the politicians of Vienna and Berlin during the last few days. It was believed in Vienna that the necessary steps had been taken for inundating the Danubian provinces with Russian troops; and news concerning the movements of the English and French fleets was awaited with intense anxiety.

SWITZERLAND

Diplomatic relations have been re-established between Austria and Switzerland. M de Bude declares that it was never his intention to break them off, but that M. de Kalnoki, the Austrian Minister at Berne, was only for the moment recalled to Vienna. The attempt to intimidate the Swiss Federal Government has thus signally failed. On the Wednesday of the Austrian Minister, the Federal Council resolved to take orders to the various cantons, instructing them to fill up the ranks of their military contingents at once, and to be prepared to take the field at the first call. These warlike preparations are fortunately not now needed.

RUSSIA.

Letters from St. Petersburg state that the lately-contemplated interview between the Emperors of Russia and Austria is indefinitely postponed. The visit of the Empress to Western Europe is also abandoned. Rumours of a rupture between the two Courts caused a coolness between the Courts of St. Petersburg and Vienna.

In consequence of the opening of the Neva, part of the Russian fleet has come out from Cronstadt for the purpose of practising evolutions in the Baltic.

TURKEY.

The negotiations carried on by Prince Menschikoff at Constantinople, and the interruption of diplomatic relations between that Russian Envoy and the Porte, are events of so much importance that a brief narrative of the Russian demands and the causes of the rupture seems called for. On the 5th of May Prince Menschikoff obtained from the Porte the Firman which satisfied his demands with reference to the Holy Places. But no sooner was that affair brought to a satisfactory conclusion than the Russian Envoy proceeded to lay great stress on a third demand which had hitherto been left in the background. This demand was for a convention to guarantee the privileges of the Greek Church in the Ottoman Empire. The first article of this convention is the cause of all that has since occurred. It provided "that no changes whatever should be introduced in the right, privileges, and immunities which have been enjoyed and are now possessed *ab antiquo* by the churches, the religious institutions, and the orthodox clergy of the Eastern Church, in the whole extent of the dominions of the Ottoman Porte, which is pleased to secure to them all such rights, privileges, and immunities on the strict basis of the *status quo* now existing." This convention, when the note demanding it was sent in, was represented as the most important object of the mission; and an answer was required within five days, "inasmuch as the Ambassador could only consider a longer delay as a want of respect to his Government, which would impose on him the most painful necessities." The other articles of the Convention stipulated that the Greek Church should constantly be placed on the footing of the most favoured Christian nation, and should participate in all favours and privileges granted to other churches; that at Jerusalem the relation of Greeks and Latins should remain unchanged; that the vast frontiers granted to Russia on the Holy Places should be confirmed by the Sultan, and placed under the sanction of this treaty; and that leave should be granted to erect a Greek church and hospital at Jerusalem, to be served by Russian priests. These proposals were accepted by the Porte, with the exception of the first. The rejection of that article was the express ground of Prince Menschikoff's departure.

If this account should be found in the main authentic, it would appear that the Russian demand did not include any change in the nomination of the Patriarch, nor any overt authority over the clergy, nor any interference with the temporal allegiance of the Greek population to the Porte. The phraseology of the objectionable article is, in fact, so mild and guarded, that, without the experience we have of the Russian mode of proceeding in the East, its effects would not be at once apparent. Turkey is called upon to promise that no change is to take place adverse to the rights, privileges, and immunities of the Greek Church in her dominions. She would, probably, not hesitate to offer that assurance to the whole world; and the policy which can alone prolong her existence as a Government is to extend those rights, and to raise her Christian population to be the servants and supporters of the Empire. But, when that promise is demanded by Russia alone; when it is accompanied by threats, and converted from a free act of toleration into a diplomatic contract, the Turkish Ministers recoil from the snare. However mild in form, Russia knows that this article, if conceded, would suffice for her purpose. The British Ambassador, Lord Stratford de Redcliffe, has considered it his imperative duty to make vigorous opposition to the claims of Russia, and he has been cordially supported by the French Ambassador.

Letters from Constantinople state that if Russia resorted to hostilities the Turkish Government was determined to repel force by force; that a Turkish steamer had been despatched to summon the Ottoman fleet from the Archipelago to Constantinople, and thence to Egypt, to assist in transporting the division of troops which Abbas Pachia has ready at the orders of the Sultan; and that the Minister at War had sent couriers to the whole of the provinces of the empire to call the national militia to arms, and to prepare them to act at the shortest notice. The greatest activity was displayed by the Government and the local authorities in making preparations, should hostilities unfortunately arise out of the present crisis.

The latest advices give us reason to suppose that the Emperor of Russia has moderated his pretensions. He has sent Count Nesselrode to Constantinople, to supersede Prince Menschikoff, and the Turkish difficulty, it is confidently believed, will be pacifically arranged.

GREECE

About a year ago an American missionary, named King, was imprisoned by the Greek Government for preach ng in public at Athens against the dogmas of the Greek religion. On the 13th ult. the United States frigate *Cumberland*, having on board the Consul, Mr. Marsh, was at the Piræus; and it was said that the business of Mr. Marsh was to enforce payment of 300,000 drachmas as damages for Mr. King.

WEST INDIES.

The state of political affairs at Jamaica has not improved. The various branches of the Legislature was still wrangling—the House of Assembly having refused further business with the Council. It had been prorogued to May 17, and is supposed by the almost entire voice of the people. They claim the right of appropriating the money of their constituents as they deem proper, while the Council obstinately persists in rejecting all money bills containing appropriation clauses. It was thought the Assembly would be dissolved.

Mr. Barkly, Governor of British Guiana, has left the colony for England upon leave of absence. His administration has been highly successful.

THE BURMESE WAR

By the Overland Mail, we have news from Burmah to the 9th of April. The intelligence from the seat of war is extremely unsatisfactory. The defeat of General Cheape, in his expedition against the Burmese Chief, Myah Thoon, has cast a gloom over the troops, who are in very bad health. Provisions are very scarce. The Burmese Commissioners have met Captain Phare, and returned to Ava for further powers. The Burmese Commissioners have refused to make the cession which we persist in exacting. It appears, accordingly, to be thought that we must march upon Ava, and urgent requisitions have been made upon the Indian Government for the reinforcements which so exhausting a system of war inevitably demands. The *Medusa* was sent to Moulmein, with an urgent requisition for more troops. A steam frigate was immediately despatched to Calcutta, where she took on board a wing of the 2nd European Fusiliers, and immediately returned. The other wing is to follow. These reinforcements will be followed shortly by a still more numerous embarkation of soldiers, as soon as they can possibly be dispatched. The bazaars of Calcutta are inundated by reports of disasters in Burmah. Montmein, Martaban, and Bellog are still threatened by superior forces of Burmese, and there is every reason to fear that the small garrisons of Sitang and Shoygyn (so distant from any aid) must be also surrounded by bodies of the enemy. The garrison of Rangoon, only 800 strong, is threatened by a Burmese force, consisting of two bodies of 1500 each. The Lead-quarters at Prome have been much weakened by the detachment of a considerable force to the south to look after Myah Thoon, and another to the north to form the advance at Meadey. General Steele marched upon a column from Donabew through the Tonghoo line interior, leaving small garrisons at Beling, Shoygyn, Sitang, and other towns he went through. He is now halting at Tonghoo, within twenty one marches of Ava, with about 800 men.

THE REBELLION IN CHINA.

Our advices from China are deeply interesting. They confirm the statement that the British, French, and American ships of war at present have consented to interfere for the protection of Shanghai and Nankin. The rebel flotilla, sailing down the Yangtsekiang, had anchored without opposition immediately opposite Nankin. The division of the "revolutionary army" investing the place by land is stated to be 30,000 strong, and increasing.

Sir Charles Bonham, the British Commissioner at Hong-Kong, had left in her Majesty's steamship *Hermes* on the 13th of March, for Shanghai. Her Majesty's steam-ship *Sniamander* had also gone to Shanghai, and her Majesty's ship *Lily* was already there. The French war-steamer *Cassini*, and the United States lovalthan *Susquehanna*, had proceeded up the Yangtsekiang; and Colonel Marshall, the American Commissioner, has determined to place the latter before Nankin. It is acknowledged by the Chinese themselves that the loss of Nankin would be the loss of the Empire. The occupation of Nankin by the "revolutionary army" would give the command of the grand canal, and cut off all communications between Pekin and the coast provinces between Nankin and Canton. At Canton it was understood that, although up to the 18th of March Nankin had not been taken, the outer walls had been breached, and there was a prospect of an early capitulation, after which Pekin, the capital, would be in imminent danger, as the insurgents would be able to stop all supplies of grain from the south. At Shanghai, on the 28th of March, a general belief prevailed that the assault had been attended with partial, if not entire, success. The force, consisting of several foreign vessels, which the Imperial authorities at Shanghai had been active they to convey stores and ammunition to the besieged city, had not yet been sent off, and it was now thought unlikely that any assistance would arrive there in time.

On the subject of the popular feeling as to the issue of the struggle,

private letters tend strongly to show that the ruling dynasty has no real hold upon the nation. One writer from Canton says, "The Chinese with whom we come in contact, and who perhaps may be dignified with the title of 'middle classes,' express themselves, both here and at Shanghai, rather in favour of the revolution than otherwise, and I believe that this is the feeling of the masses throughout the country." An impression consequently prevailed that when the capture of Nankin should have been effected, the country to the south would pass under the power of the rebels with no other disturbance than would be caused by the displacement of unpopular local officers. The presence of foreigners among the insurgents appears to be confirmed in a letter received by an English house from a young man who left the country a few years back, and who now writes that he is engaged with them as an artillery officer, and that he knows of six others who are likewise active in the service.

The rebel proclamations convey a very favourable idea of the organization and character of the movement in progress. The rebel leaders have issued stringent proclamations against military officers allowing their troops to plunder, and against corrupt civil functionaries. They have also issued proclamations for the protection and retention of Christian establishments, and the encouragement of literature generally. The education of women is one of the objects of the insurgents; and over the doors of the female schools they have established there is a notice posted, "On red paper shall the girls study; they are not of the male sex; and that any men presuming to enter them "in a disorderly manner, will be beheaded." The enlightened tone of their proclamations is partly attributed to the circumstance of there being among the rebel leaders many members of the "Chinese Union"—a literary society, instituted by the late Dr. Gutzlaff, for the purpose of disseminating a knowledge of the results of European civilisation among the Chinese; but it is, doubtless, principally due to the high mental culture of a people among whom education in general and literary acquirements are the only passports to public employment or distinction. The policy of foreigners interfering in the internal affairs of the Chinese empire can scarcely be defended. The insurrection is a great national movement to get rid of an alien dynasty on far too extended a scale to be crushed by the occupation of the mouth of a single river by European vessels of war. But, even were these vessels sent 400 or 500 miles up the river, so as to check the northern progress of the revolutionary forces along the whole of their present base lines of operations, and were the revolution altogether stopped for the present, it is questionable whether the bolstering up of the Tartar dynasty would be conducive to the progress of enlightenment and the extension of foreign intercourse and commerce in the Chinese empire.

The existing Chinese Government are taking active steps to promote the growth of opium; thus jeopardizing three millions of Indian revenue—another important source of which, the salt duties, is also beginning to fail. The people of the Company's territories are said to be becoming so poor as to be compelled to retrench in one of the most indispensable necessaries of life.

AUSTRALIA.

A letter from Melbourne, dated February 10th, states that the discovery of the gold nugget of 130 lb. weight (not 130 lb., as stated by the Australian advices received last week), at Canadian Gully, Ballarat, caused great excitement in Melbourne. Within a few hours some hundreds of persons left Melbourne, and on advance instantly took place in the bullion market. The mass was quite pure. It was deposited in the office of Mr. Commissioner Green, at Ballarat, and conveyed to the Commissioner's tent slung to a pole carried on men's shoulders. The fortunate finders were a party of four. It is their intention to proceed to England with the gold. After finding it they offered to sell the hole for £600, but there was some hesitation, and they went down into the hole again, and got another nugget, weighing 76 ounces. Upon this cheaper then stepped forward, and the lucky diggers retired from their toil with their fortunes made. There has been just compiled an accurate account of the quality and value of the gold produced by the Victoria mines. The total number of ounces raised from the various mines in Victoria was 4,175,247, which, taken at £3 10s. per ounce, produces the sum of £14,163,364 sterling.

CAPE OF GOOD HOPE.

We have letters from the Cape to the 21st of April. The greatest satisfaction prevailed at the announcement of the provisions of the new constitution. Nothing had occurred to damp the satisfaction universally felt at the conclusion of the Kaffir war. An inquiry was going on into the causes of the rebellion. The Commissioners sat with open doors, and this proceeding had produced a most beneficial effect on the public mind.

CHURCH, UNIVERSITIES, &c.

THE INSTALLATION WEEK AT OXFORD

Saturday, June 4.—The University Amateur Musical Society will give a concert at the Town hall in the evening.

Sunday, June 5.—University sermon at St. Mary's Church, at half-past ten, when the Rev. Benjamin Jowett will be delivered. The Bishop of Ohio will preach at the City Church, in behalf of a local charity. In the evening the usual assembly of young men at Christ Church.

Monday, June 6.—Opening of Dorchester Church by the Lord Bishop of the diocese, at a quarter to twelve a.m. Opening of the Training College for Parochial Schoolmasters, at Culham, by the Lord Bishop of the diocese, at a quarter to four p.m. The Earl of Derby and suite will be present—a train being appointed to stop at the Abingdon-road station on this occasion—and then proceed by the next train to Oxford, and will arrive at the Vice-Chancellor's, at Worcester College, at half past five p.m., whose guests they will be during the commemoration. There will be the annual procession of the University racing boats, with their several crews, on the Isis, at seven p.m. Blenheim Palace will be open from 10 to four p.m., and the gardens all day. The gardens at Nuneham Park will be open daily during the week, except Tuesday.

Tuesday, June 7.—The installation of the Chancellor of the University, and commemoration of the founders and benefactors, in the theatre, at 11 a.m. The annual Creweian oration will be delivered, and a portion of the University prizes and some occasional odes in honour of the Chancellor recited. Several honorary degrees will be conferred. The horticultural show will take place in Worcester College Gardens, at two p.m. The Chancellor will hold a levee in the library at the Taylor institution, at four p.m. A grand dinner will be given in Worcester College Hall to the Chancellor and suite, at half-past six p.m. A grand display of fireworks at nine o'clock p.m., near Worcester College. The first installation ball will be given in the Town hall. The gardens only of Blenheim will be open this day: those of Nuneham-park will closed

Wednesday, June 8. The annual sermon for the benefit of the Radcliffe Infirmary, at St. Mary's Church. A grand miscellaneous concert in the theatre at three p.m. The anniversary dinner of the Oxfordshire Agricultural Society, at the Star Hotel, at three p.m. A grand banquet to the Chancellor, in Christ Church Hall. The grand masonic ball, by the Apollo University Lodge, in the Town hall. Blenheim Palace will be open (not returned) and the gardens all the day. Nuneham park Gardens will be open also this day.

Thursday, June 9.—The Installation Ode, written by the Professor of Poetry, and set to Music by Sir H. Bishop, will be performed in the theatre. Congratulatory addresses in Greek, Latin, and English will be recited. Honorary degrees will be conferred by the Chancellor, at eleven. A dinner to the Chancellor and distinguished visitors in Pembroke College-hall. The second installation ball in the Town-hall. Nuneham Gardens open this day

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. J. E. Kempe, to St. James's, Westminster; the Rev. M. Jeffery, to South Thoresby, Lincoln; the Rev. F. A. Cronin, to Kingsdown, Kent; the Rev. H. E. B. Fokes, to Broughton, Norfolk; the Rev. G. Harrison, to Sutcombe, Devon; the Rev. W. H. Lyall, to St. Dionis Backchurch, in the City of London; the Rev. J. Pamen, to St. Edmund the King, Norwich; the Rev. S. Warren, to Brandon Ferry, Suffolk; the Rev. J. Wilson, to Hampton Meysey, near Cricklade. *Vicarages:* The Rev. W. Cull, jun., to Tolcoshill, Bedfordshire; the Rev. R. H. Howard, to Loweston, Cumberland; the Rev. J. Matthew, to Knowstone and Molland, Devon; the Rev. T. Pearse, to Morden, near Blandford. *Incumbencies.* The Rev. A. H. Morgan, to Llangrove, near Ross, Herefordshire; the Rev. T. Openshaw, to Brackenfield, near Alfredon, Derbyshire; the Rev C. F. Booker, to St. Peter's Church, Parkstone, near Poole, Dorsetshire; the Rev. A. Grant, to St. Michael's Church, Cambridge; the Rev. F. Southgate, to the new church, Rosherville, Gravesend. *Rural Deaneries:* The Rev. W. Vallance, to Sutton; the Rev. R. M. Evanson, to Mitchell-troy

RESTORATION OF DONCASTER CHURCH.—The site of the ruins of Doncaster parish church is now nearly cleared of the *débris*. The money already subscribed towards the re-building amounts to upwards of £26,000; but nearly £10,000 more will be required to effect a complete restoration of the late edifice

THE ROYAL VISIT TO IRELAND.—It is stated that her Majesty, on the occasion of her visit, will stay at Parsonstown Castle, the beautiful residence of the Earl of Rosse. It is also confidently rumoured that Killarney will be honoured with a Royal visit, in which case her Majesty and the Royal party will be the guests of the Earl and Countess of Kenmare.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The Slave-trade of Cuba was brought under the notice of their Lordships by the Earl of CARLISLE, upon the occasion of presenting a petition from the ladies of the island of Jamaica. Lord CLARENDON undertook that nothing should be wanting on the part of the Government to bring Spain to her duty. He stated that the present Captain-General had received stringent orders from Madrid, and was going beyond the letter of the law in the vindication of justice and the performance of treaties.

Their Lordships then, upon the motion of the Earl of ABERDEEN, concurred in an address to the Crown, praying for inquiry into corrupt practices during elections for Malton.

HOUSE OF COMMONS.—MONDAY.

Mr. DISRAELI asked whether the Government had given directions to the British Admiral at Malta to proceed with the British fleet to the Dardanelles? He expressed some apprehension that the Russian fleet and force might arrive at the entrance of the Straits in time to prevent the English or French fleet from entering the Dardanelles. Lord J. RUSSELL, in the present state of the relations between Russia and Turkey, declined to answer the question

The House went again into committee upon the Income-tax Bill, when the remaining clauses were agreed to.

The House then went into committee on the Customs Acts, when the reduction of duties upon several minor articles of import was agreed to, after a protest from Mr T. BAINES against throwing away revenue recklessly, by reducing such duties as those upon anchovies, agates, and carnelians. Relief of the kind caused no reduction in the expense of collection, and no evident benefit to the consumer or trader.

The Hackney Carriages Bill was read a third time.

HOUSE OF LORDS.—TUESDAY.

Lord LYNDHURST moved the second reading of the Alteration of Oaths Bill, the object of which is to strike out from the oaths of allegiance, supremacy, and abjuration, all those portions which are inoperative and absurd. He did not propose to make any alteration which would favour the admission of the Jews into Parliament. He therefore retained the words "on the true faith of a Christian" in the bill, but entirely *ex necessitate*, and against his decided conviction on the subject. The Earl of DERBY had no objection to the alteration of the oaths, but regarded with considerable suspicion the use which might be made of such a measure. If the bill were passed by the Peers and sent down to the Lower House, in all probability the obnoxious words would be struck out by the Commons, and so a second Jew Bill be sent up to the Lords at the end of the session. The measure was supported by the Earl of ABERDEEN, who declined to give any pledge as to the course the Government might adopt on the contingency suggested by Lord Derby. The bill was read a second time.

HOUSE OF COMMONS.—TUESDAY.

THE IRISH CHURCH.

Mr. G. H. MOORE moved for a Select Committee to inquire into the ecclesiastical revenues of Ireland, with the view of ascertaining how far they are made applicable to the benefit of the Irish people. It was the habit to speak of the Roman Catholic population of Ireland as among the most loyal subjects of the Queen. Now the fact was the Irish population was not loyal. There was scarcely a part of the Irish coast where, if a fight were to take place off it between an English and an American vessel, a very large majority of the lookers-on would not wish the Americans to win. There was no fear either of rebellion or insurrection; but the time might be fast approaching when this empire would require the united loyalty of the United Kingdom to maintain her honour abroad or protect her at home. He stated that political authorities of weight against the Irish church, and enlarged upon the evils which he attributed to it, upon its vast revenues exacted from Roman Catholics, and generally upon the religious policy pursued in Ireland.

Mr. M. O'CONNELL, who seconded the motion, declared, nevertheless, that it was rash and imprudent, and calculated to damage the cause which the hon. member for Mayo had at heart

Several Irish members supported the motion; which was opposed by Sir R. Inglis, Mr. Whiteside, and Mr. Newdegate

Lord J. RUSSELL had once thought that a part of the revenues of the Irish church might be given to an education of which all who desired might partake; but he found that a compromise would not be accepted by either the Protestant or Roman Catholic party; he was, therefore, free to consider how he could best promote content in Ireland; and he was sorry to say that, while he did not consider that the present state of things was altogether satisfactory, he saw the greatest difficulty, and no small peril, in the alteration proposed. There were only two modes in which ecclesiastical equality in Ireland could be obtained—namely, the total abolition of the revenues of the established Church, which would strike at the root of all ecclesiastical endowments; or, a new distribution of these revenues according to numbers, giving the largest amount to the Roman Catholics. But, if this were done, ecclesiastical equality would not be effected; for the Roman Catholic clergy—looking at their proceedings in this country, as well as in foreign countries, and considering that they were under the direction of a foreign head—would not be satisfied with what appeared to him to be at variance with a due attachment to the Crown of this country, to the general cause of liberty, and to the duties which a subject of the State should perform. He was convinced that, if the Roman Catholic clergy of Ireland had increased power, that power would not be exercised in accordance with the general freedom which prevailed in this country; he concluded, therefore unwillingly, but most decidedly—at the encroachment of the Roman Catholic religion in Ireland, in place of the Protestant Church, in connexion with the State, was not an object which Parliament ought to sanction. The speech of the noble Lord was loudly cheered, especially by the Conservative members of the House

Mr. BRIGHT regarded the speech of the noble Lord as unworthy of his great political reputation and character. The Roman Catholic Liberal members of Ireland would be unworthy of a seat in any senate in the world if they did not protest against the monstrous injustice inflicted on their country.

If any man complained that in Ireland Catholic prelates and priests had too much power over the people, he attributed that entirely to the fact that for a long period the legislature of that House had bound priest and people together in one bond, and had done much to subject the people to whatever there was of unwholesome influence on the part of the priests. At the present moment in Ireland it was impossible for any man to travel through Ireland, and not perceive that there was one question which poisoned all the social relations of that country. Whether at elections or in any other matter, political or social, this one question of the Church establishment was the prevalent and poisonous question in Ireland, and made it as impossible now as for the last 30 years that that country should be in the possession of tranquillity and contentment, which every man, he hoped, in that House would wish to prevail there.

The House then divided, when the numbers were—

Ayes	.. ..	98
Noes	.. ..	280
Majority against the motion	.. ..	—182

A Select Committee was appointed to inquire into the causes of accidents in coal mines

A discussion took place on the Durham Election Petitions, which resulted in the appointment of a Select Committee

HOUSE OF COMMONS.—WEDNESDAY.

Mr. I. BUTT moved the second reading of the New Trials (Criminal Cases) Bill.

Lord PALMERSTON opposed the bill. His opinion was that the present state of the law afforded to an innocent man every protection against an unjust sentence: judges could reserve points of law; and, as to facts, recourse could be had to a quarter where a remission or commutation of the sentence was never refused in proper cases. If trials were considered to be only preliminary, judges and juries would be less anxious than at present for the discovery of truth. He moved to defer the second reading of the bill for six months.

Sir G. GREY also opposed the bill

Mr. BUTT declined to call for a division, and the amendment was carried. The bill was consequently lost.

The third reading of the Judges Expulsion Bill being moved by Lord HOTHAM,

Mr. DRUMMOND moved to defer it for six months. Referring to the benefit heretofore derived from the presence of judicial personages in that House, he observed that difficult and complicated questions might arise in the next war, which made it of great importance that men of first-rate legal ability should be members, who would not, he believed, be degraded by appearing in the character of candidates

Mr. MACAULAY said he should vote, with all his heart and soul, for the amendment. Upon what ground, he asked, was the bill based? It had not been alleged that, during age, a single evil had arisen from permitting the Master of the Rolls to have a seat in that House, nor that one of the eminent judges who had filled that office had discharged his judicial duties inefficiently because he was a member of Parliament. He would throw open the House not only to the Judge of the Admiralty Court, but to the Lords Justices of Appeal and the Vice-Chancellors, who would, in his opinion, add to the credit of that great assembly, and render it far more efficient for the discharge of some of its duties.

Mr. HUME supported the bill, because he considered that the duties of the Master of the Rolls were incompatible with those of a member of that House.

Upon a division, the amendment was carried by 221 against 123; so the bill was lost.

The Combination of Workmen Bill was read a third time.

HOUSE OF LORDS.—THURSDAY.

The Common Lodging-houses Bill was read a third time and passed.

Lord LYNDHURST moved that the House go into Committee upon the Alteration of Oaths Bill.

The Earl of ELLENBOROUGH said, however anxious he was to get rid of the mummery of the present oaths for members of Parliament, he felt persuaded that the present bill, if sent down to the other House, would be moulded into such a shape as would admit the Jews to Parliament. He would, therefore, move that the bill be committed this day three months.

The Earl of ABERDEEN supported the bill.

The Earl of DERBY spoke in favour of the amendment.

Their Lordships having divided, there appeared—For going into committee—Contents, 69; non-contents, 84: majority against the bill, 15.

The bill was accordingly lost.

Lord BERNERS withdrew his Poor Removal Bill, at the request of Lord Stanley of Alderley, who stated that it was the intention of the Government to reconsider the whole law of settlement.

The Aggravated Assaults Bill was read a third time and passed.

Their Lordships soon afterwards adjourned.

HOUSE OF COMMONS.—THURSDAY.

In reply to Mr. M. Smith, Lord J. RUSSELL stated that, as the measure he contemplated relative to the disfranchisement of dockyard electors was likely to meet with considerable opposition, he thought it better to leave the question until the general subject of the further reform of the representation came to be considered

Mr. GLADSTONE, in answer to a question from an honourable member, stated that £2,360,000 of Exchequer Bills had that day been sent in for money; £237,000 to be exchanged for Railway Bonds; £3,830,000 to be exchanged for New Bills. The total is £8,487,000, and £750,000 is still outstanding.

INCOME TAX BILL.

The House went into Committee upon the Income-tax with a view of considering some postponed clauses relating to Ireland. Upon the clause authorising the collection of the Income tax from the immediate lessors of the property,

Mr. J. CRAWFORD proposed an amendment, so as to assimilate the law of Ireland to that of England, and to make it compulsory to levy the tax upon tenants with holdings over £15, but not under that amount.

After some discussion, the committee divided, when the amendment was negatived by a majority of 170 to 61.

The remaining clauses were, after considerable discussion, agreed to, and the House resumed

CUSTOMS, &c., ACTS.

The House then went into Committee upon the Customs, &c., Acts.

Mr. T. MITCHELL moved that the duty on raisins not of British possessions, be reduced to 10s. per cwt, as proposed in the first edition of the new tariff

The Chancellor of the Exchequer acceded to the proposition.

On the proposition that coir, cordage, sail-cloth, hemp, &c., be admitted duty free

Lord J. MANNERS moved, as an amendment, that the original duties be retained

The CHANCELLOR of the EXCHEQUER resisted the amendment.

After some discussion, the Committee divided, when the original proposition was carried by a majority of 104 (giving 68

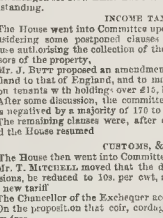
On the proposition that foreign pictures be admitted duty free,

Lord J. MANNERS opposed the vote; which, however, on a division, was carried by a majority of 186 to 46.

Several other votes having been agreed to, the House resumed, and the Chairman reported progress

OBITUARY OF EMINENT PERSONS.

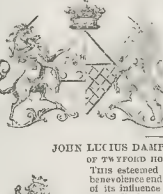
CHARLOTTE THLODOSIA BARONESS BIRKENSHADE.



THE death of this lady, who had attained her seventy-ninth year, occurred recently at Cadogan place. She was sister of the present Viscount Bolingbroke, and relict of William Lord Birkenshade, who had created Baron Isus in 1806, and was succeeded by his brother Ludlow Johnson, Bishop of Killaloe. The Baroness Birkenshade was descended from whom her ladyship derived descent, and is one of the most ancient and illustrious families in the empire.

JOHN LUCIUS DAMPIER, ESQ., M.A.,

OF THE FOND HOUSE, HANTS.



THIS esteemed gentleman—whose unostentatious benevolence endeared him to all within the sphere of its influence—died at his residence, Pulteney-street, Bath, on the 24th ult., after a short illness. He Lord Chief Justice (Lord Campbell) alluded to the melancholy event in open Court on the 24th ult., in terms of deep regret, characterising Mr. Dampier as "one of the most learned, honest, and excellent men who ever adorned the profession."

He was born 23rd December, 1792, the second son of the late Henry Dampier, Archdeacon of the Court of Queen's Bench, by his wife, the eldest daughter of the Venerable John Law, Archdeacon of Rochester. His elder brother, Henry, received at Eton and King's College, Cambridge. Of the latter he was chosen a Fellow, and there he graduated as B.A. in 1816. In 1818, he was called to the Bar by the Hon. Society of Lincoln's-inn, and became a member of the Western Circuit; on which he soon obtained reputation for his legal learning and forensic ability. He held at one period the Recordership of Portsmouth, and was, at the time of his death, Vice Warden of the Stannaries of Cornwall and Devon. In 1840, he entered with Lord Portman and Mr. Dominick Daly, on the Commission appointed to inquire into the rights and claims connected with the New Forest, Hants, and Waltham Forest, Essex; and, in 1841, was named one of the Commissioners for investigating the state, discipline, &c., of the University and Colleges of Oxford.

Some few years since, Mr. Dampier acquired, by purchase, Twyford House, in the beautiful vale of the Itchen, previously the property of Dr. Shipley, the well-known Bishop of St. Asaph; and here, of late, he principally resided, fulfilling the duties of a country gentleman in the most exemplary manner. His local charity, his constant hospitality, the active interest he felt in the welfare of those who dwelt around him, will long be remembered. He was in the commission of the peace for Hampshire, and was frequently chairman of the bench of magistrates.

Mr. Dampier married a sister of the present eminent Judge, Sir William Erle; and leaves a son, William; and two daughter, Jane and Emily.

The family of Dampier is presumed to have been of Flemish origin. The late Mr. Justice Dampier, who died in 1765, left (besides the Chief Justice) only one son, John Lucius, whose death we record), three other children, one of whom, William, was in the Bengal Civil Service; and another, Elizabeth Ann, married in 1831 John Latham, Esq., D.C.L., Fellow of All Souls, Oxford.

A matrimonial alliance is arranged, and will shortly take place, between the Lady Emily de Burgh, the beautiful and accomplished daughter of the Marquis Clanricarde, and Viscount Dungarvan, grandson and heir apparent of the Earl of Cork and Orrery

ELECTIONS.—*Clitheroe:* The poll closed on Saturday last, when Mr. Aspinwall (Conservative) obtained a majority over Mr. Foot (Liberal) of 5—the numbers being 213 to 208. *Plymouth.* The nomination took place on Wednesday, and the polling on Thursday. Mr. G. T. Braine (Liberal) and Mr. Rondell Palmer (Liberal Conservative) were the candidates. At the close, the poll stood: Palmer, 944; Braine, 87.

GENERAL VIEW OF BOMBAY, FROM MALABAR HILL.

OPENING OF THE FIRST RAILWAY IN INDIA.

THE time honoured maxim, that Peace has its triumphs as well as War, has just been exemplified in Western India by the opening of the Great Indian Peninsula Railway, on the 16th of April, which must be a memorable day henceforth in the annals of the country—memorable as the greatest of battles, and surely more glorious. The interesting intelligence which was received by the Overland Mail on Monday, is recorded with glowing enthusiasm by the Bombay journals. The *Overland Telegraph and Courier* describes the above event as "a triumph, to which, in comparison, all our victories in the East seem tame and commonplace. The opening of the Great Indian Peninsula Railway will be remembered by the natives of India when the battle-fields of Plassey, Assaye, Meanee, and Goojerat have become the mere landmarks of history. The proud arrays of England have conquered, and kept in subjection hundreds of millions of people, but her power was never more vividly exemplified than on Saturday afternoon (April 16), when the long line of carriages conveying nearly 400 persons, glided smoothly and easily away amidst the shouts of assembled thousands. It was then that the immense masses of the native population paid true and heartfelt homage to the power and greatness of their European conquerors. The superstitions of ages seemed to melt away as the gigantic reality of steam and mechanism passed before their wondering eyes. A locomotive engine conveys an idea of calm concentrated power. There is no straining at starting: a touch is given, the wheels revolve, and the immense mass rolls on without trembling or undulation. The natives saw this, and they salaamed the omnipotence of steam as it passed."

Before we describe the ceremony of the day, we shall sketch the Railway itself. It will be remembered that the first turf was turned at Bombay, on the 31st of October, 1850. Very little was done for the first eight months, till Messrs. Faviell and Fowler, the contractors, at one end, and Mr. Jackson at the other, took matters in hand. The work appears to have been one of great labour and difficulty. In addition to a most trying climate (in which the constitution of Mr Fowler, the partner of Mr. Faviell, as well as that of many of the English labourers they took out with them, failed) Mr Faviell found himself, in March, 1852, working single-handed, his partner having gone to England for the benefit of his health. Mr. Faviell was then dependent principally on native labour: the men are scarce, and, in the rice harvest time, always difficult to manage, alteration in the arrangement of the work, or strict orders given by the contractor, often gave offence, when the men went away in a body of fifty or a hundred at a time. It was also difficult to get them to earn their small rate of wages.

Snakes abounded on the line: the cobra di capello, and a small dark snake were very common among the stones; the former is an object of worship, and both have a deadly bite. Under these and many other difficulties, however, the double line of railway has been completed from Bombay to Tannah.

From the Boree Bunder the Railway proceeds by a very densely-peopled district, till, skirting along the shore, it passes the lofty precipice of Nowrojee Hill. Here the public road twice crosses it at nearly right angles, where huge gates shut up the Railway, or cut off the public road, according as they are in one position or another. After passing under the Mazagon viaduct opposite the Sudder Awlut, the Railway describes a graceful double curve of large radius, and then crosses the Byculla road, near the Bishop's house, and, passing under a viaduct it reaches the flats near the race-course. From the curious gravel bank called Phipps's Cart, it stretches along the flats to Sion for six miles, in almost a straight line. At Sion it passes under the public road and along the base of the hill, on the summit of which is an old Maratha fort, and a Portuguese church contiguous. Here it is joined by the branch at Mahim, an unimportant fishing village, but likely to be transformed by the railway into a busy port. Next, the line sweeps across the Sion Marsh, the embanking of which threatened to be very troublesome: the material thrown in sinking amongst the mud, which afterwards rose up, forming a little island on each side along the line. Here, immediately adjoining, and nearly parallel to the railway, we have the Sion-causeway on one side; and full in view two miles distant, the magnificent work of the like kind, constructed by Sir Jamsetjee Jejeebhoy, and first opened in 1814. The Railway now lands considerably to the right, and, passing through a long line of salt-pans, it enters Salsette, and encounters the only formidable obstruction on the line—a beautifully wooded ridge, traversed by an open cutting, about a mile and a half in length, about one hundred and twenty feet across at the widest part, and fifty feet in depth. For the next fourteen miles the line is perfectly level, the rails being laid along the surface of the ground with merely sufficient embanking to save them from the risk of flooding during the rains. The country, for a considerable distance, is open on both sides, and the view is extremely beautiful. To the left are the low, rocky, wooded ridges of Salsette; woodlands and richly cultivated fields, hamlets and cottages filling up the intervening space. On the right parallel to and close beside the Railway for about eight miles, is the salt-water-creek called the Tannah River, and just beyond are the magnificent Ghauts. The line, on approaching Tannah, becomes embowered under magnificent trees. On entering the village, it turns rather quickly round towards the viaduct, by which it crosses the river, here divided by a long and rocky island. The channel on the Tannah side is narrow, and the arches here are of moderate span. On the mainland side the channel is deep and narrow, and an iron bridge, somewhat on the tubular plan, 66 feet span, permits the shipping to pass under it. The whole viaduct, from shore to shore, including the part over the river, is about 1000 feet in length, and the ferry way about 40 feet above the high-water mark. Thence the line runs along the base of the hill, at a distance of about three miles, right on to the projecting spur of Parsick Point, which it penetrates by a tunnel of about 100 yards in length. On the other side the traveller passes for about a

STATION AND BRIDGE, AT BYCULLA.

EMBANKMENT ACROSS SION MARSH, BETWEEN BOMBAY AND SALSETTE.

mile along the margin of the Callian River, surrounded by some of the most magnificent scenery in the world, when a second tunnel is passed, and the village of Callian is soon reached.

The inauguration, on the 16th of April, was altogether a most interesting scene. By half past three o'clock the majority of the company had taken their seats in the train

The state carriage was occupied by Sir William and Lady Yardley, Sir Charles and Lady Jackson, the Hon. A. Bell and Lady, the Hon. D. A. Blane, Sir Henry and Lady Leeke, &c.

At half-past three o'clock, a Royal salute was fired from the ramparts of Fort St. George, immediately after which the well filled train, consisting of fourteen first, second, and third-class carriages, drawn by three locomotive engines, and containing in all, it was said, above five hundred persons, started for the terminus at Boree Bunder.

Tens of thousands of persons surrounded the spot; and, as the moving mass swept along the way, still there were tens of thousands looking on—men, women, and children—perched on wall tops, on the branches of trees, even on the masts of Arab bugla s along the harbour; from win-

COORLA CUTTING AND STATION.

GHAUT KOOPER CUTTING, SALSETTE.

dows and from the tops of temples and of houses; from every eminence around the town: finally, when the train had passed the more densely-populated parts, still the surrounding fields were studded with spectators.

Besides the inhabitants of Bombay proper, and the neighbouring country, there were in those crowds people from Scinde, from Cabul, from Afghanistan, from Central Asia, from the Persian Gulf, from Arabia, and from the East Coast of Africa.

There is little to describe, particularly to the great majority of our readers, in an ordinary railway trip. It is due, however, to those who had the task of maturing all the arrangements for the occasion, to say that every thing went on smoothly. The train stopped at Sion, going out, to allow of the engines being watered. At no time was the speed above thirty-five miles an hour, and generally it was much under that. On the train approaching Tannah, the crowds lined the sides thickly for more than a mile, and were kept in order by the Ghat police. The time taken to reach Tannah (twenty-four miles), including the stoppage at Sion, was fifty-five minutes. The return trip occupied only forty.

Arrived at Tannah, the party found, under an immense tent, at once a cool retreat and a splendid tiffin. Major Swanson, the Senior Director present, took the chair; supported by the Hon. Sir William Yardley, Chief Justice; by Sir Henry Leeke, R.N., Commander-in-Chief of the Indian Navy; also immediately surrounded by the Hon Messrs. Bell and Blane, Members of Council; Sir Charles Jackson, Puisne Judge H.M Supreme Court; Colonel F. P. Lester, Surgeon-General Taylor, Superintending-Surgeon Boyd, Colonel Woodburn, C.B., Commandant of the Garrison; Mr. Le Messurier, Advocate General; Colonel Hale, Adjutant-General; and a distinguished company, comprising the élite of Bombay.

At a separate table laid out for the Parsee passengers were Messrs. Cursetjee Jamsetjee Bomanjee Hormusjee, Manockjee Nusserwanjee,

VIEW ON THE MAHMOUDEEH CANAL.—(SEE NEXT PAGE.)

Merwanjee Jeejeebhoy, Sorabjee Jamsetjee, Limjee Maneckjee, Furdoonjee Hormasjee, Nowrojee Furdoonjee, Nowrojee Dorabjee Chabook-walla, sitting quietly looking on were Mr. Ali Jan and a few Marwarrie gentlemen.

Several appropriate speeches were made, and toasts drunk, which we have not space to report.

Shortly after, the party broke up, and returned to the Boree Bunder terminus.

We subjoin a few additional details of the scenes on the Railway, which we have illustrated.

The terminus now erected on the esplanade, between the native town and the fort, is but a temporary wooden structure, it being proposed to continue the line of rails to the Custom-house.

Station and Bridge at Byculla.—The girder-bridge over the Railway is one of the principal thoroughfares to the outskirts of the town. The Hindoo temple to the right in the Sketch has been erected by a wealthy Banian, who hopes by this means to propitiate the gods in his favour, and to obtain relief from rheumatic pains. It forms a pretty object in the picture; but native superstition stands a striking contrast to the progress of modern art and science.

Embankment across Sion Marsh, between the Islands Bombay and Salsette. —This View represents the Railway from a hill close to Coolis station. The embankment over the marsh has been a work of considerable cost, owing to its sinking in the soft mud, and the frequent washing away of the earth by the action of the tides. To the right in the distance is seen the Jamaljee Lunatic Asylum, containing Mahim and Bandora with the island of Bombay. Sion Fort is a conspicuous and picturesque object, formerly an old Mahratta fort, now a dwelling place. In the foreground are salt-pans, covered at certain periods by sea-water, which, after evaporation, leaves a deposit of salt.

Cutting Chitoog and Station.—The cutting here represented is the deepest on this portion of the line, being about 30 feet deep and 120 feet from side to side at the top. The line having crossed the public road to Tannah about 300 yards before reaching the station, traverses the beautiful island of Salsette.

Ghautchoper Cutting, Salsette.—Ghautkooper is a small village, between Kanhery and the Pass through the Ghauts, distant twelve from Bombay. The cutting through which the line crosses at this point is an extremely hard trap, and has been a work of great labour to blast. To the right is the Travela Water; and to the left, in the extreme distance, rise the Ghauts.

General View of Bombay, taken from Malabar Hill.—In the foreground is "Back Bay;" the water is shallow, and can only be entered by fishing-boats. The fort and offices are situated on the narrow neck of land forming the extremity of the "island of Bombay." The narrow slip of land running further out to sea is the island of Colaba, which has been joined to the island of Bombay within the last few years, by a solid stone embankment. This island runs out to sea upwards of a mile further than is exhibited in this View: at the extremity is the lighthouse. On the other side of the town is the harbour, bounded in the distance by the main and of India. The character of the scenery is magnificently bold and picturesque: in the extreme distance are the "Ghauts"—the northern extremity of the chain of mountains that run down the Concan, and here called the Nedgerry hills or Blue Mountains. The Railway runs across the plain in the middle distance, beyond the grove of cocoa-nut trees, connecting it with the harbour. The large native town is entirely hidden in this View by this grove of trees. Enormous crowds of natives assemble on the beach of Back Bay both morning and evening. The Parsees say their prayers here, standing at the water's edge and in the water also. It is a favorite place also with the Europeans for their exercise.

The steam paying View of Bombay is from a clever Sketch by G. K. Ingram, Esq.

It has, however, been well observed that the Great Indian railway was not to be called as the first-constructed in America. It has been remarked that ever occurred in history, says the *Bombay Times*, "such as to possess the claim to be the regular of the authorities, the Governor, the Commander-in-Chief, and the Bishops, with two of the Secretaries, and frequently Still. had gone to their summer quarters: the 21st gun of Church parade was silent; and all was ready for the Governor's levee and address, lever on the 1st on consecrating the consecrated burial-ground, or laying the foundation of a town-house, were forgotten: and consecration of the opening of the Railway."

CALENDAR FOR THE WEEK.

SUNDAY, June 5. Second Sunday after Trinity.
MONDAY, 6.—Jeremy Bentham died, 1832.
TUESDAY, 7. Reform Bill passed in 1832.
WEDNESDAY, 8.—Half Quarter-day.
THURSDAY, 9. Lilly, the Astronomer, died, 1681.
FRIDAY, 10.—Oxford recognized Queen Victoria, 1840.
SATURDAY, 11.—St. Barnabas. Roger Bacon died, 1294.

With the present Sheet is published a Supplement, containing a Copious Descriptive Report of the Dublin Great Industrial Exhibition, written expressly for the ILLUSTRATED LONDON NEWS; and Embellished with Thirty Engravings of the Exhibition Building, and its Courts; and some of the Principal Articles Exhibited.—Price of the Two Numbers, One Shilling.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JUNE 4, 1853

AMID the roar of Parliamentary warfare, occasioned by the discussions on the Budget, and by such noisy polemics as the comparative claims of the Protestant and Roman Catholic Churches in Ireland, we must not lose sight of an unobtrusive but highly important measure which has within the last few weeks been introduced into the Legislature. The question of the education of the people is hampered by many difficulties. The people of England object to being made virtuous by compulsion. They are as crotchety upon the subject as Sir John Falstaff was upon logic; and the bare idea of forcing the poor man to send his child to school, whether he like it or not, throws the over-ardent friends of the liberty of the subject into convulsions. Even those children of the poor who are sent out into the streets by their wretched parents, to beg and to steal, are to be educated by their own consent and that of their parents, or not at all. How to deal with these children has long been the most painful and the most difficult problem that philantropists have been called upon to solve. The evil was peculiarly distressing, because it was one ever-day occurrence among the most benevolent and enlightened of the magistrates of the metropolis and large towns. To [illegible] the late excellent Mr. Rushton, of Liverpool, it was painful in the extreme to sentence children of tender years to prison for begging or pilfering, when the fathers and mothers, the real delinquents, were not amenable to punishment. The suggestion, often thrown out by Mr. Rushton and others, has at length been taken up in earnest by Lord Shaftesbury; and, under his Lordship's auspices, a Bill has been introduced into the House of Lords for the repression of Juvenile Mendicancy. We are happy to believe that it will have the effect intended; and lead, not only to the eradication of this large spot of society, but to the education of the helpless children whom at present [illegible] agencies have no present means of reaching. By the provisions of Lord Shaftesbury's Bill, fathers and mothers who send their children [illegible] in the streets are liable to a month's imprisonment with hard labour. This is striking at the root of the evil, and will put an end to annihilate it than all the reformatory prisons for juvenile offenders which have ever yet been established. But were this all, the measure would be incomplete. Lord Shaftesbury has justly considered that it is not enough to punish the parents, without doing something for the children. The incarceration of the elders would but aggravate the unhappy position of the poor little victims of a destitute family, and Necessity would act the part of a still harsher parent than the human one, and again drive the helpless children into the streets. Lord Shaftesbury has foreseen this danger; and the second clause of the bill empowers the guardians of the poor to clothe, feed, and educate the young mendicants, who may thus be left more hopelessly destitute than they were. The expense incurred in this process will remain as a debt to be charged, as in cases of affiliation, and desertion, against the offending parents; to be recovered from them, should their worldly circumstances ever improve to such an extent as to render them able to pay it. This is the whole of the bill, and, though political and party necessities of a more immediately pressing nature have hitherto prevented it from receiving the attention which it merits, there can be little doubt that it will meet with warm and adequate support, and pass unscathed through its various stages in both Houses of Parliament. It is not always that measures of philanthropy are practically or wisely framed. Too often they have nothing but their good intentions to recommend them. Lord Shaftesbury's bill is not of this kind. It is as practicable as it is humane; and will recommend itself to the public the more it is studied.

THE arrival of the Indian Mail has put us in possession of more recent intelligence from China than that upon which we commented in our last week's publication. It appears that the rebel forces under *Tien-Tek* have received so many adherents, and obtained such a command over the principal military positions of the country, that the Emperor, fearful of the safety of Nankin, the loss of which would be the loss of the empire, has demanded, and obtained, the support of the English, French, and American vessels of war that happened to be stationed in the waters of Shanghae. We cannot conceive what interest England, France, and America can have in upholding the present dynasty in China, or what is their superior policy which is to be evolved by their taking a part with the losing side. The Western nations, whether European or American, have but few benefits for which to thank the Chinese authorities; and a cautious neutrality would seem to be the wisest policy to be pursued in so important an emergency as that which now promises to open up to the world a vast region hitherto hermetically sealed against it. We have yet to learn, however, whether the assistance thus given will serve the falling cause which has demanded it. If the Tartar Emperor cannot support his throne by the words of his own troops, or the love of his own people, all the assistance that a few foreign vessels can give him will be miserably ineffective. Should the insurgents have obtained half the support which they allege, the interference of Europe will but retard and not prevent a catastrophe. Yet, whatever the result may be, between the Emperor and the rebels, it is not probable that England or America will ever again turn the opportunities to account. Should *Tien-Tek* succeed in his objects, we judge from his proclamations that free commercial intercourse with the rest of the world will be the consequence. Should the Emperor, on the other hand, prove victorious in the struggle, England, France, and America have been placed by his act in a position to insist that their aid shall be rewarded by liberal commercial treaties.

The United States have already a powerful armament in the Eastern seas, whose object is to establish, *per fas aut nefas*, a commercial intercourse with the Japanese. The presence of this force is of itself a strong argument to prove to the Chinese that they have acted unwisely in hiding, like ostriches, their heads in holes, and refusing to share or acknowledge the events that are taking place in the world around them. But the whole civilisation of the extreme East seems to be on the point of breaking up. Russia is also on the alert to watch the consequences; and with her fleets on the coasts of China, in addition to those of the three Powers already named, with a fierce civil war in the heart of the Chinese empire, and with a strong hostile force battering the time-worn citadels of the Japanese, observers in Europe can scarcely avoid coming to the conclusion that great events are about to take place in that portion of the globe.

THE COURT.

The past has been a very busy and interesting week in Court circles. Her Majesty on Thursday, and H.R.H. Prince Albert on Tuesday, at St. James's Palace, and the Court on Wednesday, at Buckingham Palace, have originated a gaiety generally confined to the height of the London season; and the evening month promises to be one of the most brilliant in the world of fashion that has occurred for some years.

Her Majesty received visits on Saturday last from their Royal Highnesses the Duchess of Cambridge and the Princess Mary, the Hereditary Grand Duke and Duchess of Mecklenburgh-Strelitz and the Duchess Caroline of Mecklenburgh Strelitz. In the afternoon the Queen drove out in the parks; and in the evening her Majesty and the Prince Consort honoured the French Plays with their presence. The Prince Consort afterwards paid a visit to the Earl of Rosse, at his residence in Connaught-place.

On Sunday the Queen and Prince Albert, with the Prince of Wales, the Princess Royal, and the Princess Alice, and the Duchess of Kent and the Princess Adelaide of Hohenlohe, attended Divine service in the private chapel of Buckingham Palace. The Hon. and Rev Gerald Wellesley officiated.

On Monday her Majesty visited the Duchess of Cambridge in the afternoon, at her residence in St. James's Palace, and afterwards called upon the Duchess of Kent, at Clarence House. The French Plays were again honoured with the Royal presence in the evening.

On Tuesday afternoon the Queen and Prince Albert, accompanied by the Princess Royal and the Princess Alice, and attended by the Viscountess Jocelyn, Colonel the Hon. Charles Grey, and Lieut.-Colonel the Hon. A. Gordon, left Buckingham Palace, for Claremont (travelling by the London and South-Western Railway), and visited the Countess de Senilly and the French Royal family. The Royal party returned to Buckingham Palace at six o'clock. In the evening the Queen had a dinner party. The company included her Royal Highness the Duchess of Kent, Her Royal Highness the Hereditary Grand Duke and Grand Duchess of Mecklenburgh Strelitz, her Royal Highness the Duchess Caroline of Mecklenburgh Strelitz, Her Royal Highness the Princess Mary of Cambridge, his Royal Highness the Duke of Cambridge, her Serene Highness the Princess Anne of Hohenlohe, Earl Granville, the Marquis of Breadalbane, and the Marquis of Lansdowne.

On Wednesday the Queen held a Court. The Prince Consort paid a visit to his Royal Highness the Duke of Genoa in the afternoon. In the evening the Queen had a dinner party. The company consisted of her Royal Highness the Duchess of Kent, his Royal Highness the Duke of Genoa, her Royal Highness the Princess Adelaide of Hohenlohe, the Duchess of Sutherland, the Duke and Duchess of Norfolk, the Sardinian Minister, the Chevalier Bussine d'Arcglio, the Earl of Aberdeen, the Marquis and Marchioness of Breadalbane, Countess of Somers, the Earl of Clarendon, and Lord John Russell.

On Thursday the Queen held her first Drawingroom for the present season.

Lord Charles Fitzroy has relieved Colonel the Hon. Charles Grey in his duties as Equerry in Waiting to the Queen, Captain the Hon. Dudley Ryder has relieved Lieutenant-Colonel the Hon. A. Gordon in his duties as Equerry in Waiting to her Royal Highness Prince Albert. The Hon. Caroline Cavendish and the Hon. Flora Macdonald have succeeded the Hon. Lucy Kerr and the Hon Mary Bulteel as the Maids of Honour in Waiting to her Majesty.

THE QUEEN'S COURT, &c.

The Queen held a Court on Wednesday afternoon, at Buckingham Palace.

The Duke of Norfolk, K.G., Lord Steward, the Marquis of Breadalbane, K.T., Lord Chamberlain, the Hon. Sir Edward Musgrave, Treasurer of the Household, and Lord Drumlanrig, Comptroller of the Household, had an audience of her Majesty, and presented the joint address from the Houses of Lords and Commons respecting Cambridge.

Mr. Sheriff Carter and Mr. Sheriff Croll, accompanied by the City Remembrancer, were presented to the Queen, at an audience, by Viscount Palmerston, K.G., Secretary of State for the Home Department, for the purpose of presenting addresses to the reception of addresses of congratulation on the birth of a Prince, from the Court of Aldermen, and from the Court of Common Council. Her Majesty was graciously pleased to appoint Saturday (this day), at the o'clock, for the reception of the addresses on the throne.

The following Commissioners of Lieutenancy of the City of London attended, as a deputation, to receive the Queen's commands for the reception of an address, on the auspicious birth of a Prince, from the Commissioners of Lieutenancy of the City of London—viz. Mr. James Bentley, Mr. T. C. Banks, and Mr. George Alliston, accompanied by Mr. Henley Smith, clerk and treasurer. The deputation was presented by Viscount Palmerston, at an audience to her Majesty, who was pleased to appoint Saturday (this day) for the reception of the address on the throne.

His Royal Highness the Duke of Genoa (brother of the King of Sardinia), attended by the Marquis d'Arcglio, Sardinian Minister, had an audience of the Queen on his arrival at his country. His Royal Highness was introduced by the Earl of Clarendon, K.G., the Queen's principal Secretary of State for Foreign Affairs, and conducted by Major Grey, Equerry to her Royal Highness Prince Albert.

THE DUKE OF GENOA.

His Royal Highness the Duke of Genoa, brother of the King of Sardinia, arrived in town on Tuesday, from Paris. His Royal Highness left the French capital the same morning, accompanied by his Excellency the Marquis d'Azeglio, Sardinian Minister at the Court, who had been appointed to meet his Royal Highness, and attended by the members of his suite—the Marquis S. Marzano, and Count Della Valle. After a somewhat rough passage across the Channel, his Royal Highness landed at Dover, and, on his arrival, proceeded, by the ordinary express train, and arrived at the London-road Station at half-past ten o'clock. The Count Louis Corti, and the other gentlemen attached to the Sardinian Legation, were in attendance at the station to receive his Royal Highness. The Duke, having entered one of the carriages in attendance, immediately drove to Mivart's, where apartments had been prepared for his Royal Highness's reception. His Royal Highness had an audience of her Majesty, by appointment, on Wednesday. The Duke is a fine young man, with a Germanic cast of countenance. He was born in 1822, and married, in 1850, the Princess Marie de Saxe.

WINDSOR DURING ASCOT RACES.—Preparations are made at the Castle for the visit of the Court, and a large company of distinguished visitors, who have been honoured with an invitation to join the festivities which will take place at the Castle during the Ascot races. Banquets on a magnificent scale will be given in St. George's Hall and the Waterloo Chamber. According to the present arrangement, the Court will not arrive at Windsor before Tuesday next; consequently, it is said, the first day's races will not be honoured with her Majesty's presence; and it is also said that the Queen will not accompany her illustrious visitors in her train, state to the course before Thursday, the only day her Majesty will visit the races this season. Although any one state apartment of the Castle will be closed to the public after Monday next, and not opened before Thursday, the 16th, it is not expected that the Court will remain at Windsor after Friday, the 17th inst.

MARRIAGES IN HIGH LIFE.—On Wednesday the nuptials of the Hon. Isabella Lister, sister to Lord Ribblesdale, and step-daughter to Lord John Russell, with the Rev. W. Warburton, Fellow of All Souls College, Oxford, and one of her Majesty's Inspectors of Schools, were celebrated at Petersham Church, near Richmond. Lord John Russell gave the bride away. The marriage ceremony was performed by the Rev. Sir. Crocker. After the ceremony, Lord and Lady John Russell gave a déjeuner, at Pembroke Lodge, to the bridal party. Early in the afternoon the bride and bridegroom left town for the Grove, near Watford, the seat of the Earl and Countess of Clarendon. The bridegroom is brother of the all-fated Eliot Warburton, who was lost in the *Amazon*.—The marriage of Lady Margaret Compton, sister of the Marquis of Northampton, with the Hon. F. Leveson, M.P., brother of Lord Granville Leveson, was solemnised on Wednesday, in the presence of a select circle of the friends of both families. The wedding déjeuner was given by Lady Emma Ford, the bride's sister, at her residence, Princes-gate.

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

In reply to the Earl of Malmesbury, the Earl of CLARENDON said that, owing to the great skill and exertions of Sir Charles Hotham, the representative of her Majesty's Government at Monte Video, he had succeeded in effecting a treaty for the opening of the communications with that part of the world by means of the river Paraná.

Lord BEAUMONT moved for a copy of a certain treaty in respect to the succession to the Crown of Denmark, and for the production of papers relating thereto.

The Earl of CLARENDON said it would be almost impossible to produce the correspondence, on account of its voluminous character. A part of that correspondence it would be improper, under any circumstances, to produce. He had, however, no objection to the production of a copy of the treaty moved for.

After a few words from the Earl of MALMESBURY and Lord BEAUMONT, the subject dropped.

The Burials Bill having passed through Committee, their Lordships adjourned.

HOUSE OF COMMONS.—FRIDAY.

Mr. DISRAELI gave notice of his intention, on Monday, to move for a series of returns in relation to the Conversion of Stock under the recent resolutions of the House; and said that he would take an early opportunity of calling attention to the present state of our finances (Hear, hear).

In reply to Mr. Hindley, Lord J. RUSSELL said that in the present state of public business he could not now inform the House what course the Government would pursue with regard to the Education Bill. He intended first to proceed with the Charitable Trusts Bill now under consideration by the House of Lords.

The reports of the Income-tax Bill and the Customs Bill were severally brought up and agreed to

THE GOVERNMENT OF INDIA.

Sir C. WOOD, in rising to state the views of her Majesty's Ministers with regard to the future Government of India, expressed his conviction that whatever difference of opinion there might be with regard to the plan he was about to propose, party-spirit would not be imported into the discussion. He deprecated delay in dealing with this subject, considering the magnitude of the interests at stake, and that the present peaceable state of the world was favourable for legislation. The plan of the Government would only embrace the question of the Government of India at home and abroad. To those who contended for further inquiry, he replied that inquiry upon many of the topics embraced had been completed; and what remained to be inquired into would consume a much longer time than some persons anticipated. All testimony concurred in advising immediate legislation, and in pointing out the danger of delay. Referring to the condition of India for the last twenty years, he thought that great exaggeration had gone abroad with regard to the progress made. The rule of this country in India had, however, not been unsuccessful, though that success would have been more complete but for the unhappy wars which had prevailed there. He denied the allegations contained in some petitions to that House as to the mal-administration of justice, and asserted that it was fairly and impartially administered by English judges.

The right hon. gentleman then proceeded to take a review of the history of India since its connection with the British Crown, and having adverted to the numerous works carried out for the improvement of the country, proceeded at great length to show that the production and consumption of the people had increased rapidly during the last ten years, as the imports and exports indicated. He proposed a plan for the future administration of India, by which the double government would be retained. The Court of Directors were to be reduced to eighteen—six to be nominated by the Crown from persons who had served ten years in India. This would obviate the objection, that it was not always the best find an servants who obtained promotion. He proposed that one-third of the Board should vacate every second year, but that the out-going parties should be eligible for re election without the interval of a year. He did not propose to make any change in the constituency of the election members of the Board. He did not think it proper to effect the whole change at once, and it was therefore proposed that at first the Directors should select fifteen of their number, to which the Government should add three, with power to fill up the first three vacancies which might occur. He proposed that the Board should serve for six years with the changes he had mentioned. He considered that this would be a great improvement; but it was not intended to tie up the hands of Parliament from making changes, and it was therefore provided that the proposed Government should not be dissolved until the Parliament shall otherwise provide. As great additional labour would be thrown upon the Directors, he proposed that they should each of them have a salary of £500 per annum, with £1000 each to the Chairman and Deputy Chairman. He proposed to do away with the present system of patronage—to do away with nominations to the civil service, the introductions to the military colleges, and the appointments to be assistant-surgeons. Merit alone should be hereafter the passport to such appointments. Such merit to be tested by examination. With respect to the administration of justice, the right hon. gentleman stated that the course of education would be this: that the examination for the civil service should take place before the parties left England, and should be conducted by independent judges. The candidates should be qualified by a good fundamental knowledge of the law. The two courts which now existed in India should be amalgamated into one, and should be presided over by judges who were not only conversant with the law of England, but the law of that country. This tribunal should form the highest court of appeal. The subject of education generally would be a matter for future consideration. Sir Charles Wood then referred to minor details, and sat down, after a speech of four hours' duration.

Mr BRIGHT expressed his disapprobation at the whole plan, and amidst much cheering declared the policy of the Government.

On the motion of Mr PHILLIMORE, the debate was adjourned until Monday. The House then adjourned.

RESIGNATION OF THE ROMAN CATHOLIC SECTION OF THE GOVERNMENT.—In consequence of the remarks made by Lord John Russell, on Tuesday night, in the House of Commons, disapproving of any endowment of the Roman Catholic Church in Ireland, the following members of the Ministry resigned their offices—Mr. John Sadleir, Mr William Keogh, and Mr. Monsell declining to serve in a Government of which Lord John Russell is a leading member.

SLIGO ELECTION COMMITTEE.—This committee closed its labours on Friday, when after an hour and a half's deliberation, the chairman (Mr Divett) announced its decision that Mr. Towneley was not duly elected to serve in Parliament, he having by his agents been guilty of bribery, although not personally cognisant of their acts. The resolutions of the committee by which this decision were accompanied reflected in severe terms on the conduct of the Catholic priests, during the election; and the chairman took an extra-judicial opportunity of expressing the regret of the committee in reference to Mr. Towneley's agents, that a gentleman of his high respectability should have fallen into such bad hands. It is supposed that Mr. Somers will be returned without opposition.

COLONEL WYLDE will be in attendance on his Royal Highness the Duke of Genoa during his stay in England.

HER MAJESTY has announced her gracious intention of giving £200, and Prince Albert £100, towards the fund for the purchase of Marochetti's statue of Richard Cœur de Lion.

THE EAST INDIA COMPANY.—The Court of Directors of the East India Company have called a special general meeting of the Court for Monday next, "to receive a communication regarding the arrangement proposed by the Ministers for the future government of India.

THE ORLEANS FAMILY.—On Thursday morning, as early as eight o'clock, the rite of confirmation was bestowed on H.R.H. the Comte de Paris, by Cardinal Wiseman, in the presence of the ex-Royal family of France and a distinguished circle of the English nobility, at the chapel of the French Embassy, in King-street, Portman-square. The Duc de Chartres also made his first communion. In the next Number of the ILLUSTRATED LONDON NEWS we shall give a Portrait of the Count de Paris, and enter more fully into the details of this event.

PORTSMOUTH—FRIDAY.—The *Bluebein* and the *Sidon*, steam-ships, have taken on board their powder and shells, at Spithead, and are quite ready for sea.

DUBLIN.—The fine weather has been of much service to the Great Exhibition no less than 17,500 persons passed in on Wednesday.

UNITED STATES.—The *Hermann* steamer touched at Cowes on Thursday, on her way to Bremen. She brings no political news.—A destructive gale has visited Lake Erie, in which many vessels were sunk or driven ashore, and some lives were lost.

MUSEUM OF ORNAMENTAL ART AT MARLBOROUGH HOUSE.—The number attending during May were as follows: 7759 persons on the public days, free; 851 persons on the students' days, and payment of sixpence each, being for the registered visitors of the classes and schools.

THE JEW BILL.—We understand that Mr. Alderman Salomons has given notice of an appeal to the House of Lords against the decision of the Judges in the case of Miller *v.* Salomons. Thus, the House of Lords will have to consider judicially, and de de the important point, whether the Oath of Abjuration has been lawfully taken. The appeal will not be heard till next session.—*Hebrew Observer.*

DEATH OF THE EARL OF DUCIE.—We have to announce the decease of the Earl of Ducie, who expired on Thursday, at twelve o'clock, at Tortworth-park, Gloucestershire. His Lordship was in the 82nd year of his age; and is succeeded in his title and estates by his son, Lord Moreton, whose elevation to the Peerage creates a vacancy in the representation of Stroud.

WE are sorry to state that Sir John Hope, Bart, M.P. for the county of Edinburgh, lies dangerously ill at his residence in London, and that his medical attendants give no hope of his recovery.

THE WAGNER CASE.—LUMLEY *v.* GYE.—In the Queen's Bench yesterday, their Lordships delivered judgment in this sending case. Lord Campbell, Mr Justice Erle, and Mr. Justice Crompton were decidedly in favour of a verdict for the plaintiff, and Mr. Justice Coleridge in favour of the defendant. In giving judgment Lord Campbell observed:—"In the present case there was a malicious procurement of Miss Wagner by the defendant, to the damage of the plaintiff. But it was contended that the breach of the contract was the act of Miss Wagner herself, for which the defendant was not responsible. After reviewing the various authorities on the subject, the learned Judge said that on those authorities an action on the case was maintainable. The defendant contended that the maliciously preventing a person from performing a contract was confined to apprentices and menial servants; but the cases and the authorities extended to all cases of contract, whether in the case of man and wife, or in the case of slander, or in the case of the sale of goods. In the present case Miss Wagner was employed by the plaintiff; and therefore upon the whole case, in his opinion judgment should be for the plaintiff.

RAILWAY ACCIDENT.—On a portion of the railway occupied by the Leeds Northern Company, a fatal accident occurred on Wednesday morning to the guard, named John Hudson. The time of the luckless wheel of the engine broke, and caused the upsetting of the van on which the guard was seated: the poor fellow was crushed under the van, and drawn some yards on the rails. When taken out, he was fearfully mangled.

FOREIGN.

FRANCE.—No fact of importance in reference to the Eastern question has transpired. [illegible]

We have received [illegible] announcing the arrival of Prince Menschikoff at [illegible] on the 19th of the present May. On the morning of the 24th he started for St. Petersburgh, a distance of 1200 leagues from St. Petersburg. However fast he may travel, it is not likely that Prince Menschikoff could have arrived there before the 31st of May.

A despatch from Paris, of Thursday evening, says:—

The speculators for a rise were not able to maintain to-day the advantage they obtained at the Bourse yesterday. The Three per Cents opened at 73f. 85c., and rose to 73f. 90c., but an announcement that Consols had declined in London, and that the Bank of England had raised its rate of discount, [illegible] to 3 per cent, and the Three per Cents fell to 73f. 30c., and closed at 73f. 50c. for the end of the month, being a fall of 1f. as compared with the closing price of yesterday.

RUSSIA AND PERSIA.—Differences have arisen between Russia and Persia. The Persian demands from the Shah's Government either the immediate repayment of the loan of 50,000,000f., or the cession of the territory of Asterabad, on the shores of the Caspian. The Shah has refused compliance with either demand. It is said that the Prince Dolzoraki, Secretary to the Russian Embassy at Teheran, has given a blow to the Secretary of the Shah; and that Ahmet Effendi, the Turkish Ambassador, who took the part of the insulted dignitary, has addressed a circular to the foreign Consuls at Teheran.

AUSTRIA.—We learn from Vienna that the Minister of Foreign Affairs has addressed a circular to the Austrian representatives at foreign Courts. The Minister declares that the meeting of sovereign princes at Vienna had nothing whatever to do with politics. In conclusion, the circular announces the marriage of the Duke of Brabant with the Archduchess Marie.

BELGIUM.—A project of law for settling a dotation of 600,000 francs on the Prince Royal (Duc de Brabant) has been presented to the Belgian Chambers.

THE WEST COAST OF AFRICA.—By the *Forerunner*, we hear that slaving had again commenced on the coast, and in one or two instances captures had followed. The *Ferret* took one ship lying in the river New Calabar, and the *Linnet* had captured two lying in the river Bonny. When the *Forerunner* arrived at Cape Coast, on her outward voyage, the Governor and troops had left the fort to settle the dispute with the King of Ashantee, and had encamped near Dunqua, in the face of an army amounting to upwards of 20,000 men, the English, with their allies, being 16,000. The disturbance was caused by two chiefs, who were sworn to support the English, having broken their fidelity, and accepted bribes to join the opposite party. They were imprisoned in the English fort, but afterwards let out on bail. They again attempted to cross the river Prah, and join the king of Ashantee. Ensign Brownhill, of the Gold Coast corps, with a party of native soldiers, succeeded in bringing them back. They were secured in the cells of the castle, and afterwards beheaded by order of a court martial.

Another account says that the threatened war on the Gold Coast with the Ashantees is at an end. By the prompt and firm measures of the Governor, and the good feeling he has succeeded in establishing with the tribes under our protection, that which at one time threatened to be a serious war with one of the most civilised and belligerent nations in Africa (the same which, in 1824, defeated and killed Governor M'Carthy), was terminated most satisfactorily, and without bloodshed.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, JUNE 2

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer.			Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	° Highest Reading.	° Lowest Reading.	° Mean.	°	°			Inches.

„ 2	30.059	61·8	48·6	52·1	— 4·6	86	N.E.		0.09

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer increased from 29.71 inches at the beginning of the week to 29.76 inches by 9h. a.m. on May 28th; decreased to 29.75 inches by 9h. p.m. on the same day; increased to 30.04 inches by 9h. a.m. on the 31st; decreased to 29.97 inches by 9h. a.m. on June 1st, and increased to 30.12 inches by the end of the week. The mean reading for the week, at the height of 82 feet above the sea, was 29.949 inches. The weather during the week has been variable and severe for this season of the year, and the mean daily temperatures have ranged from 8° above to 4° below their average values. During the time when the daily temperatures were above their average value, viz., from May 14th to the 27th (with the exception of the 21st, which was slightly in defect), the mean excess for the period was 6° daily. The mean temperature of the week was 52°, being 7°9 below the average of the corresponding week in thirty eight years. The highest reading of the thermometer was 78°, on May 27th; and the lowest, 42°, on the 30th: their difference, 36°, shows the range of temperature in the week. The daily ranges of temperature have not been so large as in the preceding weeks, the greatest being (27·8°) on May 31st, the least (8·1°) on the 28th, and the mean for the week 19·1°. During the thunderstorm on May 29, which lasted from about 10h. 15m. to 10h. 45m. p.m., the temperature, which was 52·8° at 9h. a.m., declined to 48·2° by 10h. 0m., increased to 50·2° by 10h. 30m., but at 10h. 45m. had declined to its former temperature of 52·8°; and the fall was [illegible] barometer on the ground in sheltered situations for twenty-five hours after it has ceased falling. Rain fell during the week to the depth of 0.46 inch. The mean reading of the barometer for the month of May, reduced to the level of the sea, was 29.651 inches. The mean temperature of the air was 52·7°, being 0·8° below the average of thirty-eight years. The mean temperature of the dew point was 47·2°. The mean degree of humidity was 69; complete saturation being represented by 100. The mean daily range of temperature was 21·7°, and rain fell to the depth of 1·8 inch

Lewisham, June 3rd, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending May 28th, the births of 1165 children were registered in the metropolitan districts: of these 582 were boys, and 779 were girls. In the eight corresponding weeks of the eight preceding years, the average number was 1371. During the week 1128 deaths were registered. In the ten corresponding weeks of the years 1843–52 the average number was 890, which, if raised in proportion to the increase of population, will give a return of 979. The actual result is, therefore, in excess of the estimated number by 149. Of zymotic diseases 229 deaths are recorded (their average is 191): of these, 5 were due to small-pox (its average is 16); to hooping-cough, 55 (its average is 30); to diarrhœa, 32 (its average is 12); and to typhus, 52 (its average is 39). To tubercular diseases, 233 (their average is 185): of these, 136 were due to consumption (which exceeds its average by 32); to diseases of the heart and blood vessels, 49 (their average is 37); to diseases of the lungs and other organs of respiration, 167 (their average is 116): of these 81 were due to bronchitis (its average is 44); to pneumonia, 57 (which shows a decided increase, the number of deaths from this disease in the two preceding weeks being 36 and 71 respectively). To violence, privation, cold, and intemperance, 33 deaths were attributed. On May 25th a man died from old age, in the Greenwich workhouse, at the age of 100 years; and on May 21st, at 1, Elder-street, Norton-Folgate, a man died from old age and exhaustion, at the age of 100 years.

HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST.—The twelfth anniversary dinner of this admirable charity took place at Willis's rooms on Wednesday. The Marquis of Westminster took the chair, and was supported by Lord Feversham, Lord Dynevor, and other influential friends of the charity. The noble chairman stated that the number of persons admitted into the hospital during the past year was 445; of whom 292 were discharged relieved, 61 had died in the hospital, and 90 remained in the wards. The number of out-patients relieved during the same period was 3074, and the total number relieved since the opening of the new building was 29,886. The receipts during the year 1852 amounted to £2900. The chairman remarked the company that one-eighth of the aggregate mortality arose from diseases of the chest, and that there were constantly persons perishing to whom and might be rendered, if the funds were adequate. He showed that the experience which the hospital afforded of the best mode of treating consumption tended greatly to the improvement of medical science as regarded that disease. As a proof of the scientific and useful manner in which it was conducted, he stated that during the whole of the last winter its temperature had been kept up to 61 degrees. But the great event of last year in the history of the hospital was, that the managers had invested in the purchase of a quantity of land around it a sum of not less than £15,000 The appeal of the noble Marquis in aid of the charity was warmly responded to, and, in the course of the evening, subscription lists amounting to nearly £2000 were announced.

CHARING-CROSS HOSPITAL.—A sermon was preached on Sunday, at St. Paul's Church, Covent-garden, on behalf of this charity; whose efficiency it is proposed greatly to increase, by an urged recommendation in the hospital for the treatment of "accidents," and by visiting patients at their own houses. The preacher, the Dean of Manchester, was one of its earliest and most active supporters.

ST. MARK'S HOSPITAL.—The anniversary of this excellent institution was held on Monday, at the London Tavern. The Lord Mayor was the chairman; and a very pleasant evening's entertainment was wound up by a subscription list, amounting to nearly £200.

FRIEND OF THE CLERGY.—The half-yearly election of pensioners upon the funds of this excellent institution, took place at the London Tavern on Tuesday. There were 128 candidates, the number to be elected being ten. The following were declared to be the successful candidates:—Mrs. Yorath, Miss Ryder, Miss Creeton, Mrs. Hopper, Miss Cooley, Mrs. Davies, Mrs. Spencer, Miss Haseland, Miss Thomas, Miss Stephenson.

NEWSVENDERS' PROVIDENT INSTITUTION.—On Tuesday evening the fourteenth annual meeting of this society took place at Anderton's Hotel, Fleet-street. The report stated that during the past year £750 had been added to the vested fund, making the capital of the institution £1250. The report recommends the erection of almshouses, by means of small weekly subscriptions, to be called "Metropolitan Newsvenders' Almshouses." The report was adopted, and the proceedings terminated.

HER MAJESTY'S VISIT TO GORE HOUSE.—On Monday, as early as half-past nine, the Queen, Prince Albert, and the Princess Royal, visited the Exhibitions of Decorative Woven and Works of the Students of the Schools of Art, now open at Gore House, Kensington. The Royal party carefully inspected every room, bestowing considerable time in examining the productions of the special classes of the Department of Art, and the life studies of Mr. Mulready, and then proceeded round the gardens.

GRAND REVIEW AT WOOLWICH.

ON Thursday (last week) her Majesty's Birthday was celebrated by a grand Review, a scene from which our Artist has pictured upon the next page.

At ten o'clock the whole of the troops in the Garrison of duty assembled in review order, and proceeded to the Common, where they were drawn as follows:—The Royal Horse Artillery across the extreme top of the Common, facing downwards, under the command of Lieutenant-Colonel Strangways; the troops of the line extended the whole length of the Common, consisting of two battalions of the Foot Artillery, the right battalion under the command of Lieutenant-Colonel Higgins, and the left battalion under the command of Lieutenant-Colonel Dacres; the Royal Sappers and Miners, under the command of Adjutant Fitzroy Somerset, R.E.; the Battalion of Local Pensioners, under the command of Staff Officer Major Forbes; the Royal Marines, under the command of Lieutenant-Colonel Jolliffe; two 9-pounder field batteries, the gunners dismounted, and three light 6 pounder batteries, across the lower part of the Common, under the command of Lieutenant-Colonel Anderson.

On the formation of the troops into line, the command of the whole was taken by Col. Whinyates, Commandant of the garrison. Lord Raglan, G.C.B., the Duke of Cambridge, the Grand Duke of Mecklenburgh-Strelitz, &c., with a number of officers, arrived on the Common about a quarter before twelve o'clock. At twelve o'clock, a salute of twenty-one guns was fired by the Royal Horse Artillery, and immediately afterwards guns were fired in quick succession by the Royal Artillery, and a *feu de joie* commenced from the right to the left of the line. Seven guns were then fired in quick succession from the light field batteries, and then a second running fire up the front rank and down the rear. Seven guns were again fired by the Royal Horse Artillery, followed by a third running fire. The whole of the troops then presented arms, and the bands played the National Anthem of "God save the Queen." The troops afterwards ordered arms, and took off their caps, and gave three hearty cheers, taking the time from the Commandant in front. The Master-General and his staff then inspected the troops. On returning to the right of the troops broke into open column to the right, and marched past at slow and quick time. The field batteries remained on the ground, and went through the evolutions of a field day.

GRAND BALL AT THE BRITISH EMBASSY AT PARIS.

THE ball of the British Ambassador, on Tuesday se'nnight, in honour of the birthday of Queen Victoria, was, by general admission, the most brilliant fête of the season—splendid as have been the entertainments given during the late Paris season. Over the gates of the Embassy was displayed a design in gas representing the Royal crown of England, with the initials "V. R." underneath, and the whole enclosed in a tasteful garland, in which the Rose, the Shamrock, and the Thistle were combined. In the centre of the façade of the hotel, and lighting up the whole court, blazed the Star of the Order of the Garter. Tasteful illuminations were executed under the superintendence of Mr. Albano, of the Board of Works. The whole of the suite of apartments on the ground-floor were thrown open, and were quickly filled, for company began to arrive a little before ten, and it is said that not less than 2000 cards had been issued. About 1500 persons were present.

Among the visitors (who comprised all the most distinguished persons in Paris) were the members of the diplomatic corps and the Ministers who had dined with the Ambassador, Princess Mathilde, the Duke and Duchess of Hamilton, General Narvaez, General Magnan, Count Bacciochi, &c

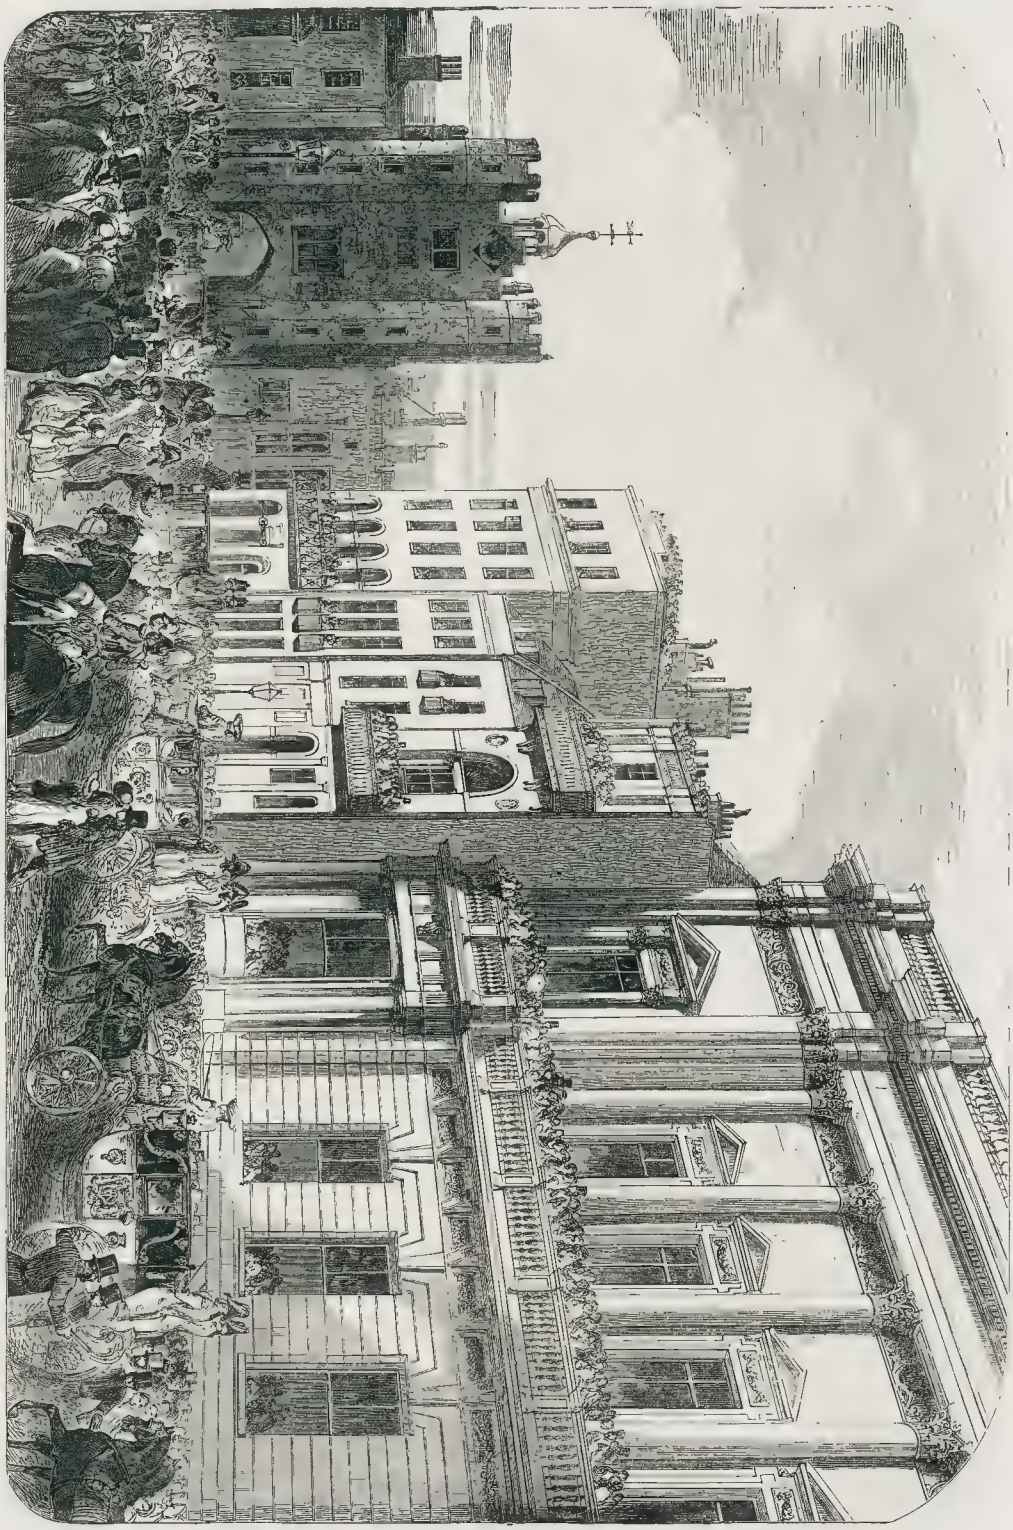
The gardens of the Embassy were brilliantly illuminated; and when, at eleven o'clock, the drapery which concealed them was suddenly withdrawn, nothing could surpass the beauty of the scene that

HER MAJESTY'S BIRTHDAY.—GRAND REVIEW AT WOOLWICH.—(SEE PRECEDING PAGE.)

broke on the eye. The whole garden was brilliantly lighted up; and, along the trees and shrubs, coloured lamps were suspended. The effect of these variegated lights was charming. A military band, of nearly 100 musicians, was stationed among the trees, and played select airs, in addition to Strauss's band for the dancing. At the lower end of the garden, and surmounting all, might be seen the Royal crown, with the same initials as before. The weather was fortunately very fine.

As there was a throne-room fitted up with great splendour, the Emperor was perhaps expected, but if so the expectation was not realised. The only members of the Emperor's family who were remarked were the Princess Mathilde and Prince Louis Lucien Bonaparte. The appearance of the Princess Mathilde, leaning on the arm of Lord Cowley, was the signal for the well-known "Partant pour la Syrie." Among the earlier arrivals was Marshal Narvaez, who looked very well, and quite happy. He remained for some time in the gardens admiring the effect produced by the display. He remarked to some persons with whom he was conversing how with Englishmen the English spirit prevails even in their very amusements. It is said that the Marshal, in familiar conversation, speaks of England and of English institutions with the greatest enthusiasm. At one o'clock the supper-rooms were thrown open, and in every respect the arrangements for the guests were admirable. The refreshments were abundant. There were, to use a City phrase, rivers of champagne; and the supper was excellent. No expense, indeed, appears to have been spared, and every body was satisfied. After supper dancing was resumed, and kept up with animation till an advanced hour. Lord and Lady Cowley were exceedingly gracious and unremitting in their attentions to the company.

HER MAJESTY'S BIRTHDAY.—GRAND BALL AT THE HOTEL OF THE BRITISH EMBASSY, AT PARIS.—THE ILLUMINATED GARDENS.



ST. JAMES'S-STREET.—HER MAJESTY'S DRAWING-ROOM.—(SEE NEXT PAGE.)

HER MAJESTY'S DRAWINGROOM.

The Queen held a Drawingroom (the first this season), on Thursday afternoon, in St. James's Palace. The arrival of the company never ably presents an attractive sight of the London season; but, upon this occasion, it was unusually gay and splendid. St. James's-street was crowded with spectators to witness the magnificent equipages proceeding to the Palace; and the line of carriages extended for a long distance through the adjoining streets. In no city of the world are such fine horses and superb carriages to be seen as in our metropolis; and, of all the display of the year, that of the Drawingroom day presents the most magnificent scene; when the carriages are occupied by lovely women, in unrivalled Court costumes, and the display of splendid uniforms, and richly embroidered liveries, have no parallel in the calendar of London gaiety. Such a scene was presented by St. James's-street on Thursday, and is pictured by our Artist upon the preceding page.

Her Majesty and his Royal Highness Prince Albert arrived from Buckingham Palace, escorted by a detachment of the Royal Horse Guards, and were received by the Lord Steward, the Lord Chamberlain, the Treasurer of the Household, the Vice-Chamberlain, and the Comptroller of the Household.

His Royal Highness the Duke of Genoa, their Royal Highnesses the Hereditary Grand Duke and Duchess and the Duchess Caroline of Mecklenburgh Strelitz, their Royal Highnesses the Princess Mary and the Duke of Cambridge, Her Serene Highness the Princess Adelaide of Hohenlohe, and his Serene Highness Prince Edward of Saxe-Weimar were present at the Drawingroom. The Royal Family were received by the Vice-Chamberlain, and conducted to the Queen in the Royal Closet.

Before the Drawingroom, her Majesty, according to annual custom, received a deputation from Christ's Hospital in the Throne-room.

The deputation, which was ushered to the Royal presence by Sir W. S. Maryon-Wilson, Esquire, Deputy-Governor of the Hospital, consisted of the Rev. W. Trollope (the treasurer), Mr. Alderman Plomptre (the president), Sir A. J. Dalrymple, Bart., Mr. B. B. Cabbell, M.P., and Mr. Hale, three of the Governors of the institution; accompanied by the Rev. W. Webster, M.A. (the mathematical master), Mr. W. B. Lock (the drawing master), and the forty boys of the Royal Mathematical School, founded by Charles II., and was most graciously received.

The Queen condescended to inspect the charts and drawings executed by the boys, and to express her approbation of their performance.

The hon. corps of Gentlemen-at-Arms were on duty in the state rooms, under the command of the Lieutenant. The sub-officers, Lieut.-Colonel Sir Martin Hawley Cooke, were also on duty.

The Yeomen of the Guard were on duty, under the command of the Earl of Ilchester.

Her Majesty was attended by the Lords and Ladies of the Household.

The Queen wore a train of blue and silver cloth, with gold stars, trimmed with gold braid and silver bullion.

The petticoat was of white satin, trimmed with gold braid and white roses, with [illegible] and bullion.

Her Majesty's head-dress was formed of diamonds and feathers.

Her Royal Highness the Princess Mary of Cambridge wore a blue moiré antique train, embossed with white flowers, and trimmed with blue. The petticoat was of diamonds. Three skirts of blue tulle, embroidered with silver stars, and a pet [illegible].

Her Royal Highness's head-dress was composed of feathers and a tiara of diamonds, of wheat ears, with lace lappets. The necklace and ear-rings were diamonds.

Her Serene Highness the Princess Adelaide of Hohenlohe wore a train of white watered silk, bordered with leaves trimmed with white satin ribbon and silver; the stomacher, of silver bionde and bouquets; the petticoat of white satin, trimmed with tulle, silver blonde, and blush roses. The dress was of English manufacture. The Princess's headdress [illegible] roses, and diamonds.

[illegible] presented for the first time, and afterwards the general circle [illegible].

Her Majesty [illegible] was pleased to [illegible] Majesty's Household [illegible].

After the Drawingroom the Prince returned to Buckingham Palace, and in the evening honoured the Royal Italian Opera with his presence.

NATIONAL SPORTS.

ROYAL THAMES YACHT CLUB

Wednesday was fixed upon for the second match of this distinguished club, since the commencement of the present season. On this occasion a new yacht, the *Rosalind*, built by Inman, of Lymington, for Lord Alfred Paget, more than realised the expectations which had been formed of her capabilities. The *Rosalind* steam-vessel was chartered for the accommodation of the members of the club and their visitors. The course appointed for the match was from Gravesend to sail round the Mouse Light-vessel and back. The following vessels were entered:

Name.	Tons.	Port.	Owner.
1 Vestal	74	South	Mr. B. G. Rowles
2 *Rosalind*	106	Cowes	Lord A. Paget, M.P.
3 May-fly	90	Cowes	Mr. [illegible]
4 *Sprite*	90	Cowes	Mr. [illegible]
5 Violet	60	Plymouth	Capt. Fenton, R.N.
6 Sapphire	104	Portsmouth	Mr. G. P. Nayl[illegible]

No time allowed for tonnage.

The race may be described in a few words. The Commodore fired a gun for weighing anchor at seven minutes to one o'clock. The *Rosalind* was by far the smartest in setting sail, and took a commanding lead in gallant style. The *Sprite* was the last off, having got her broadside on to the tide. The *Rosalind* carried a large narrow ensign at the mizen-peak. They then stood out to sea in the following order: the *Rosalind*, *Sapphire*, *Lady-fly*, *Violet*, *Vestal*, and *Sprite* last of all. Nothing calling for special notice took place, except that the *Sprite* gradually overhauled the others, and off Southend took the second place, the *Rosalind* at the time having a lead of nearly two miles. About halfway between the Nore and Chapman Head, the *Violet* and the *Sprite* being both on the same tack, had to put about to clear a brig, and it was alleged that in so doing the latter fouled the fore-rig, when immediately hoisted a signal of protest against the Swede. The *Sprite*, after this, slowly gained on the *Rosalind*. They passed the Mouse in the following order:

1. [illegible]		7	15
2. [illegible]		7	30

The *Sapphire* and *Mayfly* passed in succession very quickly after the *Vestal*. On the *Meteor* coming up with the yachts, the *Sprite* had made up her ground, and for the last half a dozen miles a most exciting race ensued between them, which was increased by the *Sprite*, about two miles from the winning-post, carrying away her foretopmast, just as she was taking a decided lead. So close were the two, that as they neared the flag-ship, it was thought the *Rosalind* was going to windward, would be able to slip round before her opponent. The latter, however, was just enough ahead to prevent the manœuvre; and the *Rosalind*, in her endeavour to avoid a foul, snapped her bowsprit. They rounded the flag as follows:—

1.	Rosalind	..	..	4 h.	30 min. 0 sec
2.	Vestal	..	..	4	51	10
3.	Sapphire	..	..	5	7	15
4.	Mayfly	..	..	5	19	10
5.	Sprite	..	..	6	31	0

The match was sailed at a very great pace, the time being a few minutes under five hours. This is, we believe, the shortest time in which the course, sixty-six miles, has ever been accomplished. In consequence of the protest the prize was not awarded; the point in dispute having been referred to the sailing committee, whose decision will be made known next Wednesday.

In page 448 will be found an Illustration and description of the [illegible].

ROYAL LONDON YACHT CLUB

The opening match of this very popular club took place on Tuesday, for a pair of colours. The following vessels took their stations:

1.	[illegible]	..	..	8 tons	W.
2.	[illegible]	..	..	19 m.	[illegible]
3.	[illegible]	..	..	[illegible]	[illegible]
4.	Romp	..	..	12 n.	[illegible]
5.	Alpha	..	..	10 n.	[illegible]
6.	Kitten	..	..	[illegible]	[illegible]

The wind was what is known by the phrase, "a soldier's breeze," Off Gravesend the *Kitten* was full half a mile a-head, and some good seamanship was displayed amongst the crews of the *Mischief*, *Romp*, and *Alpha*. They finished their course home as follows:—

1.	Kitten	..	..	..	2 hours 35 m.
2.	Mischief	..	..	..	4 m. 10 s.
3.	Alpha	..	..	..	[illegible]

The prizes were presented to the owners of the *Kitten* and *Mischief*.

BETTING AT TATTERSALL'S ON THURSDAY EVENING

2 to 1 agst Lady Evelyn (t) | 6 to 1 agst Nervous | 9 to 1 agst King Pepin

HACKNEY FLYER.

6 to 4 agst Stockwell (and off) | 2 to 1 agst Teddington. (1)

100 to 1 agst Mr. Darvill (1) | 20 to 1 agst Verbena (1)

100 to 1 agst Dervish (1) | 20 to 1 agst Verbena (1)

THE DERBY SETTLING.—Notwithstanding the large number of preliminary payments on Monday, it was "nigh change" at the Corner during the greater part of Tuesday afternoon. When it is considered that upwards of a quarter of a million of money was required to satisfy claims that were not recoverable at law, and that nearly [illegible] amount was due from one person alone, the [illegible] should have been so punctual a payment, and so [illegible]. In short, a better settlement has not been known for some years.

MUSIC.

PHILHARMONIC SOCIETY.

Professional prejudices and artistic antipathies received a death-blow, by the appearance of Berlioz in the orchestra, last Monday night, to conduct the first part of the sixth Philharmonic programme, the part being selected from his own compositions. The advent of this great composer in such a locality is a significant fact in the musical annals of the country. He is indebted for the engagement to the rivalry of concert speculations, and art has thus reason to rejoice at old and new Philharmonic discord. The triumph of Berlioz under the most disheartening difficulties was complete. The most bitter adversaries of his system were heard to exclaim, "He is, indeed, a wonderful man!" moved as they were irresistibly by the poetic fancy, vivid imagination, and splendid colouring of his marvellous orchestration. The Symphonie Symphony, "Harold in Italy," is of the descriptive class: it has four movements, opening with Harold in the mountains, succeeded by scenes of joy and happiness; then, in the second movement, presenting to the mind's eye the March of Pilgrims, who chant the evening Hymn, lastening up to the Mountaineers' Serenade; and finally, in the fourth portion, indicating the furious orgies of brigands, interrupted by desicious breaks of preceding themes. Anything more powerfully dramatic than the Symphonie Epée—through which flows a viola part, finely played by Sainton—cannot be imagined: only those who have heard the "Romeo and Juliet" work by the same composer can form a conception of the picturesque variety in Berlioz's ideal scenes. In addition to the "Harold," the symphonic introduction to the second act of the opera "Benvenuto Cellini" was executed. This overture—for such, from its length, must it be designated—is a most animated embodiment, as it were, of the rollicking fun and whimsicalities of the Roman Carnival. It is instrumented with a piquancy of the most delicate and subtle order; and many, amidst the turmoil of the throng, an exquisite melody stealing on the ear, indicating that amidst the storm and excitement of the crowd the under-current of human love is pursuing its way. Berlioz was recalled on all hands, is thoroughly original. His ideas are as novel as his forms are fresh. His treatment of an orchestra is entirely his own; his acoustical effects are peculiarly his discovery. His style, in short, is patent; it differs from everything that has been heard before; and he calls upon his players to perform passages of which they have never had a notion in their basic experience. Then remains the question, is the domain of art limited? and who hath marked the boundaries?

Great as was the success impressed at the marvellous execution of the intricacies of the symphony and overture by the band, and willing as we are to recognise the astonishing faculty of playing almost at sight, by our players, it must be a generally understood that this performance was only be regarded as a rehearsal of the two works. The light and shade so necessary to develope the subtle thoughts of Berlioz was assuredly wanting. The "March of Pilgrims," which at Vienna, Berlin, St. Petersburgh, Paris, Leipzic, &c., was always rapturously encored, was signally deficient in delicacy. The pianissimo opening the movement, followed by a crescendo of singular effect, when properly rendered, could not be accomplished with a single rehearsal; but the spirit of the execution was good.

A sacred air, "The Repose of the Holy Family," sung by Gardoni, between the two orchestral pieces, awakened unanimous enthusiasm, from its marked originality and suavity. Admirably sung by the Italian tenor, it elicited a most rapturous encore. As a vocal composer, this gifted man places Berlioz's reputation in the most favourable light.

In the second part, Beethoven's C minor symphony, Weber's "Ruler of the Spirits" overture, Bottesini's astounding double-bass concerto, and a song by Gardoni, from Donizetti's "Favorita," and by Pischek from Spohr's "Faust," under the direction of Costa, who was warmly and deservedly greeted, completed this magnificent and memorable concert.

NEW PHILHARMONIC SOCIETY.

The fourth concert, at Exeter-hall, on Wednesday night, was well attended. The scheme opened with Lindpaintner's sacred cantata, "The Widow of Nain," the poem of which, by Dr. Karl Grünelsen, a popular poet and writer, at the head of the Lutheran Church in Stuttgardt, is founded on the miracle of the restoration to life of the widow's son, recorded in the Gospel of St. Luke. The translation has been made by Mr. Desmond Ryan. Lindpaintner has not reached the elevation of his theme; his music is too simple and unpretending for the elaborate grandeur expected from oratorio writing. In what the composer has done, the accomplished, if not the inspired musician, is, however, apparent; but the gr[illegible], lamentation, joy, and thanksgiving in the poet's series of recitatives, airs, and choruses, exacted the Handelian or Mendelssohnian force to describe adequately. The contralto air, sung by Miss Dolby so exquisitely, is flowing and melodious, and evidently touched the auditory. Miss Birch, Herr Reichardt, and Herr Pischek, sustained the other solo voice parts. Mozart's Jupiter Symphony, Meafarren's descriptive overture "Don Carlos," Weber's "Der Freyschütz" overture, and Prudent's animated pianoforte solo, by Miss Dolby, Reichardt, and Pischek accompaniments, admirably, played by the author, and which was rapturously redemanded, were the instrumental pieces. Mendelssohn's "Walpurgis Night," conducted by Mr. Benedict, in Miss Dolby, Reichardt, and Pischek accompaniments, admirably, played by the author, and which was rapturously redemanded, were the instrumental pieces. Mendelssohn's "Walpurgis Night," conducted by Mr. Benedict, in Miss Dolby, Reichardt, and Pischek as principals, was scarcely executed. Herr Puschek sung Lindpaintner's popular "Standard Bearer," amidst a hurricane of applause, and was unanimously encored. The performers at the conclusion of the concert, were called for amidst acclamations, as it was the last night of its engagement. He has left golden opinions behind of his abilities. Spohr will conduct Beethoven's Ninth Choral Symphony at the next concert.

NOTES OF THE WEEK.

MR. ANDERSON'S GRAND MORNING CONCERT.—At the Royal Italian Opera on Wednesday, there was a very fashionable gathering in honour of Mrs. Anderson, the pianiste to her Majesty, and instructress to the Princess Royal. Mrs. Anderson is much esteemed, both in her public and private capacity. Her early series of instruction secured to her the hand she was regarded as one of the finest lady pianists of the day. Her niece, Mrs. F. B. Jewson (late Miss Anderson Kirkham), is the talented successor of Mr. Anderson; she played Weber's Concert-Stück, and Mendelssohn's Andante and Capriee, in excellent style. The other solo players were Sainton, Piatti, and Bottesini; and the vocalists were Madame Cara Novello, Miss Louisa Pyne, Mdlle. Agnes Bury, Madame Julienne, Madame Bosio, Mdlle. Didiée, Madame Castellan, Mdlle Hellin., Signori Tamberlik, Lucciani, Belgrelli, Tagliafico, Polonini, Belletti, and Ronconi; Herr Formès, Herr Reichardt, and Herr Pischek. The band and chorus of the theatre, under Costa's direction, were also put in requisition. Grisi and Mario did not appear, having declined to sing at concerts.

MADAME PUZZI'S MORNING CONCERT.—This annual entertainment took place on Monday, at the Hanover-square Rooms. The solo players were Signor Ardini, a Milanese violinist, who made his début; Signor Puzzi, horn; Leon Jacquard, a new violoncellist; M. Prudent, the pianist; and Bottesini. The vocalists were Madame C. Novello, Mdlle. Lucchesi-Ponca, the Misses Dolby, Messrs. Lawler, Weiss, and Lavenu.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The police of Elberg (Prussia) has forbidden the performance of the "Muette de Portici" (Masaniello), stating that the piece in question was not suited to the present times.

The State Apartments at Windsor Castle will be closed from Tuesday, the 7th of June, until the 13th of June, both days inclusive.

The intelligence from the various West India islands upon agricultural affairs is generally satisfactory, but the reports regarding the crops are unusually meagre.

The Eton Anniversary, at the Thatched House Tavern, will be celebrated on Wednesday, June 15.

A fearful loss of life by fire occurred at the Chinese Theatre, Whampoa, on the 19th March, when no fewer than sixty females were burnt to death, many others being severely injured.

The *Dido*, from the Swan River to London, with a valuable cargo, and twenty-one passengers on board, struck upon the reef of Moule Point, Table Bay, where, in less than an hour, she bilged. The passengers were saved, but the vessel is a total wreck.

A Mr. Edward Fitzgerald has been tried and condemned to two years' imprisonment for stealing books in Paris. The charges were not denied, but he declared that his mania arose from a discovered mind. The Court refused to allow the plea.

Hurley, the murderer of Catherine Kindegan, was taken in his uncle's cabin, near Beech-hill, Galway, on Wednesday week. He had a pair of pistols by him, but was surprised in his sleep. He has confessed the murder.

An accident occurred on Sunday on the Versailles railroad, by which one person was killed, another so seriously wounded that recovery is not expected, and some others were less severely injured.

A deputation of the directors of the Electric Power and Colour Company, had an interview with the Elder Brethren of the Trinity-house, on Tuesday, on the subject of illuminating the coast lighthouses with in electric light.

There arrived at Alexandria, on the 18th ult., on his way to Europe, an envoy of Prince Aloffice-Said-ben-Kawee, ruler of Lymyar, an important country at the entrance of the Persian Gulf, and a commercial centre of considerable importance.

The following annual prizes have been adjudged at Harrow:—The English poem on Syracuse, Mr. R. D. Wilson; the Hope prize (Greek prose translation), Mr. R. C. Green; the Peel medal (Latin essay), Mr. H. D. Wilson.

The second report of the Select Committee on Indian Territories was issued on Saturday last. It contains the further evidence of Mr. Jeavyes Bensopke, Mr. F. J. Halliday, and Mr. Marshman.

We learn from Canada that the crops in the western states look promising, and an extensive yield is anticipated.

The Earl of Selkirk has sailed from Gibraltar, where his Lordship arrived in the *Coral Queen* yacht, on the Irish ult. for England.

The Queen's County estates of the Right Hon. Thomas Wyse, producing an annual net rental of £1062, were sold on Friday week for £24,858, equal to 23½ years' purchase, to Alderman Moylan, of Dublin.

On Saturday afternoon a little boy was sitting at a second-floor window, in Bennett's-court, Drury-lane, and he fell out on to the pavement; on being taken to King's College Hospital, he expired, from the effects of a fractured skull.

Her Majesty's ship *Leander*, on her way to New York, called off Deal, with Lord Ellesmere and suite on board, all well, eight days from England.

The Members of the Toxopholite Society have announced their intention of giving a ball at their lodge in the Regent's-park, on Wednesday, the 15th inst.

The Grand and Peninsular Steam Navigation Company now possess 27 steamers and 6 store-ships, in addition to 19 steamers now building. Of these, 9 will be propelled by the screw, and 3 by paddle-wheels.

At the Chinese Theatre, in Hong-Hong, lately, some scoundrel, in the middle of the performances, raised a cry of fire, which caused a panic among the crowd, and nearly cost several people their lives.

A deputation upon the subject of the metropolitan bridges had an interview with Sir William Molesworth at the office of Works and Public Buildings on Saturday last.

The French ship *Hoche* was destroyed by fire, in Algoa Bay, on the 14th of April; she was laden with jute and rice; and spontaneous combustion is supposed to have taken place.

A steamer has arrived from Venice, the 19th ult., with 23 political prisoners from Austrian Italy on board. The majority of them are young men of good family. They are to be confined in the fortresses of Lubeck, Spandau, and Hesphitzade.

Lord Shaftesbury has a bill before the House of Lords to enable lower local boards of health to provide burial-grounds.

The discovery of tea under the new duties commenced early on Wednesday morning, and the entries upwards of 10,000.

An English gentleman committed suicide on the 27th ult., at Asti, in Italy, by blowing out his brains. His name is not known.

On Tuesday afternoon a drying-stove in Messrs. Armitage and Wardle's cotton-mill, Manchester, took fire; but the flames were soon got under. The damage is about £1000

The Earl of Shrewsbury is at present at Venice, and daily receives the visits of the most eminent members of the clergy. The Pope has conferred the Order of Pius VII. upon his Lordship.

In 1852 the declared value of British woollen manufactures exported was £10,161,974.

The medal to the memory of Oersted, the discoverer of electro-magnetism, which is being struck by the Danish Academy of Sciences, will be distributed on the day when the electro-magnetic line is opened between Copenhagen and Kiel.

The India Reform Committee have resolved unanimously that nothing short of a total abolition of the system of double government, and of the creation of a really responsible home Administration for India, can be entertained or supported by the society

Mrs. Beecher Stowe, accompanied by the Duchess of Sutherland, was in the House of Lords on Monday night, during the anti-slavery speeches.

The Danish Government have laid down submarine telegraphic wires in the Great and Little Belts, to which the attention of the mercantile marine of all nations is directed, in order to guard against any danger that might ensue from vessels anchoring over the wire

Mrs. Wilkinson, of Eynesbury, St. Neots, completely lost her voice twenty-five years ago. About six weeks back, she accidentally fell down two fortunately, sustaining no injury from the fall; but the shock occasioned it to have led to the recovery of her sight

The thirty-fourth birthday of King George V. was celebrated on the 20th ult. at Hanover, with considerable pomp. Their Majesties laid the foundation stone of the new museum; and in the evening held a court and drawing-room, succeeded by a supper, to which nearly 300 persons were invited.

When the Bremen barque *Maria* left Rio Janeiro, on the 20th March, all yellow fever and dysentery were raging there in a frightful manner.

Mr. Wentworth Dilke, one of the Commissioners for the Great Exhibition for 1851, left Liverpool on Wednesday in the mail-steamer *Pacific* for New York

Iron-Sailing has been seldom so successful at Killaloe as it is this year. Anglers have a busy and profitable season of it.

The ex-President of Mexico, General Arista, who was driven out of that country in favour of Santa Anna, arrived at Southampton on Monday, in the packet *La Plata*.

The Legislative Assembly at Newfoundland has passed a bill for the better protection of the fishing-grounds in the Straits of Belleisle and the approaching summer.

From the list of July next the Gas Company of Whitehaven will reduce to their customers at 2s. per 1000 feet.

The African Steam Company's mail-ship *Forerunner*, Captain James Parkins, arrived at Plymouth on Thursday, from the Coast of Africa. She left Fernando Po April 24th.

The Marchis and Marchioness of Londonderry have left town, for the benefit of their health, for Rome, and Paris, in which capital the noble Marquis and her ladyship contemplate making a brief sojourn.

The noblemen and gentlemen educated at Westminster celebrated their anniversary festival at the Thatched House Tavern on Wednesday. The Earl of Ashburnham presided.

A witness in the Liverpool election committee, named Thomas Parkinson, committed suicide, at his lodgings, in Brunswick-street, Blackburn, on Tuesday. Over-excitement is supposed to be the cause

Lord Robert Grosvenor has given notice that, in committee on the Customs, &c., Acts, he will move the total abolition of the Attorneys' Certificate Stamp-duty.

The celebrated cause of the Queen *v.* Dr. Newman has been finally closed by the payment of costs by the defendant. The costs of Dr. Achilli were taxed at £1694 19s. 8d.; and the costs of the defendant were taxed larger

William Thomas Manning, Esq., solicitor, has been appointed to the office of Coroner of her Majesty's Household and of the Verge, and been sworn in accordingly.

CHESS.

TO CORRESPONDENTS.

J. W., Liverpool.—In the position you have submitted to us, Black cannot possibly save the game, if he or present play correctly

J. P., of Bellingham.—We received but two correct solutions of Stella's "Offensive," of which yours was one. Our Correspondents seem as much at fault, too, with No. 483, for but one solution of that Problem has been sent to us.

R. of Dundalk.—In the account of the Manchester Meeting which we gave in our last, some unusual haste, some of the speeches, &c., were necessarily omitted. For a full report, we can only refer you to the *Chess-Player's Chronicle* for June, which, being devoted exclusively to Chess, contains the particulars of all that took place at the meeting.

A. T.—Quite right.

J. L.—What problem do you allude? You mention No. 478, but that is clearly not the case in point.

SOLUTIONS CORRECTLY RECEIVED.—To Problem No. 480, by S (Stella), L. D., Thirsk, Inglemanis, Devizes, Delphi, Beta, Sigma, D. D., Fleetbanks, Redhill, M. P., J. H. of Sheffield, Hiscatis, Major M., True Blue, Jack of Worcester, J. E. H. of Norwich, are correct. All others are wrong.

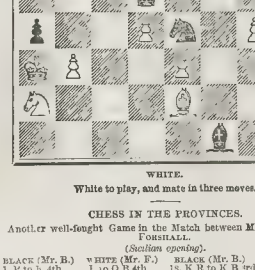
SOLUTION OF PROBLEM No. 484.

WHITE.	BLACK
1. Q to K B 3rd	P to K 4th (best)
2. Q to her sq., and Mates next move.	

PROBLEM No. 487.

By Mr. H. J. C. ANDREWS.

BLACK.



WHITE.

White to play, and mate in three moves.

CHESS IN THE PROVINCES.

Another well-fought Game in the Match between Messrs. BRIEN and FORSHALL.

(Sicilian opening).

BLACK (Mr. B.)	WHITE (Mr. F.)	BLACK (Mr. B.)	WHITE (Mr. F.)
1. P to K 4th	1 to Q B 4th	18. K R to K B 3rd	Q B to his 3rd
2. P to Q B 4th	Kt to Q B 3rd	19. Kt to K B 2nd	Q to K 7th
3. Q Kt to Q B 3rd	P to K Kt 3rd	20. Kt to Q 3rd (b)	Q takes K P (c)
4. P to K Kt 3rd	B to K Kt 2nd	21. R to K 3rd	Q to K B 4th
5. P to K B 4th	P to K 3rd	22. R to K R 3rd	Q to her R 4th
6. Kt to K B 3rd	K Kt to K 2nd	23. P to K Kt 4th	Q to her R 4th
7. Castles	Castles	24. Q takes P (ch)	K to Q sq
8. Q to K sq	P to Q 4th	25. P to K B 5th	P takes P
9. B to Q Kt 3rd	Q Kt to Q 5th	26. P takes P	B to Q 4th
10. Kt takes Kt	P takes Kt	27. Q to K Kt 6th	K to B sq
11. Q Kt to Q sq	P takes P	(ch)	
12. P takes P (a)	B to Q 2nd	28. R to K R 7th	Q to her B 3rd
13. B to Q 2nd	Q to her Kt 2nd	29. P takes P	B takes R
14. B to Q R 5th	Q to her R 3rd	30. R P takes B	R to K 2nd
15. B to Q Kt 4th	K R to K sq	31. R to K 2nd	Q R to K sq
16. B takes Kt	K takes B	32. R K R to K 2nd	K to K sq
17. Q to K R 4th	K R to K sq	33. Q to K R 5th	

And White cannot avoid mate

(a) Q takes P looks a little too dangerous.

(b) Black's only chance of extricating his game lay in the immediate sacrifice of the K P.

(c) If the Bishop had captured this Pawn, the game might have proceeded as follows:—

20.	B takes K P
21. R to K square*	B takes R
22. R to Q 4	B takes R, &c.

(d) Apprehensive of Black's threatened advance of Kt to K 5th, and a subsequent attack on the Q P, and also with the view of allaying Black to take his K B P, White advances this Pawn; but he finally overlooks Black's simple rejoinder.

21. Kt to K 5th	Q to K R 4th
22. Q takes Q	P takes Q,

CHESS SOCIETY IN ST. PETERSBURGH.

The establishment of a "Chess Society"—or, as we should call it, "a Chess Club"—in the capital of the Russian empire, is an event of far more importance than the mere fact would seem to indicate. In this country, the circumstance of a number of noblemen or gent emen forming themselves into a club for the purpose of enjoying any particular amusement, whether sedentary or athletic, intellectual or physical, is a matter of trifling moment to any but the parties immediately concerned; but in Russia, the case is widely different. There, no "societies" or "institutions" of any kind are allowed to exist except by the special permission of the Government itself; and hitherto this permission has been rigorously withheld in almost every case where application has been made, and interest used, for the establishment of a society, no matter what the object of it may have been. It is gratifying to find that at length there is some relaxation in the severity of precaution which has always been exhibited upon this peculiar point, and we cannot help thinking that the first remission being in favour of a pastime so thoughtful, so suggestive, and, we may add, so eminently sensible in its character, is honourable to the Emperor, and a high compliment to the game.

The club in question is entitled "Société des Amateurs d'Echecs de St. Pétersbourg," and is composed of some of the first nobility of the Empire. At the official inauguration (which took place on the 8th ult., in one of the *salons* of Count Aorcheiol Besborodka's spacious mansion), in accordance with the statute of the institution, approved by Government, the meeting proceeded to elect three directors for the year, and a purse put round.

The directors chosen were:

1. Le Prince Pierre de Meyendorff (Aide-de-Camp General to his Majesty the Emperor).
2. Lieut.-General de Rosenhoff.
3. Le Conseiller Intime Actuel Korcheiol Besborodko (Senateur).

The joint Secretary, M. C. F. de Lenisch (Conseiller de la Cour Impériale, &c.).

Under such auspices there can be no doubt of this society becoming the most brilliant of its kind ever known. Upwards of one hundred of the most distinguished names in the empire were enrolled within the first few days. Among these we observe Aides-de-camp to the Emperor, Generals and Hofmarschall, General of Artillery Baron Rosen, Baron Meyendorff and Baron Rosen; Meurveiff and Bekhtin, members of the Council of State; General Prince Dolgorouki, Baron Peter de Frederiks, besides a host of other elevated functionaries. At a subsequent meeting of the club, Prince Alexander Petrovitch Gagarin was unanimously elected President of the club, and Mr. Petroff (the distinguished Russian player) were unanimously elected honorary members. The election of foreign honorary members—the choice of whom will be scrupulously select—is reserved until the autumn.

It is much to the credit of this newly-formed and nearly aristocratic society, that one of their first measures was to apply with a difficulty, the extent of which has been a matter of surprise to the chess-players of Europe for the last half century—to allude to the anomalous position, so long permitted to obtain, and render null and void the "Laws of Chess." At a meeting held by the members for the purpose of considering the present state of the laws and rules of the game, it was finally resolved that the secretary (Mr. C. F. de Lenisch) be requested to draw up a new code of laws for the use of the society. The task could certainly have been intrusted to no better hands. Profoundly versed in all that relates to the practice and theory of chess, and conversant about above all other men with the history of the game, there can be little doubt, will produce a code of laws which will be calculated to win the sanction and become the standard of both countries, but of chess players generally.

THE CAMP AT CHOBHAM.

THE great military encampment now in progress of formation on Chobham Common, and of which occupation will be made, with all the circumstance of war, on the 18th of the present month, has already become an object of exciting interest both in this country and on the Continent. The length of time that has elapsed, now nearly sixty years, since a similar military display took place in England, together with the threatening aspect of affairs abroad, seem to give increased significance to the movement, which the timid and assured alike regard as a most important "note of preparation." The empire's encampment, of which our Artist gives the accompanying Sketch, as it at present appears, already attracts numerous visitors daily to the vicinity, which in all directions abounds with rich historical associations of the greatest national interest. Within a very short distance on one side lies the far-famed field of Runnymede, on which the English Barons extorted Magna Charta from King John; and on the other, Chertsey, the celebrated spot at which, according to some antiquaries, Julius Cæsar led the Roman army across the Thames.

The ground chosen for the encampment is of an undulating character, and in this respect, from the circumstance of its inequalities increasing the danger, is considered admirably adapted to the evolutions of troops; but a considerable portion of it is marsh, which is altogether unsuited to military operations. We gave in our last week's paper a correct list of all the various regiments and battalions which are to form the camp, and also the order of disposition amongst the troops, which has not since undergone any change. In addition, however, to Lieutenant-General Lord Seaton, who is to command the Camp, and his Royal Highness the Duke of Cambridge the Cavalry, the following "commands" have since been distributed by the Commander-in-chief

Command of the 1st Brigade—Colonel Bentinck of the Coldstream Guards.

Command of the Second Brigade—General Fane

Command of the Third Brigade—Major-Gen. Sir De Lacy Evans, M.P.

The pioneers of the works, under Colonel Vickers, of the Engineers, has been marked by the utmost military precision and celerity. The Camp stables, for the private soldiers' horses of the Life Guards, are 81 feet long by 27 feet wide. They are formed of low turf walls, with a trellis-work of wood, closely twisted, and a canvas roof, supported by poles and patented hoop-iron. They are constructed to accommodate thirty-six horses each. There are entrances at each end; and down the centre a double row of rang-poles are driven into the ground, 8 feet 6 inches apart, to which the horses are fastened by their head-ropes. The Dragoon and Artillery stables will be each 27 feet longer than these, and contain six more horses each. The stables for the officers' horses occupy a space of 21 feet by 12 each, and will afford accommodation to eight horses. This is certainly an improvement on "picketing" in the open air, and may become a valuable expedient in actual campaigning. With regard to the men when the Camp is formed, each regiment will have a mess marquee, 30 feet in length, for the accommodation of its officers. Each field officer will have a small separate marquee; and the other officers "bell tents," similar to those furnished to the troops—about 80 feet in circumference. One tent will be allowed to every fifteen men of the infantry regiments, and to every twelve of the cavalry. A slaughter-house and canteen have been erected—both very requisite establishments even under the present campaigning circumstances, at which assistant butchers are instructed in the art of killing and dressing by the Newgate market contractors. Some very awkward attempts at cookery characterised the first couple of days' dinners, but after a little drilling, the meals have been got upon the table in the usual style, and the science of cooking is rapidly progressing to a more than mediocrity. Each officer is provided with remarkable ingenuity. Each soldier is supplied with a tin can of dry wood per diem for cooking purposes.

We have already stated that the troops will be arranged in the form of a crescent, and that the lines will exceed three miles in length. In this respect the present Camp differs from that which was formed on Bagshot Heath in 1845, which was of parallelogram shape; and the remains of which are still observable. Near the site of the old encampment is Bagshot Lodge, formerly occupied by her Royal Highness the Duchess of Gloucester, and which has been taken, during the encampment, by His Royal Highness the Duke of Cambridge; and, it is said, will be the scene of a great military banquet on the anniversary of the battle of Waterloo.

After the two battalions of Household troops shall have served for a certain period, their places will be supplied by the remaining battalions of their respective corps. Every day will be occupied with active service, and, in addition to frequent reviews and sham fights, there will be occasional "night surprises," involving a muster of the whole camp in the least possible space of time. The formation of pontoon bridges over the Virginia-water will be among the exercises of the troops.

The interruption to the sinking of the wells mentioned in our last, owing to the imperfect nature of the "brattening," is reached by the adoption of a valuable suggestion made by Colonel Napier

The Commander-in-Chief is said resolute in resisting the erection of refreshment booths now in course of construction, and the parochial authorities, backed by the Lord of the Manor, are using every endeavour to turn the occasion to pecuniary advantage

The railway traffic to and from Chertsey has increased amazingly since the commencement of the operations.

Upon the next page our Artist has engraved a general view of the Common.

INSTITUTE OF CIVIL ENGINEERS.

—The President of the Institute of Civil Engineers gave his annual soirée on Tuesday last, which was extensively visited amongst the élite of the scientific world. In the rooms were displayed a great variety of new inventions in engineering and the mechanical arts, amongst which we observed Hill's patent newspaper-stamping machine, now in use at the Somerset-house, and capable of stamping upwards of 6000 sheets an hour; Marston's breech-loading and self-cleaning rifle, which appeared to be very effective, and simple in construction; Armstrong's hydraulic crane, a very beautiful piece of machinery, the whole capable of being placed under ground; the Lancastrian Sewing Company's machinery, patented by Jenkins—an extraordinary specimen of mechanical skill. There were also an abundance of models of life boats, centrifugal pumps, Derives' gas cooking stoves, &c. Amongst the paintings which adorned the walls were John Lewis's great work of "The Harem;" Ansdell's "Wolf-slayer"—a capital performance; two charming poetical subjects, by J. C. Nash, a wholesome English portrait of the French Emperor, by A. G. Middleton; capital insects; four very carefully-painted landscapes, by Newman, one a view on the Lincolnshire Fens, with the city and cathedral rising sketchily in the distance, and very effective; a wonderfully wrought pen-and-ink drawing, by A. Crowquill; and a study of a Sleeping Boy, by Mr. J. Rossi, the property of A. Crowquill, Esq. Turner's large drawing, "Whaling the Derry," deservedly attracted much attention. There were also several fine specimens of fictile art, and models of the work. The principal objects of the last-named class was the magnificent shield, produced by the Messrs. Garrard, and presented to Thomas Brassey, Esq., by his admirers and employés. There were also specimens of the process of the specimens of good, recently brought to M. Talbot and Mr. Archer. The whole was a most successful affair, and Mr. C. Manby, the secretary of the institution, gave unqualified satisfaction.

CHANTILLY RACES.

CHANTILLY, the most charming racing meeting of the Continent, this week furnishes us with an illustration, which may remind some of our readers of the verdant "Pelouse" and picturesque mass distance of Chantilly, the famous little palace set in a royal lake, its noble forest sheltering the quiet little town, and its magnificent but vacant stables. Though Paris was visited by heavy rain on the evening of the 15th ult., which entirely destroyed the attendance from visiting Chantilly by the special trains, the weather afterwards became beautiful, and the fresh green foliage and opening blossoms and spring flowers formed a striking and most agreeable contrast not only to spectators, but to horses and jockeys, after the dust and gravel encountered in that barrack-yard, the Champs de Mars, during the Paris "Spring Meetings."

Since last year the Pelouse and the exercise grounds in the forest have fallen into the hands of the Jockey Club, who, by appointing a superintendent to keep them in order, and levy a contribution upon each horse in training, for necessary expenses, have already improved the entrance, and, in course of time, will put all in good condition. The main interest of the day's racing centred in the Prix de Diane (the French "Oaks") in which Jouvence (who ran third to Thebbert and Pancake for the City and Suburban Handicap, at Epsom), made her debut. Her appearance was generally admired, and the style in which she won the race raised her position still higher in the betting ring. Seven horses started, and Jouvence bore them company until two distances from home, when she came away from them all in real, easy style, that Robert Sherwood, her jockey, flashed the last twenty lengths of the race putting her on the neck.

On the 20th the sports were resumed, when six races were run, one of which was characterised by a scene of

FOULE DE RACES of 100f. each; gentlemen rider; about seven-eighths of a mile.

CHANTILLY.—THE JOCKEY-CLUB RACE.

Vesuvienne went off at score. Lucetta second, and the pace was such that before getting down to the bottom of the hill, there was a straggling tail, of which Pandolfo formed the extremity. Hagarty did not reach the two leading horses till getting to the top of the hill, when he passed Lucetta, but could not catch Vesuvienne who won cleverly. An amusing finish, *en amateur*, for the third and fourth places, gave pigmacy to a very scrambling affair, and the excitement increased when Vesuvienne was seen to pitch her rider off in pulling up, and run away to her stable. The Count was either unable to stop her, or, unaware of the cords, was stripped off the saddle, and received an awkward fall. He jumped up, however, and followed the mare a few steps, but she was out of reach, and Baron de la Rochette, one of the "commissioners of courses," coming up in a few moments, caught the mare, and granted the Count a "dispensation" to walk to the weighing-room, according to the 87.h article of the "racing laws." After much excitement and disputation, Vesuvienne was declared the winner. Count Peregeaux, though a good deal stunned and bruised, received no serious injury.

Another illustration of the evils arising from the ropes which environ French race-courses occurred in the next race, for the Prix des Eouries Handicap. Cendrillon, overpowering the boy in her preparatory canter, ran against the cords at the top turn, broke the stirrup leather, pitched the boy off, and galloped away into the wood, where she was not caught till after the race. The boy received no serious injury. The race was won by M. Leclerc's Castor (J. Baines), beating M. Aumont's Hervine (Chifney).

On the 23rd the sport commenced with a Match, made the previous evening, for £100 a side; half a mile.

BETTING. Even on Jouvence, 5 to 2 agst Moustique, 5 to 1 agst Fitz Gladiator, 9 to 1 agst Javelot, 10 to 1 agst Firework, 12 to 1 agst Royal Quand Même, 12 to 1 agst Agar, and 20 to 1 each agst Nettle, Papillon, and Tippler. The start was unsatisfactory, Jouvence, however, getting well off, though several others lost lengths, and Papillon was left a long way in the rear. At the stand Ronconi was about three-quarters of a length first, Nettle being next the cords, and the leading favourites, who had all drawn central places, lay in their respective positions. At the reservoir Nettle, Moustique, Fitz Gladiator, and the favourite were in the front, but down the far side few changes of place occurred. At the bottom of the hill, Jouvence had a slight lead, and many were beginning to tire; and at the top of the hill, Nettle, Firework, Moustique, and Fitz Gladiator were the only horses left with a chance. On coming into straight running, Jouvence defeated Nettle and Fitz Gladiator, and Firework took a decided second place. A distance and a half from the chair he ran up to the favourite's girths, but her pace was so superior that she shook him off in three or four strides, and though roused by a few cuts of the whip, he could not again reach her, and she went in an easy winner by two lengths; Moustique beaten three lengths, and Nettle (who was not placed by the judge) two lengths behind him. Jouvence is by Sting (by Sane out of Lelo, by Emilius), Orville out of Currency (by St. Patrick out of Oxygen, winner of the Oaks, by Emilius).

The weather, which was magnificent, was interrupted for an hour before the racing began by thunder and rain, which passed off, and all was again bright and fine during the afternoon. The attendance was as full and fashionable as on any previous Derby-day, and the sport excellent. Jouvence returns to England, when she will continue to be trained by Sherwood for her French engagements, viz.—the "Brussels Derby," her engagement at Caen, 30th July, &c. Whilst in France, she was under the care of Robert Sherwood, who rode her for both the Derby and Oaks, which, as we have seen, she won. Prince Mark de Beauveau has sold his stud to a racing club (or association), consisting of Messrs Aquado-Emanuel de Noilles, Count Romer (a Russian title), and Prince E. de Beauveau, an interest in the firm being retained by Prince M. de Beauveau. It is reported that a sum of 50,000 francs *each*, and the services of H. Jennings, as trainer, forms the basis of this racing association. The "turf" is certainly looking up in France. The Emperor gave a prize of 2000f., added to a sweepstakes of 10f. each, which was won by M. Aumont's Milca.

Our Illustration represents the race for the French Derby, the Prix du Jockey Club, at the moment when Jouvence gathered herself up to win the race. On the right of the engraving is the picturesque tribune erected by the Duke D'Aumale in 1847. English race-courses might borrow a hint from this building, for there is no reason why our grand stands should be entirely devoid of architectural beauty and ornament.

SITE OF THE CAMP, ON CHOBHAM COMMON.—(SEE PRECEDING PAGE.)

THE TAX-GATHERER.
BY O'NEILL.

THIS very clever picture is exhibited at the Royal Academy. It represents the interior of an humble but industrious home, where a mother, probably a widow, is at work, surrounded by her family. An ominous single rap is given at the door, which is opened by a nervous-looking girl, to the tax-gatherer! She tries to make a plausible answer to his application for arrears of taxes; whilst two of her sisters listen anxiously from behind the door for the result of the parley. The story is one of every-day occurrence; and is admirably told. A great deal of character is thrown into the faces; and the various objects of furniture and other *et cetera* are well introduced, and painted with great finish.

BRUNETTA AND PHILLIS
BY SOLOMON.

MR. SOLOMON has produced an admirable picture upon the subject of an incident in the story of the rival beauties so cleverly described by Addison, in the "Spectator:" —

Phillis was draped in brocade more gorgeous and costly than had ever before appeared . . . Brunetta came in a plain black silk, attended by a negro girl, in a petticoat of the same brocade with which Phillis was attired. This drew the attention of the whole company upon which the unhappy Phillis swooned away.—*Spectator*, No. 80.

In this cruel incident female weakness is touched and wounded in the most sensitive point; an expected triumph over a proud adversary turned into an ignominious defeat; and the discomfited one has nothing left to do but to swoon, or pretend to swoon away. The *abandon* of grief in the unhappy Phillis is well expressed; whilst Brunetta actually towers above the world in the greatness of her little victory. The old stagers at the card-table are for a moment startled from their usual state of abstraction by the unexpected *contretemps*, the dandy lounging on the sofa enjoys it amazingly—it will afford a capital bit of gossip at the coffee-house next morning; and the fiddlers and dancers in the back room continue their animated exertions, as if nothing had occurred. The various figures are full of character; the colouring rich and delicate, with a lavish use of reflected lights.

"THE TAX-GATHERER."—PAINTED BY C. B. O'NEILL.

FINE ARTS.

EXHIBITION OF STUDIES FROM THE SCHOOLS OF ART

THE studies by students of the Schools of Art now exhibiting at Gore House, display considerable improvement upon those of previous years. And, although their progress is still confined to what concerns the executive department—the manual dexterity, and the knowledge and use of materials, which are the alphabet of art; it must not be thought lightly of: the alphabet, the grammar, and the copy-book must be well studied and rendered familiar to the student, whether in arts or in letters, before he can pretend to compose. We are glad to observe that, during the past year, the directors have taken pains to direct the exertions of the students in this particular, selecting the objects for copying, instead of leaving their choice to chance or caprice. By no other means could a true and intelligible comparison be drawn between the labours of competitors, or the force of example be brought to bear upon their exertions. Amongst the special examples set for copying, under the present arrangement, are the "Discobolus of Myron," and the "Plaster from St. Maria del Popolo," and the drawings produced are many of them extremely meritorious. The labours of the students in the department of anatomy and figure-drawing are also likely to receive very material assistance from a valuable collection of studies from the life by Mr Mulready, which formed part of the collection of that artist's works exhibited some years ago at the Society of Arts, and are now lent by him for the use of the department. Where the students in drawing show themselves most ancient is in the copying of objects of animal and still life—shells, birds, flowers, and other natural objects being represented in abundance, variety, with considerable [illegible], and with a good knowledge of colour and style as [illegible] manufacturing purposes. In [illegible] of design [illegible] of the [illegible] of Comparative Anatomy, at Marlborough House. In geometrical designs, and in cases of variation [illegible] is a goodly display. When we come to the application of design to manufactures, as we suggested at the outset, the display is not so rich and less important. Yet, at the same time, there are some examples, particularly amongst those applicable to printed goods and to lace, which display taste and practicability of device; and it is pleasing to find that encouragement has been already given to some of them, by their adoption by manufacturers [illegible] for production in [illegible]. Amongst the various departments, none, perhaps, is more interesting, or more immediately applicable in its success, than that of drawing and engraving upon wood. Many of the specimens of ornamental designs for title-pages, &c., are of extreme merit: of course in what relates to more important subjects of an inventive character

"BRUNETTA AND PHILLIS."—PAINTED BY A. SOLOMON.

the students are yet in the category of abecedarians, and do not pretend to anything.

We shall return again to the Exhibition of choice Cabinet work, which occupies the rooms on the ground-floor, in a future notice.

SALE OF THE PICTURES OF THE LATE KING LOUIS PHILIPPE.

THE sale of the "Spanish Collection" of pictures belonging to the family of the late King Louis Philippe was begun and is about to be closed, at Messrs. Christie and Manson's, on Saturday week; and that of the "Standish Collection" took place on Friday and Saturday last, the 27th and 28th ult. Some of the lots disposed of on the 21st ult. were important ones, and fetched good prices. A "S. James," by Guido—a very fine specimen of the master, noble in character, and pure and transparent in colouring—was purchased by Mr. Farrer for £710. By Velasquez, a fine landscape, with effect of setting sun—in the background the monastery of the Escurial—sold for £410. "Several Maries" closed the sale, of which four may be cited as masterly specimens of that artist:—"St. Thomas de Villanova," obtained from the convent of St. Thomas, at Seville, was sold for £710, to Messrs. Graves; "St. Felix of Cantalice," obtained from a convent at Seville, to Mr. Beauclerk, for £ 90; St. Rodergo, in his Robes, Crowned by an Angel," from the convent of St. Clair, at Medina, an admirable picture, richly wrought ornamental drapery, went cheap, to Mr. Grimer, for £210; and "St. Catherine," obtained at Madrid, from the Duc d'Hijar, was bought by the Duke of Cleveland, for £300.

The Standish Gallery contains many excellent specimens of all schools, with a greater number of second-class works. The history of this collection is not a little curious. It was formerly the property of Mr. Frank Hall Standish, a private gentleman, who had at one time a passion of presenting or bequeathing it to the nation, upon condition of being honoured with a Baronetcy in return. The Minister of the day not thinking proper to gratify Mr Standish's expectations in this respect, the latter bequeathed his collection, together with £25,000, to King Louis Philippe, the King of the French, "in order that they might be kept together after his death." How signally this object has been disappointed by the result is now apparent. Louis Philippe carried out wishes of the testator to the utmost as long as he was King of the French, and allotted a suite of rooms in the Louvre for the reception of the Musée Standish. The rest is thus told in the introduction to the catalogue —

After the revolution of 1848 Mr. Standish's legacy was ready to be claimed, as his private property since his death, and direction was given to preserve in the family both the Library and the collection of pictures of Mr. Standish, that they might fulfil, as far as they had it in power, the original intention of the legator. With this intention, his Royal Highness the Duc D'Aumale purchased, in 1849, the library, and, as chief of the Princes, one of the King's sons, proposed purchasing the collection of pictures. But, at the present time, every body will understand the Queens family being obliged to sell the pictures bequeathed by Mr. Frank Hall Standish, as well as the Spanish Gallery.

Amongst the most remarkable lots in the collection were the following:—By Watteau, a landscape, with figures representing actors of the Comedie Italienne, a composition of eight figures, bought by the Marquis of Hertford for 700 guineas; Moralès "The Virgin Supporting the Body of Christ" (a specimen of this artist's touching style, bought by Messrs. Graves for 52 guineas; by Murillo, the "Infant Jesus Sleeping on the Knees of St. Thomas," a pleasing composition, was bought by Mr Hoskins for 380 guineas; "Christ after the Flagellation, Kneeling on the Ground," a painful subject, but grandly treated, bought by Mr. Hickson for 205 guineas; a portrait of himself—a head painted probably the original study for the celebrated portrait in the Spanish Collection (that in an oval with a background of stone work), executed with a broad and vigorous pencil, bought by Messrs. Graves, for 350 guineas; a set of four pieces by Van Loo, representing "Painting," "Sculpture," "Architecture," and "Music," and which were formerly in the Château de Bellevue, were bought in one lot by Mr. Wheeler, for 230 guineas; a very fine Velasquez, "The Angels Appearing to the Shepherds," was bought by Mr. Bromley for 330 guineas; and a Portrait, whole length, of the Infant Don Balthasar Carlos, son of Philip IV. (born 1629, died 1646), a superb example of this artist's unrivalled style in portraiture, was knocked down to Mr. Manson—it was whispered, on behalf of Baron Rothschild, after a spirited bidding, for the National Gallery. The works of the English school are few, but some of them fetched good prices. A Portrait by Reynolds, of a gentleman, small full length, in a red coat, in a garden (a favourite arrangement with that artist), fetched 44 guineas. A Sea shore View in Zeeland, by Cuyp, fetched 220 guineas; and "The Shipwreck," by the same, 82 guineas. By D. Roberts were four, which sold respectively as follows:—"Interior of the Temple of Edfou," with figures, 360 guineas; the "Church of St. Helena, at Bethlehem," 483 guineas; "Interior of the Mosque of Cord ova," 315 guineas, and the "High Altar of the Cathedral of Seville," 300 guineas. Amongst the cheaper lots disposed of, one deserves recording. It was not catalogued, and is put in as lot 192, described as by Zurbaran, the subject the "Holy Handkerchief," with which is connected a well-known legend in the Romish Church—that the Virgin Mary, wishing Christ to the place of crucifixion, held a white napkin in her hand, upon which the features of our Lord in his agony were impressed, the faint outline of them remaining to this day. The picture is certainly admirably produced; the pure white colour and deep folds of the napkin are wonderfully executed; and the pale reflex in mute tints of colour, of the features of the sufferer, is a fine addition of the sublime scene of decease on as we can well conceive. This interesting little picture was knocked down to Messrs. Graves for the sum of thirty shillings! The total amount of the sale of the Orleans Collection, now concluded, was £38,000.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The market for National Securities has been in a very excited state during nearly the whole of the week. The receipt of news from Constantinople, to the effect that the Russian Ambassador had left that city, with the declaration of the Emperor Nicholas, that he considered the negotiations across heavy sales of Stock; and it was currently reported that the British fleet had ordered to the Dardanelles. These, however, declined somewhat, and on Wednesday there was almost a panic in the Exchange. At one time the Three per Cents were down as low as 19¾ for immediate transfer. However, the market rallied to some extent early on Thursday, from its having become known that Count Nesselrode had arrived at Constantinople, and that the Austrian Minister had been sent from Vienna to Switzerland, yet prices subsequently suffered a severe fall.

The arrivals of the precious metals have amounted to £930 000 from Australia, £200,000 (in silver) from the Cape, £100,000 from St. Petersburgh, 612,450 dollars from New York, and £285,000 (in gold and silver) from Mexico, the West Indies, &c.

The "certain" scheme of the Chancellor of the Exchequer drags its slow length along. Up to the present time, under £1,000,000 of stock has been accepted at the Bank of England, and £1,000,000 at the South Sea House. The latter stock has a premium of 1½. It may observe that the holders of this security will be entitled to share in the £610,000 of surplus assets. The dividends on this stock amount to £394,718 13s., and on the stock of 1751, to £13,561 18s. The allowance for management is £2702 10s. per annum.

The market for Exchequer Bills has continued in a very depressed state. Bills to the prem. The whole of the June bills have been received at par; with the exception of £500,000, which amount was forwarded from Liverpool for the purpose, and has been returned to the Bank of England.

The Three per Cent Consols were done at 90½ ¾, the Three per Cent Reduced, 89½ ¾; the New Three-and-a-Quarter per Cents, 94 ¾; Long Annuities, expiring 1859, 10 3-16; India Bonds, under £1000, 30s.; South Sea Old Annuities, 89¾; Exchequer Bills, par to 2s. pm.; India Bonds, 1853, for Account, 1854¾. Heavy sales took place on Tuesday, and the quotations were greatly depressed. On Wednesday the Three per Cents fell to 89¾, with heavy sellers. Exchequer Bills ruled about stationary. South Sea Stock was steady, at previous rates. On Thursday Consols opened steadily, at 90¾, but the Bank rejections having advanced the minimum rate of discount to 3½ per cent, the market, subsequently, became very heavy, and the Three per Cents fell to 89¾ for Money, and 90¼ for the Opening in the following positions. The Three per Cents declined to 89¾; and the New Three and-a-Quarter per Cents, 103¾. Bank Stock marked 204; Bank Stock, 1854 to 250¾. Exchequer Bills were par 2s. prem.; India Bonds, 30s. to 35s. prem. The transfers to-day are now closed.

Foreign Bonds, almost generally, have ruled heavy, and prices have tended downwards, 90 per cent of the Exchequer bonds having advanced the Mexican Bonds have marked 29¾; Spanish Deferred, ; Certificates, 5¾ to 6 per cent; Grenada, Active, 21 to 22, Ditto, Deferred, 8¾ to 10; Peruvian, Deferred, 61 to 63; Brazilian, Small, 100¾; Dutch Four per Cents, 96 to 96¾; Ditto, Two and a-Half per Cents, 65¾; Russian Five per Cents 114¾; Ditto, Four-and-a-Half per Cents, 105; Swedish Loan, 1¾ dis.; Venezuela Three-and-a-Half per Cents, at Brander.

Miscellaneous Shares have been much neglected, and prices have ruled easier. Australasia Bank Shares have sold at 83; British North American, 63¾; Colonial, 48¾; Oriental 62; Union of London, 1¾; Australasian Agricultural, 6¾; British American Land, 79 to 78; Crystal Palace, 2¾; Ditto of Debentures, 7 pm.; Magdalena Steam Navigation, 2¾; Peel River Land and Mineral, 8; Peninsular and Oriental Steam, 72¾ to 74 ex div.; South Australian Land, 40 to 41; Van Diemen's Land, 19. Insurance Companies Shares have been in very moderate request. Albion have marked 90, Atlas, 22; Argus, 24½; County, 121; General, 6¾; Globe, 150½; Imperial Life, 19½; Law Life, 50; Marine, 5½; Pelican, 7; Rock, 6¾ ex div.; Sun Life, 85; Royal Exchange, 2; Universal, 6¾. East London Waterworks have sold at 125½; Grand Junction, 72½; Kent, 84½; Southwark Vauxhall, 84; West Middlesex, 114, Southampton Docks, 28½, Victoria, 7¾; African Steam-ship, 1¾; American Royal Mail, 4; Canada Five per Cent Bonds, 102; Ditto, Six per Cent ditto, 104½; General Screw Steam-ship Company, 12; General Steam Navigation, 31¾; Hudson's Bay, 22¾; Peninsular and Oriental Steam, 73, to 74 ex div.; Ditto, New, 8; Reversionary Interest, 106

Railway Shares have been in request, and the market depressed, and the rather heavy settlement in the English market, which, however, has passed off extremely well, has greatly interfered with the usual amount of operations. Prices have tended downwards, the fall on Thursday being rather heavy. The total "calls" for the present month are £1 ., against £420,860 in 1852. The "calls" for the first half year are £6 ., against £3,868,178 in 1852. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS: Bristol and Exeter, 50½; Caledonian, 25¾; Dublin and Belfast Junction, 47½; Eastern Counties, 8¾; Edinburgh and Glasgow, 71; Dundalk, Perth, and Dundee, ; Great Northern Stock, 78½; Ditto, A Stock, 81½; Ditto, B Stock, ; Great Southern and Western (Ireland), 85½; Great Western, 58½; Lancashire and Yorkshire, 78½; Ditto West Riding Union, 8½; Leeds Northern, 10½; London and North-Western, 110; London and Brighton, 101; London and South-Western, 84; Manchester, Sheffield and Lincolnshire, 29½; Midland, 7 ; North British, ; North Staffordshire, 10½; South Eastern, ; Worcester and Wolverhampton, ; Scotch Central, 86; South Eastern, 7 ; South Wales, 36½, Thames Haven Dock and Railway, ; York, Newcastle, and Berwick, 70½; York and North Midland, 50

LINES LISTED AT FIXED RENTALS.—Midland Bradford, 107½; Wilts and Somerset, 105½.

LETTERS FOR SHARES.—Eastern Counties No. 1, 2 premium; Ditto, ½ premium Ditto, Six per Cent Stock, 14½; Great Northern, Five per Cents, 129; Ditto, Redeemable at 10 per cent premium, 11½; Norfolk Deferred, 5; North British, 10½; South Eastern, ; Worcester and Wolverhampton, ; Scotch Central, 86; York and North Midland, 11, and 7; Turkish, 6½.

FOREIGN.—Antwerp and Rotterdam, 2; Charleroi and Erquelines 15; Grand Indian Peninsular, 7; Grand Junction of France, 1½; Italian, 4½; Ditto, Six per Cent Preference, 1½; Madras, 2½; Northern of France, ; Paris and Lyons, ; Sambre and Meuse, 4½; Paris and Orleans, ; Sambre and Meuse, 4½; West Flanders, 2½.

JOINT STOCK BANKS.—Unchanged. On Thursday, Aqua Fortes were done at 2½; Anglo-Italian, ½; Australian Freehold, ½; British Australian Gold, ½; Carosa Creek, ½, Cobre Copper, 46; Colonial Gold, ; Copper, 1½ to ½; Port Phillip, 1½; United Kingdom, ½; Van Diemen's Land, ; Lake Bathurst, ½ to ½; Mexican and South American, 8½; Nouveau Monde, 2½ to ½; Port Phillip, 1½; United Mexican, 4½; West Australian, ½.

FRIDAY EVENING.—Owing to the unsettled state of the Money Market, it has been determined by the Lord Chancellor to withdraw any further consent to the acceptance of the Two and-a-Half per Cent on behalf of all suitors in Chancery. We had a few days ago to call attention to the anomalous position of the Bank and four we have been very unsettled to-day. The Three per Cents, for the opening, have marked 90¼ ¾ ¼ to ¾; the Three per Cent Reduced, ; and the New Three and a Quarter per Cents, 103¾ to 7-8. Exchequer Bills, ; India Bonds, par to 2s. pm. In the Exchequer Bills, this to-day's business has been very little doing.

THE MARKETS.

CORN EXCHANGE (Friday).—A moderate supply of English wheat has arrived up to our market to-day, and the trade has ruled heavy, at a decline of 1s. per qr. on the rates of that grain on sale. On the terms no sales was intended. On the whole the supply of foreign wheat has been moderate, and has supported very little alteration for lowers delivery. Per 14,000 quarters of foreign wheat have arrived this week. Barley has supported former terms. Oats continued tending to fall, and we have no change to notice in that trade. Very little doing in beans or peas. Flour was on offer, and in supply for the week. However it trade was stead at last week's currency. Malt, the show of which this week has been rather limited, has ruled dull, at 1s. per qr. less money on quotations. Indian corn and flour were firm, at full prices.

ENGLISH WHEAT, 3,000 qrs.; Barley, 26; malt, 4,500; Oats, 3,000; Irish Wheat, 14,800; Barley, 1,000; Oats, 4,000; flour, 1,400 sacks.

FOREIGN.—Wheat, Dantzic and Konigsberg, red, 42s. to 47s.; white, 46s. to 48s.; Pomeranian, Prussian, and Silesian, 42s. to 45s.; Baltic, red, 40s. to 44s.; white, 44s. to 46s.; Danish and Holstein, 40s. to 44s.; Mecklenburg, 40s. to 44s.; Russian, red, 40s. to 42s.; white, 42s. to 44s.; Petersburg, 40s. to 42s.; Archangel, 40s. to 42s.; Marianopolis and Taganrog, 40s. to 42s.; Egyptian, 36s. to 38s.; Barley, 22s. to 24s.; Beans, 30s. to 32s.; Peas, 32s. to 34s.; Oats, 16s. to 18s.; Flour, per sack, 40s. to 42s.; Indian corn, per quarter, 30s. to 32s.; Rye, 30s. to 32s.; Buckwheat, 24s. to 26s.; Dantzic and Konigsberg oats, 18s. to 20s.; Pomeranian, Prussian, and Swedish, 18s. to 20s.; Russian, 16s. to 18s.; potato oats, 18s. to 20s.; Rhenish and Danish, 16s. to 18s.; Flour, per sack, 36s. to 38s.; Beans, 34s. to 36s.; Peas, 34s. to 36s.; Barley, 22s. to 24s.; Oats, 16s. to 18s.

Wheat.—The general demand is heavy, and, in some instances, prices are 1s. per qr. lower.

Barley.—The trade is dull, and 1s. per qr. lower. Malting, Malt-houses, and distillers, per 36 bush. *Foreign*.—French flour, 34s. to 36s. per sack; American, 29s. to 30s. per barrel.

Oats.—The general demand is heavy, and, in some instances, prices are 1s. per qr. lower.

Flour.—The prices of town-made flour from 7l. to 8l. per sack of 280 lbs. for household, and 6l. 10s. to 7l. for seconds.

Imported in sacks.—Wheat, 42s. to 47s.; barley, 26s. to 28s.; oats, 18s. to 20s.; rye, 32s. to 34s.; beans, 36s. to 38s.; peas, 36s. to 38s.

The Sea Weeks Arrivals.—Wheat, 44,360 qrs.; barley, 31s. 3d.; oats, 18s. 10d.; rye, 31s. 1d.; beans, 36s. 7d.; peas, 34s. 8d.

Foreign.—Wheat, 42,000 qrs.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Flour.—Liverpool, 1,000 sacks; Hamburgh, 1,000; Boston, 1,000; total, 3,000 sold at very full prices. Common sound cargoes selling at from 19l. to 19l. 5s. per ton.

Sugar.—The market has been quiet and heavy to-day, and on Saturday next, the 4th inst., the amount of 17,500 bags will be offered.

Coffee.—The market for low sugar has been quite inactive, at a decline of 6d. per cwt. Good to fine yellow Barbadoes, 37s. to 38s. 6d.; low to mid., 34s. 6d. to 36s. 6d.; mid. to good Mauritius, 34s. 6d. to 37s.; grocery, 39s. 6d.; low to good white Bengals, 38s. to 39s.; fine, 39s. to 39s. 6d.; mid. brown Madras, 27s. 6d. to 28s. 6d.; yellow, 29s. to 31s.; per cwt. 10 06 bags Penang have changed hands, and good quality realised 29s. 6d. to 30s. 6d. Low to fine ordinary Ceylon, 32s. to 35s. per cwt. 5 casks Cuba, 30s. to 32s. per cwt. 1 cask Java, 34s. 6d. per cwt. 2 casks Manilla, 30s. to 31s. per cwt.

Coffee.—There is rather more doing in this market. Good to fine plantation Ceylon, 40s. to 42s.; ordinary to good ordinary, 36s. to 38s.; fine to good native Java, 40s. to 42s.; ordinary to good ordinary, 36s. to 38s.; Cuba, 30s. to 32s.; Costa Rica, 34s. to 36s.; Mocha, 50s. to 52s. per cwt.

Tea.—The market is very dull, and 6d. to 8s. per cwt. lower. Foreign has given way 8d. to 10d., and all kinds of English have a downward tendency. Pekoe weak; Congou, 9½d. to 10d. per lb.; Souchong, 9d. to 10d.; Twankay, 8d. to 9d. Scented Caper, 8d. to 10d.; Hyson, 9d. to 11d.; Gunpowder, 10d. to 11d.; Hyson skin, 6d. to 8d.; Assam, 10d. to 11d.; Congou, 9d. to 10d.; Souchong, 8d. to 9d.; Pekoe, 9d. to 10d.; Twankay, 8d. to 9d.;

AMUSEMENTS, &c.

PRINCESS' THEATRE.—MONDAY and FRIDAY (MACBETH and TURNING THE TABLES Tuesday Per-fection, Marco Spada, and Turning the Tables. We regret to hear that a benefit for Mr Oliver Thursday (the last time for the present). The Corsican Brothers and Marco Spada, Saturday, the Theatre will be closed, in consequence of an evening rehearsal of

ROYAL PRINCESS' THEATRE. Oxford-street.—Mr. and Mrs. C. KEAN respectfully inform the public that their ANNUAL BENEFIT will take place on MONDAY, JUNE 13, on which occasion will be presented, for the first time, SHAKSPEARE'S PLAY of KING HENRY VIII., with a splendid cast and stage representation. The costume and scenery throughout will be entirely new. Grand Tableaux of the Monuments of Westminster Abbey. Together with other Entertainments.

THEATRE ROYAL HAYMARKET.—MONDAY and during the week, a New Play, by MRS. GORE, Authoress of "Susan Hopley," "The Night-cap of Nature, &c. THE CRUEL KINDNESS. Mount Parnassus every Evening.

FRENCH PLAYS.—ST. JAMES'S THEATRE. MDLLE. RACHEL. LA PASSION. THIS DAY, JUNE 4, and MONDAY, 6, LES HORACES. ADRIENNE LECOUVREUR. On Wednesday Next, June 8, will positively be produced the New Play of DIANA, and, in the following week, LADY TARTUFF. The interesting Play of LOUIS XI. IN ENGLEFIELD, and the Classical Play of LES HORACES. IN DROMAGILDA, and VIRGINIE, may be each presented for One Representation only, during the present Engagement.—Boxes and Stalls may be secured at Mr. MITCHELL'S Royal Library, 33, Old Bond-street, and at the Box office.

KOLNER MANNER GESANG-VEREIN. The COLOGNE CHORAL UNION. Mr. MITCHELL has the honour to announce that the above Distinguished Society, consisting of 80 members, will give their FIRST CONCERT, NO LONG SIRE in this country at the HANOVER-SQUARE ROOMS, on MONDAY, JUNE 13, 1853, commencing at Half-past Three o'clock. The Programme Consists of Part I. Nos. 1, 2, 3, 4, and 5, with which means positively be recalled. One Evening only. Tuesday, at Exeter-hall, on Thursday, at the Hanover-square Rooms, and on Saturday, at the evening Concert at Exeter-hall. Programmes, with full particulars, may be had at the Music Warehouses, and at the Hall. Director, Herr Franz Weber. Pianoforte of these Concerts, with the words in German and English, and full analytical and other general arrangements, may now be had, and will be obtained at Mr. MITCHELL'S Library 33, Old Bond-street, and at all the principal Booksellers and Libraries.

MR. BENEDICT'S ANNUAL GRAND MORNING CONCERT, JUNE 22.—Under the patronage of her most Gracious Majesty the Queen, H.R.H. Prince Albert, H.R.H. the Prince of Wales, H.R.H. the Duchess of Gloucester, and H.R.H. the Duchess of Cambridge.—A limited number of Unreserved Tickets, 10s 6d. each, at the principal Libraries, and Messrs. Lucas and Librarian. Early application is respectfully solicited, for the few remaining Reserved Seats, at Mr. BENEDICT'S, No. 2, Manchester-square.

MISS GREENFIELD'S GRAND EVENING CONCERT, at EXETER-HALL, on the occasion of the unprecedented success obtained by Miss Greenfield (the American Vocalist) on Tuesday last, at the Hanover-square Rooms, in the presence of the Duchess of Sutherland, and a numerous assembly of the principal Nobility and Gentry, she is induced to give a GRAND CONCERT on an extended scale, at EXETER HALL, on WEDNESDAY, JUNE 15th, on which occasion she will be assisted by several of the most eminent Artistes, with a numerous and efficient band. full particulars of which will be duly announced at the meantime may be obtained, and tickets addressed to Miss Greenfield, care of Robert W Sillivier, 19, Old Bond-street, Piccadilly.

MR. BENSON has the honour to announce to his Pupils and Friends that his ANNUAL CONCERT will take place at the Hanover-square Rooms, on Thursday, June 16, 1853. To commence at Eight o'clock.

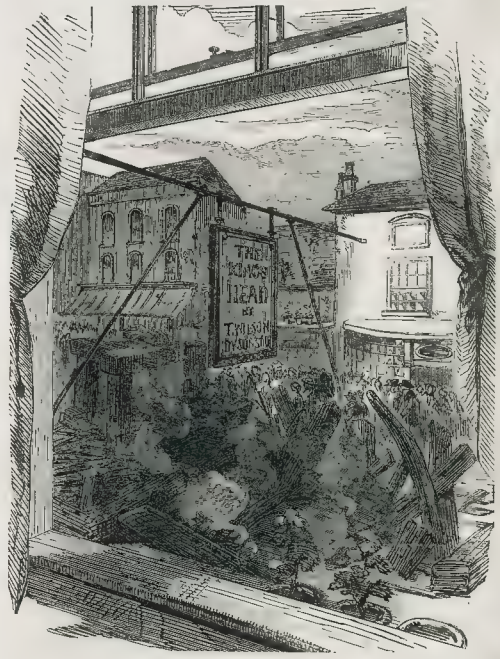
WILLIS'S ROOMS.—HARP UNION.—The SECOND CONCERT will take place on TUESDAY, JUNE 7, under distinguished patronage. Full particulars will be duly announced. Tickets to be had of Mr T. H. Wright, Hier Oberthür, Mr. H. J. Trust, and at the principal Musicsellers.

THE MISSES M'ALPINE have the honour to announce that their GRAND ANNUAL CONCERT will take place at the QUEEN'S CONCERT ROOM, HANOVER-SQUARE, on TUESDAY EVENING, at the Hanover square Rooms, when Miss Rosina Mollie Alpine, Miss Bassano, Miss M'Alpine and Miss Margaret M'Alpine (who will sing by desire "The Two Angels" by Mendelssohn Bartholdy), Mr W. Harrison, and Mr. Charles Oliver. Instrumentalists: Mr Kuhlmark (New Gaffie, Mr. Venzi Cooke, Mr. George Case, Mr H. Blagrove, Signor Pistoli. Conductors, Sir. Sidney Naylor, Mr. Reverend Lucas. To 66, 1 to Second Seats, 2s 6d; to Admission at H. Lodge, 19, Old Bond-street; and of the Misses M'Alpine, 9, Stanhope-Place, Marble-vale. Single Tickets, 7s.; to be had at the principal music warehouses.

THE BRITISH SCHOOL of VOCALIZATION. Under the Patronage of her Grace the Duchess of SUTHERLAND.—Mr. F. FLORIMO, Hon. Sec., Gresham, announces the SECOND EXHIBITION of the students of the London School of Vocalization, at the Hanover square Rooms, when Lord Tennyson's "Ode on the Death of the Duke of Wellington" will be performed Music by H. R. Bowers. Tickets, 7s. to 10s. 6d., to be had of the principal Music-sellers: B. Gilpin's, 147, Oxford-street; and Mr Flowers, 3, Keppel-street, Russell-square. Commence at 8 o'clock.

MESSRS. MACFARLANE and CUNNINGHAM beg to announce that their VOCAL, INSTRUMENTAL, AND MUSICAL MATINÉE, at the OPERA, at Which Mesdames Alboni, St. James's, on THURSDAY, the 23rd JUNE Further particulars will shortly published

MR. ALBERT SMITH'S MONT BLANC every Evening at Eight o'clock (except Saturday). Stalls 3s., Admission 2s., Children under 12 years of age, half price. Ascent of Mont Blanc, Panorama of Chamouni, Glaciers, Mer de Glace, Grand Scenery,



REMAINS OF THE TOWN-HALL, WATFORD.—SKETCHED AFTER THE RECENT FIRE.—(SEE PAGE 446.)

DISCOVERY OF A ROMAN SARCOPHAGUS.

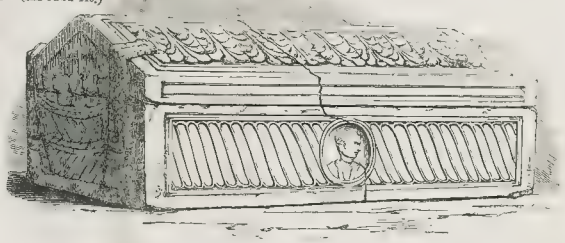
On Tuesday (last week), as some workmen were excavating for the foundations of a warehouse, near Haydon square, Minories, they struck upon a large stone, which soon proved to be the lid of a chest, or Sarcophagus, about 6ft. 2in. in length, 2ft. breadth, and about 9in. depth. It appeared to have been formed for placing in a wall, as one side of the lid and face is without moulding or decoration. The stone was in a very soft state, from its having been long imbedded in the earth; but, as the surface hardens, it may be cleaned, and the design will thus be more clearly appreciated. The lid, or cover, was firmly fastened by four iron clamps; and it is much to be regretted that great portion of the lid was broken by the labourers, at the time of the finding, with the notion of concealed treasure.

The Sarcophagus was removed to the neighbouring Church of the Holy Trinity, as the most appropriate depository for such a relic; and on Monday last the cist was opened, in the presence of a number of the parishioners and several archæologists, who had been invited by the worthy incumbent, the Rev. Mr Hill.

Among the visitors were Mr. Hawkins, of the British Museum; Mr Charles Roach Smith, who possesses a rich collection of relics of Roman London; and Mr. Akerman, Secretary of the Society of Antiquaries. Only two of the clamps were removed in order to raise the lid, a great part of which was broken; and the two other clamps remain as they were found, fastened. Each of the ends of the cist is sculptured with a basket containing fruit. The front is ornamented by a number of bands, formed by a reed, or ogee pattern; and in the centre is a medallion, in a sunk panel, in strong relief: it represents a youthful male bust, clothed in a tunic, the face turned sidewise, and marked with a strong individuality. The cover is roofed, and has its face ornamented with foliage; and, upon a portion of it being removed, the Sarcophagus was found to contain a leaden coffin, the form slightly tapering to the feet, and the lid decorated with a raised wheel and reed pattern ornament, marking the outward boundary; over the head and chest are six rows, running vertically; below are transverse lines, forming two whole and two half diamonds, in the centre of which are escallop shells, the sides are quite plain. On removing the lid of this coffin (which had not been soldered), the remains of a human form were found; the skull denoting them to be those of a child, pronounced by Mr Capes, a medical gentleman of the neighbourhood, to have been about the age of eight years. There were but slight remains of the lower parts of the body; and, on a careful examination of the contents of the coffin, no traces of body ornaments were found

The Sarcophagus was at once pronounced to be of Pagan workmanship, of the late Roman period. It has been removed to the British Museum, to be added to the collection of British antiquities; so that, in a few days, the curious may gratify themselves by an inspection of this sepulchral relic

This discovery affords a very interesting addition to the relics of Roman art found in the metropolis Last year, in the same neighbourhood, several sculptured stones were dug up, and many of them were proved to have belonged to sepulchral edifices. Urns have also been found here; and a third brass coin of Valens has been discovered near the spot whence the above Sarcophagus was taken



ROMAN SARCOPHAGUS FOUND NEAR HAYDON-SQUARE, MINORIES.

ROYAL THAMES YACHT PRIZE.—1853.

THE subject of the group which forms the Prize this year (and was sailed for on Wednesday) is taken from the Mythology of Ancient Greece. It appropriately represents the Invention of the Sail, which is attributed to Minerva, who, on the starting of the Argonautic Expedition in search of the Golden Fleece, is said to have instructed Jason in the art of navigating and controlling the *Argus*. She is here personified in the act of delivering to the hero her invention, which he receives on bended knees

THE ROYAL THAMES YACHT-CLUB PRIZE.

By the side of the Goddess is the Sacrificial Altar. On the pedestal is inscribed the name of the race, and of the successful candidate

This very characteristic group has been designed by Mr. Alfred Brown, and ably executed in silver by Messrs Hunt and Roskell, of New Bond-street. A report of the sailing is given in another column.

CEREMONY OF FOUNDING THE NEW TOWN OF DUMBARTON.—(SEE PAGE 446.)

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, JUNE 4, 1853.

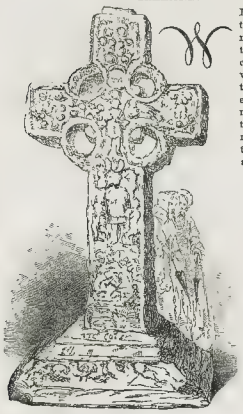
GREAT INDUSTRIAL EXHIBITION DUBLIN

SUPPLEMENT TO THE

ILLUSTRATED LONDON NEWS.

No. 626.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, JUNE 4, 1853. [TWO NUMBERS, 1s.

THE GREAT INDUSTRIAL EXHIBITION OF IRELAND.



WE have already detailed in this Journal, the history of the Exhibition—so creditable in every way to Ireland and to Irishmen. Before entering more minutely into a description of some of the many interesting articles that challenge attention, we may be permitted shortly to describe the ceremonial observed on the opening of the Exhibition. At half-past eleven o'clock on Thursday, the 12th of May, the carriages of the Knights and Officers of the most illustrious order of St. Patrick, assembled in the upper Castle-yard to await the arrival of his Excellency the Lord-Lieutenant from the Vice-Regal Lodge, Phœnix-park. On the arrival of his Excellency a procession was formed, which proceeded through the lower Castle-gate, by Dame-street, College green, Grafton-street, Nassau-street, Leinster-street, and Clare-street, to the grand entrance to the Exhibition in Merrion-square. The streets through which the procession passed were lined with troops, and the carriages proceeded in the following order:—

Carriages of the Knights
and Officers of the most Illustrious
Order of St. Patrick.
His Excellency's Household.
His Excellency.

On the arrival of the Lord-Lieutenant, he was received by a guard of honour, and several military bands were in attendance. His Excellency was received by the members of the Executive Committee, and a procession was formed as follows:—

Members of the Committee,
Two and two.
Aides-de-Camp.
Officers of the Order of St. Patrick.
Knights of the Most Illustrious
Order of St. Patrick,
Two and two, according to their
Stalls, wearing the Collar of
the Order.
His Excellency's State Household.
His Excellency
the Lord-Lieutenant,
Grand Master of the Illustrious
Order, wearing the Collar of the
Order, and the Brilliant
Diamond Badge and Star of Grand
Master.
Her Excellency
The Countess of St. Germans.
Aides-de-Camp.

In this order they proceeded, conducted by the Executive Committee, two and two, to the Throne prepared for His Excellency

While the Procession moved up the Middle Avenue of the Centre Hall to the Dais, the Orchestra, which consisted of 1000 performers, played
The National Anthem.

Their Excellencies having taken their seats, the Orchestra performed
The Hundredth Psalm.

The orchestra subsequently performed Handel's Coronation Anthem; Mozart's motett, "O God! when thou appearest!" the Hallelujah Chorus of Beethoven; Mendelssohn's Grand March from "Athalie;" and the "Hymn of Praise," also by Mendelssohn; after which, by his Excellency's command, the Ulster King-of-Arms declared THE EXHIBITION OPEN! The orchestra subsequently performed Haydn's "The Heavens are telling," and the "Hallelujah Chorus," by Handel, concluding with the National Anthem.

Not the least interesting portion of the inauguration ceremony was the conferring upon Mr. John Benson, the architect of the noble structure in which admiring thousands were assembled, the honourable distinction of Knighthood, by his Excellency the Lord-Lieutenant. Sir John Benson, on rising from his knees, was greeted with peals of applause, which again and again rung through the building.

The Lord-Lieutenant, at the conclusion, left the Exhibition with the same ceremony as on his entrance.

The Central Hall is truly a noble apartment. It is not its extent that strikes the visitor so much as its admirable proportions. As we approach the building, we begin to dread disappointment; for the exterior neither in effect nor extent gives us the least idea of the size or beauty of the interior. It is not until we have walked from the entrance to the raised dais opposite, at a distance of 425 feet, that we can at all appreciate its architectural beauty. Even then it requires a practised eye to discover its real merits. This arises altogether from the total want of taste displayed in the arrangement of the hall. Indeed, we have little hesitation in saying that it would be difficult for human ingenuity to devise a worse arrangement. Let us suppose the visitor to have mounted the dais for the purpose of seeing the hall, with its varied contents, to advantage. Before him, to the right, where we should naturally expect to find consoles covered over with *bijouterie* and gems of art, is an elevated platform, upon which, packed close to one another, like sheep in a pen, are a number of pianos, and two or three harps. As the space between these is not sufficient for persons to pass, this almost solid square of pianos is railed round. If we endeavour to look further in this direction, our view is interrupted by Chance's lighthouse. If we endeavour to look down the centre of the hall, we find it occupied by a large square heavy framework of iron, with a striped tent-cloth covering, surmounted with an iron urn at the top of the tent-cloth, and filled inside with grates and fenders. This unsightly erection was, probably, intended for a summer-house. It is exhibited by the Colebrookdale Iron Company, and certainly reflects neither credit on the taste of the artist who designed it, nor on those who placed it in such a manner as completely to mar the effect of this beautiful hall. Close to it, and also at a distance of some feet from the side compartment, stands a heavy and conspicuous structure—belonging to Houldsworth, of Manchester—containing a fine collection of rich fabrics for furniture and ecclesiastical decoration. This large trophy is close to the erection of the Coalbrookdale Company; and the close contiguity of these two, and several other things equally clumsy, have nearly the same effect in displaying the proportions of the hall that a wooden partition would have right across its centre. If we look to the north side of the hall, we find a large square of timber, faced with grates and fenders—exhibited by Benham and Sons, London—but relieved by a few small statues round it, and a large group in its centre. The sculpture, fortunately, gives us air of lightness to the whole, which could scarcely have been expected. Grubb's telescope, a glass case of Price's candles, another group of pianos, and a case of saddlery, complete the *coup d'œil*.

The arrangement of the platform at the end of the Main Hall is much better. Groups of sculpture, statues, and busts are admirably disposed. In the centre of the platform is a beautiful piece of plate, exhibited by her Majesty. It is manufactured by R. and S. Garrard, and

SILVER GROUP.—FOUNTAIN TEMPLE, WITH PORTRAITS OF HORSES, THE PROPERTY OF HER MAJESTY.

represents a Fountain Temple, with Arabs and horses round it. This fine piece of plate is of silver—in some places bright or frosted, enameled or gilt, and the design is beautifully appropriate and interesting. From the scarcity of water in the desert, and from this precious element furnishing in those burning regions the first necessary of life, the spots where it flows from the earth have been hallowed for ages. The ancients in their veneration gave them poetic and religious attributes, and displayed the high estimation in which they were held, either by erecting monuments in their immediate vicinity, or by sculpturing the rock from whence the water flowed. Hence has originated the idea of the base of this work; and the structure which surmounts it, comparatively modern, is supposed to be raised on the spot for ages the object of such veneration. The carved rock is partially buried by its *débris*, and by the accumulation of sand from the desert. Around the bases of the columns thus formed from the solid rock flows a rill, to which the flamingo is attracted. On the opposite side, represented as dry and sandy, a vulture, gorged, has retired within the recess of the rock, while two sporting lizards are seemingly conscious of the harmless condition of the bird. The Doura palm, banana, and different plants of the East characterise the fertility of the spot. The Moorish architecture of the middle ages, in its nature essentially religious—the offspring of the Koran, and the Gothic of the Bible—has been chosen for the temple; in which flowers, porcelain mosaics, and elaborate ornaments were intertwined with Cufic and Arabic texts and poetic rhapsodies, which, though the latter were laudatory of the magnificence and generous virtues of the possessor, yet the first were so contrived to constantly remind him that all that ministered to his happiness was the gift of God. As all representations of animal or vegetable life were strictly prohibited, the Moors were compelled to rely on the luxuriance of their imaginations, governed by mathematical ingenuity, in the construction of ever-varying and apparently fantastic ornaments, interwoven geometrically, and flowers, not drawn decidedly from nature, but as it were translated through the loom; for it would seem that the Arabs, in changing their wandering for a settled life, in striking their tent to plant it in a form more solid, had transferred the luxuriant shawls and hangings of cashmere which had adorned their former dwellings to their new, changing tent-poles for columns, and silken tissue for golden stucco. This structure, which represents the idea of a covered fountain, has been designed and composed in the style and spirit of the Palace of the Alhambra; the clustered columns and high springing arches being suggested by the central portico of the Patio de los Leones; and the peculiar effect which characterises the upper portion being obtained by the varied combinations of the several geometrical figures which form the stalactite pendentives of the arches, the soffits, and the supporting growth of the exterior roof; the construction of the cornice may be partly traced to the Patio de la Mesquito; and the outer roof is divided into double stages, terminating in pinnacles, to prepare the eye for the rising of the central dome. In the composition around the temple, which illustrates Arabs leading horses to water, are portraits of three beautiful animals, the property of her Majesty, presents from different Sovereigns. The grouping of both men and horses is so contrived as to be viewed with equal advantage on every side, the action of each being extremely varied. On one side a negro boy is quietly gazing on the animal he has led to the water; on another side is a horse rearing, startled by the sudden escape of his companion, while the Arab in charge is attempting to regain his hold. A Persian hound, aroused by the confusion, is in the act of barking. The original design of this piece of plate was suggested by her Majesty and Prince Albert, to embody which the full strength and artistic skill of the establishment of Messrs. Garrard was called into requisition. The credit of the group of horses and men just mentioned is due to Mr. E. Cotterell, whose works of similar character have so frequently stood the test of public opinion. The Temple Fountain, with its Arabesque ornament, is the production of Mr. E. L. Percy, a native of the Sister Kingdom, and for many years well known in Dublin. This, it is presumed, will give an additional interest in the country selected by her Majesty for the first exhibition of this superb work. The base, with its remnants of ancient architecture, birds and oriental plants, were designed and modeled by Mr. W. Spencer; who, for his success in the latter, has to acknowledge much kind attention and valuable assistance from Sir W. Hooker, director of her Majesty's gardens at Kew; also from the late Superintendent of the Botanical Gardens, Calcutta.

At each side of this piece of plate stand the two cups sent to the Exhibition by the Earl of Eglinton, the late Lord-Lieutenant of Ireland: one, the Emperor's Plate, designed by Macarthy, and manufactured by Hunt and Roskell; and the other, the Goodwood Cup—both won by his Lordship. At the side of one of these pieces of plate stands a pair of broken lances—one of them broken by the present Emperor of France, at the Eglinton Tournament, some years ago, when probably the Prince had but few expectations of ever attaining his present elevated position. On the platform, Mr. West, of Dublin, exhibits a case of jewellery, containing, among other things worthy of attention, a wine-cooler, made of bog-oak and mounted in silver. The silversmiths of Dublin exhibit a number of cases of jewellery, and most of their plate is well designed and manufactured. Waterhouse exhibits, among others, a silver épergne, very well executed, the principal figures being three Syrens sitting at a fountain. Acheson also exhibits some jewellery, including a silver tray and tea service, in addition to the casket of bog oak, of which we have given an engraving; it is ornamented with Irish gems, diamonds, &c., and does the manufacturer much credit. Elkinton and Mason, in this department, exhibit an unequalled collection of electro-plated, silvered, and bronzed articles. The combination of silver, gold, and bronze is novel and very beautiful. Elkinton and Mason also exhibit two very fine bronze statues, cast for the House of Lords, and a group of "The death of Tewdric the Great," designed by J. E. Thomas. All these works will require a more detailed notice when we come to treat of the departments to which they belong.

Next to the Fine Arts Hall, the Southern Hall is the most attractive to visitors. It contains specimens of the beautiful productions of France, Prussia, Austria, and Belgium, as well as the more gorgeous display of Indian and Chinese magnificence.

THE AUSTRIAN AND PRUSSIAN DEPARTMENT.

In the progress of the Irish Exhibition the King of Prussia has taken the greatest interest; and the works of art, as well as of more practical utility, from Berlin, do every credit to his patronage. The principal articles exhibited from Prussia consist of some fine castings in iron, copper, and zinc, and a few superior articles of real bronze (most of these from the Royal foundry); and a fine collection of biscuit and china. Subjoined is a Sketch of the "Alexander Vase." It is a fine specimen of iron casting, and bears a strong resemblance to bronze. It was cast at the Royal iron foundry at Berlin, and the frieze on the exterior represents the triumphant entry of Alexander into Babylon, after Thorwaldsen. It is inlaid with silver, and the inside is gilt. There is also a companion vase of smaller dimensions exhibited by his Majesty. It is also from the Royal foundry: the frieze represents the four Seasons and the Ages of Man composed, modeled, chiseled, and inlaid with silver, by Voigtel, of Berlin. The execution of both these vases is very perfect. The King of Prussia also exhibits two copper statuettes—Frederick I., King of Prussia; and Frederick II., Elector of Brandenburg—both modelled by Stürmer, and executed by the galvano-plastic process by Winckelmann, of Berlin. A vase, called the Athenian Vase, in the same collection, without possessing much originality, merits no small praise as a fine specimen of iron casting, and displays the perfection to which that art has been brought in Berlin. Another Prussian artist, Wolff, contributes a group of a Fox and Ducks, well conceived, and modeled and cast in bronze by himself; and Wickmann, of Munich, gives a specimen of a different style in his elaborate Shield of Hercules, which is gilt and varnished in an artistic manner. The shield is modeled as nearly as possible after Homer's description. In bronze casting Wolff supplies a Dog of the Swedish race, the size of life; and two groups—a Lion startled by a Snake, and a Stag killed by a Lion—both modeled by himself, and chiseled by Moncke. There are also two small groups by Müller that are well executed—a Boy and Newfoundland Dog, and a Girl with a Bull-dog, both cast by Fisher. Fisher also sends a number of small statuettes and groups in bronze, generally copies, and possessing more or less merit; including statuettes of Ariadne, a Nun, the Madonna, and a number of others too numerous to particularise. Geiss, of Berlin, also exhibits a number of his famous zinc casts, bronzed, and scarcely distinguishable from that metal.

The specimens of China from the Royal factory at Berlin, are of no common order. The material is generally of a very superior description; and the elegant shape of the article, not less than the execution of the paintings that adorn it, often deserves high commendation. Subjoined are sketches of a pair of vases as specimens. The samples of biscuit are for the most part busts, and fail to attract as much attention as perhaps they are entitled to.

Bucker, of Dresden, furnishes four beautiful specimens of Painting on china. They are all copies from the "Magdalen of Batoni," Raphael's "Madonna del Sedia," and other equally well-known pictures in the Royal Gallery of Dresden; but, as specimens of painting on china, the works he exhibits are excellent. The same artist exhibits a small case of miniature paintings on porcelain (brooch size); many of them remarkably well executed, and representing some of the finest paintings in the Dresden Gallery.

Anxious to hurry on to the many interesting articles that are tempting us away from the Austrian and Prussian department—we must satisfy ourselves with the enumeration, in a few lines, of many superior productions, to which we should gladly devote more space. Several photophanic pictures, or pictures made of transparent porcelain, give us an opportunity of estimating the progress this branch of art has attained in Berlin. They are from the Royal manufactory, and do not appear to claim a more than ordinary amount of attention. Madame March, of Berlin, supplies some terra-cotta figures, medallions, &c. Berlin also sends a few neat specimens of wood-carving, in which branch of art De Groot of Dublin leaves his Prussian competitors in the distance. There are also some paintings on copper, varnished, from the establishment of Charles Wried, successor to Stobwasser, of Brunswick. These paintings, of course, must vary in excellence, according to the skill displayed by the artist; but they are chiefly remarkable for the very reasonable terms at which they can be produced. The surface is beautifully varnished and polished, and is as smooth and brilliant as glass. The peculiar manner in which this process is performed, gives these pictures the power of resisting not only the atmospheric changes when placed in the open air, but it is said also the constant action of water, and even of some of the milder acids.

There are two cases in this department which will also attract notice. The first is a case of artificial flowers, from the establishment of A. de Rodenburg, of Vienna, in which skill and taste are displayed not less in the manufacture of the flowers than in their effective arrangements; and the next is a glass case, close to it, containing specimens of borders, flowers, figures, &c., for valentines, fancy note paper, &c.; and trimmings and edgings for the elegant little boxes, labels, &c., in the manufacture of which foreigners so far surpass us. The manufacture of these fancy articles gives employment in the town of Paris to several thousand people. It is creditable to Ireland to be able to say that most of the fancy-boxes, labels, and wrappers in which Irish linen is wrapped for exportation, are now manufactured in Belfast; and the Exhibition contains undeniable proofs of the progress already made in this novel branch of industry. We need scarcely remind our readers that the finer descriptions of muslins are exported in "books" or fancy boxes, highly ornamented, to please the caprice of purchasers. Hence the phrase, "book-muslin." The case of fanciful devices in paper, which we have alluded to, will show the perfection to which this art is brought on the Continent. Fechner, Guben, Prussia, is the exhibitor.

FRANCE.

The French collection is not yet complete; but, as a number of workmen are busily engaged opening and distributing the contents of several cases, we have no doubt, in two or three days, the display from France will be most creditable to her. The most interesting portion of the French department consists of the *Exposition de la Vieille Montagne*, the eminent zinc-founders. Several large counters, rising in steps, are covered over with articles—some useful, some ornamental, but generally combining both requisites. The zinc castings are either "bronze, doré, or argenté;" and, by a combination of gilding and bronzing, a beautiful effect is often produced. The specimens vary considerably in size and excellence. There are admirable busts of Napoleon the Great and the present Emperor of France; and several very beautiful clocks, of different designs. Among the other things we may mention table ornaments in variety, groups and figures, both men and animals, candelabras, lamps, candlesticks, lustres, presse-papiers, and, in short, all the fashionable nicknacks upon which ladies delight in laying out their money. The price of these articles, from the great ease there is in multiplying copies, is moderate in comparison to what it was a few years ago, and thus these things, which were formerly rare and costly, are brought within the reach of more numerous classes. Rudolphe, of Paris, also exhibits a splendid collection of jewellery, worth some thousands of pounds; and several other exhibitors will also require a more particular notice.

Workmen are at present busily engaged unpacking a number of cases consigned to the Exhibition from the Royal manufactories of Paris. They contain a fine collection of Sèvres and Beauvais, and other chinas which the French artists allege to equal anything exhibited in London in 1851, and specially selected by the Emperor of France; and also some of the famous Gobelins tapestries, and other articles of rarity and value. Criticism upon the merit of these articles would of course be at present premature and unfair to our foreign friends.

THE BELGIAN DEPARTMENT.

In the Belgian department there are many objects of merit; one of the most interesting being the marble chimney-piece which was manufactured by J. Le Clercq, of Brussels, for the King, and with which the public are familiar, as it obtained one of the prizes at our Exhibition in 1851.

Le Clercq also exhibits five or six other chimney-pieces, but they fail to equal his former production, although by no means unworthy of his studio.

Goyers Brothers, of Belgium, supply one of the finest specimens of wood-carving in the Exhibition. It is a niche, intended for a Roman Catholic place of worship, and contains an image of the Virgin and Child. The wood work, with the exception of the figures, is merely varnished, but they are richly painted in the mediæval style, and the entire reflects much credit upon the artists.

A female bust, veiled, from the studio of Fratkin, of Brussels, supplies a specimen of a style, which some mistake for true art. A close inspection of any veiled statue will show that the effect is produced not by an imitation of nature, or the genius of the sculptor, but by a mere mechanical, though skilful, use made of lights and shadows. Such productions are as far from true art as the painted statues, which were once admired; and we are pleased to find this bust where it ought to be, among the Belgian manufactures, and not in the Fine Arts Court.

This department also contains a variety of miscellaneous articles, including bird-cages, ornaments, dolls, and toys in endless variety.

THE JAPAN COLLECTION.

The King of Holland has liberally sent a fine collection of Japanese produce; among them a very beautiful cabinet is conspicuous. It is carved, inlaid, and painted in the richest style of Oriental taste. There is also a very good collection of native dresses and armour, and some articles of household furniture. Some stands to hold umbrellas, the staffs or insignias of office, and lanthorns made of the dried membrane of some animal, and painted grotesquely, are curious and characteristic. There are also a large and interesting collection of models of native manufacture, including one of a pagoda or temple, and another of a Japanese first-class war-vessel. A complete case of native types, made of wood, takes back our mind to former ages, when printing, with all its attendant blessings, was unknown among us, and when it is probable the art existed among the Japanese in the same state exactly as it exists at present. Whilst with us all the wonderful powers of the steam-engine can scarcely multiply our printed works fast enough, the native printer of Japan, holding the wooden types in his hand, stamps each letter slowly and carefully, by the same tedious process his ancestors used many centuries ago.

Among the other principal articles in this collection is a case of money, for the most part of a square, oblong shape: the smaller coins, particularly the gold ones, are neatly stamped, and much better done than a contemplation of some of their other productions would have led us to expect. The other articles include a pair of scales and weights; screens, fans, trays, painted hangings for walls, specimens of china, tomtoms, mortars, idols; and, in short, a most valuable assortment of the principal articles illustrative of the habits and social life of this singular people.

INDIAN COLLECTION.

The Indian collection will be very beautiful and perfect. A great portion of it is furnished by her Majesty, and the Society of Arts, Adelphi. The collection is under the care of Mr. Dowlin, one of the curators of the East India Museum; but, in consequence of the space required for the ceremonial of the opening, the greater portion of the goods have not yet been distributed. The collection will be very beautiful, and not inferior to the Indian department in our Exhibition, which attracted so much notice. It will be more convenient to postpone giving a Sketch of the Indian contribution till the whole collection may be seen at a single *coup d'œil*.

VISCOUNT GOUGH'S COLLECTION.

Close to the last department is Lord Gough's collection of Indian and Chinese rarities. Although it is not yet in a completed state, having had the opportunity of inspecting it, we are enabled to give a sketch of it. This is one of the finest contributions from any private individual in the building. It consists of rarities and specimens of skill and ingenuity collected in India and China during the wars in which his Lordship held the important post of Commander-in-Chief. Among these, the most interesting, for many reasons, are several beautiful Sikh guns. These comprise two twelve-pound brass howitzers and carriages complete, forming a portion of the guns taken by Lord Gough in the action of Sobraon, in the year 1846, and subsequently presented to him by the Government of India: and also a six-pound and a twelve-pound howitzer, taken by his Lordship in the battle of Goojerat, and presented to him by the Governor-General of India. All these guns were cast by the Sikhs; and, as specimens of perfect castings, cannot be surpassed. One of the guns has been slightly marked by the bursting of a shell immediately above it; but the others present a surface as smooth and free from defects as it is possible to be. The carriages are beautifully inlaid with brass gilt, in fanciful devices; and all the metal work is either of brass gilt or of polished steel. In this style of finish they far surpass our own guns, and they are, we believe, fair specimens of the guns used against us in the Sutlej campaign.

Another gun in the same collection suggests an invidious comparison between the Sikhs and Chinese enemies his Lordship encountered. It is a Chinese gun, taken in battle. It is about three feet long, and is wrapped round (probably to preserve it from injury) with Chinese matting, it has four handles, two at each side, and was carried in battle by two soldiers; and when fired had to be laid upon the ground and elevated to the proper angle by placing earth or stones under it. We have little hesitation in saying that the majority of Europeans would much prefer being the enemy, against whom this gun was directed, to being the Chinese artilleryman who served and fired it off.

The compartment also contains a fine bronze bell, taken from a joss-house, near Ning-po, the top of it ornamented with a monkey or Chinese monster, and affords a good type of Chinese casting. In addition to several dozen specimens of fine china, of various descriptions, Lord Gough exhibits some very curious models of male and female figures, carved in India, from the pith of a species of bamboo, a model of a Chinese joss house, with the idol in it; a basket made of horn and the quills of the porcupine; models of guns in jasper, and bloodstone from India, an ivory model of a hackery, or native cart, &c., drawn by bullocks; and several other fine specimens of Indian carving. The Imperial and other standards of China, taken at Chin-Kiang-foo, add to the value as well as effect of this compartment, in which a number of Chinese, Indian, and Sikh dresses, suits of armour, and implements of warfare, with a variety of other things, are tastefully distributed.

THE CHINESE COLLECTION.

In addition to the varied produce of China, in Lord Gough's and other departments, Messrs. Hewitt and Co., of Fenchurch-street, send a very fine collection. It contains a number of china jars and mandarin vases, and several other articles of china, in which this material is applied in a rather novel manner; for instance, we have a Shih-koo, or stone gun, a portable garden-seat made of china, and probably the best material that could be used in a country where the casting of iron has as yet made (compared to us at any rate) but little progress. Again, we have examples of the China land-marks, used to separate the different fields or tea-gardens, in districts where "every rood supports its man," and where ground is too valuable to be encumbered with fences. These land-marks can easily be inscribed with the names of the owners of the lands they separate, as well as their extent or position.

Messrs. Hewitt and Co. also exhibit a very fine set of carved chessmen, valued at £40. Each piece has a ball in the pedestal, which contains several concentric spheres, all worked in one piece, without joining. They also exhibit a singular Chinese rattle, made of a block of wood hollowed. This is used by the Chinese watchmen as signals: struck with a stick it makes a loud noise; and it is upon this that the watchman strikes the hour during the five watches into which the night is divided—the first commencing at 7½ p.m.: gongs and drums are also used for the same purpose.

In addition to these interesting articles, there are several very beauti-

ful cabinets, painted, carved, and inlaid with ivory in an admirable manner; one in particular, from Ning-po, supported by carved dragons, will not fail to attract attention. We can merely hint at a few of the other principal articles: a carved ivory ball, with twenty concentric spheres; lacquered tea-caddies, workboxes, fans, of carved ivory and sandal-wood; boxes of the same; a swan-pan, or reckoning-board; a bird-cage, inlaid in ivory; several painted lanthorns, some of glass and others of varnished gauze; fire-screens in endless variety; baskets, made of carved ivory, tortoiseshell, and silver filigree; a very elegant vase of carved ivory; a military saddle, richly embroidered in silk; a handsome table, carved and inlaid in ivory and coloured woods; and, in fact, a variety of other things, which are too numerous for, though not unworthy of, especial notice.

Having taken this hasty glance at the Foreign department, let us now cross the Great Hall, and ascend the gallery of the Northern Hall.

CERAMIC MANUFACTURES.

Although it would be scarcely just to pass an opinion upon the excellence of any particular department, where so much is still undisplayed; yet we have little hesitation in saying that the specimens of china and glass form one of the most interesting portions of the Exhibition.

Messrs. Gregg and Son, who are the Dublin agents for the sale of Mr. Copeland's beautiful productions, exhibit a very fine collection of English and foreign glass and china. We have selected a tall cup and cover, of red enameled flint glass, as a specimen; and a small vase from the same stall. Messrs. Gregg and Son also exhibit several lustres, of different sizes, of plain and coloured glass; and a number of vases, cups, and beakers, of French and Bohemian flint glass, enameled in azure, opal, and other colours. Some of the vases are beautifully finished in the Venetian style, with what is called in the trade, we believe, gold twist. They also have a few specimens of the Nineveh vases, which are well worthy of attention. A few small figures in Dresden china, and ornaments in silver gilt, are comprised in their collection.

Messrs. Mayer also send some good specimens, from their well-known manufactory of the Dale Hall Pottery, Longport, Staffordshire. We have selected out of a large number their "Summer and Winter," well conceived, and executed in Parian marble; and also two vases of the same material, ornamented with bold alto-relievo wreaths of flowers in white and extremely graceful.

The productions of Messrs. Rose and Co., of the Coalbrookdale China Company, Shropshire, are conspicuous. We have sketched a Vase from this collection. Two groups in parian will particularly strike us: the subject of both taken from the "Faerie Queene"—"Sir Calepine rescuing Serena," and "Britomartis releasing Amoret."

The fine collection of parian from the celebrated factory of Alderman Copeland, M.P., will require a notice of more length than we could at present afford it. Ridgway, of Staffordshire; and Bell and Co., of Glasgow, also exhibit in this class.

W. H. Kerr and Co., of the Royal Porcelain Works, Worcestershire and Dublin, exhibit a great variety of ancient and modern English china. The "Shakespeare dessert service" introduces groups of statuary, modelled by Mr. Kirk, A.R.H.A., an Irish sculptor, illustrative of "Midsummer Night's Dream." This service possesses (certainly in the building where it now stands) some additional merit, from the fact that almost all the materials used in its manufacture are the produce of the Sister Isle. Hitherto the art of pottery has made no progress in Ireland, and, although the country abounds in all the materials requisite in the manufacture of the coarser specimens of pottery, yet even the cheapest wares are generally imported. It, however, affords us satisfaction to find that more attention has lately been paid to these matters, and we have now in the building a few of its results, in some specimens of tiles and coarse pottery, dairy utensils, &c., from Florence-court; and in some fire-bricks, and other similar productions, from the county of Tipperary. It will be more convenient to postpone our remarks of the progress made in Ireland in this manufacture until we give a detailed sketch of the porcelain clays, &c., that exist—some of them in great abundance—in several parts of the island. Among the articles exhibited by Messrs. Kerr and Co., are statuettes in Irish statuary porcelain, of "Uncle Tom and Eva," from a design by Kirk: and busts of William Dargan, and others. This collection also contains several vases, groups of figures and animals, and a variety of other subjects, deriving their principal claim to attention from their having been modeled in the Dublin School of Design. The specimens of Worcestershire china are good, and contain dinner, dessert, breakfast, and tea-services; card-trays, *déjeûner* and ink-trays; and several old paintings on cabinets, cups, and vases, illustrating the progress made in this branch of art. There is also a most useful assortment of the various raw materials used in the manufacture of porcelain.

In some remarks we propose making upon the natural resources of Ireland we shall have occasion again to refer to this matter. There is something in the manufacture of china which appears particularly adapted to the genius of Irishmen, whether we consider it as a plastic or an ornamental art. The natural taste Irishmen possess is evidenced not less by the large number of her natives who have attained eminence as sculptors and painters—such as MacDowell, Farrell, West, Danby, and Maclise—than by the numerous examples we see in the Exhibition.

Having concluded this superficial glance at some of the most interesting departments in the Exhibition, it will be more instructive, as well as convenient, to treat of the principal branches of industry illustrated in the Exhibition in detail. As the capabilities of this country, and the manufacturing enterprise of the people, are so much better known, we shall also, in considering these subjects, do so, as far as possible, with our attention fixed upon Ireland.

RAW MATERIALS.

I.—TURF OR PEAT.

Among the many raw materials that conduce to the happiness of the human family, fuel fills, perhaps, the most important place. Turf is generally considered as particularly characteristic of Ireland, where it occupies the same position in social economy that coal fills with us. But, even independently of the various uses to which it can be applied, the large area it occupies is alone sufficient to claim more than ordinary attention. The entire surface covered by bog is estimated at 2,850,000 acres, which is nearly one-seventh of the whole of Ireland. Of this quantity, 1,576,000 acres are flat bog, spread over the central portions of the great limestone plain; and the remaining 1,274,000 acres are mountain bog, chiefly scattered over the hilly portions of the country near the coast. As compared to other mineral substances (among which turf may be classed), it is of a comparatively modern date. Many ingenious theories have often been put forward with great ability to account for the formation of bogs. It has generally been supposed that extensive woods, with which the valleys and sides of the mountains in Ireland were formerly covered, became flooded, and that the uprooted trees formed a barrier which impeded the exit of the water. Thus, probably, an extensive marsh was formed, particularly adapted for the growth of *sphagnum* and other mosses, the remains of which are still quite discernible. As they perished they were succeeded by others of the same species; and in time, the bottom of the formation, under the chemical influence we term decay, and of the pressure of the superincumbent mass, became turf. This theory is supported by the fact that bogs vary in depth, and that the bottom, particularly of a very deep bog, is hard, like coal; whilst the surface is always light and spongy. All bogs also abound in timber—principally oak, yew, pine, and birch. The oak is generally as black and hard as ebony, whilst the colour of the yew is but slightly changed, to a rich brown or chocolate colour. Both the oak and yew are found nearer the bottom of the bog than the pine and birch, and mostly in a position to show that the tree had been upright, even after the formation of the bog had made some progress. The bog-oak and yew are extensively used for ornamental purposes, and we shall have occasion to draw attention to many elegant articles of this manufacture.

As the bogs vary in depth, position, and appearance, so, too, the turf differs in its characteristics. Some turf is almost as black and hard as coal; whilst in bogs almost in the same locality the turf is soft, and formed of fibrous substances scarcely half decayed. But the chemical constituents differ still more widely, and often, too, in the same bog. Of this an example is given in the "Industrial Resources of Ireland." A section of the bog of Timahoe, forty feet deep, was tested, and the amount of ash it contained was found to vary. The portions near the surface contained 1½ per cent of ashes; the central portions 3½ per cent; whilst the lowest ten feet contained 10 per cent of ashes. Further experiments show that the turf which is found at a depth of *forty feet* or more, and consequently subjected to very great pressure, approximates very closely to coal in its composition, as well as density and colour; and, accordingly, we are justified in concluding that turf might be artificially made to undergo this change.

The importance of these considerations will be more evident when we remember that the great obstacle to the more extensive use of turf, as an industrial agent, results from its bulk. The value of all fuel depends almost altogether upon the quantity of heat it is capable of generating; and it is plain that, of two substances capable of supplying the same amount of heat, that which is least bulky and most portable is the best: for thus cost of carriage is saved; furnaces may be made much smaller (from which many advantages flow); and stowage in steamers, &c., will be economised.

The first difficulty which must be surmounted, before turf can become as useful as coal, is to decrease its bulk; but there is another great difficulty to be overcome. Turf, from its porous nature, retains a large quantity of water. Ordinary turf retains a fourth of its weight; and turf, carefully dried under cover, still retains a tenth; and this is a serious disadvantage, not only because it adds to the weight and bulk of the turf by the addition of a useless ingredient, but because the presence of water robs the furnace of an amount of heat (in order to expel it in the form of vapour) which would otherwise have been profitably employed.

These are the principal disadvantages turf labours under in an industrial point of view; but some eminent men have insisted that turf, far from being only useful, as an agent in the production of heat, could be used as a branch of manufacturing industry; and that, if distilled in a particular manner, it would yield products far more valuable than its intrinsic worth as fuel. As many processes connected with these subjects will be found illustrated in the Exhibition, it will be interesting to take a short glance at some of the attempts made at various times to obviate the difficulties we have alluded to.

The most natural method of condensing turf, was the application of great pressure by means of a powerful hydraulic engine. By this means turf was not only compressed into a smaller bulk, but the water it contained was forcibly expelled. Two difficulties, however, were soon found to exist—both arising from the elasticity of the fibres in the turf. An immense power was required, and the fibres gradually expanding, attracted damp from the atmosphere. Mr. Williams, an Irish experimenter, endeavoured to correct this by giving the turf a coating of coal-tar; but it is obvious the expense, &c., of this process, certainly in the wilder districts where turf luxuriates, is such, as to prevent its general use. This compressed turf has been used and found very valuable, for the manufacture of coke or charcoal, being in many respects superior, and denser than wood charcoal. It can be manufactured at a cost of 20s. per ton. Turf charcoal is now extensively made by the peasantry in the west of Ireland; but from the want of skill shown, its amount of turf wasted is very great. Sir R. Kane has analysed some of this charcoal with the following result:

Carbon	89.90
Hydrogen	1.70
Oxygen and Nitrogen	4.20
Ashes	4.21
	100.00

Mr. Derust, pyrotechnist to Vauxhall, made several experiments upon it with a view to test its inflammability, and has given it as his opinion that it was twenty per cent more combustible than wood charcoal. It is, consequently, peculiarly fitted for the manufacture of gunpowder, in which it is, we believe, extensively used.

To get rid of the difficulties that arose from the elasticity of the fibres, it was proposed to place the turf mould, as raised from the bog, in large tanks, and to have it trodden by cattle, or kept in agitation by machinery, whilst a stream of water flowed through. By this process the light and fibrous portions were easily separated from the denser, and the latter being permitted to fall to the bottom of the tank in a sediment, was easily dried when the water was shut off. The artificial coal made by this process is hard and heavy, and possesses almost all the valuable qualities of coal.

Nor are the fibrous portions of the turf mere waste. They are at present extensively used at the paper-mills, in the manufacture of the coarser sorts of card-board, known as mill-board, and of which the covers of books, &c., are made, and generally in the manufacture of all the coarser articles made of papier maché. Many specimens of these will be found in the Exhibition.

Turf of a superior description has, however, been used in its natural state (without being subjected to any of these processes), for many years in the inland navigation of the Shannon. There the bulk of the turf is of little consequence, as the vessel need not carry more fuel than will be sufficient for a trip of a few hours' duration. The matter, so far back as the year 1843, engaged the attention of the Lords of the Admiralty, and the secretary of the Dublin Steam-Packet Company supplied these facts in his answer to my Lords:—

The *Lansdowne*, a steamer with two engines, 28½ inch cylinders, at three feet six inches stroke, consumed upon an average 120 tons of coal per month, running daily (except Sunday) a distance of forty six miles, at 15s. per ton, covering expenses £108. The same duty is done with 1415 tons of turf, of twenty cubic feet (about 250 tons weight), at 7d. per ton £41 7s. 8d.: thus making a difference in the cost of fuel per month of £66 12s. 4d.

In addition to these practical tests, many other experiments have been made with turf and coal mixed in different proportions; but, as our object is rather to direct attention to this great source of wealth, than to give a complete history of its various uses, we shall necessarily pass over to another branch of the subject:—

THE DESTRUCTIVE DISTILLATION OF PEAT.

Turf occupies an intermediate position between wood and coal, the different varieties of turf approaching more or less near to each; and, as both coal and wood have long been used in various processes, it is not surprising that many similar experiments should have been made with turf. The destructive distillation of wood is carried on upon an extensive scale in many localities, both in England and Ireland, and forms an important branch of industry. Its principal products are wood-vinegar, pyroligneous acid, creosote, naphtha, and charcoal. Our readers are still more familiar with the distillation of coal, which is principally conducted upon a large scale for obtaining gas for illumination, but the manufacture of which has incidentally led to the production of several other substances, including coal naphtha, sal-ammoniac, lamp-black, &c. As both these manufactures have long existed as important branches of industry, it is surprising that more enterprising efforts were not made long since with peat, which occupied the intermediate place between the two. As it would be impossible to review the various processes, we shall rest satisfied with a glance at the experiments made by Mr. Reece, at Newtown Crommelin.

In the year 1849, Mr. Reece having brought his experiments to a satisfactory conclusion, obtained a patent for his invention of the process of distilling peat in an air blast, and thereby obtaining certain products. As the matter was one of considerable interest, and of vast importance to Ireland, his process was made the subject of scientific inquiry at the Museum of Irish Industry, and an elaborate report upon it was published. Mr. Reece proposed, instead of putting the turf into a closed vessel or retort, and distilling it as coal is distilled, by the application of external heat, to make the heat generated by its own combustion the agent in its distillation. The turf being placed in an iron cylinder, and the lower portion ignited, the heat so produced acts as the heat of an external fire would have done upon the peat lying immediately above. Thus, in the upper part of the furnace, there is a simple distillation and a coking of the peat; whilst, in the lower portion, the combustion of the peat charcoal, as it descends, is going on. This process, therefore, does not materially differ from close distillation, a saving of fuel being the chief recommendation. The principal products that result from this distillation consist of sulphate of ammonia, acetate of lime, naphtha, fixed and volatile oil, and a substance called *paraffine* which resembles beef-wax in its outward appearance. It is more brittle, and has a very singular smell; but it is applicable to nearly the same uses. The visitor should examine several specimens of this curious substance, which are exhibited in various stages: candles, and other things, made of paraffine, are also exhibited.

That all these substances can be easily produced by the distillation of peat, no doubt can be entertained, as the most skilful chemists have come to this conclusion, after a searching inquiry. The only question of real importance is the expense. This has hitherto impeded operations of this kind; for, however curious such experiments may be for the man of science, as a commercial speculation the logs of Ireland will never be applied to such uses, unless it can be done with profit.

The Exhibition possesses specimens of turf and artificial fuel, and a collection of the principal chemical products of turf, which will not fail to interest the visitor, and perhaps cause him to reflect, as he passes over the extensive wastes of bog in the Sister Isle, upon the possible future that may yet be in store for Ireland; when science will transform these solitary morasses into mines of wealth—diffusing industry and happiness, where not long since famine and misery held undisputed sway!

II.—COAL AND ANTHRACITE.

Coal in Great Britain fills the important position we have accorded to turf in Ireland. It possesses little beauty to attract, and derives all its value from its utility alone. It is to coal that England is principally indebted for her commercial greatness. Without it the mighty steam-engine would be an inert mass of iron—our railroads would not exist—our steamers would not plough the deep. The principal coal mines of England are generally well known, and specimens of their produce are to be found in most geological collections. The general absence of specimens of coal (particularly from foreign countries) was generally noticed in the Crystal Palace in 1851; and the same may be said of the Irish Exhibition. Coal seldom offers much to enlist the attention of the stranger; it is principally of interest in the country in which it is found. In the Dublin Exhibition we fail to find such specimens as those exhibited by Messrs. Bagnall and Jesson, in 1851, whose sectional column of the South Staffordshire thick coal, nearly forty feet high, showed the whole thickness of the seam. But we find several collections of minerals, illustrative of the richness of the Irish soil. The Mining Company of Ireland and the Board of Works are the most important contributors. Several specimens are also exhibited by private parties; and the Monkland Iron and Steel Company (Glasgow), Messrs. Morgan and Sons (of Carmarthenshire), Mr. Dunne (of Newcastle-on-Tyne), &c., exhibit specimens of the Scotch and of our own mines, which will afford Irish contributors the advantages of comparison.

As our readers are much more familiar with the coal-fields of this country, it appears more advisable, in giving an historical sketch of the Irish Exhibition to keep our attention fixed as much as possible upon her resources and capabilities.

There are seven principal coal-fields in Ireland, lying nearly equally to the north and south of the metropolis. They differ materially in their geological circumstances—those to the north of the capital yielding bituminous, or flaming coal; and those to the south, stone coal, or anthracite, which burns without flame. Notwithstanding the abundance of turf, coal was worked in Ireland at a very early period; and pits have been discovered that bear evidence, from the rude stone and wooden tools found in them, of having been worked by a race far anterior to historical records. But, from the ignorance displayed formerly, and from present want of capital or enterprise, or something else, the produce of her mines is far less than they could yield with ease; and Ireland, that possesses sufficient resources to supply her own wants, and to become, moreover, an exporting country, imports a large quantity of coals every year, said to exceed in value a million sterling. The principal coal-mines are seven: one in Leinster, occupying large portions of Kilkenny and the Queen's County, with a small part of Carlow; two in Munster—one of them in Tipperary, bordering on that in Kilkenny—and the other spread over large portions of Clare, Limerick, Cork, and Kerry, being the most extensive coal-field in the empire. All these beds yield anthracite. Of the northern coal-fields three are in Ulster: one at Coal Island, near Dungannon; the second in the northern extremity of Antrim; and the third in Monaghan. These last are small, with narrow seams; and are, consequently, of little value. The Connaught coal-field extends over a space of sixteen miles in its greatest length, and lies in the counties of Leitrim, Roscommon, Sligo, and Cavan. The total area of these coal-fields is estimated at 140,000 acres.

It is impossible to cast the eye over some interesting maps showing the geological formation of Ireland, and exhibited by the Chairman of the Board of Works, without feeling surprise at the mineral treasures that lie neglected, scarcely below the surface of the soil on which the unemployed labourer drags his weary steps.

But it is not only in the quantity of her ores that Ireland is rich, their position is even more fortunate. No river in the empire can compare with the Shannon. Its majestic stream winds through a course of 247 miles, through fields whose fertility cannot be excelled. Here and there it expands into lakes, or more properly into inland seas. Lough Allen, in the centre of the iron-fields, covers an area of 9000 acres, and is still very inferior in size to Lough Derg or Lough Ree. Here every opportunity is offered for inland navigation, and the cheap carriage of goods. This splendid river rises among the coal-fields of Connaught, and cuts through the centre of the Munster coal formation. But still greater advantages exist. It frequently happens that the iron ore, the limestone used in smelting it, and the coal, and if necessary, turf (for the manufacture of charcoal), all exist in close contact, divided in the centre by a river that affords at once cheap transit and water power. This is the case with the

THE FINE ARTS COURT.

Arigna mine. In considering the iron ores we shall have occasion to allude again to this matter.

III.—IRON.

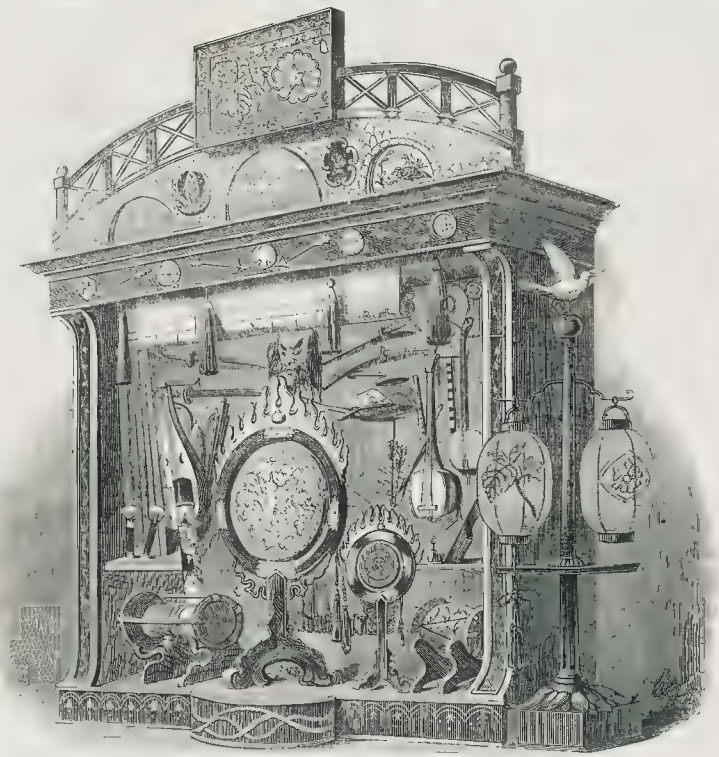
Iron was formerly worked extensively in various parts of Ireland. At that time the country was covered with timber, principally oak, and as there were few roads and no other market for the timber, it was sold for a trifling sum at the mouths of the iron mines. The abundance of timber, and its cheapness led to the establishment of a number of smelting furnaces, and a great amount of prosperity succeeded. But, unfortunately, with that improvidence that appeared (we hope it no longer exists) to mar every enterprise connected with Ireland, each one felled and consumed the timber, but none planted. No one reflected that the supply of full-grown oak-trees covering the mountain could ever fail. All of a sudden the manufacturers discovered that the fuel was all gone: a consternation appeared to dull their faculties and to paralyze their

THE CHINESE COURT.

THE WOOLLENS COURT.

energies. A feeble effort was made to supply the place of timber by coal, turf, or turf-charcoal; but in a short time ruin succeeded the short-lived prosperity. It is now upwards of a century since the last charcoal furnace was extinguished in the county of Kerry. Since then the iron mines of Ireland have never filled an important position as a source of national wealth. The Arigna mines, in the county of Leitrim, are the only ones that claim particular attention. Some years ago, Mr. Twigg was deputed by the directors of the Arigna Company to furnish a report upon the mines for their information. In his report he thus speaks:—

JAPANESE SPEAR, UMBRELLA, AND STANDARD.



CASE OF JAPANESE ARTICLES.

JAPANESE BANNERS, ETC.

The ironstone mines have been examined, and the result found extremely favourable. A greater variety of ironstones I never met with, from which, by a proper admixture and proper management, I have no hesitation in saying that pig iron of best marks, and fit for foundry work of every kind may be obtained. The iron mines begin in Rover, and continue for two miles and a half. I measured several of the beds to more than two feet thick, in some places laid bare in the ravines; and in the bed of the Arigna river we can get any quantity at the shortest notice. There is enough to last two furnaces for 250 years.

These mines are situated close to Lough Allen, which is an extensive lake formed by the Shannon; and thus their produce can be transported with economy to any part of the empire. They are surrounded by coalfields of almost unlimited extent—estimated by the Irish Railway Commissioners, in their report to Parliament presented in 1838, to contain, in the Lough Allen district alone, about 20,000 acres of coal, equal to twenty million tons. The great value of the ore may be estimated from the subjoined comparative table of the contents in metallic iron of the native ores of different districts, published by Dr. Kane, and the result of careful analysis:

	Natural Ore.	Roasted.
Arigna	40 0	58 2
Kilkenny	38 7	55 3
Staffordshire	28 0	40 4
Welsh	31 4	44 7
Glasgow	31 6	45 8

Iron, though the most common of all metals, is the most difficult to extract from the ore in a state fit for use. The most trifling inattention to the quality of the fuel, the heat of the furnace, or the various ingredients thrown in (as fluxes, &c.) with the ore, will make the metal comparatively valueless. Many of the processes—particularly those connected with its subsequent refinement—must be directed almost altogether by the practised eye of the workman; for the innumerable changes that take place in the metal at this stage are such as to preclude the possibility of their being directed by general rules. In these matters experience can be the only guide. It is, probably, owing to the isolated state in which the iron manufacturer finds himself in Ireland, that he has so many difficulties to overcome, which would not exist at all in a neighbourhood where practised and experienced workmen were numerous. The increasing facility of intercourse between the two countries will, however, go far to remedy this, and probably lead to the working of a number of neglected mines.

The subsequent processes by which the iron, as it runs from the ore, is refined and changed from cast or pig iron into wrought iron or steel, belong more properly to manufactures.

Few things have exercised a more important influence upon the destinies of the human race than iron. Mr. Locke (in his "Essay on the Human Understanding") points to the whole continent of America as a proof of this; a country possessing everything needful for comfort and luxury, but still plunged in barbarism, from its ignorance of the use of a contemptible-looking grey stone. "And whatever," he adds, "we think of our parts or improvements in this part of the world, where knowledge and plenty seem to vie with each other; yet to any one who will seriously reflect upon it, I suppose it will appear past doubt that, were the use of iron lost among us we should, in a few ages, be unavoidably reduced to the want and ignorance of the ancient savage Americans, whose natural endowments and provisions came no way short of those of the most flourishing and polite nations: so that he that first made use of that one contemptible mineral, may be truly styled the father of arts and author of plenty."

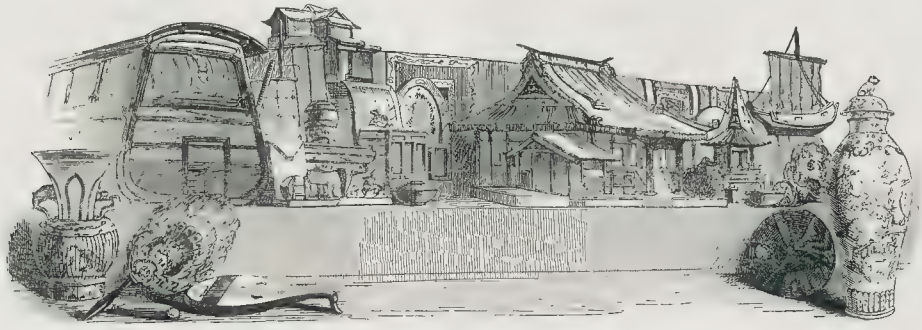
It will be interesting before we leave this subject to glance at the enormous additions we receive annually to our wealth from the two minerals to which we have last alluded—iron and coal. The quantity of iron produced in England is as follows:—

1844	.. ..	1,210,000 tons.
1845	.. ..	1,512,000 ,,
1849	.. ..	2,000,000 ,,
1850	.. ..	2,250,000 ,,

The quantity raised this year will, probably, exceed two million and a half tons.

In 1850 the quantity of coal raised amounted to 34,750,000 tons; and the average price of coals at the mouth of the pit in England being estimated at 5s. 7d., and that of pig iron at 48s., it will follow that we acquire an annual addition to our wealth from these two sources alone, amounting to the enormous sum of upwards of fifteen millions sterling a year, viz:—

34,750,000 tons coal at 5s. 7d. per ton	..	£9,701,050
2,250,000 tons pig iron at 48s.	..	5,400,000
Total value ..	..	£15,101,050



JAPANESE TEMPLE, ETC.

And if we were to add to this the enormous enhancement of value the iron receives by the addition of labour, the sum would almost appear fabulous. The following tables we extract from the "Industrial Resources:"—

The quantity of cast-iron worth £1 becomes worth the following sums when converted into

Ordinary machinery	£4
Larger ornamental work	45
Buckles—Berlin-work	60
Neck-chains	1286
Shirt-buttons	5998

And the quantity of bar-iron worth £1 becomes worth, when formed into

Horse-shoes	£2 10
Table-knives	26 0
Needles	71 0
Penknife-blades	657 0
Polished buckles or buttons	857 0
Balance-springs of watches	50,000 0

If, then, we were to assume a moderate sum as the average value which five millions and a half pounds' worth of iron receives by the addition of labour, we should have no difficulty in satisfying ourselves, that from this one mineral a sufficient sum is produced annually to defray the whole interest of our national debt.

IV. COPPER.

We now pass over to the raw material next in importance to those of which we have treated. Copper is one of the most ancient metals, and appears to have been known to the world at the same period it became acquainted with gold and silver. It was originally imported from Cyprus, whence it derived its name. It was the metal generally used by the ancients in the manufacture of their implements of war; though gold, according to Homer, was often used by the ancient chiefs for their armour. Copper, in its pure state, is extremely malleable and ductile; that is to say, its primary atoms possess so great a power of cohesion, that it may be beaten out into a leaf of such thin texture as to be carried off by the wind; or, that though drawn into a fine wire of the small diameter of 0.073 of an inch, it will support a weight of 203.26 lb. avoirdupois without breaking. Pure copper is too soft to be applied to any purpose where great hardness is required, such as in the edge of a sword or hatchet, the head of a spear, &c. This was a serious objection to its use in early days where there was no iron to fulfil such purposes. Ingenuity was therefore applied to the solution of this difficulty, and success was the result. It was discovered that the addition of a very small quantity of tin—a metal still softer—would form the hard and brittle metal we call bronze. To account for this, it is necessary to bear in mind that all metals consist of particles, or primary atoms. Let us look at a glass filled with small shot of a uniform size. No amount of shaking or alteration in the distribution of the contents of the glass will make them fit into a smaller compass, or, in other words, will add to their density. If, however, we pour into the glass something else, consisting of particles smaller than the shot, the interstices will be filled, and the contents of the glass will become denser; and, if cohesion were to take place—such as that produced by melting two metals together—the whole, as a lump of a particular form, would become harder and more solid: there would be fewer empty spaces. This will convey an idea of the manner in which the addition of one metal to another—such as alloy to gold, or tin to copper will add to their hardness and density.

The alloys of copper are numerous, and all of them of great value and utility. Hard bronze, such as the ancients used for their weapons, contains from one to five per cent of tin: the addition of more tin makes the metal harder but more brittle. Bell-metal, which is another species of bronze, consists of nearly a sixth of tin with some zinc, silver, and antimony—the last two in very small proportions; but their addition adds to the sonorousness of the bell. Gun-metal consists of eight or twelve parts of tin to a hundred of copper. This is the metal generally used at Woolwich; and, as it retains some malleability, it is tough and well suited to the construction of field-pieces; but these exact proportions are not always observed. The metal called speculum metal contains about one-third of its weight of tin, and some zinc, silver, and arsenic. It is as bright as steel, and of the same colour, and takes a fine polish; but as it is very brittle, much care is required in casting and polishing it.

Two thirds of the entire copper supplied to the world is from the Cornish mines. The annual production of copper from Cornwall is 12,000 tons of metal, the value of which is £800,000 sterling. This is generally smelted at Swansea, in consequence of the absence of coals near the mines, and it being found cheaper to take the ore to the coal than the coal to the ore.

The Burra-Burra mines were discovered about the year 1845, in South Australia. Their produce between that and the year 1850 amounted to 56,428 tons of ore, the greater part of which was smelted at Swansea. Latterly, however, arrangements have been made to smelt it upon the spot, but there can be no doubt the gold diggings have seriously injured the copper mines of Australia.

In Ireland, the principal copper mines from three groups—the first in the county of Wicklow, in the picturesque valley of Ovoca; the second in the county of Waterford, occupying the district of Knockmahon; and the third is situated in the southern portions of Cork and Kerry. The copper ore from the Irish mines is exported to Swansea or to Liverpool. The quantity exported to Swansea averages 10,000 tons annually; and it is probable the quantity exported to Liverpool is nearly as great. In addition to this, a small proportion of copper ore, singularly rich in sulphur, is used in Ireland in chemical works, as well for the purpose of extracting the sulphur as the metal.

Several other districts have copper mines, which were formerly worked, but have since been abandoned—often in consequence of the inability of the proprietors to appreciate the advantages of modern appliances. An authentic anecdote of the Mucrus mine, near Killarney—which possesses a communication with the sea, as well as many other advantages—will perhaps account for the unsuccessful working of many of the Irish mines—this one included:—The miners at Mucrus, in the course of their labour, came across a profusion of hard stone, of a dark blue colour, tending to a beautiful pink. It was disposed of as rubbish; and upwards of twenty tons of it were given as such to one of the miners, who recognised its value. Some years afterwards it was discovered that this was the ore of cobalt, much used in the arts, and of far greater value than the copper which the ignorant proprietor of the mine was working. The director of this mine might have possessed industry, but he certainly had no practical knowledge.

THE SPECULUM OF LORD ROSSE'S TELESCOPE

It would be difficult to allude, as we have just done, to the manufacture of speculum metal, without dedicating a few lines to the extraordinary ingenuity and perseverance displayed by an illustrious Irishman in furtherance of science. Few of the scientific men from England or the Continent will leave Ireland without visiting the splendid telescope erected by Lord Rosse at his castle at Parsonstown. Its interest will be enhanced when we remember that everything connected with its construction was made in Ireland, always under the personal superintendence of the noble Earl. It stands prominently forward as the finest specimen of "Irish manufacture" in the world; and though its enormous size, of course, precludes the possibility of its forming part of the contents of the Exhibition building, yet it is so closely connected with its objects that we must, as by a fiction of law, assume it present.

Telescopes are either reflectors or refractors. Lord Rosse, after much study, concluded that any great improvement in telescopes must take place in the reflecting telescopes. To persons not practically acquainted with the subject, it will be sufficient to say that a reflecting telescope is so called because the heavenly body is not viewed directly by the astronomer, but reflected from a speculum, or brilliant looking-glass. This speculum is of a concave form (or more properly a parabolic curve), and magnifies the object examined. It is, therefore, evident that the heavenly body will be seen more or less clearly according to the size and accurate surface of this speculum; and the ingenuity of philosophers since the days of Newton has been employed in endeavouring to fulfil these objects.

The wonderful accuracy required will be evident to any one who remembers how great a difference a minute flaw or dulness will make in the image reflected in a plane looking glass at a distance of a few feet. In the speculum of a fine telescope every error is magnified we might say thousands of times; and the spot that would produce a scarcely perceptible blemish in a lady's fair countenance, in the speculum of a telescope, may obscure clusters of constellations, each many times larger than the world we live in.

To produce such a speculum perfectly free from flaws (the result of the casting), and from obscurity (the result of the constituents of the metal), was not easy. The difficulty consisted in this—that the brighter the metal was made, by the various compounds of which it was formed, the more difficult it became to cast it, from the extraordinary brittleness it acquired. It became, therefore, the general aim of all operators to increase the whiteness of the metal, and at the same time to decrease its porosity and brittleness. Such was the brittleness the metal acquired, that the apparently unappreciable heat it acquired from the operation of polishing the surface, was often sufficient to destroy the labour of many weeks.

Before the Rosse speculum, Herschell's was, we believe, the largest in the world, though only 18 inches in diameter, and Lord Rosse conceived the apparently foolhardy ambition to cast and complete, in his remote country residence in Ireland, a speculum more perfect and four times as large as any ever before constructed. Necessarily limited as our sketch must be, it will be impossible to point out the many difficulties that met him at every turn. In an industrial paper like this, we shall merely describe the operation of casting the speculum, as this process will serve to illustrate many similar branches of art, which we shall have to describe before we conclude this paper. Having succeeded in producing a metal of extraordinary whiteness and brilliancy, the next thing was to cast it; but its brittleness had exactly increased in proportion to its brightness. As the edges of the speculum cooled necessarily more rapidly than the centre, the speculum cracked.

Most of our readers have probably made "wax and oil," or lip-salve, and have remarked that, as it cooled in the porcelain pot in which it was melted, the edges became cold first. The edges will always be found more crystallized and harder than the centre. This comparison is not perhaps philosophically accurate, but it is sufficiently correct, and will illustrate, in a familiar manner, the difficulty of fine metal casting where a perfectly homogeneous mass is required.

Lord Rosse endeavoured to remedy this by pouring the metal of which he proposed to make the speculum, into a metal, instead of a sand mould—the metal being a better conductor of heat; but here still greater difficulties arose, for bubbles of air, unable to escape through the metal mould, gave a spongy appearance to the substance of the speculum, which no polishing could rectify. For months, in the solitude of his laboratory, did Lord Rosse experiment; and at last he was fortunate enough to discover a plan which has since conferred great practical advantages upon the metal-founding trade. He had hoops of iron tightly rolled together, the size of the intended speculum. This mould was afterwards ground to the proper surface, and the iron hoops were made much wider, near the centre of the mould (where of course the heat would be greater in consequence of the thickness of the metal), and narrower near the edges, where less heat would exist. Thus he succeeded in forming a mould, which, whilst it would permit the globules of air to escape, would retain the metal; and while, by carrying away the heat in different quantities just in the proportion heat would exist in the melted metal, would cool the entire mass *equally*. Now that the principle has been ascertained, the application of it is found easy, and has proved of great value in the arts.

Lord Rosse made many other valuable discoveries in the casting and polishing of metals; and while producing the finest astronomical instrument in the world, he has also added not a little to practical science. The reader will excuse this digression.

V.—LEAD.

Lead is diffused through Ireland in far greater quantity than copper The principal mines are situated in the counties of Wicklow, Down, Armagh, Kerry, Clare, Limerick, and Cork. Small veins have been opened in almost every county in Ireland at different times, but few of them have proved very profitable. At present the principal mines are worked by the Mining Company of Ireland, and with great profit. The specimens of the different ores, and the different stages through which the products of the ore pass before they find their way into the market, are all exhibited by that company. The process of smelting the lead ore is carried on by the company at Ballycorus; and the produce of the Luganure mines in the year 1851, amounted to 674 tons, which produced 460 tons of lead, equal to nearly 69 per cent. The company state the proportions of silver in the lead ore per ton amount, from the Luganure mine, to 8 oz.; Cairne, 12 oz.; Ballyhickery, 15 oz.; Shallee, 25 oz; Kilbracken, 120 oz.; Strayford, 10 oz. The average of silver extracted amounted, in the year 1851, to 20 oz. per ton of lead; and the total quantity to 3860 oz., producing £1029.

We are indebted to a contemporary for some interesting details connected with the mining operations in Ireland. The mining company was established in the year 1824, with a subscribed capital of £140,000 in £25 shares. The value of these shares has fluctuated considerably, from £1 to £24; and the dividends from nothing to 12 per cent. The company, however, is now in the enjoyment of public confidence. Since its formation it is stated to have expended in labour alone £1,400,000. At present the weekly expenditure in labour is above £900, divided among 2000 persons, who receive from 4s. to 12s. per week, many of the persons engaged being boys and women employed in picking and sorting the ore. During the last year the quantities of ore raised by this company amounted to 3335 tons of copper from the Knockmahon mine, sold for £26,680, at Swansea; 500 tons of ore, producing 60 tons of lead, from the Wicklow mines; 4822 ounces of silver, worth about £1,000; and 29,783 tons of coal and culm from the Tipperary collieries; besides other products.

VI.—GOLD AND SILVER.

We shall conclude this sketch of the mineral products of Ireland by a necessarily brief notice of the precious metals.

At the close of the last century some peasants picked up a few lumps of bright metal in the Wicklow streams. It was soon discovered that this was gold "nuggets." The peasantry from the counties round at once flocked to the "diggings" and all agricultural operations gave place to the gold fever. In a short space of time upwards of £10,000 worth of gold was collected by the peasantry, in pieces from the size of minute grains to lumps weighing twenty-two ounces. The rumours of the mineral wealth of the district, and the demoralisation that was the natural results of this gold hunting, soon induced the Government to take the mining into their own hands. But, whether the result of accident, mismanagement, or fraud, the project, as a monetary speculation, was a total failure. In the course of the two years the Government managed the undertaking, no more than 945 ounces of gold were collected, the value of which was only £3675, and much under the expenses of the establishment. The Government consequently abandoned the mines, which were afterwards leased to a London company, in whose hands they proved equally unproductive. They are now abandoned. It is probable that the quantity of gold found at first in the Wicklow rivers was the accumulation of ages, during which even mountains may have been worn away and carried by the streams to the sea; whilst the gold, from its weight, remained behind, constantly accumulating. No veins of gold have ever been discovered, or any traces of it it, except in the alluvial deposits of the river.

Silver has sometimes been found in small quantities, in a native or pure state. The quantities found have never been of sufficient value to make the working for it a profitable speculation. The silver produced in Ireland is generally found in connection with lead. The ore of some veins is so rich in silver as to be called silver-lead. Formerly the process of extracting it was wholly unknown in Ireland, and the lead, richest in silver, used to be sold in the English market, in consequence of its brittleness, at an inferior price.

The process by which the silver was separated from the lead was formerly tedious and expensive: it was called "cupellation." Lead is much more easily oxidised than silver; or, in less technical language, if the two metals are melted together, and exposed to the oxygen of the air the lead will turn into dross, or oxide of lead, without the silver being in any way effected. To obtain the silver from the lead, both were melted together, and exposed to the air, and in process of time the lead changed into the oxide called litharge, and the silver remained unaltered. But as this process was necessarily very expensive, from loss of lead, labour, and fuel, it could never be profitably used, except in cases where the lead contained twenty ounces of silver to the ton—a matter often difficult to determine beforehand. Mr. Pattinson, of Newcastle-upon-Tyne, by applying a well-known principle to the solution of this difficulty, has conferred a great benefit upon manufacturers. It was well known that lead melted more quickly than silver, and that it also cooled more rapidly, its particles arranging themselves together in crystals. The whole metal was, therefore, melted together, and as soon as the lead began to form in crystals, it was removed in a perforated iron ladle. Thus the lead that remained behind became richer and richer in silver, till at last it became so pure, that the remaining lead could be easily separated from the silver by cupellation. The silver is now separated from the lead by this process at the Irish mines, and a fine mass of silver, now exhibited by the Mining Company, in a single block, worth £200, attests its practical application. By this process silver, amounting to only three ounces in the ton of lead, and worth no more than 15s., may be separated with profit.

OTHER MINERAL PRODUCTS OF IRELAND.

The other mineral products of Ireland consist of nickel and manganese, in small quantities, alums in Clare and Kerry, pipe-clays and china clays, minerals of barytes and of magnesia, ochre, slates, and marbles, and some others.

It will be necessary to consider these, and, indeed, all the raw materials of which we have made mention, when we come to treat of the various manufactures, both native, British, and foreign, that adorn the Exhibition.

In the order we have preserved, we were anxious, as far as possible, to consider the metal as it leaves the miner's hands, without any consideration to the subsequent processes it may have to undergo; and, with respect to Ireland, we were anxious to put before the reader a succinct view of her natural resources almost without commentary

It is impossible to view all these elements of national aggrandisement and wealth, without feeling that if Ireland had ever had the good fortune of possessing as many Dargans as she has had Smith O'Briens, O'Connells, and Meaghers, smiling plenty would long since have dispossessed her poverty; and that island, so long a difficulty to all governments, and a help to none, would have been our support and our pride.

THE IRISH MARBLE COURT.

At the northern side of the Great Hall is a small compartment of great interest. It contains not only a fine collection of specimens, but several larger manufactured articles, such as chimney-pieces, &c The principal collection of specimens consists of a series of two hundred and forty-five, representing the natural rocks, minerals, soils, &c., of Dublin, collected by Henry O'Hara, Esq., C.E. A fine collection of Irish marbles, in a glass case, exhibited by the Museum of Irish Industry; some specimens of green porphyry, from Lambay Island, and red conglomerate, from the same place, both the property of Lord Talbot de Malahide; a handsome doorway of Cork marble, two chimney-pieces, some pedestals, busts, panels, and slabs of various sizes, illustrate the marbles of the different counties in Ireland. Were we to mention each contributor particularly, this sketch would degenerate into a mere catalogue of names; for we are gratified to be able to say, that every Irishman appeared ambitious to display for public inspection the varied natural products of his country.

The marbles of Connemara are well represented. They consist of three kinds—the hard white, the black, and the green. The green varies very much in colour: sometimes it is almost white; again, pale yellow; at other times, bright yellow, or dark green, almost black The most valuable specimens are generally of a bright green, almost as bright in its colour as malachite. We are convinced, if this marble existed only in the ruins of some Italian temple, it would not be less valued than the celebrated Verd-antique, than which it is not inferior in beauty. This marble exists in abundance in the Connemara mountains, near Ballynahinch and Clifden; and it works very well, and will bear turning in the lathe: it is, consequently, applied to many ornamental purposes. The principal objection to it is stated to be the difficulty of procuring large slabs of it free from flaw, but this arises from the small demand, which has hitherto prevented the quarries being worked to that depth at which alone marbles will be found in the most perfect state. The quarrying of marble, certainly, for statuary purposes, is but little understood in Ireland. The marble is invariably blasted, and, consequently, it receives what is technically called "a shake," which, even where it is not discoverable, dulls the appearance of the marble, in the same manner that the slight flaw in the Koh-i-noor obscured its brilliancy until the recent cutting. Two very handsome tables of Connemara marble—the slabs of green, and the pedestals of black—attest the size and perfection in which slabs may be procured. These tables will be found in the compartment we have alluded to. They are exhibited by Mr. Lambert, of Cong Abby.

Black marbles exist in great abundance, but not in great purity, in Ireland. The most important quarries are those of Kilkenny and Galway. The Kilkenny marble when cut is perfectly black; but after a short time the whole surface, in consequence of the action of the light and atmosphere, becomes studded with the shells and organic remnants of the fossil insects imbedded in its substance. These are varied, and as curious as interesting, and in the eyes of a geologist would, probably, add much to the value of the marble. Specimens of this marble, and of the black marble of Galway, will be seen in the Exhibition. This latter is exported in large quantities to New York and London. Black marbles are also found at Clarehtown and Donraile, in the county of Cork, and at several portions of the counties of Limerick, Kerry, Clare, and Tipperary.

The Armagh and Churchtown marbles are also well represented. They present a mottled surface of red, brown, and yellow, sometimes tinted with purple. They take a high polish, and are much admired A handsome doorway, completely made of these marbles, and two mantel-pieces, will not fail to impress the visitor with admiration for this very beautiful variety of native marble.

The other marbles of Ireland are—the ash grey, with a very fine grain, in the counties of Cork and Limerick; near Shannon Harbour, fine sienna and dove-coloured marble; near Dunkerron, county of Kerry, in small quantities, a purple marble, veined with dark green, and resembling bloodstone

In addition to these marbles, which generally are mentioned as specimens of great and inexhaustible quarries, Ireland possesses a number of veins of very beautiful marbles, and porphyries, and agates, amethysts, &c., a collection of the latter being exhibited by the Lord Chancellor of Ireland. The famous Irish diamonds, or crystals, also abound in various parts of the country, and they are now extensively used to ornament the bracelets, brooches, &c., manufactured of the bog-oak.

We should strongly recommend the visitor who is really anxious to make himself acquainted with the geological wealth of Ireland, not to leave Dublin without visiting the "Museum of Irish Industry," 51, Stephen's-green East. He will find a fine collection of all the geological productions of Ireland carefully classified, including marbles, building stones, clays, sands, &c. This museum also contains a good collection of Irish birds and fishes; and samples of most of the principal branches of native manufacture. The museum is free to the public.

THE SERPENTINE MARBLES.

In an appropriate place, close to the Irish Marbles, stands a fine collection of articles exhibited by the "London and Penzance Serpentine Company." The articles are all made from the material which forms the Lizard Rock, near Penzance, on the coast of Cornwall a place well known, by the Lizard Lighthouse, to those who have sailed from the Irish ports to Falmouth or Plymouth. It forms the whole of the southern part of the Lizard Rock. This rock is igneous, and, like others of a similar origin, it varies greatly in its general appearance, colour, and texture. It is always beautifully mottled—sometimes red, with patches of green and brown; and in others, red, green, and yellow are irregularly mixed together. It is frequently traversed with white or yellowish veins, called steatite, which adds much to its beauty. According to an elaborate analysis of several specimens of the rock, carefully made for the company, it was found that, whilst the constituents of the rock varied very much in particular cases, it generally consisted of -

Magnesia	34.50

Water, Carbonic Acid, &c.	13.57
	100 00

The articles exhibited consist of columns, pilasters, pedestals, fonts, obelisks, vases, tazzas, jugs, chess and work-tables, monumental tablets, urns, slabs, and a variety of antique and modern designs for the decoration of modern houses, public buildings, or ecclesiastical edifices. The stone is hard, and yet worked with facility—a fact sufficiently evident from the comparatively low price at which these articles are manufactured. It takes a fine lustrous polish, which adds much to the brilliancy of the tints; and, when once polished, it is said to resist the action of the atmosphere, damps, grease, and even acids, for a long time. It is generally applicable for all the purposes to which the rich marbles of Italy are usually applied, and may be carved with facility; and it differs from many marbles in this—that the portions carved with the greatest minuteness preserve their brilliancy, as well as the large surfaces, instead of showing that unfinished appearance which we so often find in inferior materials.

As the manufacture of ornamental articles from serpentine promises to be (we might almost say already is) an interesting feature in the varied branches of home industry that flourish in Ireland, it will be interesting to trace its origin. It affords one of the many examples that might be adduced of the great advantages a particular branch of manufacture has derived from public attention being directed to it by some fortuitous occurrence. In treating of the Irish Exhibition, it is encouraging to notice the rapid rise of this branch of manufacture, for we feel convinced that similar results will bring into notice many of the rich and varied mineral treasures of Ireland that exist in almost boundless profusion, unknown or unheeded, but yet possessing the same, and even greater claims, to public attention. That it may be attended with this success is the anxious prayer of every right-thinking man.

The beauty of the stone which forms the rocks of Penzance has been known for centuries. Unlike other marbles, its singular and varied richness is visible in the rough-hewn block before the polisher has applied his magic art to its surface. The richness of its vivid tints is particularly remarkable when it is placed in such a position that water can play upon it—as for the basin of an ornamental fountain, &c. It was occasionally used for various purposes; but, though equalling in every respect, in its adaptability for ecclesiastical architecture, the beautiful marbles (such as those in the Temple Church, &c.) so often used, yet it was but seldom employed; and then, even, attracted no attention

It has lately been discovered, by mere accident, that the brackets of two of the monuments in Westminster Abbey, erected in 1710 and 1711, and also the panel-bordering of the monument erected by the Marquis of Hastings to the memory of his friend Addison, the poet, are of serpentine; and their polish remains as perfect now as if but recently placed there. Notwithstanding these opportunities of being seen and admired, the stone for centuries attracted no public notice until the Royal visit to Mount's Bay in 1846, when his Royal Highness Prince Albert expressed his admiration of its utility and beauty, and suggested the propriety of working it upon a more extensive scale. The suggestion was at once adopted, and the increasing demand for it testifies the accuracy of the estimate he Royal Highness formed of its industrial value. Additional skill and enterprise are keeping pace with the increasing demand; and in a short time we shall be surprised if this material does not become as well a favourite at home as a regular article of exportation.

The articles exhibited are remarkable for their large size and their style of finish. Several large vases, tazzas, and jugs, generally after antique models, serve to show at once the beauty of the material and the skill of the artist. Some elegant tables, and a variety of other articles are exhibited, inlaid with steatite, and display taste and judgment. It is said that the steatites, when used for inlaying, harmonise better than any other material with the serpentine. In their essential compounds these two rocks, though both abounding in magnesia, differ a little—the steatite containing a larger portion of silica, and the serpentine more water of consolidation. The serpentine is also harder and brighter, and the contrast between the various colours of which it is composed more strongly marks. The steatite is of a softer colour, as well as texture, and it often appears less to a dun, or a whitish yellow. In small articles, or used for inlaying, it looks well; but, in larger works, it wants the noble effect which the serpentine so eminently possesses.

We cannot conclude this subject without regretting that many of the beautiful marbles of Ireland are not displayed to similar advantage. The compartment occupied by the Serpentine Company speaks of individual enterprise, and proclaims commercial success. In the Irish marbles the articles exhibited, with few exceptions, are either contributed from the Dublin Society, or the Museum of Irish Industry—both institutions wholly or in part supported by Government grants. We see also here and there a table (and some of them very beautiful) inlaid with native marbles and other articles, showing great ingenuity; but we fail to find extensive manufactories where Irish marbles are produced, not as curiosities, but to meet a fair demand in the home or English market. A visit to the principal marble yards in Dublin will surprise us still more; for here we find the artist (in a country abounding in the beautiful marbles to which we have endeavoured to direct the attention of our manufacturers) engaged in working those imported from England, Scotland, and Italy. The inferior mantel-pieces, &c., are generally of Irish marbles; but those upon which the artist lavishes all his art are for the most part of foreign materials, often very inferior to those that abound close at hand.

We sincerely trust the display of specimens from native quarries will lead to the formation, among a few spirited capitalists, of a company like the Serpentine Company, determined to force a thriving trade in Irish manufactured marble by the only practicable means—excellence in the material, cheapness in the production, and skill and elegance in the execution.

FLAX AND ITS PRODUCTS.

Although our notice of the mineral products of Ireland is far from being a complete one, yet we are anxious, before proceeding further, to notice the great staple manufacture of Ireland.

Ireland is peculiarly suited for the growth of flax. The light and fertile soil, the softness of the climate, and the fresh breezes of the Atlantic that fan the island, tempering the heat of the summer sun, all conduce to the health and perfection of that delicate plant. It will be interesting, before we enter into an account of the manufacture of flax, to notice briefly the progress of the growth of the raw material.

Formerly woollen factories were scattered over a great portion of Ireland, and from the abundance and excellence of wool, the manufacturers were not only enabled to supply the home demand, but were also enabled to compete successfully in the foreign markets with us. The rapid rise of this branch of Irish manufactures produced a great deal of discontent among our manufacturers; and the Parliament, acting upon the narrow prejudices which formerly swayed, too often, their better judgment, passed an act prohibiting the export of Irish woollen manufactures. We shall have occasion presently to allude at more length to this subject. This, of course, was a serious blow to the manufacturers so engaged; and, as the quantity of cloth produced far exceeded the home demand, the price fell below the cost of production, and the greater number of the manufacturers, lately so prosperous, were involved in ruin. The more sturdy peasantry and manufacturers of the north of Ireland, who resemble their Scotch ancestors far more than the natives, with whom they have freely intermarried, at once turned their attention to linen as the most eligible branch of industry open to them. At this time little was known of the cultivation of flax; each peasant planted a small "patch" of it, which he generally manufactured in a most primitive manner, either into thread or linen. But, in process of time, the demand for linen opened a new market for his industry, and with it he availed himself of every new process as it became known. The demand continued to increase; and, at last, he found himself able to supply the home demand, and to compete with the foreigner in his own market, and that, too, in spite of restrictive duties. But the activity of the weaver was greater than that of the farmer; and it became necessary to import large quantities of flax from abroad. In the north of the island such difficulties are not permitted to exist long. A society was at once formed, with the sanction of the Sovereign—the Royal Flax Improvement Society—and its efforts have been unceasing to develop this branch of agricultural industry.

The Royal Flax Improvement Society was organised in 1841 at which period the Irish flax crop averaged about 80,000 acres annually. In two years afterwards (1843), it had increased to 112,000; and in 1844, to 122,000. Owing to the great scarcity of seed, some unprincipled merchants passed off a large quantity of spurious seed upon the growers. This seed was several years old, and, to give it the appearance of being new, had been mixed, over a fire, in pans, with some deleterious ingredients, to give it a fresh, glazed appearance—just as the Chinese glaze their green tea. This, of course, rendered it completely valueless, and the farmers suffered heavily; but the Society, having wisely prosecuted the guilty parties, obtained heavy damages against them. Nevertheless, it produced so much disappointment and loss (and in some cases insolvency), that, in the following year, the breadth sown decreased to 96,000 acres. The crop of 1846 was one of the worst that had ever been known in Ireland or on the Continent The result of both these causes combined was, that, in 1847, the sowing fell to 48,000 acres; and, in consequence of the general distressed state of the trade and commercial panic, in which the linen trade participated, prices fell so much, that farmers were discouraged, and only 53,000 acres of flax were sown in 1848. As trade recovered from its depression prices improved, and the breadth of flax sown in 1849 had increased to 60,000. In 1850 it amounted to 70,000, and would have far exceeded that, had seed been procurable every available bushel having been sown; and the quantity of flax grown last year is estimated at not less than 130,000 acres Of this, no more than 12,000 acres were grown in the provinces of Leinster, Munster, and Connaught, and the remainder in the northern province of Ulster

The importance of this branch of national industry will be at once seen The value of Irish flax has generally ranged from £35 to £50 per ton, according to the quality, season, demand, &c. This has been the general average for the last fifteen years. but sometimes the prices have ranged so high as £120, and even, upon one occasion, £180 per ton The importations from abroad amounted to

Years	Tons
1846	35,479
1851	67,..
1852	7,711
1853	10,456
1854	21,097

The advantages of producing it at home, are strongly proved by Mr. Blacker—a gentleman whose opinion upon the subject has always been very highly esteemed:—

After the most minute calculations by practical men engaged in the growth of flax, the labour necessary for every acre of flax is computed to be seven days of a man, fifty-four days of a woman, and four-and-a-quarter days of a horse. Now 25,519 tons weight (which was the quantity imported from abroad at the time), supposing each acre to produce 4 cwt., which is a full average crop, would be the produce of 278,000 acres, which, according to the above estimate, would require in labour an amount equal to the employment of 988 men for 300 days in the year, 19,015 women for the same number of days, and 3339 horses, or, of course, double the number for half the period

Another practical writer (Mr. Andrews), whose calculations have been adopted by Mr. Montgomery Martin, and other statists, has made some very interesting calculations to arrive at the national importance of flax industry. He calculates that the produce of two acres of flax will give employment as follows before it is manufactured into cambric pocket-handkerchiefs:—

	£ s. d.
138 spinners, twelve months, or fifty-two weeks, at about 3s 4d. per week	1369 6 8
18 Weavers, twelve months, at £12	432 0 0
40 Needlewomen, fifty-two weeks, at 4s. per week ..	416 0 0
216 persons, amount of	2217 6 8
Cost of Flax	75 0 0
	£2292 6 8
Value of produce, 1050 dozen handkerchiefs, at £2 10s per dozen	2625 0 0
Profit on produce of two acres	£332 13 4

It would be difficult to come to any conclusion as to whether Ireland will soon be able to supply all the raw flax to the manufacturer, or whether she must still be dependent upon the Continent. The fact is, whilst the produce of Ireland has increased very much, the home demand has increased so much more, that, though Ireland has multiplied her produce nearly threefold, the importations from abroad have nearly doubled. We do not know on which to bestow most praise—on the landowner, who trebles his produce; or on the manufacturer, who so far outstrips the farmer, as still to require adventitious supplies, and hold out to the farmer an ever improving market.

Flax may, perhaps, be conveniently divided into four classes: 1. Raw flax—the specimens of which in the Exhibition, are of course, dried. 2. Fibre in various stages of manufacture. 3. Yarn and thread. And 4. Woven fabric

FLAX FIBRE AND YARN.

The Exhibition contains several very interesting collections illustrative of the entire process of the linen manufacture, from the time the flax is pulled from the ground till it is ready for exportation, in the form of the finest damask. A good series of this kind is exhibited from the well-known house of J. Leadbeatter and Co, of Belfast. It contains a complete collection of specimens illustrative of Watt's process for the preparation of flax, including:—

1. Flax straw from the field.
2. Flax straw, with head and capsules taken off, and made ready for steam chambers.
3. Flax seed.
4. Flax seed, capsules, and husks.
5. Flax straw, steamed in chambers.
6. Flax liquor, from chambers, containing important feeding qualities.
7. Flax straw, with epidermis or outer bark removed by wet rolling, and made ready for drying and scutching.
8. Flax fibre, after undergoing the process of scutching.
9. Flax fibre heckled.
10. Yarn (of various qualities) spun at Nile-water Spinning-mill, Belfast.
11. Yarn bleached.
12. Cloth as from loom.
13. Cloth bleached at Messrs. Richardson and Co., Lisburne.

The Royal Flax Improvement Society of Ireland also exhibit a similar, but more extensive collection. This will, of course, attract more attention, and be examined with more confidence, by the stranger (not to say that others deserve less confidence), inasmuch as the society has no private object whatsoever to carry out; but is merely anxious, by affording the most accurate information upon every point connected with flax cultivation and manufacture, to promote its growth in Ireland upon the widest principles of free competition.

The other principal exhibitors in this class are in general the most famous houses engaged in the manufacture of linen, and to whom we shall, consequently, have to refer presently. Reddy, of Belfast, exhibits samples of mill and handspun yarns; bleached drills, &c; J Preston and Co, of Belfast, samples of flax in the undressed state. We have also an opportunity of contrasting the Irish flax with the Scotch and our own in the specimens of yarns, &c., exhibited by John Brammer, of Kirkaldy; R. and S. Aytown, ditto, J. Nelson and Co, Selby, Yorkshire; A. and M. Aitkin, Pinchbeck, near Spalding, Lincolnshire; and several other English, Irish, and Scotch exhibitors.

We are particularly struck, as we look over this portion of the Exhibition, with the thoroughly practical nature of the things exhibited. There is not in this department so many examples of what we might call the curiosities of industry as we noticed in the Crystal Palace where, by the-by, Ireland was but badly represented in the flax department; but we see the best specimens of the qualities of yarn used in the linens, which form the staple of the country.. In the finest specimens of hand spun yarn—such as those manufactured by Messrs. Berthelot and Bonté, of Cambrai—Ireland cannot compete; but in the more homely specimens that unite cheapness and utility, she equals, if she does not surpass, her fore gn competitors

We shall now glance at the manufactures of Ireland.

MANUFACTURES.

The nearer the Exhibition approaches to a complete form, and the more effectually it displays its rich and varied contents, the more painfully is the following fact impressed upon the mind that Ireland, as a manufacturing nation, occupies nearly the lowest place in the European scale. With the exception of linen, she has no claim to the character of a manufacturing nation; for her silks, her woollens, and even her lace, fill but a limited space in the great consuming marts of the world, and employ but comparatively a small amount of capital and labour in their production. The Dublin Exhibition, in truth, is virtually a *bona e non facendo*, quoad Irish skill and ingenuity; and, had some malicious genius set about entrapping a people into an unconscious exposure of its peculiar deficiences, it could not possibly have hit upon a more effective expedient than this. The Irishman may here see his inferiority, in point of manufacturing skill, to his several contemporaries: and he must be blind indeed if he still persist in pursuing the same path, and slithering on with the same careless and indolent *insouciance* that has hitherto characterised him. He must now shake himself out of his loose and ill-adjusted habits, and determine to imitate his more energetic and industrious neighbours, if he have the least particle of self-reliance in his composition; and the long whine about Saxon oppress. n, the intermittent whimper at the competition of English capital, must give place to active and energetic determination. There must, in short, be less noise and more work; and, instead of prostration before Jupiter to get the wheel out of the rut, there must be shoulder-strength to dispense with foreign aid entirely. We write this in all kindly feeling, and will do strict justice to everything Irish in the Exhibition; but we should be wanting in moral truth, and an enemy to Ireland, were we to surround ourselves with an atmosphere of delusion, and consent to view things through the media which, we regret to say, are too ordinarily adopted

The first thing that strikes the spectator, after entering the building, is the geological map, reduced from the instructive surveys of Dr. Griffith, wherein may be seen the varied and almost boundless mineral wealth of Ireland. There is scarcely an element, which becomes an active agent in industrial pursuits, and forms, as it were the basis of manufacturing skill, that she does not possess. Beneath the surface of the earth, following the minutely-detailed and elaborate diagrams, may be seen, in public abundance, the geological phenomena which are in large request amongst industrious communities, and seem to challenge the magic skill of the hand to convert them into more useful purposes. Here marble, to use the geologist's phrase, is seen cropping out in almost every direction, in certain portions of the island; there coal, iron-stone, lead ore, and other valuable minerals, as we have already said

OPENING OF THE DUBLIN GREAT INDUSTRIAL EXHIBITION.

THE DUBLIN GREAT INDUSTRIAL EXHIBITION.

THE OPENING BY THE LORD-LIEUTENANT.

are prominently visible. Indeed, with most of the easily convertible and generally required materials, Ireland seems abundantly supplied: she only requires the dormant energies of her own children to be called into activity, and to be steadily and unwearedly directed to their useful conversion

Turning from the representation of the raw materials to those on a manufactured state, we have but little to greet the eye with an attractive welcome, and that little, for the most part, so ill-arranged, that it can only be seen at a disadvantage. It seems almost incredible—yet nevertheless, it is a positive fact—that the only article in which Ireland, outs a respectable manufacturing figure is thrust in the background, as though it were necessary to conceal it from public inspection. Instead of linens occupying a prominent position in the Exhibition, they are poked into lateral avenues and into dark recesses, which require a more than common amount of research to find them out. This singular arrangement is *more Hibernico*, in every sense of the term, and must speak for itself. Having eased our minds of these, perhaps, disagreeable but, nevertheless, sincere sentiments, we shall proceed to point out the several excellences of the manufactures in the Exhibition, and of the Irish portion in particular.

THE LINEN MANUFACTURES OF IRELAND.

We have already endeavoured to date the time when the manufacture of flax became an important branch of industry; but it would be much more difficult to discover the origin of the manufacture of linen. We hear of it in the earliest accounts of Ireland extant. The principal garment worn by the ancient chieftains was a shirt made of from 20 to 30 yards of linen cloth, and sumptuary laws were even passed to set limits to the quantity which ostentation would have used. We find linen also frequently mentioned among the produce of Ireland; and Hakluyt, an ancient rhyme-writer, in the year 1430, states, that "Ireland's commodities be hides and fish, as salmon, herring or hake, wool, *linen*, cloth, and the skins of wild beasts." The cloth was probably the ancient Irish frieze of which presently.

The linen manufacture, until a few years since, was altogether confined to the cottages of the peasantry, where the peasant, in the intervals of agricultural labour, wove by the handloom the yarn spun by the hands of the female and younger members of his family. No great factories existed at that time, nor in fact, until the discovery of spinning the thread by the wet spinning process, could factories have been established on their present extensive scale. About the year 1825, the system known as "wet spinning" was discovered in Manchester; the process consisted in passing the fibre through hot water whilst it was being twisted. Improvements were gradually made, and the English and Scotch factories soon began to undersell the handspun yarns in the Irish markets. It became necessary, to enable the Irish to compete successfully, to introduce this mode of manufacture; and about the year 1828, the first great spinning factory upon this system was erected at Belfast. Others followed the same example, and in 1841 there were no less than 41 mills, containing 280,000 spindles, at work in the North. In 1850, the number had increased to 73 mills, with 333,000 spindles; and in 1852, there were not less than 81 mills, having about 500,000 spindles, and representing a capital estimated at between three and four millions sterling, whilst upwards of £1,200,000 is annually paid in wages.

The following extract from the report of one of the Inspectors of Factories in Ireland, gives so interesting an account of the progress of this branch of industry, that we feel we should be culpable in withholding any of its valuable contents from our readers:—

> Under the original distribution of the Factory Inspectorships, in 1833, the factories in the south of Ireland were attached to my district; of these the principal were those situated in the vicinity of Dublin, and the large cotton factory of Messrs Malcolmson, situated at Portlaw, near Carrick-on-Suir, in the county Waterford. In the beginning of 1837, these factories, which had heretofore been in my township were transferred to the district of my colleague, the late Mr. Stuart; they have now, by your directions, been again incorporated with mine. On comparing the state of the factories in the southern part of Ireland, in the present year, with their state in November, 1836, when I last visited that part of the United Kingdom, although no increase in the number of factories, nor any augmentation of manufacturing premises be observable, I nevertheless saw a very marked improvement in the general appearance of the people. But the face of the country itself was also greatly changed for the better: cereal crops were frequent, and even green crops were not rare, in places where, fourteen years ago, they were unknown, and where in 1846, the eye was wearied by perpetual and monotonous recurrence of potato ground alternately with bog. The unmistakeable signs of agricultural improvement, with the abolition of the mischievous con-acre system, make it to be less a subject for regret that manufactures in the south have not advanced, or even that they should have declined in a country essentially agricultural, while the excellent training in the arts of husbandry, and in practical agriculture, upon scientific principles, which is obtained through the agency of the National Board of Education, at their model farm of Glasnevin, near Dublin, and in the various model and other agricultural schools in connection with the National Board, which are dispersed through the provinces, justifies the not unreasonable hope that the improved system of husbandry, which is displacing the potato, and the consequent increase of the comforts and elevation of the character of the peasantry, will more than compensate for the decay of the factory system in the southern parts of Ireland. In no part of my very extensive district is the industrial prosperity, to which I have already adverted, as generally pervading all branches of manufacture, so conspicuous as in the flax-spinning district of the north of Ireland, which having by your directions been only recently added to my district, I have visited for the first time during the half year just terminated. Of this district, I effect in the commercial metropolis, and, at every place which I visited, and almost at every factory which I inspected in this part of the country, some extensive improvements were going on, some new machinery was being introduced, some enlargement of the existing accommodation was being made, or some new buildings were either in course of construction or about to be commenced. This remark is universally applicable in the northern parts of Ireland, where the energy, enterprise, industry, and skill of the gentlemen who have embarked their capital in manufactures, are to be surpassed by no part of the United Kingdom with which I am acquainted. So rapid is the extension of business in the flax-spinning district, that I have good reason to believe that materials, collected for the purpose of showing the present condition of the flax-mills of Ireland, speedily become obsolete, in consequence of the increase of the works in operation. It is calculated by those who have access to the most authentic information, that the number of spindles in operation for spinning flax in Ireland, in July, 1850, was upwards of 408,000, and that additions to existing machinery in old mills, the establishment of new ones, and mills previously unoccupied newly fitted up, will add to this about 75,000 spindles, making a total of upwards of 481,000 for next year; and, from the present prospects of the trade, it is anticipated that the number of spindles in operation on the 1st January, 1852, will amount to 500,000. Taking the number of persons employed in the factories, together with those employed in weaving, in bleaching operations, and in foundries, in machine shops, and other occupations incidental to the flax manufacture, probably not less 20,000 are actually employed in connection with the trade. There are actually employed in the spinning-mills about seven persons for each hundred spindles in operation; and if the manufacture of linen increase in proportion to the increase in the production of linen yarn, it will add a fourth or a fifth to the numbers already dependent on the trade. For these calculations, I am indebted to Mr J. Herdman, Belfast, and Mr. Macadam, secretary to the Royal Society for the Promotion and Improvement of the Growth of Flax in Ireland: but the great increase in the flax manufacture in the north of Ireland not only more than counterbalances the unquestionable decay of the factory system in the south, but it furnishes further compensation, by its demand for the increased cultivation of the raw material, and thus supplies a stimulus to the agriculture of those parts of Ireland which are more legitimately devoted to agricultural than to manufacturing operations, and upon which it appears to be already exercising a very beneficial influence, as is shown by some extracts from the tenth annual report of the Committee of the Royal Society for the Promotion and Improvement of the Growth of Flax in Ireland, which was presented at the general meeting of the society, holden at the society's rooms, Commercial-buildings, Belfast, on the 29th ult. It is satisfactory to observe that the general meeting of the society to which the report whence these extracts are taken, was addressed, was numerously attended, not only by agriculturists of considerable influence, but also by mill-owners and manufacturers, without distinction of party, and who appear to have taken up the subject as men of business, actuated by a common sense of their mutual interest in the prosperity of the staple manufacture of that part of the United Kingdom; and a simultaneous movement seems at the present time to be making by agriculturists in the different provinces for extending the cultivation of the raw material in all parts of the country.

Linen forms the most characteristic portion of the Exhibition, not only from the quality and quantity of the goods displayed, but because it affords an example of the capabilities of Irishmen, when they bring enterprise and perseverance to the task, to introduce into Ireland a great branch of industry, second to few in the empire in importance, and perhaps destined to rival our own cotton fabrics. The manufacture of linen is almost altogether confined to the north. There are a few factories in Drogheda in which about a thousand hands are employed; but the principal trade is carried on in Belfast, Largan, Donaghadee, &c. In Mr. Mulholland's factory, which we had the pleasure of inspecting a short time ago, there were between 800 and 1000 people at work; their cleanliness and moral superiority contrasting favourably with the lounging and listless peasantry of the south and west, we had visited a short time before. In the north, education, respect for the laws, and sturdy honesty are the rule. These facts will appear more clearly by a reference to the census. By the return of 1841 it appeared that the proportion of the population in each province who could neither read nor write were in each hundred:—Connaught, 64; Munster, 52; Leinster, 38; and Ulster, 33. Thus, of persons wholly ignorant, there were then in Ulster fewer by one-third than in Munster, and by one-half than in Connaught. These facts are corroborated by the late return of the Commissioners of National Education. The number of national schools in Ulster are there stated to exceed by 200 the aggregate number in the two provinces of Connaught and Munster. Again, if we look to the moral and religious education of the people, we shall see the great advantages Ulster enjoys. Let us take a single example. The following table will show the encouragement given to the Sunday-school system in the different provinces of Ireland, for the year ending the 1st January, 1851:—

Provinces.	Population in Total.	Number of Schools.	Number of Scholars	Number of Scholars to every 100 of the Population.
Ulster	2,994,389	1931	166,835	14.121
Leinster	1,667,771	457	32,014	4.78
Munster	1,831,817	400	17,160	1.771
Connaught	1,011,917	216	12,403	8.2
Total	6,515,794	3004	226,515	19.783

We must refer those who are anxious further to pursue this parallel between the north of Ireland and the provinces of the south and west, to an article entitled "Ireland: its Garden and its Grave," which appeared in September last, in the *Dublin University Magazine*, and in which the agitation and turbulence that so long prevailed in the south and west, banishing enterprise and capital, and disturbing men's minds from honest industry, are forcibly contrasted with the state of the North; where the people are educated, loyal, and industrious; where comfort and contentment reign in every homestead; in short, a province which the commerce and manufactures of the island appear to have selected as their favoured dwelling place. Let every honest man in Ireland, from the peer to the peasant, wash and eucalcate in the hands of his countrymen, on every occasion the truism, that peace, education, and industry, are necessary before a country can prosper, and that a union of these must lead to prosperity

A large portion of the Southern Hall is dedicated to the exhibition of linen Almost all the most eminent houses in the North have contributed some of their choicest specimens. These consist of damask table-cloths of a beauty and finish which have made them objects eagerly sought for by more than one Sovereign; of cambrics, single and double damask napkins, sheeting, quilts, muslins, and a variety of other articles The well-known house of Andrews, of the Royal Manufactory, Ardgreve, Belfast, exhibit several "super extra double damask" table-cloths: the border of one composed of a rich selection of flowers, drawn from nature; the centre a group of flowers, also from nature, which springs from a scroll resting on a shell, and supported by bulrushes, &c. The ground of the table-cloth consists of sprigs of shamrock and flax. Another table-cloth, from the same house, represents in the corners rhododendrons in flower, well executed; while groups of hyacinths, crown imperials, bolyhocks, stocks, &c., complete the pattern; the centre consists of a basket of rich flowers, placed on a rustic trunk, which rests on a group of flowers at the base, and is supported by an urn, &c.; surrounded by light wreaths of flowers, chiefly climbers. The "fern rustic pattern," from the same house, has a border composed of branches of trees, interlaced with flowers and various climbers, and shamrock margin; the centre is a varied collection of ferns, supported by pieces of trumpet flower and leopards' bane, with festoons of running flowers between, and a filling of a variety of fern sprigs, all drawn from nature. Among the other exhibitors we may mention Osborne, Hill, and Co., bird-eye diapers, manufactured from prime linen yarn J. Rowland, Drogheda, damask and diaper sheeting, of all breadths, huckaback, dowlas, tickens, stair-cloth, &c. Fenton and Co., of the Linen Hall, Belfast, exhibit in the Main Hall a "linen trophy," consisting of various kinds of linens tastefully arranged. Bell and Co., of Largan, exhibit cambric handkerchiefs, bordered, printed, hem-stitched, tucked, and embroidered in the loom. This house also exhibits some printed dresses, also embroidered in the loom. Murland, of Castlewellan, exhibits a collection of linens, as prepared and finished for the United States' market. Harrison Brothers, of Dromore, Down, exhibit linen shirt fronting in various patterns, all woven in the loom.

LINENS.

The Messrs. J. and R. Geoghegan have contributed a case of manufactured linens, which represents the highest class of weaving, and the best quality of that fabric. The qualities range from 1s. 4d. to 7s. 6d. per yard, of seven-eighths and four fourths widths. These linens are woven of a fair round yarn, which imparts to them a long-wearing quality, and enables them to bear a good washing the most trying test to linen in work of this kind there is no mixture of cotton, which not only wears yellow, when woven thread and thread with linen, but is liable to be cut by the latter in the process of washing. The sheetings in this contribution are equally truthful in the material of which they are composed; and are not made for sight and sale, but for use, beauty, and endurance The table linens, the diapers, the single and double damasks, present the same appearance, and are the production of one of the best linen manufacturers in Ireland.

Messrs. Birney and Calvin exhibit a variety of linen, from toweling and sheeting up to the finest shirtings and cambrics. This linen is principally made at Drogheda, and appears excellent in quality, but, as the character of the article is so completely dependent upon the experience of individual wear and tear, we must refrain from giving an opinion upon it. This firm also exhibits linen fronts, woven in the loom, and intended for insertion into shirts: these fronts are manufactured at Dromore, county of Down, and employ a great number of hands in their production. The cambrics, muslins, and jaconets, appear to be of good quality; and, whatever may be the material of which they are composed, have all the characteristics of first class goods The printed jaconet muslins in this case are deserving of remark, as they are made in Glasgow and printed in Ireland—of very rare occurrence.

The richest contribution, however, in this class of work appears under the name of James Coulson, who, we believe, is the oldest damask manufacturer in Ireland. The specimens of table-covers made for her Majesty display as beautiful an execution in weaving art as it is possible to conceive The character of the pattern is exquisitely worked out, and appears as though it was a kind of painted relief the brown and white threads forming a pleasing, and even a picturesque appearance upon the cloth

Mr. Andrews, of Belfast, has also an excellent specimen of damask weaving, which is a study in itself: the dark threads of this fabric, however, do not contrast so pleasingly with the light as those of the brown just noticed, the contrast being too abrupt. The pattern, nevertheless, is equally well worked out.

Messrs Robert Speedie and Sons, of Kirkcaldy, have placed a good assortment of their peculiar manufacture of linen in the Exhibition, which consists of Scotch ticks and coarse cloths, both entering largely into ordinary consumption.

Messrs. Cradwell and Chadwick have contributed specimens of flax in the several stages of its manufacture, from the first gathering to its preparation for the loom, which is deservedly admired. Alexander Knox exhibits a case of linen of the useful kind, apparently; and Messrs. Clibbon and Hill, of Banbridge, have placed a case of diaper in the Exhibition which is equal to anything of the same class of goods around it. The same remark may be made of Mr. R. Roddy, of Belfast, whose diapers, lawns, and table-cloths, are creditable specimens of Irish manufacture. James Muir exhibits some Scotch book-muslins, which are favourable specimens of that kind of manufacture, being even, uniform in thread, and of a fair texture. Mr. Ferguson, of Drogheda, is also entitled to a notice, for the case of well-arranged and most sightly linens that he has placed in this department; so, also, are Messrs. Rainey, Knox, and Co., whose display fully sustains the general excellence of the linen manufacture in Scotland and Ireland.

Messrs Finlayson and Brownfield, of Glasgow, have a case of coloured threads which is entitled to a distinct notice, as it shows the great attention that has been paid to the manufacture of that useful article in Scotland, and that she has little to apprehend at present on the score of competition.

Mr. Hugh M'Donald has placed specimens of tow, hemp, and almost every thickness of string and rope, in the linen department, as a specimen of industrial skill, and a similar contribution by Mr. J. Elliott is equally effective, and, apparently, equally entitled to approbation. It is not stated, but most of these ropes and strings, we apprehend, are twisted by machinery, and not by hand, the smoothness of the line which they display seldom being attained by the latter. The relative strength of the two processes must be tested by experience; that by machinery, if properly served with the raw material, being evidently the most easy and economical in production. Messrs. Brook and Brothers exhibit a case of cotton thread which indicates a certain excellence in manufacture; but that of Messrs. Clark, of Leicester, is the most attractive; whether the article be better in quality must, however, be determined by the consumer.

A description of linen seldom conveys to the reader an adequate impression of the articles described; we must therefore close this imperfect sketch, by stating that almost every manufacturer in Ireland is an exhibitor; and that, though the goods exhibited possess, of course, various degrees of excellence, yet, as an entirety, they reflect very much credit upon those whose industry they represent

Among the Scotch and English houses, we also find some exhibitors who need not fear comparison with their Irish neighbours. Lockhart and Sons, Kirkaldy; Nelson and Co., Selby, Yorkshire; and a number of others, produce linens, damasks, cambrics, as well as coarser articles—such as sacking, window-blinds, &c. as samples of the industry in the districts they represent.

SEWED MUSLIN

Sewed muslin, or muslin embroidered with the needle, is an interesting branch of Irish manufacture; the extent of which is not sufficiently known, nor its value, as a branch of domestic industry, enough appreciated By some it has been represented as an offshoot of the mere needlework trade, which is proverbially the worst remunerated and the most liable to fluctuation in the empire; others maintain that it stands upon an unsound basis, inasmuch as it depends too much upon luxury and the caprice of fashion; and others, again, have considered it as a branch of peasant employment, calculated to confer great benefits, and, in fact, to work a social revolution in Ireland. As it is impossible to reconcile these conflicting theories; and, as the solution of the problem is one of vast social importance, particularly to Ireland, we shall endeavour to examine this branch of trade in a dispassionate manner. It is, however, necessary to premise, before entering upon the subject, that this is a question that cannot be decided by a glance at the glass cases that display so ostentatiously their elaborate contents in the Main Hall of the Exhibition. Before coming to a definite conclusion upon the subject, it is necessary to visit (as we have lately done with this object in view) the cabins of the peasantry in the south and west, where these manufactures do not exist, and those in the north where they do. And it is necessary, too, to glance at the rising prosperity of the large districts of Connemara, into which the missionaries and benevolent landlords have introduced this means of employment hand in hand with the Reformed religion

It is not always sufficient to deal with a commercial matter in the cold spirit of a political economist. Social questions of importance must also be taken into account. We must, in estimating the value of any branch of industry, however humble, have regard to the feelings, the genius, and wants of the people among whom it is established. How many benevolent societies do we find in London, and all our manufacturing towns, with the professed object in view of improving the condition of the people, and admittedly at variance with true commercial principles? Even, then, if the manufacture of sewed muslin required any artificial stimulus to support it, will it not be admitted that it fulfils the important object of giving an industrial education to the most interesting portion of Ireland's population—her young women? We shall presently show that the trade is flourishing—depending not on the caprice of fashion, nor on the luxury of the great, but that the demand for this manufacture is rapidly extending among the middle classes, not of this country only, but of America also.

To procure suitable employment for young females is one of the social problems most difficult of solution. If women are married, with children to attend to, and all the cares of a household, their absence from home is, of course, impossible; and if of a tender age, the dangers are great to which young girls are exposed if obliged to work in factories, removed from the *surveillance* of their parents In securing a suitable employment for women, it is important to fix upon one which will not necessitate absence from home, and one which will also, as far as possible, inculcate thrift and cleanliness. If, in addition to these, we are fortunate enough to discover a branch of industry which will instruct young women in many necessary things, and which, even if abandoned, by change of place or circumstances, will still be practised with advantage, we shall have gone far indeed towards solving the difficulty. We are satisfied that the manufacture of sewed muslin possesses the advantages we have mentioned; and that its extension will prove a blessing to Ireland.

The art of embroidery is coeval with that of sewing. It has existed in all parts of the world, particularly in the East, from our earliest records Spinning or embroidery were the favourite pastimes of the females of the higher classes in our country; but, as a branch of industrial employment, it is of comparatively modern date In France it has existed as an article of trade from an early period. It now extends over twenty departments, though its principal head-quarters are at Paris and Lyons; and it gives employment to upwards of 120,000 people at wages that average from 8*d.* to 1*s.* daily. Although this manufacture has existed among us for eighty or ninety years, it is only since the commencement of this century

that it assumed much importance. The introduction of machinery, by which those who formerly obtained profitable wages in spanning yarn by the hand were thrown out of employment, both in Scotland and the north of Ireland, compelled them to turn to something else. At this time there were eight or ten houses in Glasgow, and a few in Belfast, engaged in the trade; and those who had lost their former employment were glad to turn to the new branch of manufacture as it presented itself, of course, existed; but in a short time they vanished, as prejudices always will when met without fear. The low price at which these fabrics were sold soon forced a market, and the public were not slow to discover the elegance of the embroidery on muslins, which were now extensively manufactured. To supply the increased demand, it became necessary to instruct new hands; and after a time the new manufacture extended over the whole north of Ireland, whence it is rapidly extending to the south and west.

Although the sewed muslin trade is carefully fostered in the south and west of the island, yet we must not conclude that for that reason it is not capable of flourishing without artificial aid. In the north it receives none: it is self-supporting in the widest sense of the word. The principal warehouses belong to Scotch manufacturers; and the works are executed generally for Scotch houses. For one article made to gratify the luxury of the great, a hundred are made for the use of the million; and, in addition to this, a demand from America is daily increasing, and the trade bears all the symptoms of one with which machinery can never interfere, nor the caprice of fashionable society; but one founded on the requirements of the people, and likely to increase with the comfort and growing prosperity of the middle classes. Let us now examine some of the articles displayed in the Exhibition

D. and J. Macdonald exhibit an exquisite specimen of needle-work embroidery, in the shape of an infant's toilet, wherein is displayed the different kinds of work in vogue in this department of industry. Here we have the open-work, the satin-work, and the lace-work, combined: the rose, thistle, and the shamrock are tastefully blended in one piece; and present a pleasing, ingenious, and beautifully-executed specimen of industry. Sleeves, trimmings, habit-shirts, babies' robes and frocks, make up the contents of the contribution; and each evinces, in a peculiar manner, taste and skill, and is well worthy of an inspection.

Mr. Hugh Brown, of Glasgow, exhibits an intermediate quality of goods of this kind, all of which appear to have a marketable property about them, and are tastefully and cleanly finished.

The Normal School of Dublin exhibits specimens of Valenciennes lace in the process of manufacture, on the pillow, with bobbins, thread, and pins, which attracts considerable attention. The quality is stated to be fully equal to the foreign lace, and to be a little lower in price. Be that as it may, it certainly deserves a passing study, as indicative of a growing, and, we trust, a thriving industry in Ireland. The difficulty in work of this kind consists in making the lace from the design; and there does not appear more than three or four hands, even in Ypres (the very seat of the manufacture), who are capable of doing this. When the parchment is once pricked from the design, it is easily multiplied, and worked with ordinary mechanical exertion.

J. Barony, of Glasgow, contributes a variety of sewed work, generally of the finest quality. Here we have children's frocks and robes, habit-shirts and collars: each of these articles displays a different kind of work, varying from the satin-stitch to the neatest embroidery, which presents a singular variety to the contribution. The Morquetaire collar is a peculiarly skilful piece of work; nor are the embroidered flounces and handkerchiefs less attractive, though not equal to some others in the Exhibition.

A robe of Donaghadee needle-work, in the case of Messrs. Birney and Collis, is, perhaps, next to the productions of J. Forrest, the most beautiful article in the Exhibition of its kind: it is a picture of industrial skill.

Mrs. J. Bleakley, St. Mary's, Bandon, has contributed some neat specimens of muslin, embroidery, and crochet, worked in Ballymodan school, which clearly show that this kind of work admits of a most pleasing diversity.

Messrs. Brown, of Bangor, county Down, have contributed a case of sewed muslin collars, habit-shirts, chemisettes, handkerchiefs, &c., which, when taken to evidence the demand for these elegant articles which are becoming more wide spread every year.

Messrs. Bower and Thomas, of Glasgow, exhibit a series of robes, embroidered by the Irish peasantry: besides frocks, collars, and habits, is finished by the same hands. The black and coloured veils of these contributors are equally interesting, the more so as the embroidery is the production of Irish labour.

Mr. E. Clarke, of Dereham, Norfolk, has sent some specimens of crochet and point-work collars, in imitation of Honiton and old Marguerite guipure lace, which will suggest to the workers in Ireland that they have something to learn, excellent as they unquestionably are at this kind of industry.

The embroidered pocket-handkerchiefs of Mr. E. Hill, of Bryansford, county Down, are worthy of inspection; so, also, are his contributions of habit-shirts, collars, and sleeves. The work displays great effect, at, apparently, very little labour—the very perfection of industrial skill.

IRISH POPLINS AND TABINETS

The manufacture of tabinets is almost the only one of which the Irish metropolis can now boast. There are, of course, several other branches of manufacture, but they appear to exist almost by sufferance. But that of which we are now treating has taken a healthy root

It would be difficult to assign any date for the origin of mixed fabrics They have probably existed since the art of weaving was first learned: Linen is the earliest textile fabric of which we read. It formed, according to the Sacred Writings, one of the exports from Egypt to Tyre and Sidon, in the days of Solomon; and Herodotus also mentions "fine linen" as exported from Egypt in his time to Greece. This statement is fully corroborated by the cloth in which we find the Egyptian mummies shrouded, sometimes equaling in the fineness of its texture the cambric we manufacture. In the days of Roman luxury, the fine linen gave place to the more costly silk. The species of silkworm that feeds on the pine, the oak, and the ash were common to the woods of Asia and Europe; but, as their management was more expensive, and their produce more uncertain, they were generally neglected, except in the little Island of Ceos, near the coast of Attica. A thin gauze was procured from their webs, which was much admired, for female attire, both in the East and in Rome. Virgil is the most ancient writer who alludes directly to the silk we now use. He speaks of it as (what it was then supposed to be) a soft wool, which was combed from the trees of the Seres, or Chinese ("Georgic" ii., 121.) The demand for silk became so great that Pliny complains that it was sold in Rome at the rate of 12 oz. of gold for a single pound. So great was its value that the silk stuff imported from China was sometimes unravelled, and the precious materials were multiplied by a lower texture, or the intermixture of linen and thread. (Gibbon's "History of Christianity" "Decline and Fall," vol. 94). We may thus give an equal, date to the introduction of mixed fabrics and of silk, into Europe

The introduction into these countries of spun silk with wool may be dated from 1685, when the Revocation of the Edict of Nantes drove over to England's happy shores—principally to Spitalfields and Norwich—upwards of 30,000 skilled artisans from Paris and Lyons. A number of these refugees also settled in Ireland, principally in the metropolis, where they introduced the manufacture of silk and wool mixed, and effected many improvements in the weaving of silk. The mixture of two materials, apparently so different, and the opportunity it gives for novelties, both in style and texture, and for new combinations of colours, requires from the manufacturer a practical and scientific knowledge of no small order. In the Irish tabinets not only have the brightest colours been introduced, but gold and silver tissue have been also employed, with the happiest effect.

The manufacture of tabinets is closely allied to that of silk, velvet, tabarets, brocatelle, and chintzes. Fine specimens of all these will attract attention in the Exhibition.

The first object of skill that presents itself is the manufacture of poplins, which may be termed a native industry. Three Jacquard looms exhibit, in their several forms, the peculiarity of the manufacture of figured poplins; and the cases immediately adjacent contain some excellent specimens of the plain-work in their several widths and qualities. There is no great consumption, however, for this article, although it is never out of date—being considered, nearly throughout Europe, a kind of bread-and-cheese article, which can be adopted whenever the presentations of fashion happen to pall upon the taste. The principal consumption of poplins is in England, the least, perhaps, in Ireland itself. Since the application of this article to paletots the manufacture has slightly enlarged; but, as that is merely a temporary demand, the ordinary production must soon resume its level. The Messrs. Fry, perhaps, occupy the highest ground in this branch of industry, and exhibit a Jacquard-loom weaving a single coloured, but beautifully-figured, poplin, of which they dog-gnate the Dargan Robe, in compliment to the lady of the spirited proprietor of the Exhibition, at whose ordered it is manufactured. These manufacturers also exhibit the process of winding and warping the silk, preparatory to its being woven; and, in addition to these instructive examples, they have arranged, in a glass case, the different qualities of raw silk, and appended to each the names of the country where it is produced. Messrs. Atkinson exhibit, likewise, a Jacquard-loom, slightly varied in its structure, but more or less of the same complicated principle of action, and presenting a similar manner of parts to form the figure. The same remark may be applied to the loom of Messrs. Pim, both as regards its construction and its producing effects. It would be invidious to distinguish one from the other of these manufacturers, as they severally produce articles which are about upon a par, and it would demand a keen and experienced eye to point out the particular make of each. The poplins are now made in widths from twenty to twenty-four inches wide; formerly they were only sixteen to eighteen inches, which rendered them difficult to be economically and tastefully applied. These poplins will never go out of date, as they furnish material for useful dresses for the fair sex; and, as garments made from them fit well upon the figure, from the many and elastic properties of the wool, which, with silk, forms the texture, they are generally admired throughout Europe There are one or two other manufacturers of poplins in the Exhibition; but their contributions do not require particular notice. They consist of articles of the same kind: velvets, silks, poplins—plain, figured, double-shot, and in various other styles; and figured, brocaded, and watered vesting, embroidered or ornamented with gold and silver tissue. Messrs. Cordner and Co. exhibit, in addition to other articles of this class, some handsome silk curtains, in amber tabaret, with silk fringes; and, in a corner, though not less ornamental department of industry, carriage laces, velvet plush, and London cords, for carriage linings, valance fringes, and orderings for window curtains, Brussels carpets for coach-makers' use, &c.

WOOLLENS.

Upon minute examination, it will be found that the woollen manufacture of Ireland, as a whole, is at a low ebb, and—with one or two exceptions—much inferior to those of England and the Continent. It was proved in the Exhibition of 1851, that the fine woollen cloths of France were, in a few instances, superior to our own; but, taking the general run of goods, we had no superior, and scarcely an equal. Ireland, on the contrary, ranks nearly in the lowest grade of European woollen manufactures; and, with the exception of her friezes and elbans, the productions of her looms are scarcely entitled to the appellation of a manufacture. The two exceptional kinds of cloth, however, just mentioned, the manufacturers of a good quality, and turns them out in a very marketable condition. There is, also, a peculiar character about the finer kinds of friezes and elbans, which few of our English woollen fabrics can lay claim to; they are hereditary put together, contain the true quality of the raw material, and in the wear maintain their beauty much longer than similar goods imitated in England and elsewhere. The same remark may be applied to her blankets, for which Ireland is entitled to great credit; they are generally finer in the texture than those of England, are much warmer, and will wear longer, although a little higher in price. One, if not the main, cause of the superiority of the Irish blankets, is—that the wool they are formed of is that of the Kerry cake sheep, which, from its peculiar silky elasticity and its cohesive attraction, are more effectually preserved. Ireland, also, turns out some decent qualities of tweeds; but she has little chance of competing with Scotland in the manufacture of that article

The frieze is the most ancient Irish woollen manufacture we read of. It is mentioned in several old Acts of Parliament; and, so early as the year 1356, it is stated that among the articles sent to the Low Countries were five hundred cloths, one dozen with green, and one russet garment lined with Irish cloth

In succeeding years we occasionally find notices of Irish woollen manufactures, which were exported in large quantities to the north of Italy, Portugal, and Spain. The Irish cadow, or coverlet, was highly esteemed in Italy. Her manufactures continued to improve, and the influx of the Paratines in the reign of James I. added still further to the prosperity of this branch of industry. England being at war with Spain and Portugal, an Act was passed in the year 1627, which recited that "Whereas the kingdom of Ireland, by reason of the peace and plenty it hath had since it was first reduced to civility, is grown to that plenty that it has not only enough for their own use, but for exportation besides," and concluded by prohibiting the export of Irish woollen goods

Notwithstanding these discouragements, the Irish woollen trade continued to prosper; and so jealous did the English merchants become, that they induced both Houses of Parliament to present an address to William III., to use his utmost diligence to hinder the exportation of wool *for Ireland*." This produced from the King the following:—

"My lords and gentlemen,—I shall do all that in me lies to discourage the woollen manufacture of Ireland, and to encourage the linen manufacture there; and to promote the trade of England.

Another Act, passed in 1699, states "that great quantities of wool and woollen manufactures of cloth, serge, kerseys, perpetuanas, and other stuffs, made and mixed with wool, have of late been made, and are daily increasing in the kingdom of Ireland, &c., which will invariably sink the value of land, and tend to the ruin of the trade and the woollen manufacture of this realm" The Act then proceeds to prohibit the export thereof—and both of wool and woollen goods to any part of the world, except England, from Ireland

Notwithstanding all these vexatious restrictions, the woollen trade still continued to exist up to the period of the Union. But it stood at this time upon an unwholesome basis. The Irish Parliament, by prohibitive duties, prevented competition; and, by the pernicious system of bounties, encouraged to prop up, at the expense of the tax-payers, a declining trade: cheapness of production and excellence of material were neglected; and the thoughts of the manufacturers turned to parliamentary aid, and not to individual enterprise. The result of this state of things might have been protracted for a season, but could never have been ultimately prevented. The trade lingered in this unwholesome state till the restrictions upon English importation ceased, and the bounties were withdrawn, when it gradually declined

The principal woollen cloths at present manufactured in Ireland consist of blankets, which are manufactured in several parts of the Island, but principally in Kilkenny; flannels, drugget-cloth, hosiery, tweeds, elbans, and frieze. Some of these, particularly the last two, reflect much credit upon the makers.

Williams Brothers and Co., of Island Bridge, Dublin, are the principal manufacturers of the Irish tweeds. This house supplies clothing for many of her navy, and, more recently, supplied the Dublin Metropolitan Police; and also manufactures tartan trousering for soldiers, caps, and other military requirements. The 16th Lancers were for some time clothed from this establishment, upwards of 14,000 yards of cloth having been supplied; and much satisfaction was expressed at its excellence. This establishment exhibits superfine black cloths, kersemeres, and doeskins; some beautiful "elbins" frieze—a fabric peculiar to Ireland, shepherds' plaids, and fancy tweeds; regimentals, cloaks, trousers, shawls, and privates; fine shawl woollen yarns hosiery and knitting yarns, and a variety of other articles.

Logan, of Dublin, exhibits some fine black cloth, napped and some fine brocaded Irelands; and a gentleman (Mr. Abbott), who has taken much interest in the promotion of industry in his neighbourhood, exhibits specimens of ginghams and other fabrics woven on the Ankstell Grove estate.

There are in this department a large number of minor exhibitors, whom we need not particularly mention: they are persons who rest their claim to notice more on the fact of their articles being "Irish manufacture" than on their merit; and, inasmuch as its generally difficult, if not impossible, for a purchaser to ascertain the locality where the article is manufactured, and the effort to do so is generally a direct premium to fraud, we should strongly recommend our Irish friends, in whose welfare we are deeply interested, to seek success by studying to produce excellence and cheapness combined, and not to rely upon a national caprice, which to-morrow may unmake as to-day has made.

The general impression we obtain from a glance at this department of the Irish Exhibition is that the woollen trade does not appear to stand upon as sound a basis as we should desire. It wants the appearance of stability. The manufacturers, whose capital is generally but trifling compared, at least, to that invested in the cotton trade of the West of England houses—display a sort of restlessness, which does not properly belong to a thriving trade. We shall best express this by an illustration. The importations into Ireland from this side of the water of superfine cloth is very great, and far exceeds anything the Irish houses can supply, the same may be said of tartans, tweeds, and a variety of other fabrics. Ireland at present offers an unbounded market to the native producer of any one of these. Why not, then, select that which is most suitable to the country, and produced at least cost? This would obviously be the interest of the manufacturer; but his restless straining after everything forbids excellence in any. Of the various fabrics of this class exhibited, the specimens of frieze appear the most likely to prosper. The tweeds, it is true, are excellent: but its very name shows that it is an imitation of a Scotch cloth, and that to force this cloth into the market Irish manufacturer will have to contend against the skill and capital of long established houses of Scotland. But the frieze is a cloth *sui generis*, manufactured only in Ireland, and one which has attained excellence by the slow and wholesome process of constant improvements, which can alone give real stability to any manufacture. Patentees of this cloth were some time since presented to his Royal Highness Prince Albert, who expressed his admiration at its great beauty, but, in addition to its excellent appearance, it possesses a durability which is said to exceed that of most other cloths.

Before concluding this branch of the subject, we may mention that the manufacture of frieze, both the yarn and weaving of it, is still extensively carried on in all the mountainous districts of the south and west of Ireland in the most primitive manner: and the cloth now made is probably manufactured in the same manner as the mantles were, which we have already said were presented to the Pope in the thirteenth century

Home-made flannel is also extensively manufactured, and hose. The frieze is generally dyed of a light grey, or dark brown, almost black the first is the favourite colour. In Munster the skirt of the women's dress is generally of green home-made stuff, and the bodice of a russet colour; but in Connaught the bodice is of coloured cotton, or tartan, and the skirt invariably of bright red. The stockings are generally dyed of a violet colour, or a dark grey. These dyes are prepared by the peasantry from traditional receipts; and are composed partly of mineral substances and partly of herbs. Not a few of our most eminent chemists would be sorely puzzled to produce the bright colours some *colleen dhas* on the Connemara mountains will have no difficulty in imparting to her stockings from a few minerals, and herbs culled by herself, and not to be found in the "Pharmacopœia."

Some creditable specimens of elbans, friezes, and tweeds, are exhibited by Mr. R. Allen, of Dublin—not as manufacturer, we believe, although they are all Irish production. The tweeds are excellent in quality, and will doubtless wear well, for they have all the truthfulness of good work about them; though they are not so slightly, nor have they the finished appearance of the Scotch. The blue and black Devon cloths of the same exhibitor are creditable specimens of Irish woollen cloths, and are deserving of especial notice

Messrs. Wilmas and Mr. A. Read have, however, the credit of bringing the manufacture of friezes to their present excellence, and, judging by their contributions, we should say that they are fairly entitled to it. Originally these friezes were not much more than a coarse cloth, made of the rudest materials, and worn exclusively by the peasants; but they are now the chosen fabric of the higher classes, and are converted into habits of singular diversity and taste. This is owing, almost exclusively, to the care taken in the selection and manipulation of the raw material, and to improved methods of working it into a fabric. There is also another point of importance, which is common to all the friezes we allude to, and which renders them such a favourite material for an dress clothing—they are mostly undyed in their tone of colour, and harmonise admirably with the general appearance of objects, which is much more pleasing to the eye than strong and glaring contrasts. The light grey frieze of Mr Read is singularly quiet in tone, and looks, when made up, of a subdued and gentlemanly appearance.

Mr. John Logan is, likewise, entitled to notice, from the variety of friezes which he exhibits, many of which are highly creditable to Irish manufacture. An embroidered vest, of exquisite contrast in colour, is exhibited by Mr. Dillon, which receives, as it deserves, the marked attention of the passers-by.

From the Irish we shall pass to the English contributions of woollen fabrics, many of which are particularly striking in quality and fineness. Messrs. Bidgood and Reside have sent a valuable assortment of woollens for male attire, which are unsurpassed in quality. This firm also exhibits some richly embroidered silk vests, whose quiet and subdued tone of colour is not one of their least merits. A specimen of fine West-of-England cloth in this contribution is also deserving of notice, as it marks the immense distance between the Irish and English manufacture of woollens: it is the finest we believe, that has ever been made, and possesses such qualities which are rare in a single piece of cloth being short-grained and soft, yet possessing the elasticity which is so difficult to obtain in fine cloths, but are generally characteristic of the coarser kinds. The specimen we allude to is the perfection of manufacture, and the quality it displays has rarely, if ever, been attained before. The hunting cords of this firm are excellent examples of English manufactured woollens, especially the scarlet-milled, which is remarkably fine in colour

Messrs. Hastings, Brothers, of Huddersfield, have sent some specimens of fine cloths, which are rarely to be seen in Ireland. In the manufacture of these woollens, great care must have been taken in the selection of the raw material—a matter of prime importance in all fabrics, but not sufficiently attended to—and it must, also, have been nicely handled before such a result could be obtained. Therein consists the true excellence of British manufacture in general, and of woollens in particular.

The contribution of Messrs. Bull and Wilson, of London, is, however, the richest and most diversified in the woollen section of the Exhibition. It contains, amongst other excellent specimens, two which obtained a prize in 1851, at the world's great show in Hyde-park. Here we have cloths of the finest quality and texture, and of the most exquisite finish; beavers, mix-milled and otherwise, and Angola cloths are equally conspicuous, and seem to challenge competition as to their super-excellence. Messrs. Day and Fox, of Mirfield, have a respectable contribution, whose quality and character fill up an intermediate degree of excellence which is desirable to see in an exhibition of this kind, and clearly indicates that an especial direction of industry is sure to be rewarded, provided it be of a practical and useful nature.

LACE

The manufacture of lace in Ireland was introduced, we believe, by Mr. C. Walker, of Limerick, in 1829, and the firm of which he was then the senior partner, and is the present, time upwards of 600 hands at that work. Preceding that period the manufacture of lace, of the character which we are about to describe, was principally confined to the Continent, as neither the Buckinghamshire nor Northamptonshire pillow lace could be compared to it in quality. France and Belgium had almost the exclusive supply of the finer kinds of thread lace to this country, antecedent to its manufacture in Ireland; and the very names of "Mechlin," and "Brussels lace" familiar as household words" amongst the consumers of that delicate article, and still characterise a certain quality of it, wherever it may be manufactured. But Ireland has stepped beyond both these countries, and now makes a quality of lace of different kinds, which would find a ready sale in the French markets, were there no prohibitory duties to prevent it. The appliqué, the guipure, the tambour, and, above all, the beautiful Italian point, are all produced in Ireland, and are fairly creditable to her industrial skill and energy. The export to England is considerable, and forms one of the most beautiful articles of female attire that we can boast of, when comparing our productions with those of foreigners.

The most beautiful contribution of this article, in its several kinds, is decidedly that of Mr. J. Forrest, which forms a leading point of attraction. The contribution is not only tastefully arranged, but the exquisite finish of each article is worthy of special notice. Here we have scarfs, mantles, and robes of guipure and Italian-point, worked in the finest manner, and producing the most delicate and refined effect. The flounces in one or two of these kinds of work are remarkably beautiful, both for delicacy and finish of the most graceful order. We would particularly point out the one worked in guipure character, which is exquisitely designed and executed. The robe tambour is, also, worthy of a remark or so, as it is in this kind of work that Limerick mostly excels. The blonde lace worked in gold appears exceedingly rich, and yet, withal, chaste: but the gem of the contribution is the bridal parasol, which certainly is the most exquisite object of manufacture, in its way, that we ever saw. It seems the fitting emblem of one, whom we love to contemplate, "as chaste as ice, as pure as unsunned snow." The appliqué imitation is a more useful kind of work, and falls more immediately within ordinary consumption; it is, nevertheless, exceedingly effective in its appearance. This contributor employs upwards of one hundred hands in different parts of Ireland, and exports his productions to all parts of Great Britain; and well would it be for Ireland were there others to display the taste and industry that this exhibition indicates in so remarkable a degree

The next contributors of importance are Messrs. Lambert and Bury, of Limerick, who exhibit, in the Western Gallery, a case containing some beautiful specimens of their industrial art. The shawls, robes, and mantilles display considerable taste in the designs, and are nicely finished. This quality of goods, for the most part, has no pretension to rival the high finish and delicacy of those just mentioned among more at the intermediate and useful—which, as regards the industry of

be carried, and how exquisitely it may be applied. The Brussels flounces of these contributors are equally prominent objects of attraction.

Mr. J Bannister, of Limerick, exhibits a case of a useful class of goods, consisting of veils, mantillas, shawls, and robes, all of which are of a medium quality, and at a moderate price. This manufacturer employs upwards of 60 hands.

the country, is, perhaps, equally important. This firm employs upwards of 600 hands in the city and suburbs of Limerick, and was established by Mr. Walker, who, as we have already remarked, was the first to introduce the manufacture of lace in Ireland.

Messrs. Reckless and Hickling, of Nottingham, have contributed some beautiful specimens of the manufacture of lace in England; but it cannot be said to rival that of Ireland, being so different in its character, though by no means inferior in point of quality. The black guipure double-skirt dresses are proofs of how far the skill of manipulation may

Messrs. Harding, of London, also exhibit a case of Limerick lace, which is especially deserving of a passing notice, as it contains some nicely-finished specimens of the guipure class of work. This lace was made by the girls of the National School.

The Society for the Promotion of Irish Industry exhibit considerable variety of this kind of work, and most of it, as far as skill is concerned, of good execution. Nor have we a single fault to find with the taste displayed in the articles produced; but we must express our belief that all these eleemosynary productions only injure the fair trader, and open a door for a certain kind of pseudo-philanthrophy. There are, it is true, many worthy individuals who encourage these institutions with the purest of motives, and under the impression that they are benefitting their poorer fellow-citizens; but, when we have made this concession, there is still a positive and inevitable evil inherent in them all; they break down the principle of self-reliance, in addition to inflicting an injury upon the fair and honest dealer. And Ireland, unfortunately, abounds in these institutions—if we may judge, at least, by the Exhibition—at all times an indication that there is something radically wrong in the political and social organisation of a people.

Mr. John Holden, of Belfast, exhibit some neat and truthfully-finished needlework; and a Miss C. Doran has contributed a singular specimen of industry in the form of a dress knotted with Irish thread, and measuring 4½ yards in width, and 1¼ yards in length. This delicately-manipulated garment only weighs eight ounces.

Mr. B. Hall, of Olney, has sent a frame which exhibits a series of the Buckinghamshire pillow-laces, all of which appear to be exquisitely finished, and are certainly arranged with considerable taste. These laces, it is stated, are made for Messrs. Groucock, Copestake, and Moore, of London. This contribution is certainly deserving of an especial study, particularly by lace-makers.

The Limerick lace of Messrs. Todd, Burns, and Co. is equally deserving of notice; but, being apart from contributions of a similar nature, is not likely to excite comparative criticism. It is, however, of the finest quality and the highest finish. There is, moreover, some embroidery or crape lisse, executed by poor girls, which is sure to attract attention. And here let us remark that a great portion of sewed muslins, sold at Glasgow and elsewhere in Scotland, as of Scotch manufacture, are got up in Ireland, and are really worked there, labour being so much cheaper in that country than in Scotland.

CROCHET-WORK.

The crochet work, in one shape or another, forms a prominent object of attraction in the Exhibition. The cause of this is obvious enough; it is the production of females, and its abundance may be attributed principally to the charitable direction which a great deal of labour of the fair sex has naturally taken in this country. Leaving causes, motives, and peculiar modes of production, however, out of the question, and simply limiting ourselves to the result of this kind of labour, we must devote a few observations to the contribution of Messrs. Marsland, of Manchester, who appear to take the

BOY AND DOG,—BY MULLER, OF BERLIN.

GIRL AND DOG,—BY MULLER, OF BERLIN.

lead in this kind of work. Their case exhibits a great variety of productions, embracing almost every kind of excellence in needle-work, and is peculiarly attractive to those who are adepts in the work. Here we have guipure, embroidery, horse-hair ornaments, and feather flowers, all of Irish manufacture, and each exhibiting more or less the beauty and dexterity of manipulative excellence. The tatting work is peculiarly elegant in its appearance, and appears to have been executed with the nicest care. This firm employs, or takes the produce of, upwards of 2000 hands, and disposes of it in the ordinary markets at a profit, if possible; if not, a profitable remuneration would. it is fair to assume, be afforded them in the sale of the cotton with which they supply the workers, who are compelled, as a matter of course, to use that, or not to be employed by them. The *modus operandi* of this system is obvious; nevertheless, we can scarcely conceive a better condition of things, under the present state of affairs; and the work produced is fully equal to that worked under what is termed a more healthy and independent system. The Royal horse-hair ornaments made for her Majesty are curious, and worth a few minutes of examination, on the part even of the most incurious observer. Sir Thomas Deane has also some work of this kind in the Exhibition, which is the result of charitable labour; but it does not appear under his name; although it is known that he has been instrumental in procuring work in this way for numbers, who must otherwise have been comparatively destitute. The Ladies' Industrial Society for Ireland equally display their charitable labours in the production of crochet-work, most of which appear to be executed with great care and exquisite taste. The guipure and appliqué parasols in this contribution are worthy of minute examination, and will amply repay the attention bestowed upon them. The poor of Benvarden have some curious needle-work exhibited; a *couvrette* in the contribution is especially worthy of note; and the Irish pearl-tatting, by the poor of Kildarrock Ardee, exhibited by Messrs. Ellis, is equally attractive. The Kinsale Industrial School, the Adelaide School, the Ballymasden School, Bandon; and the Halverston School, have each their peculiar excellence in needle-work, crochet, and embroidery; and help, by their industrial contributions to make this section of the Exhibition more interesting and attractive.

TERRA COTTA COURT.

THE CENTRAL HALL.

Let us now request the courteous reader to glance with us at the principal things displayed in the Central Hall. The most prominent place has been accorded to the clumsy iron summer-house of the Colebrookdale Company; but this arrangement was not rendered necessary by the absence of other articles of interest and beauty. Elevated on a lofty pedestal stands an equestrian statue of her Majesty, by Baron Marochetti. The works of the Baron are well known. His bronze statue of "Richard Cœur de Lion" in our Exhibition attracted much attention; and his statue of the late Duke of Wellington, opposite the Exchange at Glasgow, is equally admired. As the committee were most anxious to have a statue of her Majesty in the Exhibition, of more than ordinary merit, Mr. Deane, their secretary, was deputed to wait upon the Glasow committee, to request a cast of the statue of the Queen, modeled by Marochetti. The Lord Provost kindly interested himself with the Glasgow committee, and the result was that the only duplicate of the original model ever made now stands in the Exhibition. The statue will be of bronze, but will not probably be completed for some time.

WARRIOR.—BY MEYER, OF BERLIN.

VASE AND TAZZA, FROM THE ROYAL FOUNDRY, BERLIN.

There are two fountains in the Central Hall—the one of *fer bronze* from the manufactory of André, near Paris, which is very inferior to what we might have expected as the principal fountain; and the other of terra cotta, from Millar, of Glasgow. In the same hall are also placed two angels of bronzed zinc, cast by Devarenne, of Berlin; and Hercules holding a bull, from Griemann, of the same place. A similar group to the last was manufactured expressly for the King of Prussia, and is now at his park at Potsdam. There are also several other statues of bronze, which it will be more convenient to mention in connection with the progress of the foreign and British bronze manufactures. Macdowell's well-known statue of Eve occupies a prominent position at the end of the hall facing Telford's organ. A colossal statue of Mr. Dargan, presented to him by the men in his employment as a testimony of their respect for him, also fills a conspicuous place.

Along the southern side are a series of glass-cases, containing jewellery, which we have already mentioned in a cursory manner. The cases containing laces, poplins, &c., and some of the looms at work, occupy a similar position along the northern side. Near the Marble Hall is the Terra-cotta Court. Millar, of Edinburgh, and Fergusson, Miller, and Co., of Heathfield, Glasgow, are the principal exhibitors. Among the curiosities exhibited in this department is a plumbago pot (No. 30) which has refined 60,000 oz. of silver, running 60 heats, and melting each time 1000 oz. of silver, at the establishment of Messrs. Browne and Wingrove, refiners to the Bank of England. These operations occupied six days, and the pot was permitted to cool each time. Fire-bricks, tiles, and specimens of terra-cotta and coarse pottery are also exhibited, from various parts of Ireland, where the raw materials exist, in some places, in abundance. There are also specimens in this class from the Nantela works, near Bristol, and several other, to which we have not now space to allude further. In Venetian and Mosaic pavements, Messrs. Minton, Hollins, and Co., of Stoke-upon-Trent, are exhibitors, and surpass all their competitors.

BOG-OAK.

A portion of the Main Hall contains specimens of Irish bog-oak carving. We have mentioned that the bog-oak and bog-yew are found in the bogs of Ireland: generally at a distance from the surface, sometimes of 40 feet. In some cases the exterior of the wood is slightly decayed; but, if found at a great depth, not only is the wood perfect, but it has generally attained an extraordinary hardness, far exceeding the common oak, and has also become as black as ebony. The yew, found close to the oak, instead of being black, has acquired a rich brown colour, almost approaching that of chocolate. But the colour does not change uniformly as in the oak; on the contrary, the beauty of this wood, which equals in richness of hue the most admired of our foreign timbers consists in the manner in which the natural tints of the timber are enhanced, and rendered stronger by contrast. The oak is very difficult to work, and takes no natural polish, but the yew polishes freely. In fact, if a piece of it be cut with a knife, it presents a polished surface, with every appearance of having been carefully varnished. It may be worked with equal facility in the lathe, and is almost as pleasant a wood for the amateur to manipulate upon as box or ivory. It polishes and carves as easily as walnut; but, being a much harder wood, is preferable to it for all the purposes to which walnut is applied; and, from the natural richness of its tints, it never requires any artificial pigment

WARRIOR.—BY MEYER, OF BERLIN.

to "bring out the colour"—or, in plain words, it does not require dyeing.

Ornaments have been manufactured at the Lakes of Killarney for many years past, as *souvenirs* for tourists who were determined to purchase some memorial of their visit to Ireland. Conolly, who now exhibits, and one or two others, were the only manufacturers of these articles; and they were generally made of the wood of the arbutus, which, though only known in England as a shrub, attains at Killarney, and along the western coast of Ireland, almost the size of a timber-tree. Of late, the great influx of visitors considerably increased this branch of manufacture; and, as the supply of arbutus became scarce, its place was often supplied with the bog-yew. A few years ago the Conollys removed to Dublin, where they opened a small establishment for the sale of articles made of the bog oak and arbutus; and so great was their success that several others opened shops for the sale of similar articles; and there are at present in Dublin upwards of a dozen places in which these articles are sold

The sale of these ornaments has lately increased very much; and, as the purchasers are generally strangers, they are too often treated as birds of passage, who may be imposed upon with impunity. There are, of course, exceptions; but, in criticising candidly a branch of manufacture which, if properly conducted, would certainly prosper, we do Ireland a service by pointing out the frauds often practised. A few years ago the articles sold as arbutus and oak were made of these woods, and "Irish diamonds" were genuine Irish crystals. Now the arbutus often consists of bog-yew. This we do not object to, as the yew is a more beautiful wood; but it should be sold on its own merits. Again, as it is difficult to work the black oak, ebony is constantly used; and paste is too often substituted for the genuine crystal. The stranger who treasures a black oak brooch set with Irish diamonds, as a memorial of a pleasing sojourn, would possibly experience a sense of disappointment if he followed the artisan to the workshop, and found him manufacturing these *souvenirs* of Ireland of ebony from the coast of Africa, and paste from London or Birmingham.

But, assuming that the purchaser obtains the genuine article, he must still be careful about the workmanship, which is often execrable. The crystals are sometimes so badly set, that two or three stones will fall out of a brooch or bracelet before it has been in use a single hour. Instead of being carved from the solid, pieces of wood are often glued together and glue also forms frequently the only bond of union between the oak and the gold, or silver mounting. We are convinced this branch of manufacture would become prosperous, if carried on with a proper amount of capital, enterprise, and, above all, good faith. From the great demand for these articles, they are sold in many of the larger establishments in Dublin; we do not believe, to say, after careful inspection, that the articles sold in the "monster houses" are open to all the faults we have laid to the charge of the manufacturers of these articles. Our strictures apply altogether to the sale of the smaller articles

We have already described a wine-cooler of bog-oak and silver, after the ancient Irish mether, exhibited by West, of Dublin; and a casket, by Acheson. Some of the inventions of modern Irish round towers, ruins, crosses, &c., as well as work-boxes, inkstands, and a variety of other articles, exhibit not less taste than artistic skill. Mr. Classon, of Dublin, also exhibits a very interesting glass case, containing a series of models of ancient ruins and monuments illustrative of Ireland's ancient history, of the contents of which we subjoin the following abstract:—

Ardmere Tower, one of the most perfect in Ireland, said to have been built by St. Declan, the friend of St. Patrick, about the year 402. Antrim Tower, which bears some resemblance to Christian origin, having a cross in bas-relief carved on a large stone on the outside lintel. Monasterboise, county Louth, an abbey which was founded by St. Beete, or Boetius, who died in the year 521. On the south side are two elaborately-carved Irish stone crosses, the one 16, the other 16 feet high, considered amongst the most ancient relics in Ireland. Clonmacnoise, the interesting remains of which occupy a very romantic position on the banks of the Shannon. This great tower is one of the largest in Ireland. There are eight apertures in the upper story, which is unusual in other structures Donaughmore Tower, county Meath. Castledermot, county Kildare. Dumbrody Abbey, county Wexford, founded about 1182, by the celebrated Hurvey de Montmorency, Marshal to Henry II. The Rock of Cashel, which, it has been remarked, presents a magnificent picture of this branch of architecture, of every variety of ecclesiastical architecture round and square towers, stone roofs, crypts, and shrines; arches in the Saxon, Roman, and Norman styles—all in one connected ruin. Amongst these Cormac's Chapel is one of the best preserved buildings of that age. The roof is of stone, and finely arched. The ancient belfry is an extremely and beautiful Gothic structure. The round tower is very perfect; and there is a subterranean passage, leading to several other ruins, containing ancient pieces of sculpture with interesting inscriptions, recently discovered. Clondalkin Tower, near Dublin, 84 feet high and 15 feet wide Downpatrick Abbey, with the tombs of St Patrick and St. Columbkille, which are supposed these interesting ruins were demolished for the sake of the building materials! The Abbey of Emms, erected in 1240, and for a long time the place of sepulture of the Princes of Thomond, and the Abbey of Monasterevin, Glendalough, one of the most celebrated ecclesiastical institutions, founded by St Kevin, who was born in 498. The round tower here, 110 feet high, is in fine preservation. Howth Abbey was founded in 1207, and the only part which preserved the book of the four Gospels, called the "Garland of Howth," and long held in great veneration. Kildare Tower is in good preservation. Lusk Monastery, county Dublin, which, it is said, had suffered several times from fire, and been plundered during the early civil wars Longford Monastery, founded by Richard de Burgho, in the year Derginit Abbey, county Limerick, founded in the year 1185. Roscrea Tower and belfry, the remnant of an abbey founded in 812, by St. Columbkille. St. John's Abbey, Kilkenny. Kilreagh Tower, county Cork, now 70 feet high, and of a peculiar form, the base, to a height of 16 feet, being a hexagon. Mucross Abbey, at the Lakes of Killarney an interesting monument of antiquity. About sixty years ago a devotee took up his residence in it, and lived in it for twenty years. The bed in which he slept was formed of coffin boards which had been strewn about, and was placed in one of the recesses of the windows. Rose Castle, founded by the O'Donoghues. Devenish Tower and Abbey, near Enniskillen, founded in the sixth century. The Magdalene Steeple, near Drogheda; and St Doulough's Holy Well, about four miles from town, on the Malahide road.

This collection will be viewed with great interest. The models are made with truthfulness, and will, we are sure, induce many tourists to visit the originals.

Whilst alluding to this subject, we may be permitted to criticise what appears to us very bad taste. It is the erection in the Great Hall of ancient Irish crosses of Tuam and Kells; they are undoubtedly of great value to all who feel an interest in ancient Irish art, and the early spread of Christianity in Ireland; but in the Central Hall of the Exhibition, close to the entrance, they destroy the effect of the display of lace and poplins, and other vanities, they are, beyond question, out of place. If in the Exhibition at all they should have been in the Hall of Ancient Irish Art; but we should never like to see the crosses cut from the place where they have stood stately and erect for ages amidst the many changes and exciting incidents that those localities gave birth to, and from which the crosses derive no small portion of their interest

In black oak carving Mullins exhibits a model of the Round Tower of Donoughmore, and of the Cross and Tower of Monasterboise, which we suspect the artist never saw. Casts of the Crosses of Monasterboise are in the Exhibition, and are perhaps the most curious and interesting in Ireland.

Mosley exhibits a richly-carved jewel-case of bog-yew, representing St. Canice's, Kilkenny, &c.

The other principal exhibitors are M. Connell—arbutus tables, chess tables, work-boxes, and ornaments in great variety; D. Connell—similar articles, with carved models of ruins, &c.; and Goggin a candelabrum in bog oak, ornamented with Irish diamonds, from the design of the Duke of Devonshire; a casket in oak, mounted in silver and Irish crystals, designed by the Earl of Eglinton, for her Majesty; and a variety of other articles

We trust the salutary discretion exercised by purchasers will gradually lead to improvement: and we extend to them our little reprehension, but that greater perfection and fair dealing are the only requisites to increase the demand for this manufacture considerably.

MUSICAL INSTRUMENTS.

It must be confessed that Ireland, throughout all her troubles, and with all her shortcomings of industry, has preserved a nice appreciation of art. Whatever may be her deficiencies in other matters, she pays great homage to the beautiful and intellectual, whether it be embodied in painting, in sculpture, or in music; and no greater proof can be adduced of the warm sympathies and mercurial feelings of the Irish character than the crowds which linger in the picture gallery, and gather round the several pieces of statuary. Nor is music less admired in these our lively neighbours; for Dublin, we believe, is one of the most musical cities of Europe, although she may not indulge in so many public concerts as her more affluent contemporaries. The truth is, that music is cultivated in private life to a great extent in Dublin and other places in Ireland; and it is this kind of cultivation, more than public concerts, that stamps the musical character of a people. That this is the case in Dublin, there can be little doubt; for it is a well-established fact that instruments of the most expensive kind find a sale there, and that large numbers of moderate priced ones are annually disposed of. Upwards of one thousand pianofortes are imported from the great London manufacturers every year; and that number is exclusive of other kinds of musical instruments, for which there is a considerable demand.

The display of musical instruments in the Exhibition is, therefore, somewhat imposing; and deserves a more extended notice than our space permits. We shall, however, endeavour to do justice to it.

Of organs—that "monarch" of musical instruments—there are two, situated one at each end of the Great Central Hall. The largest, at the west end, by Messrs. Telford, of St. Stephen's-green, already mentioned, was built for the College of Music, at Chudley, Oxford, and is in a case of solid oak, in the Gothic style, the choir organ being placed in front. Some of the pipes are of pure tin, polished and burnished; there are three rows of keys, from C C C G in all; the pedal organ from C C C to f, two and a-half octaves; six composition pedals, five copulæ, and fifty stops. The great organ contains 1146 pipes, the small organ 1003, the choir organ 386, and the pedal organ 416; making a total of 2921 pipes. The tone is excellent; and, altogether, it is highly creditable to Irish manufacture. Dr. Stewart, one of the finest organists in the United Kingdom, performed on it with great effect, and his masterly touches elicited sounds that can scarcely be conceived, and which will long be remembered by those who heard him.

Messrs. Bevington, of London, exhibit an organ on a smaller scale, which is placed over the entrance of the Central Hall. It is in a carved Gothic case, with gilt speaking-pipes in front, and the tone is singularly rich and mellow. There is another London organ by the same exhibitors, in a carved cabinet rosewood case, which is also an object of attraction.

The contribution of pianofortes is exceedingly good, and comprises specimens from the leading manufacturers of London: the Messrs. Broadwood, Collard, Erard, and Kirkman, have sent their several instruments, which make up a most imposing display. Some of these are exhibited by the manufacturers themselves; others by the great musicsellers of Dublin. Mr. Kirkman, however, as the most liberal exhibitor, has contributed a number of instruments, among which are some elegant Gothic harps, in walnut and satin-wood, manufactured by Messrs Erard. There is also several grand and oblique pianofortes by the same maker. The grand piano in Amherst wood, manufactured by Broadwood, is equally attractive; so also are the massive and highly-finished squares of Collard, in mahogany and rosewood, and the carved cottage, in walnut-tree wood. Mackintosh, of Rutland-square, exhibits both in the Central Hall and in the Gallery, a varied assortment of pianos, combining almost every shape and description, and comprising the makes of Broadwood and Kirkman, of London, and others of inferior note. The Messrs. Cramm, however, are the largest exhibitors on their own account, and fill a large space in the Central Hall with their instruments. Here we have specimens of the most elegant and costly pianos—the grand, the semi grand, the oblique, the cottage, and the pianole; exhibiting the various improvements that have been lately effected in that much-desired instrument. The principal of these instruments are distinguished for the novelty of their construction, and the high finish which has been bestowed upon them. The concert extra-grand, for example, in rosewood, having seven octaves of great volume, clearness, and brilliancy of tone, is remarkably effective. The semi-grand, also, in French walnut, with seven octaves, with Brazilian tulip-wood inlaying and bands, is a beautiful specimen of simple and plain cabinet work; while the shape and line of the cottage, with its finely figured wood, is exceedingly graceful. The upright piano, exhibited by these manufacturers, called the oblique grand, in rosewood, with seven octaves, is well worthy of remark. The instrument occupies no more space than an ordinary pianola piano, with a slight extension of the ends, and is nearly equal to the horizontal grand in the rich and powerful quality of its tone. This character of piano has long been a favourite with the public, and is now, for the first time, in the concert-pitch. These manufacturers, however, have obviated the difficulty by applying metallic bracings and a string plate, notwithstanding the difficulties of the scale and construction. By this means the instrument is made most effective, and gives out the fine tone of higher-classed pianos; it also occupies less space than ordinary instruments, and from its upright form it is susceptible of more elegance and ornamentation in its stage. Another striking article from the original connection in the requisite length of string is obtained without increasing the height, which peculiarly adapts it for accompanying the voice. The semi-oblique cottage, of this exhibitor, with seven octaves, a patent double-repeating action, and three strings in unison to each note, is a very fine piano, both as to tone, from the fine grain of the wood. Placed in juxta-position with a piece of Amboyna wood, this cabinet appears to great advantage; and it would require a peculiar judgment to determine the superior beauty of the two. The pianole is a novel and interesting piece of furniture, which, when it attains enormous growth, sometimes measuring twenty feet in girth of the wood, which obtains a high price in the English market, is merely a short cottage piano, with a musical front case of the tree, and is not a guarded character of grain, peculiarly hard, and susceptible of a high polish. From the nature of its growth, it can only be obtained in small pieces, is usually cut into veneers and is employed in the finer branches of cabinet work. It is nearly of the same kind of wood, and has a similar character of grain; and it is singular that, while we are importing large quantities of the Amboyna from Ceylon, we are neglecting the pollard-oak in our own country, which is more easily obtained, and more especially in Ireland. A comparison of the rich tortoiseshell like appearance and fine figure of the oak in question, with the Amboyna, on the stand of Messrs. Kirkman, will soon convince even the sceptical which is the more beautiful wood of the two. Sufficient attention, we regret to say, is not paid to the beauty and grain of our own grown woods; for the walnut, the pollard-oak, and even the elm, under certain conditions, have their peculiar beauties; and in some respects equal, if not superior, to many foreign in great request. M'Nie exhibits some well finished cornopeans, and other instruments of Irish manufacture, which attract, as they deserve, particular attention from the musical spectators. H. Russell, of Dublin, exhibits some pianofortes, of London make, which are creditable specimens of that class of goods. J. Scates, of Dublin, has, also, some concertinas, which have their peculiar excellence, and Hudd, of London, has contributed his flutes, which, for workmanship, are equal to any in Europe. The Irish Harp, by Metzler, of London, and Messrs. Allison and Canby, of the same place, have sent specimens of their respective excellence in the manufacture of piano fortes, which the "Dubliness" fully appreciate and deservedly encourage in the foreign department of the Exhibition. Austria, also, Austria has forwarded a few brass instruments, whose principal recommendation is their cheapness; and Belgium, in the person of M. Jastrzebski, manufacturer to King Leopold, exhibits three upright pianos, which are more curious in construction than effective in tone or quality.

MANUFACTURED METALS.

If we except one or two manufacturers of deserved note, there are few contributions of importance in metal articles in Ireland, as we have remarked, has no reference to this class of industry, the Irish contributions are almost exclusively confined to those from England. Mr. De Bergue has sent a case of reeds, used for the warps of textile fabrics, which suggest an instructive lesson to the spectator, if they do not exhibit a good quality of work. Here we have specimens for cottons, silks, and woollens, ranging from eight to eighty dents to the inch, according to the relative thickness of the thread which is placed on it. The same exhibitor has also some iron waggon-buffers, drawsprings, angle and joint chains, for railways, which, although to be used principally in hardwood and frost, of Derby, have some railway carriage-wheels, and other specimens of the manufacture in its several stages, which are well worth a passing inspection; and Whitley, of Ashton, Warrington, exhibits a fine collection of hinges, for ecclesiastical purposes, made of wrought iron, which seem to be of excellent workmanship. Ruffits from sales occupy a prominent position; but Milner's Patent Bolthead and Fire-resisting Safe is the object of greatest attraction, from the fact of its prize wing a note from each. Thornton and Sons, of Birmingham, have contributed a variety of useful articles in metal work, which fill up tastefully, considerable space, and John Hawkins, of the same locality, have a case of screws, which appear remarkably well made, but whose quality can only be determined by practical application.

Chapping and Selly, of Oxford street, London, exhibit some excellent specimens of horse shoes, for almost every conceivable kind of hoof, whether sound or unsound; and Dyce's Repository, of Dublin, have sent a similar contribution. Bryan Corcoran, of London, has some curious specimens of wire for flour machines, which are worthy of note; and Pounds, of Dublin, furnishes a rare assortment of ironmongery and other metal articles of domestic use, which attract due attention. Hodges and Sons, of Dublin, have erected an economic cooking-range, with all the et ceteras of so useful a piece of construction; and Taylor, of London, with his finely-executed copper-work, is no less conspicuous, and exhibits workmanship in metal which is rarely equalled, and never, we apprehend, surpassed. Thomas Hodges, of Dublin, exhibits coils of water pipe, one of which runs to the length of 120 feet, and weighs 24 cwt.; and Church, of London, has a series of new locks, which exhibit his usual excellence in mechanism, and, no doubt, safety, for no Irish Hobbs, as yet, has ventured to pick his last new patent. Henry Pooley and Son, of Liverpool, have sent their ingeniously-constructed weighing machines, with their finely-executed copper-work, is no less conspicuous, and exhibits workmanship in metal which is rarely equalled, and never, we apprehend, surpassed. Thomas Hodges, of Dublin, exhibits coils of water pipe, one of which runs to the length of 120 feet, and weighs 24 cwt.; and Church, of London, has a series of new locks, which exhibit his usual excellence in mechanism, and, no doubt, safety, for no Irish Hobbs, as yet, has ventured to pick his last new patent. Henry Pooley and Son, of Liverpool, have sent their ingeniously-constructed weighing machines, which attract general attention—and deservedly so; while Kent, of London, with his knife-cleaners, astonishes some of the far-country Irish, who can scarcely conceive what such machines can be intended for.

Tillon, of Birmingham, has contributed admirable specimens in the steel-pen department; and Johnson and Cammell, with great liberality, have sent an illustration of their unequalled excellence in the manufacture of steel; and the Atlas Works have contributed a series of lamps, which are among the finest ornaments in the Exhibition.

Finally, the Vieille Montagne Company have sent specimens of their excellence in zinc, both in a manufactured and in a raw state, which occupies a more than ordinary space, and is well deserving of a separate and attentive study; and Benham and Sons, of London, have constructed a rather ornamental platform, against which their various grates and fire-irons appear to great and (judging by their appearance) deserved advantage.

COURT OF ANCIENT IRISH ART

Before we venture to give any minute description of the contents of the Museum of Irish Antiquities, added to the Great Industrial Exhibition of 1853, it may be well to explain certain matters connected with it, as many well-informed people are at a loss to know why it is that the antiquities of Ireland are made to form a part of the Great Exhibition? We are also at a loss to understand the collections of antiquities exhibits, so far as it goes, evidence of the state of the arts and manufactures in Ireland at different and distant periods. It thus enables visitors to compare the past with the present, and decide on the amount of progress, if any, in certain departments of the arts. It also leads to the recovery of lost, or almost forgotten, arts, designs, and manufactures, which may possibly be revived advantageously to the public or to private individuals.

On the other hand, the antiquary and ethnologist may find in the collection evidence bearing upon that ancient trade and manufacture in Western Europe, which is indicated in many passages in the Bible; and to which, coupled with civilisation of the highest kind, the myths of the Egyptians and the Greeks—relating to the gardens of the Hesperides, the Island of the Atlantis, and the visit of Hercules to a certain island on the coast of Spain, whence he stole the famous breed of cows—all point; but which neither the Greeks nor the Egyptians, nor, indeed, any other Eastern people appear to have had any certain or exact tradition of in the time of Herodotus. It is, however, quite clear, from many passages in the Old Testament, that from three to five hundred years before the time of Herodotus, a very considerable direct trade and intercourse existed between the West and the East. The evidence is altogether in favour of that trade having proceeded originally from the West towards the East; and not, as is generally supposed, from the East towards the West. The formation and maintenance of this trade is undeniable evidence of the existence in the West of Europe and, especially, in Spain, of early civilisation, equal to, or greater than, any which ever developed itself, even in Egypt.

The curious fact, not noticed by modern writers on the ancient Egyptians, that their great deity, Vulkan, or Phtath, was a smith, or worker in metal; and if he were Tubal Cain, as is generally supposed, according to the book of Genesis, he was a worker in both iron and brass—neither of which materials is found in Egypt or on the Nile. Local Basque and Spanish tradition claim Spain as the original habitat of the race of Tubal Cain, Vulcan, or the Smith; and, though traces of *copper* mines and furnaces have been found in and near Lower Egypt, and though the name of Egypt itself was originally adopted by the Greeks, from the fact of its having been known to them as the land of copper—a name which its natives never adopted—still, it is to the West we must look for the original habitat of the race of Vulcan, and of that religious system which exhibited such extraordinary manner in Egypt, probably in the hands of the copper-workers, who may have brought their craft from the copper mines of Spain and Western Europe.

It is certain, that the Egyptian copper district lay to the east of that country; but still it is to the West—and the very far West—the ancient worshippers of Vulcan looked for their paternal homes. It was there they placed, with the setting sun, their Amnito, or place of their dead ancestors. The door of the Temple of Vulcan first fronted the West; it was changed again and again, so that what at first appeared as if the place of the cardinal points themselves had changed, as the Egyptian priests explained to Herodotus, who, with other Greeks, had previously observed the fact, which at last determined the local origin in Egypt of the worship of Vulcan, and points to the West as the place from whence even the first dawnings of Egyptian civilisation came. It is from that quarter we should look for those first dawnings of primitive civilisation, as manufacture and trade, which, somehow, the Egyptians appear to have received in a state of great perfection from the Europeans, or the Gentiles, as they are called in the early writings of the Jews.

In the East, civilisation, as we call it, is clearly due to Greek influence; but it is not remembered that the Greek was only one branch of the great Japhetic family; and that the same instincts, feelings, sentiments, belonged to all the other branches of the same stock. War and love were the great motive powers of the men of this race; the Greeks found themselves into political associations for the purpose of aggressive and defensive war. The proximity of the great Asiatic and African despotisms led them to unite for mutual protection, and this union led to their extraordinary development of mind and civilisation, which, under other circumstances, growing out of personal rivalries, would have been lost in petty jealousies and warfare

If this pressure in the East kept the Greek or Japhetic people at peace with each other, during a certain time in the West of Europe, no influence of the kind operating, they appear to have fallen into a state of perpetual and mutual warfare, and to have lost the benefits described by the Greek poets, which the Japhetic race enjoyed in the Golden and Silver Ages, indefinite meaning that which they denominated the Age of Bronze, or of warlike weapons, in which the poets and earlier historians lived or wrote. With the Greeks this time may be considered as coming down almost to the era of Alexander, when iron and steel weapons, at least in the East, were just supplanting those made of copper and bronze—the latter metal being used generally for other purposes, for which it was preferred; but in the West of Europe, the material of swords appears to have been bronze; and at a very late period indeed, we have reason to believe bronze or brass spears were in use in Ireland, as they are still said to be in some parts of Central Asia.

The quantity of swords and spears, made of bronze, found in Ireland is so great, compared with the finds in all other European countries put together, that one might almost suppose that Ireland had been the battlefield of the whole of ancient Europe; for the number of bronze weapons in the collection of the Royal Irish Academy alone, independent of the other private collections in and not in the Exhibition, is vastly greater than those in all the English, Scotch, and continental museums put together. The inference is inevitable, that, at the period within the era called the Bronze Age, Ireland must have been the seat of petty warfare, in which the tactics met and fought with bronze swords, spears, &c.

The "Annals of the Four Masters" give no real or estimated date B.C. 1500, as that of the Milesian Invasion, when bronze weapons may be considered as having been in common use here in the West, as they were then in the East; the period being the same, apparently, in shape, and probably, brought here and into Greece ready-made from Spain. Hitherto our attention has been directed to the East for the elements of ancient civilisation. We have not looked in Western Europe for those manifestations of mind in ancient times which, in our own era, are the elements of Asiatic and African civilisation.

If Solomon's statement be true, that there is "no new thing under the sun," then are we warranted, for the sake of argument, in assuming that the European race formerly, as at present, visited Egypt and Syria, and other countries, for the purposes of trade and commerce, and, consequently, for civilisation. It is generally admitted that the ancient Egyptians were not, at any period, a maritime people; and, that in the Hymns, Sidonians, and Phœnicians all were, at certain times, a daring mercantile, and land ships of their own; yet more anciently, it is clearly stated or implied, in numerous passages in the Bible, that the ships which visited and traded to the coasts of Egypt and Syria were not native ships, but "ships of Tarshish"—ships which came from the West, and not ships which went from the East, except when the fact is so stated. The

oldest notice of the ships of Tarshish is in Psalm xlviii., v. 7, where they are noticed as having been "broken by an east wind." This event may be placed in the life-time of King David, who is the reputed author of this psalm. In the reign of Solomon—who fitted out ships of his own, which were navigated by servants (which means hirelings or slaves, and not subjects) of King Hiram, and sent from Syria to Tarshish "once in three years came to Syria the ships of Tarshish, bringing gold, silver," &c. In Jeremiah x., v. 9, we read that "Silver spread into plates is brought from Tarshish." It is not stated by whom; but in Ezekiel xxvii., v. 12, we read that the people of Tarshish, and not the Carthaginians—as erroneously explained in the Septuagint—furnished the Tyrian market "with silver, and gold, and iron, tin, and lead." Here, as in the other cases, it is the Tarshish ships that bring the metals enumerated to the East, in the same way as the Carthaginian ships in later times supplied the East with the metallic products of Spain and the Islands of the Gentiles.

The fact is clearly stated and implied, that it was the Western European or Tarshish merchant who brought his wares to the Syrian markets, and not that the Phœnician or Tyrian merchants who sent their ships originally westward.

The fact stated by Herodotus, as to the Phœnians having discovered Iberia, or Spain, and Tartessus, is altogether opposed to the universally received opinion that the West of Europe was known to the Eastern merchants. Herodotus explains that he never met any one who had been an eye witness of the West of Europe; though he explains how the trade in tin, in his time, was in the hands of the Carthaginians, who retained it for several hundred years. The East, contrary to modern analogy, had, anciently, much to get from the West, and little, if anything, to give in return; hence, probably, the different invasions, or attempts at invasions, of Europe, for the purpose of getting possession of the mineral resources of Spain and England—the places where the Persians, Medes, and Egyptians believed that gold, silver, tin, lead, and iron, were found in the greatest abundance.

Solomon sent ships to Tarshish, navigated by people supplied by Hiram; but he, like Solomon, may have only supplied the capital for this trade, which appears to have become, in the time of Isaiah and Ezekiel, so demoralising to the Jews who were engaged in it, that they are described in Ezekiel xxii., 18, as having become themselves "no better than the dross of silver, namely brass, tin, iron, and lead." The love of gain from the trade with the West appears to have broken down the lines of demarcation between the inhabitants of Tyre and Sidon on the one hand, and of Jerusalem on the other. One common interest united the different races in one common and universal demoralisation, and not in that spirit of European civilisation, which is one of the great results of commerce and wealth, when regulated by the principles of European morality and sentiment.

It thus appears probable that the people called Phœnicians, who, as such, are mentioned by the Greek writers, as having been great merchants in ancient times, were the Jews of the period of Isaiah and Ezekiel, coupled with the Tyrians and other towns-people, who at that time were, more or less, engaged in the trade of Spain and Tarshish, but at the rise of Carthage, which was itself more Jewish than African or Tyrian in its language, customs, and feelings.

The proper enumeration of these matters relating to the ancient trade in the metals are here noticed, because they appear to apply in a wonderfully exact manner to the various metallic articles in the Academy's collection, which answer so closely to the notices we have in the Jewish Scriptures, of various articles made of gold, silver, bronze, and iron. Indeed, so far as mere descriptions go, their identity appears to be complete. Unfortunately for the purposes of exact comparison, no Jewish antiquities of any kind, as such, are known to be in existence in any museum; so that here we are entirely at fault. In one instance, a French traveller who visited the Jews in the country west of the Ashantees, has stated that nearly all the gold antiquities in the Academy's museum are so like things now in common use among these African Jews, who claim to have been originally expelled out of Spain about 1200 years since, that one is disposed to believe the shapes of gold and other metallic articles in the East originally were the same nearly with those previously adopted in the West, where the gold was found; so that these metallic articles, particularly the gold ones, are more properly exponents of ancient European, than of Armaspian, art and civilisation, than Asiatic or African. Herodotus, however, explains that the Arimaspi were like the Cyclops, and had but one eye; and that they took the gold from the Griffins. Here again we have the myth of the Cyclops and Vulcan, the workers in iron and brass, whose place was Spain, and not Northern Europe. In this story of the Griffins we probably trace a notice of the Druids, or some other European people who used writing, and who may have been the Sephardim, or Scribes, of Spain, and the representatives of the Jewish and Phœnician merchants and settlers in Spain of an older period. Indeed, local tradition in Spain points to the time of Solomon as that of the oldest Jewish settlements. At Saguntum inscribed stones have been found, which certain Jewish Rabbis have pronounced to be the tombstones of persons who held offices in Spain under the reigns of Solomon and some of his successors. So that, in one way or another, by myth, history, and tradition, our attention is directed to Spain as the country where the art and commerce indicated by the metallic antiquities in the Academy museum were originally developed, or were established, at the time of their introduction into Ireland, where they appear to have arrived in a state of comparative perfection. No traces of progress are indicated by the articles hitherto found, as exhibiting those stages of advancement of the arts which the Danish antiquaries would have us believe may be demonstrated to have taken place from the evidence supplied by the discovery, collection, and classification of the antiquities found in the North of Europe.

As there are some who have not considered the question as to the locality of Tarshish—the centre, apparently, of that trade and civilisation which extended so early to the east of the Mediterranean it may be here remarked that Heeren, and several other modern writers, have identified the Tarshish, referred to in the passages quoted, with the city of Tartessis, in Spain, noticed by Herodotus, who states that the Phœnians were the first of all the Grecians who undertook long voyages, evidently for piracy, and discovered Iberia (Spain) and Tartessus

At this time Arganthonius (a name which we might readily interpret Dargan-thon-dun, or the red), was the King of the Tartessians. He appears to have wanted settlers in his territory, for he offered all the Phœnians land if they would come and settle in Spain; and, when they would not accept his offer, with a munificence only equalled by his modern namesake, he gave them money, or money's worth, which enabled them to fortify in their city with a wall built of large and well-cemented stone, so that they were for a time enabled to oppose the Medes, under the command of Harpagus.

The conduct of the King of Tarshish or Tartessus, shows that he himself dreaded the advance of the then Eastern despotism; and it also explains that circumstances had occurred in the West, which had entirely stopped the foundations of that trade which his city had previously carried on with the East. We may suppose that local wars in Europe, and Carthaginian influence and power, may have been the occasion of that change, for the whole continent of Europe, in the time of Herodotus was, and had been for a long time previously, as he explains, involved in petty wars and strifes, one people preying upon, or driving another out of their original territory the Asiatic Sey hians being the great fomenters of all the trouble and confusion, which appears to have either broken up or greatly modified the locations of the other inhabitants

It is about this time the Irish historians place the arrival of the Milesians in Ireland, and their departure from Spain: so that it is to that country we are more immediately to look for the elements of those arts they took with them to Ireland. In the Annals of the Four Masters under the A.M. 3270, we read that the fair of Tailltium, or Tiltown, near the Boyne, in the county of Meath, and nearly midway between Kells and Navan, was established by King Lugh, in remembrance of his foster mother, Tailltie, the daughter of Magh-mor, King of Spain, and the wife of Eochaidh, son of Erc, the last King of the Firbolgs in Ireland.

The Firbolgs were only a short time the masters of Ireland, for the landing of the Milesians, who conquered the Tuaths-de-Danames, who had mastered the Firbolgs, is placed in A.M. 3500, which event may be synchronised, according to Clinch, with the first year of Xerxes.

According to Irish or Milesian tradition, the Danaans were a highly-civilised people, and great goldsmiths, and generally supposed to have had miraculous powers. They may have been the tin-workers and merchants of the day also. One of their objects in visiting Ireland was to seek for gold, which they are said to have found in great quantity in several well known localities, directing their search for it by the taste of the water in the different rivers and streams. Their name is so similar to that of the Dodanim of the Scriptures, one might almost infer that they were branches of the same people.

If we take the reign of Xerxes as marking the era of the battle of Tailltin, we may also consider the weapons used by his army as indicating the state of the arts in Asia and Europe also, so far as they related to weapons of war, which, it may be understood, were made generally of Tartessian bronze. In all cases when Herodotus does not explain the actual material of the arms used in the army of Xerxes, we may supply bronze in his description. In his list of offensive weapons (Lib vii. 63—81) we find commemorated—(1) bronze spears and (2) daggers like those of the Egyptians; (3) clubs pointed with iron; (4) bows; (5) short bronze spears; (6) a hatchet, called *sagaris*, was used by the Scythians, and in another place he explains that they had no brass or bronze, and hence we must infer that iron or copper was the material of which the Scythian *sagaris* was made; (7) arrows pointed with iron were used by the Indians; (7) bronze scymitars (?) were used by the Caspians; (8) bronze javelins, like those of the Medes; the Ethiopians had (9) arrows, pointed with a (flint) stone, which they used for signals, they had also (10) spears, armed with the horns of antelopes or goats, sharpened like lances; the Lydians had (11) wooden spears; and the Sycians had (12) javelins with points hardened in the fire; the Turacians of Asia carried each of them two (13) Lycian spears, made of bronze; the Moschi had (14) short spears, and long iron points; the Mares had (15) bronze swords. This list is imperfect, but it is useful as exhibiting to us a case where different people in the same army had weapons made of different materials, and the more civilised preferring bronze to iron. It will help to give us an approximate maximum date to those bronze and iron weapons found near the river Boyne, and, indeed, in all other parts of Ireland; the landing of the Milesians being considered an historic fact, and the arts of the time in Western Europe being considered the same with those of the East at the same period. Whether this be admitted or denied, the migration of the Milesians from the East may be considered as an historic fact, and the antiquities found in Ireland may be taken either as evidence in its favour, or against it. They certainly point to the period of Xerxes, or the time to which the painted vases of the Greeks and Etruscans belong, for on them the bronze weapons represented are similar in point of shape to some of those found in Ireland; still it is a most perplexing fact that no bronze swords have been found in either Italy or Greece, though we have many representations of them. It looks as if iron swords and weapons generally came into use in the East about the period of Alexander, and that bronze weapons went rapidly out; and the connection of the East with the West fell off greatly, the chief trade being only in tin, which found its way as a crude material to the East, and not in its alloyed or manufactured state with copper; in which form alone it appears to have found its way to Ireland.

That many of the bronze weapons found in Ireland were made more for sale than use like some razors now manufactured in Birmingham—is to be inferred from the badness of their material, the frauds or defects in their manufacture, the want of strength in certain parts: all these indicating the desire of a merchant to sell the article and gain a profit, and not to use it. They are consequently exponents of a trade in weapons made of bronze, which probably extended over the then known world. At first it began in the West, the bronze makers being the first traders in articles produced in this material; but afterwards the trade passed into other hands; and then the Pillars of Hercules appear to have been closed on European trade with the East. It is after this event that the Greek historic period begins—our older notices of the early trade being alone found in the Jewish Scriptures. Everything we know justifies us in considering the bronze antiquities found in Ireland to be exponents of the old European arts and commerce, though many of them may be comparatively modern: and though we may observe great differences in their shapes and material, indicating differences in the designs and uses, to which those who made intended to apply them

In the face of the Annals of the Four Masters, we cannot consider them as yet in the light of pre-historic records. We must take the annals as we find them, and apply the antiquities found in Ireland as a test to ascertain their truth. If we find them not standing that test, we must discard them where the agreement fails for antiquities are living facts, which cannot be denied. They verify beyond doubt; they confirm or they deny the truth of what was previously received as tradition and written history. It is for this purpose they are so very valuable in Ireland the only country in western Europe which professes to have an ancient history. In Denmark the circumstances Herein, the road is there open for theory, for they have no history; but here, as in Greece, we have no choice, we must first test the statements handed down to us by those who have already formed a history of the country, and of its different inhabitants; and we have either to strengthen it, and add to its details, or we have to pull it down and to build up another in its place.

A modern Scotch writer has boldly rejected the Scottish traditions altogether, and adopted the Danish theory, which will answer very well to classify a collection of antiquities, but, considered in relation to history, it is so full of exceptions, that it is, in the face of a written history, quite inapplicable to Ireland, while that written history, coupled as it is with local traditions and family pedigrees, exists.

STATUE OF MR. DARGAN. BY J. E. JONES.

On this gentleman a cleverly-executed statue appears in the Exhibition. Without enjoying any advantages beyond those common to the majority of his countrymen, Mr. Dargan has proved to the world that his native land is one in which a princely fortune may be attained, in not many years, by any one who unites ability and enterprise with integrity. Mr Dargan's father was what is called a gentleman farmer in the county of Carlow. He farmed an extensive tract of ground, of which his son lately became the purchaser. Young Dargan received a liberal education, and with little beyond this, and a character for the strictest integrity, he left Ireland to push his fortunes. At this time, Telford was constructing the Holyhead road, and Mr. Dargan was fortunate enough to obtain employment under him.

As soon as the Holyhead road was completed, Mr Dargan returned to Ireland, and embarked in several minor works, in which he made some capital. He shortly afterwards obtained the contract for the Howth road, which to this day attests his genius. A railway was next projected from Dublin to Kingstown—the first in Ireland. For this work Mr. Dargan became the contractor; and, commencing operations in the year 1833, he completed it in the following year. To give an account of the subsequent works in which he was engaged, it would be scarcely necessary to do more than to enumerate the principal railways, canals, &c, constructed in Ireland.

Of the noble manner in which Mr. Dargan has aided the Great Industrial Exhibition, some account has already appeared in the ILLUSTRATED LONDON NEWS for May 14, p. 390.

We annex a Ground plan of the Dublin Exhibition Building, showing the position of the respective Courts. In that appropriated to "Machinery in Motion," a Printing Machine for working the ILLUSTRATED LONDON NEWS proves as attractive as did the Machine in the Crystal Palace in Hyde-park. In the Dublin Palace it has been employed in printing a large bird's eye View of the Irish metropolis, and next week the forms of the present Illustrated Supplement will be printed there—amidst the many triumphs of ingenuity which it commemorates in its pictorial pages.

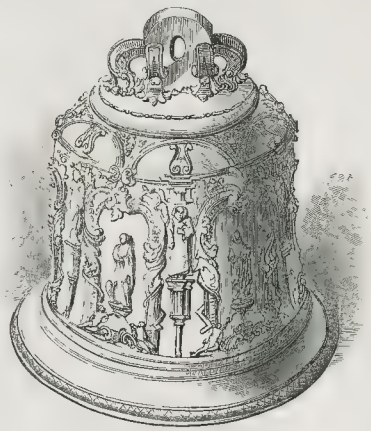
MARBLE CUPID AND DOLPHIN.—BY RAFFAELLE.

THE Dublin Exhibition boasts of the possession of one of the most interesting bijous of sculpture in the United Kingdom. It is a lovely statue of a Child borne by a Dolphin; which, in addition to the exquisite grace and almost perfection of execution of which it can boast, derives additional value from the fact of its being one of the only two works from the chisel of Raffaelle in existence. Sir Charles Eastlake, who has constantly lent his valuable aid to advance the fine arts portion of the Irish Exhibition, in a letter to John C Deane, Esq., one of the secretaries, pointed out the propriety of soliciting Sir Henry Bruce to exhibit this gem of art.

"The Committee" he wrote, "are probably aware that a statue of a Child borne by a Dolphin, by the hand of Raffaelle, is in Ireland It was brought to Ireland by the Earl of Bristol, Bishop of Derry, and it is now in the collection at Down-hill. There are but two statues which have been admitted by the best critics to have been executed wholly, or in part, by Raffaelle. The 'Jonah,' in the church of S. M Del Popolo in Rome, and the statue of a child above mentioned. A cast of the latter is preserved in the Dresden Gallery with great care, the original being supposed to be lost."

The child has a wound in the side, and is in a state of insensibility, whilst the dolphin supports him in a graceful manner, holding him, at the same time, by the hair. The whole is particularly interesting and graceful. The dolphin, notwithstanding his grotesque form, appears quite natural, and there is a simplicity and a total absence of any effort at effect from the artist which completely captivates. The marble of which it is made is singularly white, and highly polished, which adds also to the beauty of the group. It is impossible to view this statue without reading in every trace the skill of a great artist, confident in his own powers, and master of his subject.



BELL (BELGIUM).—BY VANDERSCHOTT AND VANERSPEN.

INTERVIEW OF MR. RONEY WITH THE PRINCE PRESIDENT OF FRANCE.

AT an early stage of the arrangements for the Exhibition, it was decided that Mr. Roney should visit the Continent, for the purpose of securing the co-operation of the principal manufacturing countries of Europe—foremost among which was France. An interview was sought by Mr. Roney with the Prince President, and graciously accorded on Sunday, the 24th of October last; and one artist has faithfully pictured the scene at the Palace. The apartment into which Mr. Roney was ushered is a handsome room, about thirty feet long by eighteen wide, on the first floor of the portion of the Palace of St. Cloud occupied by the then President Louis Napoleon—this being the apartment in which the Ministers assembled. In the centre was a long table, furnished with writing materials, and around it were placed chairs, high-backed, and covered with green velvet. Immediately on Mr. Roney reaching the Palace, and sending up his letter of audience, he was conducted by an English servant to the sides de-camp room, by one of whom he was taken in charge to the above apartment for the interview. Having entered, he was requested by the side-de camp to wait; he then withdrew, and in half a minute returned, announcing "Le Prince President." His Highness slightly waved his hand, the side-camp retired, and the door was closed. The Prince, approaching Mr. Roney, spoke in English, and said, in the most graceful and cordial manner, that he was happy to see him, and requested him to be seated; and, seeing that Mr. Roney hesitated, the Prince repeated the request.

Mr. Roney explained to the Prince the origin of the Exhibition, and the generosity of Mr. Dargan; adding that Ireland was beginning at last to raise herself from her melancholy condition.

The Prince made several inquiries respecting Mr. Dargan; and Mr. Roney then explained the object of his mission to be a collection of the manufactures of Sèvres, the Gobelins, and Beauvais; for which purpose he requested to be favoured with facilities in the public offices, and permission for the goods designed for the Exhibition to leave and return to France free of duty. The Prince graciously replied—These are requests easily granted (and he has completely fulfilled all his promises) Mr Roney having expressed his gratitude for the Prince's condescension and kindness, rose and retired

We should add that during Mr Roney's stay in Paris he and his family received the most cordial attention: were invited to the grand ball, given by the Senate and Legislative Body, and the Municipality of Paris, to the Emperor and Empress. Mr. Roney's family were also presented to their Imperial Majesties, and invited to the Tuileries; for which distinction Mr. Roney has expressed the warmest personal gratitude.

We are gratified to learn that the services which Mr. Roney has rendered in connection with the Dublin Industrial Exhibition are to receive well-merited recognition at the hands of her Majesty's Government. It has been officially intimated to Mr. Roney that the Lord-Lieutenant would confer upon him the honour of knighthood early in October, when the Exhibition will be brought to a close.

STATUE OF MR. DARGAN.—BY J. E. JONES.

INTERVIEW OF MR. RONEY WITH THE PRINCE PRESIDENT OF FRANCE, AT THE PALACE OF ST. CLOUD.

London. Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid. -SATURDAY, JUNE 4, 1853.—SUPPLEMENT.

THE ILLUSTRATED LONDON NEWS

No. 627.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY JUNE 11, 1853. [SIXPENCE.

CURIOSITIES OF THE CENSUS.

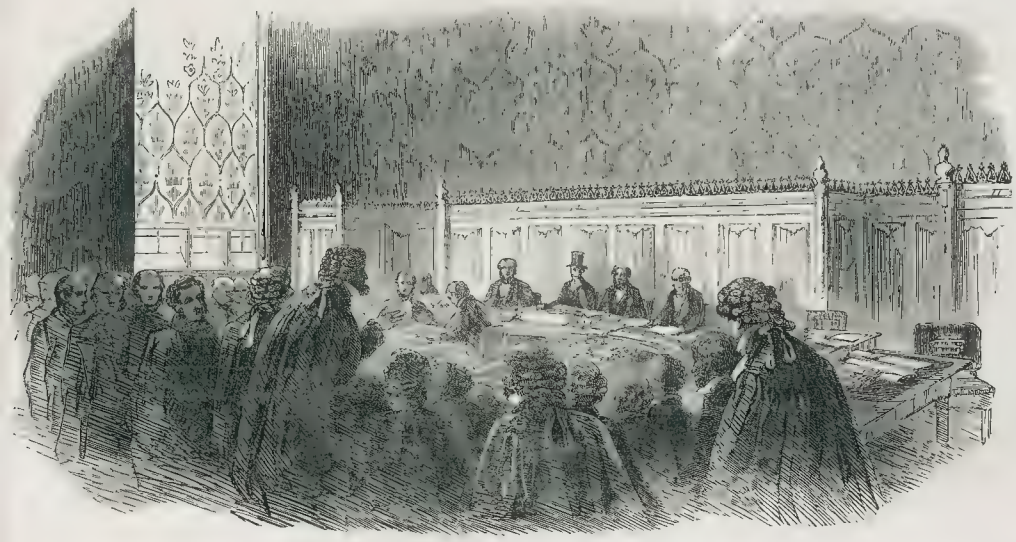
AFTER the long interval of two years, the Registrar-General, Mr. George Graham, and his two assistants, Mr. William Farr and Mr. Horace Mann, have prepared and published in two very thick folio volumes, the details of the numbers and of the distribution of the population of Great Britain—but of the numbers and the distribution only. All the information collected relative to the ages, occupations, civil condition, and birth-places of the population; with the number of the blind, the deaf, and the dumb, of schools and places of worship, is omitted; and will not be published for a considerable time. A third folio volume, of no less than 300 pages, is exclusively filled by an index to the places and matters contained in the other two volumes. To collect the information, 620 superintendent registrars, 2190 registrars, and 30,610 enumerators, were employed in England and Wales; in Scotland, 1010 superintendents, and 7873 enumerators; and in the Islands of the British Seas, 257 enumerators were employed. Gaolers, masters of workhouses, Custom-house, naval and military officers, clergymen, schoolmasters, secretaries and officers of public institutions, all lent their aid. Seven million forms were printed, some of them in Welsh; and the weight of all the papers sent from the central office exceeded fifty-two tons.

As the information was collected by the registration officers, and as their districts and the Poor-law unions are identical, the whole work is based on the new division of the country made in 1834, in order to provide for pauperism. It is, indeed, a singular circumstance that a new division of the country, made only on account of the poor, is fast becoming the basis of all our statistics, and is silently introducing as great topographical changes into England as were introduced into France, at the period of the Revolution, by dividing it into departments. The Poor-law unions are not always identical with parishes or counties; hence arises a necessity, for the purpose of comparison, of having, in many cases, two or more returns—one, of the population in the counties, as their boundaries have long been settled; and another, as their boundaries were settled in 1834. Under the Boundary Acts, too, for electing members to the House of Commons, and under the Municipal Acts, different boundaries were established for counties and for boroughs, which give rise to numerous complexities, and to numerous wearisome and perplexing repetitions. To give two examples, of what may be found concerning hundreds of places:—Greenwich is put down in one place as containing 99,365, and in another as containing 105,784 persons—the one being its population as a Poor-law Union, and the other its population as a Parliamentary borough. In one page Sussex is put down as containing 336,844 and also as containing 339,604 persons—the former being the population of Poor-law Sussex, and the latter the population of Sussex as its boundaries were established before the New Poor-law existed. The Report refers to the inconveniences and perplexities which the variety of ecclesiastical, military and civil, fiscal and judicial, ancient and modern, municipal and parliamentary sub-divisions of the country occasion; and these evils make themselves felt at every page of the work. They augment labour, they multiply details, they generate confusion, and they—for it was neither in the province nor in the power of the registrar to reduce them to simplicity and harmony—make this cumbrous work one of the most confusing and perplexing it has ever been our lot to endeavour to understand. Passing, however, from curiosities in the manner of collecting the information, and in the form of publishing it—some of which testify to the ignorance and slovenliness with which nearly all the business of Government, statistical and other, has long been carried on—we shall now advert to some of the peculiarities of the information collected.

The most striking and the most important is the certain fact of the continual increase of the people since the practice was adopted in 1801 for numbering them. Prior to that time their number was conjectured, rather than ascertained, from records of births and deaths, from hearth-taxes and poll-taxes; yet it was known that they had increased. Towards the close of the last century it was generally supposed that population doubled itself in about 160 years. Earlier records seem to prove that between the end of the fourteenth and the end of the seventeenth centuries, it required three centuries for the population to double itself; and the progress of population anterior to the fourteenth century is involved in doubt and obscurity. It was, however, ascertained, by actual enumeration in 1801, that Great Britain, which we know had then been peopled at least twenty centuries, contained 10,917,433 persons; and it was again ascertained in 1851 that it then contained 21,121,967 persons. In the fifty years, therefore, that have elapsed since 1801, the population has increased by 10,204,534 persons, or very nearly as many as the country contained in 1801, after it had been peopled for many ages. It is supposed that in the eleven centuries which elapsed between the landing of Julius Cæsar and William the Conqueror the population hardly doubled itself; thus what in those barbarous times required eleven centuries to accomplish, has now been accomplished in half a century. "The most important result, accordingly, which the inquiry establishes," says the Registrar-General, "is the addition in half a century of ten millions of people to the British population." At the same time the wealth of the country has increased faster than the population. "In the last ten years, too, 2,308,181 persons have been added to the population, which exceeds the known increase of the last fifty years of the last century." Thus, when we take a long view, it is demonstrated that population increases much faster in modern than it increased in ancient times.

The rapid increase mentioned supplies a curious and an important moral element. The English population contains an excessive number of young persons. In youth energy and hope predominate; the imaginative and all the inventive powers are active; and such a community is necessarily, like the people of the United States, very rapidly progressive, both morally and materially. One of its distinguishing characteristics is great but quiet and almost unobserved changes. They are brought about silently by the individual exertions of great multitudes, and we only perceive them by extending observation over considerable intervals.

The 21,121,967 people in Great Britain are dispersed over it at very unequal distances. In England and Wales they are at an average distance asunder of 108 yards; in London they are within 14 yards of each other. In East London there are 185,751 persons to a square mile; in the district of Bellingham, Northumberland, there are only 18 persons to the square mile; or, in London, the people are 10,000 times as numerous as in Bellingham. In the towns there are 5.2 persons to an acre; in the country, 5.3 acres to a person. It has been said that three persons could stand in a square yard; but, supposing one person to be in a square yard, the whole 21,000,000 would go, according to the report, into a space equal to seven square miles, or 4480 acres. Amongst the towns of England, the one which occupies the space nearest to this is Bewdley, in Worcestershire, which contains 4430 acres, and, therefore, would contain within 50,000 of the whole population of Great Britain, each one standing a yard apart from every other. They would not all stand in Norwich, containing 4825 acres;



HOUSE OF COMMONS COMMITTEE-ROOM NO. 2.—RAILWAY COMMITTEE.—(SEE NEXT PAGE.)

nor in Maidstone, containing 4042 acres; but they could go with ease into the space occupied by Oldham, 4617 acres; or occupied by Coventry, 4902 acres. They would about fill twice over such towns as Macclesfield, Liskeard, Penryhn, Launceston, and Shaftesbury; which would have contained the whole population, standing a yard apart, at the beginning of the century. Moving through a space as long as the Great Exhibition building at the rate of 100,000 a day, all the people would pass in 211 days—the English in 169 days, the Welsh in 10 days, and the Scotch in 29 days; the islanders, the soldiers, and the absentees passing in three days.

In Great Britain there are 815 towns, containing 10,566,288 persons; and 10,403,189 dwell in what, as distinguished from the towns, is called the country. The centres of English towns are 10 8-10ths, of Scotch towns 12 7-10ths miles apart. Our territory consists of 500 separate islands and rocks, and from 175 islands, or groups of islands, returns were obtained: the others are uninhabited. The total area of Great Britain and the Islands in the British Seas, is 90,038 square miles: the area of England is 50,922; of Scotland, 31,324; of Wales, 7398; and of the Islands, 394—a fair territory, and an abundant people.

The population is pretty nearly equally divided into males and females—the former amounting to 10,386,048; the latter to 10,735,919, and exceeding the males by 349,871. To every 100 males there are 103.3 females; or, 31 females to 30 males. A similar proportion prevailed at the taking of every census, and may therefore be considered nearly constant. At every period, however, more males are born than females—the proportion being throughout nearly 104.8 boys to 100 girls. The details yet published do not enable us to tell in what degree the reversal of this proportion is due to decrease in early life, to the emigration of the males, or to the shortening of life consequent upon the greater hardships to which they are exposed; but, as a greater proportion are always born, and a less proportion are always living, the life of a female is, at all times as the rule, more valuable than the life of a male.

The sexes are unequally distributed through the country. In 1851, two per cent of the males who are numbered amongst the people as soldiers, sailors, &c., were absent; so that when the Census was taken the actual proportion of females to males in the country was 105 to 100. In Scotland the females were as 110 to 100 males; in England and Wales the females were only as 104 to 100 males: while, taking Wales by itself, there were in it 102 females to 100 males. Confining our remarks for the present to the distribution of the sexes in England only, we observe that, while the average is an excess of four per cent in the females, that average is exceeded in the following counties—the proportions in them of females above males being per cent:—Middlesex, 12; Somerset, 11; Gloucester, 10; Surrey, 9; Bedford, 9; Cornwall, 7; Devon, nearly 7; Dorset, 7; Norfolk, 6; and Lancashire, 5. In Berks, Bucks, Cambridge, Kent, Nottingham, Northumberland, Southampton (Hampshire), Wilts, and Worcester, the excess of females is less than the average. In the following counties the males are dominant in the respective per-centages mentioned:—Durham, 9; Essex, 1; Hereford, 2; Lincoln, 1½; Monmouth, 9; Oxford, 1½; Rutland, 5; and Stafford, 4. In Berks, Cambridge, Derby, and Northampton, the sexes are nearly on a par. The remaining counties do not depart from the average excess of females sufficiently to deserve notice. Now, selecting a few districts and places that are remarkable as diverging from the average, we may notice that the females in Hampstead were 42 per cent more than the males; in Kensington, 40: in St. George's, Hanover-square, 32; and in Hackney, 32: while in Rotherhithe there were 5 per cent more males than females; in Greenwich, 4; in Poplar, 3; and in West London, 1½. The average of all London is 13 per cent more females than males. Of towns and suburban districts, Bath has 50 per cent more females than males; Exeter, 37; Devonport, 26; York, 13; Manchester, 9; and Leeds, 6. In Oxfordshire, Herefordshire, Kent, Stafford, &c., there are numerous rural districts in which the excess of males is very considerable. In New Shoreham, Sussex, the excess of males is 24 per cent; in Windsor, 9; in Chatham, 17; and in the district called Woolwich, 55 per cent. Such statistics suggest the observation that the chances of marriage are greatest where the sexes are most equal in number; and least where they differ the most, as in Bath, Kensington, and Hampstead. A community, too, like Bath, whatever it might supply of wealth, could send few men forward to defend the country, compared to Woolwich, Chatham, Windsor, or New Shoreham; or compared to the rural districts we have adverted to in Oxford and Kent, in which there is an excess of males, though in them there are no military stations. We know from the example of some of our convict colonies how dreadful becomes the depravity of a community composed mainly of one only of the sexes. It may be inferred, therefore, that in proportion as a community approaches such a condition it will be depraved, and will be the reverse as its condition approximates to the normal and natural one of an equality in the numbers of the sexes, or in a slight preponderance of females. A confirmation of this inference is found in the fact that garrison-towns, like Chatham and Woolwich, in which the males predominate, have a bad reputation. We may, therefore—rather contrary to some often-repeated assertions—augur more favourably of the morality of communities like Leeds and Lancashire, in which there is a slight predominance of females, than of the morality of the rural districts of Oxford and Kent, in which the males are in considerable excess

COMMITTEES ON PROJECTED RAILWAYS.

AN unusual number of railway projects have this year claimed the attention of Select Committees of the House of Commons. Our Engraving represents Committee Room No. 2, of the new Palace of Westminster, in which evidence has been given of the schemes to be comprised under Group U. The bills referred to the Select Committee were—the Cheltenham and Oxford Union Railway Bill, the London and North-Western Railway (St. Albans, &c.) Bill, the London and North-Western Railway (Finchley and Cricklewood) Bill, and the London and Mid-Western Railway Bill. The district which the great rival companies are desirous to possess lies between the Great Western and the London and North-Western Railway, and comprises the line from St. Albans to the district of Amersham and Chesham. The latter branch railway, which cannot fail to be of general benefit to the neighbourhood, passes the paper manufactory of this newspaper, and would, of course, be of great convenience in the conveyance of the paper employed in printing the ILLUSTRATED LONDON NEWS to and from the Stamp-office in London. After five weeks' patient deliberation, the Committee declared that the preamble of the London and Mid-Western Railway was *not* proved. The Committee then adjourned until Friday last, when they resumed the consideration of the St. Albans branch of the London and North-Western Railway.

Every one knows the interest taken by railway directors, speculators, engineers, counsel, attorneys, and parties locally interested, in the decisions of these Committees. When the matter is ripe for decision the room is cleared, and the Committee deliberate. As soon as the door is re-opened a gentle rush is made from the Lobby and listen with intense anxiety for the fiat of the Chairman. As soon as the important words, "We find the preamble proved," or "not proved," as the case may be, are uttered the successful parties congratulate each other, and the unsuccessful condole, while several persons rush from the Committee-room to forward the news by electric telegraph to the district, and to the Stock Exchange, if the hour be sufficiently early. Seldom, indeed, does general legislation affect the interests of a district in so great a degree as a railway, which places the inhabitants in communication with the great centres of civilisation. A reduction in the price of coals is usually one of the first, and not least beneficial, results of opening a line through a portion of the country previously destitute of railway; other conveniences and advantages quickly follow; so that, whether the undertaking does or does not pay the shareholders, no doubt can exist that the construction of a railway is invariably a blessing to a district which is fortunate enough to obtain the sanction of Parliament for the necessary act.

The extraordinary length of the inquiry instituted by the Committee on Group U, and the enormous expenditure entailed upon the rival railway companies, must excite anew a regret on the part of the shareholders, that Parliament has not yet constituted some less expensive and uncertain tribunal before which these investigations might proceed. No matter how well chosen a line may be, or how beneficial to the country through which it passes, it is in the power of any railway company upon whose monopoly it infringes, to plunge its promoters into ruinous expenses; which, although they are in the first instance visited upon the shareholders, eventually fall upon the public. It cannot be too often repeated, that it is the public who pay in increased fares, and in diminished accommodation, the wanton and excessive railway expenditure in committee-rooms of the House of Commons

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The terrors of the Bourse have somewhat subsided on the subject of the Eastern question; but the slightest fresh alarm, whether true or false, will be sufficient to bring them once more into full play. Many and severe have been the catastrophes consequent on the pan o' one suicide, and several cruel reverses of fortune, and engagements unfulfilled, to the distress and even ruin of both sides interested therein, are cited as the results of the lamentable *crise*, the effects of which will probably be felt by many long after the cause which gave rise to them has ceased to agitate the public mind; for all parties now seem to incline to the opinion we cited last week—as being that of the best-informed and most intelligent—of the probability of the complete establishment of peace.

We know not if all this belligerent talk, wafted upwards towards the skiey regions, has exerted a magnetic influence there; but, whatever be the cause, the result is that winter and summer are here holding a pitched battle, and we, poor mortals, are, like the inhabitants of the site of war, the severest sufferers in a case that personally in no way concerns us. We are pelted with hailstorms, soaked with most congenial showers, pierced through with cutting winds, forced to seek shelter by a blazing hearth, and to wrap ourselves in winter garments by winter, while "the leafy month of June" vainly tries to oppose to these cruel weapons of the insolent invader her fair panoply of foliage and flowers. Lilac and laburnum, May and horse-chesnut, shiver in a February atmosphere; sentimental strolls are out of the question; and white trousers and parasols are at a discount.

Les Dames de la Halle, that gentle and august body, whose soft robes generally contrive to make themselves audible when it conceives itself in any way aggrieved or "put upon," have, it appears, penetrated the walls of St. Cloud, to inform the Emperor that the new buildings erected for the Halles, in the place of those lately demolished, in no way meet the approbation of the body in question. The result of the complaint has been that the Chef de l'Etat has visited the spot, examined the constructions, and has, it is stated as a fact, given command that they shall be destroyed, and re-erected on a much more commodious and handsome scale.

An accident, which might have proved most dangerous, has given rise to a singular and interesting discovery in the Place du Panthéon, within the last few days. Towards the centre of the square, a depression of the soil becoming observable, the cause of the phenomenon was examined into, and it was found that within half a yard from the surface of the ground, existed a subterranean cavity, which appears to be arranged in the catacomb style, to occupy all the space beneath the Place. Measures are, of course, about to be adopted to examine further into this curious discovery, and to guard against the dangers which otherwise could not fail shortly to result from the insecure state of the ground.

The state of the weather, if unfavourable to all else, has brought to the theatres a richer harvest than generally falls to their lot at this season.

The great attraction at the Opéra Comique has been Pepa (Spanish) for as regards the principal performers therein) at the Gymnase, "Les Folies d'Espagne," with La Petra Camara and her *troupe*, the appearance of which we announced in our last letter as about to take place. The plot of the piece—a flimsy mere nothing—serves only as a string on which to thread the dances; dances of which no description can render anything like a just idea, from the moment when the Petra Camara, leaning on the shoulder of her Majo, advances to the front of the stage to that when the bells are taken off feet, the last flash of her wondrous eyes, the last *claquement* of her castanets, leaves the spectator in a maze of blissful wonder

At the Théâtre Italien appears a novelty, a Spanish opera, *Meravilla*—words and music by M. J. de Ciebra. This novelty is unfortunately, how ever, its sole attraction. The music is a *mélange*, stolen from the "Lucia," the "Favorita," and airs from other well-known compositions, put together without knowledge or science: the whole glossed over with a certain Spanish tone and air which does not sit naturally on it. M. de Ciebra is certainly a guitarist of undoubted skill and talent; but it requires something more than this for the successful execution of an *opera seria*, which the performance in question claims to be.

Among the principal attractions of the week have been the races at Satory, and the flower-show at the park of Versailles, under the patronage of the Empress, who was present on the opening day. The races were the last of the spring season; and, though they were not very numerously attended, owing to the uncertainty of the weather and the counter-attraction of the flower-show in the immediate neighbourhood, a considerable number of the élite of society were present; and most of the races (with the exception of the hurdle-race, which was a woeful affair—three horses starting—one breaking down in the middle, a second being "nowhere," and the third only winning, owing to the badness of the other two) were well contested, and of much interest.

The Eastern difficulty continues to be the prominent topic of conversation in Paris. The Bourse was agitated on Wednesday, and several fluctuations took place. It closed firm, however, in consequence of a report that the difference between Russia and Turkey would be pacifically arranged. The Three per Cents closed at 77f. 20c. for the end of the month

The *Constitutionnel* of Wednesday had letters from Constantinople, stating that measures have been taken for the purpose of arriving at a peaceable solution of pending questions by means of an arbitration Redschid Pacha was in favour of this solution, which did not, however, receive a decided support from some of his colleagues.

The *Bulletin de Paris*, which has in some quarters the reputation of being a semi-official organ of the French Government, has a long article on the rumour that a number of the Turkish troops have received orders to advance towards the frontiers of Wallachia and Moldavia.

This occupation (adds the *Bulletin*) would be a manifest violation of the treaties of Adkerman and Adrianople, and would be equivalent to a declaration of war against the Turkish Empire. The clause of the treaty of 1841, declaring that the Dardanelles and the Bosphorus shall be closed to the vessels of war of all nations so long as the Porte shall be at peace, would, in the case of the occupation of the principalities by Russia, be no longer applicable, and the Porte would have a perfect right to apply for the presence of the French and British fleets.

The *Pays* has published an important article, signed by M. de la Guerronnière, on the Eastern question, which, it is confidently asserted, is meant to convey the expression of the Emperor's ideas on the Eastern question, and as marking out the line of policy which it is proposed to follow; especially to dissipate any apprehensions that might be entertained of the Emperor seeking to avenge any possible violation of the treaties in the East by a similar violation with respect to Belgium. The aim of the article is to show, that the question raised by the arrogant pretensions of Russia is altogether a French and European question.

Our national pride (it is said) is much flattered, no doubt, at hearing it constantly stated, that the Mediterranean is a French lake. Unfortunately, the treaties of 1815 have changed into a dream that expression of a great man. In consequence of these treaties the Mediterranean is not, and cannot henceforth be, other than a European and international lake. It is to maintain for it that character that Egypt ought not to be either English or French, and that Turkey cannot be Russian.

The same authority states that the pacific policy advocated in the article in question coincides with the sentiments of the Cabinet "almost to a man."

The *Moniteur* announces the successful continuation of the expedition against the Kabyles, consisting in burning several of their villages, and the loss of a considerable number of lives on both sides

The Duke of Rianzares, the husband of the Queen-Mother of Spain, since his arrival in Paris, has had two or three interviews with General Narvaez; but it is not, as yet, known whether he has succeeded in effecting a reconciliation. The Duke of Rianzares proceeded to London a few days ago. It is his first visit to England. The object of the Duke's visit is to see his son, who has been now for the last two months in England for the purpose of studying the language. The young Munoz is eighteen years old, and was some time since appointed midshipman in the Spanish navy. Of his rapid promotion, with such powerful protection as that of his father and mother, there can be very little doubt.

THREATENED HOSTILITIES BETWEEN TURKEY AND RUSSIA.

Resuming this week our narrative of events in the East, we have first to remark that the telegraphic despatch announcing the arrival of Count Nesselrode at Constantinople exercised greater influence over the Paris Bourse than its importance deserved. Indeed, it must be borne in mind that since private speculators have been allowed to forward announcements of political events by the Continental electric telegraphs, these despatches must be taken with some suspicion, as they are not unfrequently designed to serve the stock jobbing purposes of the hour. Count Nesselrode is not the Russian Chancellor, who, it was stated, had arrived from St. Petersburg to supersede Prince Menschikoff, but the son of the veteran diplomatist, an *attaché* of the Russian Embassy, who accompanied the Prince to Constantinople. Count Nesselrode arrived in London on Tuesday from Constantinople, having passed through Vienna and Paris. He was the bearer to the several Russian missions of full particulars as to the manner in which the late events, and the future of the embassy to which he was attached, occurred. But, not having been to St. Petersburg since that occurrence, he cannot be acquainted with the latest views of the Russian Cabinet; and he is not specially accredited to the Government of this country. He is rather as an informant of the Russian Embassy, than as an emissary, that he appears to have been detached from Prince Menschikoff's diplomatic staff, and ordered to visit the capitals of Western Europe.

It will be remembered that Prince Menschikoff began his embassy by the demand of a treaty which was at first to be kept secret—embracing, in a formal manner, the appointment of Greek Patriarchs, the protection of the Greek Church in Turkey, and the settlement of the question of the Holy Places. Upon the arrival of the French and English Ambassadors, about the 5th of April, this demand was abandoned, and the matter was supposed to have been dropped, as unpracticable. On the 5th of May the proposal was renewed in the more modest form of a *Sened*, or convention, which, however, still had the form of a bilateral contract. Lastly, on the eve of his departure, and, indeed, after he had affected to break off relations, Prince Menschikoff offered to accept the same species of concession in the shape of a note. This last proposal was certainly free from some of the grave objections which had been made to the contract: for a diplomatic engagement in the form of a mere declaration is susceptible of explanation, and even a departure from it is not to be regarded as a cause of war.

The latest negotiations between Prince Menschikoff and the Porte took place after the former had left Constantinople, and while he was on board his frigate. The Austrian Chargé d'Affaires waited upon the Prince, proffered his mediation, and—in the name of his colleagues, the representatives of England, France, and Prussia—endeavoured to open some path to an understanding. Instead of a treaty, the Prince consented, as we have stated, that the guarantees required by Russia in favour of the Greek Church should be stipulated in a diplomatic note. He announced that if, in the course of the day, the Porte did not send him this note, he would leave without granting any further delay. The answer of the Turkish Ministry was that the Greek Patriarch would shortly receive a firman from the Sultan confirming all the religious privileges granted to the Greek Church by the Sultan's predecessor; that he himself could guarantee the scrupulous maintenance of them for the future; that a copy of this firman should be delivered to the Russian Embassy; that in all that concerned the *status quo* at Jerusalem, no alteration should be made without the consent of the two courts of France and Russia; and, finally, that the Porte would not refuse to guarantee beforehand to the Greek Church all the religious advantages which might be granted in future to other religious communions protected by foreign powers. The only point upon which the Porte would consent to conclude a written arrangement with Russia, was relative to the establishment of the church, of the convent, and to the Russian hospitals demanded by the Emperor. Prince Menschikoff, in his turn, refused to agree to these proposals. He insisted upon the concession to Russia of the protectorate and civil jurisdiction over the Greek subjects of the Porte. As diplomatic relations were broken off, the Prince gave notice that he would listen to no further negotiation whatever on the subject. He required a plain answer to a plain request—yes or no. The answer in the negative was immediately returned. The Prince weighed anchor for Odessa, and thence travelling rapidly to St. Petersburg, breathed that capital on the 31st ultimo. On his arrival, the Emperor fully and entirely approved of every act of his Ambassador, and expressed the utmost displeasure at the conduct of the Sultan. The Czar at once transmitted orders to the fourth *corps d'armée* of Podolia to be moved by forced marches, in order to replace the army quartered there, which is destined to invade Moldavia.

A courier was at the same time despatched from St. Petersburg to Constantinople to address another summons, which may now correctly be termed an ultimatum, to the Porte. The courier is the bearer of a peremptory demand to the Turkish Government to sign within a week the last draught note proposed by Prince Menschikoff; and, in the event of a further refusal on the part of the Turkish Ministers the Russian Government does not dissemble its intention forthwith to enter and occupy the Danubian Principalities. The same courier is said to bear orders to the Russian Generals on the frontiers of the principalities, directing them, in the event of the rejection of the ultimatum, to cross the Pruth without further delay.

The Turks, on the other hand, are actively preparing for war. The remainder of the fleet is equipping with much vigour, and all the porters of the port have been engaged for the transfer of ammunition from the arsenal to the various forts on the shores of the Bosphorus. The Minister of War has given orders to Namik Pacha to be ready to proceed to the frontiers at the head of 40,000 men the moment the first Russian is known to have crossed the Pruth. Namik Pacha was formerly Governor of Arabia, and he is a man of much energy. Much enthusiasm prevails among the Mussulman population. The Ottoman fleet, commanded by Achmet Pacha, is now concentrated in the Bosphorus. The arrival of the Egyptian contingent, of from 25,000 to 30,000 men, was expected,

If Russia, after all, means nothing warlike, she has incurred an immense and useless expenditure in her armaments on the shores of the Black Sea and in Bessarabia. By the last post further accounts speak of the armaments as being still larger, and in a still more forward state of preparation. On the Pruth 20,000 ox-waggons are drawn up on the banks ready for the transport of baggage; and at Ismael floating bridges of boats are prepared for the passage of troops.

The combined fleets of England and France are, it is believed, ordered to the Dardanelles, and will arrive at their destination somewhere about the 16th inst. at latest; and, as the Russian forces are ordered to commence hostilities about the 15th, it is evident the fleets will arrive some days before a Russian armament can reach the Straits of Marmora from Sebastopol or Odessa. The squadron under Admiral Corry has before this reinforced Admiral Dundas, who was at Malta at the date of the last advices. The French fleet was stationed at Salamis; it consisted of eight ships of the line, a reinforcement of four others was expected.

The position taken by Austria is of some importance, seeing that it is one of moderate, but firm opposition to the pretensions of Russia. Austria has always been sensibly alive to the importance of keeping the navigation of the Danube free from Russian control. A movement that should establish the Russian frontier along the Danube from Orsova to the Black Sea is in the event of the utmost consequence to the Austrian empire; and Austria cannot allow the entire control of that river, which is the main artery of her empire, to pass into the hands of Russia, who might either intercept the whole Danube navigation, or avail herself of the stream to menace all Austrian territory. It is a fortunate circumstance that a perfect concert prevailed at Constantinople between the Four Powers; and, while the Porte showed its readiness to accede to any terms not inconsistent with its honour, the Ministers of the four Courts unanimously approved its decision on Prince Menschikoff's proposal; and M. de Klezl, the Austrian Chargé d'Affaires, was, as we have seen, deputed by his colleagues to make a last attempt at an amicable arrangement. But while conjecture points strongly to the probability of an invasion of the Danubian principalities, and in the first instance of Moldavia, from which the Russian province of Bessarabia is separated only by the channel of the Pruth, there seems some doubt whether, if the Russian troops

enter Moldavia, a *casus belli* will, in fact, occur. The Danubian provinces have been several times occupied by a Russian army during the present century, and the Hospodars of that territory are already almost independent of Turkey. A convention has been for many years in existence between Russia and Turkey, the spirit of which was the semi-independence of the Hospodars and of their administration, and "the inviolability of the Moldavian and Wallachian territory," which was specially provided for, so as to throw the Turks entirely on the right bank of the Danube. An invasion of these principalities would, therefore, simply be the overthrow of the system established by Russia herself for their government; and it would still be open to the Porte to treat it or not as an act of hostility against the Turkish dominions. In reality, the provinces north of the Danube have been so effectually wrested from the Porte by the treaties of 1826 and 1639, and by the reiterated Russian occupations, that a fresh invasion of them is of less consequence to Turkey than it is to the general policy of Europe, and especially of Austria. Although Russia has, ever since the peace of Tilsit, openly expressed her desire to possess these provinces, and has repeatedly occupied them, as she did under the convention of Balta Liman from 1848 to 1851, neither her protectorate over them, nor the present state of those countries, at all justifies such an invasion; and if, as is reported, Omer Pacha be stationed with an army in Albania, a conflict seems imminent.

It is clear that, however serviceable the combined fleets of France and England may be for the protection of Constantinople, they will not avail to check the advance of a Russian army in Moldavia, nor prevent the Czar from re-opening negotiations at his pleasure, with all the advantages derived from possession of a conquered province.

Mr. E. H. Stanley, in a letter to a contemporary, supplies some opportune information on the state of the Greek Church in Turkey, over which the Emperor of Russia seeks absolute control. According to returns made as far back as 1844, Constantinople alone contained 157,000 Greeks and 230,000 Armenians, while the entire population returned under those two heads as subjects of the Porte, amounted to 10,730,000. Mr. Stanley concludes that if the Czar could obtain the consent of the Sultan to a sequence in what he terms a necessary measure of precaution to ensure the *status quo* of the Greek Church, he would virtually rule over one of the most energetic and important sections of the subjects of the Porte—would establish an *imperium in imperio*; and, whilst the substance of the present Sultan's power would be visibly diminished, his successors might be left without even the shadow of authority over a dismembered realm.

AMERICA.

We have advices from New York to the 24th, by the *Cambria*; and to the 28th, by the *Baltic*. The following appointments of Foreign Ministers have been made by the President. Great Britain: James Buchanan, of Pennsylvania, in place of Joseph R. Ingersoll; John Appleton, of Maine, Secretary of Legation. Spain: Pierre Soulé, of Louisiana, in place of Daniel M. Barringer. Russia: Thomas H. Seymour, of Connecticut, in place of Neil S. Brown. Prussia: Peter D. Vroom, of New Jersey, in place of Daniel D. Barnard. Central America: Solon Borland, of Arkansas, in place of John B. Kerr and B. M. Ethery. The only remaining appointment to be made was that of France, in place of Mr. Rives. The pay of Envoys Extraordinary and Ministers Plenipotentiary is 9000 dollars per annum as salary, and 3000 dollars outfit. Secretaries of Legation receive 2000 dollars per annum.

The new Minister to London, James Buchanan, is well known as a statesman and politician. He is a bachelor, sixty-two years of age, having been born in Franklin county, Pennsylvania, in April, 1791. He studied law, and entered public life as a member of the Legislature of Pennsylvania, in 1814. He was elected to Congress, having been attached to the old Federal party, in 1820, and served as a member of the House of Representatives until 1831. In May, 1833, he was appointed by General Jackson Minister to Russia, having become united with the Jackson Democratic party some years before the election of the General to the Presidency. On his return from Russia, he was elected to the Senate in 1834, and continued a member of that body until 1845, when he received from President Polk the appointment of Secretary of State. He has been a private man since March, 1849.

Most of the newly appointed Ministers have been connected with journalism. The Charge at Washington, Mr. Robert Dale Owen, is a native of Lanark, Scotland, and son of Robert Owen, the Socialist. Mr. Theodore S. Fay, of New York, for many years Secretary of Legation to Prussia, had been appointed Minister Resident to Switzerland, with an allowance of 6000 dollars per annum. The United States Government was previously unrepresented in that quarter. Mr. Dennis Mullins had received the appointment of Consul at Cork; Mr. J. Lyon, at Dublin; Mr. H. Dessoff, at Dundee; and Mr. Nathaniel Hawthorn, the well-known author of "Mosses from an Old Manse," at Liverpool.

In the Canadian Council the bill to increase the representatives in the Legislature was passed by a large majority. The bill to abolish Seignorial Tenures was defeated. A rumour was very prevalent that Belle Island was to be ceded to the French Government; and an address to the Queen, remonstrating against it, had been numerously signed.

From the city of Mexico we have advices to the 16th, and from Vera Cruz to the 22nd ult. A revolution broke out at Vera Cruz on the 17th among the National Guards, in consequence of an order from the Government to incorporate them with the regulars. The revolution lasted several days, during which business was entirely suspended. The regular troops had possession of the forts, and the National Guards of the streets and city gates. Brisk firing was kept up during the whole time; but the affair was finally ended on the 22nd, by the entrance of a large body of troops from Jalapa, who took 50 of the National Guards prisoners, and restored quiet. Santa Anna had issued many arbitrary decrees; he had suspended Legislative authority of all kinds throughout the Republic and prohibited the possession of arms, powder, or any kind of munitions by private citizens. He had also placed the telegraph under control of Government. The army was being re-organised and increased.

A project for a new national bank had been started, based upon a Government loan of from 8,000,000 dols. to 12,000,000 dols.

JAMAICA.

The quarrel between the Governor and the House of Assembly continues. The island was without a revenue, the principal revenue acts having expired in consequence of the refusal of the House of Assembly to renew them. The Governor has stated that between the 1st of May and the 10th of October next, if matters should remain in their present footing, there would be legitimate demands upon the Island Treasury for payments to the amount of £100,000, and that there would be money wherewith to pay more than one-fifth of the amount. The Governor was about to dismiss all the male and female convicts and prisoners whose labour could not be made to provide for their maintenance. The police, by the interruption of their pay, would also be released from their engagements. The Governor adds that, "Those who may be on the watch to turn the public loss to their own profit will have the opportunity of stocking their stores at this season of the year with undiluted rum at the rate of 1000 puncheons a week." He recommends that the attention of the House of Assembly should be given, first, to a regulation of the civil and ecclesiastical establishments by reductions which shall either be prospective, or shall be made upon the basis of a fair and moderate compensation for existing interests; secondly, to the provision of a permanent fund for the payment of the reduced establishments; thirdly, to the enabling of the Governor for the time being to employ Ministerial officers, holding seats in the Assembly, to bring forward Government measures in that House. The Assembly on the 18th were preparing to reply to the Governor. A remonstrance to the Queen, calling for his removal, was in agitation. An alteration in the constitution of the colony seems imperatively demanded. The House of Assembly had declared Kingston a free port.

THE NEW YORK EXHIBITION.—An American correspondent says:—"The Exhibition, I think, will prove hardly less than a failure. It is now said that the building will not be ready before the 1st of September. This is truly a sad delay. Many persons have now arrived in this city who came from distant countries purposely to bring goods, and others came to see the grand show. Already some goods are here than can find space in the building. It is said that it has been got up by a few inexperienced people, who have no reputation as business men; and that the Government has declined to afford them assistance. But such is the Yankee Exhibition without much interest, or care being manifested by the people at large, although many of them are really ashamed of it." A more recent account states that the architects of the Crystal Palace had reported that the building would be completed so as to be ready for the reception of goods by the middle of this month. The directors expected to open the exhibition between the 1st and 15th of July.

NEW SEIDLITZ POWDER IN ONE PAPER.—Contrary to the usual practice, this powder keeps well ready mixed in one paper, and effervesces briskly when put into water. It is composed of one part of bicarbonate of soda and two parts of bitartrate of soda. Half a teaspoonful dissolved in a tumbler of spring water, and drunk quickly, is a very good thing for those who are "thirsty in the morning."

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—FRIDAY, JUNE 3.

GOVERNMENT OF INDIA.

Sir C. WOOD moved for leave to bring in a bill to provide for the Government of India. As the existing act would expire in April next, it was necessary to introduce either a measure for the future administration of India this session, or a continuing bill, deferring a final measure until next session. The Government were of opinion that the latter course would be unwise, and that delay was inexpedient. The complaints of the present Indian Government were mainly of the administration of justice, the want of public works, and the tenures of land. He noticed the difficulties attending the dispensation of justice in India, where perjured witnesses could be got at an anna (1½d.) a head. The natives of India reposed implicit reliance in the integrity of English judges; and the native judges, who now decided a large proportion of the causes, had greatly improved in integrity. He read a statement of the roads completed, or in the course of construction, in different parts of India; adverting to the subject of railroads, in the promotion of which, he said, no time would be lost or expense spared; and to that of canals and works of irrigation, which had been increased to such an extent as to render productive 14,000,000 acres of new land. In reviewing the tenures of land, he discussed the comparative merits of the Zemindary, the Ryotwary, and the village systems of revenue settlement, prevailing in the Bengal, the Madras, and the Western provinces respectively, showing the inexpediency, and the impediments in the way, of establishing either as a universal system; and he examined the subject of cotton cultivation, the success of which, he remarked, depended upon the certainty of a market in this country, which, again, depended upon the peace of the American crops. Sir Charles next considered the finances of India, the gross amount of which was about £36,000,000. In enumerating the results of the last twenty years' administration of India, he noticed the extinction of slavery, suttees, infanticide, human sacrifices, and Thuggees—all of which had been quietly put an end to; contrasting the state of British India with that of India under Mahommedan rule and that of the native princes. The value of the imports into India had augmented from £7,954,000 in 1834-5, to £17,318,000 in 1849-50—or 140 per cent. He admitted that it did not follow, from these facts, that the existing Government of India was the best that could be devised; but if we were to test a Government by its results, whatever might be its anomalous character, that of India could not be condemned as bad or inefficient. He thought it better that the Indian Government should remain as it was than that it should be assumed by the Executive Government at home. Leaving the relations between the Board of Control and the Court of Directors as they stood, as well as the responsibility to that House of the President of the Board, her Majesty's Ministers proposed to improve the constitution of the Court, and to impose restrictions upon its patronage. They proposed to reduce the number of the elected members of the Court to twelve, and to add six named by the Crown from Indian servants who have been ten years in the service of the Crown or the Company, making the number eighteen instead of twenty-four; which would obviate the objection that the best Indian servants could not obtain seats in the Court. They proposed that one-third of the members of the Court should vacate their seats every seven years, but be immediately re-eligible. They did not think it fair, however, to tie up the hands of Parliament for any period from making a change in the form of the Indian Government, if the experiment should not answer; it was proposed, therefore, that it should only continue until Parliament should otherwise provide. It was intended that the directors should receive £500 a year, and the chairman £1000. With respect to the limitation of their patronage, it was proposed to do away altogether with the nomination to appointments to Haileybury College, opening them to the universities' competition, and giving them, not by favour, but to merit, and merit alone. It was proposed to adopt the same course with reference to appointments to the scientific military branch at Addiscombe, and to assistant-surgeons. As to the direct appointments to the Indian army, these, not being the subjects for competition, would be left, as at present, in the hands of the Directors. In respect to the Executive Government in India, the principal change proposed was the separation of the Government of Bengal from the Governor-Generalship, constituting a Lieutenant-Governor of that Presidency, continuing the Lieutenant Governorship of Agra, and giving power to the Supreme Government to constitute a new Presidency in the district to the north-west. It was proposed also to alter and enlarge the powers of the Legislative Council of India, adding two judges thereto. Sir Charles then indicated certain alterations which could not be introduced into the bill, including the education of civil servants, securities for the due qualification of candidates for judicial offices in India, and the consolidation of the Courts of Sudder Dewanney Adawlut with the Queen's Courts, the amalgamated Court being an ultimate Court of Appeal, with original jurisdiction in certain cases, and he concluded a speech of five hours' length with a rapid survey of various subordinate topics—native judges, furloughs, native education, and the prospects of Christianity in India.

Mr. Hume thought the Government's bill as a half-way measure inadequate to cure the evils and supply the defects of the Indian Government.

The debate was then adjourned.

HOUSE OF LORDS.—MONDAY.

Lord ELLENBOROUGH called the attention of their Lordships to the position of our army in Burmah, which he described as inadequate—partly from its want of the means of locomotion, partly from the inadequacy of its force to the extent of ground it had to occupy and the magnitude of the enterprise assigned to it—to take advantage of the favourable opportunity which the revolution in Ava had afforded it; or, in fact, to undertake any operation of importance. He recommended that the troops, which were now much dispersed in garrisons, should be concentrated; that the Government should give up all illusions as to an easy conquest, and prepare itself for an arduous and costly war.

Lord ALBEMARLE strongly urged the propriety of disowning the annexation of Pegu.

HOUSE OF COMMONS.—MONDAY.

On the order of the day for the third reading of the Income-tax Bill a short discussion took place, after which the House divided, when the third reading was carried by 189 against 56.

Sir F. KELLY moved a clause to reduce the tax upon incomes between £100 and £200 a year to 3½d. in the pound, and between £200 and £300 a year to 5½d. in the pound.

The CHANCELLOR of the EXCHEQUER objected to the clause, which was negatived upon a division, as were other clauses. The bill was then read a third time and passed.

GOVERNMENT OF INDIA.

The adjourned debate on the Government of India was resumed by

Mr. J. PHILLIMORE, who enlarged upon the defects of the judicial system in India, and the inefficiency of the judges. He advocated the employment of the natives in the higher capacities. The East India Company had assumed the rights of the proprietor of the land, but had invariably neglected his duties. Under the permanent settlement in Bengal the native landed proprietary had been reduced to a dead level of misery, and the ryotwar settlement had blighted the prospects of the Madras provinces. Condemning in strong terms the general policy and proceedings of the Court of Directors, he urged on the House whether so enormous a power should be left in such hands.

Sir J. HOGG offered a long and elaborate defence of the administration of the Court of Directors. He urged the necessity of immediate legislation. So far from the Court of Directors being, as alleged, a mere sham, under the existing system, the practical government of India rested with the Court, under the paramount control of her Majesty's Ministers; but the great virtue of the double Government consisted in its being the only mode by which the administration of India could be purged of all political bias. Sir James then proceeded to contend that the directors' patronage had been properly distributed; that the emoluments of the Indian civil service were indeed to those in corresponding stations in the general public service; and that India, so far from languishing, had advanced in prosperity—the result being indicated by the large increase of the gross revenue, notwithstanding reductions of duties and taxes, and in spite of fatal legislation in this country calculated to retard the commercial progress of India. The estimate for the year 1852-3 showed a gross revenue of £29,928,252, and an expenditure of £26,317,826, leaving an Indian surplus of £2,910,736; after allowing for the tribute to England there was still a surplus of nearly £500,000, including the estimate for the Burmese war, which was about £600,000. The Indian debt had nominally increased; but of this increase £15,000,000 had been incurred through the Affghan expedition, which was not an Indian, but a European war. He replied to the allegation that natives of India were not sufficiently employed, showing that they adjudicated 96 per cent of the causes, that they were appointed deputy collectors and deputy registrars at high salaries. After describing in glowing language the social revolutions accomplished in Mairwara, Candeish, and the Khond country, by reclaiming and civilising even wild and ferocious tribes, he detailed the progress of education, of ecclesiastical establishments, and of moral and religious facilities throughout British India, and concluded with expressing, on the part of the Court of Directors, an earnest wish and anxious prayer that the Supreme Disposer of events might so direct the counsels of that House that it might select the form of Government for India best calculated to advance the interest and happiness of the people of India and the honour and glory of this great country.

The debate was again adjourned.

The House then went into Committee on Savings Banks; when, on the motion of the CHANCELLOR of the EXCHEQUER, resolutions were agreed to, that leave be asked to introduce a bill to amend the laws relating to savings banks, and a bill to amend the law relating to the purchase of Government annuities through the medium of savings banks.

HOUSE OF LORDS.—TUESDAY.

The Duke of Melfort's Restitution Bill, the object of which is to reverse the attainder of the Earls of Perth, implicated in the rebellions of 1715 and 1745, was read a second time.

HOUSE OF COMMONS.—TUESDAY.

There not being forty members present to-day, when the Speaker took the chair, the House adjourned until Wednesday.

HOUSE OF COMMONS.—WEDNESDAY.

The House went into Committee upon the Courts of Common Law (Ireland) Bill, the details of which occupied the sitting. The bill effects great and valuable changes in the law of Ireland.

HOUSE OF LORDS.—THURSDAY.

Lord BROUGHAM introduced a bill to amend the laws relating to the treatment of wages for debt in Scotland; which was read a first time.

The Burial grounds Bill, with amendments, was reported.

The Hackney Carriages (Metropolis) Bill was read a second time.—Lord STANLEY of Alderley gave notice of his intention to propose a clause to prevent unwieldy advertising vans from encumbering our streets.

The Consolidated Fund Bill was read a second time.

Drummond's (Duke de Melfort's) Restitution Bill passed through committee.

The Income-tax Bill was read a first time.

HOUSE OF COMMONS.—THURSDAY.

Mr W. MILES brought up the report of the Election Committee on the return for the county of Clare, which stated that Sir J. F. Fitzgerald and Mr. C. O'Brien had not been duly elected for that county; that there had been intimidation at the last election, but that there was nothing to show that it had been at all encouraged by the unseated members. They also reported that although two priests had been very active in the Sixmile-bridge affair, yet the Roman Catholic clergy, in general, had not exercised any undue influence. On the motion of Mr. J. FITZGERALD, new writs were ordered to issue for the election of representatives for the county of Clare.

Mr. BRAMSTON brought up the report of the Durham Election Committee, which stated that Lord Adolphus Vane, having by his agents been guilty of bribery, had not been duly elected for the borough of Durham, and that it was a void election.

GOVERNMENT OF INDIA.

The adjourned debate on the Government of India was resumed by Mr. BLACKETT, who concurred in many of the views expressed by Mr. Bright, and said that Parliament was called upon to legislate with slighter information than it had ever had on any former occasion. He stated his objections to the double Government and to the proposed bill, because it left the patronage in the hands of the East India Company, because they had exercised it to benefit their own family connections, and not either to economise the resources of the country, or to strengthen the social condition of India.

Mr. T. BAINES thought it unwise to postpone legislation upon this important subject. He did not wish to see the government of India in the hands of her Majesty's Ministers exclusively; he preferred seeing another power recognised, which would be independent of political agitation, but at the same time subservient to the decision of the Crown ultimately.

Sir H. MADDOCK could not see the necessity for immediate legislation, and believed that in India they did not expect that any measure would be passed this session. He would not, however, object to the introduction of the bill, although he objected to the double government which it proposed. He expressed a hope that some arrangement would be suggested by which a certain number of natives would be admitted into the Legislative Council.

Mr. D. SEYMOUR said that, from personal experience in the Russian Asiatic territories, he could assert that the natives of India had more to expect from Russian policy than from that of England, as proposed to be carried out by this bill. Russia was aspiring to the dominion of the East; and, should the struggle come, it would not be difficult to divine the result. He strongly deprecated the proposal of the double Government, which might be designated as the mystery of iniquity, as illustrated by the case of Dost Mohammed, and others.

Mr. A. HASTIE supported the proposition of the Government.

Mr. HUME thought that they were about to legislate in perfect ignorance of all that had recently occurred in India, and that any such legislation was premature. At the same time, he would say that the Select Committee was not composed of that class of members from which it should have been selected. He hoped that the House, for its own credit sake, would not be led blindfold into a path full of danger to our Indian empire. He thought the bill a most unwise one, and one that ought to be resisted in every shape, until the requisite inquiries should have been made.

Leave was then given to bring in the bill.

CUSTOMS, &c., ACTS.

The House then went into Committee upon the Customs Acts, and a great many of the reduced duties were agreed to.

The House then resumed, the Chairman reported progress, and obtained leave to sit again to-morrow.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The Rev. Dr. George Taylor, Rector of Dedham, to the Rural Deanery of Rochester. The Rev. W. S. Congreve, to be Principal at Brighton College. The Rev. R. Wigtman, to the Incumbency of Cross Canonby, near Maryport, Cumberland. *Rectories:* The Rev. W. Kelghley, to Dunsby, Lincolnshire; the Rev. J. N. Neill, to Newton Toney, Wilts; the Rev. W. B. Philpot, to Walesby, Lincolnshire. *Vicarage:* The Rev. H. G. Morris, to Mark, near Wells, Somerset.

THE DIOCESE OF BATH AND WELLS.—A correspondence has been published between Archdeacon Denison and the Bishop of Bath and Wells, in which the former tenders the resignation of his office as examining chaplain pending a formal and public inquiry for the purpose of ascertaining, "whether, in requiring the assent of the candidates for holy orders to the doctrine of the Holy Communion to which Bishop Spencer has taken exception, I have required their assent to anything which is not the doctrine of the Church of England." His Lordship, in reply, accepts the resignation thus tendered, but explicitly declines the liability of providing the costs which may be incident to the inquiry.

CONFIRMATIONS ABROAD.—The Bishop of Ripon has left England, at the request of the Bishop of London, for the purpose of holding confirmations according to the following arrangement:—Hanover, Wednesday, June 8; Hamburg, Tuesday, June 14; Berlin, Friday, June 17; Dresden, Tuesday, June 21.

The Bishop of Ripon has granted a commission to the Venerable John Headlam, M.A., Archdeacon of Richmond, and Chancellor of the diocese, to confer institutions and grant licenses during his Lordship's absence from England.

The *Neptune* steam-ship was wrecked on her homeward voyage from St. Petersburg to London a few days ago, on the shoals known as Nucknan's Grounds, in the Gulf of Finland. The crew and passengers were saved.

The studio and premises of Mr. John Wood, an artist, 65, Upper Charlotte-street, were robbed, last week, of five valuable paintings and some plate.

A deputation of merchants, &c, waited on Lord Canning, on Wednesday, on the subject of postal arrangements with Australia.

The exports for May are of the value of £7,678,910; an excess of £2,396,965 over the May of last year. For the four months ended May 5, the amount is £27,970,653; an increase of £6,125,970 over the same period of last year.

THE DUKE OF GENOA.

PRINCE FERDINAND-MARIA-ALBERT-AMADEUS-PHILIBERT-VINCENT, Duke of Genoa (who is now on a visit to England), is brother of Victor Emmanuel II., the present King of Sardinia, being second son of the late Charles Albert, so distinguished in the recent war against Austria. The Duke of Genoa's mother, the Archduchess Maria-Theresa, is daughter of the late Ferdinand, Grand Duke of Tuscany. The Duke of Genoa was born 15th November, 1822. He participated in the Italian campaigns of his father, and was conspicuous for personal gallantry and daring. In 1846, a decree of the Sicilian Chambers called him to the throne of Sicily, under the title of "Albert-Amadeus, First King of Sicily under the Constitution of the Kingdom;" but subsequent events rendered this nomination of no avail. He now bears, as before, his title of Duke of Genoa. He married, on the 22nd April, 1850, the Princess Maria-Elizabeth Maximiliana, second daughter of Duke John of Saxony; and has a daughter, the Princess Margaret-Maria-Theresa-Joanna, born the 20th November, 1851.

The kingdom of Sardinia comprises the whole of North Italy, west of Ticino, including Piedmont, Genoa, and Nice, the adjacent Duchy of Savoy, and the Island of Sardinia in the Mediterranean. Its dynasty is the House of Savoy, claiming descent from the famous Wittekind, and tracing a long and illustrious line of ancestry. Sardinia is the only Italian State still governed by the male representative of the ancient hereditary sovereigns.

HIS ROYAL HIGHNESS THE DUKE OF GENOA.

CAMP OF SATORY, NEAR VERSAILLES.

(From our own Correspondent.)

THE Plain of Satory, upon which the French troops are now executing manœuvres, is about a mile to the southward of the town and Palace of Versailles. The Camp occupies its southern extremity, under the shadow of the forest, by which the plain is nearly surrounded. Immediately in front of the Camp is placed an altar, covered by a tent, supported by four poles in the form of halberts, inclining outwards from the base, and kept in their position by gilded ropes; a cross is placed on the apex in the centre, and the whole is richly decorated with gilding and blue. The base on which the altar stands is formed of fascines, and is enriched with flowers on either side of three flights of steps, by which it is ascended. On the front of the upper steps, facing the camp, is an inscription, worked in *immortelles*, of yellow and white, varied with other colours—"Salvum fac Napoleonem Imp. Eugeniamque Imp. Conjugem." The whole is completed by two military trophies of arms and tri-colour flags, the centre flag bearing the Imperial Eagle.

The front boundary of the line of the Camp, a few yards in advance of the tents, is made by a small trench or furrow, a few inches wide, cut in the grass, and filled with broken stones; making the line indelible, and easily distinguished, though not interfering with the military movements. Outside this line are cut various devices and mottoes, such as "Vive l'Empereur;" the letters N.E, surmounted by the Imperial crown; and the Cross of the Legion of Honour: in some cases the turf being removed to form the letters; in others the turf removed and replaced by sand—the letters and ornaments, being formed of turf or moss, very tastefully arranged. These devices, with turf pillars, &c., decorated with flowers and inscriptions, are said to have received the marked commendation of the Emperor on his inspection of the Camp, which he has made more than once.

The first line of the encampment is occupied by low tents, under which the arms are piled. At certain intervals are sentry-boxes, of which it may be worth while to notice the construction, as a hint to our own countrymen, who are little versed in such matters. Six slight poles are stuck into the ground in a circle; these are surrounded on every side, except the front, with two rough wooden hoops, at equal heights, the top being secured by a third entire hoop, which supports a framework of six smaller poles, secured by a second hoop above, and bound together, so as to form a cone-shaped top. Whole lengths of straw are then fastened vertically by the centre to three lower hoops; the ends of the upper length are gathered over the top; and the whole is completed by a fourth length, bound together at the end, and placed over all, so as to form a projecting thatch. The appearance is somewhat rude, but thus a comfortable and efficient sentry-box is provided, and is very quickly made.

Behind this line of sentry boxes and low tents for the arms, are the lines of tents, varied with kitchens and other appurtenances, which, being within the boundary, strangers could not inspect.

On the morning of the 20th ult. mass was celebrated in presence of the troops drawn up before the temporary chapel. Shortly after one o'clock the Emperor arrived; when part of the infantry of the Camp marched in close column to take up the ground to the left of the Camp, and deploying with line, occupied the space extending to the race-course. The cavalry and artillery from Versailles, St. Cloud, and St. Germains occupied the ground in rear of the infantry. The Emperor, attended by his staff, with the Duke of Genoa, Prince Jerome, and others, rode along the line of infantry, and returned in front of the cavalry, the infantry facing round to receive him. He then took up a position in front, whilst the troops defiled before him. It was impossible not to notice the splendid appearance of the cavalry and artillery; nor to be struck by the bearing of two regiments of Grenadiers, who, though not an Imperial Guard by name, were evidently picked men and tried soldiers; their uniform is something like the ordinary gend'armes, with the exception of the fur cap, and the chest broadly faced with red. Their cries of "Vive l'Empereur!" as their commanders raised their sword to salute the Emperor, seemed more fervent than those of the other troops. As the Emperor was about to leave the ground, he was joined by the Empress in her carriage. He rode by her side into Versailles, followed by the cavalry, consisting of about nine regiments, who, together with the artillery, passed *au pas du charge* before the carriage of the Empress and the assembled staff, which occupied a position in front of the noble palace on the Place d'Armes, thus closing the first review of the troops encamped on the plain of Satory.

Among the manœuvres executed on the 3rd were those which took place at the celebrated Battle of the Pyramids. Marshal Magnan arrived at half-past twelve, when the three brigades of infantry advanced in a straight line; and, on coming to a certain point, supposed to be not far distant from the enemy, they formed into squares, with a piece of cannon at each angle, and commenced firing. The cavalry was drawn up in the rear as a reserve, as were the batteries of flying artillery. As the attack of the enemy was then supposed to be directed to the left, the brigades faced to that side by echelons; the cavalry advancing to cover the movement, and occasionally charging, as if to disperse the enemy who attacked. At the same time the artillery which was in reserve dashed in front, and opened a fire to support the cavalry. When the infantry had completed its movement to the left, and taken up position, the cavalry executed the movement of retreating through the lines, and formed in the rear of the infantry. Immediately afterwards each echelon of infantry formed in square, with a piece of cannon at each angle, and opened its fire, as at the commencement of the manœuvres; the artillery at the same time keeping up a well-sustained fire to support the infantry. At last, the enemy being supposed to have withdrawn, the troops returned to their encampment.

ENCAMPMENT ON THE PLAIN OF SATORY, NEAR VERSAILLES.

FRIERN MANOR DAIRY FARM.—THE GREAT MEADOW.

FRIERN MANOR DAIRY FARM.

THE supply of milk to the London market is so important a branch of commerce that an account of one of the largest dairy farms in the metropolis may be read with interest. The Friern Manor Dairy Farm is situated at Peckham, about six miles from the Royal Exchange. The number of milch cows at this farm is at present not less than 186. They are kept in sheds, of one of which we give an Illustration. This shed holds fifty cows; in another, which contains stalls for thirty-eight, the cows are separated by a wooden partition. Upon an average of the whole year each cow gives about ten quarts per day. When the produce of any animal falls below the average, she is sold, and another bought to supply her place. Some of the cows at the farm are extraordinary milkers, several giving more than 20 quarts a day, and one or two 24 quarts. One cow gave 28 quarts a day for five months. The greater number are bought when four or five years old. At this age they begin to give the most milk; in two or three years the supply begins to fall off, when they are sold. One cow, however, is shown, which has been a singularly good milker for nine years. She used to give upwards of 20 quarts a day, and still gives 17 quarts. The following is the produce of the farm during the last week:—Monday, 1247 quarts; Tuesday, 1765 quarts; Wednesday, 1837 quarts; Thursday, 1793 quarts; Friday, 1802 quarts; Saturday, 1815 quarts. The milking takes place twice a day: at half-past 1 a.m., and half-past 10 a.m. The first milking finishes about 4 a.m., and the second about noon. The milk is in London at 8 a.m., and at 1 p.m. The sheds are everywhere lit by gas, by the light of which the night milking is carried on. Fourteen milkers are employed, all of whom are of the rougher sex. It will be seen that our artist has put a milk-maid by the side of the cows; this is a poetical license excusable in a picture, but which a strict regard for accuracy compels us to correct. The average time occupied in milking each cow is seven minutes. The period does not seem to be regulated by the quantity of milk that the cow yields; but something depends upon the animal, and more upon the skill of the operator. Some men milk a cow in five minutes; others take ten. The cows seem to regard their milk with a strange feeling of maternal pride, for none of them like to be milked into a pail containing the milk of any other cow. Each cow is thus humoured by having a pail to herself; and, if this regulation is disobeyed by the milker, the cow is very likely to kick the pail over which contains the milk of the sister cow. The utmost cleanliness is observed with the vessels into which the milk is drawn, and those in which it is sent to London. These vessels, which are of tin, are scoured out twice a day. As soon as each cow is milked the pail is taken to the foreman (Mr. Steel), who measures the milk, and enters the quantity on a slate opposite the number of the cow. The milk is all passed through several strainers; and it is then placed—pure from the cow, and free from every kind of adulteration and admixture—in large tin cans, barred across the top and sealed. Every precaution is taken to prevent the carriers from adulterating the milk for their own dishonest profit, and with so much success that the milk enjoys the highest character for purity. Mr. Wright, the proprietor of the farm, has two offices in London, to which the milk is sent in vans—one in Farringdon-street, and another recently opened in Charles-street, Grosvenor-square, for the sake of his West-end connection, which is considerable. The busiest season is from Christmas to June or July, when town is full.

The care taken of the health of the cows is dictated not only by a regard to the excellence of the milk, but by considerations of the ruinous pecuniary loss which would result from disease in the herd. Cows are peculiarly susceptible to contagion, and when new stock are bought, they are placed half a mile off, in a quarantine meadow, for two or three months, in order that disease, if it exists, may have time to develop itself, before they are placed with the herd. It is stated that when Mr. Wright has been to market to buy cows he always changes his clothes, and generally takes a bath before he ventures among his own herd. Some time ago the foot-rot broke out among one or two cows in the quarantine meadow, whereupon orders were given that the men in charge of them should on no account come near the buildings of the farm, or enter the great pasture in which the cows are turned out for exercise. By this means the progress of the disease was stayed. The herd at present enjoy remarkably good health. The cows are mostly of the short-horned breed. A few are Alderneys; but they are said to be too tender and delicate for this climate, and, for the most part, do not give enough milk.

During the cold weather the cows are never turned out into the meadows. They are in small numbers let loose in a yard for exercise and water for about half an hour a day. At the present season the cows are turned into the great meadow for two or three hours in the middle of the day. At the call of the cow-herd they simultaneously direct their steps from every part of the field to the gate nearest the farm buildings. Every cow is branded with a number upon the horns

FRIERN MANOR DAIRY FARM.—THE COW-SHED.

and a corresponding number is hung up in her stall. Each cow knows her stall and her own stall; and they take their proper places—turning to the right or left, as the case may be, on entering the shed, with as much precision and regularity as a company of soldiers. In the course of a week or two they will be turned out all night, and this will continue for three months; advantage being taken of this interval to scrub the boards and walls of the sheds with soft soap and water, and to wash the building with lime-water, so that when the cows return in the autumn the sheds may be clean, sweet, and wholesome. The food of the cows at present is winter barley sown in autumn, tares, and a little mangel-wurzel once a day. In winter they have hay, grains, Swede turnips, and oil-cake.

Some of our agricultural readers may not be above taking a lesson from the Friern Manor Farm, in the economy and application of liquid manure. The floors of the sheds are covered with asphalte. The solid refuse is removed three or four times a day, being conveyed from the door of the long shed by a tram-way. The liquid manure is conveyed along small drains in the sheds into large tanks, whence it is pumped up into a drainage butt, and applied to the land in its liquid state. The results of the application of the liquid manure to the meadows of the farm are extraordinary—as many as half a dozen of Italian rye-grass in one year having been thus obtained. So rapidly is vegetation assisted by sending the drainage back over the land, that a crop has been cut in three weeks after the previous mowing. The Friern Manor Farm consists of 200 acres, about 30 of which are arable and the rest grass land. The common upland grass land produces three heavy crops a year from the application of liquid manure. The best agriculturists appear to doubt whether the application of manure in its solid state is not a great mistake; and this theory derives some corroboration from the practice upon Mr. Wright's farm. Upon one field no solid manure has been put for seven years, the drainage-butt having been sufficient to keep it "in heart," and to produce abundant crops during that time. No one can see the heavy grass crops now awaiting the scythe under this treatment without thinking of the wasteful process of polluting our rivers with refuse which, in its liquid state, might clothe our fields with richness and fertility, and cover our barren and sandy moors with the richest pasturage.

CALENDAR FOR THE WEEK.

SUNDAY, June 12—Third Sunday after Trinity. Wat Tyler killed, 1381.
MONDAY, 13.—Trinity Term ends. Battle of Marengo, 1800.
TUESDAY, 14 Battle of Saragossa, 1809.
WEDNESDAY, 15.—Magna Charta signed, 1215. Luther excommunicated, 1521.
THURSDAY, 16—Duke of Marlborough died, 1722.
FRIDAY, 17. John Wesley born, 1703
SATURDAY, 18.—Battle of Waterloo, 1815. William Cobbett died, 1835

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JUNE 11, 1853.

MANY alarming rumours are still afloat as to the intentions of Russia with regard to Turkey. In Paris it is believed that war is imminent, if it have not already commenced. In England the hopes of a peaceable solution predominate. Throughout the rest of Europe doubt and anxiety prevail. The last accounts that can be relied upon speak of another term of eight days as having been accorded by Russia for the re-consideration of the ultimatum of Prince Menschikoff. It seems, therefore, evident that the acts of that diplomatist have not been, and will not be, disavowed by the Czar. War was from the first intended. The Czar thought his opportunity had come. He was encouraged by the blunders of the French Government in their recent intercourse with Turkey, as well as by the influence of Austria towards the same power. He imagined that Turkey was powerless and friendless, and that Great Britain would be isolated in Europe, and unable to move a finger in defence of her ally. Events have shown that the Czar miscalculated. He was not prepared for Turkish resistance, although he might have laughed at the unavailing sympathy of the English people. It will be difficult to avert the collision so wantonly provoked; and to maintain peace with rights all the patience, prudence, and wisdom that the great powers of Europe can command. Great Britain is prepared single-handed to support the independence of Turkey. But she will not be left to fight the battle alone. France *must* become her ally in such a cause; and Austria and Prussia, though not so largely interested, must, for their own sakes, and for the sake of public order and international honesty, join in the defence of a state that has rigidly observed treaties, that has committed no offence, and that stands with dignity and firmness upon its rights.

The doubts that might have been entertained as to the policy of Louis Napoleon, have been to a great extent dissipated by a manifesto which has just appeared in the *Pays*, the organ of the French Government. The writer, M. de la Guerronnière, shows, with the most convincing logic, that neither France nor any other great power of Europe can remain quiescent under such an attack as that which the Czar has aimed against the independence of Turkey; and that it is the bounden duty, as well as the obvious interest, not only of France and Great Britain, but of Austria and Prussia, to remonstrate with the Czar, and to prevent, if need be, by force of arms, his threatened aggression. It is clear—if the opinions avowed by M. de la Guerronnière be those of the French Emperor, as we have every right to assume—that the Governments of France and England are cordially united upon the subject. The probability, therefore, is, that, should the Emperor of Russia be so blinded by ambition and lust of conquest, as to make war upon Turkey, he would be opposed, not simply by the reason and sentiment of Europe, but by the armies of Austria and Prussia, by the navies of England and France, and by the whole of the large military and naval force at the disposal of the Sultan. Nay, in so glaring an invasion, the Christians of Turkey, forming nearly one-half of the population would doubtless aid the allies in resisting the yoke of Russia. Under their Turkish rulers the Christians are daily increasing in wealth, power, knowledge, and enterprise. In the fulness of the appointed time it is not unlikely that they will supersede the Turks as the dominant race. Under the despotism of Russia no such prospect would be opened to them. They would be inconsiderable and unconsidered items in the vast aggregate of European and Asiatic Muscovy; and would acquire neither nationality, nor rights, nor privileges, nor advantages of any kind to counterbalance their subjection. But a potentate so politic, and usually so cautious, as the Czar cannot fail to have considered this circumstance amongst the many others that dissuade him from so rash an enterprise.

THE Government has introduced its long-expected bill for the future government of India. In a long and lucid statement, Sir Charles Wood explained the provisions of the measure. The subject is not one that the people or the Parliament of England take as much interest in as they ought. The reason may be that the affairs of India are imperfectly understood. As a nation collectively we bestow but little attention upon that which is foreign or remote. So much has this been the case, that, until the discovery of the gold of Australia, that and other magnificent colonies of Great Britain were known but by name to the vast majority of the British people.

In the case of India the Government has shared to some extent the ignorance of the community. We are, therefore, not surprised that Sir Charles Wood's oration fell coldly and tamely upon the ears of Parliament, and that it excited far less commotion than that which was felt in all classes of society when Mr. Gladstone, in a more homely but more effective speech, explained the items of the Budget. Mr. Gladstone had to deal with the palpable and the known—Sir Charles Wood, with the dim and the distant and the imperfectly understood. A statesman who has never been in India can but grope his way to truth amid the conflicting statements which reach him from those who have resided in or helped to govern it.

Sir Charles Wood's India Bill is coloured by this circumstance. Its great characteristic is its caution. It modifies rather than changes machinery and details. It interferes in the smallest possible degree with pre-existing arrangements; and its authors, as if they were mistrustful of their own power to devise a permanent settlement of so difficult a question, do not seek—as in the previous instances of the renewal of the East India Company's Charter—to fix any term for its continuance; but simply declare that the Government of India shall be carried on under the new mode until Parliament shall otherwise direct. But although the bill proposes little, there can scarcely be a question that its propositions are sound, and likely to be conducive to much future advantage. The principal changes may be briefly summed up:—The number of East India Directors is to be reduced to eighteen, of whom six are to be appointed by the Crown, and twelve by the East India Company. The Crown is to be limited in its appointments to persons who have served ten years in India. Six out of the twelve to be appointed by the East India Company must have undergone a similar probation. Canvassing for Directorships is to be prohibited; and the whole patronage, civil and medical, of the Directors is to be abolished. Directors are to receive salaries of £500 a year each, and the Chairman £1000. The President of the Board of Control is, like the Chancellor of the Exchequer, to make an annual statement to Parliament of the affairs of India for the past year. These are reforms much, though little, may lead to great results, and must meet approbation. It will be seen that what has been called the "double Government" is still to be preserved. Nor could it well have been otherwise, for any Government that should have entirely ignored and superseded the Board of Directors would have proved ineffective for good, but potent for evil. The changes to be introduced into the local Governments are of less importance. Power will be given to appoint a separate Governor for the presidency of Bengal, and also to alter, from time to time, the limits of presidencies and lieutenant-governorships. The establishment of a new presidency in the Punjaub of the Indus is provided for. Some improvements are also to be introduced into the constitution of the present Councils in India, of which the most important is the addition of three members to each council for legislative purposes, to consist of a member of the civil service and two Judges of the Supreme Court.

Sir Charles Wood described the state of India as highly satisfactory. He gave the lights of the picture, but not the shadows. According to his statement, if much had been left undone, still more had been done by the East India Company and the British Government for the welfare and advancement of the people of India. Taxation was not oppressive; public works had not been neglected; and wars had not been rashly or ignorantly undertaken. Everything had been done for the best, and was the best that could have been done. British rule in India was alike creditable to the governing, and beneficial to the governed. But Sir Charles Wood spoke at a disadvantage, as men usually do who speak upon the defensive. Sir J. W. Hogg, arguing on the same side, laboured under a similar weight. Far different was the case with Mr. Bright, who, as an attacking party, launched his invective with telling effect, and gave the world some of the truthful shadows of the too dazzling and fanciful picture, drawn by the President of the Board of Control. Perhaps there was error on both sides, and exact truth may lie almost as far from Mr. Bright's version as from Sir Charles Wood's. But truth, wherever it lie, will be served by the discussions that have taken place; and the Governors of India will be exposed more fully than ever to the broad daylight of parliamentary inquiry. The attention of the British people will be more frequently and more authoritatively drawn to the affairs of our superb dependency; and if good government be not increased by the process, India is a more exceptional country than we imagine it.

BANQUET AT THE TRINITY-HOUSE.—On Saturday evening the Hon. Trinity Corporation gave a grand banquet, at their house, Tower-hill, at which his Royal Highness Prince Albert presided, as Cadet Master of the brethren, for the first time. His Royal Highness was elected on the decease of the late Duke of Wellington. The entertainment was one of the most superb character that, perhaps, has ever been given at the Trinity house. It was served up in the grand dining hall, covers being laid for upwards of one hundred guests. The tables presented a most gorgeous display of plate, the appropriate piece given by William IV. forming the chief attraction thereby. Before seven o'clock his Royal Highness, attired in the uniform of the brethren, arrived, attended by Colonel Phipps and Colonel Grey; and was received by Captain Sheppard (the deputy-master), Mr Bennett (the secretary), and other of the officers: the band of the Grenadier Guards, which was stationed on the grand staircase, playing the National Anthem. The Prince took his seat as President of the Board, accordingly, the Lord Chancellor, the Lord Master of St. Katherine's, the Earl of Derby, Viscount Hardinge, Lord Campbell, Sir Francis Baring, the Speaker, &c.

ENTERTAINMENT AT THE MANSION-HOUSE.—The Lord Mayor gave a dinner on Tuesday evening to about eighty mayors and provosts of the principal cities and towns of Great Britain and Ireland. This, we understand, is the first of several entertainments the special object of which is to aid the efforts of her Majesty's Government by promoting a uniform organization throughout the country for the diffusion of a more general and practical knowledge of science and art among all classes. His Grace the Duke of Argyll, Earl Granville, Dr. Lyon Playfair, the Rev. Dr. Booth, Mr Cole, Captain Owen, Mr. Redgrave, Mr. Edgar Bowring, and other gentlemen connected with the Government and specially relating to science and art were invited to meet the municipal authorities convened on the occasion. A conference on the important subject which has thus brought together the leading officials of so many remote British cities and towns was held on Wednesday; and in the evening his Lordship threw open the Mansion-house to an assembly of the most distinguished friends of education, artists, and literary and scientific men, from every part of the United Kingdom. In our next we shall illustrate this interesting reunion.

EAST INDIA HOUSE.—On Monday a special general court of the East India Company was held in Leadenhall-street, to receive a communication regarding the arrangement proposed by her Majesty's Ministers for the future government of India; Mr. Lillie in the chair. The minutes of former proceedings having been read, the Chairman said the directors had summoned the proprietors at the earliest possible opportunity upon a subject which especially carried their attention at this moment. He then proceeded to lay the plan proposed by the Government before them. The correspondence between the Board of Control and the Company was then read by the secretary. Mr. Hume, M.P., suggested that if ever they required time for deliberation they ought to have it now, and it would be most unwise to discuss the great questions involved in the Government plan without giving the proprietors sufficient opportunity to make themselves acquainted with the whole details of the case; and the hon. gentleman concluded by moving that the correspondence be now printed and distributed for the use of the proprietors, and the further consideration of the question be adjourned until Monday, the 20th instant. Sir Peter Laurie seconded the resolution. A long discussion then took place, but ultimately the resolution was put and carried by a large majority. The proceedings then terminated.

THE COURT.

WINDSOR CASTLE.—The Queen and Prince Albert, accompanied by the Prince of Wales, the Princess Royal, Prince Alfred, Prince Arthur, the Princesses Alice, Helena, and Louisa, and the infant Prince, and attended by the Countess of Desart, Lady Caroline Barrington, Hon. Caroline Cavendish, Hon. Flora Macdonald, Lord Rivers, Colonel the Hon. C. B. Phipps, Mr. R. Ormsby Gore, Lord Charles Fitz Roy, Captain the Hon. Dudley de Ros, and the Master of the Household, left Buckingham Palace at three o'clock on Tuesday afternoon, for Windsor Castle. The Royal party occupied seven of the Queen's carriages, and were escorted by a detachment of the 12th Light Dragoons from Buckingham Palace to the terminus of the Great Western Railway at Paddington, where a special train was in readiness for the conveyance of her Majesty and the Royal circle to Windsor. Her Majesty arrived at Windsor Castle about four o'clock

On Wednesday morning the Queen and the Prince Consort took a drive in an open carriage. His Royal Highness Prince Albert, accompanied by the Prince of Wales and Prince Alfred, afterwards went to Eton College, to be present at the delivery of the annual speeches. On the same day his Royal Highness the Duke of Genoa, their Royal Highnesses the Hereditary Grand Duke and Duchess of Mecklenburg-Strelitz and the Duchess Caroline of Mecklenburg-Strelitz, and his Royal Highness the Duke of Cambridge, arrived at the Castle on a visit to her Majesty and the Prince Consort. The following distinguished personages also arrived on a visit. The Duchess of Sutherland, the Duke of Norfolk, the Duke and Duchess of Bedford, the Duke and Duchess of Buccleuch, the Duke and Duchess of Atholl, the Duke of Wellington, the Marquis of Breadalbane, the Earl of Clarendon, and Viscount Hardinge. In the evening a grand banquet was served in the Waterloo Gallery. Her Royal Highness the Duchess of Kent joined the party.

On Thursday the Queen and Prince Albert went to Ascot Races, accompanied by the whole of her Majesty's illustrious guests staying at the Castle. The Royal procession quitted the Castle at a quarter before one o'clock, in the following order:—

An open carriage and four, conveying her Majesty the Queen, their Royal Highnesses the Hereditary Grand Duchess of Mecklenburg-Strelitz, the Duke of Genoa, and the Princess Leiwa

An open carriage and four, conveying her Royal Highness the Duchess Caroline of Mecklenburg-Strelitz, her Serene Highness the Princess Adelaide of Hohenlohe, their Royal Highnesses Prince Albert K.G., the Prince of Wales, and the Hereditary Grand Duke of Mecklenburg-Strelitz.

An open carriage and four, conveying their Royal Highnesses the Princess Alice, Prince Alfred, and the Duke of Cambridge, K.G., the Duchess of Sutherland, Mistress of the Robes; and the Duke of Wellington, Master of the Horse.

The Duke of Buccleuch, K.G., and the Equerries in Waiting to the Queen and Prince, Lord Charles Fitzroy and Captain the Hon. Dudley de Ros, rode on horseback with the Royal cortège, which was escorted by numerous outriders in scarlet liveries. The rest of the Royal suite followed in open carriages and four.

The Duke of Norfolk, K.G., Lord Steward, the Marquis of Breadalbane, K.T., Lord Chamberlain, and the Master of the Household, preceded the august party to the race-course to be in readiness to receive her Majesty and Prince Albert at the Royal stand.

The Queen returned to the Castle at half-past five o'clock.

The Court returned to Buckingham Palace yesterday (Friday).

The Countess of Desart has succeeded the Viscountess Jocelyn as the Lady in Waiting to her Majesty. Lord Rivers has relieved the Earl Somers in his duties as Lord in Waiting to her Majesty; and Mr. R. Ormsby Gore has relieved Lieutenant-General Sir Edward Bowater in his duties as Groom in Waiting to her Majesty.

THE QUEEN'S COURT, &c.

The Queen held a Court on Saturday afternoon last, for the reception of Addresses on the Throne.

The Lord Mayor arrived at the palace, in procession, from the city of London, in his state coach, accompanied by the Aldermen, the Sheriffs of London and Middlesex (Messrs. Carter and Croll) Common Councillors, and officers of the Corporation. Addresses of congratulation on the birth of a Prince were then read from the Court of Aldermen, Court of Common-council, and the Commissioners of Lieutenancy, to which her Majesty returned most gracious answers.

The Archbishop of York had an audience, and presented to the Queen an address from certain members of the Convocation of York.

The Right Rev. Dr. Jackson had an audience of her Majesty in the Royal closet, and did homage, on being appointed Bishop of Lincoln.

The Queen will hold a Privy Council, on Monday next, at Buckingham Palace.

The Earl and Countess of Jersey gave a splendid entertainment, on Saturday evening last, to their Royal Highnesses the Hereditary Grand Duke and Grand Duchess of Mecklenburg-Strelitz and the Duchess Caroline of Mecklenburg-Strelitz, at their mansion in Berkeley-square.

THE DUKE OF GENOA has been an object of great interest in London during the past week. He has been busy visiting some of our London sights. Last week he went through the New Houses of Parliament—a proceeding which to a Prince whose country has so successfully attempted constitutional government. On Friday night, Mr. Panizzi and Baron Marochetti conducted him over the British Museum after regards he visited the Regent's Zoological Gardens. After the hour of dinner took an orthodox canter in Rotten Row. On Saturday, the Prince visited Woolwich; and, after inspecting the Arsenal, went to the practice-ground, where firing with the Minié and Enfield rifles took place. He fired five rounds from these rifles, and four of the balls struck its target within about one foot of the bull's eye, and in one instance within three inches. From the practice-ground at the butts the visitors proceeded to the marshes, where they witnessed rocket practice. On his return from Woolwich the Duke dined with Lord Palmerston in Carlton-gardens; then went to the Royal Italian Opera, and afterwards to the Countess of Jersey's reception. On Tuesday, the Duke, accompanied by the Sardinian Minister, went to Ascot, to witness the races. His Royal Highness returned to town before the sports of the day had concluded, and attended a grand entertainment in honour of his Royal Highness, given by the Earl and Countess of Clarendon, at their residence in Grosvenor crescent. On Wednesday the Duke of Genoa left town on a visit to her Majesty and the Prince Consort, at Windsor Castle.

IRISH MEMBERS OF THE GOVERNMENT.

The following correspondence explains the reasons that have induced Messrs. Monsell, Keogh, and Sadleir, to withdraw the resignations which they forwarded to Lord Aberdeen on Thursday, the 2nd of June:—

MR MONSELL TO LORD ABERDEEN

55, Chapel street, Grosvenor-square, June 9, 1853.

My Lord,—I was not present in the House of Commons on Tuesday night, and only learned from the newspapers what had passed in the debate. It appears, that in the course of a discussion upon the ecclesiastical revenues of Ireland, Lord John Russell, who is the organ of the Government in the House of Commons, made use of the Roman Catholic Church in a manner which could not fail to be most offensive to the members of that communion. His Lordship described, not individual members of the Roman Catholic Church, but that Church itself, "under the direction of its head," as hostile to free institutions and disloyal to civil governments; and therefore the qualification which his Lordship added to his censure, could not apply to any who, like myself, are in deep and thorough unity of sentiment and spirit with that Church and its head. No other Minister can, without dissent from the opinion of his Lordship; they have, therefore, gone forth as the opinions of the Government; and of a Government publicly professing such opinions I cannot with honour remain a member. Of the votes given upon the question before the House I do not complain; but sentiments so thoroughly hostile to the civil equality of the communion to which I belong, I cannot pass by. Acknowledging, therefore, as I am on many accounts bound to do, the great and constant liberality of your Lordship, and of many members of your Government, and the great personal kindness which I have received at your hands and at theirs, I beg respectfully to tender my resignation of the office which your Lordship has hitherto thought me worthy to fill. I am, my Lord, your obliged and faithful servant, WILLIAM MONSELL.

LORD ABERDEEN TO MR MONSELL.

Downing-street, June 3, 1853.

My dear Sir,—It is with much concern that I have received your letter, in which you tender your resignation in consequence of the proceedings which took place in the House of Commons on Tuesday last. I have to inform you that, while the vote on that occasion had the sanction of the Government, the reasons for that vote given by Lord John Russell, and the sentiments of which they were not shared by me nor by many of my colleagues. I wish this to be distinctly understood, as I might otherwise be justly charged with a departure from those feelings which, both in and out of office, I have held and still hold with regard to the Roman Catholic body, and the open avowal of which had appeared to several Roman Catholic gentlemen to justify them in accepting office under the Government. Words spoken in the heat of debate are liable to be misapprehended, and Lord John Russell desires me to say that he did not impute want of loyalty to the Roman Catholics, and that he expressly said that political and social equality ought to be maintained. I have made a similar communication to Mr. Keogh and Mr.

Sadler; and after this explanation I confidently trust that you will not perservere in an intention which would be to me the cause of sincere regret.—I have the honour to be, my dear sir, very truly yours,

ABERDEEN.

MR. MONSELL TO LORD ABERDEEN.

25, Chapel-street, Grosvenor-square, June 4, 1853.

My Lord,—I beg to acknowledge, with many thanks, the receipt of your Lordship's letter. That letter put it beyond doubt that the basis upon which I accepted office remains unshaken, and that the sentiments of which I complained are not those of your Lordship's Government. It is, indeed, deeply to be lamented that a circumstance should have occurred which required so imperatively the re-assertion by your Lordship of the principles which you have so long professed; and I cannot conceal from myself that even the frank and generous consistency with which your Lordship has acted on the occasion may prove insufficient in some quarters to allay apprehensions which have been excited. With me, however, it is otherwise. I have trusted and I do trust your Lordship, as a high-minded statesman, resolved to deal justly and liberally with a religious communion which has long suffered from opposite treatment; and henceforth, unless I shall learn from your own lips, or from formal acts, that the policy of the Government is changed, I shall accept every fresh difficulty which attends its course as a fresh reason for offering to your Lordship a continuance of the support which, as they are, which I am capable of rendering. Under these circumstances I can have no hesitation in acceding to your Lordship's wishes by withdrawing my resignation.

I am, my Lord, your faithful and obliged servant, W. MONSELL.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, JUNE 9.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Hemidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average, and the sign + above the average.

The reading of the barometer decreased from 30.20 inches at the beginning of the week to 29.32 inches by 6h 30m. on the 6th; increased to 30.1 inches by 9h. a.m. on the 8th; and decreased to 30.08 inches by the end of the week. The mean reading for the week was 29.984 inches. During the time the daily temperatures were below their averages viz., on every day from May 28th to June 7th—the mean daily defect for the period was 3. The mean temperature of the week was 56·8°, being 2·8° below the average of the corresponding week in thirty-eight years. The range of temperature during the week was 35·8°; the highest reading being 77·9° on the 8th, and the lowest 42·1° on the 4th. The daily ranges have been considerable, the highest being 29·2° on the 7th, the lowest 13° on the 9th, and the mean of the week 22·2°. Rain fell during the week to the depth of 0.05 inch.

Lewisham, June 10th, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending June 4, the births of 1444 children were registered in the metropolitan districts: of these 758 were boys, and 686 were girls. In the eight corresponding weeks of the eight preceding years the average number was 1334. The number of deaths registered to the week was 1023, which is less by a hundred than that of the week immediately preceding, which was 892; and, corrected for increase of population, becomes 981. The present return also exhibits an amount of mortality in the metropolis lower than has been observed in any previous week since January; and the 1023 deaths now returned exceed the expected number by 42, which is the least in excess of the average number since the week ending March 20, when the number of deaths exceeded that which was expected by 20. Zymotic diseases 219 deaths are referred (their average is 204); of these 41 are due to typhus, which is a decline of 12 in the week; to diarrhœa, 21 (which is a decline of 11 in the week), to measles, 28 (which is an increase of 9); with these exceptions, zymotic diseases exhibit no important fluctuation. To tubercular diseases, 208 (their average is 190); of these 122 are due to consumption, which is in excess of its average by 16. To diseases of the brain, 121 (their average is 110); of these, 73 were caused by apoplexy, 21 by paralysis, and 37 by convulsions. To diseases of the heart and blood-vessels, 50 (their average is 50). Diseases of the lungs and other organs of respiration continue still in excess of their average (which is 107). To diseases of the stomach, &c., 73 (their average is 57); and to violence, privation, cold, and intemperance, 55 deaths are referred (exceeding the average by 27).

ALDERMAN OF BRIDGE-WITHOUT WARD.—Aldermen Thompson, Sir Peter Laurie, Farebrother, Copeland, and Kelly having refused to leave their wards, Alderman Wilson, the next in rotation, has consented to this offer; and a precept has issued for a wardmote for the election of an Alderman to serve in Castle Baynard Ward, in the room of Alderman Wilson, appointed Alderman of the Ward of Bridge-Without. By the vacant gown there are two candidates—namely, A. A. Croll, Esq., one of the Sheriffs for the present year; and Henry Muggeridge, Esq., of the Compter, Old Bailey. There are, as nearly as possible, 200 liverymen voters who, upon this occasion, possess the franchise within the ward. The friends of Mr. Muggeridge appear to be sanguine of success. William Barber, Esq., of St. Paul's Churchyard, was invited to stand for the vacant Aldermanship, but he declined to do so. The election will take place the early part of the ensuing week.

THE ROYAL SOCIETY.—The second exhibition for the season of fruits, flowers, and plants, under the management of the Botanic Society, took place on Wednesday, in the gardens in the Regent's-park, and was attended by a host of people of rank and fashion, among whom were the Brazilian, Portuguese, Sardinian, Bavarian, Prussian, Greek, Belgian, Turkish, Sicilian, and American Ambassadors; the Bishop of Winchester, Dr. Wiseman, &c. The number of visitors was computed at nearly 10,000. The specimens of floriculture exhibited were of the highest character. The large gold medal was awarded to Mr. Speed, gardener to Mr. Edmonson, for a collection of twenty-four and specimen plants. Other gold medals were awarded to a considerable number of exhibitors.

THE KING OF HANOVER.—The Hanoverian Legation in Grosvenor-place is in a state of preparation to receive King George of Hanover and his Consort. A suite of English apartments, we hear, have been engaged for his Hanoverian Majesty during his sojourn in England. The King has one son, the youthful Crown Prince, after whom the Duke of Cambridge is in remainder to the throne.

THE CITY TERMINUS.—At a meeting of the Common Council on Saturday, Sir James Duke told the members that the President of the Board of Trade had informed him that the Government could not sanction the Bill (for the terminus in Farringdon street) in its present shape, as they did not consider it to be in conformity with the arrangements made in the year 1846, for the improvement of the Holborn valley.

THE SOCIETY OF ARTS AND THE MECHANICS' INSTITUTES.—On Thursday a conference was held of the representatives of about 240 Mechanics' Institutes, in connection with the Society of Arts, in the Adelphi.—Mr. Henry Cole presiding—when a variety of resolutions were carried, with a view of improving the position and promoting the interests of these institutions throughout the country; and in the evening the various representatives dined together at the Freemasons' Tavern, under the presidency of Earl Granville.

FANCY BAZAAR.—On Thursday, the 30th inst., and Friday, the 1st of July, a fancy bazaar will be held in Sir Thomas Maryon Wilson's grounds at Charlton House, in aid of the funds for the erection of parochial schools in Woolwich. Under the auspices of the distinguished ladies patronesses, we hope the amount realised will in some degree correspond with the importance of the object in view.

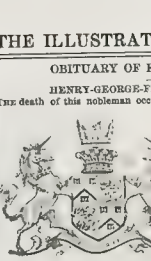
NEW WESTMINSTER-BRIDGE BILL.—The committee in the Common Council have reported to the court that "your committee have considered the said bill, and have inspected the plans of the same, and is appearing to us that the height of the centre arch was not to be less than twenty-five feet six inches above high-water mark, we did not propose to recommend any objection to the said bill; but in an amendment that the height of the centre arch being only twenty feet above Trinity high-water mark, we are of opinion that the erection of a bridge, the height of the centre arch being only twenty feet above Trinity high-water mark, will be a great obstruction to the navigation of the river, and your committee therefore recommend that the said bill should be opposed—that a petition should be presented to the House of Commons against the said bill." The report was unanimously agreed to, and a petition adopted.

THE CLOCK AT THE EXCHANGE.—The clock, which is said to be a most useful work of its kind, was supposed to be designed for the use of those who have business on 'Change, and a standard to regulate the time for the whole of London. Yet it is so placed that it cannot be seen from any part of Cornhill, or the surrounding streets, except from one single spot. To set your watch you must go to the corner of Birchin-lane, before you can accomplish that purpose (for on all the other sides the face of the clock is invisible); and, what is still more extraordinary, the clock is equally useless to the greater part of the frequenters of the Exchange, for it is shut out from at least three-fourths of the quadrangle and the arcade surrounding it.

OBITUARY OF EMINENT PERSONS.

HENRY-GEORGE-FRANCIS, EARL DUCIE.

THE death of this nobleman occurred on the 2nd inst., at Tortworth Court, Gloucestershire. His Lordship, so well known by his able advocacy of Free-trade, was a liberal patron of agriculture, and the inventor of the Ducie cultivator and other farming implements now extensively used. His breed of stock was of unrivalled excellence. During the past year, he filled the Presidential chair of the Royal Agricultural Society. (A Portrait of his Lordship appeared in the ILLUSTRATED LONDON NEWS, No. 569.)

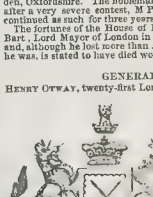


Lord Ducie was born 8th May, 1803, the eldest son of Thomas-Reynolds, fourth Baron and first Earl, by Frances, his wife, only daughter of Henry, Earl of Carnarvon. He married, 26th June, 1826, Elizabeth, eldest daughter of John, second Lord Sherborne, and leaves ten sons and four daughters. Of the former, the eldest, Henry John, Lord Moreton, M.P. for Stroud, now succeeds, as third Earl Ducie. He is married to his cousin Julia, daughter of James Haughton Langston, Esq., of Sarsden, Oxfordshire. The nobleman whose decease we record, was elected, after a very severe contest, M.P. for East Gloucestershire in 1832, and continued in such for three years.

The fortunes of the House of Ducie were founded by Sir Robert Ducie, Bart., Lord Mayor of London in 1631, who accumulated immense wealth; and, although he lost more than £80 000 by King Charles I., whose banker he was, is stated to have died worth half a million.

GENERAL LORD DACRE.

HENRY OTWAY, twenty-first Lord Dacre, died suddenly, on the 2nd inst., in Great Cumberland-place, in his fifty-fourth year. His Lordship had enjoyed the title only two years, having succeeded his brother Thomas Lord Dacre 21st March, 1851. He was born in 1799; and at an early age entered the army, in which he attained the rank of General in 1851. In 1827 he was appointed Colonel of the 4th Foot. Lord Dacre served with the Coldstream Guards in Flanders, from 1793 to 1795; at Copenhagen in 1807; and in the Peninsula from 1808 to 1812. He was present



at the battles of Talavera and Busaco, and at that of Salamanca, where he commanded a battalion of the Coldstream Guards.

He married, 24th July, 1826, Pyne Cresside, sister of Lord Brandon, and by her (who died in January, 1844) had two sons and four daughters. Of the former, the elder, Thomas, now 22nd Lord Dacre, married, in 1837, Susan Sophia, daughter of the Hon. Charles Compton Cavendish, M.P. Of the daughters of the late Lord, three are married, viz.: Mrs Granville Harcourt Vernon, Mrs. Samuel Whitbread, and Lady Hamilton Seymour, wife of the British Envoy at St Petersburgh.

The late Lord Dacre's younger son, Henry, is now M.P. for Lewes. The Barony of Dacre was originally in the family of Vaux. From this family race it passed through the Moultons, Greystocks, Fiennes, Leonards, and Ropers, to the Brands: the family of the present inheritors. It is one of the ancient Baronies by writ, descendible through heirs female.

SIR CHARLES ABRAHAM ELTON, BART., OF CLEVEDON COURT, COUNTY SOMERSET.

THE venerable gentleman, who was in his seventy-fifth year, died on the 1st inst. His family—one of antiquity in the counties of Hereford and Gloucester—has long been influentially connected with the city of Bristol, for which the first Baronet, Sir Abraham Elton, sat in Parliament.

Sir Charles, the subject of our present notice, was formerly an officer in the 11th Regiment; and held, at the period of his death, the lieutenant-colonelcy of the 2nd Somerset Militia. He married, in 1804, Sarah, eldest daughter of Joseph Smith, Esq., of Bristol, and by her (who died in 1835) had five sons and eight daughters. The two eldest sons were both unfortunately drowned in 1819; the third is now Sir Arthur Hallam Elton, seventh Baronet.

VICE-ADMIRAL SIR FRANCIS MASON, K.C.B

THE death of this gallant officer occurred on the 27th ult., at Eastbourne. Sir Francis was born February 10th, 1778; and, at the early age of thirteen, entered the Royal Navy. His services extended, consequently, over the most important period of our naval history. In 1794, he took part, when midshipman of the *Russell*, in Howe's first action; and, in 1795, in the victory achieved by Lord Bridport. Soon after attaining his commission as Commander, he was appointed to the *Scottish* sloop, in which vessel he came into frequent and severe contact with the enemy off Flushing. In 1806, having received post rank, he took the command of the *Daphne*, and served in her at the capture of Cape Vidoe, and in all the operations which preceded the evacuation of Spanish America. In 1809 Captain MASON was nominated to the *Rishgard*, and formed part of the force employed at the mouth of the Scheldt. In 1814, in command of the *President*, he assisted at the storming of St. Sebastian; and, in 1815, was made a Companion of the Bath. Having attained flag rank in 1851, Rear-Admiral MASON was appointed, in 1851, second in command on the Mediterranean station, and was invested with the insignia of a Knight Commander of the Bath.

Sir Francis married, April 16, 1805, Selina, youngest daughter of Henry, 2nd Viscount Hood, and had a very large family. His residence was Wicker Lodge, near Welford.

LIEUTENANT-COLONEL FRANCIS FULLER, C.B.

THIS distinguished soldier, an old Waterloo officer, died on the 28th ult., at Greenwich, aged sixty-five. He was for many years connected with the 50th Regt. of Foot, and took part in the following affairs:—Vittoria, San Sebastian, Nive, Waterloo, Cambray, and the taking of Paris. He subsequently proceeded to India, and served at Bhurtpore, under Lord Combermere. Colonel Fuller was wounded severely at the Nive. He held three medals—one for Waterloo, a second for San Sebastian, and an old war medal.

DEATH OF JOSEPH COTTLE, ESQ.—This much-respected gentleman died on Tuesday evening, at his residence, Firfield-house, near Bristol, at the advanced age of eighty four years. He was known by his literary labours; and was connected with Coleridge, Wordsworth, and Southey; and was distinguished as a poet.

MEMORIAL OF THE GREAT EXHIBITION.—On Saturday a public meeting was held at Willis's Rooms, for the purpose of promoting the execution, in bronze, of Baron Marochetti's well-known colossal statue of Richard Cœur de Lion, and its erection in some conspicuous site in the metropolis, as a Memorial of the Great Exhibition of 1851. The room was crowded with gentlemen interested in the promotion of art, or its distinguished patrons. The Marquis of Lansdowne was called on to preside, and expressed his high admiration of the statue, under Lord Combermere. Colonel Fuller was wounded severely at the Nive. He held three medals—one for Waterloo, a second for San Sebastian, and an old war medal.

DEATH OF JOSEPH COTTLE, ESQ.—This much-respected gentleman died on Tuesday evening, at his residence, Firfield-house, near Bristol, at the advanced age of eighty four years. He was known by his literary labours; and was connected with Coleridge, Wordsworth, and Southey; and was distinguished as a poet.

MEMORIAL OF THE GREAT EXHIBITION.—On Saturday a public meeting was held at Willis's Rooms, for the purpose of promoting the execution, in bronze, of Baron Marochetti's well-known colossal statue of Richard Cœur de Lion, and its erection in some conspicuous site in the metropolis, as a Memorial of the Great Exhibition of 1851. The room was crowded with gentlemen interested in the promotion of art, or its distinguished patrons. The Marquis of Lansdowne was called on to preside, and expressed his high admiration of the statue, under a conviction that of which he found there was complete unanimity. Earl Granville proposed the first resolution, to the effect that it was desirable to erect the statue of Cœur de Lion in some desirable site in the metropolis. The Earl of Eglinton seconded the resolution. Sir John Pakington proposed the next resolution, that, for the purpose of promoting the erection of the statue, a public subscription be now opened, and that further subscriptions be received by certain of the London bankers. Mr. Labouchere seconded the resolution, and said he could conceive of no ornament of the Great Exhibition of 1851 more suitable than that which furnished one of the chief objects of attraction, as the most appropriate to hand down recollection down to posterity. Viscount Canning moved that a committee be appointed to promote the carrying out of the objects of the meeting; and the High Bailiff of Westminster seconded the resolution, which was carried. Lord Overstone moved a vote of thanks to the noble chairman, which was carried with acclamation. Lord Lansdowne, in responding, said that England was a country celebrated for its erection of the best and finest horses, but as yet it was not renowned for its bronze steeds (Cheers and laughter). They would soon have a bronze sire; and the result, he hoped, would be the production of a large progeny, bearing the characteristics of their admired progenitor (Cheers). The meeting then broke up, many noblemen and gentlemen signing their names to large subscriptions before they left the room.

CITY MILITIA.—Notices have been issued calling upon all the men attached to the militia for the City of London to assemble at the City Artillery-grounds, Finsbury, on Friday, the 17th inst., at ten o'clock, to commence a 28 days' drill. Any men connected with the corps being absent without lawful excuse will be treated as deserters.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The Queen has appointed Dr. James Begbie to be her physician in Scotland. Mr J. G. Payne is appointed resident surgeon of the Millbank Penitentiary, in the room of Mr James G. Rendle, appointed medical officer of the new Prison at Brixton.

Photography has just been applied with great success to engraving upon steel. We shall give particulars in our next.

Accounts from Malta, of the 27th ult., state that the English squadron has been reinforced by two sail of the line.

A ball will be given by some of the members of the Toxopholite Society, at their lodge in the Regent's-park, on Wednesday, the 22nd inst.

King Maximilian II. of Bavaria, took leave of the Pope on the 27th ult., previous to his departure for Munich.

The *Cygnet Queen*, 95 days from Melbourne, has arrived; she has about half a ton of gold dust on board, and a large quantity of silver from the Cape.

From Silesia we learn that great distress existed, in consequence of the scarcity of remunerative employment, one-third only of the persons ordinarily employed in weaving being now engaged.

The import of the precious metals last week amounted in value to nearly one million and a half, of which £900,000 was gold from Australia. The shipments were about £300,000, of which £54,000 only was gold.

His Royal Highness Prince Albert has consented to lay the foundation-stone of the new Medical Benevolent College at Epsom, on Wednesday, the 6th of July.

Colonel Shiel, her Majesty's Minister at Teheran, has arrived at Constantinople from Trebizond. He is suffering much from ill health.

During the thunderstorm which lately burst over Cologne, the lightning struck the stables of the cuirassiers at Deutz, penetrated underneath and down thirty horses, of which six were killed, and then hurled itself at the opposite extremity.

Mrs. Beecher Stowe has added her name to the list of patronesses of the Distressed Needlewomen's Society.

On the 30th ult. there was a heavy fall of hail at Vienna, with the thermometer at 78 Fahrenheit, and a violent thunder-storm. The hailstones which fell were "as large as pigeon's eggs," and all the windows in the western part of the town were broken, and 746 panes in the passengers' hall at the railroad.

The fishing-smack *Pearl* (screw propeller) arrived at Grimsby last week, from Norway, with 7000 lobsters and several boxes of salmon for the London market.

The steamer *Union* has arrived at New York, with advices from San Francisco to the 30th April.

The price of ships at Newcastle and Shields continues to mount rapidly upwards. Vessels of a class which only a few months ago would have been a drug in the market, are now eagerly sought after.

Mrs. Paley died on board the *Forerunner*, on the 6th of April. Her husband, a clergyman, attached to the Mission at Abeokuta, went out with the Bishop of Sierra Leone, in December last. Mr. Paley died there on the 1st of April, his wife came on board, very ill, at Lagos, and died five days afterwards.

The reports of the discoveries of gold among the hills and gulches of the Upper Colorado River in Texas, and its tributaries, seem to be in a fair way for the most satisfactory confirmation.

The Duchess of Orleans, with the Comte de Paris and the Duc de Chartres have gone on a visit to the Countess Newilly at Clermont.

The Chancellor of the Exchequer attended on Tuesday morning, in his robe of office, in the Court of Exchequer, in Westminster, and was sworn into office before the Barons of the Court as Chancellor of her Majesty's Exchequer.

The *Golden Gate* sailed from San Francisco on the 30th April, with 2,137,307 dollars in gold dust, *en route* for New York.

On the 2nd inst. the ratification of the treaties for the renewal of the Zollverein were exchanged at the Foreign Office, Berlin.

At Weimar a committee has been formed for the erection of a monument to Schiller, Goethe, and Wieland.

On the 31st March, 1852, there were 9473 depositors in military savings-banks, and 1671 of the Ordnance corps. The amount of the fund is £157,826 6s 0d.

The Jews of Leipzic have just obtained permission to build a synagogue in that city. A meeting of the Committee, and the whole amount collected in a week. Among the subscribers were persons belonging to different Christian creeds.

A deputation from Highgate, headed by Lord Robert Grosvenor, M.P., and Sir Benjamin Hall, M.P., had an interview with the Earl of Aberdeen on Tuesday, in Downing-street, on the subject of enclosing Hampstead Heath.

Sir C. Fox and Mr. Crampton arrived at Berlin on the 5th, to make arrangements for the commencement of the waterworks there. Mr. Moriarty has also arrived for carrying out the negotiations relative to the Neustadt Railway.

The deliveries of tea last week in London were unprecedently large, amounting to 2,930,547 lb. About 550,000 lb. is a fair average; but the duty paid for several weeks past has been small, owing to the anticipated reduction.

At Stockholm, the triennial Exhibition of the Royal Academy of the Fine Arts has been opened. It consists of 226 works all by natives of Sweden—the number of native productions ever exhibited in that kingdom in a single year.

Accounts from Baltimore (U.S.) state that information had been received there of the death of Patrick O'Donoghue and another of the Irish exiles from Van Diemen's Land.

Mr. Edmund Woolthorpe has been elected surveyor for the northern district of the city of London, in the room of Mr. James Monnington, deceased.

The Privy Council, appointed to be holden by the Queen at Buckingham Palace this day (the 11th), has been postponed to Monday, the 13th inst.

The accounts from Newfoundland confirm the previous reports as to the state of the seal fishery. There had been very little seen on the coasts, and the produce of the fishery would be one-third less than last year's take.

The British Ambassador at Madrid has come to London on leave of absence.

The most careful persons will occasionally drop melting sealing-wax on their fingers. The first impulse of every one is to pull it off, which is followed by a blister. The proper course is to let the wax cool on the finger; the pain is much less, and there is no blister.

Her Majesty's yacht, *Victoria and Albert*, will have a camera obscura fitted in the rotunda, to enable her Majesty to take sketches of the various localities in Ireland and Scotland. It is well known that her Majesty and the Prince excel in this beautiful art.

The Camden Town and Euston-square stations of the London and North-Western Railways cost £800,000.

A number of coins, buried in an earthenware vessel, of Roman origin, have been discovered at Old Panama. The names of Maximinus, Diocletian, and Constantine, are legibly inscribed upon many of them.

Table-moving is now all the rage in Rome, the mystic circle of hands being formed with great success. The Pope himself has seen and verified the fact!

Mr. Brewster is likely to obtain at once a seat on the bench in Ireland, in which case Mr. Keogh will become Attorney-General for that country.

The whole of the gallery of St. George's Church, Liverpool, is now converted into school-rooms for the poor.

An English company is being formed to work silver and lead mines in Surdinia.

A well-earned pension has been given in Paris on behalf of literature—6000f., to the widow of the distinguished Orientalist, M. Burnouf.

The youthful daughter of the King of the Belgians completed her 13th year on Tuesday, having been born 7th June, 1840.

Cornelius Vanderbilt, Esq., the commodore of the *North Star*, now in the Southampton docks, has accepted an invitation from the Mayor and inhabitants of Southampton to a dejeûner, to take place at the Antient Gallery Rooms on Monday next.

The emigration to Australia still continues as brisk as ever, and the price of passage is kept up by the scarcity of shipping. The vessels that have arrived during the present year have almost all been discharged and reloaded again in about six weeks.

The Court of Aldermen have decided on publishing the names of those tradesmen and dealers who, on a second conviction, use false weights or measures.

Sir W. Molesworth and Lord R. Grosvenor have examined the neighbourhood of Highbury, relative to a park for Finsbury.

William Newton and Thomas Long, the masters of the Watermen steam-boats No. 4 and No. 1, have been fined respectively £10 5s. and £20 5s., for carrying more passengers than allowed by law. Joseph Ball, of the *Nereid*, was also fined £10 for a similar offence.

On Wednesday evening, about six o'clock, three newly-finished houses, in Westbourne-terrace North, Paddington, were totally destroyed by fire: the origin of the fire is unknown.

THE OXFORD INSTALLATION.

THE annual recurrence of the Commemoration Festival at Oxford is invariably looked forward to with most pleasurable anticipations, which were this year greatly enhanced by the rare occurrence of the inauguration of a new Chancellor.

Of the "Installation Week" we gave a programme in our last Journal. On Saturday evening, the University Amateur Musical Society gave their concert at the Town-hall. On Sunday, the Bampton Lectures, which are annually preached before the University, terminated; the lecturer this year being the Rev. W. Thomson, of Queen's, author of "The Laws of Thought." His sermons appear to have given universal satisfaction; and although, from the concourse of visitors that invariably takes place at Oxford at the Commemoration time, St. Mary's Church is always full on "Show Sunday," it is remarked that so large a congregation has never been attracted since the corresponding Sunday when the famous "development sermon" was preached by Mr. Newman.

It was not till Monday afternoon that the business of "Installation" really began. The London train, which brought the new Chancellor, the Earl of Derby, set him down at the Abingdon station, that he might be present at the opening of a diocesan training school at Culham. To this spot, which is a short half hour's walk from the station in question, many persons migrated from Oxford at three o'clock, hoping to find omnibuses at Abingdon. However, there was nothing of the sort, and the party proceeded by a long dusty road until they reached the Training College, which is a large and remarkably neat Gothic building.

At length, the Bishop of Oxford, and Lord Derby, with Lady Derby, Lord Stanley, and several other persons of distinction, made their appearance. The Bishop delivered the keys of the new edifice into the hands of Mr. Ashworth, the appointed principal of the college, and, in a brief speech, impressed upon him the duties of his office. But the great oration of the occasion was the speech of Lord Derby, who was formally introduced by the Bishop to the assembled multitude. The Earl expatiated at considerable length on subjects that have very often been connected with that of education, setting forth the material improvements of the age, regretting that moral improvement had not kept pace with them, stigmatizing the apathy of the last century, and pointing out the danger of mere secularity. His speech came to a practical conclusion with his declaration that he presented the college with £100—a declaration which caused the Bishop to express a hope that the parties present would not fail to profit by so munificent an example. The National Anthem was then sung, and the assembly pleasantly returned to Abingdon, finding omnibuses on this occasion, and dropping donations into the small red bags which met their eyes on their departure from the College precincts. (In No. 618 of the ILLUSTRATED LONDON NEWS, our readers will find a View of the new College.)

In the early part of the day the Bishop of Oxford had attended the re-opening of Dorchester Abbey Church, which is celebrated for its architectural interest. He proceeded thence to meet Lord Derby on his way from London, and it was immediately upon this meeting that the opening of the Culham College took place.

Lord Derby at six o'clock, reached Worcester College, where he was the guest of the Vice-Chancellor.

In the evening Christ Church Meadow became the point of attraction, and some thousands of persons were hurrying to this spot to witness the annual procession of the racing boats on the Isis, which was attended by an unusually large concourse of spectators, at least 10,000 in number, attracted by the fineness of the evening. The "eights" started from Iffley at seven o'clock, rowed up and saluted the head-boat, which was stationed at the University barge, by tossing their oars, passed under the left-hand arch of Folley-bridge, out again by the centre arch, and then proceeded down the river, round a punt moored off the Long-bridge, and returned up The order of boats was as follows:—

1. Brasenose.	9. St. John's.
2. Balliol.	10. Wadham.
3. Worcester.	11. New.
4. Christ Church.	12. Trinity.
5. Pembroke.	13. University.
6. Queen's.	14. Jesus.
7. Exeter.	15. Corpus.
8. Lincoln.	16. Oriel.

The New College Glee Club gave one of their charming musical entertainments in New College-hall, where the *élite* of the University, and many of its distinguished visitors, enjoyed a rich musical treat. The performances, which were highly creditable to this club, and greatly applauded, concluded with the far-famed song of "Dulce Domum."

On Tuesday, the great event of the week, and the one in which the chief interest is concentrated, namely, the installation of the Chancellor, took place in the Sheldonian theatre.

The reception of the Earl of Derby, in spite of the too obvious prominence given to political aims and designs in the copious list of partisan doctors and graduates which heralded his advent, has been everything that was to be expected from the ardent championship of his friends and the generous chivalry of his opponents. On an occasion like the present, good taste dictates that rival interests and feelings should be smoothed down into unison with the sentiments of welcome, that even opponents may consistently entertain towards a guest on whom the choice of the University has fallen. Long before the time appointed for the opening of the theatre, every entrance was besieged; but, by the judicious arrangements which were made on this occasion, there was an entire absence of that crushing and trampling down, both of ladies and gentlemen, which has hitherto been the characteristic of a commemoration

The first striking feature in the occurrences of to-day was the formation of the grand procession to accompany the Chancellor from Worcester College to the Sheldonian Theatre. This was certainly a very brilliant and stately show, and, from the number of dignified ecclesiastics present, is thought to have been the finest thing of the kind ever witnessed at Oxford. It consisted of the Vice Chancellor and heads of houses; the noblemen members of the University in their dresses of state; the bishops, thirteen in number, including the Bishops of Oxford, London, Exeter, Lincoln, Salisbury, Chichester, St Asaph, St. Andrew's, Quebec, Montreal, Ohio, Nova Scotia, &c., the doctors of divinity, law, and physic, the proctors, and the masters of arts

The interior of the Sheldonian Theatre on a commemoration day is certainly one of the most imposing sights in England, and it probably never presented a finer *coup d'œil* than it did on Tuesday. By ten o'clock every disposable inch of space, whether in the area or galleries, was completely occupied. The area crowded with the *élite* of the clergy from far and near, the lower galleries filled with elegantly-dressed ladies in the most charming variety of toilets, and the upper galleries crammed with a mass of undergraduates, noisy and tumultuous as ever, make up a scene as characteristic as it is dazzling. The favourite amusement of the students who fill the higher tier is to give expression to the feelings with which they regard the most eminent personages of the era, present or absent, and even the chief topics of the day. Thus, the names of Mr. Gladstone and Mr. Cardwell, when mentioned, elicited a burst of cheering as cordial as it was general; those of Lord Aberdeen and Lord Lyndhurst were greeted with similar, though more partial expressions of

THE RIGHT HON. THE EARL OF DERBY, IN HIS ROBES AS CHANCELLOR OF THE UNIVERSITY OF OXFORD.

INSTALLATION PROCESSION PASSING THE TAYLOR INSTITUTION, OXFORD.

THE OXFORD INSTALLATION.

applause. Lord Derby's name was hailed with plaudits that showed no lack of enthusiasm, which were renewed when that of his Countess was pronounced. Lord John Russell and one or two other statesmen seemed by no means so popular with the Oxonians, judging from their equivocal reception; while the names of Messrs. Cobden and Bright, on being called out by some of those who took on themselves to act the part of prompters, roused a perfect storm of obloquy. The *mot* of "Disraeli and Protection" was received with faint cheering and laughter; but some of the undergraduates would not be content without testing the feelings of the auditory in a less mixed form, and the name "Benjamin Disraeli," when shouted forth by a pair of stentorian lungs, became the signal for manifestations of conflicting emotions from the two parties into which it was evidently divided. After a warm struggle between the applauders and the hooters, in which it was difficult to say where the weight of numbers lay, the energy of the latter ultimately slackened, and the zeal of friendly partizanship increased until it became decidedly predominant. Amongst the oddities of these utterances of the *vox populi* we may enumerate the following:—"Mrs. Louis Napoleon," "Cardinal Wiseman," "Colonel Sibthorp," "the Queen's last baby," "the gentlemen in the crush below," "the illustrious foreigners," &c.

QUADRANGLE OF WORCESTER COLLEGE.—THE EARL OF DERBY'S LODGINGS.

At half-past ten the Earl of Derby, in his full official costume as Chancellor, entered the hall, and took his place in the state seat reserved for the chief academic dignitary. The noble Earl was accompanied, besides the right reverend prelates above mentioned, by his Royal Highness the Duke of Cambridge, his Royal Highness the Hereditary Grand Duke of Mecklenburg-Strelitz (on whom degrees of D.C.L. had been conferred by diploma, in a convocation held the preceding day); Mr Ingersoll, Minister from the United States, Mr Van Buren, formerly President of the United States; the Earl of Hardwicke, Earl of Malmesbury, Lord Redesdale, Lord Colchester, Mr Disraeli, M.P., Mr. Walpole, M.P., Lord Stanley, M.P., Sir John Pakington, M.P., and a number of other persons of distinction. Mr. Henley, M.P., was prevented by illness from attending to receive the honours destined for him.

The first business consisted in announcing the degrees of D.C.L., conferred on the Duke of Cambridge and the Hereditary Grand Duke of Mecklenburg-Strelitz, in a special convocation held on the preceding day. The degree of Doctor of Civil Law was then conferred, with the usual formalities, on the following eminent personages:—

The Most Noble the Marquis of Blandford, M.P.
The Most Noble the Marquis of Chandos, M.P.
The Right Hon. the Earl of Eglinton and Winton.
The Right Hon. the Earl of Hardwicke
The Right Hon. the Earl of Malmesbury.
The Right Hon. Lord Stanley.
The Right Hon. Lord Redesdale.
The Right Hon. Lord Colchester
The Right Hon. Lord St. Leonards.
The Right Hon. Thomas Babington Macaulay, M.P.
The Right Hon. the Lord Justice Turner.
The Right Hon. Sir J. S. Pakington, Bart., M.P.
The Right Hon. Spencer Horatio Walpole, M.P.
The Right Hon. Benjamin Disraeli, M.P.
The Right Hon. Joseph Napier, M.P.
Major-General the Hon. Sir Edward Cust, K.C.H.
The Rev. Joseph Fulling, B.D., Vice-Chancellor of the University of Cambridge.

The formula of proposition runs as follows:—"Placetne venerabili huic Convocationi, ut vir prænobilis (aut vir honoratissimus), &c., admittatur ad gradum Doctoris Juris Civilis, honoris causa? Placetne vobis, Domini Doctores? Placetne vobis, magistri?" This is read by the Chancellor, and met by the *placets* of the graduates assembled in the area beneath. In spite of etiquette, an occasional non-placet was heard, and sometimes, too, an ultra-vigorous "*magnis nobis*," which furnished some matter of amusement to diversify the detail of official routine. A Latin speech from Dr Philimore followed, quite inaudible in the confusion, on presenting the new-made graduates to the Chancellor, to whom each paid the homage of an obeisance, before passing to his seat among the doctors. Dr. Mitchell, Vice-President of Magdalen Hall, afterwards delivered the Creweian Oration, spoken at every commemoration in praise of the founders and benefactors of colleges.

The remaining business of the Convocation consisted in the reading of the English prose essay for the Chancellor's prize, "On Popular Poetry considered as a test of National Character," by Mr. Day, of Wadham College; and of odes composed in honour of the installation, for which prizes have been awarded—in Greek verse by Mr. Griffiths, of Wadham College, and Mr. Falcon, of Queen's College; in Latin verse by Mr. Atkinson, of Exeter College, and Mr. Danner, of Trinity College; in English verse, by Mr. Alexander, of New Inn-hall, and Mr. Arnold, of University College. After the conclusion of the ceremonial the noble Chancellor, attended as before, returned to the Vice-Chancellor's residence in Worcester College.

In the afternoon a grand horticultural show and promenade took place in the beautiful gardens of Worcester College, bordering the Isis. It was attended by the Earl and Countess of Derby, and Lady Emma Stanley; by Mr. Disraeli, and the other newly-made Doctors; and by all the nobility and gentry in Oxford. The band of the Coldstream Guards and the Royal Thame brass band played during the afternoon; and the fête went off, favoured by beautiful weather, as brilliantly as could be desired.

At four o'clock the Chancellor held a public levee in the library of the Taylor Institution, where many of the dignitaries of the University and the resident Masters of Arts had the honour of a personal introduction to their Chancellor.

The Earl of Derby went through his duties in a graceful and dignified manner; and the remark was made that he evinced the possession of that eminently academical qualification—correct Latinity.

Of the new batch of doctors, Mr. Disraeli was the favourite of the Undergraduates. For the rest, the Earl of Eglinton was well cheered, Mr. Macaulay received marked honours, and the Vice-Chancellor of Cambridge was equally fortunate. The Earl of Derby, by altering the usual formula, so as to give Lord Stanley the title of "*patris mei dilectissimus*," excited much sympathy.

The congratulatory addresses (one by Mr. Arnold, who gained the last Newdigate, and who has recently distinguished himself by a volume of poems) were likewise highly successful; and the Latin oration of Mr. Mitchell, the Public Orator, was marked by its ordinary fluency.

A Convocation was holden in the morning at eight o'clock, when the Rev. Dr. Plumptre (officiating for the Vice-Chancellor) admitted the following to *ad eundem* degrees viz.:—

Thomas Bevenet, Christ's College Cambridge, D.D.
Edwin Guest, Master of Caius College, Cambridge, D.C.L.
Charles Bickmore, Trinity College Dublin, M.A.
John Meridyth, Trinity College Dublin, M.A.
F. Morewether, St. John's College, Cambridge, M.A.
Charles John Myers, Trinity College, Cambridge, M.A.
Charles Begsby, Trinity College, Cambridge, M.A.
Daniel Winham, Christ's College, Cambridge, M.A.
John A. Bolster, Trinity College, Dublin, M.A.
Frederick Hogan, Trinity College, Dublin, M.A.
John H. Sherring, Trinity College, Cambridge, M.A.
Thomas L. Lane, St. John's College, Cambridge, M.A
Edmond R Turner, Caius College, Cambridge, M.A.
William White La Bark, Trinity College, Dublin, M.A.
Clemens M. Ingleby, Trinity College, Cambridge, M.A.

The opening of the School at Culham was looked forward to with no small curiosity, as the first meeting in public of two redoubtable masters of verbal fence since the shrewd encounter of wits that took place between them not long ago in the House of Lords. It was known that the Earl of Derby had consented to attend the ceremonial, and to take this opportunity of holding out the right hand of reconciliation to the Bishop of Oxford, and making a graceful atonement for the somewhat wanton attack which had led to a sharp passage of arms between them in the parliamentary arena.

This year, through the excessive amount of business consequent on installation, the ordinary Wednesday of Commemoration-week was split into two portions—a Tuesday and a Thursday—a Wednesday of comparative repose being allowed to intervene. Tuesday, though it was without a "Newdigate," was esteemed the grand day *par excellence*, and went off exceedingly well. In fact, a great local authority was heard to observe that it had been one of the "easiest" Commemorations, *quad* the Undergraduates, on record.

Next week we shall more fully illustrate the Installation Ceremonies.

RT HON T B. MACAULAY, M.P. RT. HON. S. H. WALPOLE. RT. HON. B. DISRAELI, M.P. SIR E. BULWER LYTTON, BART. M.P. THE EARL OF EGLINTON. RT HON J NAPIER, M.P.
RT. HON. THE EARL OF MALMESBURY RT. HON. SIR J. S. PAKINGTON, M.P.

NEW DOCTORS OF CIVIL LAW, AT OXFORD.

TUESDAY.—At the close of this day, the Earl of Derby was entertained at a grand dinner in the hall of Worcester College, of which Dr. Cotton, the Vice-Chancellor, is the Provost. There were present the noblemen, Bishops, Ministers, &c., who had taken part in the preceding details. The usual loyal toasts were followed by others relating to those present; among others, "the Chancellor," who returned thanks in a brilliant speech, replete with eloquent and classic lore, and was much cheered in various portions of it. It might be termed his inaugural oration, for it embraced almost every topic in which the University takes an interest, and, indeed, the "great" questions of the evening. The party broke up shortly after eleven o'clock. A grand display of fireworks was made in Worcester Close, which attracted a great crowd, and passed off in the most brilliant style. The first installation ball was given in the Town-hall, and was attended by several hundred guests.

WEDNESDAY morning the anniversary sermon for the benefit of the Radcliffe Infirmary was preached at St. Mary's Church by the Rev Dr. Scullard, head-master of Rugby School. A concert was given in the theatre at three o'clock. The principal vocalists were Staudigl, Piscbek, Gardoni, Miss Louisa Pyne, Miss Dolby, Mr Lockey, Mr. Hobbs, and Mr. H Phillips. The selection of music, chiefly from the works of the great German composers, was admirable, and met with great applause. The same evening, a grand banquet was given in Christ Church-hall to the Chancellor and a number of distinguished visitors. The second installation ball of the University Lodge of Freemasons, also took place in the Town-hall, and was attended by several hundred guests.

WEDNESDAY morning the anniversary sermon for the benefit of the Radcliffe Infirmary was preached at St. Mary's Church by the Rev Dr. Scullard, head-master of Rugby School. A concert was given in the theatre at three o'clock. The principal vocalists were Staudigl, Pischek, Gardoni, Miss Louisa Pyne, Miss Dolby, Mr Lockey, Mr. Hobbs, and Mr. H Phillips. The selection of music, chiefly from the works of the great German composers, was admirable, and met with great applause. The same evening, a grand banquet was given in Christ Church-hall to the Chancellor and a number of distinguished visitors. The second installation ball of the University Lodge of Freemasons, also took place in the Town-hall, and was attended by several hundred guests.

FINE ARTS.

BRITISH INSTITUTION.—WORKS OF THE OLD MASTERS.

THE annual Exhibition of works of ancient masters and recently-deceased artists opened on Monday last. This is always one of the most agreeable and instructive exhibitions of the season, opening up, as it does, glimpses into the various fields of art which are not usually commanded by the public. To the student and amateur it is a display of extreme interest, comprising specimens of the most esteemed masters, which, coming with all the freshness of novelty, afford opportunities for contrasting and weighing the relative merits and the peculiar styles of the several artists in a way which no one permanent collection of moderate extent could do. In the multitude of counsellors there is wisdom; and, in art, out of the multitude of examples comes ripeness of judgment.

Whilst, however, we fully admit our obligations to the possessors of these art-treasures for their annual contributions of specimens to this Exhibition, we are strongly of opinion that the utmost use is not made by the directors of the opportunity which is thus afforded them of instructing and improving the public taste. A miscellaneous assemblage of pictures of all schools and all periods may present a very attractive *coup d'œil* to the general observer, and its various contents individually may be thoroughly appreciated by the learned few; but it is comparatively valueless as a school in which to study the principles and the history of art. If the directors would make arrangements for occasional exhibitions of works of particular schools, and periods of art, and induce the owners of picture-galleries to contribute the best specimens in their possession to each, a result would be obtained the interest and value of which it would be impossible to overrate. One collection might consist of works of the Italian schools, from the earliest times down to the grand period of Michael Angelo and Raffaelle; another of the school of the Caracci and their followers; another of Flemish and Dutch art; another of Spanish; another of French and English art. Each exhibition would present an aspect peculiarly its own, whilst several of such displays taken in succession would afford a panoramic view of art in its various phases. What would materially add to the enjoyment of such exhibitions, would be the issuing of a *catalogue raisonnée* of the contents, instead of the meagre lists now supplied even if the notices went no further than to the history of the pictures themselves, with a mere hint of the artist's favourite style and subjects. Catalogues so enriched would not only be most acceptable as aids to the visitor, but, collected and bound in a series, would be highly interesting for future reference.

The collection now exhibiting consists of 173 pictures, but a small proportion of which are of the Italian school; by far the largest number being of the Dutch and Flemish schools; a few being by Spanish and French masters, and about a score by English. The post of honour over the chimney piece of the North room is worthily occupied by a picture by Rubens, representing "Thomyris, Queen of Massagetæ, ordering that the head of Cyrus to be dipped in blood." This is a fine example of the brilliant colouring of this master; but the character of the actors and the spectators of the barbarous scene about to be enacted betrays his want of power in all that concerns the higher requirements of poetic art. The attitudes of the figures are tame, and the faces have little or no expression in sympathy with what is going forward. This picture, which is exhibited by Lord Darnley, was purchased by the late Earl, at the Orleans Collection, for 1200 guineas. No. 3, the "Charity of St. Thomas de Villanueva," by Murillo (the property of Mr. T. Baring), is a small piece, sketchily executed, but admirable in warm colour and naturalness of expression. The Earl of Suffolk exhibits two small sketches, by the same artist: 28, the "Assumption of the Virgin," and 40, the "Coronation of the Virgin," both studies for larger and well-known works; the former similar in treatment to the large picture recently purchased by Louis Napoleon, from the Soult Collection, and of which we gave an engraving about a twelvemonth ago. More important than either of the above, is the fine portrait of Don Andres de Andrade (No. 64), recently purchased at the sale of Louis Philippe's Spanish Collection, and which may be cited as one of the most masterly works in this by the above-named master. It is now in the possession of Mr. T. Baring.

There are two fine portrait subjects by Rembrandt. 18, "A Dutch Lady and Gentleman"—the former seated, seen in profile; the latter standing, full face—from the collection of Mr. H. T. Hope, is a well-known work. In the artist's most careful manner; 21, "Lechard Bramer," belonging to the Earl of Carlisle, is in his bolder and later style, but capital for expression and healthy flesh tints. Of Cuyps are several specimens; two of which, belonging to the Earl of Carlisle, are especially beautiful. In 7, "Landscape and Cattle," the sky, to the deepest recesses of the picture, is absolutely bathed in pearly light; the reflexes of which are dotted about with surprising effect upon the foliage and other objects in the foreground. 38, "Landscape with Sheep," is a small picture, but of the most genuine character. By Wouvermans—a. "The Starting for the Chase," addressed the men on the great advantages of the lectures, which they appeared so fully to appreciate. "They had listened to Professor Forbes's eloquent and explicit description of the appearance and disappearance of spaces on the earth. Although he was not an old man, he could remember the appearance of the spaces with whom originated the desire to spread useful knowledge amongst the people; and he believed and hoped that this was spreading, and would spread to a greater extent. He was fully described by the lecturer until it embraced a very large circle of the entire earth." He congratulated those present on the advantages they had enjoyed, and assured them that the desire of the Government was to afford the industrial classes the means of improving their knowledge to the utmost extent.

At the conclusion of Mr. Cardwell's speech, a working man proposed, in a neat manner, a vote of thanks to the Professors who had lectured this year, and to Sir Henry de la Beche; which was seconded by another, who said he could assure the gentlemen who had so kindly undertaken the gratuitous task of instructing them, that he felt certain the seed they had sown would not have fallen on stony places, but that like bread cast upon the waters, it would be seen again after many days. Sir Henry de la Beche replied, making some remarks on the advantages the country derived from its working men, and thus the session concluded in the most satisfactory manner.

PHOTOCHROMOGRAPHY.—A Swedish artist, Carleman, has made a new discovery, which he calls photochromography. By this new application of photography he is enabled to take from three hundred to four hundred copies per day, and the various objects are represented in their natural colours. Herr Carleman will take out a patent in Germany without delay. Should this new art succeed, it will revolutionise lithography and engraving.

EXTRAORDINARY EFFECT OF ELECTRICITY.—A most extraordinary effect, produced by electricity, has just happened in one of the principal offices was in communication with one of his colleagues, when the electric wire fell on the purpose of transmitting intelligence happened to relax, and to come in contact with his arm. The electric current was passing through it, and the *employé* sustained a violent shock, which, raising him from his chair, violently threw him through a window opening on a garden. When he recovered his senses, he could not recollect his adventure, and could only be convinced of it by perceiving that his hair and beard, which were previously of a beautiful jet-black, had become in various places as white as snow. It devolves on scientific men to explain this phenomenon, which will form an epoch in the history of electricity.—*Courrier de l'Europe.*

MUSIC.

THE COLOGNE CHORAL UNION

The advent of the celebrated Kölner Mannner Gesang-Verein has been the great musical event of the week. The Choral Union was established in 1842, under the able direction of Herr Franz Weber, who is now the permanent conductor. In the great choral contests on the Rhine (France) and in Belgium, the Cologne Union has been signally successful in carrying off the prizes. The Union is formed almost exclusively of amateurs, from all classes of society, and members in all 122 members; of whom 89 of the principals have been selected to do their sporting in this country. The Union does not labour after individual profit, for the proceeds of their performances are devoted to art and charity, their motto being, "Let the good be invariably attained by the beautiful." Monday's programme, at the Hanover-square Rooms, included Neukomm's "Greeting to England," composed for the occasion; Mendelssohn's chorus "On the Water"; Zollner's double quartet, "Serenade"; Taubert's chorus, Reinecke's "Approach of Spring"; Brissler's "Vor Innen's Heim," and "Young Maidens" chorus. A facility in the singing of the Choral Union, like that of the Sacred Harmonic Choir, consists in the precision of their attack, the truthfulness of their intonation, the light and shade in the ensemble, and their marvellous management of the gradations of sound from the most delicate pianissimo to the most stunning fortissimo, in obedience to the conductor's baton. The conductor fairly comes in for a great share of the glory of the Choral Union. He has drilled the forces admirably, has them always in hand, and the nicety reached in the details of his study and intelligible beating has never been surpassed in our country. The whole performance made the deepest impression on the auditory, and several pieces were demanded.

On next Monday, the Choral Union will give an evening concert in Exeter Hall, at which the renowned organist, Dr Schneider, will play.

NOTES OF THE WEEK

Mendelssohn's "Elijah" was announced for repetition last night, at Exeter-hall, by the Sacred Harmonic Society; Mdme. Clara Novello, Miss F. Rowland, Miss Dolby, Miss Bassano, Gardoni, Novello, and Herr Formes, sustaining the principal parts.

The Paddington Sacred Harmonic Society performed Haydn's "Creation," at the St. John's School, on Thursday night, under Mr. Da Silva's direction, with Mr. Savage as leader

The Misses Cole and Mr. Alfred Gilbert gave their third soirée of chamber music on Wednesday night, at the Queen-Anne street Rooms. The brothers Alfred and Henry Holmes executed Spohr's violin duet in E flat very cleverly. Messrs. Chandler, Messrs. Colchester, Wallworth, Mills, Romberg, and Mr Benett Gilbert, were the other performers.

Herr Molique, who as a composer and violinist holds the first rank, presented his second concert on Wednesday night, at Willis's Rooms, assisted by Mdme. Clara Novello, Miss Messent, and Mr. Weiss. Molique performed, with Herr Pauer, in a new duet for pianoforte and violin, a remarkably clever and effective composition: the rondo is extremely graceful and pleasing. Miss Stabbach was the vocalist.

The second morning concert of the "Harp Union" took place on Tuesday, at Willis's Rooms. Messrs. Wright, Trust, and Oberthur were the chief performers, and amongst the other performers were Messrs Aguilar, Regondi, Lazarus, Jarrett, Baumann, Frarten, F. Mori, Mdme. Ferrari, Miss Bassano, Herr Pischek, and Mr. Ferrari.

The fifth performance of the Quartet Association took place on Thursday, at Willis's Rooms: Saintes, Cooper, Hill, and Piatti, and Miss Arabella Goddard were the performers.

Grisi and Mario have signed an engagement to go to America in the autumn, and to remain there for five months; they are to receive 17,000*l.* and their expenses paid for that time. They are to appear exclusively in operas.—*Musical World.*

THE THEATRES.

ROYAL ITALIAN OPERA.

Meyerbeer's "Huguenots" was given for the second time on Saturday night, in presence of her Majesty. The house was again crowded to excess, and the opera received with enthusiasm. Grisi, Castellan, Mdlle. Vestvali, Zelger, Gardoni, Formes, Belletti, Polonini, Tagliafico, and Marini render the present cast very complete. On Monday (which was included in the subscription, for the final night of August 30), the "Huguenots" was repeated. On Tuesday, Rossini's "William Tell" was performed. Mozarts's "Don Giovanni" was originally announced for the extra night on Thursday, but the bills were changed—in the first instance, to "Norma," and the second act of the "Elisir d'Amore;" and, subsequently, to the "Roberto Il Diavolo," with Madame Jullienne, Madame Castellan, Mdlle. Bertucca, Polonini, Tagliafico, Stigelli, and Tamberlik; but this cast was subjected to a change at the eleventh hour, owing to the indisposition of Madame Jullienne. A further variation in the programme was rendered necessary by the illness of Mdlle. Bertucca, who undertook the part of *Alice*, and was prevented from appearing. It is one of the most charming characters in the opera, and powerfully sustained by Mdlle. Alboni. Mdlle. Bertucca is the smallest of Madame Castellan in the Princess: she deserves credit for undertaking the task at such a short notice. These alterations in the leading characters naturally affected the steadiness of the whole, as a performance of one of Meyerbeer's works cannot be improvised by any artists, however gifted.

Berlioz's three-act opera, "Benvenuto Cellini," will be produced on the 18th inst. Madame Jullienne, Madame Castellan, Mdlle. Bertucca, Tagliafico, Herr Formes, and Tamberlik, are included in the cast.

ST. JAMES'S

Madame Rachel appeared on Wednesday in a new play, the "Diane," by M. Emilie Augier, when has recently enjoyed great Parisian popularity. *Diane de Montsabrié* (Madame Rachel) is the sister of *Paul de Mirwmale*, who has slain a French noble in a duel, and conceals himself in the house of the *Duchess de Rohan*. His sister's visits to the place of refuge lead the officers to the spot, and the young man surrenders. The plot then turns to a conspiracy against Richelieu, the result of which it is hoped by *Diane's* lover, the *Marquis de Pienne* (M. Raphael) will lead to the liberation of *Paul*. But *Diane* has a opportunity of pleading herself with the Cardinal, and reveals to him the conspiracy. She contrives to a scene between the latter, her brother, and herself, in which *Diane* has to plead for the life of *Paul*, but, ultimately, is compelled in honour to consent to his doom. The sensational both wins and satisfies, when it seems him not only pardon, but *lettres of noblesse*. Her lover, the Marquis, however, continues in peril, and *Diane*, as an example of romantic self-sacrifice, has, in the end, to disclaim her affection for him. The excellent phases of emotion were grandly interpreted, and the audience testified their admiration by calling the great actress forward in every act.

HAYMARKET.

Acting up to his determination to produce a series of dramatic novelties from first-class authors, Mr. Buckstone produced, on Monday, a new five-act play by Mr. Crowe, somewhat quaintly entitled "Ice Cold Kindness." The meaning of the title points to the central incident of the piece. The son of the *Duke of Urbino* has privately married the daughter of a painter, and, during the absence of the latter, by the command of his father, is about to wed Lucasum *Viola*; at which, enraged, the old Duke, tottering on the brink of the grave, threatens to execute his wife and child. To save both, the father—Hal Bentley (Mr. B. Sullivan)—[illegible] in the supposition that *Florentius* (Miss Reynolds) is only [illegible]. The gaoler woman is afterwards incarcerated, and then set at liberty by the interposition of *Viola* (Mrs. Buckingham); but she wanders the moonlight forest with her boy in her arms, frightening the peasantry, who mistake them for spectres. Meanwhile, the old Duke dies in an excess of fury against his sons for refusing to sign contracts to wed at his pleasure, and *Giulio* succeeds to his power. Both child and mother at length reach the court, but *Florentius* refuses to acknowledge him as her husband until he explains his conduct for having repudiated her. On understanding that his apparent baseness was but a "cruel kindness," their happiness and their reconciliation is complete. Mr. Howe, as the old *Duke*, acted with much force, and obtained great applause; but he must learn to subdue his energy. Miss Reynolds was graceful and touching in the wife and mother; and Mr. Sullivan took great pains with the character of the husband. But the plot, happily, was relieved by some comic characters, ably impersonated by Mr. Buckstone, Mrs. Fitzwilliam, Mr. Corri, and Miss E. Chaplin; whose appearance, when the serious dialogue—which wants concentration and abridgment—became tedious, was truly welcome. The *mise en scène* and scenery, particularly the portions of it painted by Mr. Beverley, are admirable; and the whole does credit to the spirit, judgment, and enterprise of the management.

DRURY-LANE

This theatre opened on Monday with a five-act play: and a ballet, under the direction of M. St. Leon. It is on the latter that the management has expended its resources. It is entitled "The Spirit of the Valley," and is accompanied with scenic and choreographic effects, remarkable for their novelty and merit. Speeches, songs, and instrumental playing entered into the composition, and M. St. Leon himself, as *Father Ambroise*, a decrepit village fiddler, a farmer's boy, a gipsy, and a Spaniard, was admirable. Miss Julia Harland, too, had some graceful songs; and Mdlles. Plunkett, Nathan, and Lisericux, together with M. Frappart, excelled in the dance.

The new play is by Mr. Wilkins, the author of "Civilisation." It is entitled "St. Mars"—the name of the hero—the follower of a certain Prince of Modena, who marries the lady *Dianora*, whom the latter had unfortunately loved. He threatens her incarceration, but is prevented by a

fanatic, who accomplishes his assassination. In such a plot, there are not the elements of greatness; but the parts were excellently well acted by Mr. Davenport, Mr. Hoskins, Miss F. Vining, and Miss Julia Harland; the last of whom, in a lively character, executed a bravura which justly received unanimous and strongly-pronounced applause.

PRINCESS' THEATRE.—Lord Byron's tragedy of "Sardanapalus" will be produced at this theatre on Monday next, for the benefit of Mr. and Mrs. Charles Kean. The discoveries made by Layard, Botta, and others, on the site of ancient Nineveh, have been taken as the authorities in the production of this drama. Mr. Layard, during his latest excavations in the south-east palace of the mound of Nimroud, arrived at the conclusion that the above structure was the work of Esarhaddon, and no other than Sardanapalus, who, conquered by the Medes and Babylonians, under Cyaxares (B.C. 606), made one funeral pile of his palace, his wealth, and his wives; and the costume, architecture, and customs of the ancient Assyrian people, have been verified by the bas-reliefs in the British Museum; but for which it would have been impossible to render Lord Byron's drama with proper dramatic effect. We need scarcely add, that with so fortunate a combination of circumstances the result must be successful.

GERMAN PLAYS, ST. JAMES'S THEATRE.—Mr. Mitchell announces a second season of German Plays at this theatre, to commence July 1, with a company of eminent artistes, from the principal theatres in Germany.

MISS RAINFORTH'S ENTERTAINMENT.—This distinguished vocalist delighted her admirers on Wednesday evening, at Music-hall, Store-street, with the first of a series of "Illustrations of the Lyrical and Romantic Poetry of Scotland." The initial portion of the entertainment consisted of select readings from Sir Walter Scott's poem of "Marmion," and these extended over nearly the whole of the first, second, third, fifth, and sixth cantos. Miss Rainforth's management of the metrical varieties in each stanza was admirable; and throughout she delivered the poem with elocutionary grace. The few didactic and sentimental passages were particularly distinguished, and received with much applause. The description of the "Trial of Constance," and that of "Flodden Field," were of course the most striking points in the delivery; both were pronounced with emphasis and discretion, and the death of Marmion was full of effect. Miss Rainforth's mode of reading is much to be commended for having kept her recitation within reading limits, and for not attempting a dramatic or histrionic display, which in a concert-room is always out of place. During the recasing, Miss Rainforth interposed some vocalisations, which were especially pleasing. The songs of "Young Lochinvar," "Blue Bonnets over the Border," and "Flodden Field," were likewise well executed. The second part consisted altogether of lyrical illustrations, each song being accompanied with an historical sketch. The old songs, "Adieu, dear Bonnie Aberdeen," and "Up in the Morning early;" the former arranged by J. Ballantine, Esq., F.R.A.S., were much approved by the audience. Mr. Ballantine has also contributed to the programme, "Tha bhade o' gras kepa its ain drap o' dew," the theme of which is highly interesting and piously touching. Burns's "Oh, whistle" and "Wandering Willie" were old friends we were happy to renew. The evening was concluded with Roy Patterson's "Caller ou'!" and the lady retired from the plaudits of a numerous and fashionable audience, who had thus enjoyed an intelligent and delightful entertainment.

THE CAMP AT CHOBHAM.

The works of the encampment have at length begun to assume a tangible outline, and at the present stage of their progress convey something like an adequate idea of the *tout ensemble* when completed. It is true that the cavalry stables, with their canvas roofs glistening in the sunshine, are as yet the only prominent features of the "tented field;" but when an army of 10,000 men, horse, foot, and artillery, marching with flying colours to martial music, is thrown in, as it will be on Tuesday, to fill up the picture, it may be easily imagined how much the scene will be enlivened. It is expected that her Majesty will be graciously pleased to be present to witness the arrival of the troops on the ground; and a spot commanding a fine view of the entire common has been marked out for the erection of the Royal Gazebo. During the week many of the visitors to Ascot Races made a *detour* by Chobham to witness the progress of the encampment. On Tuesday the streets of Windsor were in a state of commotion, by the sudden appearance of a detachment of the 42nd Highlanders, and of the 93rd, for whose accommodation the police were obliged to press several public conveyances off the streets into their service to convey their baggage to the Camp. During the day detachments consisting of quartermaster, subaltern, two sergeants, and fifty men each from the various regiments of cavalry and infantry arrived at the encampment, for the purpose of preparing the huts, marquees, &c., for the reception of their respective corps, which were necessary for the arrival of the main body on the 14th. Colonel Torrens, the Assistant Quartermaster-General, and Lieutenant-Colonel Wood, the Assistant Adjutant-General, were amongst the principal Staff officers who visited the Camp. On the previous day (Monday) Lord Hardinge, the Commander-in-Chief, inspected the progress of the works, attended by Sir W. Peaton, the Commander of the Camp; and, after examining the stables, and visiting various points of the encampment, expressed himself in terms of the highest approval. The Sappers and Miners, as they proceeded to work after dinner from the Camp on Shiphill, some with buckets and ropes, for the purpose of well sinking, resembled very much a band of gold-seekers in the Australian diggings. The officers of this corps, under whose personal superintendence the works up to this time have been conducted (Captain Lovell and Lieut. Drake), were granted to the Commander-in-Chief by Colonel Vickers, of the Engineers, and were complimented by his Lordship on the science and skill manifested in their operations. Captain Seton (of the 93rd), Captain Sinclair (of the 38th), and several other officers were also presented to the noble and gallant Lord. His Lordship afterwards inspected the site chosen for her Majesty's grand stand, from which the manœuvres of the troops will be in all directions observable. Near to this point, just at Lon, cross, the entrance to the Common, and adjoining the artillery stores, Messrs. White and Lon, of the Railway Hotel, Godalming, have erected, by permission, a large refreshment saloon.

On leaving the Common, Lord Hardinge, accompanied by Colonel Challoner, who occupies a beautiful seat adjoining, proceeded in the direction of Windsor, for the purpose of surveying the roads over which the route of her Majesty will lie on her occasional visits to the Camp. The distance is about nine miles.

Preparations on a most extensive scale are being made by the South-Western Railway Company, for the conveyance of the public from Londing the Chertsey station on their line to bring the nearest available point to the Camp, and only four miles distant

The road-making and drainage operations are now being carried on with much better prospects of success than at the date of our last notice. By damming up, and giving a new direction to various small rivulets, several hundreds of acres of land have been rendered dry, which will be found exceedingly advantageous for the horses. Several excellent springs, too, have been found, which will afford a good supply of water.

We understand that the differences existing between Lord Onslow and the parish authorities regarding the erection of refreshment booths for the public, have been smoothed over and arranged, and that such erections will be allowed beyond a certain boundary, so as not to interfere with the movements of the troops

Several "circular memoranda" have issued from the Horse Guards with regard to the encampment, but want of space disables us from giving them *in extenso*. Amongst other orders the authorities direct that the whole of the troops intended to encamp on the 14th shall, if possible, arrive at possible and set up their tents on the same day, and at the same moment, so that it may be ascertained in what period of time a given number of troops in the various stations of England can be concentrated on any one point in a case of emergency. As the troops who are to be encamped will have to raise their tents on the day of their arrival in camp, and as some of the corps have not been encamped for many years, the General Commanding-in-Chief has directed that a few short rules be promulgated to these regiments with regard to pitching and striking their tents, so as to assist them in performing their duty with alacrity and precision.

His Royal Highness the Duke of Cambridge has visited the Camp during the week, accompanied by Lord Seaton, and inspected the progress of the works. A camp, after the suggestion of Colonel Berkeley, upon a new principle involving the formation of an 18-inch wall of turf, was pitched in the presence of his Royal Highness, and obtained his approval; but, owing to the barrenness of the Common, and the inadequate supply of turf, this idea has been found impracticable.

Next week we shall illustrate some of the most striking scenes of the encampment.

Captain Inglefield, of her Majesty's steam-vessel *Plumper*, has been presented with four pair of ringdoves (a present which he was to let fly half-way to Cape Farewell, another on reaching that place, and the remainder at future periods. As, probably, the birds may not reach their doves at any person who will forward to Messrs. Prescott, Grote, and Co., Threadneedle-street, the note attached to each bird, shall be rewarded for their trouble.

A PECULIAR POSITION.—Dr. Clements, a physician of some celebrity at Bath, paying his last visit to a patient who was on the point of death, was desired by the sick man, as no attendant was in the room, to put his hand into his pocket and take out his fee. "But would not that be very like picking your pocket, my friend?" said the physician, as he handled the dying man's pantaloons. "Very like, indeed, sir," said the other, and expired.

CHESS.

TO CORRESPONDENTS.

S. M., Weymouth; F. REALEY, J. D., OMEGA.—Under consideration.
DAVIS.—Stella's "Difficulty" was solved correctly by Mr. Wilson Bigland, of Leamington, and Mr. Phenix, of London: and by these two of our correspondents only.
J. A. G., of Dublin. Too easy.
T. M. G.—It admits of an easy mate in three moves.
ONE WHO LOVES CHESS.—The game played by signals between the ships *Barham* and *Wellesley*, on the homeward passage in 1854, from Calcutta to London, is interesting as being probably the first game ever conducted under such circumstances. Can our correspondent favour us with a more accurate copy than the one he has forwarded, which, in many parts, is quite unintelligible?
J. R.—I. The problem sent is much too simple. 2. No. 467 is perfectly correct
STELLA.—The continuation of your favour is not sufficiently explicit for us to understand what the intention of each piece is to accomplish. The last move of Queen's Knt. to Queen's Bishop's 4th would be a blunder, as your opponent would then win the Queen by playing Bishop to Queen's Knt. 2nd. Your game has been disturbed by the unfortunate removal of the Queen's Knt's Pawn at the very commencement of the game.
C. S. NAIRNE.—Although we do not profess to be connoisseurs in chess, we are much pleased with the problem you have sent us, and think it highly creditable to the composer. We shall be happy to receive any others which you may favour us with.
A CONSTANT READER.—Your solution is correct, and the problem is very neatly composed.
ALPHA

by Mr. St. John (Pope's Lord Bolingbroke); by Mr. Craggs, the statesman; and, up to the period of his death, by the widow of Sir William Trumbull. Being a younger son, his high integrity stood in the way of affluence, but assured him rewards of a richer and more permanent nature. His poems are included in Dr. Johnson's collection, with a brief memoir. His share in the translation we usually designate "Pope's Homer" was the version of the 1st, 4th, 10th, and 20th books of the "Odyssey;" and these Johnson pronounces to be not distinguishable from those translated by Pope. His versification is marked by grace and elegance. He was an eminent scholar and an amiable man; in proof of which we quote Pope's letter, the original MS. of which is still preserved, to his other coadjutor in the "Odyssey," Broome, on the occasion of the death of Fenton, at the age of 47 years. In this letter, Pope writes:—

I shall with pleasure take upon me to draw this amiable, quiet, deserving, unpretending, Christian and philosophical character, in his epitaph. There truth may be spoken in a few words: as for flourish, and oratory, and poetry, I leave them to younger and more lively writers, such as love writing for writing sake, and would rather show their own fine parts yn report the valuable ones of any other man. So ye elegy I renounce.

I condole with you from my heart at the loss of so worthy a man, and a friend to us both. Now he is gone I must tell you he has done you many a good office, and set your character in the fairest light to some who either mistook you, or knew you not. I doubt not he has done the same for me.

Adieu: let us love his memory, and profit by his example. I am, very sincerely, dear sir, your affectionate and real servant,

August 29th, 1730. A. POPE.

To the Rev. Mr. Broome, at Fulham, near Harlestone, Norfolke.
By Beeches Bag.

If Pope has been considered at times to have written letters with an eye rather to the press than to his immediate correspondents, the above must be viewed as an epistle from the heart, dwelling on real merit.

The fire which has destroyed old Shelton Hall originated in a large stack of crate-wood sticks, used in the construction of the crates in which earthenware is packed. The wind, which was high at the time, carried burning particles over an intervening new house, and a space of about 200 yards, to the barn of Shelton Hall farm, and thence to the house itself, both of which were quickly converted into the heap of ruins our Artist has depicted in the accompanying Sketch. Such a disaster produced great consternation in the town and populous neighbourhood. The church bells immediately rung the note of alarm; the clergyman

REMAINS OF THE OLD SHELTON HALL.

of Hanley Church brought the service to a close, and large numbers assembled at the blazing scene. The efforts of the firemen and engines were quite unavailing; and the whole of the premises, old and full of inflammable materials, speedily became a prey to the flames.

GREAT FIRE AT THE GUTTA PERCHA COMPANY'S WORKS.

A FIRE of a most destructive character broke out on Sunday morning, shortly before eleven o'clock, on the premises of the Gutta Percha Company, in the Wharf-road, City-road. The Company's premises included an immense warehouse for the raw material; a tube and wire manufactory, in which the wire for the submarine and subterranean telegraphs was prepared; the warehouses for manufactured goods, with a range of counting-houses over them; three boiler and engine-houses; the cleansing and kneading-rooms; the rolling mills; and the mechanics' shops, where the whole of the valuable machinery employed on the works has been made. Of this immense range there now remains only the raw material warehouse, the tube manufactory, and the mechanics' shop.

REMAINS OF THE GUTTA PERCHA COMPANY'S WORKS, CITY-ROAD.—SKETCHED AFTER THE RECENT FIRE.

The fire was discovered by the wife of a confidential servant of the company, who observed smoke issuing from the warehouse above the boiler-rooms.

The premises contained property valued at £100,000; and it is supposed that the damage done will exceed £30,000. The fire burnt with extraordinary rapidity. On the premises of Mr. Gorton, for making Edwards's fire-lights, a ship-load and a half of wood was destroyed; and so great was the body of fire, that several buildings on the opposite side of Wenlock-basin, 100 feet across, were ignited. Two vessels lying in the canal, near the factory, were totally destroyed. Fortunately, the telegraphic wires and tubes were saved; and three immense tanks of naphtha were saved by the bravery of the fire-brigade. The counting-house books and papers, which were contained in one of Milner's patent fire-proof safes, were also saved, although the intense heat in many parts melted the outside of the case. The property was insured for the most part in the Yorkshire, Imperial, Scottish Union, and Royal Insurance offices.

During Monday a most searching inquiry was made by the brigade authorities, and also by the officials of the company, for the purpose, if possible, of ascertaining how the terrible disaster originated, but nothing that could be depended upon could be learned. The only thing definite that could be gleaned was that, when the factory was closed on Saturday, there was not the least smell of fire in any part of the premises, and every compartment seemed perfectly safe as usual.

Such an unusual circumstance as a fire communicating with buildings so far from the one in which it began, on the other side of the Wenlock basin, appeared to every one who did not witness it next to an impossibility, more especially so, as there was a large sheet of water to separate one row of premises from those where the flames commenced. Those persons who witnessed the commencement of the conflagration, however, do not express the least astonishment that the flames should have travelled to such an extraordinary distance, for they describe the fire to have shot from the windows and doors like several furnaces in full play. The land side of the factory has been measured, and it was found to be precisely of the same width as the basin—namely, 110 feet. But that space gives a very faint idea of the extent of the whole premises, as scarcely an inch of ground was left unoccupied, the whole being turned to some advantage, either for warehouses or workshops.

Upon a closer examination the whole of the valuable stock-in-trade, &c., in the machine-rooms, the hand-houses, the cutting-rooms, the rolling-houses, and the press-houses, and the picture-frame department, appear for the most part destroyed; but there seems some chance that many of the bevel cog-wheels and some other heavy portions of the machinery may with care be worked up again.

Out of an immense number of drinking cups, plates, fancy frames, inkstands, &c., which were stored in the premises, nothing can now be seen but heaps of partly-consumed gutta percha, which cannot be again worked up.

The company, it is stated, have been accommodated with other premises in the neighbourhood, so that only a temporary interruption of their business will be occasioned. Mr. Statham, the manager, states that he hopes to be able to resume the deliveries of telegraphic wire within a month.

ROYAL THAMES YACHT CLUB.—THE SCHOONER MATCH.—(SEE PRECEDING PAGE.)

CONFIRMATION OF THE COUNT DE PARIS, AND THE DUKE DE CHARTRES, AT THE CHAPEL OF THE FRENCH EMBASSY, KING-STREET, PORTMAN-SQUARE.

ROYAL CONFIRMATION.

On Thursday morning (last week) the confirmation of the Count de Paris took place, at an early hour, in the presence of the ex-Queen of the French and all the members of the ex-Royal Family of France, and a distinguished circle of the English nobility, at the chapel of the French Embassy, in King-street, Portman-square. The Duke de Chartres, at the same time made his first communion. Cardinal Wiseman officiated, and pronounced a very impressive address appropriate to the occasion. The chapel was crowded to excess, although the hour for assembling was as early as eight o'clock. The august exiles were received with the most touching marks of respect. A great concourse of eminent and devoted friends of the Orleans family attended the ceremonial; and, among others, we remarked the Duchess de Marmier, the Duke de Montmorency, the Duke de Broglie, the Count and Countess de Ségur, the Baron de Bussières, &c. In the afternoon there was a second religious service, at which the Duke de Chartres renewed his vows of baptism. This ceremony also took place in the presence of Cardinal Wiseman, accompanied by his clergy, and of the Pope's Nuncio, now in this country, on his way to Mexico. The chapel was again crowded with the adherents of the exiled family, and many English of high rank.

Extension of the Submarine Telegraph.—On Monday a communication was received announcing that the submarine electric telegraph cable had been successfully laid down across the Great and Little Belts. This line of telegraph, in connection with the Dutch line of submarine cable, extending from Orfordness to Holland, opens up the electric communication between London and Copenhagen.

Bullion in the Bank of England.—A return to the Houses of Parliament has been issued, from which it appears that on the 16th of April the bullion in the Bank was £19,057,000. The monthly issue of notes in circulation in England, Scotland, and Ireland, in the four weeks ending the 16th April, was £40,096,535.

THE NEW CHAMBERLAIN OF THE CITY OF LONDON.

The public life of this distinguished member of the Corporation of London presents some memorable instances of the influence of popular opinion on the distribution of civic honours.

Sir John Key is descended from a highly-respectable family, both on his paternal and maternal side. His father, John Key, Esq., of Denmark-hill, Surrey, was a magistrate of that county, and was of an old Shropshire family, one of whom was Archdeacon of Salop in the year 1700. The mother of Sir John was the eldest daughter of Bluett Jones, Esq., of Iron Acton and Thornbury, Gloucestershire, and was descended from the Smiths, of Long Ashton; his grandfather having married Susannah, sister of Sir Hugh Smith, Bart., of Long Ashton, in the county of Somerset.

Sir John Key was born in 1795, in the ward of Langbourn, which he subsequently represented in the Court of Aldermen; and was for many years in extensive business as a wholesale stationer, in Abchurch-lane. He was chosen Alderman in 1823, and served the office of Sheriff of London and Middlesex in 1824. He was elected to the civic chair in 1830, but his mayoralty commenced inauspiciously, in consequence of his representing to the Ministers of William IV. the popular tumult to be apprehended from the contemplated visit of the Sovereign to dine with the citizens, according to Royal custom on the first Lord Mayor's Day after the King's accession; and on the 7th of November great excitement was occasioned in the metropolis and elsewhere by the announcement of the resolution come to by the responsible advisers of his Majesty that he could not venture with safety to his person to dine with the Lord Mayor and Corporation in Guildhall. This was followed

SIR JOHN KEY, BART., THE CHAMBERLAIN OF THE CITY OF LONDON.

by the resignation of the Duke of Wellington, Sir Robert Peel, and the other Ministers; and within another week the Grey Administration was in office under the banner of Parliamentary Reform. Throughout the agitation which followed, Sir John Key's exertions to preserve the peace of the City were attended with success; and in August following King William and Queen Adelaide honoured the citizens with their presence to open New London Bridge, when the Lord Mayor Key received a patent of baronetcy. In the following month Sir John Key was proposed a second time for the mayoralty by a strong party of the citizens, in recognition of his untiring efforts for the success of the Reform Bill, and his able maintenance of the public peace. Sir John's year of office had also been one of unbounded hospitality; and, although its commencement was beclouded with discontent, it closed in the full tide of popularity, which was sought to be extended to the unusual honour of a re-election. This was, however, strongly opposed upon political grounds; and Sir John Key had to fight three severe contests of seven days each, being thrice returned, ere the Court of Aldermen yielded to the choice of the Livery.

At the general election in 1832, Sir John Key was returned as one of the representatives of the City, in Parliament; and, in accordance with his promise made on the hustings, he brought forward a motion for the repeal of the House and Window-tax; and succeeded in carrying the repeal of the House-duty. Sir John was also a supporter of Mr. Grote's motion for Vote by Ballot; and his votes were invariably recorded in favour of the Reform party; but in August, 1833, he resigned his seat

OPENING OF THE NEW PORTLAND-STREET SUSPENSION-BRIDGE, GLASGOW.—(SEE NEXT PAGE.)

In 1851, upon the death of Sir C. S. Hunter, Sir John Key was transferred to the ward of Bridge Without, a nominal aldermanship; but Sir John continued to perform his magisterial duties as hitherto, and this up to the resignation of his gown on Tuesday last.

Upon the death of Mr. Anthony Brown, the City Chamberlain, Sir John Key was proposed as a candidate for that office; and the progress of the contest (an unusually severe one), with the return of Sir John Key, have been duly recorded in our Journal. On Tuesday last the newly-elected Chamberlain's resignation of his aldermanic gown was accepted by the Court of Aldermen.

Sir John Key married, in 1813, Charlotta, youngest daughter of the late Francis Green, Esq., of Denmark hill; and has issue one son and three daughters, all of whom are married, except the youngest daughter.

Sir John Key has nominated Mr B. Scott (the late candidate for the Chamberlainship) for his clerk, and the Court of Aldermen have unanimously confirmed the nomination.

OPENING OF THE PORTLAND SUSPENSION-BRIDGE, GLASGOW.

Of the many great engineering works by which the present age is distinguished, the Suspension-bridge is entitled to foremost rank, both for its elegance and utility. A fine structure of this class has just been erected at Glasgow, by the enterprise and public spirit of a few individuals; and it was opened by the Lord Provost and other trustees on the 18th ult., with fitting ceremony. By ten o'clock an immense number of gentlemen, interested in the undertaking, assembled on the south platform, forming the approach to the Bridge. Precisely at that hour the Lord Provost, carriage drove up, and immediately the band moved through the arch, followed by the Lord Provost, the trustees, Mr Gale (civil engineer), Mr. George Martin (engineer of the undertaking), and others, walking two abreast; the band playing "The Garb of Old Gaul." The northern arch having been gained, the gentlemen in the procession faced about, and were rearranged. On reaching the Gorbals side, three cheers were given by the Lord Provost and the trustees; which were responded to by the assembled thousands who lined the banks of the river. The party again crossed over to the north side, and the Lord Provost briefly addressed the multitude, declaring the Bridge to be opened for the public. The gallant speaker then, in the presence of the multitude, the band playing the National Anthem, at the assembled signal, hoisted aloft the flag, and showers of rockets were thrown upon the admiration of the public. The Bridge is an extremely beautiful and striking ornament to the finest part of the city. The trustees are confident that, by means of beams and diagonal rods placed on the soffit of the roadway, the oscillatory motion will be entirely prevented. The motion is stated to exceed six inches; whereas, upon the opening of the Hungerford Suspension bridge, the vibratory motion amounted to about 16 inches.

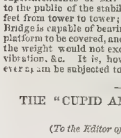
It appears from the *Glasgow Saturday Post* that the Bridge originally failed from inefficient construction; but, under the advice of Mr. Leslie, civil engineer, of Edinburgh, and the late Mr. Grainger, the Bridge has been reconstructed upon the original plan, at the sight, and under the superintendence of Mr. Mansel, of Edinburgh; a complete guarantee to the public of the stability and safety of the erection. The span is 415 feet from tower to tower; the width fifteen feet; and it is stated that the Bridge is capable of bearing a weight of at least 1200 tons. Supposing the platform to be covered, allowing three full-grown persons to the yard, the weight would not exceed 160 tons, thus affording ample margin for vibration, &c. It is, however, scarcely possible that the Bridge will ever again be subjected to so severe a trial as on the opening day.

THE "CUPID AND DOLPHIN" IN THE DUBLIN EXHIBITION.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

Bolton Gardens, Russell square, June 6, 1853.

Sir, In your number for Saturday last you gave, among the illustrations of the Dublin Exhibition, a drawing of a youth borne on a dolphin, attributed to Raphael, and by some called a Cupid. I am, however, inclined to suppose that the group represents Melicertes, as noticed by Pausanias in chapter xliv. of his book upon Attica, wherein he mentions a narrow part on the road from Megara to Corinth, where there are several rocks celebrated by various traditions. "From the rock Moluris (it is said), that leo cast herself, with her youngest son Melicertes, when the eldest Learchus had been killed by his father Athamus. The body of the child having been carried on the back of a dolphin towards Corinth, Melicertes obtained, under the name of Palæmon, various honours, among



which was the institution of the Isthmian games." The statue was preserved (Corinth, chap. i.), at the time of Pausanias, and so in the present of the temple of Neptune; and a bronze medal of Lucius Verus (A.D. 161—169), struck at Corinth, and preserved in our British Museum, gives the elevation of a Corinthian per pteral temple. The centre intercolumniation is widened, in order to display Melicertes on the left, and a dolphin, I presume, that the sculptor of the statue in the British Museum has represented as a ram, which would be the case if the head were turned in the opposite direction to that it cannot be a dolphin. Your obedient servant, THOMAS DAVIDSON.

THE DUBLIN EXHIBITION.—The reduced rate of prices having become more generally known, the building has presented a busier and more crowded appearance than previously; numbers having availed themselves of the opportunity thus afforded them of witnessing the many wonderful objects contained in the Industrial Temple, at the rate of 1s. admittance, and the gardens have assumed a more lively appearance than has been presented by them at almost any period since the opening day. The number of visitors was on Tuesday 7783, upwards of 2000 more than attended on Monday.

FERATI M.—In the account of the Dublin Exhibition, page 468, col. 3, for "Finlayson and Brownfield, of Glasgow," read "Finlayson, Busfield, and Co., Johnstone, near Glasgow."

THE REPEALED DUTIES.—The following goods are now admissible free of duty on importation into this country from foreign parts under the resolution of the House of Commons, o the usual (nominal) condition of the parties abiding the ultimate decision of Parliament, viz:—

Agates or cornelians, cut or manufactured; albumen amber, manufactures of, and enamels; animals, stuffed, or preserved in spirits, or otherwise; articles of vegetable materials, not enumerated; bamboo canes, rattans, and sticks; basket-making materials; bees-wax, crude; bird lime; bird's nests; birds, preserved, and parts of; blacking; books being of a bulk not to exceed one foot in length, breadth, or thickness; bread, biscuit, and cakes; brimstone, crude; brushes, and all other sorts not particularly enumerated or otherwise charged with duty; calkers' oakum; cane, manufactured; canes and other raw materials; cassia buds; chalk, prepared; chemical preparations, and all other sorts not particularly enumerated or otherwise charged with duty; cochineal; coral, cut or manufactured; corks and other raw materials; cotton wool, not otherwise enumerated; cuttle bone; dandelion-roots, dried; dates; drugs, not otherwise enumerated, and not otherwise charged with duty; dyes, not otherwise enumerated, and not otherwise charged with duty; earthenware; eggs; emery, cut or manufactured; enamels, and articles of; fancy goods, not otherwise enumerated; feathers, dressed or undressed, and not otherwise enumerated; fishes, fresh, salted, or otherwise cured, and not otherwise enumerated; fishing-tackle; flowers, artificial; fruits, dried, preserved, or otherwise prepared, and not otherwise enumerated; fruits, fresh, not otherwise enumerated; fuller's earth; furniture, and parts of, not otherwise enumerated; gall-nuts; gamboge; gelatine; glass, and articles of; glue; gold-beaters' skins; grain and pulse, not otherwise enumerated; grease; gums, not otherwise enumerated; gunpowder; gut; hair, not otherwise enumerated; hair-cloth; hair-seating; hats, and articles of; hides, raw, not otherwise enumerated; horns, not otherwise enumerated; ice; indigo; ink, and ink-powder; ivory, and articles of; jet, and articles of; lac-dye; lamp-black; leather, and manufactures of, not otherwise enumerated; leeches; lime-juice; lozenges; mace; madder, and madder-root; manna; mats, matting, and matting-materials; medicines, not otherwise enumerated; metals, and articles of, not otherwise enumerated; mineral waters; musical instruments, and parts of, not otherwise enumerated; nutmegs; oil-cake; oils, not otherwise enumerated; orchilla-weed; paintings, drawings, and pictures in oil or water colours; paper-hangings; pearls, not polished; pencils; perfumery; pipes, tobacco; plaster of Paris; plate, manufactures of, not otherwise enumerated; plumbago; pickles and vegetables preserved in salt or pickled; porcelain; pottery; quicksilver; rags; rattans; rice; rosin; sago; salt; saltpetre; sausages or polonies; seeds, not otherwise enumerated; shells, not otherwise enumerated; shot; silk, and articles of, not otherwise enumerated; silk-worms' eggs; skins, not otherwise enumerated; soap; spars, rough; spices, not otherwise enumerated; spirits, not otherwise enumerated; stone, and articles of, not otherwise enumerated; straw, and articles of; sugar-candy; tallow; tapioca; tar; tea; teeth; tin, and articles of; tobacco, manufactured or unmanufactured; toys; trees, shrubs, and plants; turpentine, not of a greater value than 10s. per cwt.; and oil or spirit of, twine, vandyes, varnish, and other wax; vegetables, not otherwise enumerated; vegetable substances, not otherwise enumerated; vermilion; watches; whalebone; wood, not otherwise enumerated; wood-ashes; wood, manufactures of, not otherwise enumerated; wool, not otherwise enumerated; and yarn, not otherwise enumerated.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The news from Turkey, in reference to the decision of the Divan on the subject of the Russian ultimatum, being unfavourable, and as affairs in the East have assumed a more warlike appearance, the Consols Market has continued depressed during the whole of the week, and prices have again had a downward tendency. Numerous heavy sales of Stock have taken place, and the *Bear* have otherwise operated to some extent for the fall. Notwithstanding the late advance in the minimum rate of discount, by the Bank Directors, to 4 per cent per annum, and that out of doors first class paper is not taken under 3½ per cent, there has been an active demand for money, chiefly for commercial purposes, and heavy advances have been somewhat readily made by the private bankers.

The conversion books at the South Sea House have been closed, except for parties residing abroad. A meeting of the proprietors is announced for the 23rd inst., to consider whether any further loan shall be received for the capital stock. Large quantities of the Three per Cents Reduced are still unconverted, and we find that the number of Exchequer Bills sent in for cash is larger than had been anticipated. The supply of the latter securities in the market being now much reduced, the premium has advanced to 6s. and the India Bonds have accommodated rather more attention, and their value has had an upward tendency.

On Monday, the Three per Cents for the Account were done at 88⅞ ⅞; the Three per Cents Reduced, 88⅞ to 89¼; the New Three per Cents, Quarter per Cents, 101⅝⅞; India Bonds, £1000, were 98; Ditto, under £1000, 98; Exchequer Bills, 2s to 6s prem. Very little change took place in the general operations on Tuesday; but, on Wednesday, the Unfunded Debt, as well as India Bonds, steadily advanced. The market, on Thursday, commenced heavily, and Consols for [illegible] were marked 88⅞ ⅞. The demand for stock was heavy the [illegible] days, and prices left off at [illegible]. The New Three and [illegible] were 101⅛⅞; Bank Stock was 208 to 209; Exchequer [illegible] at 6 prem.; but India Bonds ruled steady, at 98 to 98a prem.

The imports of bullion have been tolerably extensive about 800,000 dollars having come in from New York and £150,000 in gold from Australia. The shipments to the Continent have fallen off, arising from the altered state of the exchanges, a very large whole of which are becoming more favourable to England.

The returns from the Board of Trade, for the month ending on the 5th ult., are unusually favourable. They show an increase in the declared value of our exports, as compared with the same period last year, of £2,309,965. The aggregate value was £7,579,891, against £5,268,926 in 1852. Since the beginning of the year, the total shipments are valued at £27,070,005, against £21,844,068 in the same time in 18..

Only a limited business has been transacted in Miscellaneous Securities, prices of which have, however, ruled tolerably firm. Australasia Bank shares have marked 28¼ Chartered Bank of India, Australia, and China, 28¾ English, Scottish, and Australian Chartered, 10⅞; London Chartered Bank of Australia, 10⅝; London Joint-Stock, 2½; Oriental Bank, 3½; Union of Australia, 32½; South Australian, 50; Australian Agricultural, 17 to 18; Royal Waterworks, 24; British American Land, 70 to 72; Canada Company, 70; Crystal Palace, 3½; Ditto of France, 1 prem.; North British Australian, 1½; Peel River Land and Mineral, 1¾ prem.; Australian Land, 44 to 45; Van Diemen's Land, 17 to 18; Hungerford Bridge, 12; Vauxhall, 2½; Lisbon Improvement, 8; Atlas, 2½; Argus, 24½; County, 22½; Crown, 1½; Globe, 1½; Law Life, 5½; Marine, 9½; Pelican, 8½; Provident, 41; Rock, 8½ ex div.; Royal Exchange, 240; Sun Life, 65; Universal, 65½; East London Waterworks, 125½; Grand Junction, 74½; Kent, 84½; Southwark and Vauxhall, 88; West Middlesex, 114; Crystal Stream-fire, 2½; Canada Five per Cent Loan Bonds, 102½; Ditto, Six per Cent ditto, 104½; General Steam Navigation, 13½; Irish Ditto, 1½; Peninsular and Oriental Steam, 73½ to 74, ex div.; Ditto, New, 36; Royal Mail Steam, 15; Reversionary Interest, 106.

There has been considerable activity in the demand for Foreign Bonds. Russian Stock has declined, but Mexican has kept up remarkably well. Brazilian Five per Cents [illegible] at 101, the Four and-a-Half per Cents [illegible], Buenos Ayres, 10; Chilian, 10; Greek (first), 8½; Ditto (second), 8; Mexican, 20½; Peruvian Four and-a-Half per Cents, 30½; Portuguese Four per Cents, 44; Russian Five per Cents, 104; Ditto, Four-and-a-Half per Cents, 97; French Five per Cent and a Half per Cents, 100; Spanish Three per Cents, 20; to 20½; Ditto, Certificates, 89 to 89½; Ditto, Four per Cents, 19½; Swedish Four per Cents, 94; Belgian Four per Cents, Half per Cents, 87½ to 88, Dutch Two and a Half per Cents, 60; Ditto, Four per Cents, 98½ to 99.

The demand for Railway Shares has been rather depressed, notwithstanding that the traffic receipts have been good during the whole of the present year. The total increase in them from the 2nd of January to the 21st of May over the corresponding period of 1852 amounted to £41,429, or 11 61 per cent. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 27½; Ambergate, Nottingham, and Boston Junction, —; Bristol and Exeter, 101; Caledonian, 66½; Chester and Holyhead, 22½; Dublin and Belfast Junction, 47½; East Anglian, 2½; Eastern Counties, 8 and ¼; East Lancashire, 73; Edinburgh and Glasgow, 70½; Edinburgh, Perth, and Dundee, 79½; Great Northern Stock, 86; Ditto, A Stock, 80; Ditto, B Stock, 134; Great Southern and Western (Ireland), 103½; Great Western, 87½; Lancashire and Yorkshire, 77½; Leeds Northern, 16; London and Blackwall, 7; London and Brighton, 103½; London and North Western, 114⅝; Ditto, Fifths, 4⅛; London and South Western, 88; Manchester, Sheffield, and Lincolnshire, 20½; Midland, 71⅝; Norfolk, 81½; North British, 29½; North Staffordshire, 12½; Oxford, Worcester, and Wolverhampton, 45½; Shropshire Union, 3½; South Devon, 2½; South-Eastern, 70; South Wales, 35½; Thames Haven Dock and Railway, 7½; Waterford and Kilkenny, 9½; Whitehaven Junction, 12½; Wilts, Somerset, and Weymouth, 9½; Yarmouth and Norwich, 79; York and North Midland, 60.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 107; Gloucester and Dean Forest, —.

Purchase, 21.

FOREIGN.—East India 2½; Ditto, Extension, 2½; Luxembourg, 4½; Ditto, Six per Cent Preference, 1⅜; Namur and Liege, with interest, 7⅛; Northern of France, 34½; Paris and Lyons, 26; Paris and Rouen, 42; Paris and Strasbourg, 25½; Sambre and Meuse, 8½, Upper India Scrip, ¼ prem.

Mining Shares have been dealt in to a very moderate extent On Thursday, Agua Fria were done at 2½; Australian Agricultural, 18; Australian 2½; Ave Marin, 8; St. John del Rey, 32½; Colonial Gold, 2½; English and Australian Copper Smelting Company, 3½; General, 16; Great Nugget Vein Scrip, 2½; Linares, 2½; Mexican and South American, 7½; Nouveau Monde, 2½; Port Phillip, —.

THE MARKETS.

CORN EXCHANGE.—The arrivals of home-grown wheats up to our market this week have been unusually limited, and in full average condition. All kinds have sold briskly, at an advance in the quotations of 2s per quarter. The imports of wheat into London, last week, have consisted of freely, at 2s per quarter more money; and the value of floating cargoes has improved in the same extent. Barley and beans have ruled steady, at full quotations. The wet trade has continued firm, and the quotations have had an upward tendency. Both loaves and fancy sorts of flour have commanded more money in favour, and American qualities have advanced in per barrel.

English.—Wheat, 42s to 46s; Essex and Kent, 44s to 49s; Ditto, white, 46s to 47s.; Norfolk and Suffolk, red, 44s. to 45s; Ditto, white, —s. to —s.; rye, 28s. to 30s.; grinding barley, 23s. to 25s.; distilling, 27s to 29s.; malting, 30s to 32s.; Scotch and Irish feeding oats, 19s to 20s.; Ditto, 25s; brown Ditto, 23s to 25s.; Kingston and Ware, 57s. to 60s.; Chevalier, 61s. to 63s.; Yorkshire and Lincolnshire feed beans, 34s to 36s.; Ditto, tick beans, 34s to 36s.; Youghal and Cork, black, 16s. to 19s.; dutto, white, 17s to 21s.; fine beans, new, 34s to 36s., ditto, old, 36s. to 38s.; grey peas, 32s to 34s.; maple, 34s to 36s.; white, 36s to 38s.; boilers, 40s to 42s. per quarter. Town-made flour, 35s to 44s.; Suffolk, 32s. to 34s.; Rockton and Yorkshire, 32s. to 36s. per 280 lb. Foreign flour, 20s to 24s. per 196 lb.; American, 22s. to 24s. per barrel.

Seeds.—The demand for all kinds of seeds is heavy, and the following quotations are almost nominal Cakes steady

Linseed, English, sowing 54s. to 56s.; Baltic, crushing, 43s. to 45s.; Mediterranean and Odessa, 44s. to 45s.; hempseed, 38s. to 42s. per quarter; Coriander, 8s. to 12s. per cwt. Brown mustard-seed, fine, white Ditto, 9s to 9s.; and tares, 4s. 6d. to 5s. 6d. per bushel. English rapeseed, new, £— to £24 per last of ten quarters; and rape cakes, £6 10s. to £7 per ton. Linseed cakes, £6 10s. to £7 per ton. Rape cakes, £4 10s. to £5 0s. per ton. Canary, 42s to 42s per quarter English clover seed, new, 70s. to 76s.; and old, 60s to 66s per cwt.

Bread.—The prices of the undermentioned bread in the metropolis, and have been steady for the past week:—Wheaten bread in the metropolis are from 7d. to 8d.; of household Ditto, 5d. to 6d. per 4 lbs. loaf.

Imperial Gazette Averages.—Wheat, 47s. 3d.; barley, 29s. 6d.; oats, 19s. 0d.; rye, 34s. 0d.; beans, 35s. 8d.; peas, 35s. 8d.

The Six Weeks' Average.—Wheat, 44s. 1d.; barley, 30s. 10d.; oats, 18s. 10d.; rye, 33s. 3d.; beans, 35s. 10d.; peas, 36s. 0d.

Potatoes.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—Since our last nearly 3,000,000 lbs. have been sold at the port of London, under the new scale of duties. The demand is steady, and prices are well supported. Common congou, 1½ per lb.; fine congou, 1s 2d to 1s 3d; good ditto, 1s 4d to 1s 5d; fine ditto, 1s 6d to 1s 7d; finest, 1s 8d to 1s 9d.

Coffee.—Several parcels of good ordinary native have changed hands, at 47s to 48s. per new import. Plantation kinds have ruled dull. Foreign coffee are much neglected.

Sugar.—The supplies are moderate, and the trade has been dull. Notwithstanding, yet the demand has continued in a sluggish state, and prices have in el somewhat lower. Fine yellow Barbadoes, 35s to 38s 6d; good to good fine, 32s to 34s 6d; fine yellow Grenada, 30s to 32s 6d; good to fine brown, 32s 6d. to 35s 6d.; crystallized Demerara, 37s 6d. to 39s 6d; good to fine yellow Manilla, 30s to 32s; good, white Havanas, 30s to 32s 6d. per cwt. Foreign sugars have sold heavily. Refined goods are dull, at from 45s. to 48s. per cwt. The total clearances to the 4th instant were 2,859,955 cwt., against 2,507,365 ditto last year.

Cocoa.—This article has declined 1s. per cwt., with a heavy market.

Fruit.—All descriptions move off slowly. In prices, however, no material change has taken place.

Provisions.—Irish butter is still very dull, and prices have further receded 4s. to 5s. per cwt. Carlow, 86s. to 88s; and Limerick, 82s. to 86s.; Dutch is heavy, and easier; per chest Kegland dull. Fine weekly Dorset, 90s. to 97s.; middling, 85s. to 86s. per cwt.—fresh, 2s to 3s less money. Waterford ekcombe, 80s. to 86s., Hambro' ekombe, 81s. to 83s. per cwt. Hams and lard are quite as dear as last week.

Tallow. The demand is heavy, and prices continue to decline. P.Y.C., on the spot is quoted at 45s 9d. to 47s.; and for delivery during the last three months, 47s 9d. to 48s. per cwt. Town Tallow 46s. to 46s 6d. net cash; rough fat, 2s 9d. per 8lb.

Oils.—Linseed oil is steady at from 29s. to 29s 6d. per cwt. on the spot. All or ore oils are in moderate request. Turpentine tolerably firm. British, 47s. per cwt

Spirits.—Brandy moves off heavily, and the quotations are not supported. Rums of Cognac boat brands of 1850, 6s. 11d. to 7s. 1d.; 1850, ditto, 7s. 1d. to 7s. 3d.; 1849, ditto, 7s. 3d. to 7s 4d.; older, 7s 3d. to 7s 9d.; and low to middling, 5s. to 6s. 9d. per gallon. Geneva and eaux simples steady. The market for rum is tolerably firm. East India, proof, 1s. 9d.; and Jamaica, 1s. 10d. per gallon

Hay and Straw.—Meadow hay, 75s. to £4 10s.; clover ditto, £4 0s. to £5 10s.; and straw, £1 1s to £1 16s per load. Trade steady

Coals.—Carr's Hartley, 15s. 9d.; Chester Main, 14s. 9d.; Holywell, 10s.; Tanfield Moor, 15s.; Tees, 14s. 6d.; Hetton, 14s. 6d.; Bendgyll, 15s. 6d.; Hilton, 16s. 3d.; Lambton, 15s. 3d.; Wear, 14s. 3d. per ton

Hops.—All kinds continue to move off steadily, at very full prices. The plantation accounts are favourable. Middling and fine qualities are not wanted. Mid to fine, 110s. to 130s.; Kent, 110s. to 128s.; Sussex, 110s to 130s per cwt.

Wool. The public sales—at which 41,483 bales have been disposed of—have been brought to a close. Private, only a moderate business is doing, yet prices are well supported.

Potatoes.—The supplies have been reasonably good, but in very inferior condition, the demand is heavy, at a decline of fully 10s. per ton. Present quotations vary from 70s. to 130s. per ton

Smithfield.—The beef trade has ruled steady, at an advance in the quotations of 2d per 8 lb. Sheep, lambs, calves, and pigs have been in only moderate supply.

Beef from 2s. 2d to 3s. 8d.; mutton, 3s. 2d. to 4s 8d lamb, 4s. 10d. to 6s 4d; veal, 4s. 0d. to 5s. 0d.; pork, 3s. 0d to 4s. 4d per 8lb. To-day (Monday) the supply of beasts was very large.

Newgate and Leadenhall.—The general demand has been in a sluggish state, as follows:—Beef, from 2s. 10d. to 3s. 8d.; mutton, 3s. 4d. to 4s. 8d.; lamb, 4s. 10d. to 6s 4d.; veal, 4s. 10d.; pork, 3s. 4d. to 4s 4d. per 8 lbs., by the carcase.

ROBERT HERBERT

The Rev. W. Procter, Rector of Bishop Burton, Yorkshire, aged 63

On the 6th inst., Arthur Sir, aged 18 months; and a fortnight since her brother, at Faversham, Capt. S. D. [illegible], 55 Hussars, aged 7.

At Shebdrford, Aberdeen, William Hen[illegible] 107. He assisted at harvest at the advance of 100

EXPLOSION OF THE "TIMES" STEAMER.

WE regret to state that a most lamentable and fatal catastrophe occurred on Thursday evening (last week) on board the *Times* screw steamer, one of whose boilers exploded, causing loss of life and dreadful injury to a large number of persons

The *Times*, one of the vessels belonging to the Dublin and Liverpool Steam Packet Company, and commanded by Captain James Collis, left the North-wall, Dublin, on Thursday evening, for Liverpool, at six o'clock, having on board 303 deck passengers (chiefly emigrants), and seven cabin passengers. She also carried, as part of her cargo, a number of cattle. When nearly opposite the Pigeon-house, at about seven o'clock, a partial explosion of one of her boilers took place, causing a rent, through which there was an immediate and destructive escape of steam. A scene of the greatest confusion and terror ensued. A number of the unfortunate passengers who crowded the deck were instantly overwhelmed, and frightfully scalded by the condensed steam and boiling water shot up from the midship hatch and the window of the engine-room, and descended on the unfortunate deck passengers, who were gathered in the waist of the vessel. Scarcely anything can be imagined more appalling than the sight which the deck presented: men, women, and children rushing to every side for shelter from the scalding steam; others—many of them women—screaming in agony. The terrified cries of their friends, and of those who were in search of, and apprehensive for, the safety of friends, added to the bellowing of the cattle and the bleating of sheep and lambs, with which the vessel was laden, rendered the whole a scene of horror happily without a parallel in this country.

On the vessel being stopped and the steam lowered, and the sufferers conveyed ashore. On examination, it was found that 30 persons were injured, many of them severely; and that two, a boy about four and a girl about three years old, were dead

The greater portion of the sufferers were landed at the fort, where Dr. Gilburn, the resident physician of the hospital, was in immediate attendance, and rendered every assistance in his power; and in the evening the injured persons were removed to the various hospitals

The *Times* has been built only about 18 months; and a fortnight since her boilers were examined, and certified to be in a sound state. The rent caused by the explosion was about 16 inches long and two wide.

The engineer, William Galway, gives the following account of the accident:—

At about half-past six the vessel was going nearly nine miles an hour against the tide, which was then flowing; the pressure of steam on the boiler of the starboard paddle-wheel was about inch less than it was calculated to bear. When the vessel had proceeded down the river to the point nearly opposite to the Pigeon-house, he was going up the ladder from the engine-room, and had just left the machinery in the charge of Patrick M'Ilgrye (the assistant engineer), when the explosion took place. He immediately rushed down, seized the safety-valve, and stopped the engines. He also states that at the time the vessel started the water in the boilers was fifteen inches above the level of the action of the flame from the furnaces. In accounting for the cause of the accident, he states that in one of the landing of engineers of the boilers a portion of the rivet had been frayed, and when the pressure was put on, the part that was thus incurred gave way. The pumping-gear for supplying the engines with water was in perfect order, and at work at the time of the accident.

On Friday an inquest was held at the Baggot-street Hospital, on the bodies of William Taylor, aged three years, and Margaret Mulhern, aged three years and a half, whose deaths had been caused by this lamentable accident. The jury, after hearing the evidence, found the following verdict:—"Scalded to death by the bursting of the boiler, caused by an imperceptible flaw down the lap of the iron on the top of the boiler."

Up to Friday evening eight of the injured persons had died

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE.—Oxford-street.—Mr. and Mrs. C. KEAN respectfully inform the nobility and public that ANOTHER BENEFIT will take place on MONDAY next, June 13, on which occasion will be presented Lord Byron's Tragedy of SARDANAPALUS, KING of ASSYRIA (considerably altered for stage representation). ASCOT RACES. PRIZE PLATE.

THE ASCOT Prizes which have been contested for during the past week are fine specimens of classic design, and exquisite workmanship in metal.

THE EMPEROR'S VASE.

THE ROYAL HUNT CUP.

HER MAJESTY'S VASE.

The Emperor's Vase is a magnificent and elaborate work, designed by M. A. Vechte. The Vase alone is three feet high. It bears bas-reliefs illustrating the history of the horse. On the foot of the Vase is represented the horse in his wild state; on each side of the foot are figures of Prudence and Valour. The bas-relief on the body of the Vase represents tritons and sea-horses. The handles represent the horse in his more domesticated state: on one is the figure of a Grecian hero, on the other an Amazon. On the neck of the Vase is a war-horse; and on he cover Pegasus, bearing a male figure, with a harp. The base is ebony, enriched with silver. This work has been beautifully executed by Messrs. Hunt and Roskell.

The Royal Hunt Cup is a splendid silver vase, composed of branches and leaves of open-work vine, with a lining of ruby-glass; copied from a pair modeled expressly for Lord Ward, after a drawing by E. T. Parris. It is from the manufactory of Mr. Hancock, of 39, Bruton-street, and is a beautiful work. The base is covered with blue velvet; the effect being altogether novel and striking.

Her Majesty's Vase, of silver, is of Etruscan form, decorated in the Renaissance style. The subject is maritime. On the cover is the figure of a Zephyr, whose

> Soft-beating wings
> Waft the vessels to their goal.

On the handles are female Tritons, playing with Cupids. The bas-relief represents Thetis bearing to her son Achilles the proof-armour forged by Vulcan. This prize has been designed by M. Antoine Vechte, and is from the establishment of Messrs. Hunt and Roskell, of New Bond-street. It is altogether a superb work.

EXPLOSION OF "THE TIMES" STEAMER, AT DUBLIN.—(SEE PAGE 478)

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, JUNE 11, 1853.

THE ILLUSTRATED LONDON NEWS

No. 628.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, JUNE 18, 1853. [SIXPENCE { WITH SUPPLEMENT, GRATIS.

THE MYSTERY OF THE TABLES.

THE matter-of fact people of the nineteenth century have plunged all at once into the bottomless deeps of spiritualism. Railroads, steam, and electricity, and the indubitable wonders which they have wrought, have not proved powerful enough to supersede and destroy that strong innate love of the supernatural which seems implanted in the human mind. Thousands of people in Europe and America are turning tables, and obstinately refusing to believe that physical and mechanical means are in any way concerned in the process. Hats, too, are turned, as well as the heads that wear them. But the greatest mystery has taken up its abode in and about the tea-table. The spirits that used to rap in the old days of the Jameses and the Charleses, rapped upon the walls and the ceilings, and made strange noises in the chimneys; but the spirits that rap in the days of Victoria prefer to rap upon rosewood or upon mahogany, and to haunt the under surfaces of round tables. The delusion of a few threatens to become the mania of the many; and the folly, like many others which preceded it, has become epidemic, and seized upon the people like the *grippe* or the cholera-morbus. It is in vain that we boast of the progress of education. We are little, if any, wiser than our ancestors. The love of the marvellous is not to be eradicated by the schoolmaster. There are multitudes of hard-headed business-like people, safely to be trusted in any matter of commerce or of money—people who can reason, and argue, and detect the flaws and the contradictions in statements and theories which they do not approve—who continually wear some pet absurdity of their own. They hug it like a garment, and refuse to shuffle it off till they can robe themselves in another absurdity not a whit better than the old one, except in the gloss of its novelty and in the fashion of its cut. Something of the kind is always occurring to excite the laughter of those who smile, and the tears of those who weep, at the follies of humanity. Neither Democritus nor Heraclitus need lack disciples in our day. It is not only the ignorant and the vulgar, but the educated and the refined who yield themselves up, the unsuspecting, if not the eager, victims of self-deception. In fact, it may be asserted that the lower classes—men and women who battle with the sternest realities of life—are less apt than the wealthier and more luxurious to seek excitement in the wonderful, and to feed their credulity with the incomprehensible. It has been so in all ages. The days of witchcraft had scarcely passed away when the idle and the fashionable listened with keen curiosity to the wonderful stories related in the "Sadducismus Triumphatus," and swallowed with open mouths the reports of the spirit-rappings at the house of Mr. Mompesson. About the same time (two hundred years ago) appeared Valentine Greatraks, with his sympathetic salve, which cured the most desperate hurts—not by application to the wound, but to the sword or the pistol which caused it. Valentine Greatraks had thousands of believers; and to have doubted of the marvellous cures which he effected would have been to run the risk of being scouted from good society. The famous metallic tractors of Dr. Haygarth, introduced sixty or seventy years ago, were a nine-days wonder, and were thought to have revolutionised the science of medicine, until it was found that wooden tractors, painted to imitate metallic ones, were as good as the genuine articles, and that neither had any effect, except upon the hypochondriacal and the weak-minded. Mr. St. John Long, at a comparatively recent period, rubbed the backs of the wealthy, and was growing rich by the process, until an unforeseen, and, to him, unwelcome casualty brought him within the grip of the law, and caused his fashionable theory and his extensive practice to explode amid popular disgust. The Cock-lane Ghost, the spirit-rappings of Stockwell, and the dancing porridge-pots of Baldarroch, all had their day and their believers. We cite these cases at random, and might select hundreds of others that are familiar to those who have made the credulity of the multitude their study. There is nothing too absurd for the belief both of the ignorant and the educated. There is no system of miscalled philosophy, especially if it meddle with the business of the physician, that is too outrageous for encouragement, or too ridiculous for admiration.

In an age which has been called pre-eminently practical and material, dead superstitions start out of their graves, and squeak and jabber in our streets. The haunted house rears its head next door to the Mechanics' Institute; and in the same town in which a Faraday is lecturing upon the newly-discovered truths of science, a clever adventuress calls up ghosts for a fee, and pretends to reveal the ineffable secrets of another life. The old fables of witchcraft and demoniacal possession are surpassed by the modern marvels which we are called upon to believe under the penalty of being denounced as Materialists and Atheists. The extraordinary results obtained by science in our day have ceased to excite the same lively interest as of yore. Those who feed upon the highly-seasoned fare of the preternatural, are like the daughters of the horse-leech, and their cry is "Give, give!" Even clairvoyance opening as it does so vast a field of inquiry to those who consider how fearfully and wonderfully man is made, fails to unfold mysteries enough to satisfy the daring neophytes of the nineteenth century. Magnetism and electricity are great, they admit; but the human will, they assert, is greater. Electricity in Dover can rend the rock at Calais; but the all-potent will of man—either travelling upon electricity, or using it as a weapon—can leave this paltry world behind, and soar amid the planets and fixed stars, or, if it choose to stay upon the Earth, can become as veritable a power as any mechanical or physical force that was ever stirred into activity by the ingenuity of an Archimedes or a Watt. Not only can it accomplish such small feats as turning tables and hats, and making crockery dance upon shelves; but it can communicate with departed spirits, and call them from the interlunar spheres (which are no longer vacant in modern philosophy), to answer the most impertinent questions. Where shall we find any one so deaf to reason, so blind against proof, so callous to argument, so independent of demonstration, so utterly careless of evidence

BONAPARTE, ON THE FIELD OF WATERLOO.—SKETCHED IN 1853.—(SEE NEXT PAGE.)

as the marvel-monger? And the marvel-mongers are a numerous tribe. It does not astonish them to hear that the spirits of the mighty dead are at the beck and call of any one of the gentler sex who chooses to establish herself as a "medium." It pleases them to think that Adam himself, the venerable father of the human race, will respond to a duly qualified practitioner in petticoats, and make his presence known by rapping upon a table. Although the spirits summoned by different "media" contradict themselves; although one class of spirits anathematizes the Protestants, and another hurls the Roman Catholics to damnation; although one "medium" has only learned of Lemuel Gulliver as a veritable spirit, and another allowed her mahogany to be rapped by a spirit, calling itself the Baron Munchausen; although the spirits that rap for Mrs. A. stigmatise as impostors the spirits that rap for Mrs. B.; although the spirits spell their responses, and sometimes make woful blunders in their orthography; and although the sum total of the spirit revelations as yet recorded amount to nonsense, or to nothing, the spirit-rappings of our day have crowds of enthusiastic believers. Contradictions, meannesses, blasphemies, impossibilities—all are believed, all are gulped by a voracious credulity, that may sometimes be fatigued, but that never can be satiated. Witnesses of the most extraordinary statements are never found wanting. A proof is always at command, and the loosest evidence reported at second-hand, and, in all probability, perverted or exaggerated, is amply sufficient to satisfy those who have made up their minds to believe.

The philosophic observer is not astonished at this result. Nothing is so little understood as the laws of evidence. Every barrister and attorney in the kingdom knows how difficult it is to hunt out and to capture that shy and retiring creature, a veritable Fact. The mass of mankind are so apt to believe that no one tells an untruth except from pecuniary and interested motives, that if the honesty and purity of a witness be undisputed, his testimony is held to be unassailable. In countless instances the wish to believe is the father of conviction. The credulous believe, because they are credulous. The honest believe, because they do not reflect that honesty itself can be misguided, and that erroneous evidence may be given by the innocent and the disinterested. The unthinking believe, because of their incapacity for thinking, or because they have not the faintest comprehension of the philosophy of proof, and have neither the means nor the will for detecting errors: and because they are content to take upon trust the statements which are dined into their ears by the self-deluded on the one hand, and the designing upon the other. Let not Absurdity be ashamed of itself, it will always find good company to keep it in countenance. The lion on the top of Northumberland House *did* actually wag its tail!—and will wag it again if one man has a will potent enough to induce ten other men to believe that it did so. The ten men will prove it, each to the satisfaction of the other, and will gain thousands of adherents—especially if they attempt to explain it by magnetism, or electricity, or the agency of spirits. Another fact as wonderful as the spirit-rappings will thus be added to the mystical history of the nineteenth century. As for the lion himself, it is to be hoped that the Duke of Northumberland will take care of him. Who knows but what he may become as good a "medium" as any that have been sent to us by our friends on the other side of the Atlantic?

HOUGOUMONT.

THE FIRST—LAST MEETING.

At a quarter to eleven (June 17) the French second corps advanced in close columns against Hougoumont, and the battle commenced. The officers were repeated to carry the important post, only to be bloodily repulsed, and the existence of the Guards was borne in mind. At last, despairing of success, the French artillery opened with shells upon the house—the obstinate Hougoumont was quickly in a blaze—the fire reached the chapel, and many of the wounded, both combatants and defenders, there perished miserably. Though the fire raged fiercely, shells burst around, and shot ploughed through the shattered walls and windows, Legourès nobly held the place, and Hougoumont remained unshaken.'—*Marmont.*

THERE, as we stand, a little further on,
Where Hougoumont had rolled the battle back—
Not yet the glory of their eagles gone—
The Old Guard thundered to their last attack.

And first defeat, and final overthrow,
And field of doom, and close of long career:—
These walls remember, and these ruins know,
What sentence from on High was spoken here.

Sweetly the smiles of musing sunset fall
On homes of peace and toil's secure rewards,
Where battlements and fragments of a wall
Still mark the dreadful meeting of the Guards

But once they met: and broken was his dream
Who thought he saw upon the waves of war
Reflections of an eldritch planet's beam
Mystical flashes from a fated star.

But once met they who then each host arrayed—
Rivals reserved for conflict from their birth—
But once they met—and shivered was the blade
Which long had waved its terrors o'er the earth.

Where whole battalions found a sudden grave,
And sank together to their bloody rest,
Peace broods full-breathing, yellow corn-fields wave,
And silent shadows creep from out the west.

And other shades, more awful, hover round,
And, haunting, visit the long summer here.
Be that peace theirs they died for on this ground—
They fought and conquered at this time of year.

June, 1853. MILES GERALD KEON

NEW FACILITIES FOR CONTINENTAL TRAVELLERS.—The Customs authorities now allow the luggage of passengers from Paris, by the 8 till 10h, to be brought to London without exam nation at Dover, in order to prevent detention in the latter place. The passengers by the mail packet have merely to point out their luggage at the railway station after landing at Dover, and take their places in the train for town. On arrival, the luggage van is run into the new Custom-house at London-bridge station, where officers from the Customs are in attendance, and where the examination is made. At present this facility is confined to the train leaving Paris at 7 30 p.m., the passengers by which arrive in London at 8.6 a.m. the following morning.

THE REBELLION IN CHINA.—A curious statement is given in the New York papers concerning the rebellion in China. It appears that Commodore Aulic had just arrived, having been lately in command of the East India squadron, and being the bearer of despatches. This gentleman gives it as his opinion that the British ships of war would not assist the Emperor, even if called upon, as the foreigners in China are almost all in favour of the success of the rebels. The present Emperor is stated to have alienated the affection of the people by his sensuality and addiction to opium, and his Cabinet also was unpopular and corrupt; moreover, the Commodore asserts that no assistance which could now be given would be of service, as the rebels are fast progressing towards Pekin, where a naval squadron could not approach. Finally, he anticipates, as we believe most people in England do, greater advantages, commercial and political, from the insurgents than from the reigning dynasty.

SHIPS AND TONNAGE.—On Wednesday a return printed showed that last year 17,319 sailing and steam-vessels were employed in the foreign and home trade of the United Kingdom. The tonnage was 3,389,586, and the crews, including masters, mates, and apprentices, numbered 177,982.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The state of the Emperor's health is a source of much uneasiness to those immediately about him; for, though not prevented by it from going about as usual, he suffers considerably from symptoms indicative of a condition that requires the utmost attention; while his constant attendance to the weighty cares which press on him, render impossible the repose which would go far to aid his recovery. Violent swelling of the legs and feet is one of the symptoms to which he is subject, and which causes him the most inconvenience, he still, however, appears in public as before; and has, of late, visited several of the theatres

The Imperial household has, since the residence of the Court at St. Cloud, been temporarily placed on quite a different footing to what it was at the Tuileries, nearly all the officers and ladies composing it having received the congé, and the Emperor and Empress live in comparative retirement and simplicity. This arrangement is, we believe, in accordance with the personal desire of the latter, on whom the etiquette kept up in Paris weighed most heavily.

A report that the *Garde Nationale* of Paris was about to be dissolved, has, for the last week, been going the rounds, and had at length gained such general credit that a formal contradiction of the rumour has been inserted in the *Moniteur* to destroy the impression.

Many fresh arrests, almost entirely among the Legitimist party, have been taking place within a few days. Under the present state of affairs, with regard to the possibility of the war with Russia, the members of this cause are viewed with peculiar suspicion; and, as the maxim that prevention is better than cure is considered the wisest in such cases, these measures are adopted *par précaution*.

The Société d'Horticulture de la Seine has just given a fresh exhibition of flowers in the Champs Elysées the finest of the year, owing to the much greater variety of flowers the more advanced season affords, the finest and rarest geraniums were particularly brilliant. Our compatriots, Messrs. Standish and Noble, successful with several species of flowers, had won a number of prizes.

M. Paxton Hood has, in six, so subtly and successful a manner, put himself into connection with the Great Exhibition two years ago, as to cause him to proceed to New York on a most important mission of the same nature, entrusted to him by the Government which he is charged formally to represent; he is further instructed to examine and compare the productions of the various nations, to state in what France holds the superiority; where she is deficient, how such deficiency may be supplied; and to ascertain by what means and in what points her commerce in that quarter of the globe may be beneficially extended. Every importance is to be given to the bearer of so grave and interesting a responsibility. The steamer *La Reine Hortense*, which last year was employed for the Minister de la Marine and of the Emperor himself, is to be fitted up with the greatest luxury for the beginning of July, when M. Sallandrouze takes his departure, and is to be under his orders during the whole of his stay in America, and until his return to France.

The success of "Les Filles de Marbre" at the Vaudeville continues unabated, and it asserted that the result of the visit of Louis Napoleon to the theatre will be the bestowal of the *croix d'honneur* on M. Théodore Barrière.

The Emperor has granted to Millies, Cornelle, descendants from the great writer, a pension of 2000f. from his private purse, on the occasion of the 247th anniversary of the tragedian's birth.

The marriage of Mdlle. Madeleine Brohan with M. Mario Uchard took place a few days since at the church of St. Roch, before a small circle of friends. The popular *soubrette* is not to quit the stage, but it is expected shortly to make her re-appearance in M. Mazères' play and the "Jeux de l'Amour et du Hasard."

Report states that Thalberg, who is now at Milan, proposes to write a *première* for the Opéra Comique here; this news excites much interest in the musical world, and earnest hopes are expressed that it may be realised.

A little *brochure*, entitled "Mdlle. Rachel, ses Succès ses Détracteurs," just made its appearance. The subject is such tenderly on the part of the author, M. de Chambrun, may be, we pretend not to say; for so any of the critics seem disposed to venture very freely on such dangerous ground; hitherto it seems to have been considered inadvisable to state—in print—that Mdlle. Rachel had or could have *défauts*; and we suspect M. de Chambrun would have done wiser, as far as the success of his book goes, to wait till time had brought its usual effects on a public almost always more or less ungrateful to its favourites.

M. de Kisseleff, the Russian Ambassador, had an interview with Louis Napoleon on Wednesday morning. It is stated that he mentioned to his Majesty that the occupation of the Danubian provinces was not meant by Russia as an attack on the independence of Turkey. The Emperor was of opinion that the treaties did not authorise Russia to cross the Pruth, except under certain circumstances, which have not taken place.

A certain degree of activity is displayed in all the military ports of France. Detachments of marines, on their way to Toulon, pass almost daily through Paris. Orders have been issued to all seamen on leave of absence, whose term of service has not yet expired, to proceed forthwith to Brest, and to report themselves to the Port Admiral. This order has been executed at Havre. Orders were received at Honfleur on Saturday last to raise all the seamen disposable. This measure will include fathers having three children, and having served in the navy three years and nine months. Letters from Bayonne announce that orders were received there to raise 200 seamen. On the 10th, orders reached Brest to arm the steam-frigates *La Pomone* and *La Caffarelli*, and the vessels *L'Hercule* and *Le Duguesclin*. Nothing is known of their destination.

The Bourse, which was comparatively firm on Tuesday, was agitated on Wednesday with various reports of an alarming character, which caused a serious decline in the prices of public securities. The Three per Cents opened at 78f., fell to 77f. 95c., and closed at 77f. 20c. for the end of the month. The Four-and-a-Half per Cents closed at 101f. 60c.

AUSTRIA.

The King of Bavaria has arrived at Vienna. It is asserted that the Russian Ambassadors at Vienna and Berlin insist on Austria and Prussia discontinuing that passive part which they have up to the present played in the Oriental question.

BELGIUM.

The Belgian Journals mention a report that negotiations are in progress for causing Belgium to join the Austro-German commercial union. The marriage of the Duke de Brabant and of the Archduchess Maria will not take place by proxy. The ceremony will be performed in the month of August, but the day has not yet been fixed.

The Chamber of Representatives of Belgium terminated its session on Saturday. Before breaking up, it voted a bill for allowing 618,000 fr. for a monument in honour of the National Congress, and 400,000 fr. for one to the late Queen. The Chamber expressed a wish that the column, which is to form a monument to the Congress, shall be surmounted by a statue of the King.

HOLLAND.

The King opened the session of the States General on Tuesday, in a speech which will be read with interest, in consequence of the change of Government and the recent agitation in Holland upon the subject of the alleged Papal aggression. His Majesty's speech was as follows:

Gentlemen,—I was much affected, some time since, when thousands of my beloved subjects, fearing for their national interests, came to me and desired me to take measures to provide against the evils which they dreaded. Being deeply impressed with my obligations to protect all their interests and rights, I thought it better not to follow the advice given me by the advisers of the Crown. I felt that by following it I could not remove the great anxiety nor calm the excited feelings of my people. When the Ministers offered me their resignations, I accepted some of them, and replaced them by men who possessed my entire confidence; therefore, I felt myself bound to dissolve the Chambers, and to give an opportunity to the electors of expressing their feelings on the subject. Now with gratification I see myself surrounded by both Chambers of the States-General, and I was anxious, gentlemen, to open your Assembly myself. I am glad I can do this with satisfaction. We are on good terms with foreign powers. The development and welfare of the country are increasing. These are the favourable auspices under which the Legislative Body can recommence its labours. The difficulty, however, to which I adverted in the beginning, I am sorry to say, is not yet removed; I have tried to arrange it, as well by inviting explanations from those parties who have originated the dissension—I suppose involuntarily—as by taking measures to be carried out by ourselves. The Government are convinced that many of the difficulties can only be disposed of by a law. The sixth clause of the Charter assures equality to all religious associations, but it imposes also duties on Government, which cannot be fulfilled without the power of the law. It is my intention to request your co-operation in this matter. I shall do it with greater confidence, as I am sure that the spirit of moderation and quiet investigation so natural to our country will prevail at your deliberations, and that it will be your serious desire, as it is mine, firmly to maintain the principle of religious tolerance when less belonged to our nation, and to enroll all that could cause discord, and seclude between the sons of the same country. In that way it will be possible to arrange so that the Government can give equal protection to all the religious associations, by which they can obtain security for liberty and substantial solidity under the same rea-onable and impartial law. I intend to bring before you, in the session, only those projects of law for your deliberation that require a speedy decision. I now declare the Assembly to be opened, and I conclude with wishing that Heaven's wisdom may actuate and govern us, so that our efforts for the benefit of our beloved country may be characterised by order, peacefulness, and justice.

The King has just granted permission to the new Catholic prelates to accept the title of supernumerary Chamberlains conferred on the Bishop of the Propaganda to wear the insignia of that ecclesiastical dignity.

THREATENED HOSTILITIES BETWEEN RUSSIA AND TURKEY.

Since our last the actual position of the Eastern question has not been materially altered. We now know, from the statements of the British Government in Parliament, that the British as well as the French fleet is on its way to the Bay of Besika, in the vicinity of the Dardanelles. Couriers and diplomatic agents have been busy hurrying backward and forward between Western Europe and St. Petersburg; the course of events confirming the impression that the Russian forces will again occupy the Danubian Principalities. It would appear that official information of that determination has been communicated to the Courts of Vienna, Paris, and probably London, accompanied with the assurance that the Emperor Nicholas does not construe that act of aggression as a declaration of war with Turkey and the protecting Powers. He thus adroitly attempts to throw the responsibility of a rupture upon the Porte and her allies. The question is now narrowed to this single point:—Will the other powers of Europe regard the Russian invasion of Moldavia and Wallachia as a *casus belli*? Accepting to present appearances they will not. That step would be a clear infraction of treaties which declare that the Pruth shall be the boundaries of the two empires. But, unfortunately, the Czar can plead precedent in his favour. These provinces having been occupied by his armies in 1848, and the following years—and upon that precedent he now bases a right to garrison the same course, under certain contingencies, which he asserts have now arisen. It is supposed that the Czar will defer any real negotiations with the Porte until the Russian troops have taken full possession of the provinces of the Ottoman empire, when European diplomacy will have to accept the alternative of their permanent occupation, or of a declaration of war. We would be a further December ere the Russian Emperor will have come to demands respecting the Greek Church.

Letters from Constantinople of the 2nd inst. are full of hostile rumours of the great preparations for defence, of warlike feelings of the Mussulmans on the theatre. They state that the Turks, ignorant of the unjust pretensions of Russia, and conscious of their own strength, consider themselves for the maintenance of their dignity, and for the fulfilment of engagements with energy and enthusiasm." The Bosphorus was covered with vessels of every size, transporting ammunition and troops to the camp of Buyukdéré, which is now composed of 30,000 men, and the same activity was manifested in the arsenal of the Admiralty, where ten vessels were ready to sail. The population were working from daybreak to midnight, and the *ulémas* were laden with cannon and military stores of every kind. An ordinance was issued on the 26th May, prohibiting merchant vessels of 10 000 kilogrammes burden and upwards from quitting the port. The Turkish merchant service was actively furnishing its contingent of seamen, and Hussein Bey was charged with enrolling volunteers for the independent corps. Each volunteer is to receive sixty piastres per month during the whole period of his service; the pay of the Nizam is only twenty. The excitement of the population against Russia was at its height

The quantity of gold put into circulation was very great. It proceeds, no doubt, from the contributions for extraordinary occasions like the present. All that was purchased for the service of the Porte was paid for in cash. Orders have been sent to the provinces to fill the magazines of the Government with wheat and Indian corn. The *Egyptian* fleet of 25 sail, iron-clad and with much steam power, was to be at Constantinople on the 10th inst. Letters from Alexandria of the 3rd inst. state that the Viceroy of Egypt was making in the armament of twelve corvettes and several frigates, which were to be ready for sea on the 2nd of June. Through out the week 140 flat-bottomed boats had been engaged in transporting artillery and ammunition to the fleet and the Citadel which commands the Bosphorus. On the 27th, five Turkish vessels transported troops and martial stores to Varna. The militia are pouring in from all the provinces. On the 30th of May the Sultan proposed passing the troops in review

From Jassy, under date June 3, we learn:—"Colonel Hanoff, the Commander of the Russian Ponto-n Brigade, has arrived at Ainga, on the Moldavian border, on the left bank of the Pruth.

Omar Pasha, who takes the command of the army of Roumelia, had arrived at Varna, and was occupied with inspecting the fortifications.

RUSSIA.

Letters from St. Petersburg state that Prince Gortschakoff, who had been appointed to command the active army of 120,000 men now on the Pruth, had been summoned to the capital to receive instructions. The Grenadier corps had been ordered to be in readiness to march for Poland, in case it should become necessary to withdraw troops thence. Letters from Warsaw state that Paskiewitsch is busy inspecting the troops and arsenals. It is broadly hinted that Count Nesselrode, the Minister for Foreign Affairs, is no longer so perfectly possessed of his Imperial master's confidence as formerly; that he had, from the beginning, opposed the mission of Prince Menschikoff; and that the specific Russian party was now gaining the upper hand.

The Russian fleet at Sebastopol consist of thirteen ships of the line, six of which mount 120 guns, namely the *Varna*, the *Twelve Apostles*, the *Empress*, *Sviatoslav*, *Sedefond*, and the *Three Swietytels*; eight frigates of sixty guns, six corvettes, and twelve smaller vessels. The crews had been lately completed, and the 120-gun ships were amply supplied with heavy artillery. The fleet, however, wanted steamers, which rendered its evolutions more difficult.

The Emperor of Russia, it is said, at present makes has ordered the construction of an electric telegraph between Odessa and St. Petersburg, and the re-organisation of the mail communication along that road. The same paper adds that the establishment of a railroad in that direction was considered indispensable, and would be the object of a subsequent decree.

AMERICA.

By the *Canada*, we have advices from New York to the 4th instant From Washington there is no intelligence of a political character. Baltimore and its vicinity has been visited by a tornado, which destroyed a good deal of property.

Vigorous measures have been taken by the British Government for the protection of the British North American fisheries. Her Majesty's steamers *Basilisk* and *Devastation* are to be anchored off Newfoundland, four small vessels, each manned by twenty-five men, are to be fitted out from the flag ship *Cumberland*, and to cruise near Halifax.

We briefly noticed in our last the passing of the bill to increase the representation in the Canadian Legislature. The bill passed the Legislative Council at Quebec by two more than a two-thirds vote, which was the number necessary to carry it. For five or six years past this two-thirds majority was not obtained by only one or two votes every session of Parliament. This adds to the defeat of the present success of the bill. The bill will, of course, now become law, as, according to the theory of responsible

Government, the Governor-General is supposed to have given his assent to the principle before its introduction. The provisions of the bill are of great importance, and will make the representation more thoroughly Democratic. The members of the provincial Parliament are increased from 84 to 130. The Legislative Council, the second branch of the Legislature, is made elective. The Upper House to consist of 60 members, 30 to be elected from either section of the province. The qualification for membership to be £1000 worth of real estate or ex-membership of the Lower House. The councillors to hold office for a period of six years, and to be elected and go out by rotation. The Governor-General to have the power of dissolution in case the Council should reject a measure twice passed by the Lower House, but not otherwise. The Colonial office has uniformly discountenanced this change

The news from the River Plate is of a most unfavourable character. The siege of the city of Buenos Ayres continued, but was carried on merely by a species of skirmishing guerilla warfare in the outskirts of the town, by which much property was destroyed, and many lives sacrificed. General Urquiza, after proclaiming that the "fatal obstinacy of the pitiable circle which had possessed itself of the arms and power in the city against the general will of the province of Buenos Ayres," compelled him to assume an attitude he would sincerely have desired to avoid, the General-in-Chief of the National Squadron issued a notification, dated April 23, announcing, "that the blockade of the aforementioned port of this port is established from this date, conceding a term of six days, reckoned from said date, for foreign vessels to quit the inner roads, and twenty days for those that are in the outer roads." The pressure of the siege was severely felt in the city.

WEST INDIES

By the *Persia* we have dates from Jamaica to the 5th ult. Five deaths from yellow fever occurred on board this steamer. The weather in the West Indies was rainy, and favourable for the next crop; but the falling off in the present crop will be general say about 12,000 hogsheads at Barbadoes, 10,000 in British Guiana, 5000 in Trinidad, and the other Islands in similar proportion. At St. Thomas, the yellow fever was totally prevalent

At Jamaica, yellow fever was very malignant in the harbour. Great excitement prevailed about mining operations, and each week produced some fresh discoveries. Two new copper and mining companies were being got up. In commercial affairs there had been more activity. The differences of the Council and the House of Assembly appeared to be far from adjustment at ever; and the collection of the revenue bills was not likely to be entertained by the House of Assembly, whilst the Council refused to pass them with the appropriation clauses. In the meantime, various ports may be considered as free ports, but there had not been the large influx of goods which it was supposed would have taken place. The Hon. Hector Mitchell, Mayor of Kingston, died on the 27th ult.

NEW YORK CRYSTAL PALACE.

A private Correspondent at New York, writing on the 3rd June, states that the Exhibition will certainly not open before the 15th of July, and he inclines to think that the 15th will be the day of inauguration. He states that great complaints are made by persons intending to exhibit who have been waiting in New York with their goods for some time, and at great inconvenience. As yet, he says, the building is a mere skeleton. The land of Ellesmere and his brother commissioners were hourly expected, and preparations were made to give them a cordial reception

The directors of the Exhibition have issued an announcement that the Exhibition will be opened on the 15th. They state that the completion of the building has been retarded by "the novelty and intricacy of the style of construction, and the high standard of architectural beauty it has been their object to attain." They add, "It will, unquestionably, be the most attractive and interesting collection of the works of art, the results of science, and the productions of industry that has ever yet been made in this country, and will tend to increase the competitive emulation of the age in every branch of its effectual development

The glazing of the building will not be finished in less than a month or five weeks. There is much to be done to complete the interior fittings, the painting of the interior and exterior, and the construction of a separate building, between the principal structure and the Reservoir, for the machinery. Viewed from the interior, the dome—which is 100 feet in diameter, and, from the floor to the top of the lantern, 123 feet—has a very grand and imposing appearance. The galleries will soon be enclosed with trellis-work railings, which are in admirable keeping with the light and airy character of the whole building. In the course of five weeks the building will be so far finished as to be ready for the reception of contributions. Large quantities of articles for exhibition continued to arrive. Amongst the latest contributions the following are recapitulated:—

From the Society of Arts and the Geological Society, London. The Duke of Buccleuch, from his mines, sends a bar of silver weighing 537 ounces. Sweden and Norway send all that is interesting from those countries. Russia sends will be represented by the Russian Court, various public departments. Mr. M'Culloch, an eminent painter, of Amsterdam, has sent one of his best productions, representing the first meeting of Gustavus Canabus Dusseldorf paintings. The largest amount known. The Earl of Carlisle's piano. Miss Shenstone's sculpture of Nourmahal. The French Government are affording every facility for sending the goods of French manufacturers. M. Bialock, the European agent for the Exhibition, had been admitted to an audience by the Emperor of France, who assured him that the Imperial manufactures should be worthily represented. His Royal Highness Prince Albert is among the contributors of valuable articles. The portraits of her Majesty, himself, Prince Arthur, and of the late Duke of Wellington, formerly in picture painted by Winterhalter, is his contribution. The Baron Marochetti has completed a colossal equestrian statue of General Washington, which is about to be embarked. Mr. Crewe has executed a colossal statue of the late Daniel Webster, it represents the American statesman in the act of addressing the Senate. From Rotterdam will be sent a variety of articles used by the Japanese, such as grasses, mats, plants, fruits, minerals, crystals, ores, and fossils collected during a five years' residence in Japan. The Sardinian Government has the same facilities to exhibitors as that of France. Samples of china and glass from Austria and Bohemia. Bronzes from Duplan Salles, France. Crosskill's patent flour-mill and agricultural machinery in motion. Elkington, Mason and Co., the manufacturers of electro plate, send some articles. J. and S. Garrard, crown jewelers of London, are amongst the exhibitors, and send a magnificent collection of silver ware.

The Canadians take great interest in the Exhibition. It is the intention of the Canadian Government to apply to Parliament for the sum of £2000, to defray the expenses attendant on the transmission to and from New York, and custody there, of articles to be forwarded from Canada to the great industrial fair at New York. The Governor of the United States and a large number of eminent personages are expected to honour the event of the opening of the Exhibition with their presence. An invitation to his Excellency the Governor-General of Canada, has been forwarded from Professor Sedgwick, President of the Exhibition Committee, which his Excellency has signified his intention to accept, in the event of his other avocations permitting. Several members of the provincial administration, with other distinguished visitors from Canada, will also be present on that interesting occasion.

GREAT INDUSTRIAL EXHIBITION FOR SCOTLAND.—A public meeting is about to be held in Edinburgh, to concert measures for an industrial exhibition, to take place in that city in the summer of 1854. The committee appointed by the promoters of the scheme have succeeded in acquiring the option of a central and adequate site on the Calton-hill of Edinburgh, so as to combine, along with the present object, the completion of a great national edifice. The contractor is prepared to execute the work, and to rely for payment of half of the expense on the sale of crown jewelers of London, are amongst the exhibitors, and send a magnificent collection of silver ware.

BROMPTON HOSPITAL FOR CONSUMPTION.—The London Sacred Harmonic Society will give a performance of sacred music at Exeter hall, on Wednesday evening next, in behalf of the funds for the completion of the east wing of the Hospital for Consumption at Brompton. The performance will be under the immediate patronage of her Majesty and Prince Albert.

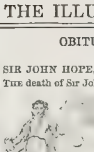
LORD ELGIN AND GOVERNOR LA TROBE.—We have authority for saying that this officer is about to retire from the government of Victoria, so soon as the necessary arrangements for the appointment of his successor are made. His Excellency has sold his Melbourne property, originally bought by him at a nominal price, for £70,000.—*Australian and New Zealand Gazette.*

POSTAGE REGULATION.—By a Treasury warrant, dated June 10, 1853, it is directed that every printed price-current, commercial list, course of exchange, shipping list, or other publication, respectively printed or published in the United Kingdom, although not a newspaper, but bearing newspaper stamp, the circulation of which, by the post, under the newspaper privilege, shall be allowed by the Postmaster-General, may be sent by the post free of British postage, or liable to British postage according to regulations set forth at length in the said warrant.

OBITUARY OF EMINENT PERSONS.

SIR JOHN HOPE, OF CRAIGHALL AND PINKIE, BART., M.P.

THE death of Sir John Hope took place on the 6th inst., at the residence of his son, in Gloucester-terrace, Hyde-park. The deceased Baronet, born on 13th April, 1765, was second son of Sir Archibald Hope, the ninth Baronet, and succeeded as eleventh Baronet on the death of his half-brother, Sir Thomas, in 1801. He married, in June, 1805, Anne, youngest daughter of the late Sir John Wedderburn, Bart., and by this lady, who survives him, leaves issue seven sons and three daughters, of whom the



[illegible] Hope family in Scotland are descended from Sir Thomas Hope, of Craighall, Lord Advocate of Scotland, temp. Charles I., created a Baronet of Nova Scotia and Scotland (19th Feb.), in 1628, of whom the late Baronet was the lineal representative, and was then chief or head of the family. From a younger son of Sir Thomas the Earl of Hopetoun and many others of the name of Hope are descended. Mr. H. T. Hope, of Deepdene, is descended from a younger brother of the first Baronet.

The family seat was formerly at Craighall, in Fifeshire; but has latterly been at Pinkie-house, near Musselburgh, six miles from Edinburgh

The deceased Baronet had been for many years Lieutenant-Colonel Commandant of the Royal Mid Lothian Yeomanry Cavalry, and Lieutenant of the County of Edinburgh; and he was former[illegible] Member of the county. He was also one of the Lieutenants-General of the Royal Company of Archers, and Deputy-Governor of the Royal Bank of Scotland, &c.

In 1840 he was elected member for the county of Edinburgh, or Mid-Lothian, and again in 1847, and in 1852 each time without opposition Throughout his whole life he was a steady and consistent supporter of Conservative principles.

SIR RICHARD BAKER

THE death of this gentleman occurred on the 1st inst., at his residence, Mount Errol, Dawn-brook, county Dublin, in the eighty-third year of his age. He was the representative of an old and respected Northumbrian family, whose [illegible] in the [illegible] Baronetage [illegible] of Osingdon Hall [illegible] Durham, [illegible] and [illegible] letter (still preserved) in [illegible] other, Ralph [illegible], served as High Sheriff of Northumberland in [illegible], and his [illegible] Colonel Bates, com manded, for many years, the Inniskilling Dragoons.

RALPH BATES, ESQ.,

OF MELROSE HALL, NORTHUMBERLAND.

THIS gentleman died on the [illegible] inst., in the fifty-fourth year of his age. He was the representative of an old and respected Northumbrian family, whose [illegible] in the [illegible] Baronetage [illegible] of Osingdon Hall [illegible] Durham, [illegible] and [illegible] letter (still preserved) in [illegible] other, Ralph [illegible], served as High Sheriff of Northumberland in [illegible], and his [illegible] Colonel Bates, com manded, for many years, the Inniskilling Dragoons.

DEATH OF MADAME MACEDO.—We regret to announce the sudden decease of Madame Macedo, wife of the Brazilian Plenipotentiary of Brazil at this Court. The fatal event occurred at the Brazilian Legation, No. 9, Suffield-street, Portland-place, on Sunday, during her Excellency's confinement. She was an English lady, and has left a young and interesting family.

WILLS.—The will of the late Chamberlain of the City, Anthony Brown, Esq., has been sworn to by the executors. The personal property was valued, for probate duty, at £70,000; there are no bequests to public charities.—The late Dean of Peterborough, the Rev. George Butler, D.D., formerly head master of Harrow, has bequeathed to his widow, and afterwards to his children, those presents of plate made to him by the scholars and Harrow men, on his retiring, in 1829, from Harrow School: as well as the gold snuff-box, with list of Messrs. works, the gift of Prince Leven, whose three sons were educated by him. He leaves his widow an annuity of £200, and to his sons and daughters £400 each. The personalty was valued at £30,000.—The will of Lieut.-General Sir Walter Raleigh Gilbert, Bart., K.C.B., has just been proved by his relict Lady Gilbert, to whom, by a codicil made the day before his death, he bequeaths all his property in the nature of transmission from India; and the residue to his son and two daughters.

BEQUESTS. The late James Foster, Esq., of Sournton Castle, Staffordshire, died possessed of £700,000 personalty, comprising large portions among his next of kin and nieces; [illegible] interest in the Chilington Coal and Iron Company between Messrs. Jeremy Foster and Percival Foster. To his brother, William Foster [illegible] annuity of £2000; and to his sister, Mary Foster, £2000 [illegible] all the furniture, carriage, and residence at Sournton, and the castle, with the pictures, busts, and statues, at Leamington, to his said brother, William Foster, upon his paying to the testator's estate his sole executor, devising to him his freehold estates. — Simon Joseph Joseph, Esq., late of Montagu-place, Russell-square, has left legacies to a great number of Jewish charitable institutions. His property was sworn under £45,000.—Miss Isabella Brown, of Skipton, Yorkshire, has bequeathed to the British and Foreign Bible Society £200; Religious Tract Society, £200; Society for Promoting Christianity amongst the Jews, £200; London Missionary Society, £200; Irish Society for Promoting the Education and Religious Instruction of the Native Irish, £100; Scripture Reading Society (Ireland), £100; Church Missions to the Roman Catholics, £100; Moravian Missions, £100; and like bequests to many other institutions.—Mrs. Catherina Manning has left to the British and Foreign Bible Society, £500, and a like sum to the Religious Tract Society, London Missionary Society, and to the Society for the Prevention of Cruelty to Animals.

MR. CHARLES MANBY, the indefatigable secretary of the Institution of Civil Engineers, and Chevalier of the Legion of Honour, has been unanimously elected a Fellow of the Royal Society of London —one of the highest distinctions connected with science.

BOSTON AND SPALDING RAILWAY JUNCTION RAILWAY.—This committee, of which the Right Hon. H. T. L. Corry was chairman, commenced their proceedings on Thursday, the 2nd inst. Evidence in support of the public objects of the undertaking was given by many gentlemen and practical men connected with the district, which occupied the two first days of the inquiry; and, on the subsequent days, a numerous body of witnesses were examined with the view of establishing the superiority of the direct Ambergate line between Grantham and Boston and Spalding, over the proposed curve by way of Sleaford; but this attempt signally failed. The great, and, in fact, the only opposing interest was that of the majority of the shareholders of the South Forty-foot Drain, from Swineshead-bridge to Boston, especially that portion of it which lies between that bridge and Mr. Brakenbury's, upon which many witnesses were examined, whose testimony did not appear to be much regarded by the committee, who required the objectors to establish the practicability of their scheme, especially that portion of it which lies between Swineshead-bridge and Mr. Brakenbury's, upon which the chief evidence was to show that the banks were insufficient to carry a head of water. On Tuesday last the committee resolved that Mr. Rennie, upon the allegations of the two gentlemen before named, had not succeeded in establishing the utter worthlessness of their testimony, although that the bank was peculiarly weak, adopted by the formation of a railway, and that the danger apprehended was entirely opposed to the results of all practical engineering. After a very powerful speech from the promoters' counsel (Mr. Burke), the committee decided that the preamble was proved.

PICTURES FOR THE NEW HOUSES OF PARLIAMENT.—Mr. E. M. Ward has received authority to commence at once on a second illustration from history, for the new Houses of Parliament, as a companion to his "Preparation of Montrose"—at present one of the leading attractions of the Royal Academy Exhibition; and now about to be removed, in a size commensurate with its merits. The story which Mr. Ward is to tell on canvas is known among artists as the "Slave of Argyle." It has been painted before. Mr. Ward's theme is the Argyll who was executed early in the reign of James II.; and the incident which he has to paint is, when briefly told, the touching circumstance of his having been found in his cell on the last hours before his execution, asleep in all the innocent repose of childhood.

SEARCH FOR SIR J. FRANKLIN.—Dr. Kane had sailed from New York in the brig *Advance*, on his second expedition to the Arctic regions in search of Sir John Franklin. He was accompanied down the bay by his father, Judge Kane, his three brothers, and a large number of friends. The steam boat *Union*, with the members of the New York Masonic Grand Lodge, and a company of two or three hundred persons, proceeded a long distance with them

SAVING OF NEARLY TWO HUNDRED LIVES.—The British steamship *Conway* had arrived at Savannah from Jamaica, announcing that two of the passengers on board the ill-fated barque *William and Mary*, recently wrecked off the Great Isaacs, have been saved. They were rescued by a sponging schooner just before she sank. The loss of this fine vessel is to be regretted, was reported about a fortnight since, as having forced her with nearly 200 passengers She was bound from New York to New Orleans

PROVINCIAL INTELLIGENCE.

VISIT OF HER MAJESTY TO HULL.—Her Majesty the Queen has been graciously pleased to notify to the municipality of Hull that she accepts their invitation to visit the town in the course of the current season, but that she has not yet been able to fix the time when it may be expected to arrive at this port. But the Queen directs Lord Palmerston to make known to the people of Hull that ample notice will be given to them of her coming.—*Hull Advertiser.*

EXTENSIVE TURN-OUT AT STOCKPORT.—The master-spinners and manufacturers of Stockport having refused to give their operatives the ten per cent increased wages they demanded, the latter to the number of several thousands, have turned out, and are now on strike. The town is in a great excitement, and the authorities have sworn in special constables; but the people are quiet, believing they will be sure to win, because of the demands of trade. Some of the masters are said to have given in.

INCREASE OF WAGES.—The general rise in wages throughout the country has induced the Edinburgh County Police to petition for an increase of pay. The petition has been favourably entertained, and a graduated scale has been adopted, increasing the wages of the 3rd class of officers 2s., the next 2s., and the third 1s. 6d. per week. —The Police Board of Glasgow have agreed to add 2s. to the weekly pay of the police officers of that city.

SOIREE TO THE MEMBERS FOR BOLTON. On Friday evening last week a public demonstration took place in the Bolton Temperance Hall, to commemorate the defeat of the petitions against the return of Messrs. Barnes and Crook, as members for that borough. About 700 persons sat down to tea.

MINING IN THE ST. IVES DISTRICT.—The two companies have been formed for working mines near St. Ives. Engines are to be erected forthwith, and there is reason to expect that will be carried on with spirit, so that the demand for labour in this neighbourhood is likely to be very great, especially when the Harbour Improvement Bill is obtained, and the railway branch from the West Cornwall line.

A SINGULAR DISCOVERY.—A man in humble circumstances lately produced at the Aylesbury branch of the London and County Bank a Bank of England note for £10, dated eighty years back. Upon being questioned, he stated that about twenty five years since he married, and that his wife's mother gave them, among other trifles, an old bond. It was recently turned over to which he found in one of the note. It was paid by the bank At compound interest it amounted to £1400

DISCOVERY OF OLD COINS AT LANCASTER. A few days ago, in making some excavations on Castle-hill, and in the churchyard, several old coins were discovered. Among them were a Roman coin of the Emperor Trajan, who began to reign A.D. 98; a small copper coin of Tetricus, one of the Thirty Tyrants, and a silver twopence of Queen Elizabeth, dated 1589

DISCOVERY OF ROMAN REMAINS.—In the course of excavations at the works of Messrs. Dixon, West Tower-street, Carlisle, a number of deeply-interesting relics of the Roman era in Britain were discovered. Some of them were portions of the remains of animals, as bears tusks, deers horns, &c. Amongst the latter were two lamps, one of earthenware, and [illegible] iron, with a chain by which it would seem it was suspended when in use; two stilettoes, one of iron, another of composite metallic substance similar to our bronze, and in shape resembling the blade of a dinner-knife spear; the half of a red earthen vase, and of basin, beautifully turned, and in a [illegible] excellent preservation as to appear like the work of yesterday, instead of being, perhaps, more than 1500 years old, a spear head of peculiar construction, and some brass coins

HUNSTERPOINT PUBLIC SCHOOL.—The permanent building of St. John's Public School, for the middle classes, at Haraerpoint, will be opened on Monday next, the 20th inst. A special train will leave London bridge at eight in the morning; and those persons who may not be able to avail themselves of this train may use the ordinary Brighton trains—at nine, stopping at Hassock's-gate; and at ten a.m., stopping at Hayward's Heath.

INVITATION OF KOSSUTH TO SHEFFIELD.—An application has been made to Kossuth to know if he could accept an invitation to come to Sheffield, to be presented with a testimonial. He has replied as follows:—"It is no affectation on my part, but, under present circumstances, I can plead no merit to nothing, nor even to being in England. I have were to be tranquil if circumstances permit me—I should feel honoured to visit Sheffield, as suggested."—*Globe*

BATH AND WEST OF ENGLAND AGRICULTURAL SOCIETY

THE Show of this olden Association, originally established in the City of Bath, in 1777, was held last week at Plymouth, with great festivity. A very liberal subscription was entered into by the inhabitants of the three towns, to which the country gentlemen in the immediate neighbourhood very spiritedly contributed. An eligible site at Penny comequick, in the parish of Stoke Damerel, adjoining the borough of Devonport, was selected for the cattle, implements, &c., and additional accommodation for the poultry show; and other arrangements were made effectually to carry out the object of the managing committee of the Society. The railway companies also acted in a liberal spirit, conveying the stock, implements, &c., at reduced rate

The towns (Plymouth, Devonport, and Stonehouse), were characteristically decorated for the occasion; the arches being dight with flags and banners, and illuminated on each evening with devices in gas. We regret that we have not space to engrave our Artist's sketches of these festal embellishments

On Monday and Tuesday the trial of implements took place in a field at Lipson, in the parish of Plymouth, Mr. Bradford, the implements being of the latest improvements, and the ploughmen amongst the most skilful of their class, the work was executed in a very clever manner, and called forth expressions of admiration from the experienced and old labourers by whom it was witnessed. The scarifiers and paring and skimming ploughs were subsequently brought into operation. The judges next proceeded to another part of the field, where an acre of turnips and mangold-wurtzel had been sown in rows two feet apart, by direction of the council, and where the horse hoes and scuffling machines were tested. The deep ploughing was afterwards tried in another field, on the east side of the Saltash-road, called East-down, of about four acres in extent, with a similar but deeper soil to that of North-down

On Tuesday the chief attraction was the reaping machines, the trial being made on a piece of rye, which was in full ear. The field had been sown by Mr. Hosford expressly for the occasion. The following were tried:—No. 1, Hussey's, improved by Dray and Co., London; patented, 1847. Mr. Hussey is an American, of Baltimore, Maryland. No. 2, Bell's, also an American. No. 3, Hussey's improved by himself. Mr. M'Cormick is also an American. No. 3, Hussey's improved by himself The improvement aimed at may in general terms be said to be, the [illegible] of the machine as it approaches furrows, and a surer method of [illegible] the knives for cutting the crops. The judges then proceeded to test the powers of the digger (exhibited by Burgess and Key) on the ploughed land, and it appeared effectual. At about six o'clock the trials were concluded

On Wednesday, the Cattle and Implement Yard was effectually enclosed. It was situated on the rising ground at Pennycomequick, and on the west side of the Saltash-road, rather less than a mile from Plymouth. The field in which the show was held, was about six acres in extent, and was admirably adapted for the purpose. Within were erected four tents, which extended the entire length, with the exception of a narrow space in the centre for the visitors to pass and repass from one side of the show-yard to the other, in their tour of inspection.

On the next [illegible] of the show-yards there were refreshment-booths of every description; and in one of these [illegible] numerous manor shows, exhibiting giants, giantesses, extraordinary sheep, the [illegible], and dwarfish cattle, attracted various classes of the community to the spot. Dancing booths and marquees were also well filled, as well as Mesmerists, &c. The whole throughout the three days was crowded to excess—and the utmost good humour prevailed.

On Thursday, the number of persons at the Show was immense; and, when it had closed, the streets became crowded with persons to witness illuminations, &c.

On Thursday afternoon the annual meeting of the members was held at the Guildhall, Plymouth; after which, upwards of 500 gentlemen dined at the Royal Hotel, under the able presidency of Sir Thomas Lyle Acland, Bart

The Poultry Show was another attractive feature of the meeting: it contained upwards of 800 birds, admirably arranged

The Royal Devon and Cornwall Botanical and Horticultural Society held their first Exhibition for the season in the vicinity of the Showyards of the Agricultural Society

The principal tent was for the exhibition of flowers, plants, &c., by

THE BATH AND WEST OF ENGLAND AGRICULTURAL SOCIETY'S SHOW, AT PENNYCOMEQUICK, PLYMOUTH.

amateurs. On the west was another tent, in which the bazaar of the Ladies' Lying-in Charity was held. Below was a 60-feet bell-tent for visitors, and lower down was a geranium tent; and several marquees.

In the fruit tent were some very beautiful grape-vines, from the Earl of St. Germans. Sir Ralph Lopes, Bart. M.P., had sent some very fine citrons and lemons; and the Earls of Mount Edgcumbe and St. Germans had also contributed to this department. There was also a very fine dish of strawberries, from the Earl of Mount Edgcumbe; and a fine specimen of the Ripley Queen pine from the Earl of St. Germans.

To the left of the upper entrance was the large marquee, where the amateurs' flowers were exhibited. This was a very beautiful show—the finest, perhaps, seen in Plymouth. The first prize was gained for greenhouse plants by Admiral Rogers, whose Azalea punctata was remarkably rich in flower, well grown, and the most beautiful plant of the kind in the exhibition. Amongst the stove plants was a fine specimen of the hoya-bella, belonging to the Earl of St. Germans. It was clothed with a profusion of wax-like flowers, and obtained, for its beauty and excellence the Society's gold medal. The noble Earl's miscellaneous group included a specimen of the Norfolk Island pine, the Araucaria excelsa; and his Lordship also showed some Azalias, rich and profuse in flower, completely covering the plant with a sheet of exquisite colour. The Earl of Morley exhibited a fine collection of Ericas, many of which were remarkably beautiful; to these were awarded the first prize. His Lordship was also successful with his show of Azalias.

Mr. Elliott, of the Royal Hotel, exhibited about a hundred plants of different kinds, and carried off eight prizes. His geraniums were the finest group exhibited, and gained the first prize.

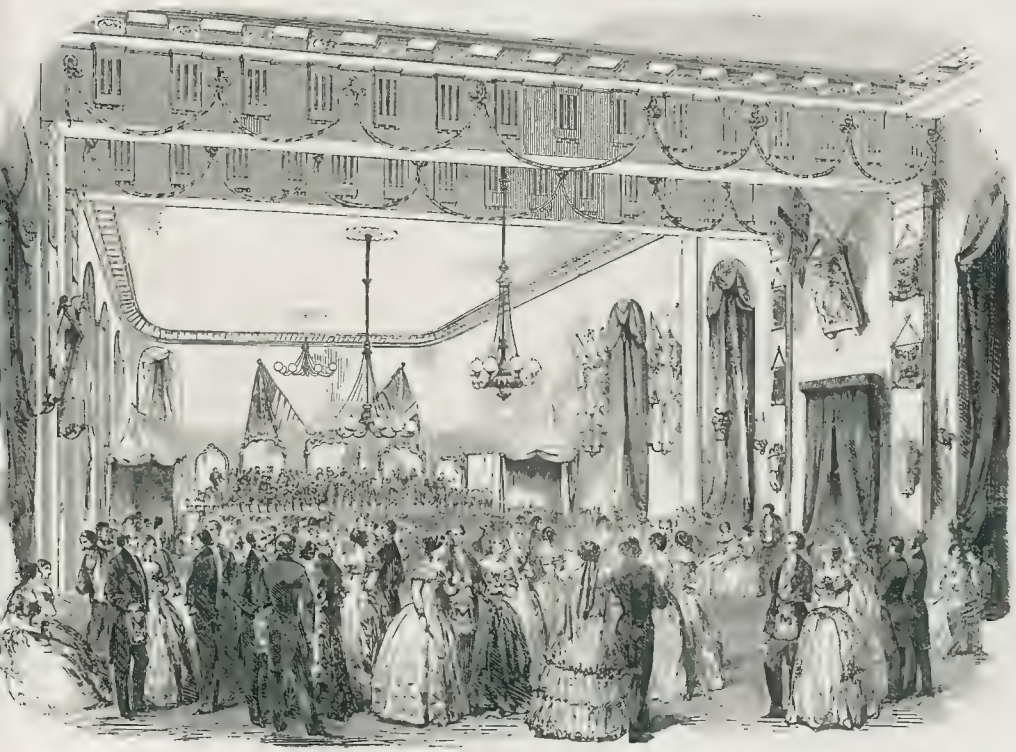
Mr. Morgan, nurseryman, of Torquay, exhibited a fine specimen of Azalea variegata and others: good examples of Erica depressa, &c. and a few good Pinellias of different sorts.

Mr. Fonley's marquee was filled entirely by supplies from his own extensive nursery.

We regret that we have not space for the prize-list.

HORTICULTURAL SHOW, AT THE BATH AND WEST OF ENGLAND AGRICULTURAL SOCIETY'S MEETING, PLYMOUTH.

THE INSTALLATION AT OXFORD.—ENTRANCE OF THE CHANCELLOR INTO THE SHELDONIAN THEATRE.—(SEE NEXT PAGE.)



GRAND MASONIC BALL IN THE TOWN-HALL, OXFORD.

LATEST INTELLIGENCE.

FRIDAY, 11 A.M.

INDIA AND CHINA.—TRIESTE.—The steamer *Calcutta* arrived on 16th June, from Alexandria Belling, which had really been captured by the Burmese insurgents, notwithstanding is was denied, has been recaptured, with the loss of 30 killed and wounded The Burmese Commissioners have not yet returned an answer to the Governor-General's proffered terms. Should they not return a favourable answer before the 30 days allowed them for consideration have elapsed, an advance upon AVA will take place, and steamers are being made ready to meet the contingency at Bombay.

RUSSIA AND TURKEY.—The French squadron was to leave Salamis for Besika Bay on the morning of the 11th inst. The English fleet left Malta on the 8th.

FRANCE.—PARIS, June 16, 6 p.m —The *Jena* and *Friedland* are at Toulon waiting orders The armament of the *Marengo* and *Suffren* was talked of there.

The Exchange of to-day was violently agitated at the commencement, but prices afterwards became more steady. Three per Cents, 77f, 35c.

TURKEY.—CONSTANTINOPLE, June 6.—The Divan has just despatched an Envoy Extraordinary to Becharest and Jassy. The armaments continue. It was said that the last Russian *ultimatum* had been rejected by the Porte. The Moldavo-Wallachian Chargé d'Affaires has left Constantinople for Bombay.

SWITZERLAND.—BERNE, June 14.—The Grand Council has resolved to resist, at any cost, the unjust demands of foreign powers News has reached Switzerland from Milan of a violent agitation in that city in consequence of another appeal to the armies made by Mazzini. To prepare against all eventualities the Austrian Government has decreed a concentration of troops at Gallarate, between Milan and Arona, not far from the Piedmontese frontier.

THE OXFORD INSTALLATION.

IN our journal of last week we recorded the proceedings of the Installation Week. We now illustrate the impressive opening of the great event of the week in the Sheldonian Theatre on Tuesday, at the moment of the entry of the Chancellor's procession. We subjoin a few additional particulars.

THE INSTALLATION.

In the midst of the cheering of the under-graduates, the wide portals of the theatre were thrown open, and a procession, in which bishops, statesmen, generals, divines, and civilians were seen, approached with measured steps; and no sooner was the Chancellor caught sight of than the whole assembly rose, and for several minutes the building resounded with notes of welcome and approbation. The Chancellor having reached his official seat, opened the Convocation, and read the names of those distinguished individuals upon whom it was proposed to confer the honorary degree of Doctor of Civil Law. It is needless to add that the noble Chancellor, who well became his splendid robes, was the hero of the day, and he seemed throughout thoroughly pleased and gratified with the reception given to him. Lord Stanley's name was most warmly greeted; and when Lord Derby, in pronouncing the formula of admission, for the usual phrase, "Vir honorattissime, ego auctoritate mea et totius Universitatis admitto te in gradum Doctoris in Civili Jure, honoris causa," substituted the words, "Fili mi dilectissime," &c., by the dimness of the bright eye, and the faltering of the clear voice, it was evident that the Chancellor was for the moment forgotten in the father: if hearts are to be judged of by voice, there was not one unmoved heart in all the theatre. And the evident undisguised pride with which he shook his son by the hand, and glanced at the same time towards Lady Derby, touched a sympathetic chord which went to the hearts of all.

We must not omit to mention that "God save the Queen" was sung, with fine effect, by the assembly, immediately that the Chancellor had reached his official seat.

THE MASONIC BALL,

On Wednesday evening (the subject of the second illustration upon the next page), was given at the Town-hall, by the members of the Apollo University Lodge of Freemasons. This Ball may truly be described as the most successful effort of the whole week. The visitors, on their arrival, were received by the stewards and their assistants, in full masonic costume, in the area under the Hall, which had been fitted up as a reception-room and promenade. The staircase was hung with paintings. The Hall itself was so transformed that it was difficult to recognise the old room. The walls, hung with drapery, were emblazoned with the arms of the Chancellor, and of every College and Hall in this University; and between these were interspersed masonic emblems, banners, and rich devices, bearing appropriate mottoes.

The splendid masonic attire of the brethren, their jewels, collars, and other decorations, the handsome dresses of the ladies, and the objects of taste and beauty which met the eye in every direction, combined to make the spectacle very striking. The Grand Jury Room, the platform end of the Town-hall, and the Council Chamber, were fitted up as refreshment courts. The supper was served in the Council Chamber. Upwards of 600 persons were present; and so great was the demand for tickets, that the stewards resolved on the last day to issue twenty additional, at three guineas each, the whole of that amount to be given to the Radcliffe Infirmary.

Among the distinguished company present were the Chancellor and the Countess of Derby, Lord Stanley, and the Lady Emma Stanley.

The festivities of the week were brought to a close by the second Installation Ball at the Town hall, when about 800 persons were present. Balls were also given at Magdalen College.

The hospitality displayed throughout the week by every College and Hall was most profuse, but we have only been able to notice the more prominent entertainments.

SUMMER CIRCUITS -1853.

North Wales Circuit: Lord Campbell.—Newtown, July 16; Dolgelly, July 20; Carnarvon, July 25; Beaumaris, July 27, Ruthin, July 30; Mold, Aug. 3; Chester and City, Aug. 6.

South Wales Circuit- Mr. Baron Platt. Cardiff, July 13; Carmarthen, July 19; Haverfordwest Town, July 21; Cardigan, July 27; Brecon, July 30; Prestaign, Aug. 4; Chester and City, Aug 6.

Norfolk Circuit: Lord Chief Justice Jervis and Mr. Baron Parke.—Aylesbury, July 11; Bedford, July 13; Huntingdon, July 18. Cambridge, July 16, Norwich and City, July 20; Ipswich, July 25

Home Circuit: Lord Chief Baron Pollock and Mr. Justice Crosswell Hertford, July 6; Chelmsford, July 11; Lewes, July 16; Maidstone, July 21, Croydon, July 26.

Midland Circuit: Mr. Baron Alderson and Mr. Justice Maule.—Oakham, July 8; Northampton, July 9; Lincoln and City, July 13; Nottingham and Town, July 16; Derby, July 20; Leicester and Borough, July 23; Coventry, July 27; Warwick, July 28.

Oxford Circuit: Mr. Justice Coleridge and Mr. Justice Crompton - Abingdon, July 7; Oxford, July 11; Worcester and City, July 13; Stafford, July 15; Shrewsbury, July 23; Hereford, July 27; Monmouth, July 29; Gloucester and City, August 2.

Northern Circuit: Mr. Justice Wightman and Mr. Justice Erle.—York and City, July 9; Durham, July 23; Newcastle and Town, July 28; Carlisle, August 1; Appleby, August 4; Lancaster, August 6; Liverpool, August 10.

Western Circuit: Mr. Justice Talfourd and Mr. Baron Martin.—Winchester, July 9, Dorchester, July 15; Exeter and City, July 19; Bodmin, July 23; Bridgwater, July 29; Devizes, August 4; Bristol, August 6.

Mr. Justice Williams will remain in London to attend Chamber business.

DEPUTATIONS.—A deputation, to urge the completion of certain county works in Ireland, that were at present suspended for want of advances on loan from the Treasury, has had an interview with the Chancellor of the Exchequer in Downing-street, upon which the right hon. gentleman was pleased to accede to their request.—A deputation from the Steam ship Owners' Association had an interview with the Right Hon. E. Cardwell, at the Board of Trade, on Saturday.—A deputation from the Manchester, Sheffield, and Lincolnshire Railway Company had also an interview with Mr. Cardwell on the same day, at the Board of Trade, on the subject of the Mer. hant Shipping Bill

CALENDAR FOR THE WEEK.

SUNDAY, June 19.—Fourth Sunday after Trinity. Inigo Jones died, 1652
MONDAY, 20.—Queen Victoria's Accession, 1837.
TUESDAY, 21 Income-tax imposed, 1842. Longest day.
WEDNESDAY, 22.—Hochstaedt. Ii died, 1627. Battle of Vittoria, 1813.
THURSDAY, 23.—Leibnitz born. 1646. Alexander died, 177.)
FRIDAY, 24.—St. John the Baptist. Midsummer-day
SATURDAY, 25.—Battle of Bannockburn, 1324.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JUNE 25, 1853.

THE CAMP AT CHOBHAM.

ON SATURDAY next, JUNE 25th, will be published

A GRAND DOUBLE NUMBER

OF

THE ILLUSTRATED LONDON NEWS;

CONTAINING

A SERIES OF ENGRAVINGS

OF THE GREAT

ENCAMPMENT ON CHOBHAM COMMON:

Illustrating the more attractive scenes of the military spectacle, and its evolutions, in Large Views, and a set of Characteristic Sketches, forming a picturesque record of this national demonstration.
Also, a Series of Illustrations of the French Camp at Helfant, St Omer.
Portraits of the King and Queen of Hanover.
The Government School of Practical Art, to be founded at Wolverhampton, on Tuesday next.
Launch of the *Solent* Steamer, at Cowes
West Kent Poultry and Rabbit Show.
The *North Star*, United States Steam ship.
Foundation of the Asylum for Idiots, at Redhill.
The D'Eyncourt Testimonial; and a variety o other Engravings.

Price of the Two Sheets, One Shilling

TO CORRESPONDENTS.

MILITIA OFFICERS.—It is very probable that militia officers while embodied are privileged, in law, to adopt the titles of their rank; but we still maintain our opinion that good taste should restrict the usage to the actual period of being on duty Officers of the army are entitled, solely in the object of their profession, and are consequently at all times virtually officers; but those in the militia may be at the same time barristers, attorneys, doctors, and persons engaged in trade Surely the designations of Major, Captain, and Lieutenant, sound strangely inapplicable, and sadly against good taste, if given to such as these, except when actually on duty

SACRISTOTUS.—We do not know the address of the gentleman in question. A letter sent to the care of his publisher would, doubtless, be forwarded.

A SUBSCRIBER, Maidenhead.—The Baronetcy of Browne, conferred in 1689 on Sir Henry Browne, of Kiddington, became extinct in 1764; which fact proves that neither Henry nor Peter (if, indeed, they ever married) left any male descendants.

CAROLUS.—The gold coin is a quarter-noble of Edward III. Very common

ERRATUM.—At page 473, for "William White La Bark," read "William White La Barre"

TO OUR SUBSCRIBERS.

On and after SATURDAY, JULY 9, 1853, a SUPPLEMENT of Eight Pages will be published, GRATIS, every week, with the ILLUSTRATED LONDON NEWS.

TO ADVERTISERS.

The PRESENT RATE of CHARGES for ADVERTISEMENTS in the ILLUSTRATED LONDON NEWS will be REDUCED ONE-HALF immediately on the new law for the alteration of the Advertisement-duty and Stamp-duty on Supplements coming into operation.

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS PUBLISHED A SUPPLEMENT, GRATIS.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JUNE 18, 1853.

THE most popular part of the Chancellor of the Exchequer's Financial Scheme—the bill for extending the Legacy-duties to real estate—was committed on Monday, after a vain attempt on the part of the landed interest, led on by Sir John Pakington, to throw it out. The tax, we must say, notwithstanding the approval of public writers and statesmen, is by no means a desirable one; and there is scarcely a family in the kingdom, of the middle classes, which has not, at some time or other, had a painful battle with the Legacy-office, and suffered a galling defeat. The greatness of the annoyance is one element of the desire of those who suffer that it should be extended to all; and the chief merit of Mr. Gladstone's plan is that, with the exception of the property of Corporations sole, it fairly subjects all property to the same vexatious impost. Now that the tax is to be extended to the landowners, they have found out that it is most inquisitorial, vexatious, and unjust; and on these grounds they resist it. As long as they were exempt from its operation, though bound as members of the House of Commons to promote the public good, they never said a word against it; but the instant it is likely to fall on themselves, they denounce it as vehemently as the taxes on knowledge are denounced by the society for getting rid of them. Their eyes are couched, their lips touched with a "coal of fire," and they see at once and proclaim the truth. As Sir John Pakington did not hesitate to accuse the Bishops -who are exempt from the tax, and voted against the motion of Lord Malmesbury for an inquiry into its bearings—of being actuated by selfish motives, he invites the retort that his party acted from such motives in supporting a tax which they did not pay. In fact, when the tax was imposed, in 1796, the landed gentlemen were the authors of a plan for dividing it into two parts, and they passed the first measure imposing the tax upon personal property, and threw out the second that applied to their own. They did this at a time when they were denouncing freedom as rebellion, and calling on the nation for sacrifices in the cause of Order and the Throne. They were convicted of hypocrisy and injustice; and feelings the reverse of respect were from that time roused against them. Now the balance is redressed, and, henceforward the landowners will be ranged with the rest of the people in opposition to the tax. Whatever objection may be made to it *per se*, landed property ought to be subjected to it as long as it is maintained; and the great, but we regret to say almost the only, merit of Mr. Gladstone's measure is that it extends an obnoxious tax to a class which exempted themselves from it when they imposed it on others.

Mr. Gladstone contemplates making a Tax on Successions a permanent part of the national revenues. It is a Property tax, and is henceforth to be levied on all successions, at the old rates—varying from 1 per cent, when the heir or the legatee is the lineal descendant or ancestor of the deceased, to 10 per cent, as he is a stranger in blood. Property left in trust for charitable purposes is treated like property left to strangers, and subjected to a duty of 10 per cent. Property not exceeding the value of £100 is exempt; and all successions which, taken as legacies under the Legacy-duties Act would be exempt, are to be exempt under this act. Policies of life assurance effected by parties themselves, on their own lives, are not to be considered as successions, and will be exempt from the duty.

It is easy enough to say that all property, when it devolves by the death of one person to another, shall pay a certain percentage to the State; but, though all property in this calculating and insuring age can be reduced to a money value, it is of various kinds, and of future or contingent values; and to define them, to estimate these values, and the mode of levying the duties on various kinds of properties, a long Act of Parliament, containing fifty six clauses besides tables (one of them very voluminous) for determining the value of annuities—is necessary. Then the Commissioners of Inland Revenue, to whom the execution of the act is entrusted, are empowered to cause an estimate of the value of all successions to be made, if they are dissatisfied with the statements of the parties, and to charge at their pleasure all the expense of making the estimate on the succession, and recover it forthwith. Persons not giving proper notices are liable to heavy penalties, and to be exchequered if they make default. The Commissioners may call for the production of books and documents necessary for their information, and take copies of them. Individuals may, indeed, appeal to the Court of Exchequer against their decision—but what that means for the inheritors of a few pounds, or a few hundred pounds, against a Government board, we need not state. The old duties were long ago described, by the late Earl Grey, as a tax on misfortune. If the tax sometimes lights on the heirs of a miser revelling in his hoards (which seems to have been the chief picture present to the mind of the legislator), it also falls heavily on the capital of industrious families at the very moment they have lost him who made that capital productive by his skill and exertions. Political Economists condemn the tax as a discouragement of saving; and humanity can scarcely find anything more barbarous than for the State, which claims to be the protector of the people, falling on a family in the hour of its bereavement, and appropriating to itself a large share of its diminished means or subsistence. The law makes the Tax on Successions, the first charge on the property; it must be paid, in many cases, before exposure of the bequeathed wealth can be realised; and families, forced in the hour of their distress, to have recourse to money-lenders, to meet the charges of the State, are often involved in great difficulties. They are liable, too, from mistakes, which cannot be avoided, in estimating the contingent value of property, to certain overcharges. "So great (says the *Times*) is the robbery of widows and orphans through duty paid under error and excess, may, through duty paid where there is no property at all, not even enough to sue for the recovery of duty—that the iniquities of Somerset-house—and we say it on the authority of a high official —exceed those of the 'towers of Julius, London's lasting shame,' or any other of the many spots in this metropolis darkened by the memory of wrongs." There is nothing whatever in the new law to abate such iniquities; and, while we advocate the extension of the tax to landed property, as only fair play, we hope the extension will ensure the speedy remission of the tax.

THE Russian Emperor has not yet gone back from his demands, nor withdrawn his threats; and relying, it is believed, on the neutrality, if not on the assistance, of Prussia and Austria, means to occupy the Danubian provinces. The determination of France and England to support Turkey, and the presence of their fleets at Constantinople are sufficient, if even his plan was to occupy it, to prevent him making an attack on the Turkish capital. It is, however, shrewdly suspected that his demonstrations on the Black Sea have been from the first a mask for his real designs. He knows that both England and France would interfere were he to attack Constantinople; but the Danubian provinces enjoy under his Protectorate a kind of independence; and, while the occupation of them would not bring him into contact with either France or England, and would be only disadvantageous or dangerous to Austria, which is too dependent on Russia even to growl disapprobation, it is doubtful, from the peculiar condition of those provinces, whether his occupation of them could be considered as a just cause of war. Our Government, we understand, do not consider it *a casus belli*. It would be something like his annexation of Poland; when he reduced it from a nominal independence to avowed vassalage, which was tacitly permitted by the rest of Europe. To have a pretext for annexing the principalities to his own dominions, it is supposed that his demands for a Convention, to establish the rights of the Greek Church, were made. He seems to know that they would be refused; and they were put forward cunningly to be refused, rather than to encourage compliance. His diplomacy, if this were his object, has attained its end; and his armies, according to the latest accounts, have crossed the Pruth, and are on their march for Moldavia, if they have not already entered it. Europe awaits with anxiety the result. The Funds in Paris and London tremble and fluctuate day by day; some business in almost every part of Europe is suspended; the corn trade and the tallow trade are interrupted; and it is perceived with deep regret that the ambition of the Czar and the feebleness of the Sultan have a great influence over the welfare of the most civilised parts of Europe.

THE COURT.

The week just closed has been rife with events of interest in Court life. On Tuesday her Majesty held her second Drawingroom for the present season: and on Wednesday all the anniversary and leading gentry at present in London were honoured with invitations to the first State ball at Buckingham Palace. On Thursday the King and Queen of Hanover arrived in this country, in order to be present at the approaching christening of the infant Prince. The Queen and the Prince Consort visited their Majesties at the residence of the Hanoverian Legation immediately after their arrival. Their Royal Highnesses the Duke and Duchess of Saxe-Coburg-Gotha have also arrived at Buckingham Palace, on a visit to the Queen and the Prince; and other Royal visitors are expected to follow early in the ensuing week.

The Queen and the Prince Consort, with their illustrious guests, were present at the Royal Italian Opera both on Tuesday and Thursday evenings. The Prince Consort and the Duke of Saxe-Coburg-Gotha visited the Camp at Chobham on Wednesday morning.

THE DRAWINGROOM.

The Queen held a Drawingroom, the second this season, on Tuesday afternoon, in St. James's Palace. His Royal Highness the Duke of Cambridge, and his Royal Highness the Duke of Saxe-Coburg Gotha, attended the Court.

Her Majesty and his Royal Highness Prince Albert, K.G., entered the

THE CAMP, AT CHOBHAM. GENERAL VIEW.

THE CAMP AT CHOBHAM

our own Reporter).

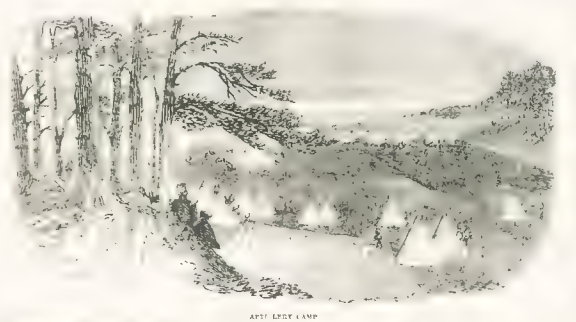
[illegible] telphone that exists in the British army was never more [illegible] the brilliant scene which took place on [illegible] when the troops marched on the ground [illegible] of war" and [illegible] the field. It [illegible] not have had [illegible]

[illegible] colour to produce a more entertaining and spirit-stirring effect. Nearly 10,000 Men, composed of seven regiments of horse, foot, and artillery, arrived almost at the same moment on the ground, crossed each other's [illegible] of march, and defiled to their respective tent quarters without [illegible] a single incident of confusion or disorder. As it [illegible] that the Chobham Campaign will hereafter become an [illegible] History in [illegible] Hall where they were met by the Duke de Nemours, [illegible] French Generals. The arrivals at the Staines station were equally numerous and distinguished. Colonel [illegible] Highness the Duke of Cambridge, entertained a breakfast [illegible] Hadaway Hotel, which also afforded excellent accommodation to the officers of the various regiments arriving from the north. By a curious coincidence, the 17th Light Dragoons the 11th Lancers, and the 42nd Highlanders, arrived at the corner of Sunbury common, adjoining Staines, at the same moment, and the scene at this point [illegible] proceed to describe the events of the general bivouac, and such subjects as our Artist has been enabled to illustrate in our present number.

The slow and incessant rain which prevailed during the three days previous to the opening of the campaign had induced a hope that the fountains of the sky were for a time exhausted, and that the weather on Tuesday would be more propitious. The morning dawned auspiciously, purpling the heath with splendour, yet the experienced eye might detect the threatening thunder-cloud, looming in the vast expanse, and as the day wore on the indications of a gathering storm became more manifest and imminent. Still the sight seers of the metropolis, as well as the troops who, like the great Captain, had a "duty to perform" were unawed by the unfavourable portents of the weather, or poured forth their thousands through every avenue of approach to the scene.

The arrangements on the railways leading to the neighbourhood of the encampment were on a scale commensurate with the requirements of the occasion, and although the South-Western Company had to convey 4000 men and upwards of 300 horses, the utmost accommodation was afforded to the general public without the slightest accident, confusion, or delay. A large number of duty-dashed visitors availed themselves of the earliest train, which left the Waterloo station at half past seven o'clock, and arrived at Chertsey a quarter before nine. Amongst these were Lord Hardinge, the General Commanding in Chief, Lady Agnes Duff, Lord Howe, Lord Mark Kerr, Colonel Westgarth, and other personages of distinction. Hall, where they were met by the Duke de Nemours, [illegible] French Generals. The arrivals at the Staines station were equally numerous and distinguished. Colonel [illegible] Highness the Duke of Cambridge, entertained a breakfast [illegible] Hadaway Hotel, which also afforded excellent accommodation to the officers of the various regiments arriving from the north. By a curious coincidence, the 17th Light Dragoons the 11th Lancers, and the 42nd Highlanders, arrived at the corner of Sunbury common, adjoining Staines, at the same moment, and the scene at this point was remarkably animated and picturesque. The Highland regiment arrived from Weedon, which they left at half past four o'clock in the morning, by the North and South-Western Junction line, which, although completed for some months past, was only opened for the first time on Tuesday. This line affords facilities for passengers from all the eastern part of the metropolis, including Bow, Bromley, and Greenwich, as well as from the extensive district around Hackney and Camden town, to reach the encampment, by way of Stratford, in forty minutes. The number of coaches and omnibuses kept in constant readiness on the arrival of the trains at the Staines and Chertsey stations afforded immediate conveyance to the Camp at the very moderate fare of eightpence and a shilling respectively. These reasonable charges, with the vigilance exercised over their servants by Mr Rowland at Chertsey, and Mr Rankin at Staines, were productive of general satisfaction on Tuesday and during the week, and a knowledge of this fact may not be altogether unuseful to the numerous visitors during the encampment.

CAMP KITCHEN.



ARTILLERY CAMP.

[illegible] one of the exciting scenes [illegible] during the various lines of route, especially towards [illegible] roads leading to the Common were thronged with troops [illegible] many rest after the fatigue [illegible] companies every where [illegible] tiers, the dashing hobs [illegible] sisted by hundreds [illegible] horseback, or in [illegible] day, the pushing [illegible] command [illegible] Blanc [illegible] Lam Corn [illegible] points they halted, and, having manœuvred drew up on each side of the road, and allowed the Royal Artillery from Woolwich, and the Royal Horse Artillery from Brixton which had been bivouacked at Wandsworth, Putney, and Walton, on the previous night, to pass on. The former consisted of two six-pounder field batteries, under the command of Captains Campbell, and Lefroy, and the latter under the command of Captain Wood. The other troops of artillery arrived on the common by a different route. Captain Blackwood Price's nine-pounder field battery, from Tangmere, reached the encampment at ten o'clock, having marched from Leather head. The 46th Regiment, which suffered so severely in China marched after the Artillery from the Chertsey station, and also passed the Carabineers on the road. The regiment came by railway from Chatham, which they left at four o'clock in the morning. The prevalence of the "brogue" amongst the men seemed to indicate that 46th has been recently recruiting in Ireland, and, as they passed merrily along, they indulged in the fun characteristic of their country. The Lancers and 2nd Brigade entered on the Common by the road from Chobham and Gould ord, and most of the other regiments by the Egham, Staines, Bagshot and Woodsham roads.

The Royal Horse Artillery and field batteries are under the command of Lieut.-Col. Bloomfield. The Artillery Camp, of which our Artist has an accompanying sketch, is [illegible] north-east, and [illegible] is reached [illegible] leading from Windsor to Chobham. The Rifle Brigade, 2nd battalion, from Canterbury, under the command of Lieut.-Colonel J. A. Lawrence, [illegible] the line, and as it then are encamped [illegible] ment of Foot, who arrived on Monday, from the Isle of Wight [illegible] keeping the ground during reviews and evolutions [illegible] troops.

The first regiment on the field was the 46th from Portsmouth, under the command of Lieut.-Colonel Sir J. Campbell, Bart., who, immediately afterwards, the 46th, from Preston, Lieut.-Colonel H. S. De Burgh Sidley. Next [illegible] came the 42nd Highlanders from Portsmouth, under the command [illegible] The two regiments were encamped with the rest of the 4th Division, under the command of Sir De Lacy Evans. The 46th, with the [illegible] from Chatham, Lieut.-Colonel Smith, and the 42nd Highlanders, Lieut.-Colonel Duncan Cameron, and which are encamped near each other, compose the 2nd Infantry Brigade, under the command of Major-General Pate.

These form the left wing of the encampment, and occupy an inclined plane between the Bagshot and Chobham roads. The right wing is formed by the cavalry, under the command of his Royal Highness the Duke of Cambridge. It is composed of the 1st Life Guards, from Windsor, commanded by Colonel John Hall; the 17th Light Dragoons, from Hounslow, commanded by Lieut.-Colonel Charles E. Doherty C.B., the 11th Light Dragoons (Lancers), from Brighton, commanded by Lieut.-Colonel Laurence, and the 6th Dragoon Guards, from Canterbury, commanded, as already stated by Lieut.-Colonel Jones. These regiments, with their canvas stables occupy a commanding position on the crown of the hill adjoining Egham. The central ground of the encampment is occupied by the Guards, consisting of three battalions—viz., the First Battalion of the Coldstreamers, from St. Johnswood; the Scotch Fusilier Guards, from Windsor; and the First Battalion of Grenadier Guards from Winchester—all under the command of Colonel Bentinck. The Royal Sappers and Miners, commanded by Lieut.-Colonel Vivian, are in the same line with the Foot Guards and occupy the central ground between them and the cavalry. On a knoll between the artillery and the cavalry, but somewhat nearer to the latter, are [illegible] and tents of Field Marshal the Royal Highness Prince Albert, General Lord Hardinge, Commanding in chief, Lieutenant-General Lord Raglan (Master-General of the Ordnance), Lieutenant-General Lord Seaton (commanding the troops in camp), Major-General Sir Rowland Hill, Major-General Sir Richard England, Major-General Sir George Brown, Major-General Sir Colin Campbell, Major-General Sir Richard Dacres, Major-General Sir Richard Airey, Major-General Sir Harry Jones

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—FRIDAY, JUNE 10.

The Marquis of Westmeath after a preface [illegible]

[illegible] by the Lord Chancellor, that the Government had not been in possession of any information which would justify them in laying it before Parliament.

The Duke of Richmond [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Duke of Newcastle [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Duke of Argyll [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Clarendon [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Aberdeen [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Malmesbury [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Derby [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Ellenborough [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Hardwicke [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Carlisle [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Shaftesbury [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Harrowby [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Lucan [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Cardigan [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Ripon [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Clanricarde [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Eglinton [illegible] Government had not been in possession of any information which would justify them in laying it before Parliament.

The Earl of Carnarvon

HOUSE OF COMMONS.—THURSDAY.

MR. THESIGER inquired whether the Succession-tax was to apply to property of corporations such as the Royal Hospitals held in trust for the poor, and for the care of insane persons?

The CHANCELLOR of the EXCHEQUER said the tax was to apply to corporations even of an eleemosynary character.

In answer to Mr. J. Gibson, the CHANCELLOR of the EXCHEQUER said the only alteration in the law with respect to the Advertisement-duty that he intended to make was, to reduce its amount

MR. KEOGH AND THE DERBY GOVERNMENT.

Mr. KEOGH rose, according to notice, to call the attention of the House to a statement made in the other house of Parliament on Friday evening last, and repeated on Tuesday night by Lord Derby, reflecting upon his (Mr. Keogh's) personal honour. He had stated that Lord Naas had asked him, while Lord Derby's Government was in process of formation, whether he would take office under that Government. This assertion had been positively denied in the other House; but he (Mr. Keogh) now asserted in the House of its truth, and hoped to be believed. The facts of the case were, that Lord Naas, after being offered the office of Chief Secretary for Ireland, and before accepting it, sought him (Mr. Keogh) at the Reform Club, and, not finding him there, pursued him from house to house, and street to street. Ultimately, he (Mr. Keogh), by the noble Lord's desire, had an interview with him at his house, and it was there the noble Lord asked him whether he would take office under Lord Derby's Government." He at first treated the subject jocularly, but when the noble Lord repeated a serious answer, inquired by whose direction the question was put. Lord Naas said, by direction of Major Beresford (Laughter), who was in communication with Lord Derby. Subsequently, Major Beresford complained of the opposition given by him (Mr. Keogh) to the Government of Lord Derby, upon the ground that an offer of office made, or a question put by Lord Naas, had entitled them to kinder consideration (Cheering.) The hon. and learned gentleman stated other circumstances; and asserted that such a question as that put to him by Lord Naas might be well understood to be an offer of office, although the noble Lord had denied that he had, directly or indirectly, made such an offer to him. He hoped, in conclusion, the noble Lord would place the matter in a right light before the House.

Lord NAAS said that his recollection of the circumstances of the case differed very materially from that of Mr. Keogh. It was true that the interview alluded to had taken place, and at that interview he (Lord Naas) said to Mr. Keogh, "If office had been offered by the Queen to you or your friends, would you have accepted it?" The hon. and learned gentleman replied, "I think, after the part we had in overthrowing the late Government, such an offer might have been made (Laughter)." But there was nothing like an offer of office, or any intention of doing so; although he (Lord Naas) had said that Major Beresford knew of his asking the question, which was, indeed, the fact; but Major Beresford did not authorise him to make any offer of place.

Major BERESFORD assured the House that he had neither directly nor indirectly authorised Lord Naas to offer office to Mr. Keogh or his friends. He saw the noble Lord at the time alluded to, and the noble Lord said he should be likely to see Mr. Keogh. Upon that, he (Major Beresford) said that after the part the learned gentleman and his friends had taken in assisting to overthrow the late Government, they might expect an offer of place; but that could not be, although he (Major Beresford) could not say there was a friendly feeling towards them upon the part of the Government. With regard to the conversation which subsequently took place between himself and Mr. Keogh, the learned gentleman had put an interpretation upon it, which he did not warrant; giving to the House an impression that he (Major Beresford) knew of an offer of office having been made to Mr. Keogh, which was directly opposed to the real state of the case. In conclusion, he protested against the introduction of such private and confidential matters into the House.

After some remarks from Mr. Napier and Mr Butt,

Mr DISRAELI said the question was one which ought hardly to have been introduced, inasmuch as it principally concerned the private veracity of two members of that House. With regard to the affair itself, he thought the statements of the noble Lord and the hon. and learned gentleman perfectly reconcileable with each other, although leading to different conclusions

Lord J. RUSSELL remarked that the discussion had arisen from a direct personal attack made upon the Solicitor General for Ireland, by one who had lately held the office of Attorney-General of Ireland under Lord Derby. With reference to the statement of Lord Naas, it fully confirmed that made by Mr Keogh, who was justified in regarding the communication of the noble Lord as likely to be followed by an offer of some office. He (Lord J. Russell) was bound to say that he never before saw such a want of candour and fairness towards a former friend as that by Lord Naas to Mr Keogh.

Sir J. PAKINGTON objected to the tone of Lord J. Russell's speech, and vindicated the conduct and speech of Lord Naas. It had been said in the other House that the appointment of the hon. and learned gentleman was a fair example which the present Government had made; and, admitting that there was nothing in the conduct of the right hon. gentleman which would have disqualified him for office under the late Government, he (Sir J. Pakington) now stated that impression. Since that time the hon. and learned gentleman had been represented as having morally and physically trampled under foot the Ecclesiastical Titles Act, and the conduct of the noble Lord (Lord J. Russell), as the author of that bill, required explanation in connection with the appointment. He (Sir J. Pakington) was at first so disgusted with the appointment of the hon. and learned gentleman, that he cut from the public papers extracts from speeches delivered by him in Ireland at public meetings, and kept them in his pocket for some time, lest the matter of the appointment should have come before the House.

Mr JOHN ARKWRIGHT was glad to find that those who had spoken upon the matter between himself and Lord Naas, as a complete satisfaction to his feelings. With reference to the new charge preferred by Sir J. Pakington, he would only say that, since his interview with Lord Naas, he had spoken at no public meeting in connection with the Ecclesiastical Titles Act.

Mr Whitside, Mr. Bentinck, and Mr Vance having said a few words, the subject dropped.

THE SUCCESSION DUTY BILL.

The House then went into committee on this bill, five clauses of which were agreed to, after four hours' uninteresting discussion, and the Chairman reported progress

The other orders of the day were afterwards disposed of.

APPOINTMENTS.—The Lord President has appointed Charles Edward Boothby, Esq., of the Council Office, to be his Lordship's private secretary. Mr. Boothby was some time secretary to the Marquis of Lansdowne. Mr. A. W. Hanson, late Her Majesty's Consul at Liberia, has been appointed Consular Agent at Sherbro Castle. Mr. W. Augustus Tollemache, Unpaid Attaché at Paris, has been appointed Paid Attaché to her Majesty's Legation at Rio Janeiro.

CASTS FOR THE NEW CRYSTAL PALACE.—Some packages have arrived by a steamer from Hamburg, containing casts for the New Crystal Palace at Sydenham. These packages were of such extraordinary size and weight, that it was found to be impracticable to land them at one of the ordinary wharfs; and it was found to be necessary (with the sanction of the proper authorities) to land them at Greenwich, in order that they might be immediately landed, and safely removed to their destination.

SALE OF AUTOGRAPHS.—An interesting collection of rare autographs were sold on Wednesday last. Among them an autograph letter of Maria Antoinette, date 1784, for £1 15s.; one of Martin Luther to a friend, £3; of Charles Edward Stewart, £3 10s.; of Cardinal Richelieu, £2; of Napoleon Bonaparte, addressed to Mr. Janess, of Chalons, dated February, 1791, £11; of Jean Paul Marat, £1 12s.; of James Stewart (the Cheva ier St. George), £2 14s.; of George Villiers Duke of Buckingham, obit 1628, £1 10s.; the signature of George Washington to a document, accrediting the American Minister to the then French Republic, sold for £1 6s; an autograph letter of David Garrick, in French, written to De Latouche, who was translating Shakspeare, £1 8s.

AUSTRALIAN PACIFIC STEAMERS.—The six screw-ships building for the Pacific Steam Company, to ply from Panama, Tahiti, New Zealand, and New South Wales, are progressing towards completion; and the first ship of the line is expected to start from England the latter end of July. The whole squadron will be out at Sydney, and established on the Pacific route before the completion of the Panama Railway across the Isthmus. Hopes are entertained that the service between Panama and Sydney, and vice versa, will be performed in from 32 to 35 days; thus bringing the Australian colonies within a postal communication with England of from 50 to 56 days, in conjunction with the steamers of the Royal West India Mail Company.

CHESS.

TO CORRESPONDENTS.

A., BRUSSELS.—We beg to acknowledge with thanks the interesting games lately played by our correspondent and others with the celebrated German master, Von Heydebrand.

SIGMA.—It has no merit whatever. In the variation, you give White a move which leaves his King in check! 2. Your solution of No. 487 is correct—the others are both wrong

R. L. The variation you suggest was not seen until too late. You are quite right

STERN GRAPHEUS.—The system of Chess Notation which you find us the favour to submit to our consideration is certainly available to any player, but so utterly unskilled to all practical purposes that it was of late a mere waste of space to give it publicity.

J. L., of Edinburgh.—You are liable under the circumstances mentioned.

C. G. H., Crosby-hall.—It shall be examined

GERMANICUS.—The report of M. Kieseritzky's death is, we are afraid, too true, although we have received no authentic notification of such an event.

STUDENT.—You should master yourself of the profound and interesting analysis of the Bishop's Gambit—by Kolisch and Horwitz—just published in the *Chess-Player's Chronicle*.

CLERICUS.—The Glasgow Chess club now meets at the Athenæum Institution, Ingram street, every Monday and Thursday evening, from five to ten P.M., and on Saturdays, from one to six P.M. It numbers about 70 members. President, H. G. Bell, Esq., Sheriff Substitute of Lanarkshire. Hon. Secretary, James Horne, Esq.

SOLUTION OF PROBLEM No. 487, by Alfred of Canterbury, D. D., Orange, C. L. of Strand, Nellie, L. L. of Edinburgh, R. W. H., Jack of Worcester, are correct.

SOLUTIONS OF PROBLEM No. 486, by Rachmonds, Ohio, Rienzi, C. L. of Strand, J. N. of Scotland, J. P., E. H., Dereven, Agnes, Mr. Jekyll, are correct. All others are wrong.

SOLUTION OF PROBLEM NO. 487.

WHITE.	BLACK.
1. B to Q Kt 5th	B to B 8th, or (a)
2. Q to K Kt 6th (ch)	Kt takes Q
3 Kt Mates.	

(a) 1. Kt takes P
2. Kt to K B 4th (ch)
3. B takes Kt—Mate.

Kt takes P
K to K 4th.

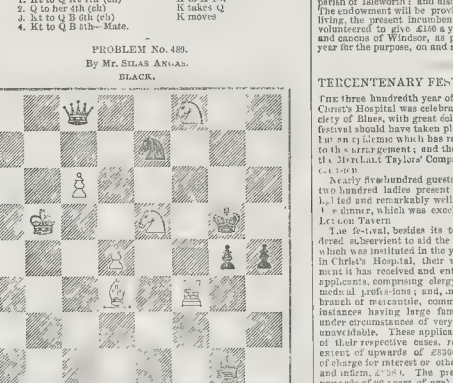
SOLUTION OF PROBLEM NO. 488.

WHITE	BLACK
1. Kt to Q Kt 7th (ch)	K to K 4th
2. Q to her 4th (ch)	K takes Q
3. Kt to Q B 6th (ch)	K moves
4. Kt to Q B 5th—Mate.	

PROBLEM No. 489.

By MR. SILAS ANGAS.

BLACK.



WHITE.

White to play, and mate in four mov.

CHESS ON THE CONTINENT

The following beautiful Game was played a few [illegible] between the great German master Von Heydebrand der Lasa and Mr. Rives, an amateur, who requires only practice with an opponent of first rate skill to reach the topmost rank himself

WHITE. (M. de R.)	BLACK. (Von H. der L.)	WHITE. (M. de R.)	BLACK (Von H. der L.)
1. P to K 4th	P to K 4th.	18. Kt to K 4th	P to Q Kt 4th
2. P to Q B 3rd	K Kt to K B 3rd	19. Q to Q B 2nd	K R to Q sq
3. P to Q 4 h	Kt takes K P	20. P to K Kt 5th (f)	P to Q R 4th
4. Q P takes P	P to Q 4th	21. Kt to B 3th	B takes Kt
5. Q B to K 3rd	Q B to K 3rd	22. K Kt P takes B	P to K B 3rd
6. Q Kt to Q 2nd	Q Kt to Q 2nd	23. Q to K 2nd	K R to Q 2nd
7. Q Kt takes K P	P takes Kt P	24. B to Q B 2nd (e)	Q R to Q sq
8. Q to Q R 4th	Q B to K B 4th	25. B to Q Kt 3rd	K to K R sq
9. Castles	P to Q B 3rd	(ch)	
10. P to K B 3rd	Q to Q B 2nd	26. Q R takes R	R takes R
11. K B P takes P	Q B to K Kt 3rd	27. B to K 4th (d)	K to Q sq
12. Kt to K B 3rd	Q Kt takes K P	28. B to B 3rd	Q to K 4th
13. Q B to K B 4th	Kt to Q 4th (ch)	29. R to K R 3rd (e)	Q to K B 5th
(c)		30. Q to K B 3rd	Q to Q 7th
14. K B takes Kt	Q takes Q B (ch)	31. Q to K B sq	Q to Q R 6th
15. K to Q Kt sq	K B to Q B 4th	32. P to Q R 3rd	B to K 6th
16. h R to K B sq	Castles on K side	33. K to Q R 2nd	R to Q 6th
		34. h to Q Kt sq (f)	P to Q Kt 5th
17. P to K Kt 3rd	Q to Q B 2nd	35. Q R P takes P	P to Q R 6th

And White resigns

(a) Q to her 4th would perhaps have been better.

(b) Threatening to win a piece by playing Kt to Q 5th.

(c) We cannot think it safe to accept the proffered gift. Black would have a fine game after the exchange of Queens.

(d) P to K 5th, threatening to take the Q Kt Pawn with the Bishop, would have been worth more consideration.

(e) We doubt much if this be so strong as advisable. The King's Pawn, for instance—

27	Q to K B 3rd
28	Q takes B P
and White has considerably the advantage.	

(f) Intending to take the h R Pawn, and must soon move.

(f) This move is not worthy of Mr. de Rives's earlier play in the present game. He might here to have played P to K 5th, or, as he subsequently suggested, Queen to K B 3rd. In the latter case, the following is a probable continuation—

31 Q to K B 3rd	P to K R 3rd
32 Q to K B sq	R to Q sq
33. R to K R 3rd	B to K Kt 4th

(Black must guard against by K Kt Pawn being taken, or we would lose our bishop, or move Q. If he try a coup de main, by pushing onwards with his Q Kt Pawn and Q R Pawn, White must capture the Pawns as they advance, with his Q R Pawn and his King.)

37 P to K 4th	Q to K R 7th
38 K to Q 3rd	B to Q Kt sq

(If he move the Rook to K 3 sq, White may play his Queen to K B 7th; and will win easily whether his Queen be captured or not.)

39. Q to her sq.	and wins

7	P takes P
8. Castles	Kt to K B 3rd

38. P to K B 6th

And again White has by far the better game.

CHESS ENIGMAS.

No. 824 By MR H. J. C. ANDREWS.

White. K at Q Kt 4th, Q at Q R sq. Bs at K R 2nd and 5th, P at Q B 3rd.

Black: K at Q B 5th, P s at K Kt 4th and Q B 2nd.

White to play and mate in four moves.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS. *Rectories*: The Rev. J. Rowland, to St. Botolph, Cambridge; the Rev W. Jephson, to Hilton Waldrist; the Rev. G. Burd, to Shenstone, Shropshire. *Incumbency*: the Rev. T. Daniels, to the district of St. Paul, Hulme.

The Queen has appointed the Venerable Archdeacon Hare, the Venerable Archdeacon Tattam, and the Rev. Henry Melvill, B.D., to be Chaplains in Ordinary to her Majesty

The new Dean of Peterborough, having been installed by the Lord Bishop of the diocese, was installed with the usual ceremonies, at the morning cathedral service on Sunday; and, on Monday, read himself in.

CONSECRATION OF ST. MATTHIAS, STOKE NEWINGTON.—This church was consecrated on Monday by the Bishop of London. Notwithstanding the unpropitious weather a very large and fervent congregation assembled. The church is the work of Mr. Butterfield, and was built by Messrs. Myers. It has been two years building, and its cost is about £7300. It is 135 feet long internal y, and is about 70 feet to the ridge of the nave roof, and 102 feet to the top of the gable cross of tower. The church is of early middle pointed character, and consists of nave and aisles, with a western centre door and north and south porches, a tower with a saddle-back roof, which forms the choir on the ground plan, with aisles on either side of it, and a sanctuary, apse to the eastward of the tower, with a vestry of two stories to the north

NEW CHURCH IN ST. MARYLEBONE.—Active measures are in progress for the erection of a church in the southern part of the parish. A site in Caldwell buildings, Portman-square, has been munificently granted by Lord Portman for £4000, one-half its estimated value. A preliminary meeting of some of the influential residents has been held, and between £1000 and £2000 has been already contributed.

NEW CHURCH AT ISLEWORTH.—The Duke of Northumberland has given £2000 towards building a new church in the populous parish of Isleworth; and also offered a site on a most eligible situation. The endowment will be provided out of the vicarial rent-charge of the living, the present incumbent, the Rev. Henry Glasson, having liberally volunteered to give £100 a year during his incumbency; and the dean and canons of Windsor, as patrons, having agreed to set apart £100 a year for the purpose, on and after the next presentation

TERCENTENARY FESTIVAL OF CHRIST'S HOSPITAL.

THE three hundredth year of the existence of the Royal foundation of Christ's Hospital was celebrated on Wednesday, by the Benevolent Society of Blues, with great éclat. It was originally intended that the festival should have taken place in the great hall of Christ's Hospital, but an epidemic which has recently prevailed among the boys put a stop to the arrangement; and the Society availed itself of the kindness of the Merchant Taylors' Company, who offered the use of their hall for the occasion

Nearly five hundred guests sat down to dinner; there being nearly two hundred ladies present as spectators. The noble hall, brilliantly lighted and remarkably well ventilated, afforded ample accommodation. The dinner, which was excellent, was provided by Mr. Bathe, of the Lebon Tavern

The festival, besides its tercentenary commemoration, was also rendered subservient to aid the funds of the Benevolent Society of Blues, which was instituted in the year 1824 "for the relief of persons educated in Christ's Hospital, their widows and orphans." Since its establishment it has received and entertained 1680 applications from above 600 applicants, comprising clergymen, bankers, members of the legal and medical professions; and, in short, persons engaged in almost every branch of mercantile, commercial, and professional pursuits, in many instances having large families dependent on them for support, and under circumstances of very urgent distress, rendering renewed appeals unavoidable. These applicants have, after due inquiry into their merits of their respective cases, received assistance from the Society to the extent of £2000, namely, in gifts, £1400; in loans (free of charge for interest or otherwise), £600; and in pensions to the aged and infirm, £200. The present number of pensioners (some of them upwards of 90 years of age) is 18; and two pensions have recently become vacant

The chair at the festival on Wednesday was taken by Mr. Alderman Thompson, M.P., president of Christ's Hospital, and patron of the Society; and among the company were the Duke of Northumberland, the Earl of Leicester, Viscount Chetwin, Colonel Angerstein, Sir H. De Bathe, Sir Samuel Whitbread, M.P., Samuel C. Whitbread, Mr. Gibbs, Mr. Bentley, treasurer of St. Bartholomew's; Alderman Hooper, Major Parry, Captain Outram, Asa Stone, Esq., Messrs Farebrother, Clark, Reed, Forbes, Esq., Sir George Staunton, Bart., Hall, Acton, Dr. Booth, Rev. Dr. Gully, Rev. Canon Dale, Rev. Canon Jacob, Rev. C. V. Le Grice, Hon. and Rev. H. Legge, W. Pott, Esq., Samuel Bendry Brooke, Esq., R. B. Cabbell, Esq., M.P., &c. The hall was brilliantly lighted, and decorated with a variety of flags and banners and heraldic achievements of the various City Companies.

Stationed in the gallery at the extreme end of the Hall, was a very numerous and efficient party of vocalists, under the direction of Mr. George Genge, the leader, Miss Hawkins, Miss Williams, Miss J. Williams, Miss Annie Loder; Messrs. Francis, Lockey, Hobbs, Cummins, Burnby, Gadsby, H. Phillips; and Masters Stainer and Gadsby, who delighted the company with a variety of songs, duets, &c., during the evening

After dinner the Chairman gave the toasts of the "Church and Queen," "Prince Albert, the Prince of Wales, and the rest of the Royal Family," the "Pious and Immortal Memory of our Royal Founder, King Edward VI."—which were drunk with much enthusiasm.

The next toast was the "Army and the Navy," to which his Grace the Duke of Northumberland responded, observing that Christ's Hospital was intimately connected with both branches of the service to whom he had the honour to belong During the war many of the young men who had been educated at Christ's Hospital entered the navy, and had arrived at the highest rank in the service (Cheers). The education of a young man destined for the navy was then confined to navigation and seamanship; but now another service had been introduced, that of steam, with its intricate machinery, which was absolutely indispensable to the navy. He was delighted to meet those with whom he had been associated in days gone by, and he was proud to acknowledge, with feelings of gratitude, that the first hints on navigation which he had received had been given within the walls of Christ's Hospital (Applause).

The next toast was "Prosperity to the Royal and Heraldic Foundation of Christ's Hospital—may they prosper who love it, and may God increase their number"

The CHAIRMAN, in proposing this toast, referred to the many noble men who had been educated in Christ's Hospital, and the feelings of gratitude they entertained for the institution; and named, among others, Dr. Middleton, Bishop of Calcutta, who had sent a cheque for £4000 to the Hospital, which he regarded as the most benevolent institution in the world.

The toast was drunk with much enthusiasm, as was also "The Health of the President, Mr. Alderman Thompson," who had always been a liberal benefactor.

The "Benevolent Society of Blues," "The Treasurer and Governors of the Hospital," "The Worshipful Company of Merchant Taylors," "The Masters and Officers of Christ's Hospital," and several other toasts, were afterwards drunk, and duly honoured.

One of the hits of the evening was made by Mr. Harker, the toastmaster, who, being himself a "yellow-stocking," and finding some of the company inclined to be noisy, threatened, in the exercise of his official duties, to "send them to the stone."

The company separated after eleven o'clock, highly delighted with the social character of the festival.

CONVERSAZIONE AT THE MANSION-HOUSE.

THE festivities of the present Mayoralty bid fair to stand out in bold intellectual relief to the routine of turtle and venison feasts which are the usual accompaniments of the civic year. The late Alderman John Johnson, when Lord Mayor, left an excellent example for his successors, by inviting to the Mansion-house two hundred or more of the most eminent men of science and letters; a similar distinction characterised the mayoralty during the Great Exhibition year; and the present Lord Mayor has already distinguished his year of office with similar honours to genius and talent, for all which there is precedent of centuries since; for, at the table of a Lord Mayor first met those great lights of history—Erasmus and Sir Thomas More

Last week was intellectually signalised at the Mansion-house by a conference of the chief magistrates of about eighty of our principal cities and towns, on the subject of providing more extended facilities for instruction in art and science throughout the United Kingdom; and

CHRIST' HOSPITAL TRICENTENARY FESTIVAL IN THE HALL OF THE MERCHANT TAYLORS' COMPANY.—(SEE PRECEDING PAGE.)

in the evening the civic palace was thrown open to an assemblage comprising nearly all the most distinguished names in connection with the question of education.

The Conversazione in the evening was a very brilliant affair; and seldom indeed has the rooms of the Mansion house been more appropriately and worthily filled. Besides his civic brethren from the country, the Lord Mayor had assembled around him a great number of the most eminent names in connexion with the subject of education and with art and science generally. The representatives of 270 mechanics' literary and scientific institutions in union with the Society of Arts were invited. The rooms of the Mansion-house were furnished, for the occasion of the Conversazione, with a large and highly-interesting collection of educational apparatus, brought together through the instrumentality of the Society of Arts. Among the more conspicuous contributors to that collection may be mentioned the Master-General of the Ordnance, who supplied illustrations of the instruction given at the Military Academy, Woolwich; the British and Foreign School Society; the Society for the Diffusion of Christian knowledge; the National Society; the Society for Teaching the Blind to Read; the Home and Colonial School Society; and the Working Men's Educational Union, also exhibited their books and systems of instruction. The principal publishers of educational works sent in their publications, and some beautiful models, diagrams, and specimens of apparatus, remarkable for their cheapness as well as their excellency, were shown by the new Department of Science and Art. The paintings lent for the occasion were most effectively arranged upon screens in the centre of the hall. The crowds of visitors left little opportunity for the careful and leisurely examination of these objects, interesting at all times but doubly so now, when the question of education is attracting so much attention. More than 1000 ladies and gentlemen attended the Conversazione.

CONVERSAZIONE, IN THE EGYPTIAN-HALL, MANSION-HOUSE.

INSPECTION OF THE WEST ESSEX YEOMANRY CAVALRY, ON WANSTEAD FLATS.—(SEE NEXT PAGE.)

PRINCESS' THEATRE.

THE spectacular tragedy of "Sardanapalus," abridged from Byron's poem, and accompanied with scenes and costumes accordant with the drawings and discoveries of Layard and Botta, and the friezes in the British Museum, was brought out on Monday, as we had already announced, for the benefit of Mr. and Mrs C. Kean, and more than "kept the word" in promise. The play is [illegible] stage-mounting that we ever witnessed; nay, we believe that was ever yet attempted. It excels the most gorgeous of Parisian examples, and is an honour to the national stage of the country. What with foreign translations adaptations and [illegible] has been converted into a provincial copy of the French. But a production like this redeems at once its reputation for originality, both in regard to the poem produced, and the manner of its production. One of the noblest of Byron's dramas—the fullest of character, and replete with poetic feeling—the tragedy of "Sardanapalus" connects itself with the most astonishing of modern archæological discoveries. It was a happy conception to make it the medium of placing on the boards the disinterred glories of ancient Nineveh, with the most perfect accuracy of detail, to the full extent of the pictorial and scriptural authorities recently brought to light. In realisation of this idea, resort has been had to the talent—we might almost say the genius—of such artists as Mr. Grieve, under whose direction Mr. Gordon has painted a magnificent diorama of the city of Nineveh and the river Tigris; Mr. F. Lloyds, a nothing-less-than-wonderful perspective of the Hall of Nimrod, with its entablatures and cherubic symbols; and Mr. Dayes, a chamber in the Royal palace, doomed to conflagration, and opening on the city at the moment of its destruction, with its winged lions and portal embellishments—quite a marvel in its way. Mr. Oscar Byrn likewise has contributed dance and action to the general illustration, with that originality of mind and power of adapting himself to the theme for which he is remarkable. The [illegible] of this grand master of pageants was early displayed. After a soliloquy by *Salemenes* (Mr. Ryder), the voluptuous Monarch entered, in his chariot, drawn by a pair of bays, preceded by a train of women, slaves, nobles, [illegible] Bayadere movements were equally picturesque, striking, and characteristic. The costumes and accessories of these crowds have been carefully imitated from the friezes, and, in their glittering array, more than suggest the wealth of the Queen of Cities, hurried to its fall by the undue prevalence of luxury and splendour. On descending from his gorgeous chariot, in his scarlet robe and scarf, adorned with gems and gold, and bearded like the figures on the sculptured monuments, Mr. C. Kean further sought to realise the resemblance to the pictures by assuming the angular positions of the limb and body to which the artist, in the crudeness of his skill was reduced. The action of Oriental people does not justify this assumption; their manner having a general sweep and roundness, which the rude artist, however, was incapable of imitating; but an apology for the servile adoption of this imperfect manner may be readily accepted in the laudable desire evinced to conform to the pictorial authorities, for the purpose of promoting the utmost possible vraisemblance. At any rate, the make-up of Mr. Kean was so perfect that the illusion was complete. There were a grace and suavity in his delineation, and a quietness of elocution that place his performance beyond competition. Mr. Kean's superiority was particularly seen in the Epicurean gaiety of his scepticism; and still more especially in the [illegible] which has utter ruin was preceded. Mr. Kean trusted to level speaking and a passionate delivery, not travelling beyond the natural key, but solemn and impressive withal, which was thrillingly effective. We had here one [illegible] which so frequently reminds us of his great father. His death-scene likewise possessed the same specific kind of merit; it was calm, dignified, intensely pathetic. In all these great situations, Mrs. Kean assisted as *Myrrha*—portraying the Greek girl with appropriate statuesque effect. Her attitudes were frequently beautiful, always expressive; and her declamation was uniformly sustained and powerful. Mr. Ryder as the Queen's brother acted with force, discretion, and singular aptitude. In abridging the play, Mr. Kean has been undeniably judicious. May we, however, venture to suggest that the entire part of the injured Queen might have been omitted with advantage? It is true that Miss Heath was not, and could not be, matronly enough; and, with the best intentions, only succeeded in throwing the part out of harmony and proportion; but the situation itself is one alien

SCENE FROM THE TRAGEDY OF "SARDANAPALUS," AT THE PRINCESS' THEATRE.—THE HALL OF NIMROD.

to the spirit and sentiment of the theme; and is, in a word, European both in tone and feeling, and not Asiatic—not in keeping, in fact, with the morals or manners of the time, and the picturesque accessories now so effectively and properly brought to bear on the actual performance of the play. That these accessories—so numerous in amount, and so excellent in quality—should all have been introduced into three scenes only, is one of the wonderful attributes of the present getting-up. Between the rise and fall of the curtain are infinite varieties of illustration in grouping and combinative action. The first scene is, in the second act, presented under the aspect of sunset, *apropos* of *Belzees* apostrophe to the descending orb. In the third act, the Hall of Nimrod is the scene of many and most striking and brilliant effects. There is the dance, the act of prostration before *Sardanapalus*—a deity, the confused starting up of the parasite groups as they hear the thunder, whose loud and awful peal seems to resent the impious adulation (to which point in the general and ever moving picture our Illustration refers), the cry to arms, the crowding together of the alarmed slaves at the foot of the throne of the menaced Monarch, the preparations for battle, the rushing to and fro, the coats and the entrances; the world of business, the turmoil, and the brunt of battle; with the last closing scene in recess of peace, when the wearied monarch sinks into slumber, and his attendants decide on the various modes of sport, while the devoted and beloved slave touches the lyre to soft notes of music that she may deepen his refreshing slumber. That a play so poetical in conception as Byron's should be illustrated in its performance—must prosper in representation equal to the costly outlay bestowed on its production, we both believe and hope. Mr and Mrs. Charles Kean Lave here accomplished a triumph and an ambition alike exemplified a virtuous action. It was a good deed for an actor thus to have honoured one of his country's greatest poets—one not supported by the *prestige* of antiquity, but selected from the number of modern bards; thus effectually disproving the absurd canard so lately current about "the decline of the drama!"

ROYAL ITALIAN OPERA.

Meyerbeer's "Roberto il Diavolo," with a vastly improved cast of the principals and execution in the ensemble, was repeated on Tuesday. Nicolini Castellan was the *Alice*, and Mdlle. Bosio the *Princess*; Tamberlick, Tagliafico and Formes sustaining their original characters. The performance was honoured by the presence of her Majesty, Prince Albert, the Duke and Duchess of Saxe-Coburg, the Duchess of Kent, the Duchess and Princess Mary of Cambridge.

On Thursday the "Huguenots" was given for the extra night; her Majesty, Prince Albert, and the Duke and Duchess of Saxe-Coburg being again present.

Signor Mocleri will make her first appearance in this country to-night, in Donizetti's "Maria di Rohan."

ST. JAMES'S.

Mdlle. Rachel appeared on Wednesday in another new play the "Lady Tartuffe," by Madame Emile de Girardin; in which, however, the great actress divides the honours with M. Regnier as the *Baron Destelleres*. The play was produced at the Théâtre Français on 16th last February, and is a fit not to have precisely satisfied the expectations previously excited. The title of it intentionally suggests a similarity to Molière's famous comedy: since it is not the mere act of the heroine, but her inspired character, *Madame de Blosseu*, is the natural daughter of an English man and gipsy, who worms her way into society as the widow of a naval officer, and installs herself into a Marshal's family, whom she ruins by her pretended charities, even commercially making jackets for the *gamins*' monkeys. But she is doomed to be exposed by one *Hector de Savigny*, who is resolved on avenging the death of a friend whom she has deprived of her own reputation. Some degree of sympathy is excited for the hypocrite from the fact that she really loves the said *Hector*, who in return is to be married to a *Madame de Clairmont*. Her consequent diabolical causes her to take measures that at length lead to the dreaded result. But she is a woman of nerve, and retires from the scene with dignity. In the course of the piece, Mdlle. Rachel has to exhibit opposite qualities, for *Madame de Blosseu* is portrayed as truly loving by nature, though cruel, treacherous, and deceitful by circumstance. She is consumed with remorse for the man whom she has permitted to die, and inflamed with passion for the friend who has become his avenger. Moreover, she is invested with personal fascinations, which charm the audience as well as the *dramatis personæ*, and with opportunities and exceptional bursts which are calculated to identify the house. M. Regnier's character is that of a cynical chorus to the whole drama; and is one of the most effective of his parts. The theatre was crowded.

MISS RAINFORTH AND THE POETRY OF SCOTLAND.—The second illustration of Caledonian song was given at Store-street Music Hall, on Wednesday, by Miss Rainforth, who, for the occasion, sketch of Prince Charles Edward's battles, victories, [illegible] dressed with illustrative songs, to which, with the [illegible] Cameron Men," which received an encore. The same honour was accorded to "The Hundred Pipers." We particularly admired Lady [illegible] "Will ye no come back again?" and "Wae's me for Prince Charlie." The room was well attended.

MR. JAMES HANNAY'S LECTURES.—The first of Mr. Hannay's lectures on "Satirical Literature" took place on Monday evening at the Literary Institution, Edwards-street, Portman-square. The discourse, which was devoted to Horace and Juvenal, was an excellent and popular [illegible] of the literary characteristics of the great Roman satirists [illegible] was fully attended, and numerous persons distinguished in [illegible] were present. Mr Hannay's next lecture will be on the Satirical Writings of Erasmus and the great Satirists of the Reformation.

WEST ESSEX YEOMANRY CAVALRY.

On Monday week this fine body of volunteer corps, under the command of Major Palmer, and numbering 220 men, underwent its annual inspection on Wanstead Flats, after having completed its eight days' training. The corps has expanded into four troops, including the artillery. The A troop being commanded by Captain Jessopp, of Waltham Abbey: the B troop by Captain Watlington, who has largely recruited its ranks from the district of Harlow; the C troop by Captain the Hon. F. Petre, who has drawn much of its strength from the estates of the noble Lord, with whom he is so nearly connected; and the artillery is commanded by Captain Hainsworth. The other officers are Lieutenants Clifton and A. Palmer; Cornets W. Davis, jun., A. Kortright, and G. A. Lowndes; and Quartermasters South, Place, and Williams.

The different troops mustered about one o'clock, and, headed by their excellent band, marched to Wanstead Flats, about two miles distant, the dullness of the morning and the military music drawing together an immense number of spectators from the town, while all the roads from the villages and districts around were thickly thronged. Many thousands were scattered in all directions over the flats, a plain of hundreds of acres. Unfortunately, however, while the landlord and other parts of the county were enjoying pleasant sunshine, the envious clouds gathered over Wanstead, and a smart rain, which set in about the time the manœuvres commenced, and continued most of the afternoon, marred part of the effect of the spectacle.

The Hon. Major Pitt, of the Royal Horse Guards (Blue), inspecting officer, arrived upon the ground between two and three o'clock, attended by Sergeant-Major Cardman, as orderly, after having passed about the line and inspected the equipments, took his station near the Staff, and various movements were executed in admirable style, and called forth the commendations of the military men upon the ground. At the close,

Major Pitt assembled the officers, and addressing them said, he was surprised at the state of efficiency in which they had performed the duties of the day, and particularly at the manner in which the guns were worked; the Major adding that he should make a very favourable report of them to the Commander-in-Chief.

Major Palmer briefly acknowledged the pleasure he felt at the satisfactory expression of opinion just given.

The artillery then went through a manœuvre not set down in the programme of the day, and which excited no little surprise amongst the spectators. A couple of rounds were fired rapidly, and when the smoke cleared away, the guns were seen completely dismantled, the carriages, having in the meantime been taken to pieces and scattered in all directions, while the men lay flat upon the grass. At the signal, however, they were up and running the sword exercise; and the guns having been put into fighting trim again, which they had been taken to pieces, two rounds were fired as a finale to the proceedings of the day; the spectators testifying their satisfaction at the manœuvre with a hearty cheer. After the inspection, a splendid *déjeûner* was served in a spacious tent erected by Edgington, in Wanstead Park; the list of stewards of the entertainment included the magistracy and leading inhabitants of the district. There were about 350 guests—William Cotton, Esq., in the chair. A variety of appropriate toasts were drunk, and the day's proceedings were altogether of a very interesting character. His Grace was served upon the spot where the princely Wanstead House once stood.

NATIONAL SPORTS.

HAMPTON RACES.—WEDNESDAY

Ever since the new management commenced operations, a gradually marked improvement has been perceptible in the character of Hampton Races: and this year not the least important improvement was intended to be effected by the abolition of heat races; but a step has been taken in the right direction, and next year the abolition of heat races is certain.

Stand Plate. Nonsuch, 1. Stansfield, 2.
Claremont Stakes. Village Lass, 1. Balmoral, 2.
Surrey and Middlesex Stakes. Torment, 1. Tavistock, 2.
Innkeepers' Plate.—Antonina, 1. Cotton Lady, 2.
Consolation Stakes.—Clothworker, 1. Duke of Troy, 2. Before the Ham. Gold objection was made to Clothworker, on the ground that he was not the property of a gentleman qualified according to the articles (Captain Little supported the right of Clothworker to start; and the stewards decided that, as the horse was *bond fide* Captain Little's property, he was entitled to run.

THURSDAY

Visitors' Plate.—Mr Sykes's [illegible] Lady, 2.
Railway Plate.—Nouvelle, 1. Ariadne, 2.
Queen's Guineas.—Torn out, 1. Cityfitter, 2.
Richmond Plate.—Stockwell, 1. Sandiford, 2.

LATEST BETTING.—Northumberland Plate: 5 to 1 against Goldfinder (offered); 8 to 1 against Chief Justice (taken).

ROYAL THAMES YACHT CLUB.

The sailing committee, after a very lengthened discussion into the circumstances of the case in which it will be remembered, Captain Freestun, of the *Violet* protested against Mr. Bartlett, of the *Sterlet*, on the ground of foul sailing has come to the decision that the *Sterlet*, having violated the sailing regulations of the club, is disqualified, and that the prize is therefore awarded to Lord Alfred Paget's *Rosamond*.

TRIBUNALS OF COMMERCE.—It is stated that Lord John Russell is about to present to the House of Commons a petition from the Association for the Establishment of Tribunals of Commerce in this country; and that his Lordship will strongly support it in his place in Parliament.

THE NEW STAMP DUTIES.—The amended resolutions to be proposed by the Chancellor of the Exchequer have been issued. They provide for a duty of 6d. on policies of insurance for sums under £25, and 6d. for every additional £50 to £500; for every £100 up to £1000, and every £1000 amounting to £5 and upwards—the scale charged at present. The Advertisement duty is not regarded as settled, but remains fixed. All drafts or orders for the payment of money to the bearer or order, drawn upon any banker or bankers are to remain as now by law exempt from Stamp duty. The penny Stamp-duty on newspapers is retained: the duty of a half-penny on supplements removed, without any stipulation but that of the size of the sheet or sheets.

WHAT IS "CANVASSING."—A witness having said, before the Canvassing Election Committee, that he had been "canvassed," he was directed to "define canvassing, which he did thus: "To try to induce a voter to vote, to vote for Corny Grinson; and, if they would not, to give them drink till they could not vote at all."

SINGULAR INSTANCE OF VULNERABILITY.—A few days ago a [illegible] Sandgodown farm, near Dover, while driving home some cows caught up a small [illegible] weighing about two pounds, [illegible] to make it move on faster. He struck the cow on one of its legs, just above the hock, and such was the injury sustained from so slight a blow on this vulnerable portion, that it was found necessary immediately to slaughter the animal, a very fine one, worth at least £15.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the long-pending differences between Russia and Turkey have not been adjusted, the markets for Consols has ruled steady, the week's fluctuations have been subject to some rather extensive fluctuations have advanced about one half per cent. The Funded Debt has been comparatively at rest, the principal amount of Exchequer Bills paid off is £4,110,000, being a much larger sum than has been anticipated. Heavy drains upon the purse of the Exchequer have left Mr. Disraeli a very limited capital to invest; hence, should the holders of South-Sea Stock determine to take [illegible] of Treasury Bonds, the Bank must, of necessity, make large [illegible] to the Government.

There has been a steady demand for money out of doors at [illegible] first-class acceptances have been done at from 2 to 2½ per cent. The supply in the hands of the bank is, as well as the discount [illegible] The foreign exchanges, with the exception of those on New York, which show a small profit on the shipment of gold, are still against this country.

The Directors of the East India Company have given notice that they are prepared to receive cash for Bonds on Bengal and Madras, and on Bombay at 2s. 6d. the Company's rupee.

The Bank of England Account was [illegible] Bullion for the week [illegible] Five per Cents [illegible] Exchequer Bills [illegible] Stock Dealing, consequently, will be almost [illegible] Five per Cents have marked 100; the Four [illegible] Three per Cents [illegible] Reduced [illegible] Consols [illegible] Ditto (Blue), 9. Annuities [illegible] Bonds

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE.—Monday, Tuesday, Thursday, Friday, and Saturday, A DAY AFTER THE WEDDING. After which, Lord Byron's Tragedy of SARDANAPALUS (positively the last night for Mme. Ingenstadt). Wednesday, Berlioz. With farming the Tableaux every evening.

FRENCH PLAYS.—ST. JAMES'S THEATRE.—ADRIENNE LECOUVREUR will be repeated for a last time, on-night, SATURDAY, June 18; and the new play of TANT VAUT, VFE, on MONDAY, next, June 20, for the last time; and the popular drama LOUISE DE LIGNEROLLES will be produced on WEDNESDAY, June 22. Boxes and Stalls at Mr. MITCHELL'S Royal Library, 31, Old Bond-street.

GERMAN PLAYS.—ST. JAMES'S THEATRE.—Mr. MITCHELL respectfully announces that a Second Season of GERMAN PLAYS will be commenced at this Theatre on the 1st of JULY, at the Middle Season of the year, for which the following eminent artistes—Herr Emil Devrient, from Dresden; Herr Devrient, from Berlin; Herr Gabillon, from Hanover; Herr Flow, from Cologne, Fraulein Fohr, from Berlin, Frau Stehn, from Cassel; Frau Stehn, from Darmstadt, Herr Schirmer, from Leipsic; Herr Thomas, from Berlin, and a complete company, consisting of twenty-four persons, Professors Herr, Fischer and Mirandi, from the Duke of Saxe Meiningen's Theatre, the principal production this season will consist of William Tell, Duke of Braunau, Doctor Klaus, Faust, Torquato Tasso, Othello, and the Comedies of Lessing, Goethe, and the popular plays of Iffland and Kotzebue, Egmont and Hamlet. The performances will be given on Mondays, Wednesdays, Fridays, and Saturdays, during the month of July. Subscription for the series, or for one or two nights a week, to be arranged at a considerable reduction upon the nightly prices, at Mr. MITCHELL'S Library, 31, Old Bond-street.

SACRED HARMONIC SOCIETY, EXETER HALL.—Conductor, Mr. COSTA.—FINAL PERFORMANCE this SEASON. Handel's ELIJAH will be again repeated on FRIDAY, 24th JUNE. Vocalists: Madame Viardot Garcia, Miss Dolby, Mrs. Endersohn, Mr. Lockey, Mr. Weiss, Mr. Sims Reeves, Mr. Hobbs, and Mr. Weiss. Tickets, 7s. 6d. and 10s. 6d. each, at the usual Concert Agents, at Jullien's, and at the Society's Office, 6, Exeter-hall, and at the Committee-room at the Hospital.

CLAPHAM CHORAL UNION—FINAL CONCERT.—Mr. MITCHELL respectfully announces that the above will take place at the Royal Pantheon, Knightsbridge, on Monday next, June 20, at half-past Three o'clock; and, by the kind permission of the Right Honourable the Lord Chamberlain, will be honoured with the patronage of Her Majesty the Queen, and His Royal Highness Prince Albert, &c., &c., will be performed Haydn's Grand Mass in B flat, composed by him for Prince Esterhazy, and performed by him for the first time before the KING OF THE BELGIANS and the late KING LOUIS PHILIPPE at the CHAPEL ROYAL, Brighton. The Band will consist of nearly 600 performers. Tickets, 2s., 3s., and 10s. 6d. each, at the Choral Union Office, No. 6 in Exeter-hall.

LONDON SACRED HARMONIC SOCIETY.—EXETER HALL.—On WEDNESDAY next, under the patronage of her Royal Highness the Duchess of Kent and her Highness Prince Albert, &c., &c., will be performed Haydn's Oratorio, preceded by a "Te Deum," composed expressly for the occasion, and to be performed before the KING OF THE BELGIANS and the late KING LOUIS PHILIPPE at the CHAPEL ROYAL, Brighton. The Band will consist of nearly 600 performers. Tickets, 2s., 3s., and 10s. 6d. each, at the usual Concert Agents, at Jullien's, and at the Society's Office, 6, Exeter-hall, and at the Committee-room at the Hospital.

CLAPHAM CHORAL UNION—FINAL CONCERT.—Mr. MITCHELL respectfully announces that the above will take place at the Royal Pantheon, Knightsbridge, on Monday next, June 20, at half-past Three o'clock; and, by the kind permission of the Right Honourable the Lord Chamberlain, will be honoured with the patronage of Her Majesty the Queen, and His Royal Highness Prince Albert, &c., &c., will be performed Haydn's Grand Mass in B flat, composed by him for Prince Esterhazy, and performed by him for the first time before the KING OF THE BELGIANS and the late KING LOUIS PHILIPPE at the CHAPEL ROYAL, Brighton. The Band will consist of nearly 600 performers. Tickets, 2s., 3s., and 10s. 6d. each, at the usual Concert Agents, at Jullien's, and at the Society's Office, 6, Exeter-hall, and at the Committee-room at the Hospital.

MR BENEDICT'S GRAND MORNING CONCERT.—Mr. Benedict, Sainton, Hallé, Bottesini, Mme. Lemmens-Sherrington, and other eminent artists, have kindly promised their valuable assistance at this Concert, which will be honoured by the presence of the Royal Family, and will take place at Her Majesty's Theatre, on next WEDNESDAY, June 22nd.—Tickets may be had at all the Principal Music-sellers and Crown 8vo. Libraries, &c. Boxes, Seats may also be secured at Mr. BENEDICT'S Residence, No. 8, Manchester-square. The full programme is now ready.

MDLLE. COULON has the honour to announce that her ANNUAL GRAND CONCERT will take place at HANOVER SQUARE ROOMS on FRIDAY EVENING, JUNE 24th, to commence at Eight o'clock precisely, on which occasion she will have the honour to be assisted by Mdlle. Rachel, Mdlle. Rudersdorff, Mdlle. Nissen, Mdlle. Nicolaus, Mdlle. Parepa, Mdlle. Poinsot, Mdlle. Rebecca, Mdlle. Rudolphi, Mdlle. Clauss, Herr Jansa, Herr Molique, Signor Arditi, Signor Piatti, Mr. Lucas, Mr. Benedict, Mr. Frank Mori, Mr. Pratten, Mr. Richardson, Mr. Blagrove, Mr. Lindley, Mr. Howell, Mr. Chipp, Mr. Reed, Mr. Jay, Mr. Hill, Mr. Lazarus, Mr. Harper, Mr. Baumann, Mr. Jaell, Mr. Jaffe, Mr. Jaquard, Mr. Cusins, Mr. Walter Maynard, Mr. Land, Mr. Cooper, Mr. Lavenu, Mr. Hutchins, Mr. Hill, Mr. Thomas, Mr. Hughes, Mr. Hobbs, Mr. Weiss, Mr. Sims Reeves, Mr. Lawler, Mr. Bodda, Mr. Bellamy, Mr. Lawler, Mr. Bodda, Mr. Bellamy, Mr. Lawler, Mr. Bodda, Mr. Bellamy

ORFORDNESS LIGHTHOUSE, AND STATION OF THE SUBMARINE ELECTRIC TELEGRAPH FROM ENGLAND TO HOLLAND.

SUBMARINE ELECTRIC TELEGRAPH FROM ENGLAND TO HOLLAND.

THE process of carrying out this highly-interesting and enterprising undertaking was effected on Monday and Tuesday, the 30th and 31st ultimo.

The point of departure on the English coast was Orfordness; the point of arrival on the Dutch coast being Scheveningen (the nearest point to the Hague). The distance was 115 miles, and the quantity of cable used 119½; thereby showing that, from the undulations of the ground, and deviations from the straight course, but 4½ extra miles of cable were expended—an event altogether unprecedented in the annals of submarine engineering.

The vessel containing the cable was the *Monarch*, purchased by the Electric Telegraph Company, which arrived from Sunderland, having on board Mr. Edwin Clark, engineer to the company; Mr. F. C. Webb, assistant engineer; Messrs. Thompson and Spencer, with a large party of workmen from the factory of Messrs. Newall and Co. The *Adder* Government steamer (lent by the Admiralty), commanded by Lieutenant E. Burstal, R.N., was in attendance, and pioneered the way across by a series of flag buoys, which that officer had previously laid out on the track. The *Goliath* steam-tug was hired by the Company to render assistance in case of any casualty happening to the engines of the *Monarch*.

The *Monarch* left Orfordness at nine a.m. on Monday, having the tug ahead to steady her, proceeding at the rate of 3½ miles an hour. It was soon evident that the *Monarch* could steer without her, and she was therefore cast off. The weather, up to 10 p.m., was moderate, with a ground swell from the late gales. At this time there were evident indications of bad weather; and from 11 p.m. to the evening of the following day, it blew a gale from E.N.E. with a heavy breaking sea, which caused the *Tay* to bear up and run to Harwich. The *Adder* and the *Monarch* kept on their way. The rolling and pitching of these vessels was fearful to witness. The funnel guys of the *Monarch* had to be replaced, they having broken. Mr. Spencer, at the break, was lashed to his post, which he never left night or day. The buoys were seen by night, and the welcome news communicated by the *Adder* by rockets and blue lights. Towards daylight there was some anxiety as to position, which was soon relieved by the sight of another buoy, and thus twelve out of fourteen were made on the passage across. During the whole time there was a communication by the wire with the instrument at Orfordness Lighthouse, kindly lent by the Elder Brethren of the Trinity House; these operations were attended to by Mr. Latimer Clarke. Thus the whole labour lasted thirty-four hours, twenty-two of which were in a heavy sea. Too much praise cannot be bestowed on all the parties engaged in so difficult an undertaking under such trying circumstances.

On the day following an attempt was made to land the cable, but there being so much sea on the coast it was Thursday before the cable was joined up to the land wires in communication with the Hague.

A second cable was to be laid down at the close of the week; and it is expected the line will be open for public use in the course of a fortnight.

The King of Holland's speech at the opening of the States General at the Hague, was transmitted direct from that capital to London last Tuesday afternoon, immediately after its delivery on that day, being the first public intelligence despatched by the new route.

THE "ADDER," AND THE "MONARCH" STEAMERS LAYING DOWN THE ENGLAND AND HOLLAND SUBMARINE ELECTRIC TELEGRAPH, IN A GALE OF WIND.

Fine Arts.

THE PARIS EXHIBITION.

(THIRD AND CONCLUDING ARTICLE.)

THE general feeling of the public, as far as I have been able to ascertain it during the ten days that the Exposition has now been open, seems to confirm the opinion I formed upon my early visits—namely, that, although the principal living representatives of French pictorial art have kept aloof, and although there is a decided scarcity of those pictures which stand out, by their superior merit, from amidst surrounding mediocrity, yet this year's Exhibition is, upon the whole, a very pleasing and interesting one. One daily more appreciates the advantage of the unusually rigid scrutiny and numerous rejections. Five hundred works of art more or less make a vast difference in the fatigue of going through an exhibition of this kind, especially when (as is most probable in this case) a very large proportion of the excluded five hundred consisted of pictures. Through the sculpture, engravings, and architecture few persons do more than stroll; but upon the paintings they dwell longer; and, assuredly, the exclusion of some hundreds of daubs, comprising not a few ugly portraits and tea-board landscapes, has been a relief to visitors and the saving of many a headache. This last discomfort is rather increased by the abundant lightness of the rooms, which have not, however, upon any of the days I have visited them, been oppressively warm or unpleasantly crowded.

A final glance at the historical and biographical features of the catalogue, reminds me of a few more pictures of these classes worthy of a word or two. No. 387, by Doerr, shows "Bailly, Mayor of Paris, led to Execution." The subject has interest; and there are many such subjects to be found in the history of the French revolution, which I wonder have not been made available by artists of higher rank than any who have hitherto handled them. It is not necessary to exhibit horrors, to depict bloodshed, and heads upon pikes; there are innumerable episodes in the days of the Great Revolution which would supply the artist with noble, interesting, and affecting subjects. And there is no complaint so often made by historical painters as that of the difficulty of hitting upon good subjects, not already hackneyed. Alison's "History of the Revolution," and subsequent wars, would, surely, supply thousands. I do not particularly congratulate M. Duveau on the use he has made of a passage from Tacitus, recording the "Death of Agrippina, Nero's Mother." A murder is not a pleasant thing to contemplate, especially when the victim is a woman. She has already received a blow on the head, and is livid with the shock, but still full of vitality and passion. Undraping herself, she utters the "Strike here!" &c., which all will remember; and the centurion draws back his arm to deal the fatal blow. Another assassination is better handled: in the Gallery of the Stags at Fontunebleau, Monaldeschi is about to be done to death, by order of Christina of Sweden. He is on his knees; the relentless Queen, rage distending her nostrils and making her eyes to gleam, is quitting the apartment. There is expression in the picture, although it is not of first-rate merit. It is by Höckert, a Swede. Here is the pious death of Montaigne. For three days before his death he was speechless, and wrote his wishes. The moment selected by the artist is that when mass is being said in his apartment: he witnesses with devout joy the Host's elevation, and gives up the ghost. Barrias (a name unfamiliar to me, but a painter of merit) exhibits one picture—"Dante Alighieri." Passing through the streets of Ravenna, with fixed gaze and pallid aspect, the great bard of the "Inferno" was pursued, and curiously gazed at by children, who pointed him out to each other as the man who had returned from hell. Another interesting Italian subject is the "Death of Vittoria Colonna," by Leman. "When Vittoria died," Condivi says, "Michael Angelo's grief was so violent, that he at times remained like one deprived of his senses. He entered the room where lay the mortal remains of the woman he had so deeply loved, and, after gazing at her long in silence, imprinted a kiss upon her cold hand, and withdrew." An anecdote well known to all versed in artistic lore has been chosen by Mr. Charles Marchal for the subject of his picture, No 799—Vandyke, in Rubens's studio, is painting a part of the master's "Descent from the Cross," which the other pupils had effaced.

Sacred subjects are neither numerous nor strikingly good in this Exhibition. High upon the walls are several large things which one sees with difficulty, and turns from with small regret; and, in a corner, is a most disagreeable "Martyrdom of St. Peter," by Dumaresq; to which we greatly prefer "The Kiss of Judas," by Hebert, which has fine colouring, and great expression in some of the faces. A pretty sort of picture of "The Annunciation," by Jalabert (a pupil of Paul Delaroche), attracts gazers, and is remarkable for the sweet, girlish expression of the Virgin's countenance. With reference to this picture, and to others by pupils of Delaroche, I am puzzled to account for the style of colouring, which is decidedly an imitation of Ingres, and consequently very different from, and far inferior to, that of the great painter under whom these artists studied. I will instance two cases in point, that just now occur to me—"An Idyl," by Gérome; and "An Idyl: My Sister is not there," by Hamon. Both are pretty; the latter especially, which is a charming, fanciful group of children—a boy with an olive-branch in his hand, and a girl hiding behind two younger urchins; with butterflies and flowers of tender hues, and figures in the distance, making up altogether one of those fantastical, pensive pictures which one gazes at with pleasure. But the colouring in both cases is Ingres all over—the subdued tints, of peculiar choice; and the sort of misty, or, rather, dusty medium. I can hardly believe that even the warmest admirers of Ingres can prefer his colouring to that of Delaroche, even though they may be disposed to award him the palm in other respects.

Before proceeding to that class of pictures—interiors, fanciful subjects, illustrations of tales and fables, &c.—which is best comprised under the head of *genre*, I will give a few lines to landscapes and animals.

One of the largest pictures in the Exhibition, and which I have heard some prize as also amongst the very best, is by Mademoiselle Rosa Bonheur, a well-known and certainly very clever artist. It is rather an

GRAND ENTERTAINMENT TO COMMODORE VANDERBILDT, AT SOUTHAMPTON, ON MONDAY LAST.—(SEE PAGE 499.)

ambitious attempt, and I confess to prefer its author's more modest productions—her sheep and goats, or her group of cows and sheep (No. 155) in the present show, belonging to Count de Morny. This huge canvas of the "Paris Horse-market" is certainly praiseworthy, and shows an artist of talent; but it is also very uninteresting, although there is spirit and life in it. There are too many grey horses for the effect of the picture; and there is a monotony in the grouping. Two large pictures by Flandin, a native of Naples, call for notice, and even for praise. One is a view of the Turkish quarter of Constantinople, taken opposite the mosques of Soliman and of the Sultana Validé. The water is good, but the atmosphere does not realise all one imagines of the golden light and dancing ether of that brilliant region. The tints are rather grey and purple. The companion picture is the "Entrance of the Great Mosque at Ispahan: the Persians entering for Evening Prayer." Taken upon the spot, both these views have interest. This is more than I can say for three others by a Mr. Loubon, who indulges in a most singular style of art and choice of subjects. His pictures may have merits I have been unable to discover, but I will answer for their being ugly. One is the head of a flock of goats—the front rank of the drove—a row of black goats, staring and stepping out of the picture. Another is a "Souvenir of Carrara," which induces belief that M. Loubon's souvenirs are rather nasty, at least as regards the nature of the slope down which oxen are dragging an enormous block of marble. In the picture the descent appears all but perpendicular. A pleasanter "View of Marseilles" than his, and a very accurate one, is by Felix Ziem; and a good Provençal landscape, whose grey tints give an excellent idea of those of nature in that southernmost province of France, is a picture of the "Valley of Ardennes," near Toulon, by Vincent Cordouan. Cicero has a nice landscape, "Le Soir;" and another, "A Road through the Forest," which has been purchased by the Minister of State. A very pretty farm-yard scene, natural and pleasing, is by Salmon, from whom M. Feuld has also bought a picture. Bodinier—one of whose works wasin the Orleans Sale this spring here produces one in a similar style. "The Angelus in the Plains of Rome," with good figures in front, but with mountains in the background to which he has been rather too liberal with his ultra-marine. It is always wrong, however, in my opinion, dogmatically to criticise tints and effects of this sort, in which so much depends upon the country and aspect: how often it happens that in nature we notice some appearance of sky, earth, or water, which, had we been shown it in a picture, we should have pronounced exaggerated or unnatural. I shall say nothing of Mr. Courbet's "Women Bathing," except that it is by far the most hideous and disgusting picture of the kind that I remember to have seen. Brion's "Sledgers in the Black Forest" represents the plan there adopted of conveying wood in large masses down hill upon sledges, that run over bars placed across the path: this picture, like most pictures that illustrate peculiar local customs known but to few, gets a glance from most visitors. A very good canvas, hard by it, represents an eagle making a swoop amongst wild ducks in a marsh. Of other animal pictures, perhaps the most notable are those by Verlat, of Antwerp. "A Woodman Attacked by a Bear," "A Buffalo Surprised by a Tiger," "Two Wolves Disputing Prey," are the titles. The buffalo is in a very awkward fix, with his head pinned to the ground by his fierce assailant; and the woodman is not in a very safe predicament. Felling wood in the forest, a bear has suddenly come upon him, and, with open jaws and uplifted claws, is in the very act of charging him, whilst the bold logger, brandishing his axe, is evidently resolved to fight hard in his own defence, and in that of his young son, who looks aghast at the formidable brute.

Had I to select, in the whole of this Exhibition, the three pictures, by one artist, which I feel confident would generally please all classes of beholders, and which would form the most fitting ornament to an elegant boudoir, or dainty drawing-room, I think I should pause before Nos. 1049 to 1051, by Schlesinger, of Yorkshire-origin, I believe. There is a dash of both Leslie and Redgrave in this artist; the lovely faces of his women reminding me particularly of the former. And, in the finish and rich effect of his brocades and satins, he approaches his countryman, Winterhalter—the Indian rose excepted, of course. Nothing can be more charming than his "Warranted a Likeness," a lovely little girl seated and smiling through an oval picture frame, which encloses her head and shoulders, and is held before her by her young mother or elder sister. His "Pearl Necklace" is almost equally attractive—a group of charming women contemplating the antics of a monkey, which, having found an open jewel-case upon his mistress's toilet table, adorns himself with its contents. In the third and largest picture, the poet Puron is improvising verses to a lady, whose face seems to have a laughter-loving-everybody stops before these three pictures, and smiles, and is well pleased. Another German, Knaus, of Wiesbaden, a pupil of the Dusseldorf Academy, has also contributed a most essential picture of this class, entitled "The Morning after a Village Festival." The effects of the night's debauch are visible in the aspect of all the figures, except in that of a fair-haired maiden, who mournfully supports upon her knees the head of a young fellow who has evidently been rather over the step to which Rhine wine or Bavarian beer has evidently contributed. Two drunken old musicians, whom I could almost swear to have seen scores of times in Germany, have gathered up their instruments, and are about to resume their labours, which interrupted by a day's bath and feasting. One, whose glassy gaze and bloated features tell of his drouthy propensities, smokes a short pipe; the other is about to drain a glass hastily emptied by a departed guest. The morning is young, and lights still burn in that sort of temple of stern where the merrymakers—now far from merry—are assembled. This is a most excellent picture, full of humour. Another, by the same artist, "Drunken Peasants," has a similar kind of merit; but it tells less of a story, and is consequently of inferior interest. Knaus is to Schlesinger what broad farce is to genteel comedy. Each has great merit, and the expression of the principal picture, shows that he has feeling as well as fun. The whole character of this picture reminds me of Wilkie.

Germany is in great force in this department of the Exhibition. Muller, a Wurtemburger, and pupil of Ingres, has a very nice picture, "Fra Paolo Sarpi's Lover, a goldsmith of Venice, receiving the morning visits of admirers and amateurs. And Gentz, a Prussian, has a good picture of an "Egyptian School at Cairo," something in the manner of Decamps. A decided imitator of this last-named artist is M. Caraud, a Frenchman, who has contributed some very but oddly-coloured Algerine subjects—"A Woman Teazing a Parrot," and an "Interior of a Moorish House." While in Algeria, I must mention a picture by Leleux, "Cattle Treading out Corn in North Africa," which has the same sort of interest possessed by the "Wood-sledgers in the Black Forest," already spoken of.

Belgium and Holland are not behind-hand here. "The New Market at Amsterdam during a Kermesse or Festival," is by Van Schendel, a Dutch painter, who has frequently exhibited at Paris, and who obtained a gold medal in 1847, with Schlesinger. Night scenes are Van Schendel's forte; and he is remarkable for his curious effects of light, and for his extremely high finish. This piece is worthy of its like as regards texture; and the lights, thrown by paper lanterns upon the faces of the stall-keepers, are cleverly disposed, and of very natural effect. Hard by, in the catalogue, is a companion piece of French patronymic, Van Moer, a Brussels artist, who contributes three interiors of no great interest, and of an unpleasing colour; but one of which, a studio, exhibits a capital effect of sun-light through a window. The two Stevenses, of Brussels, one of whom (Joseph) got a medal here last year, have pictures between them. Two of the three, by Alfred Stevens—"Ash Wednesday Morning" (masqueraders going home after the revels of the Carnival), and "Jurgeress Finding at Daybreak the Corpse of a Nobleman of the Court Assembled to Dance in North Africa," are interesting.

After noticing all these foreigners, it is but fair to turn to the French; amongst whom, however, I do not find much to notice in the way of genre pictures. Some good things may have escaped me, but certainly not many; and I have marked but few of this class, by French painters, combining in any great degree merit of subject and satisfactory execution. Jacquand's "Amende Honorable" (a monk in a convent of Chevalier Brothers, Hermits of St. Maurice), kneeling before his Superior, and humbling himself for an offence committed) has the usual faults and beauties of that artist. It is unquestionably a fine picture: the colouring judicious; the expression of some of the faces—especially of that of the Superior—admirably conveying the sentiments of a clever but ill-tempered man; and the whole is clever and well-composed; but it has the usual defect of this artist, it seems to have such difficulty of getting rid. It is as hard as polished steel. His townsman, Meissonnier has three of his charming little pictures, which, even here, are very effective small works of description. Comte Calix, also a Lyonnese—a painter of inferior standing to the two just-named, but who is very well known in Paris, where many of his pictures and sketches have been engraved—has sent, besides a portrait of a lady, two pictures, entitled "Fortune and Happiness," and "As one makes one's bed, so does one lie upon it." The subject of neither is very intelligible. In the first-named the countenances and attitudes of a young man and woman, the two principal figures, might induce one to think the artist had been attempting to imitate Frank Stone; and in some of his former pictures I have fancied I discovered that tendency. If this be the case, the imitation is still leagues off from his model. M. Compte Calix has, however, certain merits of his own. He paints very pretty female faces, and is skilful in varying their expression—a talent not always found in painters who deal largely in female beauty. As to his bed-making picture, more may be meant by it than meets the eye, but what is meant I have not yet been able to discover. A heap of mattresses, a very pretty woman, with a fantastical head-dress (that of some remote Provençal province), another woman admiring her, a lap-dog upon a trailing blanket—such is the composition, which, although puzzling, is pleasing enough to look at, and will, doubtless, soon be in the print-shops. Another pretty little picture, by Hillemacher, of "Père-Vert," Grisselle renewed, parrot, going upon his travels, and gossiping as he goes. He is on board a boat, and the amused passengers gather around him. If I wished to find a fell to all these pleasant pictures, I could hardly better select than by taking Tassaert's "The Old Musician," a poor, despairing old man, sitting in his room with a pan of lighted charcoal, awaiting death by suffocation. Although I have, as yet, confined myself to oil-paintings, I will here include an engraving by the well-known Eugène Lami, entitled "An Orgie"—a sort of Belshazzar's Feast in the days of the fifteenth Louis—a sumptuously-spread board, surrounded by revellers of both sexes, laughing, drinking, singing, and love-making. In a lurid gleam in one corner of the picture the demons of discord are seen in the air, and the ominous figures, "1793," address to the reckless and licentious crew a warning unheeded until too late.

There are some very fine portraits in this Exhibition. Of that of the Empress I have already spoken, and I maintain my good opinion of it, which is that of the majority; although, since my last letter, I have heard it attacked on account of the somewhat melancholy expression, and of a certain heaviness in the eyes. There may be some slight grounds for the latter objection, although it appears to me rather strained; but, as to the expression, I persist in saying that it is the one natural to a lady when her features are in repose. The Emperor's portrait displeases many, and is very unflattering to him. For it, after all, and although caricaturists have done their utmost to make a monster of him, he is neither an ugly nor a disagreeable-looking man, although his expression is cold, inscrutable, and somewhat stern. His grand huntsman, Marshal Magnan, hangs nearly opposite to him, painted by Larivière. Very near to the Emperor, on his right, rather higher up, is a life-size portrait of the present Queen of Spain, by Lépaulle, the same who painted Napoleon III. Queen Isabella is not a person of whom one has seen many portraits that could be at all relied upon; but this one has every appearance of being a likeness, although perhaps as unflattering a one as that of the Emperor, which still has a resemblance. Her Majesty has a snub nose, a sodden complexion, coarse features, a very sensual expression, and looks ten years older than her real age. Still, from what is known of her tastes, habits, and appearance, there is little reason for supposing that this portrait is untrue to nature—the less reason, that it coincides very much with a miniature of her, to which I shall presently get. A very good Pope Pius, but a very hard picture (painted at Brompton by Mottez), is that of M. Guizot. Its expression, too, is severe, and has less of *bonhommie* than that usual to this statesman. It is a portrait taken under one of his less favourable aspects—when he is engrossed by business rather than in the relaxation of social intercourse. Here is the Pope, Pio Nono, painted for the Minister of State, by Court, an artist of whom prodigious expectations were once entertained, and who has done some very fine things; but who of late years has declined in public favour, and rather disappointed his admirers. This, however, is certainly a fine picture, carefully done—but may be styled a good comedy portrait—not displaying any extraordinary genius. A Pope, in his pontifical splendour, hardly affords much opportunity for such display. Abd-el-Kader I should take to be a more tempting subject for an artist; and, accordingly, here we find the Emir, bearded and burnoused, a full length portrait and a good likeness, by Tasser, a pupil of Scheffer and Delaroche, who has also painted General Count Goyon, the Emperor's Aide-de-Camp. Amongst theatrical portraits, the most noticeable is one of Rachel, by Mrs. O'Connell, a German by birth, notwithstanding her Hibernian name. This is a very fair likeness of Rachel, as times go. The great tragedian is, I have no doubt, extremely difficult to paint—owing, perhaps, to her wonderful features, for, out of the innumerable portraits I have seen of her, not one satisfied me as a perfect likeness. Some resemble her as she appears in particular characters; but of Rachel herself, as she looks when off the stage, I am unacquainted with an exact likeness. Mrs. O'Connell's picture is a fair one, after her physiognomy. Also, by Mrs. O'Connell, is the portrait of an extremely smug little gentleman, with a small white hand, an insinuating countenance, and a whole cluster of crosses at his button-hole. This is M. Romieu, late Director of the Beaux-Arts. Dubufe has two charming portraits of ladies, besides that of the Empress; and every one, I am sure, will gaze long and admiringly on the sweet countenance which hangs on the wall of Winterhalter's Florinda.

A walk through the Miniature-room will conclude this letter. Miniature, like landscape, is a style in which the French are beaten out of the field by the English. Nevertheless, there are a few excellent French miniature-painters, even now. Madame de Mirbel, long the most celebrated amongst them, has left the scene. It appears to me that there are fewer miniatures than usual this year, and, from what I hear, one instance has come to my knowledge of exclusions of that class of portrait. Amongst the miniature-painters who are those of Madame Herbelin, who has sent, with two miniatures of ladies unknown, one of Isabey, the painter, now an extremely old man. Pommayrac, a native of the Spanish colony of Porto Rico, and a pupil of Madame de Mirbel, has obtained three rather interesting sitters—the Princess Mathilde, Queen Isabella—and the infant Princess of the Asturias. He is a nice portrait-painter, but not eminent in vigour. Maxime David, another of Madame de Mirbel's pupils, has three miniatures of Abd el Kader, under three different aspects—two profiles and a front face; inscribed below, "At Prayers," "The Sultan," "In Battle." The idea is quaint; but the varieties of expression are well defined, without exaggeration. I saw the Emperor's portrait, finely exhibited by Goyet, one of the most esteemed painters of this class in Paris, who exhibited, last year, an extraordinarily beautiful miniature copy of Correggio's celebrated "Marriage of St. Catherine." It was a masterpiece of its kind, and a work of singular patience and finish. The painter's absence from this year's Exhibition is understood to arise from his having been long engaged on a similar copy of Ary Scheffer's beautiful picture of "Francesca di Rimini," sold, a short time since, at the auction of the late Duke of Orleans' Collection, and the engraving of which is well known in England.

THE ROYAL ACADEMY EXHIBITION.—THE MINIATURES AND DRAWINGS.

THE rooms appropriated to miniatures and drawings will repay inspection, after the works of higher pretensions in the oil-colour line have been thoroughly examined. In many instances, Thorburn adds a grace and sentiment amounting almost to the poetic—worthy of a higher walk of art. His portrait of Lady Constance Grosvenor (738), the Countess of Airlie (790), and Mrs. Knatchbull (836), are especially beautiful. The group of the Hon. Mrs. Sidney Herbert and two of her children (825) is a perfect picture. Sir W. Ross is very successful in the portraits of Mrs. and Miss B. Cresswell (737 and 740), and Mrs. Lewis (777), and in the group of Lady Arthur Hervey and Children (752). C. Durham exhibits great painstaking, and a good appreciation of colour in some of his miniatures: that entitled "The Student" (664) and another of a Young Lady (689) being favourable examples of his talent. T. J. Gullick is successful in hitting off a likeness, *ex gr.* his "Sir Harry G. W. Smith" (674) and "Sir Fitzroy Kelly" (704).

Amongst other successful hands in this line, we remark S. B. Godbold, who exhibits four miniature and three water-colour portraits, all characterised by very good taste and undeniable power of execution: amongst the water-colour subjects is the "Portrait of a Lady" (682), very charming in expression; and "Portrait of Alexander Collier, son of the late Sir Francis Collier" in a middle-aged subject a very great deal of merit is also. H. Wequil, also amongst other exhibitors, has a drawing of the late Duke of Wellington (912), taken from a sitting in 1852. Mr. V. Bartholomew exhibits a clever portrait of "Miss Glyn" in the character of "Ophelia" [illegible] chalk portraits will adorn the hall, of which that of Professor W. Bowman, of King's College (783), is a creditable example.

Amongst the subject pieces in this line few are worthy of notice. G. Jones, R.A., has two very spirited sketches; one of "Elijah on Mount Horeb" (915), and the other illustrative of the passage in Daniel vii 2. "And behold the four winds of the heaven strove upon the great sea. Mr Dyce's large cartoon of St Paul [illegible] purchased for one of the frescoes to be painted in All Saints' Church, St. Marylebone, though rather hard in outline, is, upon the whole, a fine performance. J. B. Aylmer has a good picture of the "Forum at Rome," and S. Read a view of Walmer Castle, taken in September last, just at the moment before sunset; the flag still half-mast high, denoting the resting-place of England's greatest hero. There is a great deal of skilful treatment in this little picture, and a nice sentiment pervading it.

In the Architectural Room are two block models exhibited by Sir C. Barry; one (1050) of the design of the New Crystal Palace, as now in course of erection, on the summit of Sydenham hill. The other (1051) illustrative of suggestions offered to the directors of the Crystal Palace Company, for modifications of the design of the New Crystal Palace, having for their object to enhance the effect of the interior, and to vary the outline of the exterior, so as to harmonise the principles of the design with the materials and construction employed. The central dome is shown to be 120 feet in diameter, and 365 feet high to the top of the terminal on the lantern, or twenty feet wider and five feet higher than the dome of St. Paul's Cathedral. The effect of the latter is certainly grand and imposing; but, probably the cost would be such as to deter the directors from its adoption. Mr. M. D. Wyatt exhibits (1133) a sketch for the arrangement of the interior of the Pompeian Rooms, now constructing in the New Crystal Palace, which will serve to give an idea of the various attractive features providing for the enjoyment of the public by the directors.

MR. MARTIN'S NEW PICTURE OF "THE LAST JUDGMENT."

Mr. Martin, the painter of "Belshazzar's Feast," "The Deluge," "The Fall of Nineveh," and other fine historical pictures, has just produced a work upon a more ambitious subject than any which he has hitherto attempted—a subject which long ago had put to the severest test the genius of a Michael Angelo, namely, that of "The Last Judgment."

Mr. Martin has treated his subject upon a very opposite principle to that observed in the grand fresco of Michael Angelo. He is not abstract and ideal, as the great Italian was; but seeks to realise *literation* all the miraculous manifestations predicted, in reference to the Day of Judgment, in the various passages of Scripture; beginning from the Prophets, down to the Revelations. Thus, at the top of the picture, is pretended to be represented the Supreme Being—the glory emanating from whom illumines the whole of the heavenly scene; underneath, the Son of Man, with the Book of Life open; and, on either side, the Angel whose closed book contains the record of the actions of those upon whom judgment has been passed, and the Angel who reads the records of the actions of the just, who are being judged from the Book of Life. In front of these, the four-and-twenty Elders, in two rows; and, at their right hand, the Archangel, the Angels sounding the Last Trumpet to the four quarters of the earth, and the Avenging Angel hurling the bolts and fires from Heaven. On the left, in the distance, is the Celestial City, and the plains of Heaven, with the lakes and rivers of [illegible], and the beasts of Heaven, into which are entering those saints who have received the white robes. Beneath is the holy city of Jerusalem, with processions of saints, martyrs, and worthies of various denominations—philanthropists, patriots, astronomers, poets, painters, &c.; several of whose classes are represented by portraits of well known characters. On the opposite side of the picture are the armies of Gog and Magog, "whose number is as the sand of the sea;" and, in the midst, the Valley of Jehoshphat, which has been riven by the earthquake from end to end, thus separating the blessed from the accursed; and the "terminus to the railway (!) by which are arriving the succours to the enemies of Christendom, who are besieging the Holy City. The earthquake having rent the valley in twain, the foremost train and the van of the hosts of Gog and Magog are impelled headlong down the yawning abyss." We here quote the words of the printed account; and have to add that they are strictly and simply descriptive; the train and cars of a railway of the ordinary make and shape being literally depicted; such is the latitude which the artist has allowed his fancy, we fear to the serious disparagement of the grander aspirations with which he set about designing his picture. In the foreground on the right are groups of accursed lawyers, Scribes, Pharisees, and other offenders against morality and Christian precepts, prostrate, and gnashing their teeth in torments. We have thus faintly described the multitudinous contents of this picture, which, with many unquestionable errors of judgment in its treatment, displays a great deal of admirable power of execution—producing those wondrous and startling effects which have distinguished all the artist's former productions. It is at present on view at Mr. M'Lean's, in the Haymarket; by whom an engraving of it will shortly be published.

MR. BAILEY'S MARBLE BUST OF THE QUEEN.

Mr. John Bailey, a young artist, has lately produced a marble bust of her Majesty, which is now on view at Mr. Hogarth's, in the Haymarket. Although we believe the artist has not had the advantage of a sitting, the likeness is indisputable, and there is at the same time noble ideality thrown into the character, while elevates it far above ordinary works of portraiture. The treatment, also, is tasteful and pleasing: the head is adorned with flowers, and at the back is a veil, which falls over the shoulders—the latter a hazardous attempt, but successfully carried out—the effect being that of lightness in spite of the material. Upon the whole, the work is one which does great credit to the producer, and holds out fair promise for his future career

THE VILLAGE PASTOR. By W. P. FRITH, R.A. Engraved by W. HOLL.

Messrs. Lloyd Brothers and Co. have just published a very fine engraving by Holl, of Frith's Village Pastor—an admirable picture, full of life, and nature, and fine feeling; and, though scherer in character, well worthy to hang up as a companion to his "Old English Merry Making," which has become so widely known by the engravings of it issued by the London Art Union. This truly English painter has sung the [illegible] of rural life [illegible] English poet—we mention the name of Oliver Goldsmith?) for his subject—and has charmingly realised the happy scene suggested by the following lines:—

> The service past, around the pious man,
> With ready zeal, each honest, rustic ran;
> E'en children followed, with endearing wile,
> And pluckt his gown to share the good man's smile.

The scene is in the churchyard of a rural parish, after morning service. The benevolent pastor of course forms the centre figure in the picture; around him are various groups of old and young, who seem to look up to him as the "common friend" and "oracle" of the whole village, and who variously manifest their feelings of respect, love, and admiration for his character and position. Old and young, the faces are all instinct with life, and full of character; the children especially being extremely happily treated. The general character of the subject is sunny and cheerful; but a touching little episode is introduced, which gives a sober tone to the *ensemble*, and sends the spectator from the scene with a whispered recollection that "in the midst of life we are in death." An aged mother, widow, with an only daughter, upon whose thin features the mark of the destroyer is already placed, has yielded to the attractions of the latter, and has brought her to church to hear the village pastor, in all probability, for the last time. The heat of the church has been too much for the fragile frame of the latter, and mother and daughter are resting upon a tombstone, to which the former is on his way from the church. The sentiment thrown into this little group is of the purest and most touching kind.

The engraving has been executed with admirable breadth and freedom, and at the same time with extreme minuteness of detail. It measures 36 in. by 28½ in.

THE "CUPID AND DOLPHIN," IN THE DUBLIN EXHIBITION.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

The Athenæum, June 11, 1853.

Your correspondent, Mr. Donaldson, appears to have misapprehended the subject of the "Wounded Boy and Dolphin" by Raphael, now exhibited in Dublin. It appears from M. Passavant's [illegible] that the boy, [illegible] was wounded by a fish, and was carried to the Island of Ægina, where he was visited by the President of the Royal Academy at the opening dinner this year, Eliab, amongst other stories of the affection borne by dolphins to the human race. [illegible] of a boy

GRAND ENTERTAINMENT TO COMMODORE VANDERBILDT, AT SOUTHAMPTON.

SOUTHAMPTON has of late years become celebrated for its hospitality. Its inhabitants seem to seize every opportunity for proffering a welcome to strangers from all parts of the world. The cosmopolitan position of the town, arising from its widely-extended communications with distant countries, and its rising importance as a port and packet-station, render public demonstrations almost necessary on the part of the authorities in the present connection for public advantages such as those enjoyed by Southampton. Accordingly, whenever a new steam-packet company locates itself at Southampton, or when one of the old-established ones renews a contract with the Admiralty, a banquet is sure to be given to inaugurate the event. The arrival of a frigate from the United States, of a Turkish war-steamer, or the landing of a distinguished revolutionary exile in the shape of M. Kossuth, in like manner gives occasion for the display of enthusiasm and hospitality, and feasting and speech-making follow in profusion.

The town is proud of being "the most go-a-head place in the south of England"—and appears resolved to maintain the characteristic. Americans are sure of a hearty welcome, while a second band performs several popular airs on the green outside the rooms. The whole scene was of a very gratifying and complimentary character, and seemed to be much enjoyed by the American guests. In addition to the orchestra, a party of vocalists from London heightened the festivity of the afternoon. Neither the Lord Mayor of London nor any of the provincial chief magistrates could avail themselves themselves of the invitation given them at the Mansion-house conference by the Mayor of Southampton.

The customary loyal and national toasts were given from the chair, and drank with all the honours, after which the health of "The President of the United States of America" was drunk with great enthusiasm, followed by the band playing "Hail, Columbia!" the whole company standing, and paying the same honours to the toast as they had previously done to the health of the Queen. The next toast, proposed by Mr. Alderman Lambley, was, "Her Majesty's Ministers and the Statesmen of England and America, may all their deliberations tend to promote the welfare of mankind and the civilisation of the world."

The Mayor then in a brief complimentary address, proposed the toast of the evening, "Commodore Vanderbilt: may every happiness accrue to himself and family during his interesting voyage, and every success attend all his spirited enterprises." The gentleman in whose honour they were assembled that day was one of the merchant princes of America—a gentleman who owed his present high position entirely to his own industry and perseverance, and the extent of his knowledge of mankind. He had ever been an enemy to all monopolies—and that was the foundation of his great success. He was the largest steam-boat proprietor in the United States, and now, as a sort of frame to the picture, had brought his splendid yacht into the Southampton waters, to show what Americans could do in steam ship-building. His position in America was equal to that of any of the ducal houses in Great Britain.

The toast having been drunk with enthusiastic applause, Commodore Vanderbilt, who was very warmly received, returned thanks for the honour that had been awarded to him and his family in a few brief sentences, and called upon one of his sons-in-law (Mr. Carke) to perform the duty more efficiently than he could.

Mr. Clarke, in an eloquent address, dwelt with great force on the common interests of England and America, and the deep debt of gratitude they (the children) owed to their parent nation.

Several other appropriate toasts were drunk and the company separated about half-past seven o'clock, highly delighted with the festivities of the occasion.

Previous to the conclusion of the proceedings, Commodore Vanderbildt invited the whole company to take a "trip" with him in the *North Star*, next day. Accordingly, on Tuesday the Commodore with a large party of ladies and gentlemen on board, having made the circuit of the Isle of Wight, ran two or three times through the anchorage at Spithead, to give the company a good opportunity of seeing the fine squadron (*Duke of Wellington*, 131; *Rover*, 60; *Bloodhound*, 6; *Rogue*, 6; *Edinburgh*, 58; *Sidon*, 22; *Odin*, 16) moored there. On first coming up to Spithead, Commodore Vanderbildt fired a Royal salute, of which act of gratuitous courtesy no notice was taken until the Commodore and his guests must have landed at the pier at Southampton. But at six o'clock, preparations were made on the garrison battery to return the American gentleman's salute, which he fired about four o'clock.

Next week we shall engrave the *North Star*.

NEWSPAPER CORRESPONDENCE ACROSS THE SEA.—Occasionally some accident occurs which reveals the composition of some of the colonial mails. Several months ago a sailing vessel was wrecked, and the contents of its mail-bag were brought to light, and were found to stand thus:—Letters, 780; newspapers, 8350. But this newspaper correspondence seems to increase vastly. A few weeks ago a vessel called the *Orestes*, met with an accident on its way to Australia, and its mail bags were sent back to England, to be forwarded by another ship. The contents consisted of 15,000 newspapers. There were no letters. Such was the simple statement, without comment. Who can say how many of these were newspaper letters, transmitted solely for the sake of intelligence conveyed in the mere direction on the cover! And this intelligence is often varied ingeniously to embrace fresh and pertain facts, as well as words of affection. In some cases persons have seals, cut in glass for 2d., one bear eg, for instance, the simple name "William," the other the words "All Well." There of course, was no necessity for any writing or other direction on the cover. Receipts of money and other facts are indicated frequently in a way more simple. A gentleman travelling in France, a few months since, received from his banker in England a remittance which, in order to save the postage on a special letter, he was requested to acknowledge by sending an old newspaper, with an *e* added to the last letter of the banker's name. Thus Bilham was to write Bilhame, the final *e* communicating the fact that Mr. Kilham, in France, had received safely the £20 for which he had written. Thus, under the present high rates of postage on letters, the Post-office is rewarding the bulk of the mail matter conveyed across the ocean by crowding into its bags and boxes tons of old newspapers, despatched for no earthly purpose, but to convey what may be opened in the direction on the cover. Does not this facilpleud for the establishment of an Ocean Penny Postage?

SANITARY PROPERTIES OF WOOL.—Professor Simpson, of Edinburgh, has been the means of bringing to light a curious corroboration of the sanitary value of the ancient practice of anointing with oil. It appears, that the learned Professor, when recently visiting the manufacturing town of Galashiels, was casually informed that the workers in the wool mill in that place were exempt from the attacks of consumption and scrofula. On inquiring of the medical men in the vicinity, the truth of the statement was confirmed, and it was then deemed expedient to pursue investigation on a broader scale. Communications were accordingly sent to physicians residing in Dumfriesshire, Alloa, Tillicoultry, Inverness, and other districts where wool-mills are in operation; and in the case of all, it was ascertained that similar immunity was enjoyed from the fatal diseases mentioned. It further appeared, that—one of the leading causes of health added to the list, and also that employment in the mills not only preserved health, but oh iden of defects constitutions were sent to the woollen mills for the express purpose of acquiring strength—a result in almost every instance attained

MORE NUGGETS.—The great event of finding the monster ... t in Canadian Gully, Ballarat (weight 134lb. 11 oz.) has been ... ded by a more brilliant discovery, viz., the finding of two enormous ... of gold in quartz, weighing upwards of 176 lb. troy. These mag... ... ecimens of our mineral wen th weighed as follows:—Larger ... 2 oz. 5 dwt.; smaller mass, 83 lb. 9 oz. 5 dwt.; total, 176 lb. 11 oz 5 dwt

"THE GOOD TIME COMING."—Drapers' assistants in the country TOWNS of Ireland have become so scarce, that their salaries have risen from £30 and £40 per year, to £60 and £80 per year. Large numbers of them have lately en grated, and the demand for them in Dublin during the Exhibition has been very great.

Music.

PHILHARMONIC CONCERTS.

The seventh concert was by command of her Majesty; but, owing to the anticipated arrival of the Royal Highness the Duke of Saxe Coburg-Gotha, the brother of Prince Albert, the subscribers were disappointed in the visit of the Queen. The programme, however, displayed the taste and judgment of the Royal and accomplished amateurs in the best light. There was the majestic and pathetic "Eroica" symphony of Beethoven, the reading of which by Costa is one of his most poetic "conductings;" and the "Leonora" overture by the same composer; besides the romantic "Der Freyschütz" overture of Weber, and the Shakesparian creation of Mendelssohn in the "Midsummer Night's Dream." The vocal portion of the scheme was rendered remarkable by the return to this country of the grandest singer of the age, the gifted Viardot, who is not only looking remarkably well, but whose voice was never in finer condition. The loftiness of style of this incomparable vocalist was developed in Handel's air "Lascia ch' io piango," whilst in the animated duo from Meyerbeer's "Huguenots," with Herr Formès, Viardot amply proved that she is *the Valentina par excellence*: and that, in lyric passion and declamation, she remains unrivalled. Miss Louisa Pyne was to have sang, but, being indisposed, Madame Castellan took her place in the graceful duettino, "Questa volta," with Gardoni, from Costa's "Don Carlos;" and in Righini's quartetto, "Gran Nume," with Viardot, Gardoni, and Formès. The part song, "Ye Spotted Snakes" (in the Mendelssohnian selection), was given by Miss Chambers and Madame Viardot—the former appearing for Miss Louisa Pyne, and making a very creditable debut.

The eighth and last concert will be on the 27th inst.

THE MUSICAL UNION.

At the sixth meeting, on Tuesday, Herr Ferdinand Hiller, the founder and director of the "Rheinische Musicschule," at Cologne, and a composer and pianist who ranks high in France and Germany, performed in Beethoven's trio in D, Op. 70, and in a clever sonata in C, No. 47, of his own composition. Haydn's Quartet in B minor, No. 68, and Mendelssohn's Quartet in E flat, No. 5, were the other pieces—the executants being Vieuxtemps, Goffrie, Henry Blagrove, and Piatti

NOTES OF THE WEEK.

This has, indeed, been a formidable week for soirées and concerts. On Monday, at Exeter-hall (in addition to the performances at the *Hanover-square Rooms*), the celebrated Choral Union from Cologne gave a sacred concert, at which Herr Schneider, who, as an organist, holds the first place in Germany, performed on the organ.——Mrs. Arthur Stone, the vocalist, conversazione'd friends at Willis's Rooms on Monday evening; and was supported by Mdme. Anna Zerr, Signori Gardoni, Ciabatta, and Repondi; M. Jules Lefort, Mlle. Faque (violoncelliste), Herr Kühe, Herr Nabich (trombone), Herr Janss, Mr. Aguilar, Mr. Apthomas, and Signor Zamboni.

The sister singers, the Misses M'Alpine, assembled their supporters on Tuesday night, at the Hanover-square Rooms; and were assisted by Madame Zerr, Miss Bassano, Messrs. Harrison, C. Cotton, Kaulmark, Goffrie, V. Collins, Piatti, G. Cox, Bennett Gilbert, and Signor Sidra

On Wednesday, the captivating pianiste, Mdlle. Clauss, delighted a fashionable audiory at a matinee, at Willis's Rooms, playing works by Beethoven, Mendelssohn, Weber, Handel, and Sterndale Bennett, in such a style of commanding excellence as to indicate that she had thoroughly studied in all schools. With the superb vocalisation of Viardot, the meliffuous voice of Gardoni, and the clever speciality of Jules Lefort in French romances, the programme was of great interest. Mr. C. Mori was the accompanyist. ——Mr. F. Bodda, the barytone, had an evening concert at the Hanover-square Rooms, on Wednesday. His scheme included the talents of Madame Zerr, Mdlle. Angri, Misses Binfield, Poole, R. Pinwilliam, Lascelles, E. Birch, Messent, and Dolby; Messrs. Sims Reeves, A. Pierre, Land, and Herr Pischek; Mrs. Thompson (piano); Hausmann, Repondi, Schira, Piatti, and F. Mori.——Madame Dulcken, the pianiste, gave a matinée, on Wednesday, at the Hanover Rooms, with the co-operation of Misses L. Pyne, Hermann; Herr Pischek, Belcyne Reeves (the harpist), Vieuxtemps, Hausmann, and Jacques Herz. ——Miss Greenfield (the "Black Swan") mustered the musical principalities in great force at Exeter-hall on Wednesday night, and put in requiest on the abilities of Bottesini, Piatti, Valadares, H. Distin, the band of the Orchestral Union, conducted by Mr. Mellon, Mrs. Thompson, Miss R. Bentley, Misses D. Pyne, Dolby, Stabbach, Ursula Barclay, Mdlle. Favanti, Mrs. Wokie (formerly Miss Fanny Russell); Messrs. Sims Reeves, Brandt, Cotton, Signor Gardoni, and Herr Pischek; the latter assisting by the invitation.

The Harmonic Union had a field day—or, rather a night attack—on Thursday, at Exeter-hall, by the performance of Mr. F. Mori's clever cantata, "Fridolin," and the music to Mendelsohn's "Midsummer Night's Dream," under the experienced direction of Costa. The vocalists being the Misses Pyne, Dolby, Freeman, and Ransford, Messrs Sims Reeves and Weiss. M. Emile Prudent performed a pianoforte fantasia on this occasion.

Two tiny pupils of Mr. Pelzer, the Misses May, who play the pianoforte and concertina, ventured in the midst of the crash of orchestras and soloists, to present a *soiree musicale* on Wednesday, at the Queen's Anne-Rooms, and were assisted by Mr. Rowland, Herr Kümpal, Hausmann, Witt, Cooper, and Mdlle. Anne Pelzer.

Yesterday (Friday). Mr. Brinley Richards, the composer, gave his second performance of classical and modern pianoforte music; assisted by Piatti, Mr. W. Macfarren, Miss Messent, and Signor Regondi. The novelty in this programme was Mr Richards's arrangement of Welsh National Melodies, which were sung by a chorus.——M. Billet—strengthened by Vieuxtemps, M. Paque, and M. Prudent, Mdme Greifenhagen, Herr Reichart and Herr Brandt—had an afternoon sitting at his residence, in Charlotte-street.——Last night Mr. Sainton's Champion, the tenor, congregated his admirers at the Music Hall, Store-street; his programme including the names of Mrs. A. Newton, Messrs. F. Rowland, L. Champion, Thirlwall, S. and C. Cole, Bazano, Madame Macfarren, Madame Sainville, Messrs. C. Cotton, Thirlwall, Haines, Signor Nappi, Miss Spratt, and Mr. F. Theseus Stevens.——Signor and Madame F. Lablache had a matinée yesterday, at the Queen's Anne-Rooms.

This morning will be the final concert of the Orchestral Union; and next week will be Benedict's monster concert, and that of the Choral Union, besides matinees and soirées of divers artists, native and foreign.——Alboni has returned to England from America.

WILLIS'S ROOMS.—Professor Filopanti, late a member of the Constituent Roman Assembly, commenced on Monday a course of lectures on the secret traditions of Rome, in which he reasserted the historic claims of the early legends repudiated by Niebuhr. His first lecture assumed a very masonic solidity as the base of his inductions, and dealt with the story of Rhea Sylvia. His two following lectures are announced for delivery on next and subsequent Mondays, will embrace the story of Romulus and Remus, and other traditions down to that of Camillus. Each lecture concludes with a refutation of Niebuhr's specuin objection. The lecturer's style is florid, and his delivery vivacious.

GLOVES AT FAIRS.—At Macclesfield, in Cheshire, a large glove was, perhaps is, always suspended from the outside of the window of the Town-hall during the holding of a fair; and, as long as the glove was so suspended, every one was free from arrest within the township. I have heard, while going and returning to and from the fair. EDWARD HAWKINS, Esq. Fyfe Hall, at Portsmouth, a glove used to be hung out of the Town-hall window, and no one could be arrested during the fortnight that the fair lasted. F. O. MARTIN.—*Notes and Queries.*]

THE POWER OF PENCE.—About twelve months ago a bank for savings, or deposits of wages, was established by H. F. Barclay, Esq., for the benefit of the men and boys employed at the Gutta Percha Company's works. When the late calamitous fire occurred in this manufactory, about one hundred of the funds had upwards of £300 in their "bank," put by against a "rainy day."

FREEMASONRY IN CHINA.—A gentleman has arrived in this country from China, with an eperge and also a tea service of silver plate, which were presented to him by the Freemasons in Canton and Hong-Kong respectively, as a mark of their especial esteem and respect. The articles are inscribed with masonic emblems and his initials; and the recipient, with a statement of the cause of presentation by his brethren in that far distant part of the globe.

CHLOROFORM AND ETHER.—The use of the vapour from ether and chloroform combined, as a substitute for ordinary steam, was tried a few days ago at Marsden, in a steamer belonging to Mr. Trewhella, the inventor of the system. The Prefect, General Carrelet, Senator, General Rostolan, and other distinguished persons, were on board. The steamer navigated for two hours with perfect success; and it was ascertained, beyond doubt, that the new force not only presents great economy, but has none of the inconveniences which were feared.—*French Paper.*

PARKS FOR EDINBURGH.—The Lord Provost stated at a meeting on Wednesday that forty acres belonging to the city at the Dean would be given up to the public as a park, for £240 a year; and that, if desired, forty acres more in the Meadows would also be given up, thus forming two splendid parks, one at the north, and one on the south side of the city. What with the East Princes-street Gardens, the Carlton-hill, the King's Park, Salisbury Crags, and Arthur's Seat, there is no city in Britain better provided with places for recreation and exercise than Edinburgh.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The prize of one hundred guineas, offered by the Associate Institution, for the best essay on the Laws respecting the Protection of Women, has been awarded to Mr. James Edward Davis, barrister-at-law, of the Oxford Circuit.

A surgeon has been committed for trial at Aberdeen, on a charge of culpable homicide, by administering an overdose of dangerous medicine to a child, in consequence of which it died

The number of emigrants arrived at New York from Europe, during the three days ending the 30th ult., was 9122

A steam-packet communication is about to be established between Hamburg and Southampton.

The *Adelaide*, Capt. Tremaine, has arrived from South Australia, with 10,607 ounces of gold, valued at £36,000.

St Petersburg letters mention the death of M. P. Ponomaroff, one of the most eminent merchants of Russia, and well known in London. The deceased was of an advanced age, and has left a large fortune

On Monday morning, many of the mackerel-boats at Yarmouth brought in from 1000 to 1800 mackerel each—the largest catch during the present season.

Dr. M'Hale, Archbishop of Tuam, is so far recovered as to be able to sit up for several hours each day.

The Emperor of Russia has ordered the construction of an electric telegraph between Odessa and St. Petersburg; and that the posting establishments on that road should be completely re-organised.

Owing to the discoveries of gold in Texas, it was supposed that emigrants from the United States on a large scale would take place to the diggings. Several had proceeded there already.

In a shipyard, near Devonport, a pair of sawyers sawing through a piece of elm timber came to a bird's nest containing three eggs in a cavity in the centre.

Accounts from Panama state that the total amount of specie and bullion entered for transport there across the Isthmus during the four first months of the present year has been twenty-nine million dollars

The King of Denmark has just been put in possession of the estates of the Duke d'Augustenburg, in the Duchy of Schleswig.

A couple of rabbits lately burrowed under the dog-kennel at Letham Grange, near Arbroath, and there, within an inch of the foxhounds, brought up a hopeful family of fourteen.

A man was recently executed at Naples, who was proved to have been guilty of murdering twenty-nine persons, including his father and mother, and several others of his own family.

The Austrian police have recently made a fresh discovery of a depôt of arms and ammunition at Milan.

A young man, named Ackerman, a native of Scuthampton, according to the latest papers, had been hung at San Francisco, along with two men, his accomplices in a murder. Ackerman and one of his companions smoked cigars on their way to the scaffold.

Several shocks of earthquake have been experienced of late at Ragusa—the strongest on the 25th ult.—accompanied by a loud detonation, terminating with a violent upheaving motion. The inhabitants left their houses, and bivouacked in the fields.

The preamble of the Boston and Midland Counties Railway was declared proved on Monday last by a select committee of the House of Commons.

Jesse Hutchinson, the eldest of the Hutchinson family, so famed as vocalists, died on the 17th of May, at a water-cure establishment near New York.

The balance-sheet of the Literary Guild has been published, and shows a sum of £3790 16s. 11d. to its credit.

The agricultural reports from Ireland are cheering and satisfactory in the extreme. The late rains have been of immense advantage, and hopes of an early and abundant hay harvest are revived

The Marquis and Marchioness of Normanby and suite arrived at Bonn on the 8th inst., *en route* on a tour in the states of Germany and Italy.

An iceberg, estimated at three miles in circumference, and 300 feet high, was seen by the ship *Anglesea*, in her recent voyage from Australia, as she rounded Cape Horn.

The sum of £40,000 has been left by a gentleman of Southampton to that town, for the purpose of providing for a larger and better cultivation there of "natural history, physical science, and classical literature."

The singular phenomenon of the "instantaneous" blossoming of flowers has been exhibited at Brompton. Roses and geraniums placed in mould had a liquid composition poured on them, and blossomed in ten or fifteen minutes.

At the great festival recently held at Oldenburg, 4000 horses were purchased by agents of the French Government.

A Parliamentary return states, that in England and Wales there are 46,314 schools; of which 15,824 are public, and 30,490 private. The scholars in the public schools number 1,417,900, and in the private schools 727,077. There are 23,498 Sunday-schools, and 2,407,409 scholars.

An Irish witness before the recent Clare Election Committee, having said he had been "all day canvassing," was directed to "define" canvassing, which he did thus: "To try to induce and force the voters to vote for Corny O'Brien, and, if they would not, to give them drink till they could not vote at all."

The committee which has been sitting for the last seven days on the Great London Drainage Bill, have declared the preamble not proved, and the bill is consequently lost.

The yellow fever, at St. Thomas's, in the West Indies, was, at the end of May, fatally prevalent. A slight shock of an earthquake was experienced on the 24th ult.

The first mixed Portuguese and English jury has met at Oporto under the treaty of 1842, and convicted the editor of the *Nat-onal* of a libellous paragraph against Mr. Shore, one of the most respected British merchants established at Lisbon.

Mr. Harmer, many years a member of the Court of Aldermen, died on Saturday last, at a friend's house at Cricklewood, in Middlesex, after a few weeks' illness.

The *Royal King*, Dundee clipper, 1100 tons, Capt. Fitzroy, was off the Start on Wednesday morning. She was 98 days from Adelaide, and brings 25 passengers, with nearly half a ton of gold.

A brutal murder was committed at Glasgow early on Sunday morning. two men were enticed into a low house, drugged, and one of them was thrown out of the third story window and killed on the spot The offenders are in custody

The rubbishing at Ascot Races were much less this year than usual. Only three watches were stolen; but one of these was from Captain Labalmondiere, of the police!

The Rev. H. R. Poole Sandford, B.A., has been appointed an assistant-inspector of schools

On Monday last eight members of the St. James's Society, at Ealing, Middlesex, succeeded in rugging, on the bells of Christ Church, a true peal of Grandsire Triples. The peal was rung in three hours.

A Russian ukase has been published in Poland, prohibiting the Jewish women there from wearing false hair. Several infringements of the law have already been punished.

A post-office has been formed at the Camp at Chobham; there are to be two deliveries and despatches daily. All letters should be addressed "The Camp, Chertsey."

The Common Council of Brussels has voted 50,000f. for the fêtes to be given in that city on the marriage of the Duke de Brabant and the Archduchess Maria Henrietta.

Eleven new petitions were filed in the Encumbered Estates Court last week, and the number of petitions to claimants amounted to £64,230.

King Maximilian of Bavaria arrived at Florence on the 4th from Rome.

The deliveries of tea in London were large again last week, though not equal to those of the preceding week, being 1,796,255lb.

The Belgian journals announce the death of Madame Van de Weyer, mother of the Belgian Ambassador at London. She was seventy-three years of age.

In its sitting of the 9th, the Piedmontese Chamber of Deputies passed the bill for the concession of the Turin to Pigneol Railway to Messrs Edward Pickering and Co.

The Society of Arts have just awarded a medal to Mr. Toynbee, F.R.S., Aural Surgeon to St. Mary's Hospital and the Deaf and Dumb Asylum, for his invention of an artificial *membranum tympani* (drum of the ear) in cases of deafness dependent upon perforation or destruction of the natural organ

The authorities of St. John's College, Cambridge, have determined to add to the number of their assistant tutors

A cargo of Barbadoes sugar reached Dublin last week in a Prussian vessel This is the first arrival of a foreign ship from a British colony at that port

In the year ended the 5th January last there were 9,669,605 gallons of spirits imported into this country. The quantity retained for home consumption was 4,872,118 gallons On the 5th January the quantity under bond was 3,474,571 gallons. There were 6,733,304 gallons of wine imported. Duty was paid on 6,614,579 gallons. For home consumption, 6,346,961 gallons were retained in the year.

EXECUTION OF THE ASSIN CHIEFS, GABRIEL AND CHIBOO.

THREATENED WAR ON THE GOLD COAST, WITH THE ASHANTEES, AND EXECUTION OF ASSIN CHIEFS.

By the African Steam Navigation Company's Mail-packet *Forerunner*, we have received intelligence that by the promptitude and firmness of Major Hill, the energetic Governor of the Gold Coast, a serious war with one of the most civilised and belligerent nations in Africa (the same which, in 1825, defeated and killed Governor M'Carthy), has been averted.

When the *Forerunner* arrived at Cape Coast Castle, on her outward voyage, the Governor and troops had left the fort to settle a dispute with the King of Ashantee, and had encamped near Dunqua in the face of an army amounting to upwards of 20,000 men; the English, with their allies, being 16,000.

The particulars of the dispute are as follows:—At the close of the last Ashantee war two Assin tribes (tributaries to the Ashantees), preferring the mild rule of the English to the despotic one of their own King, came over the boundary river Prat, and claimed British protection, which was granted them. Since then, the King has been making repeated attempts to induce them to return, but without success. At length he bribed the two chiefs, Gabriel and Chiboo, with 300 oz. of gold to bring their followers over. The chiefs spent the gold, but were so far from being able to fulfil their engagement that, on the people discovering what was going on, they informed Major Hill of the circumstance; and, on a party of Ashantees coming into the British territory to assist the chiefs, the Assins rose and took many of them prisoners. Major Hill immediately seized the two chiefs and imprisoned them in the castle, and then marched out to the assistance of our allies, calling on the Fantees and other tribes under our protection to assist against the common enemy who had now about 8000 men in our territories, supported by about 12,000 others a few days' march in the rear, who threatened to release the prisoners from the castle. The Fantees cheerfully responded to the call, and Major Hill soon found himself in the field with an army of 28,000 men, and he had three men-of-war—the *Britomart*, the *Polyphemus*, and the *Spy*—off the town. He then assembled a public court in the camp (about two days' march from the town) for the trial of the two traitor chiefs. It was composed of thirteen of the principal chiefs under British protection. The prisoners were found guilty, and sentenced to be beheaded—it being their second offence; which sentence was carried into execution on the 18th of April, in front of the camp, some of the Ashantees being allowed to be present.

The execution took place just outside the town of Dunquah, where they were tried. The open space had been cleared, in case of the advance of the Ashantees. We have been favoured with a spirited Sketch of the scene of the execution, by Commander Heseltine, of H B M.'s ship *Britomart*, who was present on duty. After the execution, Major Hill sent word to the Ashantees, that, unless they quitted the British territory in twenty-four hours, he would attack them. They retreated; and, on communication being had with the Ashantee King, he found it convenient to disown the whole affair, and to declare that the army marched into British territories without his sanction, and that he had no war palaver whatever with the English.

The small poll-tax, which the Governor has lately imposed on the inhabitants, in return for British protection, is so far from being unpopular, that on the first call it was paid with enthusiasm. This tax, although individually trifling in amount, will probably not only render the colony self-supporting, but leave a surplus in the Governor's hands, to enable him to prosecute the various useful public works—such as new roads, waterworks, &c.—that he is undertaking.

The *Britomart* left Cape Coast Castle on a cruise after the settlement of the disturbances

When the *Forerunner* left Cape Coast Castle, on May 3, all was peaceable.

THE AFRICAN SLAVE-TRADE.

FROM intelligence lately received by the African Steam Navigation Company's Mail-packet *Forerunner*, we learn that slaving had again commenced on the African coast, and, in one or two instances, captures had followed; one of which a Correspondent has sketched for our Journal.

It appears that Governor Kennedy had not only succeeded in putting a stop to a system that seems to have long prevailed at Sierra Leone of selling children out of the colony to the people on the banks of the river, but has recovered above seventy of them from the chiefs, and is still actively prosecuting further inquiries in that direction. In doing this he obtained information that two suspected vessels in the river Pongas were being prepared for slaves; and he sent information by the *Pluto* to the senior officer (Captain Seymour, of the *Firefly*), who directed Captain Reed, of the *Linnet*, which was blockading that river, to send his boats up and examine, and they succeeded in capturing two fine vessels fully equipped.

Our Correspondent's sketch shows the capture effected by the *Linnet* on the 30th of April, about twenty miles up the river Pongas, the vessel, with sails loosed, was a handsome brigantine, of about 250 tons, the other a schooner of about 100. The brigantine was taken entirely by surprise; but the crew leaped overboard, and, with the exception of two, escaped. The schooner was found deserted; and, as she was not taken until three hours after the brigantine, her crew, in all probability, upon hearing of the capture, left her. Both vessels were got down the river, and, at the date of our Correspondent's letter, were at Sierra Leone, awaiting adjudication.

The scene of the capture is picturesque. The banks of the river are covered thickly with mangrove trees; and sails and brambles were spread over the sides of the brigantine, to protect them from the sun.

By the *Forerunner* mail we also learn that Captain Seymour, finding that the King of the Medina River, which communicates with the Pongas, was not keeping the treaty which had been formed for the suppression of the Slave-trade, personally undertook an expedition up that river, and had some difficulty in making him understand that a treaty made with his father was still binding on him and his people.

CAPTURE OF AN AFRICAN SLAVER, BY H.M.S. "LINNET," IN THE RIVER PONGAS.

THE SOCIAL CABMAN, WHO DOESN'T MIND GOING TWO OR THREE MILES OUT OF HIS WAY TO OBLIGE A FRIEND, EVEN WHEN HIS FARE IS IN A HURRY TO CATCH THE TRAIN.

STRIKING ATTITUDE OF A BRITISH CABMAN WHEN TOLD BY A FRIEND "THOU HAST OVERCHARGED ME."

THE NEW REVOLUTION IN CABS.

WITH ILLUSTRATIONS BY PHIZ

It is difficult to say what the new Revolution in Cabs will effect. Most revolutions have been brought round by vehicles. It would seem as if the advancement or retardment of a commonweal depended upon a wheel of some sort. Was not the Revolution of July—and we applaud ourselves for our excessive moderation in only mentioning one French revolution out of so many—principally caused and aided by the omnibuses and cabs being upset in the middle of the street, and so forming an immense impediment, which was called a "barricade"? These impediments have existed in the streets of London no less than in those of Paris. They have so impeded all public progress, that it seemed almost the height of impossibility ever to get over them. A barricade of this description has lately existed in all our thoroughfares, composed of hackney-coaches and cabs. There is this difference, however, between a French and an English revolution: whereas the former consisted in throwing up obstacles in the streets, the object and fight of the latter has been to clear them away as effectually as we could. A French Revolution lowers every kind of public vehicle; whereas it is the wise object of an English revolution to elevate them, and to put them on a much higher stand than before—the stand, in this instance, being a cab-stand.

The last revolution of this kind has been carried, in the most heroic manner, by that able champion, Mr. Fitzroy. To him is the public indebted for having been the first to mount this English barricade, which had driven back with fear so many stout legislative hearts. Success has followed every step he has hitherto taken; and there is but little doubt that he will be able to jump over all the difficulties that still lie before him in the execution of his task. He has already cleared the barricade there was in front of the House of Commons—and this in spite of Sir Robert Harry Inglis, and other determined advocates of the *ancien régime* of slow coaches, who stood forward in the front of the cab-ranks to oppose him. There remains to surmount but one little barricade, composed of one of the smallest stages, before the House of Lords, and the victory is his. Mr. Fitzroy will be the Washington, the Lafayette, the Cavaignac, the Lamartine of our great and glorious revolution of 1853. The tyranny of Cabdom is no longer to exist!

And it was high time that this tyranny should be put an end to. Never was a tyranny more hated, and yet more patiently submitted to! A cabman was supposed to be the servant of the public, and yet he was every one's master. He could do what he liked, and take his own time in doing it. His word was law—and it was the only law he recognised, or chose to obey. It was useless to dispute his authority. The absurd attempt was only less of time and of temper; for object, remonstrate, kick, threaten as you would, you only got laughter, or abuse in return, and were compelled to give way in the long run. He exercised more power in the City than the Lord Mayor, and enjoyed more prerogatives in the metropolis than the Queen herself. He could demand a toll for every bundle, every bag, or hand-box that went through his hands; for his fingers were the monopoly of a turnpike that made everything pay that passed through them. He could levy taxes all day long, and had the power of exacting monstrous fines from foreigners the very moment they landed. The boasted truth of any one being free the instant he touched English ground was a mockery when that truth was read through one of the dirty windows of a cab. When once an exile or a refugee surrendered his person into a cabman's keeping, he was as much a slave as if he were pining in a dungeon in his own despotic country. The cabman could carry him where he pleased, and would not liberate him until the poor prisoner had paid the exorbitant ransom he demanded. His power was absolute. His vehicle was a Juggernaut's car, that rode triumphantly over the necks of everybody. He was a tyrant who, seated on his box as on a throne, with the whip as a sceptre in his hand, had unquestionably the whip-hand of all his subjects. Talk of an American slave-owner: an English cabman had more slaves that trembled at his slightest word, than the wealthiest merchant at New Orleans—slaves that he could whip and drive about exactly as he pleased. Talk of the oppressions recorded in "Uncle Tom's Cabin:" what would they be by the side of those which have been unrecorded of "John Bull's Cab-in!"

The tyrant, however, will shortly be dethroned; and it will be curious to speculate what will be his demeanour when he is brought under the control of his former victims. Will he be meek and submissive, and not pull his neck too violently against the yoke which he has been in the habit of placing round the necks of others? What will be the nature of the strange metamorphosis that must take place for better—for it cannot well be for worse—in his hard tyrannizing nature? Will he be civil and gentle, so that an unprotected female can speak to him without wishing that a policeman was near her? Will he, as before, pick up a dog-fancier-looking friend on the journey, so that he may beguile with pleasant conversation and the exchange of sundry short pipes, the long journey that he is extending from one mile into six, with the full intention of asking of the old lady inside five-and-twopence for an eightpenny fare? Will he be prepared with the same prompt answer, when questioned as to the strange growth of the distance, and declare that it was necessary for him, in consequence "of the streets being up," to go round by the Regent's-park, in order to get to Baker-street from Gower-street? Will he still avail himself of the many openings for extortion which the Commissioners of Sewers have, for years past, kindly given him; and, as often as a street has been ripped up, go out of his way purposely to pick a dirty shilling or two out of it? These are questions which only Commissioner Mayne and the experience of a few months can satisfactorily fill up.

THE PARTICULARLY POLITE CABMAN, WHO LEAVES THE FARE "ENTIRELY TO HER LADYSHIP'S HONOUR."

In the meantime let us hope for the best, and look forward eagerly to the beneficent, christianising results that civilisation generally endows the world with when she has to operate upon the hearts of men who are not perfectly irreclaimable. And we do not think that a cabman is beyond the grace of reformation. The cabman who, the other day, took back the bag containing 1000 sovereigns, which he had found in his cab, is a noble proof to the contrary. No! we will not believe that the cabman, much as he has been abused (only he has never received one billionth part of the abuse he has given), is wholly lost. There must be some good in him, and that good will expand until (providing the public do not take an ungenerous advantage of the liberty they have lately gained, and refrain from tyrannising, in their turn, over those who so recently tyrannised over them) the cabman will gradually grow into a superior and valuable member of society, anxious to do good in his calling, and driving his carefully-kept vehicle as if it were a small chariot of the sun that, every turn it took, cast light, brilliance, and comfort around it. As viewed, in his beautiful new suit of clothes and morals, suppose we draw an imaginary portrait of

THE CABMAN—Improved and corrected, *as it is hoped, thanks to Mr. Fitzroy, he shortly will be.*—He sits on his box as proud as any Queen's coachman. With a flower in his button-hole, and a smile of content upon his cheek, he holds in his hand a small book, which he is studying with a zeal worthy of an honest critic. Is it a song-book? No. It is "Mogg's 50,000 Cab-fares." But, see, a lady calls him. How readily he answers the call, as though he were a barrister being called to the bar. He has no necessity to put on his gloves, for they are already on his hands. Now, observe how well he applies the knowledge that, in his idle moments, he has been acquiring! When asked his fare, there is no hesitation in his voice or manner. He knows the precise sum, and, in his honesty, that has been well-tried at other places than the Old Bailey, he asks for no more, as he wishes for no more. He lifts up the children as tenderly as if they were his own. He hands in the bird-cage, also, and the large bundle, and the baby, and the bag of biscuits; and drives off at a pace not sufficient to frighten the child, nor to send the mother to sleep; but nimbles happily along, as if the church was before him, and his young bride was inside. He does not go out of his way to increase the fare. He knows but one path, the straight path of duty, and for no inducement will he travel upon any other. An open drain to him is not a trap to catch an extra sixpence. A sewer has no charms for him, as his innate sense of right would scorn to make that fare which was foul, as much as it would shrink from making the foul fare. He is always well supplied with change; and, supposing he is deficient of fourpence, he would sooner forego the difference himself than go into the public-house to get it. He never fights, for he holds the check-string over his temper so tightly, as to prevent him using his hands in any other way than to guide his passions, and to pull himself up suddenly, when he finds they are likely to run away with him. On the same principle he never drinks. Tempt him with cakes, if you will; offer him a glass of milk, if you like. You may bribe him with an orange, perhaps; but as for drink in any other form save water, or ginger-beer, he would turn from it as he would from a sovereign that had been given him by mistake for a shilling; he is consequently free from all danger of knocking his cab against a lamp-post, or of mistaking the pavement for the middle of the road. Neither is he guilty of that foolish exhibition of extra over-politeness that a cabman puts on when he wishes to disguise the filthy state he is in—which over-politeness, from the fact of its

THE ARISTOCRATIC CABMAN, WHO "NEVER HEARD OF A GENT WISHING TO RIDE IN A 'HANSOM' FOR SIXPENCE A MILE. THE THING CAN'T BE DONE."

THE CHIVALROUS CABMAN, WHO ALWAYS ACTS UPON THE PRINCIPLE THAT "NONE BUT THE BRAVE DESERVE THE FARE."

rarity, is the very first thing to betray him. However, he has a feeling of tender pity for the poor wretched man who does drink; it moves him to compassion to see a fellow-creature putting his lips to that which destroys him, kissing the poisonous glass, as it seems to him, with the kiss of death. So, in his compassion, he only takes him in his cab by way of protection. He never, by any accident, takes advantage of his helplessness; no drunken man would be a sixpence the poorer for being entrusted to his care. There is no necessity to take his number. It is a moral charge, for which he is well repaid, by quietly slipping a few Temperance Tracts into the drunken man's hat, or pocket, previous to lifting him into his hackney-coach. It is the same if he drives a Hansom. He doesn't presume upon that position. He charges no more than if he was in front instead of behind the cab. He does not acknowledge the broad line of demarcation which these aristocrats of the whip draw between the four-wheeled cabs and those like unto two. So, if he is asked to drive to a spot beyond the limits of civilisation (for these great kings are in the habitual conceit of declaring the "boundary of civilisation" to be "the last cab-stand where it is possible to get a Hansom"), he does not object to take them, but tells them to "jump in" as cheerfully as if he was going to drive them up and down St. James's-street all day long. He refrains from giving himself all the lordly airs and whiskers that Hansom cabmen generally indulge in; and it is a great question whether, when a kind legislature really reduces the fare to sixpence a mile, he would not, in his sensitive morality, take a fare like that sooner than refuse it. To a policeman, he behaves more like a chivalrous friend than a rankorous enemy. He respects him, calls him "Sir," touches his hat with his finger when spoken to, and would no more think of what is vulgarly called "chaffing" him than he would of feeding his spirited steed upon the same dry material. His cab is always kept clean; not a broken window to be found in it; the window-frames never creak, or refuse to act; the door does not fly open at unexpected moments; the cushions are something better than an old mattress; and you will find clean straw in it regularly every day. Cleanliness is the weakness; and, when not studying "Mogg's Fares," you will always see him washing or rubbing, brushing and scrubbing away at the brass-work, or something belonging to his cab. And in his own appearance he is equally particular; and he keeps a silk umbrella at over a lady when it should happen to be raining. In all money transactions the scales in the Bank of England are not more true than he is. Leave your pocket-book behind you, you need not be in the least alarmed, even though you hadn't got the numbers of the bank-notes with which its fat sides are lined. He is so honest that if he took a threepenny bit more than his fare, he would send it the following day as "conscience money" to the Chancellor of the Exchequer, or else drop it into the plate at the next charity sermon. England has every reason to be proud of such a Cabman, for he is a man who would adorn any railway-station, and be an honour to any rank in society. HORACE MAYHEW.

The following letter has appeared in the *Times*:

"Perhaps you may deem the following account worthy of insertion in your valuable columns, as showing the shameful way in which cabmen endeavour to extract money from foreigners. A gentleman of my acquaintance on passing East n square station, observed two Frenchmen and a lady, from whom, to all appearances, a cabman was endeavouring to obtain money. Seeing that the Frenchmen, who could not speak a word of English, appeared in some trouble, my friend accosted them in their vernacular, and was informed by them that they had paid the man fourteen shillings for bringing them from the Custom-house, and would have given him three shillings more (which he asked) had they more English money. The cabman, on being asked whether this was true, said it was; and, of course, was severely rebuked by my friend, who made him return the money he had received, minus 3s. 6d., his proper fare. Apologising in the most humbling you, I am, sir, your obedient servant, W. F. · Lombard-street, City, June 7."

PHOTOGRAPHY.

ENGRAVING ON STEEL BY THE AGENCY OF THE SOLAR RAYS.

We lately noticed specimens which have been produced by Mr. Henry Fox Talbot, and widely circulated, of impressions from steel plates, which had been etched by a simple chemical operation, after the picture of an object had been impressed on its surface by a photographic process. The importance which attaches to this very interesting invention, and the fact that, at the same time, specimens from lithographic stones and steel plates have been produced on the Continent, induces us to return to the subject.

Joseph-Nicéphore Niepce, when resident at Kew, in 1827, produced what he called "Heliographs" upon resinous surfaces, and many of the specimens which he exhibited at the Royal Society are described as being in the state of advanced etchings. His nephew, M. Niepce de Saint-Victor has taken up the process of his uncle, Nicéphore-Niepce, and produced by it some very promising results. The process consists in spreading over the steel plate some bitumen of Judea dissolved in essential oil of lavender. This composition is spread uniformly over the surface of the plate, and a moderate degree of heat applied, until the surface becomes hard. The plate, thus prepared, is carefully preserved from the light, and from moisture. Upon this plate is applied a photographic proof, obtained in the camera upon albumined glass, or waxed paper. It is exposed to light during a longer or shorter time, according to the nature of the picture to be reproduced, and the intensity of the sunshine. The operation is never a very long one; for, with a good proof, a quarter of an hour's exposure to sunshine, or an hour in diffused light, suffices. A prolonged exposure must be avoided, for, in case the image becomes visible before the process of development, the picture is much injured.

The action is this. The solar rays render all resins which have been exposed to their influence more soluble than such as have been kept in shade; consequently the resin may be dissolved off from some parts of the plate before the solvent begins to attack the screened portion. The solvent employed by M. Niepce is three parts of rectified oil of naphtha dissolved in one part of benzole, prepared by Colas. The plate must be attentively watched during the process, and the moment the picture is well developed, it must be carefully exposed to the action of a jet of water, to remove the solvent. When the drops of water are dried off from the plate, the heliographic operations are finished. M. Lemaitre, who has undertaken the etching processes, employs a mixture of—

Nitric acid	..	..	.. 1 part.
Distilled water	..	..	.. 8 parts.
Alcohol	..	..	.. 2 parts.

This acts very promptly upon the steel; it is not, therefore, allowed to remain long upon it. After a minute or two it is thrown off, the plate well washed, and then, if necessary, the acid is again applied. Thus, the resin protecting parts of the plate, we are enabled to produce, with care, an etching to any depth Eventually, the whole of the resin is removed, and the steel plate, employed for printing in the ordinary manner. The result thus obtained has the character of an aqua-tint engraving, wanting, however, the half-tones. At present, the impressions obtained are of a very imperfect character; and it is not easy to understand by what method it will be possible, by the heliographic process of M. Niepce, or the process of Mr. Fox Talbot, to obtain that gradation of tint which gives so great a charm to an engraving—and without which the imitation of nature is necessarily imperfect. Where the plate is left bare the acid acts freely; but where the plate is protected by the slightest film, either of resin or gelatine, the etching ceases is stopped, consequently the high lights and deep shadows are alone given

A far more important process than either of those which are now dividing public attention was introduced by Mr. Grove, about twelve years since; but, from some cause, unaccountably neglected. In August 17th, 1841, Mr. Grove communicated to the London Electrical Society a paper on "Voltaic Etching and Engraving Daguerréotype Plates." Being desirous of drawing attention again to the importance of this process, we give the abstract as it appears in the "Philosophical Magazine" for September, 1841.

This discovery enables us to multiply, in a durable material, the fleeting and delicate traces of a Daguerreotype. The plate to be etched is made a positive electrode, in an electrolyte of dilute hydrochloric acid, and the action is continued for a few seconds. Several prints obtained from plates thus prepared were placed before the Society, and were much admired as specimens of what may be done when the art has been further carried out. The author states that these prints are not so true to nature as the original picture, because, in order to etch deep enough to receive the printing-ink, some of the fine lines will blend. This will not, practically, be an objection to the process, because no lines are lost, except those which, if present, could not be appreciated

One very important application of the art is to etch very delicately a picture, and to take from this *proper etching* electrotype copies. These are so true that the author actually read on one, by microscopic aid, five lines of an inscription, on a surface 1-16th by 6-100th of an inch. I transmit with this paper some specimens of engravings of the etched plates, and of electrotype plates taken from them, and, in conclusion, would call attention to the remarkable instance which these offer of the effect of the impenetrable upon the penetrable. Has nature of a plate being inscribed, as being drawn by Landseer and engraved by Cousins," it would be "drawn by Light and engraved by Electricity

About the same time, several attempts were made to engrave the Daguerréotype plates by chemical agency—the process of M. Fizeau, which was carried out to some extent by M. Claudet, being the most successful. It appears necessary, when the efforts of experimentalists are directed towards a process which, howsoever promising it may be, presents many serious difficulties to point attention to a form of manipulation by which effects have been produced far superior to any other such was the process of Mr. Grove, availing himself of the agency of voltaic electricity. The mode of preparing lithographic stones is similar to that already described as being employed for steel plates the resin being removed, the stone is treated in the ordinary manner.

Literature.

MEMORIALS AND CORRESPONDENCE OF CHARLES JAMES FOX. Edited by Lord JOHN RUSSELL. Two volumes. Bentley.

It is an important fact—which we are justified, we think, in announcing to the public, and especially to that preponderating and immense majority of educated Englishmen who are interested in the career, and proud of the fame of Charles James Fox—that this editorial labour of Lord John Russell's is not, as they might naturally conceive, a practical joke Internal evidence, indeed, could guide the critic to no other conclusion. But some closely relevant facts, extrinsic to the composition itself, teach us differently. Lord John Russell had a better right than most persons living, to have superintended the publication of Charles James Fox's memorials. On this we would accede; but not to a conclusion which his Lordship seems to have derived from that principle, the conclusion that it is better that a work of this nature should be edited badly by himself than edited well by anybody else. Fox was the leader of the party of which Lord John is leader now. It would, therefore, not be incongruous with what the Germans call "æsthetical propriety" that Lord John should have control over the biography of the great man who transmitted to him a political trust that has been rather calamitously managed, a talent that has not been multiplied; and that the miscon and the labours which feebler statesmanship was destined to inherit, historical ability, at least, and consummative zeal should adorn and immortalize Lord John Russell would be the right man, if he had exerted the necessary zeal, and he is, perhaps, the only man who, being engaged on the task, would have displayed such a want of that quality. Nothing, in the abstract, could be more fit than the Whig Chief's last selection of a literary subject, if that noble personage himself showed the faintest sense of the responsibility which is inseparably connected with his voluntary labour. Labour, indeed, we cannot continue to designate his share in the rudest, hastiest, and most defective of compilations. The manner of pitching these clumsily-arranged and ill-selected fragments of papers before the public, is an insult to the taste and good sense of the community; and it is a worse insult to the memory of Fox. To any one who wished to write a becoming history of Fox, the materials contained in this work, and other materials besides, were already accessible. That portion of them which is new was, we repeat, accessible already; and the new portion is much, much smaller than the confiding reader might imagine. Unpublished, these materials could have availed, quite as fully as they can now, towards a better biography; published, they but encumber the place of it with a disgraceful substitute, which may deter the work man who it supplies not his work. It is as editor of the papers of celebrated men that the feeble writer of "Don Carlos" and of the "Nun of Arrouca" makes his worst figure in literature. His "Moore" was bad enough; but what could have induced Lord John to undertake on such a plan, and send forth in such a form, this book about Charles Fox, it is hard to divine. The effect of the work will be, for the present, to delay and block aside, and at no future time will it be to facilitate, a worthy history of the mighty leader of the Liberals of England—of that great man who, breaking out of the trammels of a prejudiced circle and an oligarchical training, so bore himself amid popular defeats as greatly to hasten the day of the people's crowning victory—who, long before the commonalty had the ampler franchise by which they hold a legal power and right to be represented, represented them unbidden, spoke the feelings of voiceless masses, pressged the future, made his appeal to it, and supplied in his single person, so far as one man's genius and courage could supply them, the wants of a time not yet at its "fulness," the deep and dimly void of an uncompleted constitution. Such was no subject for the careless and cursory pen of an official *dilettante*, who mistakes the entire meaning of Machiavelli's almost typical phrase of "*nobile ozio*," and who, by a living anachronism, stands forth an example still of the generation of "authors of quality." Fox is not one of those historical characters about whom it is decent to write books, consisting of hasty labels on the backs of miscellaneous letters An opponent of Fox's policy would not have dared to edit his "Memorials" in the way we have described. A Tory ought not, and few Tories would, write thus about the great Whig. What, then, shall we say of the most superficious, the most negligent, the most hurried of editors of such a work, if that editor be himself a Whig, if he be himself the leader of the Whigs, if he be no other than Lord John Russell. It may be pleaded that he had not time to do justice to the work. Then, why do injustice to it? Why undertake it at all? Why occupy the ground of others? and why prevent a task from being done well, which ought to be well done if done at all? Are there no Whigs left who would have found the necessary leisure—who would have made the "*nobile ozio*" who would have applied the well-deserved attention, which we have a right to expect, from the editor of such a production? But it is "graceful" and "honourable" in a statesman, we suppose, when driven from power (Lord John's later literary achievements were accomplished while out of office), to know how to console himself by refined and liberal pursuits, and to show himself at home in a region of thought at once more tranquil and more elevated than the fierce arena of actual politics. It might just as well be said, that it is graceful and honourable to a statesman, when driven from power, to cultivate the Fine Arts. And most incontestably, so it is, if he only knows how. It would justly excite admiration, if he who had proved his capacity to be a great Prime Minister, should, in the intervals which broke his tenure of authority, paint pictures like those of Raffaelle, or even carves vases like those of Benvenuto To exercise one's superiority is always honourable to a man's self, besides being, in general, not a little useful to his fellow-creatures. But we cannot say quite so much in favour of the practice, if we may be permitted the phrase, of exercising one's inferiority. It would, doubtless, be very glorious to Lord John Russell, in his seasons of political adversity, to write another "Novum Organum," or another such biography as the "Life of Savage." But to produce a book like these memoirs (for all his portion of it, either as a contributor or as a superintendent) is no more "graceful," no more "honorable," and no more creditable than it would be to paint a scene which an alehouse keeper would not take at a gift for his sign-board, or to discharge the duties of an admiral, or of a surgical operator, in the manner in which Sydney Smith begs us to imagine his Lordship ready to assume, and safe to perform them. It is not the writer who gains credit, it is literature which loses credit, by productions of this "graceful" and "honourable" class. One among many peculiarities of the pages before us is that not only they constitute an ill-assorted compilation from the pens of separate contributors, without any plan, but that much, very much, of what is here meant to elucidate the Fox correspondence, *has already appeared before the public*. Lord John Russell's notions of the commentary are the smallest which ingenuity could concede, in an endeavour to assume the same position, without discharging the duties of an editor. There are two sorts of self-sufficiency. One makes a man conceive that, if he takes pains, he can do anything that any other man could do, or has done. It is a delusion, as a thousand examples would prove. To furnish such examples, to adduce even one of them, would be a waste of time. But there is another description of self-sufficiency which is still more odious, and yet, still more laughable. It persuades a man, not only that he can do whatever others may have done, but do it without taking pains; that what with them may have been a laborious achievement, will with him be the effect of mere volition, and that their difficulty is his facility. We have already remarked that, in all appearance, Lord John Russell considers it better that the first regular and methodical attempt to produce a work upon the life and character of Fox should be badly executed by himself, than successfully performed by another. And the only proof which his Lordship could give that this is not his opinion, would be the frank avowal of his conviction that no trouble, no care, no zeal, no opportunities of leisure, and no expenditure of pains were needful to enable him to accomplish adequately the task which he had assumed He has done it badly. We do not know whether, by exerting himself, he could have done it well; but, as he has failed, and has not used exertion, he either thought that, by him, success could be secured without it, or he thought that failure was to be preferred to it. We, on the contrary, maintain that the very fitness of the man (arising out of his position) to superintend this work, only added to the responsibility of undertaking it, and heightened the obligation to do it with a will—to do it with a conscience. A person might fairly be careless to whom others, better entitled, had deferred the execution of what they should rather have themselves done; but he who must refuse a task before anybody else will assume it, ought either not to prevent it from being carried into effect by those who would be earnest in it, or to bring some earnestness to it himself.

Lord John Russell's share of the comments designed to throw light on the career of the hero is even less respectable in quality than in quantity. Mr. Allen and Lord Holland come back in feebleness. The other contributions, except that correspondence itself which forms the basis and virtual subject of the work, are republications. This is literally the fact. Except the portions we have mentioned, what else, less accessible intrinsically than the "letters," do these volumes contain? Nothing whatever. Not one word. Not one syllable. All the rest, we assure the reader, was accessible enough. It is no addition to the stores of public information; none to public information of that sort which is very widely diffused indeed. Shall we be believed when we state that it was all at the circulating library already? It certainly was. For it consists of massive miscellaneous excerpts from four printed, published, and well-known books one of them widely, and almost universally read. We have whole sections of the "Grattan Memoirs," of the "Rockingham Memoirs," and of the "Courts and Cabinets of George III," by the Duke of Buckingham. They are introduced with rude confusion into this base jumble of literary "cold baked meats," to fill a vacant corner, or serve a hungry want. Judging both by the ability and by the length of the contributions to which another author, besides those already enumerated, may lay claim; he, that seventh writer, in the collection of elegant and melegant extracts, might, from his tomb, far more justly than Lord John Russell, from Downing-street, assert himself the veritable editor of the "Memorials and Correspondence of C. J. Fox." Our readers will hardly believe us, but Horace Walpole is that author—his "Memoirs" are the recondite, abstruse, and generally unknown source from which these extracts are conveyed, in Lord John's valuable aqueduct, to the acquaintance of the public. If ever there was "book-making," we have the practice flagrantly exemplified in this wretched—we beg pardon, we mean this "graceful" and "honourable"—humbration. We presume that Lord John Russell's theory is, that, provided his name be on the title-page, it little matters what may be contained in the book. Whatever it contains acquires at once a new and distinct value. Else, why print, not a few occasional passages from a previously-published work, to illustrate an argument, or to attest a statement, but whole chapters and sections, standing on their own original merits, and serving no other purpose in the absurd scrap-book to which they are thus bodily transcribed, than to fill or kill space, and to save the noble editor trouble. No one would interfere with the wish of a Whig statesman, in the position of Lord John Russell, to write about the greatest of Whigs, Charles Fox. But when the editor has ceased to the living and to the dead the fulfilment of a task which, he at the same time publishes as his own, we hardly know which to despise most—his literary effrontery, or his political insensibility. He is born in the purple like John Cantaucsene, and yet cannot even gloze about Constantine.

Yet we will not be unjust; we acknowledge that, whatever may be the defects of these volumes—defects in the selection of the matter, defects in its arrangement, defects in the whole plan and in its whole execution—there is, at least, some original writing of Lord John Russell's. It is not much in quantity; some may think that this is an advantage, and some that it is a pity there is not less still. But we will quote, as a specimen, the most striking of the contributions due to the editorial hand. Somebody asked Fox "how it was that he contrived to catch the cut balls so well at tennis?" "It is," replied Fox, "because I am a very painstaking man." An asterisk here calls the reader's attention to a foot-note Glancing to the end of the foot-note, the reader observes that the initials of Lord John Russell, "J. R.," are appended. The three lines and three quarters, of which the note is composed (including the space occupied by the "J. R.") constitute one of the original passages which his Lordship has contributed to the laborious elucidation of the Fox papers and the high enrichment of these two large volumes. It is, then, with no small interest that the passage is perused. It runs thus:—"But cut balls are balls which pass just over the net, and do not rise high above the floor of the tennis court. It was Lord Holland who asked Mr. Fox this question. The answer is only valuable as showing that in no art is excellence attained without labour. 'J. R.'"

Now, it would have been no slight loss to the world if Lord John Russell had happened not to have enjoyed the noble leisure requisite for the composition of this important, though condensed essay, among the others which he has inserted in the "Memorials." First, we obtain from the brief lucubration in question a fact in sporting history, viz., the solution of the problem of what "cut balls" are at tennis. Secondly, we have another fact, a fact in sporting history, something in the Ann department, certifying us who it was that asked the vital query of Fox, it was Lord Holland. Thirdly, we have a very profound original and startling moral reflection from the annotator himself, propounded in a rather artful manner. The reflection is that excellence is attained in no art without labour, not even in that of tennis. Lord John Russell's sleepless anxiety to inculcate a high moral lesson of this nature seizes even the sportive illustration of the game at which Fox was adroit. At the same time his Lordship (as in his stand against hero-worship), so frames his remark that the reader is saved from the otherwise inevitable mistake of regarding with too vague and too idolatrous an admiration Fox's astounding reply to Lord Holland's overwhelming question. "The answer," observes Lord John, in a cautionary manner, "is only valuable as showing, &c.; lest we should have erroneously conceived it valuable in every respect. By the by, Lord John would have used English expressive of his meaning had he said, "is remarkable" instead of "is only valuable as," which latter signifies that it is not something else as well as valuable "in showing" the way "to attain excellence in any art"

We are surprised that Lord John Russell should, in this work, have laid so much stress on the necessity of taking pains with whatever one does, and of always using laborious exertions if one would attain excellence. Does he think the game of tennis more difficult, or more deserving of attention and of pains, than the art of properly and adequately editing an historical and political record of the highest interest, like these "Memorials" of Charles Fox? Or does he deem it more important to play tennis "excellently," than to edit such a work excellently?

His Lordship commences the book by informing the reader with the methodical and emphatic manner of a certain school of preachers, that he proposes "to divide his materials into six distinct periods;" whereupon he proceeds to enumerate them, and, lo! we get seven periods out of the six. *Polstoff* could not have done better; and he would certainly have avoided the apologetic note which is given for this increase of the "eras in buckram."

Eager to get away from the *peccocurante* Augustulus of the Whigs to

the greatest man of whom the annals of that illustrious party can boast—and to whose memory we earnestly wish a worthy biographer—we turn at last to Charles Fox. He was born after the days of Parliamentary corruption—as distinguished from electoral corruption—had ceased: with a far greater genius, both for politics proper, and for oratory, than that of Walpole—with less passion for power, and, alas! with stronger general passions—with a more feverish love of pleasure, a keener zest for immediate excitement, a stormier temper, a warmer heart, and a more exuberant imagination; buoyant, ardent, confident, generous, uncontrollable; that man suddenly came upon the political scene, who, of all that ever figured in this country, was the most capable of "wielding the fierce democracy," had it been. But the day of the democracy was not yet. It is as though the magician, who had framed the most potent of spells over the most potent of the spirits, had preceded the creation of that very minister; but now that the spirit is abroad, he well knows, too late for the "charmer," his dead master. The spell is active, and the worker sleeps

Charles James Fox was born just twenty years before the two men who have given to the times in which we now live their very "form and pressure;" just twenty years before Napoleon and Wellington; he was born just ten years before his great rival the second Pitt, and in the same year with the most remarkable man in the modern history of Germany, John Wolfgang Goethe. 1749, 1759, and 1769 are memorable dates. Just one century before the birth of the illustrious Commoner, Charles I. was executed, and the principles of "the Great Rebellion" gained their culminating point. Just sixty years before his birth, those principles which, for a whole generation, had been buried under the tide of a fierce but transient reaction, emerged again under a safer, more mitigated, and more durable form, and were made triumphant at the Revolution. About the exact time of his birth the House of Stuart, the representative of arbitrary power in England had made its last desperate struggle in vain; and at the same epoch, began gently in France the movement which was destined to lead by a bloodier path to a more nugatory revolution, in the overthrow, however, of a still older and more arbitrary dynasty.

Fox entered very early in life upon his political career; he voted and spoke in the House of Commons before he was of age. Nor was the great rival long behind him, who ten years his junior, was destined to die at nearly the very same period, after having won an immensurably longer portion of administrative power. Two circumstances conspired to give Pitt a decided advantage in this respect over Fox. The horrors of the French Revolution spoke to the eye; the ulterior and more permanent tendency of it as well as its irresistible force spoke only to the understanding. Sensible effects take the lead of long-sighted reasonings, in point of time. It may indeed be as vain to bring water-engines against a volcano in eruption, as to endeavour to repress by arms such an outburst as the French Revolution; but men could be more readily induced to make even that vain attempt than to listen, in the first frenzy of their repugnance and alarm, to consolations about the fertilising properties of the lava which the fire would leave behind it—about the folly of seeking to control that which inevitably would and must have its way—and about the pestilent nature of much, very much, of what was sure to be (all efforts notwithstanding) consumed by its rage. Fox was doomed now, as in the previous instance of the infatuated American war, to address his countrymen with the sublime curse of Cassandra upon all his words. Pitt shot the rapids, while Fox was battling with the current.

Another circumstance which must be taken into account is this. The people had recently conquered the power of the Crown; and had not yet waked to the faintest suspicion that it was next necessary to baffle the management of the Court. Satisfied with victory, secure in proved strength, the nation thought that, in that respect, all, and more than all, was already accomplished. Meantime, while the triumph was gained, the fruits of it were withheld—the real struggle was over; but the spoils, which could not now be defended by open force, were long misappropriated by furtive, though organised contrivances. Even with the representation which then existed, Fox would at any time have had the support of the people, if only the people had yet begun to discover that the real principles of the constitution, though in full theoretical recognition, were not in full practical operation. Very little importance is to be attached to any supposed reaction after Walpole's long Whig administration: because Walpole was no people's man, but a real Whig of the old school, "and nothing more"—a Whig of the times of that "*Discipline of the Secret*," supported by his party while they thought him a good dispatch, deserted by them as soon as they found that he was not a convenient instrument.

We give rather more weight to what is fairly and truly said of the personal character of Fox himself. He was rather idle in his disposition, and never once did full and perfect justice to his Titanic powers. He was profuse in his expenditure, and not decent in his life. He loved power less, and pleasure even more, than fame. The good of his country and the advancement of the whole human race, and, above all, the deliverance of oppressed classes from any grievous wrong, were objects which could not excite in his cool and placid ardent brain the fire of a noble enthusiasm. To those objects he would have sacrificed his life, and even a game at *quinze*; but for those objects, he would not have forsworn *quinze* for six months, during the most critical of his career. He was a frenetic gambler—the most devoted, and probably the most unfortunate frequenter of the notorious club at Almack's. Strange was the scene which its interior exhibited. On the table lay commonly some ten thousand pounds, in specie alone, piled in a circular colonnade of golden pillars, to each rouleau. Around stood wild and peregrinate figures, wearing great coats of frieze or leather tunics for luck; on their heads conical high-crowned hats, adorned with feathers and streaming with ribbons of various colours. They wore masks, to hide the contortions of countenance which joy, despair, and anxiety excited. At each player's elbow rose a neat stand, supporting his tea, and a wooden bowl, with or moulu edge, for his gold. In that room, amid that company, time flew unheeded, or marked only by the silent catastrophes of the stakes, and by the change and the ruin of large fortunes. To enter that room great oblations were made, great interests were immolated. Money was borrowed at incredible usury from Jews; and Fox even denominated the apartment where his leaders used to await him at home his "Jerusalem Chamber." His prodigious abilities were never duly cultivated or fully exerted; and cultivated and exerted as they were, they never procured for him, as for his less scandalised, half-indulgent public, the credit, the influence, and the ascendancy to which he might have so confidently aspired. We believe the mental powers of Pitt to have been inferior; we believe his policy to have been unhappy; and yet we never can but at his constant triumphs over this reckless competitor. On one occasion, on which Fox shone with peculiar lustre in the House of Commons, his preparation is known to us through Horace Walpole. "Fox," he observes, "was dissolute, dissipated, idle beyond measure. He was that very morning returned from Newmarket, where he had lost some thousand pounds the preceding day. He had stopped at Hockerel, where he found company; had sat up all night drinking, and had not been in bed at all. He came to me to move his bill, which he had not even drawn up." Of the triumph he gained, under these circumstances, Walpole adds, "This was genius—was almost inspiration."

It was a more extraordinary man has seldom appeared in civilised history than this lavishly-endowed, erratic, and brave-hearted Englishman. His father's miserable teaching he early unlearned, and replaced with better things in what concerned his son; but the worst of his efforts he never was delivered in what regarded himself. One Whig of the true school delayed and somewhat warped his career, misdirected his character, and destroyed his personal happiness: that Whig was his father. Another has now, by these "Memorials," committed an illdeserved slight on his transcendant political renown.

MEMORANDUMS MADE IN IRELAND, IN THE AUTUMN OF 1852. By JOHN FORBES, M.D., F.R.S.A. Author of "A Physician's Holiday." With a Map and Illustrations. Two volumes, pp. 751. Smith, Elder, and Co.

Dr. Forbes, who a few years ago made such admirable use of his summer vacation as to supply the public with an excellent description of a journey to Switzerland, visited Ireland last year, in his holiday time, and the result is another and a much larger book.

Landing at Kingstown, in the early part of August, he made a complete tour of the island, proceeding first to the south. He left no great district and no important place unvisited. The black north, the desolate west, and the turbulent south, were all explored. He was at Cork, Limerick, Galway, Londonderry, Armagh, and every other town of note, except Waterford, and everywhere the objects which engaged his attention were multifarious. The lower classes of the people—their cottages, their pigs, their dresses, diet, wages, labour, dispositions, and appearance—interested him much. Workhouses, their dietaries, and diseases, tenticalism, farming, fishing, geology, the round towers, the police, the Roman Catholic and Established Churches, and their respective teaching, the Government and its favouritism, absenteeism, education, antiquities, mines, emigration, tenant-right, the landscapes, are a few only of the many subjects on which he has made memorandums. We trace in them all the same amiable, cheerful, philanthropic and industrious spirit that marked his former production. We trust him unhesitatingly, and differ from him with reluctance and regret. If we sometimes find the memorandums trivial, we are always pleased with the author's good temper, and instructed at every page. He is the reverse of those travellers, one of whom he encounters and describes, who has all "barren betwixt Dan and Beersheba;" he finds fertility everywhere, and gathers fruit from beggar-boys and glowing landscapes—from the most ancient memorials of superstition and the most modern acts of statesmanship. A little garrulous he may be, and indeed must be to fill so many pages; but acute discernment and calm good sense are always apparent. He is, from old date, a rigid but unpledged teetotaller; and one of his favourite inquiries is into the present condition of teetotalism in Ireland. Father Mathew's crusade against intemperance, he certainly terises as a remarkable event in the social history of nations; but his memorandums clearly establish the fact that "the great banded army of pledged abstainers from intoxicating spirituous liquors has long been broken in pieces, and the numbering of the host has come down from millions to thousands, and from thousands to hundreds." Everywhere he meets with individuals who were, but are not, abstainers. That great movement therefore, like other "outbursts of general enthusiasm," has come prematurely to an end, though much benefit from it yet remains, and may "never entirely pass away." Indeed, when we remember how short a time has yet elapsed since drunkenness was a fashionable vice amongst the upper and the middle classes in almost every part of Europe, but especially in Germany, England, Scotland, and Ireland, we agree with Dr. Forbes that the total abstinence movement is the precursor of such a moderate use of spirituous liquors that the present generation, in comparison to that of the present time, will come to seem marvellously small.

Another topic of great temporary interest on which Dr. Forbes makes memorandums, is the feelings of the people in regard to emigration. The number of persons who have gone from Ireland, and who are continually going, the immense sums which those who have gone have dutifully and affectionately transmitted to hasten the going of many who have remained, are known from the public journals; but the general distress of separation of breaking up families, and of leaving the old country, is vividly brought before us, by such pictures as this, of individual distress

> A party of emigrants had come or were coming on board, and were now taking leave of their friends with every token of the most passionate distress. With that utter unconsciousness and disregard of being the observed of all observers, which characterises the sorrow that is wholly softhearted and simple minded people demeaned themselves entirely as if they had been shrouded in all the privacy of home, clinging to and kissing and embracing each other with the utmost ardour, calling out aloud, in broken tones, the endearing names of brother, sister, mother, sobbing and crying as if the very heart would burst, while the unheeded tears ran down from the red and swollen eyes literally in streams. It was a sight that no human being could see unmoved; and when the final orders were given to clear the ship and withdraw the gangway, the howl of agony that rose at once from the parting deck and the abandoned pier, was perfectly overpowering. "O Mary! O Kitty! O mother dear! O brother! O sister! God bless you! God preserve you! Remember in Heaven protect you!" and a thousand other wild and pious ejaculations, broken and intermixed by agonising cries and choking sobs, literally filled the air, and almost drowned the roar of the engine and the wheels that tore the loving hearts that uttered them asunder.
>
> Amid the crowds of people on the pier, swaying to and fro as they shouted aloud and waved their caps and handkerchiefs, several women were seen kneeling on the stones, kneeling and weeping, with their hands raised fixedly above them, and so continuing as long as they could be distinguished from the receding vessel
>
> Several young unmarried women were going to Australia, expecting to be taken as domestic servants immediately on their arrival. They too had been invited, on the same irresistible terms, by their absent friends and relations, to share their exile. There were one or two complete families, father and mother and children; but most of them were but the links of a broken chain which had lit the opposite quarter of the earth.
>
> Among the most deeply affected of these poor exiles were two young girls, who, at the invitation of some friends in Australia, were leaving nearly all the links of their chain of affection behind them I believe one of the kneelers on the pier was their mother, a woman emaciated evidently by grief. From them, she had sunk on her knees as she had reached the shore. They had a brother also, a strong, rough, long-coated young fellow, who, notwithstanding all remarkable and unconquerable efforts to the contrary, could not help standing all remarkable and unconquerable efforts to the contrary, could not help standing all remarkable and unconquerable efforts to the contrary, could not help standing

NEW BOOKS, &c.

RECORD OF WATERLOO. BY EYE-WITNESSES.

Elegantly bound, One Shilling, New Ready.

BOOTH'S BATTLE of WATERLOO;
with Life of Wellington, Napoleon, Blucher, &c. Illustrated with Twelve fine Engravings by Geo. Jones, Esq., R.A., large Historical Map of the Theatre of the War, engraved by Sidney Hall; enlarged Plan of the Field, a View of the Battle Field in 1835, and two Panoramic Views taken immediately after the Battle. A complete List of every Officer engaged in the Campaign, with an account of Killed and Wounded. One Book 8vo Volume, containing nearly 700 pages of letter press. 10s.

"This cheap re-issue (the eleventh edition) of a really valuable work will not fail to prove acceptable at the present time, and especially to our military readers."—Naval and Military Gazette

"In addition to the numerous spirited stuthings of individual encounters, large pieces of the battle-field maps, the present edition has a panoramic view of the ground; in short, to the civilian or to the military reader there is nevertheless much to learn how the grandest victory on record was fought and won by our late gallant Duke."—United Service Gazette

"A work that has gone through ten editions needs no further comment

"An admirable present for the young officer or cadet."
L. BOOTH, Duke-street, Portland-place; and all Booksellers

The day is published, price 1s.,

CHUBB and SON beg to lay before the Public
of the two following Letters, which they have lately received, as affording further proof of the Security of their Manufactures.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY COMPANY, LIVERPOOL.

"London and North Western Railway Company, Liverpool, June 3rd, 1853.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the Iron Door and Locks of your make, which forms the Strong-room at this Office, and which completely baffled the efforts of one or more Burglars to get at the money left on the night of Thursday last; although it is evident that considerable force was used to break open the Door.

"Messrs. Chubb and Son." "GEORGE PALMER.

From Mr. OTWAY, Superintendent of Police, 0 Division and Keeper of the Records of Parliament, 2, Great Vine-street, May 3rd, 1853

"Gentlemen,—I have the pleasure to inform you that having one of your Locks on the inner door of my House prevented my being robbed last night. The thief tried to open it, but not succeeding has so damaged it that I have sent it to you for inspection, and shall feel obliged by you will have it repaired.

"I am, gentlemen, your obedient servant,
"C OTWAY

"Messrs. Chubb and Son." Superintendent 0 Division of Police

THE ILLUSTRATED LONDON NEWS

No. 629.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, JUNE 25, 1853. [SIXPENCE.

SAVINGS BANKS AND SAVINGS BANKS ANNUITIES BILL.

Two measures of great practical value have just been laid upon the table of the House of Commons, by the Chancellor of the Exchequer—the one giving Government security to depositors in Savings Banks, under certain regulations; the other supplying an admitted deficiency in the Savings Bank system, by engrafting upon it the principle of Life Assurance for the Working Classes upon Government security, and a lower scale of payment for Deferred Annuities. The latter bill is so admirably adapted to encourage provident habits among the working classes, and introduces into our social system a principle of so much novelty and importance, that its provisions cannot be too widely known.

The friends of the working classes have long desired to see the Government take into its own hands the business of Life Assurance up to a certain amount. They have represented to successive Chancellors of the Exchequer, that a Government department of this kind, in connection with the Savings Banks, would, in conjunction with an improved scale for effecting Deferred Annuities, greatly assist the formation of habits of temperance, economy, and forethought among the lower classes. It cannot be said that the Savings Banks offer to the industrious classes a provision for the decline of life. The deposits in a Savings Bank must not exceed £30 in any one year. No deposits can be made after the principal has arrived at £150, and no interest is paid when the account of any depositor reaches the sum of £200. Thus the largest income which can accrue to any depositor from his account with the Savings Bank can never exceed the sum of £6 per annum, or 2s. 4d. per week. No one will call this a provision for the decline of life. A Government Deferred Annuity to any amount between £4 and £30 may be effected; and this is, no doubt, as an investment for the working classes, preferable by many degrees to money-clubs and sick-clubs: the former essentially mischievous; the latter often insecure and insufficient, and not unfrequently wasteful, unfair, and inequitable as regards the more prudent members. But the utility of the Government Deferred Annuities has been greatly hampered by the regulation that all payments made for an annuity will be returned should the party die before the age when the annuity is receivable, or should the payments fail to be continued. The annual premium is, of course, considerably larger than it would be if the Government did not undertake to return the money to the representatives of the party on his death, or to himself, if he should be unable to continue his payments. What has been wanted is an additional scale of payments to meet the case of domestic servants and others, who have no relations so near, or in such indigent circumstances as to have a fair claim to the reversion of these annual payments on the death of the party effecting the annuity. The Chancellor of the Exchequer, in the Savings Banks Annuities Bill, now proposes to grant Deferred Annuities at a lower rate of premium, and without any return of the money paid in case the party die before the annuity is receivable. The present scale of payments will remain for those who desire a return of their payments to their personal representatives in the event of dying before the annuity is receivable.

Persons entitled to make deposits in Savings Banks, may, under the new bill, assure their lives for £100; but the Government couple with this privilege a condition that the person assuring his life is to be obliged to purchase a present or Deferred Annuity, on the dropping of which the Life Assurance sum proposed is to be payable. This arrangement has been adopted to prevent the Government from being defrauded by bad lives being named. It may be true that insurance offices, which are likely to exercise a sharper supervision than Government officials, and which have a keener interest in ascertaining the soundness of lives, are sometimes defrauded; but the Chancellor of the Exchequer hopes that, as the one transaction gives the party an interest in naming a bad, and the other a good life, the State will, by this means, be secured against fraud. We must admit the extreme difficulty of preventing the Government from being occasionally defrauded by insurances being made upon bad lives; and we have only to express a hope that the plan proposed, of compelling a person to purchase also a present or Deferred Annuity, may not be too complex to ensure its general adoption.

The bill contains an important provision, enabling persons to contract for a Deferred Life Annuity of £1, or some multiple thereof not exceeding £30 in the whole, and to pay the amount either in one sum, or in annual payments for fixed periods. Thus, additions may be, from time to time, made to the annuity already effected, as soon as the party has saved sufficient to purchase another annuity of £1 or more.

The new Savings Banks Annuities Bill contains other valuable provisions. One great hindrance to Life Assurance and to the purchase of Deferred Annuities among the middle and lower classes, is the apprehension that, if they should ever be thrown out of employment, or have a run of ill-luck, or a visitation of sickness, they might be unable to continue their annual payments, and so lose the whole advantage which it had been the previous object of their life to secure. But, under the new bill, if a person is unable to continue his annual payments for a Deferred Annuity, instead of receiving the amount of his previous payments (without interest), he may receive from the Government a Life Annuity, either Immediate or Deferred, equivalent to the amount of the several payments made by him. Sometimes it may happen that a person who has contracted for a Deferred Annuity, receivable say at fifty, may, by misfortune or sickness, be reduced to indigence before that time. In such cases he may, if he please, receive an Immediate Life Annuity instead of the deferred annuity. So, also, a person having contracted for the payment of a sum at his death may at any time direct that

THE CAMP AT CROBHAM.—ARRIVAL OF HER MAJESTY AT MAGNET HILL.—(SEE PAGE 512.)

he sum payable to his family at his death be commuted for an annuity for life, to commence at his death, and to be paid to the person he shall nominate. Thus, if an artisan has assured his life for £100, and should think it better to leave his widow with an annuity in aid of her future support, rather than with a sum of money, which she might be persuaded to invest in some unsafe speculation, he may commute the £100 into a Life Annuity for her for the remainder of her life. Such an annuity would, in any case, be small; but, if his widow had reached the age of sixty or seventy, it would form no unwelcome provision for her future comfort; and in every case the Life Annuity would be the exact equivalent to the sum of money for which the Life Assurance had been effected.

It may be said that, in undertaking a department of Life Assurance, the Government is stepping out of its province, and undertaking what would be better left to private enterprise. But Life Assurance among the working classes is almost unknown. A poor man has no opportunities of investigating the stability of Life Assurance Companies. To him the Equitable and the West Diddlesex stand upon the same platform of security, and form part of the same *terra incognita*. It will not be among the possible clients of existing companies that the Government will recruit for life assurers; and we are persuaded that the new bill of the Chancellor of the Exchequer will not receive the opposition of the more respectable Life Assurance Companies.

We must postpone a detailed account of the new Savings Banks Bill. The chief features of the measure may, however, be briefly described. The Government makes itself responsible to the depositors for the security of all sums paid into Savings Banks where the National Debt Commissioners appoint the receiver, and where the money is paid to him in the bank during office hours. In cases where the trustees and managers of such Savings Banks are supplied, in the increased comfort and contentment of the smaller class of contributors, and in the diminished number of those who, upon the death of some near relative, would have come upon the poor-rates for support but for the timely aid afforded by the humble deposit in the Savings Bank.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The uncertain state of affairs with regard to Russia continues to exert the most injurious influence on all interests here, and to paralyse the progress of all important business to such a degree, that, even if the continuation of peace be the result, so much mischief will have ensued from the panic which has lasted so long, that to many the decision will come too late to be in any way a relief. Even those (and they were the great majority) engaged in commerce and speculation, who desired that peace should be maintained, *conte que conte*, are now half disposed to accept any solution—even that of war, in preference to the suspense which undermines all their resources. A symptom which may be considered as favourably significative, is the fact that M. Kisseleff, the Russian envoy, has renewed the lease of the Ambassadorial residence here—for nine years it is stated by some; but we believe in reality for not so long a period. On the other hand, it is no less true that an immense number of the upper class of Russians who every year visit Paris, or who are regularly residing in it, are giving up their hotels and *appartements*, and taking flight northward. How many rises and falls these circumstances have given cause to at the Bourse, and how many fortunes have been lost and won in consequences, it would be difficult to state.

It is universally bruited about in society—though nothing on the subject is stated in the papers, or given on tangible authority—that a plot, in which about a hundred and sixty persons are implicated, has recently been discovered; and all the details, which are as follows, are given. That some persons, passing along the road to St. Cloud, on one of the nights when the Emperor and Empress were to return there from the theatre, and near the hour when the carriage was expected to pass, found that cords had been stretched across the road, at a short distance from the ground, evidently with the intention of tripping the horses. Warning of the fact was instantly given; and a strict examination led to the detection of a small band of men, the immediate actors in the execution of the plot, who had been stationed among the trees on either side the road with fire-arms, purposing to shoot the Emperor in the confusion that must have resulted from the fall of the horses. Such is the tale current, implicitly believed by some, wholly scouted by others. It is, however, a fact, that the carriage of the Emperor is now, on these occasions, always escorted, which is rarely was before; and it is stated that the Empress betrays evident symptoms of uneasiness when driving with him.

The Emperor and Empress make frequent visits to the Camp at Satory, where the *Chef de Bâtaillon* commands the manœuvres, and examines into, and comments on, all the details of the arrangements. The presence of the Camp gives much life and activity to Versailles and its neighborhood, which, despite its beauty, and natural and artificial attractions, wears in general a certain aspect of *tristesse* and desertion, which makes it a much less favourite summer residence than St. Germain.

The Prince Napoleon gave, yesterday, a farewell dinner to M. Emile de Girardin, and a small number of his most intimate friends, previous to his departure for the Camp at St. Omer. It is a subject of honourable remark, that the Prince's change of position has not in the slightest degree influenced either his political views, his private friendships, or even the terms of good fellowship and familiarity with which he treated his intimates of former days: on the contrary, among them, he insists on the absence of the peculiar deference and ceremony usually paid to the heir presumptive of the Imperial throne, and preserves, in his relations with them, the simplicity that always distinguished his manner.

Apropos of M. Emile de Girardin, he has just just sold a hundredth share of his journal *La Presse* for 5000 francs—a remarkable proof of the influence of this boldest organ of the Opposition.

The suppression of the Ministere de la Police—the announcement of which appeared in the *Moniteur* of yesterday, but of which we were aware two days previously—excites the utmost attention and speculation. The real cause for this measure is the over-activity of its members, who invented imaginary plots, and kept up a series of false alarms, by constantly crying "Wolf!"—a system which, if long continued, could hardly fail to lead to the same result as that in the fable.

The two last novelties in the theatrical world are "Le Lys dans la Vallée," at the Théâtre Historique, and "L'Ange Gardien," at the Gaîté: the one taken from a novel of Balzac, the other from the celebrated and singular work of Jules Janin. The first has not had the same success on the stage as in the book: the peculiar talent of Balzac being that of extraordinary penetration and delicate analyses of character, rather than variety of incident and interest of plot, the work wants movement as a piece for representation. It was, however, admirably played; Geffroy—certainly one of the first actors of the present day—performed a true *tour de force* in the execution of a most perilous *rôle*, that of the *Comte de Mortsauf*; and all the other parts were perfectly well rendered.

The horrors of "L'Ane Mort," with all their fearful and enthralling interest, have in the piece a softener which does not exist in the original work, owing to a very pardonable liberty taken with it by MM. Th. Barrière and Jaime *fils*: in the theatrical version, the whole is supposed to pass in a dream of the heroine, who at the end wakes up, and thus relieves the overstrained feelings of the audience, by a happy termination. There is no doubt that "L'Ane Mort" is destined to have a prodigious run.

The speculators at the Bourse on Wednesday appeared undecided as to the interpretation to be given to the manifesto published at St. Petersburg on the 11th inst.; and there was very little business transacted until nearly three o'clock, when the prices both of rentes and railway shares gave way. The Three per Cents, which opened at 76f. 80c., and rose to 76f. 85c., fell to 76f. 30c., at which they closed for the end of the month.

The greatest activity prevails in the dockyard at Cherbourg, where the *Austerlitz*, mixed line-of-battle ship of 100 guns, and the *Alceste*, 52-gun frigate, are being got ready for sea. It was also reported that two frigates and a steam corvette were to be immediately fitted out.

There is to be established at the Ministry of the Interior a Direction of Sureté Générale, of which M. Collet-Meygret, Prefect of the Aube, is to be the director. M. de Maupas, the Minister of Police, is raised to the dignity of senator; and M. Latour-Dumoulin, Director of the Press, to the grade of officer of the Legion of Honour.

AUSTRIA.

Lord Carlisle left Vienna on the 17th for Pesth, on his way to Constantinople. It is said that he is the bearer of definitive instructions for Lord Stratford de Redcliffe. It is known that Baron Brück, the Internuncio of Austria, has reached Constantinople, and from his mediation the happiest results are expected.

RUSSIA.

We hear from St. Petersburgh that on the 12th inst. the Emperor visited the harbour of Cronstadt, where the Baltic fleet is concentrated. At Odessa the prices of grain have risen, owing to extensive purchases which have been made for the Russian fleet and army.

A letter from Smyrna states that the war in the Caucasus had again broken out with redoubled fury, and that the Russians had suffered a defeat at the hands of Schamyl.

The Emperor has communicated to the several Courts of Europe a circular despatch, of the 12th of June, in which Count Nesselrode sets forth and explains, in the sense of the Russian Cabinet, the causes of the present crisis, and the views upon which the Emperor of Russia is prepared to act. The Ottoman authorities are accused of "tergiversation and duplicity," because they neglected to proceed to the registration and execution at Jerusalem of the firman they had organted at Constantinople; and because they subsequently committed "that most flagrant infraction of placing in the hands of the Latin Patriarch the key of the principal door of the Church at Bethlehem." The Russian Government affirms that—

As for the protection of the Greco-Russian worship in Turkey, it needs no other rights than those it already derives from its treaties, its position, and the influence resulting from the religious sympathy existing between 50,000,000 of Russians of the Greek Church and the great majority of the Christian subjects of the Sultan—an influence of ages—an influence, inevitable, because it is in fact, and in words which the Emperor found when he ascended the throne, and which he cannot renounce without abandoning the glorious inheritance of his august predecessors.

This is in an attempt to identify the Eastern Church, as it exists under its own Patriarchs and synods in the dominions of the Porte, with the Russian branch of that Church whose head is the Czar. The claim is precisely that which no foreign nations can admit, because it amounts to the conversion of an alleged conformity of religious worship into a title to spiritual dependence and political influence. The Russian circular pledges the Imperial Government "to procure, by a more decided attitude, the satisfaction it has vainly attempted to obtain by pacific means"

The Emperor of Russia has applied to the Cabinet of Vienna for its good offices at Constantinople, to induce the Porte to submit to the ultimatum; and this circumstance gave rise to the inaccurate statement that the mediation of Austria had been accepted The Austrian Government is said to have replied, that it could not give its good offices or assistance, merely to urge upon the Porte the acceptance of terms which it did not approve; but that it was ready to instruct the Internuncio, M. de Brück, to endeavour to find some middle term or means of compromise between the last demand of Prince Menschikoff and the last concession of the Porte. If this conciliatory suggestion of Austria be accepted by the Emperor of Russia, peace may still be maintained.

THREATENED HOSTILITIES BETWEEN RUSSIA AND TURKEY.

The threatened occupation of the Danubian principalities has been delayed until the answer of the Porte to the last ultimatum has been received at St. Petersburg. The Russian ultimatum was delivered on the 5th inst. It demanded the unconditional acceptance of the convention demanded by Prince Menschikoff, and refused by the Porte. The ultimatum—said to be signed by Count Nesselrode asserts that, in case of non-acceptance within eight days, Russia would, though averse to war, feel herself compelled to pass the frontier with an armed force Redschid Pasha communicated the document without delay to Lord Stratford de Redcliffe; and it was understood that Turkey would persist in its refusal to yield to the Emperor's demand. We are yet without any authentic information of the course which will be pursued by the Cabinets of the Tuileries and St. James's in the event of the occupation of Moldavia.

A private telegraphic despatch, dated Constantinople the 13th, and Trieste the 22nd, announces the arrival at the Dardenelles of the French and English fleets. At the same date (the 13th), a Russian vessel was waiting to take on board the rest of the Russian Embassy.

The British fleet left Malta for the Levant on the 8th instant. It included the *Albion*, *Vengeance*, *Rodney*, *Bellerophon*, *Britannia* (flag), and *Trafalgar*. The French fleet sailed from the Bay of Salamis on the 11th, and both fleets are now at hand to protect the capital of the Turkish empire. The Sultan has granted the firman for the entry of the combined fleet in the Dardanelles "if necessary."

The Sultan has published the promised firmans, granting immunities to his Christian subjects, and an amount of toleration equal, if not superior, to that claimed by the ultimatum of Prince Menschikoff. This is the step of all others deprecated by the Czar.

Preparations for defence are being made in every part of the Turkish empire with enthusiasm. It appears that the disposable army amounts to 150,000 men, of whom 100,000 are infantry of 50,000 each, and composed of regular troops and militia. Two of those corps are stationed in Bulgaria: a third corps is at Erzeroum, with the object of immediately joining Circassians in the event of the two other corps being attacked by the Russians. The militia is calculated at about 200,000. Two regiments, on the model of the Chasseurs de Vincennes, are forming in Turkey. They are destined for service in the Balkan. The last Constantinople steamer has brought 40,000 muskets for the Porte. Two thousand gunners have left for Varna and Shumla.

Letters from Constantinople, under date June 6th, state that the Government have applied to the twelve founders of the new bank for a loan of 48,000,000 piastres, and, after much discussion, they reduced the amount to 7,500,000, which the founders consented to let them have, provided the Government gives them good security. In any case it is feared the Porte will not like to accept the financial reforms alleged to be contemplated have been interrupted by the present question. The expenses for placing its army on a war footing have enormously increased. These expenses must be continued the whole time the negotiations last, and there is much fear that the evil Russia may not be able to effect by war will be inflicted by a ruinous delay. The Governments of the provinces of Moldavia and Wallachia have apprised the Sultan that if the Russian troops should cross the frontiers of those principalities, they will enter a protest against such a violation of their territories, founding their protest on the treaties violated by Russia, and will withdraw to the Ottoman territory. A few Greek merchants of London are reported that the moment the Russians enter Moldavia, the Christian population will take advantage of the protection thus afforded, and rise to expel the Turks.

JAMAICA.

From Jamaica we have accounts to the 31st ult. The position of affairs had not in any way improved. The island was still without a revenue, and with little prospect of one being raised. There had been no prorogation of the Assembly, and, as the House had refused to do any business with the Council, all that was done in the Assembly was for the Speaker to adjourn from day to day. A Jamaica paper says:

Our position at present in this island is a very unenviable one—a very perilous one. Neither life nor property is secure under such a state of things. We are almost without a Government! The Treasury is closed against all applicants! The paper currency is at a discount of two-and-a-half per cent. The public officers, one and all, are without their salaries. The prisoners in the Penitentiary are to be let loose on our community, and the police force to be disbanded! Never did any country exhibit such a fearful accumulation of evils. Surely her Majesty's Government will have in all this sufficient cause to exercise its power and authority to stem this career of bad government, by the adoption of some measures which will put an end to the evils by which we are threatened, and, without it, may soon be overwhelmed.

RIOTS AT QUEBEC AND MONTREAL.

By the *Atlantic*, we have advices from Canada, which state that dreadful riots had taken place at Quebec and Montreal, on the occasion of Father Gavazzi lecturing at those places. Gavazzi's first lecture was given at Quebec on the 4th, in the Methodist church, and passed off without any particular exhibition of feeling. The second lecture was arranged to take place at the New Free Church of Scotland on the 6th. Previous to the commencement of the proceedings a large crowd of persons, mostly boys, collected outside the building, with the evident intention of creating a disturbance. The lecture proceeded quietly until Gavazzi charged the Roman Catholic priesthood of Ireland with being the promoters and the heads of the Riband Society in Ireland. A voice immediately under the pulpit, sang out, "It's a lie; the Roman Catholic clergy have always put down and preached against Ribandism." Shouts arose from all parts of the buildings of "Put him out!" And almost immediately a shout was heard from the outside, and soon after a rush was made into the church by a dozen or two persons, who directed their course immediately towards the pulpit. On the steps of the pulpit—the approach to which was by a narrow passage on each side—the *padre's* secretary and some others were posted, and, together with the *padre* himself, succeeded in keeping the assailants for some time at bay; but a few having climbed over the precentor's desk in front, attacked the *padre* in the rear, and pushed him violently to the ground At this moment the police opportunely rushed into the church, and saved him from further injury than a cut on the head and another in the face. The police compelled him down-stairs to the basement of the building, where he remained secure until the arrival of the troops, when he was, under their escort, conducted to his hotel. In the meantime, the mob, being denied entrance into the church—the doors of which were protected by the police—vented their rage by throwing stones into the building

Father Gavazzi shortly afterwards left Quebec, and proceeded to Montreal. He advertised a lecture for the 5th, to take place in Zion church, which was attended by a numerous audience, many of the most respectable citizens with their families being present. After the lecture had proceeded some little time, groups of wild, ragged-looking men began to assemble round the doors of the church and at different points in the adjoining streets. At about a quarter to eight o'clock the mob attacked the police, and proceeded to force their way into the church, but were repulsed—not, however, before several shots had been fired from both sides. The assaulting party were effectually routed, two or three of their number being left dead or severely wounded. Soon after this a company of the 26th Cameronians marched from Craig-street, and took their position between the engine-house and that street. All seemed perfectly quiet, and remained so until the lecture was concluded, and the audience had begun to move towards their homes. At this time the troops were shifted, and took their position in two lines across Radegonde-street—one line nearly opposite Zion church, and the other nearer Craig-street. A good deal of hooting and noise prevailed, and some disturbance with the lowest line of troops occurred, when two or three shots were fired. The disturbance growing still more threatening, the troops were ordered to fire, which caused the mob to beat a hasty retreat. Seven persons were killed, six mortally wounded, and about ten severely injured. The Mayor of Montreal was universally condemned for ordering the troops to fire without sufficient cause, and much excitement existed in consequence.

INDIA AND CHINA

Suppression of intelligence respecting the progress of the Burmese War seems to be the order of the day. The report, denied on authority at Calcutta, by one of the Secretaries of the Government, that Bellng had been captured by the Burmese, appears to have been strictly correct. The town, however, was recaptured by the English, with the loss of thirty killed and wounded, and of the consequent liberation of twelve of its former garrison. This insurrection in Pegu is said to be checked for the present

Nothing further had transpired regarding the progress of our negotiations with the Court of Ava. The Burmese Commissioners had been allowed thirty days to sign the revised treaty. Should the Burmese not have signed the treaty by the expiration of the term allowed them, an advance on Ava would take place. The Commodore has, it is said, at last succeeded in overcoming the prejudices of General Godwin against an advance by water.

Sir J. Grant's despatches relative to the operations against Meatoon have been published. It is very remarkable that no private accounts of this action have as yet transpired. Our loss appears to have been as follows:—Killed and wounded, 145; died of cholera, 103: total, 246.

The Nizam has deceded upon ceding to the British Government the territory which it demanded of him in lieu of his debts and stipulated annual payment to the contingent. The terms of the agreement are certainly favourable to his Highness: in consideration of a revenue of 32 lacs of rupees (£400,000) being given up, the English Government foregoes the entire debt due by the Nizam, and remits an annual payment of 40 lacs (£400,000). The newly-ceded district, Berar, is a continuation of the valley of Kandeish; it immediately adjoins the Company's collectorates of Kandeish and Ahmednugger, and is the richest cotton district in India

The news from China is interesting. Nankin had fallen into the hands of the insurgents, and it was believed that Chinkeangfoo had been taken without opposition. On the 8th of April, reports reached Shanghai of the hostile intentions of the rebels against the foreign community in particular, and that they intended advancing on Shanghai, which caused the greatest alarm and confusion. Later accounts had been received, stating that something had checked the rebels' approach, and matters were more quiet. The insurgents had evacuated Chinkeangfoo, and were retreating upon Nankin.

The Tartar General, Heang Yung, with the Grand Imperial Army, was close to Nankin, which, it was generally believed, he had taken possession of. An engagement between the two forces was expected to take place about the 5th April. A telegraphic despach, received by an eminent firm in the China trade from Woosung (the Blackwall of Shanghai), dated April 16, states that the insurgents had been compelled to evacuate Nankin, that they had been defeated about thirty miles south of Nankin, and that 400 troops had been ordered to Shanghai for the protection of British interests. Applications have been made to the foreign powers for assistance by the local authorities, but a strict neutrality seemed to prevail. The United States steamer *Susquehannah* had failed in going up to Nankin with the American Commissioner, having grounded for twenty-four hours about ten miles above Woosung, and returned. The United States steamer *Mississippi*, Commodore Perry, was to proceed from Macao to Shanghai on the 27th instant (April).

THE HOME CIRCUIT.—As some incorrect statements have been published regarding the days appointed for this circuit, it may be necessary to state that the following are the arrangements actually made:—*Herts:* The commission will be opened on Wednesday, the 6th of July, and on the same day the criminal business will be proceeded with. The civil business will not commence until Friday morning, the 8th July. *Essex*: The commission will be opened on Monday the 11th of July, and business will be proceeded with on Tuesday morning, the 12th, in both courts, at ten o'clock. *Sussex:* The commission will be opened on Saturday morning, the 16th July, and business will commence in both courts on Monday, the 18th, at twelve o'clock. *Kent:* The commission will be opened on Thursday, the 21st of July, and business will be proceeded with in both courts on the following morning, at ten o'clock. *Surrey:* The commission will be opened on Thursday, the 28th July, at Croydon, and business will be proceeded with in both courts on Friday morning, at ten o'clock. The Judges will be the Lord Chief Baron and Mr. Justice Cresswell.

AMERICAN NOTIONS.—A correspondent of the *National Intelligencer* announces the invention of a form of road and improved locomotives, which, he says, will transport the mails and passengers at the rate of 100 miles per hour. The *Boston Advertiser* informs us of the invention of the "atmospheric telegraph," to send letters and parcels at the rate of 1000 miles an hour. It is based on the principle of the atmospheric railway. The tube of this line, it is proposed, shall be two feet in diameter. The cost of laying it down is estimated at 2000 dollars per mile. There will be supply valves as often as once in 25 miles, and intermediate stations at suitable points. There will be air-pumps at all the stations. Hourly mails may be made up and despatched, a part of them at fixed hours, stopping at the stations, and the others proceeding throughout direct. It is expected that letters and parcels from New York would be delivered in Boston in less than half an hour (!)

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

This being the anniversary of her Majesty's accession, their Lordships did not sit

HOUSE OF COMMONS.—MONDAY.

The CHANCELLOR of the EXCHEQUER announced that, if permitted by the state of the finances, he might not ask for the additional Licence-duty upon trade; but it was impossible to make a decided statement on the subject until he had seen what alterations were made in the proposals of the Government by the House

Lord J. RUSSELL stated, in reply to Sir J. Pakington, that despatches had been received with regard to the financial crisis in Jamaica, and that the Government, after taking the subject into serious consideration, had resolved upon remedial measures, which would be explained to the House in a few days. In reply to Colonel Dunne, Lord John stated that differences between Turkey and Greece as to the possession of certain villages on the frontier, had been settled by the intervention of the French, Russian, and English representatives

The consideration of the Succession-duty Bill was resumed in committee. Discussions—generally of little interest—took place upon most of the clauses. Upon clause 20, Mr. W. WILLIAMS said that, on bringing up the report, he should move that the Succession-duty should be paid within twelve months, instead of extending over the period of four years and a half. Clause 21, which prescribes the mode by which lands, houses, ornamental timber, &c., should be valued, gave rise to a discussion; the question being, how "ornamental timber" was to be defined. Sir J. TRELLOPE moved the omission of the words relating to growing timber. Mr. AGLIONBY supported the amendment, believing it to be undesirable to tax timber, which was not only an ornament to the mansion, but to the whole country. On a division, the amendment was agreed to by 155 to 150. Another discussion arose upon a proviso moved by Sir J TRELLOPE, excluding itself present the tax. It was proposed that progress be reported; but it was negatived by 157 to 119. Sir J. Trollope then withdrew his proviso, and, after some further conversation, the Chairman reported progress.

The LORD ADVOCATE moved a resolution on the subject of the Edinburgh Annuity tax, enabling him to bring in a bill making payable out of the Consolidated Fund the sums now raised by the Annuity-tax, repayments to be made to the Imperial Exchequer by the abolition of certain sinecures connected with the Chapel Royal, aided by a temporary tax of one per cent upon the citizens. The resolution was agreed to.

HOUSE OF LORDS.—TUESDAY.

THE INCOME-TAX.

The Earl of ABERDEEN moved the second reading of the Income-tax Bill, a tax for which, in the present condition of the finances of the country, it was impossible to find any substitute, and which the Government had, therefore, resolved to reimpose, with certain modifications, for a period of seven years. With respect to the feeling, which had become widely spread, that a difference should be made in taxing precarious incomes and realised property, it had been found impossible to legislate so as to meet that feeling, though it had been adopted as a principle by the Government.

The Earl of DERBY would not oppose the second reading of the bill, because it was quite impossible to dispense with the money brought into the Exchequer by the most objectionable tax. The noble Earl stated his objections to the tax as re-imposed by the Government, and concluded by declaring that he only submitted to it because he believed it to be an inevitable impost, and one which, after these repeated renewals, he did not believe would ever be taken off.

Lord BROUGHAM pointed out several anomalies in the tax; in which he was followed by the Marquis of CLANRICARDE.

After some further discussion, the bill was read a second time.

The Encumbered Estates (Ireland) Bill was also read a second time; after which their Lordships adjourned.

HOUSE OF COMMONS.—TUESDAY.

EPISCOPAL AND CAPITULAR PROPERTY.

The Marquis of BLANDFORD moved for leave to bring in a bill to make better provision for the management of episcopal and capitular property. The primary object of this bill was to supply the deficiencies of the parochial system, and he proposed to transfer the entire management of episcopal and capitular property to that portion of the Ecclesiastical Commission which a recent act constituted Estate Commissioners. The effect of modern legislation had been to limit the incomes of the dignitaries of the Church, and to cause a diminution of necessary consequence, that the management of the property should be entrusted to other hands. He dwelt at some length upon the numbers of the parochial clergy labouring in poor and populous parishes, with very small endowments or stipends, and insisted upon the anomalies and evils resulting from this state of things. In some districts, in which new churches were imperatively required, no funds whatever had been provided. The sum required for supplying the pressing wants of the Church was £351,000, and he showed that, under a proper administration of the episcopal and capitular revenues, there would be a surplus applicable to those wants of £445,000.

Lord J. RUSSELL heartily assented to the introduction of the bill.

After some remarks by other members, leave was given to bring in the bill.

HOUSE OF COMMONS.—WEDNESDAY.

After the presentation of a vast number of petitions for and against the Recovery of Personal Liberty Bill,

Sir R. INGLIS, in moving its second reading, contended that it was the duty of Parliament to provide a remedy to meet the case of females in convents who were detained against their will and deprived of their personal liberty. The existing law was insufficient; for the writ of *Habeas Corpus* required conditions which in the cases contemplated was sometimes impracticable. If the persons whose liberty the bill was intended to secure were detained against their will, the bill would have no effect. Mr. PHINN moved, by way of amendment, that it be referred to a Select Committee to consider whether any and what regulations are necessary for the better protection of the inmates of conventual establishments, and for the prevention of undue influence in procuring the alienation of their property. He denounced the bill as unconstitutional and unnecessary. Mr. J. BUTT seconded the amendment. Mr. FAGAN objected to the bill and the amendment, considering both to be equally offensive to the feelings and even the honour of the Roman Catholics of this country. The amendment implied that there was cause for inquiry, and thus conveyed a charge upon Roman Catholic parents, and an insinuation against the inmates of nunneries. He vindicated the contemplative as well as the active orders of religious women in the Roman Catholic communion, into whose lives, characters, and proceedings it was proposed to inquire. A discontented nun was never detained; and, if any individual desired to leave the convent, she had ample power to do so. Mr. NAPIER supported the amendment. Lord J. RUSSELL had no hesitation in voting against the second reading of a bill which, on the plea of securing liberty, would set up a tyranny, being satisfied that the Habeas Corpus Act was an effectual safeguard for personal liberty. Mr. Phinn had argued conclusively against the bill, but his reasons for a Select Committee were not so satisfactory. To justify such a bill there should be great grounds for believing that women were kept in convents against their will; and, without some very strong case, he could not agree to the appointment of a Select Committee. The exercise of undue influence in the alienation of property might be a fit subject for consideration, but this question ought not to be mixed up with the subject of the bill. Other members addressed the House; and upon a division the second reading of the bill was, in effect, negatived by 107 against 178. The hour of six having arrived, the amendment could not be put, so that the question of the appointment of a Select Committee remains to be decided.

HOUSE OF LORDS.—THURSDAY.

THE INCOME-TAX BILL.

On the motion for going into Committee upon the Income-tax Bill, the Earl of CLANCARTY urged a series of objections against extending the measure to Ireland.

The Earl of ABERDEEN having defended the financial propositions of the Government, the clauses of the bill were agreed to.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

On the motion for the third reading of the Holme Reservoirs Bill, Mr. CORDEN moved as an amendment that the bill be read a second time that day six months. Mr. B. DENISON, as chairman of the committee, supported the bill. Lord Goderich also supported the third reading of the bill. After some discussion the House divided, and the numbers were—For the third reading, 129; against it, 21: majority, 108. The bill was then read a third time, and passed.

Mr. HUTT brought up the report of the Taunton election committee, which stated that Sir J. W. Ramsden was duly elected for that borough, but that the means resorted to by him to secure his election were not strictly legal.

GOVERNMENT OF INDIA.

On the order of the day for the second reading of the Government of India,

Lord STANLEY rose to move as an amendment the following resolution, "That in the opinion of this House further information is necessary to enable Parliament to legislate with advantage for the permanent Government of India; and that at this late period of the session it is inexpedient to proceed with a measure which, while it disturbs existing arrangements, cannot be considered as a final settlement. The noble Lord said he would not follow the arguments of Sir C. Wood, because he would not at that time enter at all into the question of the Government of India; for, after nine months' sitting, he thought it unreasonable that they should be called upon in the autumn to enter upon the consideration of such an important subject. It was not likely, moreover, that the additional evidence would contain their sittings beyond the middle or the close of August, which would give only about six or seven weeks for the consideration of this measure, without at all adverting to the numerous other bills which were then advancing in their stages through the House. House Measures of such importance were usually many months in progressing through the House. The Corn-laws and the Ecclesiastical Titles Bill were cases in point, and in former instances Indian Government bills had been upwards of eight months before Parliament. He thought further time requisite in order to ascertain the opinions of the people of India with respect to the bill, for as its operation would most materially affect their interests, it was only right that their feelings should be consulted. In the present state of our information upon the affairs of India, it was not saying too much to assert that public opinion was not sufficiently ripe for legislation. When the Government threw forward the present bill as legislation, it turned round and predicated the greatest possible danger from the slightest postponement. He was of a precisely contrary opinion. The noble Lord then proceeded to argue at considerable length in favour of delaying legislation for another year, and to contend that any apprehensions as to insurrections or disturbances taking place in India in consequence of such delay were ridiculous, and not to be justified by the past history of that country.

Mr. LOWE defended the proposition of the Government.

After a lengthened discussion, the debate, upon the motion of Mr. HUME, was adjourned.

The other orders of the day were then advanced a stage.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The Rev. H. MOSELEY has been appointed to the Canonry in Bristol Cathedral. *Rectories:* The Rev. W. Hadley, to Compton Abbas, near Shaftesbury; the Rev. W. Hutchinson, to Hinton Waldrist, Berks; the Ven. T. Dampier, D.D., to Therfield, near Royston, Herts; the Rev. J. Rowland, to St. Botolph, Cambridge; the Rev. J. Walter, to Faulkbourn, Essex; the Rev. T. Pelly, to Church Brampton, Northampton. *Vicarage:* the Rev. T. G. Dawes, to Canon Pion, Herefordshire. *Incumbency:* the Rev. E. P. Dennis to St. John's, Notting Hill.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev. J. P. Sheppard, of the North Shore district, Barkdale, by the labouring poor of his congregation; the Rev. R. C. Cove, by his parishioners, on his Ven. T. Dampier, D.D., to Therfield, near Royston, Herts; the Rev. J. Rowland, to St. Botolph, Cambridge; the Rev. J. Walter, to Faulkbourn, Essex; the Rev. T. Pelly, to Church Brampton, Northampton. *Vicarage:* the Rev. T. G. Dawes, to Canon Pion, Herefordshire. *Incumbency:* the Rev. E. P. Dennis to St. John's, Notting Hill.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev. J. P. Sheppard, of the North Shore district, Barkdale, by the labouring poor of his congregation; the Rev. R. C. Cove, by his parishioners, on his Ven. T. Dampier, D.D., to Therfield, near Royston, Herts; the Rev. J. Rowland, to St. Botolph, Cambridge; the Rev. J. Walter, to Faulkbourn, Essex; the Rev. T. Pelly, to Church Brampton, Northampton. *Vicarage:* the Rev. T. G. Dawes, to Canon Pion, Herefordshire. *Incumbency:* the Rev. E. P. Dennis to St. John's, Notting Hill.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev. J. P. Sheppard, of the North Shore district, Barkdale, by the labouring poor of his congregation; the Rev. R. C. Cove, by his parishioners, on his

CONFIRMATIONS BY THE BISHOP OF PETERBOROUGH.—The Lord Bishop of Peterborough purposes holding confirmations thro ghout Leicestershire in the course of the summer.

THE NEW CHURCHES IN NOTTINGHAM.—The ceremony of laying the foundation of the two new churches of St. Matthew and St. Mark, intended to supply the great deficiency in church accommodation which has long been felt in this fast increasing town, took place on Wednesday week.

VISITATION OF THE DIOCESE OF YORK.—The Archbishop of York has given notice of the following arrangement for the triennial visitation of his diocese:—Sheffield, Thursday, June 30; Doncaster, Friday, July 1; Beverley, Monday, July 4; Malton, Tuesday, July 5; Scarborough, Wednesday, July 6; York, Friday, July 8; Thirsk, Tuesday, July 12; Stokesley, Wednesday, July 13.

CHAPLAIN AT CHATHAM.—The Rev. G. W. Langmead, garrison-chaplain at Plymouth, has been appointed staff-chaplain to the army encamped at Chobham. The duties of the garrison during his absence will be taken by the Rev. G. Fortescue.

PROVINCIAL INTELLIGENCE.

YORKSHIRE INSTITUTION FOR THE DEAF AND DUMB.—PRESENTATION OF PLATE TO THE REV. W. C. FENTON.—On Thursday week, the twenty-fourth annual meeting of the subscribers to the above valuable institution was held at Doncaster; and, at the close of the proceedings, a valuable service of plate was presented to the Rev. W. C. Fenton, the originator and firm supporter of the institution. The plate consists of a salver, a candelabrum, and a tea service, manufactured by Messrs. Barnard and Son, Angel-street, St. Martins-le-Grand. On the principal pieces is the following inscription:—"Presented to the Rev. William Cart Fenton, by the friends whose privilege it has been to co-operate in his work of Christian love, as a token of their respectful gratitude to the benevolent mind which originated, and the diligent hand which has fostered, under the abundant blessing of God, and to the relief of affliction in its most deplorable form, through a course of twenty-five years, the Yorkshire Institution for the Deaf and Dumb. June 16th, 1853." The plate was presented by the chairman, Mr. Aldam, jun.; and Mr. Fenton returned thanks for the superb gift.

LUNAR RAINBOW.—This rare and singular phenomenon was witnessed at Bedminster, near Bristol, on Sunday night last, at a quarter before eleven. The moon being full on Tuesday morning, the rainbow was not circular. It occupied a space on the horizon from W.N.W., terminating N.E. by E., about 140 degrees, and the highest part about 38 degrees above the horizon. It lasted nearly half an hour, and was of no direct colour, but very distinct in its arc.

EMIGRATION FROM SOUTHAMPTON.—The Emigration Commissioners have chartered the following ships to convey out emigrants from Southampton to Australia, between this and the 1st of August next, viz.: the *Wilkonia*, *Ben Nevis*, *Ascutney*, *Adelaide*, *Hurlingham*, *Hereford-shire*, *Pekin*, *Maidstone*, and *Equanimondas*. The gross tonnage of these vessels is about 9000 tons.

ENGINEERING ENTERPRISE.—Messrs. Tod and M'Gregor, of Glasgow, have contracted to have their building completed ready to heat and lighted with gas. In this structure, a modification of the Crystal Palace, they will be able to build several first-class ocean steam-ships at once, the men working full time comfortably in all sorts of weather. This is the first application of Sir J. Paxton's invention to such a purpose. The cost of the erection will be about £12,000; and the *New York*, the new vessel for the Glasgow and New York Steam-ship Company, will be the first vessel launched from under this crystal palace.

STRIKE OF THE POLICE.—The Manchester police-constables, 220 of whom had given a month's notice of resignation, have many of them withdrawn it at the request of their superintendents, upon the assurance that their claims for additional remuneration will be likely to meet with a favourable consideration from the Watch Committee, if left to pursue their own sense of justice, instead of being coerced.

A VALID EXCUSE.—At the Bristol County Court, a few days ago, a man being called in a suit, his wife cried out "here." "Then where is your husband?" demanded his Honour. "Serving his queen and country!" boldly answered the woman. "What do you mean?" was again demanded. "He is in the *militia* on drill," was the reply. His Honour pronounced the excuse a good one, and postponed the case.

SOUTHAMPTON.—Private accounts from New York mention that a new clipper cutter yacht was shortly to leave for Southampton, to challenge the far-famed cutters belonging to the Royal Yacht Clubs of England. The name of this new competitor is the *Sylvia*, belonging to Mr. Depeau, of New York. She is said to be very fast, and is fitted with a "weather board," or false keel, which enables an immense pressure of canvas to be carried in a strong breeze. The *Sylvia* is to cross the Atlantic under jury rigging, which will be replaced at Havre by the proper masts and sails, which have been shipped to that port. She is not a large vessel, and is to be offered as a match to the English yachts in any description of weather.

DUBLIN EXHIBITION.—The total number present on Tuesday amounted to 7867—rather under the usual average. The assembly consisted principally of merchants and other excursionists from the manufacturing districts of England, to whom the industrial spectacle is said to afford the utmost interest. There was also a numerous sprinkling of fashionable visitors. A military band is present during the latter part of each day, and at five o'clock Dr. Stewart performs on the grand organ. The receipts are very satisfactory

OBITUARY OF EMINENT PERSONS.

MAJOR GENERAL HOWARD VYSE.

RICHARD WILLIAM HOWARD VYSE, Esq., of Stoke, Bucks, and Boughton, Northamptonshire, a Major-General in the army, died on the 8th instant. He was born 25th July, 1784, the son of General Richard Vyse; and assumed, by Royal licence, in 1813, the additional surname of Howard, as heir of his maternal grandfather, Field-Marshal Sir George Howard, K.B., grand nephew of Francis, fifth Lord Effingham. He married, 15th November, 1810, Frances, second daughter of Henry Hesketh, Esq., of Newton, Cheshire, and had issue, ten children. The eldest son, Captain George Charles Ernest Adolphus Richard Howard Vyse, is married to Elizabeth, daughter of the late Sir Michael Seymour, Bart.; the second, Richard Henry Richard Howard Vyse, Esq., sits in Parliament for South Northamptonshire.

Major-General Vyse was M.P. for Beverley in 1812, and for Honiton from 1816 to 1820. In early life he was Aide-de-Camp to the late king of Hanover, when Duke of Cumberland.

MAURICE O'CONNELL, ESQ., M.P.

THE death of this gentleman occurred suddenly on the 17th inst., from an apoplectic attack. He was the eldest son of the late Daniel O'Connell, M.P., and succeeded to the estate of Derrynane Abbey, in the county of Kerry, at the decease of his celebrated father. In 1827 Mr. Maurice O'Connell was called to the Irish Bar, and in 1831 became one of the Knights of the Shire for Clare. In 1832, he was first elected for Tralee, which borough he continued subsequently to represent. In the same year he married Miss Scott, only daughter of Binden Scott, Esq., of Cahircon, county Clare, and leaves issue. His son (and successor in his Kerry property) is Daniel O'Connell, a midshipman in the Royal Navy, who arrived only a few days since at Derrynane, after a tour of foreign service on board H.M.S. *Dauntless*.

GEORGE GORDON, MARQUIS OF HUNTLY.

THIS venerable nobleman—who was, we believe, the oldest member of the peerage—died on the 17th inst., having almost completed his 92nd year His Lordship was only son of Charles, fourth Earl of Aboyne, by Margaret, his first wife, daughter of Alexander, sixth Earl of Galloway. He succeeded to his father's honours, as fifth Earl of Aboyne, in 1794; was created a Peer of the United Kingdom in 1815; and became Marquis of Huntly at the decease of his kinsman, George, fifth Duke of Gordon, in 18.

The Marquis married, April 4th, 1791, Catharine, second daughter of Sir Charles Cope, Bart., of Brewerne, and by her (who died 16th Nov. 1832) had six sons and three daughters. Of the former, the eldest, Charles, present Marquis of Huntly, born in 1792, has been twice married, but has issue only by his second wife; and the third, Lord John Frederick Gordon Hallyburton, is married to Lady Augusta Kennedy Erskine, daughter of King William IV.

Lady Margaret Gordon, the deceased Marquis's sister, was the wife of William Beckford, of Fonthill, the distinguished author of "Vathek." The Marquis of Huntly was a Knight of the Thistle, Colonel of the Aberdeenshire Militia, &c.

ELIZABETH LADY DODSWORTH.

THIS lamented and esteemed lady died on the 12th inst., at Thornton Hall, Yorkshire, aged sixty-three. She was the only child of John Armytage, Esq., of Kirklees, county Yorkshire, and grand-daughter of Cudwallader, ninth Lord Blayney. Her marriage with Sir Charles Dodsworth, Bart., of Newland Park, took place 8th June, 1808; and its issue consisted of seven sons and six daughters: of the former, four are dead, and of the latter, two are married.

THE LATE JAMES HARMER, ESQ.

WHOSE death we recorded last week, was the son of a Spitalfields weaver, and was left an orphan at ten years of age. He learned to write a good hand; and in 1792 was entitled to an attorney, whose office he was compelled to leave in consequence of his early marriage. He was subsequently transferred to Messrs. Fletcher and Wright, of Bloomsbury. Much of his practice as an attorney was in the Criminal Court; and what he there witnessed he made tell upon public opinion and Parliamentary decision; for his evidence before the committee for the reformation of the Criminal Law, was declared by Sir James Mackintosh to be unequalled in its effect; he exposed the delinquency of witnesses, and especially the mode in which convictions had been obtained in the cases of Holloway and Haggarty; and he took an active part in obtaining the abolition of the blood-money system. On the death of Mr. Waithman, Mr. Harmer was unanimously elected Alderman of the Ward of Farringdon Without, when he relinquished his legal practice, worth £4000 a year. He next served the office of Sheriff of London and Middlesex, in troublous times, when he offered to collect the rent-taxes which had been resisted. Yet a violent opposition was raised to his natural succession to the Mayoralty, when those citizens who had elected him a Common Councilman and Alderman, with singular unanimity, would not suffer him to be defeated without a struggle. On the show of hands he was declared duly elected; and on the poll, in which only the votes of a greater number of liverymen than had voted for the four Reform candidates at the previous election. Yet, Mr. Harmer was defeated. Without any temporary consolation he might have ended, he bore manfully: he retired from civic life; and his friends at parting, presented him with a valuable testimonial of their regard. Mr. Harmer was a liberal supporter of public charities: he took a leading part in establishing the Royal Free Hospital in Greville street; and his presidency of the Newswenders' Benevolent Provident Institution was uniformly distinguished by liberal contributions to its funds. By his proprietorship of the *Dispatch* newspaper, as well as by his legal practice, he amassed a large fortune. On Saturday last, the remains of Mr. Harmer were removed from the residence of Adam Steele, Esq., Cruikswood, Middlesex, to Kensal-green Cemetery, for interment. "Independently of the deceased's personal friends and relatives, and the principal members of the *Dispatch* establishment, many gentlemen who highly respected him for his kind and humane disposition to the poor, also followed the deceased to his last earthly resting-place." By his will Mr. Harmer disposed of £40,000 in various legacies, which included a liberal bequest to his grand daughter. It was his implied testamentary wish that the residue of his personal estate should be devoted to charitable objects upon a magnificent scale, to be instituted and founded by him However, by a codicil, made only a few months before his death, he increased the legacies to £70,000; but the residue, which formed the bulk of his property, he has directed from the benevolent channels he had previously designed it, and has left the whole of it to his grandchildren, who was residing with him, and is his sole heir, and appointed residuary legatee; thereby entirely doing away with the proposed charitable endowments under the will. The amount of property of which Mr. Harmer died possessed is not yet ascertained; but it is spoken of as not likely to be estimated for probate below £300,000.

CHARITABLE BEQUESTS.—Wm. Stephens, Esq., of Wordling, Hampshire, has left the Wesleyan Missionary Society £500 sterling and Poor-rate Relief Society, Marylebone Dispensary, Lock Hospital, and bequests to many other charities. Miss Mary Ann Lloyd, of Bath, has left the Wesleyan Missionary Society £500 sterling; to the British and Foreign Bible Society, £250, and a reversion of £200; to the Ringwood and Woodhouse Grove Schools, £100; and other public bequests.—Mrs. Sarah Charlotte Campbell, of Bath, to the Lock Hospital, Bath, £600, General Hospital, Bath, £100; also bequests to several other institutions, schools, hospitals, and parishes.

The will of the late Earl of Belfast, who died at Naples on the 11th of January last, at the early age of twenty-six, has been proved in London, by one of the executors, Henry Riversdale Grenfell, Esq. It bears date Sept. 2, 1851. His Lordship thereby bequeaths to his sister, Lady Harriet Chichester, an annuity of £300 a year, and all his plate and plate; and, after making a few other bequests, and an annuity of £50, less as the residue, including the surplus of £9000 a year, derived from the family estates, after paying the annuities, and all his other property, to his mother, the Marchioness of Donegal.

ELECTIONS FOR M.P.'s.—*Harwich:* On Tuesday, Mr. Bradshaw (Liberal) obtained 160 votes, against Mr. Fraser's (Conservative) 110: majority, 25. *Chatham:* On Wednesday, the Conservative member, Capt. Vernon had 610 votes, as opposed to Admiral Stirling's 597—majority, 13. *Liverpool:* The only two candidates at present in the field are both Conservatives—Hon. H. T. Liddell and T. B. Horsfall, Esq. *Durham:* The nomination took place yesterday; and the polling to-day (Saturday); Mr. Blewitt and the Conservative are candidates. *Penryn:* Mr. W. C. Lindsay is the Liberal candidate.—In Ireland, Mr. Daniel O'Connell is the only candidate for *Tralee*. Mr. Reynolds and Mr. Cantwell retired as soon as it was known that Mr. O'Connell was in the field. *Sligo:* The only candidates are Messrs. Sadleir and somers. *County Clare:* The candidates are Colonel Vandeleur (Conservative), Sir J. Fitzgerald, and Cornelius O'Brien (Liberals)

ST. THOMAS'S HOSPITAL.—On Thursday took place the interesting ceremony of prescribing to the pupils of this hospital who had distinguished themselves in the prosecution of their medical studies during the last session those prizes which they had borne away from the less talented and the less studious. The report of the conduct of the students was highly creditable to them. The Bishop of Oxford presided.

THE KING AND QUEEN OF HANOVER.

THE accompanying Portraits of these illustrious personages possess a peculiar interest at the present moment; when their Majesties are on a visit to this country.

GEORGE-FREDERICK-ALEXANDER-CHARLES-ERNEST-AUGUSTUS, King of Hanover, is second Duke of Cumberland and Teviotdale, in Great Britain; Earl of Armagh, in Ireland; and a Knight of the Garter. His Majesty was born at Berlin, May 27, 1818, the same year as his cousin, Queen Victoria, and the present Duke of Cambridge. During his youth he was very popular in London, as Prince George of Cumberland. His father, Ernest-Augustus, late King of Hanover, was fifth son of George III.; and his mother, the Princess Frederica-Caroline-Sophia-Alexandrina, third daughter of Charles-Louis-Frederick, late reigning Duke of Mecklenburgh-Strelitz. He married, Feb. 18, 1843, the Princess Mary-Alexandrina-Wilhelmina, eldest daughter of Joseph, reigning Duke of Saxe-Altenburg, sister to the wife of the Grand Duke Constantine of Russia, and niece of the Queen of Bavaria. By this Princess (who was born April 14, 1818, and has consequently completed her 35th year) his Majesty has one son and two daughters, viz.:—

1. Ernest-Augustus-William-Adolphus-George-Frederick, Hereditary Prince of Hanover, born Sept. 21, 1845.
2. Frederica-Sophia-Maria-Hamiltia-Amelia-Theresa, born Jan 9, 1848.
3. Maria-Louisina-Josephine-Alphar-Henriette-Theresa-Hamiltia-Alexandrina, born Dec. 3, 1849.

The King of Hanover is male representative of the Royal House of Guelph. His Queen is a Princess of Saxe-Altenburg, a senior branch of the House of Saxe, to that of which his Royal Highness Prince Albert is a scion.

Appended is an outline of the genealogical history of the Dukes of Cumberland.

The Cliffords, one of the most illustrious northern families, bore the title of Cumberland as Earls—from 1525 to 1643. It was first assigned to a member of the Royal Family, in 1646, when the gallant Prince Rupert, nephew of King Charles I., was created Baron of Kindal, Earl of Holderness, and Duke of Cumberland. After his death, the honour remained extinct, until revived in favour of George, Prince of Denmark (husband of Queen Anne), at whose death, in 1708, it again expired. In 1726 it was conferred on Prince William-Augustus, son of King George II., who was then made Baron of Alderney, Viscount Trematon, Earl of Kennington, Marquis of Berkampstead, and Duke of Cumberland. This Prince was the great military commander—the victor of Culloden. He died in 1765; and in the next year, the Dukedom of Cumberland, combined with that of Strathern, and the Earldom of Dublin were granted to his nephew (the youngest brother of George III.), Prince Henry-Frederick, whose marriage with Lady Anne Horton, widow of Christopher Horton, Esq., of Catton, gave rise to the Royal Marriage Act, by which the subsequent marriages of the Royal Family were confined within specific limits. At the Duke's death, issueless, in 1790, the Royal dignity of Cumberland was once more extinct, and so remained until 1799, when King George III. conferred it associated this time with the adjunct of Teviotdale, and the Irish Earldom of Armagh—on his fifth son, Prince Ernest-Augustus, who eventually ascended the throne of Hanover, and was the late King.

THEIR MAJESTIES THE KING AND QUEEN OF HANOVER.

LAUNCH OF THE WEST INDIA MAIL STEAM-SHIP "SOLENT"

IN No. 604 of the ILLUSTRATED LONDON NEWS, January 22, page 61, when describing the launch of the Peninsular and Oriental Company's steam-ship *Vectis*, of 1600 tons, we referred to the building of the present steam-ship *Solent*, of double her tonnage, for the Royal West India Mail Packet Company—both constructed on the Messrs. White's patented improved diagonal method of ship-building, to the exclusion of timbers. The launch of the *Solent*, which took place on the 8th inst. from the circumstance of her being the largest steam-ship constructed at the port of Cowes, appears to have excited more than ordinary interest. The neighbouring hills and roads leading from Osborne on the one side of the Medina, and Newport road on the other, presented, long previous to the launch, a continued stream of individuals thronging to the spot. The town and more immediate neighbourhood had every appearance of a country fair. Bunting of every shade and hue—flags of every nation and code—were suspended from the house tops and across the streets, and hoisted on the flag-staffs and shipping at the port.

Just before noon, the *Medina* steam-packet arrived from Southampton, with the directors of the R.W.I. Mail Company, and Donna Manuelita de Roxas y Tivierro, daughter of the ex-Dictator of Buenos Ayres, who performed the interesting ceremony of naming the *Solent*. Everything being in readiness, the noble ship was freed of her blocks and dog-shores; and, at a quarter to one, she glided majestically into the water. After the launch, the directors and guests partook of a sumptuous *déjeuner*, at the residence of Mr. John White; and a half-holiday was given to the workmen.

The *Solent* is the first of a class of steamers built by the West India Mail Company, to enable the Company to reduce the motive power; and, consequently, the enormous quantity of coal which their present ships require. Should the *Solent*, of 2230 tons, succeed in her future trials, the result will be manifest that 550 tons of coals will do the work which has hitherto required 1250 tons. Another important feature in connection with this patented mode of building is increased buoyancy; and the *Solent* has proved herself to be 150 tons more buoyant than a ship of her tonnage would be by the ordinary mode of construction. This advantage to a sea-going steamer must be obvious, as that additional tonnage may be devoted (if necessary) to an increased stowage of coals, besides the increase of room between decks for internal accommodation. Her launching draft of water, without any ballast and with her masts *à tanto*, was only nine feet forward, and ten feet six inches aft, thus making her displacement or weight 1000 tons. Her dimensions are as follows:—Length over all, 310 feet; breadth, thirty-six feet; depth, twenty-eight feet. She is to have engines of 400-horse power, capable of working to 600, which are being constructed by Miller and Ravenshill, of London. The *Solent* has since remained in the river, off the Medina Dock, which is being lengthened for her reception. In the foreground of the Sketch, the dock is shown in progress: it will be completed by the next spring tides, when the *Solent* will be placed therein, to be coppered prior to proceeding to the Thames to receive her engines.

THE ISTHMUS OF DARIEN SHIP CANAL.

DR. CULLEN has been favoured with the following communication by Baron Humboldt:—

Sir, I am very much to blame for having so long delayed an answer to the agreeable and interesting despatch that you have been kind enough to forward me by the hands of Mr. Augustus Peterman, so estimable by his character, as well as by the solidity of his geographical labours. Dr. Cullen cannot doubt the high importance that I would attach to the merit of his courageous and useful investigations in the eastern part of the Isthmus of Panama; knowing my position and my antediluvian age, he will receive with indulgence, even so late, the expression of my lively gratitude.

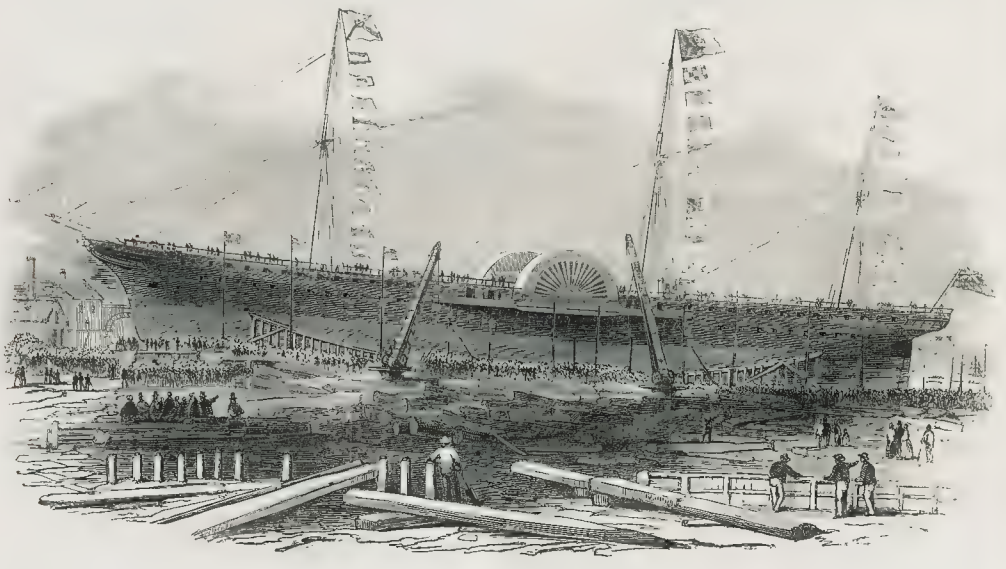
After having laboured, in vain, during half a century, to prove the possibility of an *Oceanic Canal*, and to point out the Gulf of San Miguel and Cupica as the points most worthy of attention; after having regretted, almost with bitterness, in the last edition of my "Aspects of Nature," that the employment of the means which the present state of our knowledge affords for obtaining precise measurements has been so long delayed; I ought, more than any one else, to be satisfied to see, at last, my hopes for so noble an enterprise revived. By your publications, sir, and by that of Mr. Gisborne, will be originated the great work of changing an important part of the commerce of nations, and of rendering more accessible the rich countries of Eastern Asia and the Indian Archipelago. The undertaking is by no means above the intellectual and material power which civilised nations have attained to. The work should be one to last for ever; it should not commence with a canal with locks, like the magnificent Caledonian Canal; it must be a really *oceanic* canal, without locks—a free passage from sea to sea, across which the speed of the navigation will be modified, but not interrupted, by the difference in height and non-coincidence of the tides.

Receive, I pray you, sir, the expression of my highest consideration.

Yours, &c.

Potsdam, June 4th, 1853. ALEXANDER VON HUMBOLDT.

CONVEYANCE OF INDIAN MAILS.—The *Valetta*, a new paddle-wheel steamer, belonging to the Peninsular and Oriental Company, has proceeded on a trial trip to Cherbourg, and thence to the Mediterranean, to convey the Indian mail between Malta and Marseilles. In about six weeks, a sister ship will join her on the Malta and Marseilles station; it is then expected that Indian news will reach England quicker by way of Marseilles than by way of Trieste.



LAUNCH OF THE WEST INDIA MAIL STEAM-SHIP "SOLENT," AT COWES.

ODESSA.—THE HARBOUR AND BOULEVARD.—(SEE NEXT PAGE.)

PRESENTATION OF A TESTIMONIAL TO Mrs. STOWE.

A VERY interesting meeting was lately held in the School-room adjoining Surrey Chapel, Blackfriars-road, for the purpose of presenting to Mrs. Stowe a magnificent Silver Inkstand, of large dimensions and exquisite workmanship, which had been subscribed for by the ladies of the congregation, as a token of their admiration of the talents of the authoress of "Uncle Tom's Cabin," and their affection for the gifted champion of the poor slave. The Inkstand was manufactured by Messrs. Barnard and Sons, Angel-court, St. Martin's-le-Grand.

A company of about four hundred ladies and gentlemen were present among whom were the Duchess of Argyll, the Earl of Shaftesbury, Lord Frederick Leveson Gower, the Hon. Miss Ashley, Thomas Barnes, Esq., M.P., Joseph Tritton, Esq., T. A'Beckett, Esq., W. Powell, Esq., W. D. Child, Esq., W. Flanders, Esq., Dr. Ray, W. Barclay, Esq., Rev. Samuel Ward (a coloured minister from Canada), Miss Greenfield (a coloured vocalist), the Rev. Thomas Binney, the Rev. Baldwin Brown, Joseph Payne, Esq., &c.

The Earl of Shaftesbury, in a short but eloquent and Christian address, stated his delight at being present on such an occasion. He conceived it right that if any public token of esteem should be given to Mrs. Stowe, it might well emanate from the ladies of the congregation of Surrey Chapel.

The Rev. J. Sherman then read an address to Mrs. Stowe, and presented her with the Inkstand, which was universally admired for the chasteness and appropriateness of its design. In the centre, a female figure (intended to represent Mrs. Stowe) presents a Bible to a slave, who, in a devotional attitude, welcomes the gift as the source and charter of his liberty; while another figure, in a stooping posture, is knocking off his fetters.

The Rev. Charles Beecher read the thanks of his sister: after which, Miss Greenfield, the coloured vocalist, sang, with deep feeling and pathos "Weep not for Eva."

Then came a procession of beautiful children: being grouped around Mrs Stowe, one of them read an address to her; the object of which was to solicit her to write more pleasant stories about black children, to enlist the sympathies of the whites on their behalf. They then presented her with a gold pen. Mrs. Stowe, evidently much

TESTIMONIAL PRESENTED TO MRS. STOWE.

affected, then delivered to the children a deeply-interesting address, and promised she would use their suggestive present in advocating the cause of the oppressed.

The meeting was subsequently addressed by the Rev. T. Binney, J. Payne, Esq., and the Rev. S. Ward. The Doxology was sung, and the meeting separated, highly gratified.

THE ASYLUM FOR IDIOTS.

THE short notice of this institution which we gave last week will have prepared our readers for the Sketch now presented to their notice of the ceremony of the Laying of the Foundation-Stone, by his Royal Highness Prince Albert, on Thursday week.

In reference to the institution, it may be interesting to state that it owes its origin to Dr. Andrew Reed, whose attention was turned to the subject by the inspection of the establishment for Cretins, conducted by Dr. Guggenbuhl, in Switzerland.

The Asylum for Idiots was founded in the City of London, the Right Hon. the Lord Mayor presiding, on the 27th of October, 1847. It now enjoys the immediate patronage of her Majesty the Queen, and has been supported to an extent far exceeding the most sanguine expectations of its founders.

We confess ourselves to have been amongst those who thought that the idiot was one of a small class in this country, not needing so large a provision; but we are astounded by the fact that already these gentlemen have received 250 patients into their asylum, and at the present time applications for admission are extremely numerous. Hitherto the members of this unhappy family have been located in the two establishments at Highgate and Colchester; but now the board of managers, having succeeded in procuring an estate on very advantageous terms, at Red-hill, near Reigate, Surrey, here will be erected the above hospital, with accommodation for four hundred beds.

The expenses of management are necessarily very great, and we observe that the last report states that there are forty-eight persons in attendance upon the inmates, who are never left alone. The most careful attention to the individual requirements of each case seems to

CEREMONY OF LAYING THE FIRST STONE OF THE ASYLUM FOR IDIOTS, AT EARLSWOOD, NEAR REIGATE.

be the aim of the board. Medical testimony of the highest character brings out the fact hitherto disputed by many that remedial measures can be applied to idiocy; in fact, that the idiot may be educated. It is also plain that the earlier the recovery of the idiot is attempted, the greater is the chance of success; for, when taken at this stage, and carefully trained and educated on the principle that *there is mind*, and that it only demands *physical manifestation*, much, in most cases, that is essential to life, if not all that is desirable, may be secured. At the present time the inmates of the Asylum—most of them entering without the power of articulation, deprived of all muscular strength, and oppressed by diseased and defective organization—after a few months, or at the most, a few years, are ranged under the following industrial departments:—

Ninety-eight are daily engaged in reading and spelling; eighty-six in writing; twenty-five in drawing; twenty in gardening; twenty-eight in sewing, knitting, &c.; sixteen boys in willow plaiting; five boys in each class are respectively basket-makers, shoemakers, and tailors; six are daily occupied as carpenters; sixteen are engaged in domestic work; twenty take lessons in dancing; seventy have object lessons; eighteen write from dictation, and learn geometry and arithmetic; a hundred and one are drilled, and take gymnastic exercises; thirty-nine have speaking lessons; a hundred and forty-nine attend domestic worship; a hundred and four attend public worship. The greater part of the family are practised in singing, and some are taught on the harmonicon.

The specimens of the work thus produced commanded the attention of his Royal Highness, on Thursday week. On leaving the ground, the Prince said:—"I have to express the great satisfaction it has given me to be able to come here to-day to take my humble part in laying the first stone of this Institution. May the building arise speedily, and be ready for the reception of the inmates, whose sufferings deserve so much sympathy. I have seen the old Institution, and I cannot avoid saying how much I admired the judicious management of the unfortunate inmates of that Institution. I most sincerely thank you for the expressions of kindness used towards me."

The noble sum of £10,000, contributed in answer to an appeal, will be a sufficient evidence of the hold this interesting project has acquired upon the minds of our benevolent countrymen; and we venture to predict that the Asylum for Idiots, like our hospitals for the Insane and the Deaf and Dumb, will become, as it eminently deserves to be, a great national institution. Sure we are that the touching statements contained in the Report for 1853, cannot be read by any Englishman without the noblest sympathies of his nature being at once enlisted in the cause of these most helpless members of the human family, who, as the able writer so truly says, have so little of the world's care, and so much of its scorn, that they have been pathetically denominated God's children.

The ceremony is illustrated upon the next page at that very interesting portion when several ladies deposited upon the foundation-stone purses containing sums varying from five to sixty guineas. An appeal had been made to thirty gentlemen to subscribe one hundred guineas each; up to the Thursday, twenty-nine had responded by contribution; and, next morning, a gentleman sent to the committee a cheque for one hundred guineas, completing the thirty names. The Corporation of London gave two hundred guineas.

PORT OF ODESSA, SOUTHERN RUSSIA.

SINCE the repeal of the Corn-laws, our commerce with Odessa has become of so valuable and extensive a character, that it scarcely required the rumour of hostilities in the East, and the threatened presence of a Turkish flotilla in the Black Sea, to fix the attention of Europe upon this portion of the Russian empire. We are fortunate in being enabled, at this juncture, to lay before our readers a sketch of the town and harbour of Odessa, by an Artist who has returned from Russia within the last three months. Our Engraving represents the portion of the harbour known as the Port de Pratique, and the Boulevard. The harbour, which is formed by two large moles, and can contain 200 ships, is defended by strong works. The bay has sufficient depth of water almost to the very shore for the largest men-of-war. The town is seen to great advantage from the sea. It stands on a high cliff, along which runs a Boulevard. The streets are generally at right angles to the Boulevard, and exceedingly wide. The large building on the extreme left of the picture is the Exchange. The line of houses on this promenade is broken by two quadrants, between which the street of St. Catherine commences. The Hotel of St. Petersburg fills the whole of one quadrant, and the other is occupied by the Chancellerie of the military Governor—the building in the centre of the Boulevard at the top of the "monster staircase," and the Museum and Public Library. The Museum contains an object of paramount interest to an Englishman—a Japanese boat and costume, very much bruised, once the property of the philanthropist Howard.

The large buildings on the right of the Boulevard are the Chancellerie and mansion of Prince Woronzoff, Governor-General of New Russia, whose kindness and hospitality to Englishmen has been experienced by almost every traveller in Southern Russia. The Prince gives entertainments throughout the winter, and twice a week holds a reception, at which the noblemen of the town and the civil and military *employés* may be seen. The promenade along the Boulevard is planted with a quadruple row of acacias; and here, when the military band plays of an evening, are displayed all the beauty and fashion of the place, either in carriages or on foot—the pedestrians, however, being by far the most numerous. A general officer or a *conseiller d'état actuel* (a civil rank corresponding to that of the former), drives four horses; and no one below him can do so, unless the animals are all placed abreast. From the centre of the Boulevard, a staircase called the "*escalier monstre*," descends to the beach. It consists of 200 steps, each twenty being separated from the others by a platform. At the top of the staircase is a statue of the Duke de Richelieu, a French emigrant, who was made Governor of Odessa and South Russia by the Emperor Alexander, and under whose judicious administration the prosperity of the then new town, as well as of the province, rapidly increased. At the foot of the cliff, and below the wall of Prince Woronzoff's shrubbery, is a wooden bathing-house built on piles a few feet out of the water; an establishment much frequented during the summer months by Poles and the fashionables of the town. The troops, and military or naval stores, for Sebastopol, Circassia, or any other destination, are embarked at this harbour.

The Mole, on the right of the Sketch, built on piles, is a fine work. Close to the mole are the docks, quays, are warehouses of the quarantine. One of the best hotels is the Hotel de St. Petersburg, which is situated, as we have stated, on the boulevard facing the sea; but here, as at the other hotels in Odessa, there is no regular attendance, every one being expected to bring his own servants and linen.

The shops of Odessa are principally kept by Russians: they are generally of one story, with arcades in front, under which the goods are piled on each side of the door—each, at least, as can be so placed.

The Catherine-street, nearly a mile long, leads to the Bazaar, which is laid out in streets and square market-places. The Bazaar has, however, nothing of an Oriental character about it, the houses being low, dirty, and mean. The entrance to the Bazaar is crowded by servants and workmen waiting to be hired by the day.

Great numbers of English merchants reside at Odessa. The import trade from England is increasing, but it has been restricted by the high protective duties of the Russian tariff against manufactures. If the Emperor would materially lower the scale of protection, and carry out his intention of constructing a railway, which would allow of free communication with the interior, it would be difficult to set any bounds to the prosperity of Odessa.

BESIKA BAY.—The following is an account of the present presumed position of our Mediterranean fleet:—"Besika Bay is in the Ægean, about a mile and a half (about seven English) below the Kum Kalessy (Sand Castle), or first Castle of the Dardanelles. The Bay, which has good anchorage in ten or twelve fathoms water, is sheltered against east, south-east, and north-east winds. South-west and north-west winds, which, however, rarely blow hard in summer, are dangerous for ships at anchor. The Scamandrian Su, the ancient Scamander, makes the bay a good station for a large fleet. Although the Scamander is but ten English miles in length, it has always plenty of water, and when a fleet is in the bay, the ships can readily obtain a supply of fresh water from its mouth. If the combined fleets should have to proceed to Constantinople, they will first have to pass the two new castles at the mouth of the Hellespont—the one above-mentioned, at the sandy embouchure of the Mendere (the ancient Simois); and the "Sedd-Bahr," or "boundary of the sea," three guns. A fresh south-west wind is necessary to take vessels up the Hellespont. About twenty English miles up the Straits are the two old castles. That on the Asiatic side is Chanak Kelesi (Potsherd Castle), with 102 guns; opposite are Kilid Bahr (Key to the Sea), with thirty-eight; and somewhat further south Namasich, with forty-six guns. The renowned capes, Abydos and Sestos, are a little higher up the Straits."

CALENDAR FOR THE WEEK.

SUNDAY, June 26.—Fifth Sunday after Trinity.
MONDAY, 27.—Dr. Dodd executed for forgery, 1777.
TUESDAY, 28.—Queen Victoria crowned, 1838.
WEDNESDAY, 29.—St. Peter.
THURSDAY, April 1.—Argyll beheaded, 1685.
FRIDAY, July 1.—Battle of the Boyne, 1690; of the Nile, 1798.
SATURDAY, 2.—Hungerford Market opened, 1833.

TO OUR SUBSCRIBERS.

On and after SATURDAY, JULY 9, 1853, a SUPPLEMENT of Eight Pages will be published GRATIS, every week, with the ILLUSTRATED LONDON NEWS.

TO ADVERTISERS.

The PRESENT RATE of CHARGES for ADVERTISEMENTS in the ILLUSTRATED LONDON NEWS will be REDUCED ONE-HALF immediately on the new law for the alteration of the Advertisement-duty and Stamp-duty on Supplements coming into operation.

ROYAL PRINCESS' THEATRE, Oxford-street.—Under the management of Mr. CHARLES KEAN.—SARDANAPALUS will be performed every evening during the week, with grand entertainments, according to the bills of the day. MACBETH will be repeated for the Fiftieth time on Wednesday week, 6th July.

FRENCH PLAYS.—ST. JAMES'S THEATRE.—MDLLE. RACHEL.—The Evening PARTORAL for the last time of ADRIENNE LECOUVREUR. On Monday next, and during the week, LA MARTYRE. A MORNING PERFORMANCE will be given on Saturday next, June 25, commencing at Two o'clock. Stage Tickets, 5s.; Family Tickets (to admit Four), 1l. 1s. To be obtained at the principal Music-sellers; and at the Royal Academy of Music, Tenterden-street, Hanover-square.

MUSICAL UNION.—DIRECTORS' MATINEE.—On TUESDAY, JUNE 28th, at Three o'Clock.—Quartet No. 1, in G, Mozart; Duet, in 4 Mains, Pianoforte, Mdlle. Rudolphi and Herr Ernst; and Herr Reinecke; Septet, in E flat Beethoven. Solos, Pianoforte, Mdlle. Staudach; Solo Contra-Basso, Bottesini. Vocalists, Mesdames Veronique, Sedlitz, Bingham, Hall, Bassano, Wade, Bauzano, and C. Hayes. Violoncello, M. Jules Lefort. After the concert the infant prodigy Arthur Napoleon will perform Beriot's Scena, &c., on the Pianoforte. Members will greatly facilitate ingress by providing tickets for their friends. Programmes and tickets to be had of Cramer and Co.'s Registrations, Chappell, and Olivier, Bond-street. All fees and donations suspended for the Matinée. Doors open at Half-past Two, and the performance to commence half an hour earlier than usual.

MADAME de LOZANO, assisted by Mdme. Viardot, Signor Gogliehni, Signor Regondi, Apthomas, Maschesk, and others, will give her CONCERT at WILLIS'S ROOMS, on the 11th JULY, at Three o'clock. Limited number of reserved seats, half-a-guinea, to be secured only at Mdme. de LOZANO'S, 5, Mecca-street, Eaton-square. Stalls and the Unreserved part-room, King-street, St. James's, where the plan of the room may be seen. Unnumbered tickets at the principal Music Warehouses.

SIGNOR MARCHESI and Mme. MARCHESI GRAUMANN beg to announce that their MATINEE MUSICALE will take place at the New Beethoven Rooms, 27, Queen-Anne-street, on WEDNESDAY, JUNE 29, at Three o'clock, when they will be assisted by Mdlle. Agnes Bury, Mdlle. Emma de Standach and Mr. Henry Compton. Conductor, Signor Manzieri. Tickets, 1l. each; to be had at Cramer and Beale's, Regent-street; Beethoven Rooms, 27, Queen-Anne-street; and at Signor Marchesi's Residence, 56, Welbeck-street.

MR. ALBERT SMITH'S MONT BLANC every EVENING at 8 o'Clock, except Saturday. Stalls, 5s. (which can be secured at the Box-office, from 11 till 5) extra, by Cockspur, &c. A Morning Performance on every Saturday at Three. EGYPTIAN HALL, Piccadilly.

ROYAL GALLERY of ILLUSTRATION, 14, REGENT-STREET. Messrs GRIEVE and TELBIN'S NEW DIORAMA, illustrating the ROUTE of the GUERNAM MAIL (viâ the Cape) to INDIA and AUSTRALIA, is now Exhibiting daily, at 3 and 8 o'Clock. Admission, 1s.; Stalls, 2s. 6d.; Private Boxes, 3l. 3s., each, may be obtained.

EXHIBITIONS of CABINET-WORK, lent by her MAJESTY the QUEEN, and several Noblemen and Gentlemen; the Works of Art, and Pictures of Mr. Hornsby, R.A., together with the Gardens, are OPEN to the Public on MONDAYS and TUESDAYS, at One o'Clock, on the ORDINARY DAYS, from Ten to Six, and on Mondays and Tuesdays, 6d.; Wednesdays, Thursdays, and Fridays, 1s.—Catalogues, 6d. each person.

ZULU KAFIRS.—NOTICE.—In consequence of the increasing [illegible] ZULU KAFIRS will [illegible] MORNING and EVENING. Doors open at Eight and Half-past Seven. ST. MARTIN'S HALL, Long-acre, Old Bond-street.—Doors open at Eight and Half-past Seven. ST. MARTIN'S HALL, Long-acre, Old Bond-street.—Doors open at Eight and Half-past Seven. Books, 2d. each, may be obtained.

ROYAL POLYTECHNIC INSTITUTION.—On TUESDAYS and FRIDAYS, at Four o'Clock, and every Evening (except Saturday), at Nine, the FIRST PART of the HISTORICAL ALLUSIONS, on the TALES, by GEORGE BUCKLAND, Esq., assisted by Miss Blanche Younge—in addition to the varied Beautiful Exhibitions. Admission, 1s. Stalls, 2s. 6d. Evenings—Admission, 1s.; Schools, Half-price. Ten years of age, Half-price.

ZOOLOGICAL GARDENS, REGENT'S PARK.—The Collection of LIVING ZOOPHYTES MOLLUSCA, FISH, and other Marine Animals, is [illegible] The Band of the Second Life Guards will perform, by permission of Colonel Williams, [illegible] Saturday next, at Four o'Clock. Admission, One Shilling; on Monday, Sixpence.

A LLOTMENT of ESTATES.—Members of the CONSERVATIVE LAND SOCIETY are on the Committee of GRANTS, are respectfully informed that the Leases on the Kirkstall and Bradford [illegible] and Wood-Green, Tottenham [illegible] end of July to THURSDAY, the 14th of JULY, at the Offices, 33, Norfolk-street, Strand, London. The KIGHTH PUBLIC DRAWING will take place at the [illegible] SATURDAY, the 9th of JULY, at Twelve o'Clock precisely, and all persons having shares on or before that day, or to the time of placing [illegible] in the Wheel, will participate in the advantages of this Drawing. Prospectuses may be obtained of CHARLES LEWIS GRUNEISEN, Secretary.

PUBLIC DINNER of the MEMBERS and FRIENDS of the CONSERVATIVE LAND SOCIETY. More than fifty Noblemen and Members of Parliament have already signified their intention of [illegible] the DINNER, at the FREEMASONS' TAVERN, on FRIDAY, JULY 8th, 1853, at Six o'Clock precisely, to celebrate the great progress of the Society [illegible] M.P., Vice-Chairman. Members and friends of the Society desirous of being present at this Dinner, are earnestly requested to [illegible] in forwarding their names to the Secretary, on or before the 1st, as it will not conveniently hold more than 500. The Tickets for the Dinner will be issued on and after the 25th inst., at the Offices, 33, Norfolk-street, Strand, and may be obtained on application to CHARLES LEWIS GRUNEISEN, Secretary.

THE PRESS.—This day, SATURDAY, JUNE 25th, No. 8, price 6d., of THE PRESS, the new Weekly Conservative Paper. Published every Saturday.—Office, 110, Strand. Money orders for subscriptions to be made payable to Mr. ALFRED IVIE.

DIOGENES at CHOBHAM.—The FIRST ENLARGED NUMBER of DIOGENES is chiefly devoted to the CAMP at CHOBHAM. Numerous Illustrations, including "The Reconnoitring Party," "Scene in the Camp," "Sorrows of the Servant Maids," "It was a Glorious Victory," &c. &c.

London: Office, 65, Fleet-street; and all Booksellers and Railway Stations. Price 3d.

A GRAND FANCY BAZAAR, in aid of the Funds for the ERECTION of SCHOOLS in the new Parish of ST. THOMAS, WOOLWICH, will be held, by the kind permission of Sir Thomas Maryon Wilson, Bart., in the PARK and GROUNDS of CHARLTON HOUSE, on THURSDAY, JUNE 30, and FRIDAY, JULY 1, 1853. The Grounds will be Open from One o'Clock in the Afternoon till Seven in the Evening.

Delgrave, Esq.	R. J. Mackenzie, Esq.	H. J. Turner, Esq.
Captain Dwyer, R.N.	Major Little, R.M.	Captain Welch, R.E.

By the kind permission of the Colonel Commandant, the bands of the Royal Artillery, Royal Sappers and Miners, and Royal Marines will be in attendance.

Admission, First Day—Single Tickets 5s.; Family Tickets for [illegible] persons, 1l. 1s. Second Day—Single Tickets 2s. 6d.; Family Tickets, for the first day [illegible] Tickets may be obtained of the Committee [illegible] Woolwich; of Mr. Soddy, [illegible] Mr. Thomas-street, Woolwich; at Greenwich, [illegible] Thomas-street; at Greenwich, [illegible] Mr. Rose, Mr. Bowyer, Mr. Hall, Mr. Bowyer, and Mr. Hall, Mr. Bowyer, and Mr. Hall, Mr. Bowyer, and

is easily valued, and is valued every day. Scarcely an estate is sold without the condition that the timber is to be taken at a valuation. But the country gentlemen allege that it is ornamental—that some men would almost as soon part with their heads as a tree—that it can't be sold to pay the tax, &c.; but all these objections apply equally to levying the tax on pictures, vases, and statues. The successor inherits the value of the timber, whatever it may be: he can sell it at any time; and he can as easily raise money on it, or more easily, to pay the tax, than a legacy of personal property can raise money to pay his tax. The landed gentlemen, however, had old custom and prejudice in their favour. The clause actually exempted timber that sheltered or ornamented a house, and really left the landed gentlemen nothing in reason to complain of; but they were sufficiently strong to resist successfully the application of the tax to timber. We regret this defeat of the Ministers; for the several changes they have made in the Budget, including their proposed alteration in the licensing system, and the comparatively slow progress of their measures through the House of Commons, has already detracted from their great reputation, and caused some disappointment. At the beginning of the year, it was expected that the Parliamentary session would be short and successful, but it is at present said that it will not close till September, and cannot now, whatever may happen, be very successful. Just as this disappointment arises here, intelligence has reached us from the United States that the Government of General Pierce begins to disappoint the Americans. His Cabinet does not give satisfaction, and he is not skilful in business. We are afraid that the people on both sides of the Atlantic expect and demand too much, more than statesmen, who have so many conflicting interests to deal with, can accomplish; and the respective Governments, feeling the influence of popular opinion, and anxious to comply with it, promise more and undertake to do more than they can perform. Hence arises disappointment on both sides of the Atlantic, though the members of both Governments are as enlightened statesmen as the respective countries can boast, and are animated with the very best intentions. Whatever party may be in power, the same kind of exaggerated hopes are continually forn ed at the commencement of every session, and meet the same kind of disappointment before it is closed. The fault, if there be fault, is less in Presidents and Ministers than in the people. If the former sometimes do too little, the latter invariably expect too much.

THE COURT.

The gaieties of the Court have been continued with increased effect during the past week. A Drawing room, a State concert, a Chapter of the Order of the Thistle, and a Royal visit to the Military Encampment at Chobham, have all been crowded into the short space of six days. The chief movements of the Court during the week may be thus briefly enumerated:—

On Saturday the Queen held a Chapter of the Most Ancient and Most Noble Order of the Thistle, at Buckingham Palace, at which the Earl of Eglinton was elected a Knight, and invested with the insignia. Prince Albert, accompanied by the Prince of Wales, Prince Alfred, and the Duke of Saxe-Coburg-Gotha, went to inspect Messrs. Barclay and Perkin's brewery, in Southwark. The Royal party were attended by Captain the Hon. Dudley De Ros, Baron Seebach, Baron Treskow, and Mr. Gibbs. In the evening the Queen and the Prince, with their illustrious relatives, the Duke and Duchess of Saxe-Coburg-Gotha, honoured the Princess' Theatre with their presence.

On Sunday the Queen and Prince Albert, the Prince of Wales, the Princess Royal, the Princess Alice, the Duchess of Kent, and the Princess Adelaide of Hohenlohe, attended Divine service in the private chapel of Buckingham Palace. The King of Hanover, attended by Lord Bloomfield, Baron Issendorff, and Major-General Buckley, was also present at the service.

On Monday morning the society of the Cologne Choral Union attended at the Palace, and sang several of their vocal pieces, concluding with "God save the Queen." Their Majesties the King and Queen of Hanover visited the Queen and Prince Consort during the afternoon. The King of Hanover accompanied the Queen and the Princess to the St. James's Theatre, to honour with their presence a concert for the benefit of the German Hospital. The Duchess of Saxe-Coburg Gotha paid a visit to the Tower of London. In the evening the Queen gave a State concert.

On Tuesday the Queen and Prince Albert, accompanied by the Duke of Saxe-Coburg-Gotha, and attended by a numerous suite, visited the military Camp at Chobham. In the evening the Queen held a Drawing Concert, accompanied by the Duke of Saxe-Coburg-Gotha honoured the Haymarket Theatre with their presence.

On Wednesday morning the Queen and Prince Albert, attended by the Countess of Mount Edgcumbe, the Marquis of Ormonde, Colonel the Hon. C. B. Phipps, Lord Charles Fitzroy, and Captain the Hon. Dudley de Ros, visited the Royal Military College at the Ridge School of the Cavalry Barracks in Hyde-park, in aid of the funds of the Cambridge Asylum for Soldiers' Widows. In the evening the Queen had a dinner party. The company included the King and Queen of Hanover, the Duchess of Kent, the Duke and Duchess of Saxe-Coburg-Gotha, &c.

On Thursday the Queen held her third Drawingroom for the present season at St. James's Palace. In the evening, her Majesty, accompanied by the King and Queen of Hanover, and her illustrious guests, honoured the Royal Italian Opera with her presence.

The Marquis of Ormonde has relieved Lord Rivers in his duties as Lord in Waiting to the Queen. Major-General Berkeley Drummond has relieved Mr. E. Grimsby Gore in his duties as Groom in Waiting to her Majesty. The Countess of Mount Edgcumbe has succeeded the Countess of Desart as the Lady in Waiting to the Queen.

THE DRAWINGROOM.

The Queen held a Drawingroom on Thursday afternoon in St. James's Palace. Her Majesty and his Royal Highness Prince Albert arrived from the Palace at Buckingham Palace about three o'clock.

Their Majesties the King and Queen of Hanover arrived in the same state as her Majesty, the Queen's Body Guard of the Ridge School of the Guards.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary, the Duke and Duchess of Saxe-Coburg-Gotha, the Hereditary Grand Duke, Grand Duchess, and the Duchess Caroline of Mecklenburg-Strelitz, and her Serene Highness the Princess Adelaide of Hohenlohe also attended the Drawingroom.

The Queen was attended by the Ladies in Waiting, and a brilliant Court.

Her Majesty the Queen wore a train of white and gold brocaded moiré, trimmed with white tulle, and white satin ribbons and gold bands. The petticoat was white satin, trimmed with white tulle, and white satin ribbons and gold bands, to correspond with the train. Her Majesty's head-dress was formed of diamonds and feathers.

H.r Royal Highness the Duchess of Cambridge wore a train of rich grey satin, trimmed with point lace: the stomacher adorned with diamonds. The petticoat was also of grey satin, having an exclusive of point lace. Her Royal Highness wore on her head a splendid tiara of diamonds, with white feathers and lappets. The necklace was diamonds.

Her Royal Highness the Princess Mary of Cambridge wore a train of white moiré antique, trimmed with white lace, lappets, and bunches of white roses. The stomacher, necklace, and ear-rings were diamonds and turquoise. The dress was of white tulle, three skirts embroidered with silver, over a gland silk petticoat. The Princess's head-dress was composed of a tiara of diamonds, white feathers, and lappets.

Her Royal Highness the Duchess of Saxe-Coburg-Gotha wore a train of light blue moiré antique, trimmed with blue satin ribbons and white tulle; the stomacher adorned with diamonds. The petticoat was white silk, trimmed with white tulle. The head-dress was a tiara of diamonds and turquoise, and feathers. The necklace was diamonds.

Her Royal Highness the Hereditary Grand Duchess of Mecklenburg-Strelitz wore a train of white silk, brocaded with flowers, and trimmed with point lace; the stomacher enriched with diamonds and sapphires. The petticoat was white tulle, trimmed with gold lace and blue and gold flowers. Her Royal Highness wore a diadem of diamonds.

The foreign circle was first introduced, and afterwards the general company. The presentations were very numerous.

The Queen and the Prince Consort returned to Buckingham Palace after the Drawingroom.

THE STATE CONCERT.

The Queen gave, on Monday, at Buckingham Palace, a concert, to which their Majesties the King and Queen of Hanover, the member of the Royal Family, and a large party of the nobility and gentry, were invited. Their Majesties the King and Queen of Hanover arrived at the Palace at twenty-five minutes past nine o'clock. The Duchess of Gloucester, the Duchess of Cambridge and the Princess Mary, the Duke and Duchess of Saxe-Coburg-Gotha, the Hereditary Grand Duke and Grand Duchess of Mecklenburg-Strelitz, the Duke of Cambridge, and the Princess Adelaide, of Holsenlohe, were among the illustrious guests of her Majesty. The Queen and Prince Consort entered the Picture Gallery, which was fitted up for the concert, at a quarter before ten o'clock. The Programme embraced the talents of all the leading Italian artistes. Signor Costa presided at the pianoforte.

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

The Marquis of CLANRICARDE gave notice of his intention on Thursday to move an address to her Majesty on the subject of a recent document purporting to be published in Bruges, which he thought would have a most important bearing upon the political aspect of the great powers of Europe.

The Bishop of SALISBURY entered into a long statement in reply to charges made against him of malversation of ecclesiastical property, with a view of showing that there was not the smallest ground for such accusations.

On the motion of Lord MONTEAGLE, a Select Committee was appointed to consider the effect of employing the constabulary force in Ireland for the suppression or prevention of illicit distillation.

The Earl of CARDIGAN inquired whether it was the intention of the Government to prosecute the two Roman Catholic priests implicated in the riots at Six-Mile-bridge at the last election for the county of Clare in Ireland?

The Earl of ABERDEEN said that Lord Palmerston had sent over instructions to have the priests prosecuted; but the Lord-Lieutenant, in the exercise of his discretion, having consulted the Irish law-officers on the subject, thought that it would be unwise to prosecute those clergymen. There was another election for the county of Clare pending, and it was of course necessary to take measures to guard against violence and outrage during those proceedings. A prosecution of the priests at such a time would considerably aggravate the difficulties of the Government in preserving order on the occasion of the election.

The Earl of CARDIGAN, having moved for the production of the correspondence that had recently taken place between the Roman Catholic gentlemen connected with the Government and the noble Earl at the head of the Government,

The Earl of ABERDEEN said he did not see any occasion for the production of such correspondence, inasmuch as it had been already published in the public newspapers.

The Earl of DERBY commented at some length upon the conduct of the Government, both in respect to the non prosecution of the priests referred to, and in reference to some of their Irish appointments.

After some discussion the motion was withdrawn, and their Lordships adjourned

HOUSE OF COMMONS.—FRIDAY.

The House met at twelve o'clock, and remained sitting until about four o'clock, during which time the Leasing Powers (Ireland) Bill underwent considerable discussion, and was ultimately passed through committee.

The Landlord and Tenant (Ireland) Bill was considered in committee; but, after the passing of a few clauses, the House resumed, and then adjourned until six o'clock.

Upon the re-assembling of the House at six o'clock,

In reply to Mr. C. Forster, Lord PALMERSTON stated that he hoped to be able to introduce a measure, in the present session, to meet the evils of the truck system.

Mr. WILSON gave notice that he would on Monday introduce a bill for the consolidation of the laws relating to the Customs.

THE INDIA BILL.

The adjourned debate upon the second reading of the India Bill having been entered upon, Mr. HUME animadverted in strong terms upon the conduct of the Government in introducing a bill upon this important subject before the committee appointed to inquire into the subject had completed their investigation. He stated it to be his intention to support the amendment of Lord Stanley for delay.

Mr. MACAULAY saw no reason for postponing legislation, and thought that the measure proposed was the very one to meet the case, inasmuch as it introduced amendments, and left room for extending them still further, when necessity should require it. The objections which had been urged against the bill applied rather to points of minor importance than to the principle upon which it was based. With regard to the system of double government, he thought that those who objected to it did not clearly understand it, for whatever power might nominally rest with the Directors or the Board of Control, India must necessarily be governed in India. The most important office of the English Government was the appointment of the Governor-General of India, but the most important class of appointments, with regard to the happiness of the Indian people, was that connected with the revenue collectors, whose good or bad disposition frequently made the districts in which they acted happy or unhappy. Nepotism and jobbing formerly governed these appointments, but the bill would prevent a repetition of such enormities by limiting the appointments to a circle of individuals properly educated for the civil servants of the Crown, and would be subject to competition.

Mr. BLACKETT disapproved of the measure, chiefly upon the ground that it was based upon the principle of a double government.

Lord JOCELYN thought that sufficient evidence had been obtained upon which to form a good and efficient government for India. He should therefore vote against the amendment.

Mr. OTWAY and Mr. ADDERLEY severally supported the amendment of Lord Stanley, and Lord JOHN RUSSELL spoke in favour of the bill.

On the motion of Mr. VILLIERS the debate was again adjourned until Monday.—The House soon afterwards adjourned.

THE PRINCE AND PRINCESS OF PRUSSIA.—Their Royal Highnesses the Prince and Princess of Prussia are expected to arrive in England on Sunday evening. The steam-packet *Vivid*, Captain Smitant, has been ordered to Ostend to convey the illustrious Prince and Princess to Dover. The Prince and Princess of Prussia will be accompanied by their daughter, the Princess Louise of Prussia.

THE *Madrid*, Captain Weeks, arrived at Southampton on Friday with the usual Peninsular mails and dates—from Gibraltar, 14th; Cadiz, 16th; Lisbon, 19th; Oporto, 20th; and Vigo, 21st inst.

THE NEW SHERIFFS FOR LONDON.—A Common Hall of the Livery of the City of London was held on Friday, in the Guildhall, for the purpose of electing the Sheriffs of London and Sheriff of Middlesex, when Mr. Turnley and Mr. Shepperson were duly elected to serve the office of sheriffs. Sir John Key, having been re-elected Chamberlain, addressed the Livery, thanking them for the support he had received. The usual officers of the corporation were then elected, and the proceedings terminated.

CORK MATTRESSES FOR THE CAMP.—A number of mattresses, composed of cork fibre, have been sent to the Chobham Camp by Messrs Taylor and Sons, of Great Dover-street, for the purpose of testing their utility as a preventive against damp. The Lieutenant-General has directed that each of the corps on the field shall have one of these mattresses in use during the period of the encampment.

THE WAGES MOVEMENT.—"At *Stockport*, the prospect of any arrangements between the employers and the operatives seems to be more distant than ever." "At *Blackburn*, the progress of the turn out leaves little doubt that the whole of the mills will soon be at a stand." "At *Manchester*, all the employers have succeeded in arranging with the operatives who demanded an advance." "At *Southampton*, a meeting of painters, glaziers and plumbers was held on Tuesday, for an advance of 6d. per day." "A large number of shoemakers of *Devonshire* are still out on the strike." "A great strike has taken place at the iron-works of *Llynfi*, in Wales; but numbers are leaving for Australia; and it is expected that the whole workmen, and their families—3000 souls—will, in a short time, leave the works."

FOREIGN.

AFFAIRS IN THE EAST.—The following important telegraph has been received.

"CONSTANTINOPLE, June 16.

"THE ULTIMATUM OF RUSSIA HAS BEEN FINALLY REJECTED BY THE PORTE."

FRANCE.—The Paris Bourse was very heavy on Thursday, but there was a slight improvement in prices, in consequence of the extent of the discounts. The Three per Cents left off at 76f. 75c. for the end of the month; and the Four-and-a-Half per Cents at 101f. 40c.

No positive order had, at the date of the latest accounts from Odessa, been given for the occupation of the Principalities.

The following appointments appeared in the *Moniteur* of yesterday (Friday):—The Duke de Padoue, M. Berger, M. P. Merrimee, and the Marquis De Lavalette, are named Senators; M. De Maupas is named Minister at Naples; M. Adolphe Barrot, Minister at Brussels; M. His De Butenval and M. Haussmann, Prefects of the Seine.

RUSSIA AND TURKEY.—We hear from Vienna, that if the Russian troops have not yet crossed the Pruth, the delay is owing to the insurmountable obstacles thrown in their way by the overflowing of the Lower Danube and all other rivers in those parts. The plains are transformed into lakes, and the mouths of the rivers are so encumbered with sand that the commander of the flotilla has declared that the passage would be attended with the greatest danger.

MALTA.—The *Tritom* steamer, coming from England with despatches for Admiral Dundas, has been signalled.

SWITZERLAND.—The Government of Friburg has called out the Civic Guard. There are fears of another insurrection.

SPAIN.—The Minister of Finance, M. Manuel Bermudez de Castro, has resigned. M. Luis Pastor has been appointed his successor. M. Moyano is named Minister of Trade, and M. Calderon de la Barca of Foreign Affairs.

THE CAMP AT CHOBHAM.

THE great event in the past week has been the visit of her Majesty to the military spectacle on Chobham Common, when the most moderate computation estimates the concourse of spectators at 100,000; and we believe this by no means exceeds the number actually present. We must not, however, anticipate the occurrences of the Encampment; and therefore, in order that our narrative may be as complete as possible, we will commence with the proceedings of Friday last,—

THE FIRST FIELD DAY.

Shortly after nine o'clock in the morning, the whole Camp turned out in marching order; and, after a brief inspection by the respective Colonels in command of the various regiments, marched into a plain most judiciously selected for their evolutions. It was free from those ruts and inequalities with which the Camp ground itself abounds; and, though rather wet at one end, was dry and firm at the other extremity, adjoining the Guildford and Shottesham-road. On this plain the troops halted in a line facing the north: the Household Brigade occupying the valley near the Bagshot road; General Sir de Lacy Evans's Brigade, consisting of the 93rd Highlanders, the 38th Regiment, and the Rifle Battalion occupying the extreme eastern end; the 42nd Highlanders, the 50th and 95th Regiments being posted in the centre of the plain. Beyond these, in the distance, was posted the Cavalry Brigade of his Royal Highness the Duke of Cambridge, comprising the 1st Life Guards, the 17th Lancers, the 13th Light Dragoons, and the 4th Dragoon Guards, with a battery of the Royal Horse Artillery. Immediately in the rear of the infantry, the batteries of the Royal Artillery were placed on eminences commanding the whole of the plain facing the foot brigades. The length of the line of infantry, now standing two deep, extended about two miles; and, while in this position, Lord Seaton, accompanied by a brilliant staff, rode slowly along the line, and for two hours minutely inspected each regiment, and expressed his highest satisfaction and approval of the appearance of each corps.

Immediately after this commenced the interesting operations of the day, by the whole line of infantry, as far as the eye could reach, pouring a continuous fire on an imaginary advancing foe; while the guns of the Royal Artillery opened a most tremendous cannonade from the heights in the rear. Nothing could be more grand and exciting than the scene at this moment. The whole line of infantry was wrapped in flame and smoke, produced by unceasing file firing; while the cannoniers of the artillery, on the southern hills, could only be faintly discerned in the dense cloud going through the movements of discharging and reloading their pieces, with all the steadiness and precision for which that arm of our force is so remarkable. To the left night now and then be distinguished, as the wind happened to sweep the dense clouds of smoke for an instant from the plain, the shining helmets and bright swords of the cavalry gleaming in the sunshine. The position of the Rifle Brigade, whose sombre uniform rendered them almost invisible against the dark pine wood near which they were posted, could only be discovered by the stunning volleys which they occasionally sent forth. At this moment orders were given to the cavalry and Horse Artillery to advance to support the infantry and cover their retreat. They accordingly moved forward in squadrons, with the Royal Horse Artillery in front, keeping as much to the rear of the infantry as possible; and making a *detour* round the south-west Common, towards the height on which the foot batteries were planted, commanding the rear of the whole line. The pace at which they advanced was not rapid; and they availed themselves, during their steady progress, of the declivities and inequalities of the ground to shelter themselves, as it were, from the cannonade until they arrived at the point desired. Here they remained under cover, awaiting the order to charge. By this time, the brigades of infantry on the plain were formed into hollow squares, to repel the expected charge of cavalry. This manœuvre was brilliantly accomplished. No sooner had the front rank prepared itself to receive cavalry, by kneeling down, than the lines within the squares poured forth a continuous discharge of musketry, the smoke of which enveloped the whole plain in a dense and impenetrable cloud; but, when that cleared away, and the troops became again visible, the whole infantry force was seen retreating in beautiful order to the shelter of their batteries on the heights. Having formed into columns, and thrown out their skirmishers, who maintained an unceasing and rapid fire on the supposed pursuing enemy, and, having stretched for nearly a mile along the plain, and covered the retreat of the steadily-retiring columns, the shrill sound of the bugle was heard from behind the hills, where the cavalry and artillery were posted, sounding the signal for the charge. Instantaneously, the Horse Artillery and four regiments of cavalry, rushed from the hills like a mighty avalanche, and, wheeling, deployed on the plain below within range of the supposed retreating enemy. In less than a minute the artillery guns were unlimbered, and were pouring forth their loud thunders in the direction of the retreating columns. The effect at this instant was most thrilling; when, 'mid the roar of artillery reverberating along the hills and awakening echoes which added an awful grandeur to the din of war, the four cavalry regiments having formed two deep, consisting of the Lancers, Light and heavy Dragoons, and Life Guards made one of the most gallant and dashing charges that could be witnessed. The line of advance was kept with the greatest precision, a matter of manifest difficulty when it is consi- ered that the horses were almost at racing speed. Nothing could have been more brilliantly executed than this movement. The enthusiasm and soldierly bearing of the officers, the intrepid steadiness of the men, the sounding of the bugles, all tended to produce upon the spectators an overwhelming and electrical effect, and was sufficiently strong to convey a notion of the horrors and dangers of the battle-field. Immediately after this manœuvre, the retreat was sounded, and the entire army swept across the plain to the shelter of the batteries which still remained posted on the heights in the rear. A number of ladies and gentlemen, who were seated on the slopes, from the summit of which the front field batteries were still pouring discharge after discharge over their heads, were thrown into considerable fright and confusion by the cavalry and Horse Artillery coming full charge towards the very spot which they thus occupied in fancied security. Lord Seaton and his staff, who had been reconnoitring from this point under shelter of the batteries, now rode rapidly away, leaving the uninitiated spectators in the utmost trepidation and dismay. The danger now seemed imminent; the troops in full charge not being more than 300 yards distant from the terror-stricken spectators, who made a wild rush towards the guns on the heights above them, and which were still blazing away incessantly, seeking safety, even at the cannon's mouth, from that fearful charge of cavalry and artillery. The confusion was such that some serious accidents must have occurred had not the troops pulled up before they came closer to the crowd, and thus put an end to the panic. On occasions such as this, it would be only right to warn off the people from the ground likely to be occupied by the evolutions of the troops; and we are glad to say that every precaution of this kind was adopted on the occasion of her Majesty's visit, as will be seen hereafter.

The operations of the day having been now concluded, and while the cavalry were resting their horses, the infantry regiments, formed in companies two deep, advanced towards the hill, and passed in review before General Lord Seaton, previous to their return to Camp. The whole army, then headed by the cavalry, under his Royal Highness the Duke of Cambridge, commenced their return to their respective quarters. The scene at this m- ment was most grand and imposing, the whole of the troops being seen a- one view; and as each corps filed past it was critically inspected by General Lord Seaton.

The closing scene of this glorious pageant was not its least interesting or picturesque feature. The striking contrast of the different arms of the service engaged in this grand rehearsal, as they marched to their several quarters in their fairy city of canvas, could not fail to produce a most agreeable and varied picture to the painter's and poet's eye, while the ordinary spectator must have been gratified by the stirring sounds of martial music proceeding from the bands of each corps, as they proudly marched along after the fatigues of the day.

The chief part of the visitors to the Camp on Saturday and Sunday were the ruddy-looking peasants of the surrounding districts, who, on foot, and in all sorts of vehicles, market carts, vans, drays, &c., formed a most motley but apparently well-satisfied crowd on the rude and barren heath of Chobham.

It is most gratifying to learn that the general health of the troops is good, fewer men than usual being in hospital; and that those who met

THE CAMP AT CHOBHAM.

COMMANDING OFFICERS.

with accidents during the review on Friday are doing well, most of the cases being of a trifling character.

HER MAJESTY'S VISIT TO THE CAMP.

We now proceed to describe the great event of Tuesday. The immense concourse of spectators who assembled on this occasion evinced the intense interest with which the people of this country regard the maintenance of our national defences; and we believe, the only object of the Encampment, the efficiency and discipline of the British army. From earliest dawn of Tuesday morning, continuous crowds of visitors from the metropolis and the neighbouring towns and villages poured forth to the scene of action. Great as were the preparations made by the railway companies to accommodate the public, and to increase and facilitate, by extraordinary appliances, the mode of transit, yet thousands were inevitably delayed considerably beyond the time when they hoped to reach the Common. The fares, too, by coaches and omnibuses from the railway stations, were enormously increased, but this was entirely owing to the cupidity of the speculators, who had no connection with the railways; and whilst the Company's conveyances were charging only a shilling, the conductors of rival vehicles exacted sums varying in amount from five shillings to a sovereign. The Waterloo Station of the South-Western Railway was besieged with passengers, some of them in the highest rank of society, from a very early hour; and after all the available trains had been despatched, the platform still continued thronged with an anxious and excited multitude. Amongst the crowd were a number of ladies in riding habits, and officers in costume, who betrayed strong feelings of disappointment at the delays which occurred; but ultimately all were conveyed to the Chertsey station, without the slightest accident. Mr. Godson, the superintendent of the railway, performed prodigies of individual exertion; but, where the demand was so far beyond all powers of calculation, it was impossible to give equal satisfaction to all. Amongst the earlier departures were General Lord Hardinge and family, who were accommodated with a special train, in the advantages of which several of his Lordship's personal friends were permitted to participate. Amongst these were the Russian General Ogaroff, Lord Dufferin, the Earl of March, Lord Carrington, Lord Harry Vane, M.P., Lady Graham and the Misses Graham, Lady Dalmeny, Lady Louisa Primrose, &c. Her Majesty the Queen and the Royal party also travelled by the South-Western Railway, from the Nine Elms station, at Vauxhall, to Staines. The Duchess of Cambridge, accompanied by the Queen of Hanover and the Princess Mary, with her Royal Highness the Duchess of Kent, the Princess Adelaide of Hohenlohe, their Royal Highnesses the Hereditary Grand Duke and Grand Duchess of Mecklenburg-Strelitz, and the Duchess of Saxe-Coburg, took their departure also from Nine Elms, by a special train, which left that station at half-past eight o'clock in the morning. Her Majesty and Prince Albert arrived at the station at a quarter to ten o'clock, where the Royal party was joined by the Duke of Saxe-Coburg Gotha and his Majesty the King of Hanover. The journey to Staines was performed in less than half an hour, under the superintendence of Mr. Godson.

It was a pleasant sight—the long stream of brilliant equipages traversing the road with their gaily-dressed inmates, reminding the spectator of the route to Ascot before the "glories of the road" had dwindled under the influence of the "iron ways." As they entered upon the heath, the carriages drew up, in true race-course fashion, in a long line and formed, as it were, an amphitheatre, inclosing the ground where the evolutions of the day were to take place.

The Camp, up to half-past nine o'clock, was in a comparatively quiescent state. The men had just finished their morning meal at this time, but immediately afterwards the troops assembled on parade in front of their respective encampments for the ordinary daily inspection. This movement was watched with intense interest by the gradually-increasing crowd who thronged every elevated position on the field from which a view could be obtained, darkening the summits of all the points

HIGHLANDERS

THE CAMP AT CHOBHAM.

THE RIFLE BRIGADE SKIRMISHING.

of rising ground, and spreading out in black dots over the Common. There was no undue interference on the part of the military; on the contrary, the public were allowed free ingress within the lines, and the camp kitchen and other domestic arrangements were examined with curious scrutiny.

It was expected that her Majesty would reach the field at ten o'clock; but it became known on the previous evening that eleven was the hour ultimately fixed.

During the interval that elapsed before the arrival of her Majesty, we had an opportunity afforded us by the courtesy of the authorities, of inspecting the marquee and tents prepared for the reception of her Majesty, Prince Albert, their Royal guests, and their respective suites. It may here be mentioned that the Pavilion occupied by Queen Charlotte, on a similar occasion half a century ago, and which once belonged to Tippoo Saib, was found to be quite unfit for use; although it is erroneously supposed to be the one now erected on Magnet-hill, and to have been occupied by the Royal party on Tuesday last. The Royal Pavilion consists of a central marquee, which forms a banqueting hall, a tent for the accommodation of Prince Albert, another tent for the equerries and distinguished persons of the Royal suite; and smaller tents which serve as retiring-rooms for her Majesty the Queen, his Royal Highness Prince Albert, his Majesty the King of Hanover, and her Majesty the Queen of Hanover. The whole of the Royal encampment is surrounded with a square canvas wall, about seven feet high. These apartments are plainly furnished, and the floors are laid with India matting. Most of the furniture has been supplied from the Grand Stand at Ascot; the only additional articles being the couches. At ten o'clock, carpets were laid down, extending from the principal entrances of the Pavilion to the carriage-road, and sentries were placed to prevent intrusion.

At half-past ten o'clock, the whole division composing the Camp was under arms in front of their respective quarters, in readiness to receive the Queen. All the troops occupied their own ground, with the exception of the Rifle Brigade, who, instead of occupying the extreme left of the field, were drawn up with the First Brigade of Infantry, on the left of the 93rd Highlanders and 50th Foot. The spectacle at this period was very imposing. The cavalry cresting the high ground on the right, the brigade of Guards extending across the valley, and the two infantry brigades stretching out to the extreme left, flanked by the Royal Artillery, with a white wall of canvas to fill up the picture, formed a grand military *coup-d'œil*. The weather was, fortunately, propitious, the sun not too bright.

The interest of expectation was now added to the beauty of the scene. All eyes were directed to Magnet-hill, on which were assembled his Royal Highness the Duke of Cambridge, Viscount Hardinge, Lord Seaton, and all the other officers composing the staff. In close proximity to this body were assembled the most distinguished persons in the country—some in carriages, many on horseback—among whom were a great number of female equestrians. It is quite impossible to give anything approaching a correct list of the fashionables present; but among many others may be enumerated the Countess of Wilton and the Ladies Grey Egerton, the Marchioness of Ailesbury, the Earl and Countess of Strathmore, the Earl Cawdor, Lord Carington, Lady Dalmeny and Lady Louisa Primrose, the Countess of Bradford and the Ladies Bridgman, Capt. the Hon. C. Hardinge, M.P., Lord C. Manners, M.P., the Earl Howe, the Earl of Cardigan, the Earl and Countess of Glengall, Mr. Elliee, M.P., Mr. and Mrs. Alexander Wood, Colonel T. Wood, Mr. Baldock, M.P., the Baroness North and Colonel North, M.P., and Miss Doyle; Viscount Villiers, the Hon. Mr. A. Villiers, Colonel Malcolm, Colonel Rose, Col. Brownlow Knox, M.P., the Earl of Euston, Lord George Paget, M.P., Lord Adolphus Fitzclarence, Viscount Newport, Mr. Roberts, Capt. Buckley, Lord Paget, General the Hon. G. Anson, M.P., the Earl Bruce, Mr. George Payne, Colonel the Hon. A. Hood, his Excellency the Sardinian Minister, &c.

An additional feature of interest was given to the group by the presence of a large party of Etonians—the junior branches of the aristocracy—for whom Lord Seaton, himself an Etonian, had secured a holiday from the principal, Dr. Hawtrey, who headed in person the young brigade.

Shortly before eleven o'clock, Viscount Hardinge, attended by his aides-de-camp, and accompanied by the Adjutant-General, the Quartermaster-General, the Deputy Adjutant-General, the Deputy Quartermaster-General, and the Military Secretary to the Commander-in-Chief, left the head-quarters (Magnet-hill), and proceeded across the heath in the direction of Colonel Challoner's park, through which it had been

CAMP KITCHENS.

arranged the Queen should enter the Encampment, in order to be in readiness to receive her Majesty

The Duchess of Cambridge and the Queen of Hanover left the railway at Staines, where one of the Queen's pony phaetons, drawn by four greys, was in waiting to convey the Royal party to the Common. The Duchess of Kent and party followed shortly afterwards, and both proceeded from the primary Staines road across the Common, and through the lines of the Guards to Magnet-hill. As the Royal party passed along the line to their position, the troops saluted, and the bands played the National Anthem. At this time, a troop of the Life Guards rode out from their tents and took up a position at the junction of the new road—made for the accommodation of her Majesty with the Windsor road, where they waited to escort the Royal visitors. A guard of honour, consisting of sixty men of the 3rd battalion of the Grenadier Guards formed in front of the Royal pavilion, and the whole of the brigade of infantry formed in line two deep in front of their encampments awaiting the arrival of her Majesty.

At half past ten the Royal standard was run up the flag-staff; and a movement of the Life Guards, at the extreme end of the road, showed that the Queen had entered on the Common, the scarlet liveries of the outriders having been seen emerging from the fir plantations of Colonel Challoner's demesne.

Her Majesty had left the railway-station at Staines in an open carriage, drawn by four grey horses, and escorted by a troop of the 4th Light Dragoons; and, after passing across Portnall-park, the estate of Colonel Challoner, through which a temporary road had been made, the Royal visitors entered at the centre of the Common, between the extreme wings of the Encampment.

Her Majesty could be now seen, with a glass, alighting from her carriage, and, to the surprise of most of the spectators, and to the delight of all, a caparisoned charger was brought forth, upon which her Majesty mounted, and rode forwards in the direction of the Camp.

The procession was headed by a detachment of the First Life Guards, preceded by an officer of the Quartermaster-General's department. Next came the Aides-de-camp to the General Commanding-in-Chief, the Earl of March and Lord Charles Wellesley. These were followed by the Royal Aides-de-camp; the Deputy Adjutant-General, Col. Torrens; the Deputy Quartermaster-General, Colonel B. Wood, C.B.; and the Equerries to the Sovereign not in Waiting. The Adjutant-General and the Military Secretary to the Commander-in-Chief, with the Quartermaster-General, followed; and then came Viscount Hardinge, General Commanding-in-Chief, mounted upon a splendid chestnut charger.

Her Majesty was attended by the Countess of Desart, Lady in Waiting, also on horseback, and by the Duke of Wellington, Master of the Horse

The Duke of Saxe-Coburg, and the Hereditary Grand Duke of Mecklenburg-Strelitz, conspicuous by their white uniforms and silver helmets, immediately followed; and the procession was closed with a brilliant array of foreign general officers, British general officers on the staff, and with a crowd of aides-de-camp of every kind, and majors of brigade.

A string of royal carriages, and a detachment of the 4th Light Dragoons, which had formed the escort from Staines, closed the cavalcade. As the Queen drew near the Camp, each battalion fired three rounds from the right of brigades, whilst the guns of the artillery added their thunder to the sharp volleys of the musketry. Her Majesty wore a blue riding habit, with a basque jacket, setting closely to the figure, and having on the breast a rich gold *cinquillette* and a brilliant garter-star; and a round riding hat, having in the front a small military plume of red and white feathers. The horse of her Majesty, a graceful dark bay charger, was caparisoned with rich housings and gold trappings. His Royal Highness Prince Albert was attired in the uniform of a field-marshal. Her Majesty had upon her right Prince Albert, and upon her left the Duke of Saxe-Coburg; and was attended by Lord C. Fitzroy and the Hon. Dudley de Ros. Her Majesty looked remarkably well, and the somewhat *militaire* appearance which the plume of feathers, the gold *cinquillettes*, and rich trappings of the horse imparted to her, increased if possible the enthusiasm with which the troops received their royal mistress. Her Majesty, we need hardly say, was loudly cheered by the visitors as she passed.

The King of Hanover was on horseback, his horse being led by one of his Majesty's aides-de-camp. Following immediately in the route of the Royal visitors was a brilliant suite, amongst whom were several officers of the Hanoverian service, Prince Felix Salm, of the 11th Prussian Hussars, Colonel Jackson, Colonel Chatterton, Colonel Challoner, &c. A troop of the 4th Light Dragoons, and a body of mounted police brought up the cortège. Her Majesty, passing by the pavilion, proceeded to the centre of the cavalry regiments drawn up in front of their camps, the bands of the respective regiments playing as she passed. The Queen then passed along the whole of the infantry, the troops saluting with the usual honours.

While her Majesty was passing along the infantry lines, the cavalry regiments left the camp by the rear, and proceeded in quick trot, and in sections of "threes," along the long cross-road at the rear of the infantry brigades, and, taking a circuitous route, reached the positions assigned to them on the ground where the evolutions were to take place, and which was the same as that occupied on the last field-day. While this was going on, the guard of honour of the 3rd battalion of Grenadier Guards took up a position round the pavilion erected for her Majesty and suite to witness the movements from, and which they arrived shortly after twelve o'clock. Couches and seats were provided in the tents for the accommodation of the distinguished visitors.

The attack commenced shortly after on her Majesty's issuing from the tent, by the army drawn up on the ridge at the left on the ground, who were supposed to be opposed by an enemy holding the heights on the right—the enemy to the British grenadiers in this instance being admirably represented by the British public, who dauntlessly held their ground, despite every attempt to dislodge them, short of a charge. The attack commenced by a long array of riflemen, thrown out as skirmishers by the Guards and Highland brigades, to cover their advance. Their rapid and scattered firing was checked by the unexpected appearance of a party of the enemy, who rose up from the marshy ground, where their recumbent position had been unobserved by the spectators. These poured in a sharp fire on the skirmishers, whom they drove back, and gave occasion to the exercise of the great arm of the service. The Foot Artillery took up a position on a height on the right flank of the infantry, and opened a fire on this party, which speedily dislodged them. They made a rapid retreat; being threatened with a charge of cavalry from the right flank, threw themselves into square, and presently effected a retreat. This small corps, which represented what might be called the active spirit of the enemy, so as to give vitality to the battle, consisted of the men off duty of the 23rd Welsh Fusiliers, a party of the Royal Sappers and Miners, and some few cavalry, under the command of Lieut.-Colonel Vicars, R.E. With this little party, who had forty rounds of ammunition served out to them, the supposed line of the enemy was prominently marked, and sufficient point given, to evince the utility and reason of the vigorous charges made by the Guards and Highland regiments. The advance of the Highlanders, the steadiness of their onward progress, and the precision of their volley, were subjects of general admiration. But nothing could possibly be finer than the advance of the brigade of Guards in two lines, supported on the right flank by a heavy battalion in square. Their halt, and the delivery of their volley, were something terrific; and this latter, followed by their charge up the opposite hill, with another simultaneous charge suddenly by the Cuirassiers and 17th Lancers on the right flank, at once routed the assembled multitude. It is a striking proof of Lord Seaton's admirable mastery of the science of war that, even to the unmilitary spectator, the cause for every manœuvre in this simulated battle was apparent. The Queen appeared to watch with great interest the different evolutions, and joined in the general hilarity that followed the dispersion of the people from the heights on the left of the Royal position. The supposed enemy having thus been driven off, the staff approached the Queen's tent.

At one o'clock the cavalry regiments, headed by their bands, trotted past the Queen. As each regiment defiled, its band moved to the right, and took up a position opposite the Royal tent. The Horse and Foot Artillery followed, and then came the brigade of Guards, the drums and fifes playing the "British Grenadiers." The scene at this moment was remarkably picturesque. The cavalry extended its glittering files as far as the eye could reach. The Guards were immediately in front, with the 93rd Highlanders following in their rear. The valley was occupied by the 93th and 39th regiments, while the other corps might be seen at different points emerging from the gorge separating the two hills on the left of the Royal tent. The rear was formed by the Rifle Brigade. The appearance of the troops excited altogether universal admiration. There were some that pointed with pride to the Queen's company of Grenadiers, in which not a man was under the height of *6 feet 2* inches. Others regarded with wonder the stalwart forms, broad shoulders, and sturdy limbs of the Highlanders. There were those, too, who remarked with satisfaction the medals which graced the breast of many an old campaigner in the 26th. Each regiment had its friends, and the whole was certainly a display of which the nation might well be proud. There is no country in the world from whose army, however large, 9000 men could be brought together that, either in height, size, strength, vigour, health, or appearance, would bear comparison with the men who passed before Queen Victoria on Tuesday last, on Chobham Common. The 42nd passed, with their pipers playing "Bonnie Laddie—Highland Laddie;" and the Rifles with their Jager chorus; and the review was over.

The Queen and the Royal party, who had been seated in front of their tents during the review, now remounted their horses, and proceeded, amid the cheers of the assemblage, to the Royal marquee on Magnet-hill, where a superb luncheon was prepared for her Majesty.

Before her Majesty had left the ground, and several times during the day, she expressed to Lord Seaton and to the Duke of Cambridge her high gratification at the manner in which the troops had gone through their evolutions.

Shortly before three o'clock her Majesty re-entered one of the Royal carriages in attendance, and, with her illustrious relatives, returned to the Staines station, whence they were conveyed by train to Nine Elms. The Royal standard was taken down at the moment her Majesty left the Camp.

The total number of the troops in the field operations of the day amounted to—officers, 587; sergeants, 459; drummers and trumpeters, 191; rank and file, 6692: total, 8129; horses, 1305; guns, 24.

Of the number of persons present, some notion may be formed by the fact, that in three hours 14,000 tickets for Chertsey were issued at the Waterloo station, and up to the hour of nine o'clock on the night of Monday, between 300 and 400 horse-boxes had been specially engaged on the Great-Western Railway.

Almost immediately after her Majesty had left the ground, heavy rain came on: the refreshment-rooms were instantly filled.

The statistics of the Post-office are interesting. On the first Sunday of the Encampment, the day being exceedingly wet, the number of letters sent out amounted to 1237, which shows a very large correspondence in proportion to the men assembled. The number of letters received and delivered amount on an average to upwards of 2000 daily. The duties of the office are performed chiefly by Corporal Letton, of the Sappers and Miners, under the superintendence of a Post-office official, belonging to St. Martin's-le-Grand. The letters are fetched and taken away by orderlies from the different regiments. Lord Seaton's orderly attends mounted and fully accoutred.

WEDNESDAY.

Although it was anticipated that Wednesday would be a comparatively idle day in Camp, yet such was not the case; as, besides the early parade of all the troops, the two Highland regiments and the Rifle Brigade marched to the scene of the previous day's operations, and performed various evolutions. During the day the troops were gratified by the promulgation of the following commendation (dated Tuesday, June 21) received by Lieut.-General Lord Seaton, commanding the Camp:—

The General Commanding-in-Chief has received the Queen's commands, on the occasion of her Majesty's having this day reviewed the division of the army encamped, to express to Lieut.-General Lord Seaton her Majesty's entire approbation of the military arrangements made by the Lieut. General. The appearance of the troops as the Queen rode along the line was most satisfactory; and her Majesty was much gratified by the perfect order and regularity which prevailed during the field movements (so ably directed by the Lieut.-General), by which many thousands of spectators witnessed from the heights the manœuvres of the troops on the plains without inconvenience or accident. The Lieut. General will be pleased to convey these her Majesty's sentiments of unqualified approbation to the Major-Generals and Commanders of Brigades, to the command of the troops, and to the officers and men of all ranks.

G. BROWN, Adjutant-General.

The following Memorandum from the War-office was also issued on Wednesday:—

Officers temporarily employed on the staff with the troops assembled in camp are to wear the plain blue coat and trousers established for the infantry, with the sash, cocked hat, regimental sword, and black sword-belt, during the ordinary evolutions and exercises; but on occasion of her Majesty's reviews they will be expected to appear in their full regimentals uniforms.—(By command.) G. Brown, Adjutant-General.

It will thus be seen that it is her Majesty's gracious intention to visit the Camp frequently.

THURSDAY.

Much disappointment to the public will be no doubt felt by the non-fulfilment of the announcement that Tuesdays and Fridays were to be "field days." In fact, there are no certain days to be named; but the troops will be called out as the weather, or other causes, may justify. For instance, the field operations to-day far exceeded those which took place in the presence of her Majesty on Tuesday. The troops appear to be getting better into their work, and the increased precision of the movements is very generally remarked. The evolutions yesterday took place in Cuttle's valley, on that portion of the Common immediately facing the encampment, and at a considerable distance from the locality occupied on Tuesday. At ten o'clock all the troops were paraded in front of their respective quarters, after which they marched in columns to take up the positions assigned to them. At a given signal from the commander, Lord Seaton, the operations commenced, and then followed, perhaps, the most brilliant series of military manœuvres ever witnessed in England. The whole division first drew up in columns of brigades, the Guards supporting the line, and the Artillery upon the right covered by the Rifle Brigade. They then crowned the heights, from which they opened a sharp cannonade for the purpose of protecting the movements of the troops in the valley below. A fine view of the whole operations was gained from the Magnet-hill, upon which were assembled all the spectators who had arrived from London. The company was by no means numerous, but a great many members of the aristocracy were present, and among them we observed his Grace the Duke of Beaufort. It was a remarkably interesting sight to observe the long files of infantry, with their bright bayonets glittering in the sun, opposed to, and successfully resisting, the repeated charges of the cavalry in their attempts to gain possession of the hills. The operations of the Rifle Brigade were also watched with great interest, and the whole evolutions had a very beautiful effect. The review lasted until nearly two o'clock.

FRIDAY.

No field operations of any moment took place to-day; but this day (Saturday) will be another grand review in honour of the officers in the suite of His Majesty the King of Hanover, who have accepted invitations to be present.

NAVAL AND MILITARY INTELLIGENCE.

THE 33RD REGIMENT.—Her Majesty has been graciously pleased to command that the 33rd Regiment of Foot shall henceforward bear the name of "the 33rd (or the Duke of Wellington's) Regiment," which honourable addition will be inscribed on the colours of the regiment. The 33rd was the first regiment in which the late lamented Duke of Wellington became the commanding officer, and with it the Duke saw much active service in India. The compliment conveyed by her Majesty's gracious command will be warmly appreciated by the corps.

ARRIVAL OF THE CHANNEL FLEET.—Rear-Admiral Corry arrived at Portsmouth on Tuesday, from his cruise in the Channel, with the fleet under his command. This force, added to the ships already at Spithead, makes up fifteen sail of the line, and a very formidable armament as that or any other rendezvous in the world. They comprise:—

	Guns.		Guns.		Guns.
Prince Regent (flag)	90	Blenheim	60	Sidon	22
Duke of Wellington	131	Hogue	58	Highflyer	21
Agamemnon	91	Edinburgh	58	Leopard	18
London	90	Impérieuse	51	Encounter	14
Ajax	80	Amphion	51	Odin	16

In harbour and refitting there are the *Arrogant*, 46, screw frigate; the *Vesuvius*, just commissioned; and the 120-gun ship *Neptune*, preparing for sea. It is said that this powerful fleet will be despatched to the Baltic as soon as a squadron of observation. Orders have been received to complete the squadron at Spithead, with four months' provisions.

DREADFUL ACCIDENT.—While Admiral Corry's fleet was returning from Lisbon, on the 15th inst., a most disastrous and distressing accident occurred, which quickly hurried one gallant man into eternity, was in tow of the *Inspérieuse*, the latter stopped for the purpose (as we understand) of "parsing" the *London*'s cable, with which she was towing her from its socket, and the chain running through the hawse-hole with terrific velocity, swung round the two foremost masts, killing Mr. Charman, senior lieutenant, J. Smith, R. Righ, W. Beaver, and H. Bessiker, ordinary seamen; C. Barnes, gunner's mate; and J. Lovell, private marine; very severely injuring at the same time twelve others of the crew who were on the spot. A court of inquiry will be held immediately, to investigate the case.

PORTSMOUTH.—A valuable addition to the fleet was made on Thursday by the launch of that noble screw two-decker the *Princess Royal*, of 91 guns, at this port. She is of the following dimensions:—Length, from figure-head to taffrail, 252 feet; length between the perpendiculars, 217 ft.; length of the keel for tonnage, 179 ft.; breadth, extreme, 58 ft.; breadth for tonnage, 57 ft.; breadth moulded, 58 ft.; depth in hold, 24 ft. Burden, in tons (old measurement), 3129 90-94; ditto (new), 1468. The preparations for the launch were of a stupendous character. Booths were erected for 5000 persons, beside whom there could not have been fewer than 30,000 spectators, afloat and ashore, to witness the spectacle. The arrangements of the dockyard authorities were very complete. The launch took place with perfect success.

THE NEW YORK INDUSTRIAL EXHIBITON.

Her Majesty's frigate *Leander* arrived at New York on the 10th, with Lord Ellesmere, family, and suite on board. The *Leander* had a very fine passage of thirty days from Plymouth. His Lordship was suffering from a severe attack of gout. The *Leander* saluted the American flag with twenty-one guns, which was responded to by the cannon of the fort. The New York papers publish the following list of the passengers on board:—The Right Hon. Francis Earl of Ellesmere, the Hon. Harriet Catherine Countess of Ellesmere; his Lordship's family—Lady Alice Harriet Frederica Egerton, Lady Blanche Egerton, Hon. Algernon Egerton (Captain Coldstream Guards), Hon. Arthur Frederick Egerton (Grenadier Guards). Sir John Aston, Bart., is also a passenger.

The noble Earl was unable to leave the *Leander* on the evening of his arrival; but the Ladies Egerton went ashore, and enjoyed a sight of the novelties, varieties, and bustle, which are to be daily met with during a walk through the Empire City. Lord Ellesmere has brought some valuable contributions to the New York Exhibition—paintings, works of art, &c.—his own private property, from the family mansion. It is the intention of Lord Ellesmere to visit the Niagara Falls, Canada, and various other parts of the continent previous to the opening of the Palace.

We regret to learn, on, we fear, too good authority, that the exhibition is not likely to open till the month of September, though advertised for the middle of July. In this case the go-ahead *furore* seems to have realised the truth of the old saying, "The more haste the worse speed," and not only have considerable expenses been unnecessarily incurred already, but serious inconveniences have attended European exhibitors, who have hurried to respond to the American invitation. The first loss of time was bad enough, but the subsequent delays, and uncertainty of its ending, uncertain of the event, is yet worse; and our mission, with Lord Ellesmere at its head, may, in the event of further delay, either make a tour of the States, or put its finger in its mouth till Jonathan is ready to display his productions. The struggle was prodigious in London; at New York it appears to have been impossible for industry and effort to accomplish the undertaking, and hence the many grave disappointments of the occasion, aggravated by some ridiculous boasting and puffery of the journals, calculated to mislead the uninformed and unwary. These the authorities ought to have checked, when aware of their difficulties

SPLENDID HORSE APPOINTMENTS FOR THE RAJAH OF MYSORE

A suit of gold-embroidered horse appointments, of unexampled richness and beauty, has just been completed, at the order of his Highness the Rajah of Mysore, by Mr. Henton, harness-maker, of 7, Bridge-street, Lambeth. A more gorgeous caparison for a noble steed has seldom been seen, presenting, as it does, a mass of scarlet, gold, and crimson, of dazzling magnificence. The saddle cloth, of large size is of scarlet, profusely embroidered with gold, aured leaves and berries. This gold embroidery challenges attention in *micro-relievo*. The Crystal Palace contained many fine specimens of gold embroidery, but none in which the gold was raised in such high relief or seemed to stand out so boldly from the surface. The Mysoreans have hitherto borne the palm for gold embroidery, but the Rajah of Mysore has elicited the fact that the artisans of London will bear a comparison with those of any nation in this beautiful art. The saddle-cloth contains a gold-crimson ground, with crown on each side each crown being relieved by frosted silver, and sparkling with precious stones. The fringe, five inches deep, is composed of rich gold bullion, having at the corners heavy gold tassels. The saddle itself is made of the richest crimson velvet, picked out with small golden stars. It is of Turkish shape, with a Neapolitan square flap. The pommel presents a gorgeous appearance. In the centre, of solid silver (gilt), relieved by gold, and on either side of which the holsters, covered with crimson velvet, filled with gold embroidery. The pique of the saddle is decorated with a tasteful trellis-work of gold. The square flap of the saddle, is of crimson velvet, is covered with the richest gold embroidery, relieved by a crown, on each side, of gold, frosted silver, and precious stones: and further ornamented by valuable gold bullion fringe. The holster-pipes are covered with crimson velvet, having a tasteful gold flutted-work surrounding the crown in high relief in the centre. The coverings of the holsters are also adorned with a fringe of gold bullion, and contain the words "His Highness the Rajah of Mysore," embroidered in gold, underneath the insignia of the crown, the same inscription in the Canarese language, or dialect. The holster-pipes are mounted with a scroll-chasing of solid silver (gilt). The stirrups, of Turkish shape, are on the same principle of magnificence as the rest of the appointments, being ornamented with scroll chased ornaments of solid silver (gilt). The stirrups are surmounted by a small silver-gilt crown, and buckles of silver (gilt), wrought with a rich guilloche pattern, being so enchased that the metal flashes out like diamonds. The crupper is of red morocco leather, embroidered with gold, and ornamented by gold crowns, buckles of silver (gilt), and at the end a tassel of gold bullion. The bridle, head-piece, and breast-plate, are of red morocco, embroidered with gold, and decorated by buckles of solid silver (gilt). The breast-plate has in front a star of silver (gilt), and a gold bullion tassel, fifteen inches in depth, and of extraordinary richness. The bit is of military shape, is of fine steel (gilt), and is decorated by silver ornaments, surmounted on each side of the mouth by a crown. The head-piece of the bridle is also of red morocco, gold-embroidered.

The silver used in the cross and other ornaments with which the appointments are studded weighs 100 ounces. The total value of these splendid trappings for a royal steed is not less than £1600. We understand that Mr. Henton made, last year, a set of state harness for the Emperor of Russia, which his Highness was so much pleased that he has ever since had his carriage horses harnessed with so much taste and skill.

THE STEREOSCOPE.—M. Claudet, who has recently been elected a Fellow of the Royal Society, has just received the medal of the Royal Society of Arts, for his essay upon the Stereoscope and its application to Photography, the medal having been presented to M. Claudet by his Royal Highness Prince Albert, the President of the Society, at their recent annual distribution of premiums

PHOTOGRAPHIC INSTITUTION.—On Thursday, Mr. Philip de la Motte gave a lecture at the rooms of the Photographic Institution, New Bond-street, which was well attended. A great number of curious specimens of the productions by this art were exhibited, which afforded a convincing proof of the importance of the newly-invented process, and of the improvements which are every day being effected in it. To the man of science, and particularly to the explorer of nature for scientific purposes, the art must be invaluable, affording the ready means of taking exact representations of objects, however minute and intricate in their nature, to the tourist, and the painter of fine scenes, the photographic apparatus will lend valuable assistance. Small has been every man's portion in the very humble life of the grand landscape painter, but much of the day's labour might be saved upon the instant, without expense, by the use of materials thus made available to the artist for use in the study-case. Another period, when the importance of providing variety in sun-and-cast subjects is felt, will be found to the Photographic Institution will be much and highly useful who take an interest in exploring the recesses and the beauties of nature

THE AZTEC CHILDREN (natives of Central America), who have excited great interest in the United States, have arrived in the metropolis during the past week, and are forthwith to be added to its ethnological exhibitions.

CAMDEN ATHENÆUM.—On Thursday evening a public meeting was held—the Marquis of Camden in the chair—to promote the establishment of the above institution. F. T. Streeten, Esq., read the address of the committee, stating that the permanence of the institution had been provided for by a deed of settlement; and that its objects included a library, a reading-room, and a suitable building. Several gentlemen then addressed the meeting; the Rev. Canon Dale, dwelling on the general benefit to the neighbourhood which would result from the establishment; Mr. G. Cruickshank, on the social feeling it would promote; and Mr. C. Knight, on the intellectual and moral character it would tend to form. Professor de Morgan, Sir Benjamin Hall, Lord Dudley Stuart, Mr. Robert Hand, Mr. S. C. Hall, and Professor Carpenter, also spoke in favour of the proposed institution. Thanks having been moved to the chairman by the Rev. J. C. Harrison and Mr. Robert Chambers, the meeting concluded with the National Anthem, played by the band of the Royal Horseguards (Blue).

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The Town-council of Hull have granted a sum of £3000 towards making the necessary preparations for the Queen's visit to that borough.

The Duke of Rutland embarks at Cowes this week, on board his yacht, the *Resolution*, for a cruise.

The Duke of Brabant and the Count of Flanders left Brussels on Sunday, for the Camp of Beverloo, where the Princes will remain until the 1st July.

The American Pacific Mail Steam-ship Company have declared a dividend of 20 per cent on the undivided profits to the 30th April, payable in stock.

The Admiralty have forwarded to the Plymouth Sailors' Home an interesting library for the use of the inmates, consisting of 315 volumes.

An expedition to test with care the mineral resources of Greenland has been arranged to start from Portsmouth this week.

Mr. Edmund Smith, the contractor for numerous Government works, and for the defences of the Isle of Wight, has entered into a contract with the Wootlich Local Board of Health to thoroughly sewerage the town for about £8000.

The Oxford Town-council have refused to put the city seal to a petition in favour of the Tring and Oxford line, because they do not think that the line is required, or would benefit Oxford or the neighbourhood, but would be detrimental to the Great Western line, with which they are perfectly content.

M. Arago, the perpetual secretary of the Academy of Sciences, has left Paris for the country, in order to take some repose, his health being in a very delicate state.

Captain Eyre, paymaster, 47th Regt., is under arrest at Malta, charged with the offence of improperly using the public money, and will be brought before a court-martial.

The Earl of Selkirk has arrived in England from a cruise off Italy, in his yacht, the *Coral Queen*.

The Empress of France has given 300f. to the subscription now being raised by the Society of Antiquaries of Picardy, for erecting a monument to Peter the Hermit.

During a severe storm on Sunday, the fine ship the *Prince of the Seas*, from St John's, N.B., lying in the Brunswick Dock, Liverpool, was struck by the electric fluid, which split her mainroyal mast, royal yard, and destroyed her signals.

Letters from Constantinople speak of the general enthusiasm. The boatmen of the Bosphorus have offered to sell their boats, to give the proceeds to the public Treasury, and to go and fight with the army.

The total imports of the precious metals last week amounted to about £450,000, and the exports to £270,000, of which the largest proportion was silver.

The steamer *Europa* has brought a small amount of specie, £24,000, from Boston. The *Rippon* steamer has taken out £145,248, principally silver, for the Indian Presidences and China.

The King of Prussia is about to visit the baths at Putbus. He will be accompanied by the Prime Minister, Baron Manteuffel.

The model-lodging system in Dublin has commenced. On Monday the Lord Mayor opened, amidst much ceremony, No. 84, Marlborough-street, established by subscription, under the supervision of Sir Edward Borough, Bart., and several members of the Sanitary Association.

The Suspension of Messrs. A. Wrampe and Co., in the Baltic trade, has been announced. Their liabilities are not stated.

The accounts from Texas of the progress of gold discoveries are discouraging, the precious metal being very scarce—not sufficient to repay the labour.

A Mr. John Robinson was shot on the roadside, near his residence, in the hitherto peaceful county of Wexford, at the close of last week. Government has offered a reward of £100 for the discovery of the murderer.

The only news from Alexandria is, that the weather is intensely hot, sickness on the increase, and trade extremely dull.

A fish or the skate species, 9ft. long, and 4ft. 9in. broad, was taken at Buckie, Banffshire, last week. In order to get it into the boat the tail had to be cut off. The fish was 9in. thick at the backbone.

Sandwich Islands letters to the 16th of April report that the king had nominated as his successor to the throne his son Liliopa.

The impudence of Australian thieves is unprecedented. Five men entered the house of a gentleman at Richmond, bound him in his arm-chair, rifled the house, took him upstairs to get cheques on a bank for £600 each, laid out the table, drank his health, and regaled themselves upon his provisions.

A waterspout recently burst over a part of the communal of Domery (Marne); which caused immense damage among the vineyards.

M. Franz Knoop, has been appointed Consul at Hong-Kong, for the King of Hanover; and Don P. F. de Jove e Hevia, Consul at Malta, for the Duke of Parma.

The Sheriff has fixed Saturday the 25th inst. (this day), for the election of a member for the county of Edinburgh.

The Duke and Duchess of Saxe-Coburg, on closing their visit to the Queen, proceed to Vienna, and thence on a visit to the Duke's estates in Hungary.

The Nile has not been known to have fallen so low during the last thirty years.

The Lord Mayor of Dr. Mayor (author of the well-known Spelling-book) died suddenly in Oxford county gaol, on Sunday last.

The Emperor of Russia has offered £190,000 for the *Franklin* and *Investigator*, the two United States mail steamers that have hitherto run between New York, Southampton, and Havre.

The aggregate value of our yearly exports to both Austria and Russia does not amount to fifteen per cent on the total of those to the United States.

The price of beef and mutton is fully thirty per cent higher than it was at this time last year.

At Lockport, New York, a short time ago, a church was struck by lightning during Divine service; one of the singers was killed, and the minister and half the congregat on were prostrated by the shock.

The Dublin University Commission have reported in favour of extensive and liberal changes; among others, the complete revision of the Royal statutes.

A nest of young rooks, which were perfectly white, and had red eyes and white legs, has been taken from the plantation near Dalby Hall, Leicestershire.

The consumption of spirituous liquors in the United States reaches the enormous quantity of eighty-six millions of gallons annually, equal to six gal.ons for every adult person.

The new Hackney Carriage Act which is now passed, will take effect on the 10th July. New regulations will be forthwith made.

The Queen of Greece was expected to pass through Berlin on the 21st inst, from Oldenburg, on her way to the Carlsbad baths where she will await the arrival of King Otho.

Mr. Abbé, prompter, who recently died in Lutterworth, aged eighty, stood nearly sixty-five years behind the same counter, and served four successive masters. He not only never travelled on a rai.road, but never saw one!

The collection of coins at the Mint of Paris has just received a considerable number of Chinese pieces of money, which are being classified according to their dates.

The Bodleian library now numbers 12,000 volumes, and includes a complete copy of Hansard's debates up to the end of last session; all the Mirror of Parliament, published previous to Hansard.

On Friday week a Royal message was delivered to the Chambers at Copenhagen. This document, so important to the Danish Monarchy, as practically applying the principles propounded in the Treaty of London, of 1852, was accepted by the Diet by a majority of 89 votes.

The Emperor of France has sent a sum of 500f. to the Committee of Dramatic Artists, for M. Debreuil, who had the misfortune lately to break his leg

The estate of Mrs. Felicia West (widow of a former member for Dublin), county Galway, was sold on Tuesday, in the Encumbered Estates Court, for £105,000, being an advance of £15,000 on the biddings, after an interval of only two months.

On Monday evening, the 6th inst., the Custom-house at Constantinople was burnt down. The magazines and warehouses were saved, and the loss confined to the public offices. The British crew of the *Wasp*, Lord John Hay, did good service during the fire.

The funeral of Monsignor Garibaldi, the late Nuncio of the Pope in Paris, took place on Tuesday, at the Cathedral of Notre Dame.

M. de Bille, the Danish Minister in London, died suddenly, on Saturday last, from disease of the heart. Count Revendlow, M. de Bille's predecessor, also died suddenly, and very much in the same manner.

Richard Turner, captain of the iron-steamboat *Citizen R*, was on Wednesday fined £10, and 2s. 6d. on each person in excess over 256—the over number being 54—for over-crowding the boat under his charge.

The bill to repeal the duties, allowances, and drawbacks of excise on soap will take effect from the 6th July.

The salaries of all the officials in the Customs department, for the year ending April 5, 1853, was £646,738 13s. 3d., of which the charge for the regular officials was £600,774 11s. 8d., the remaining £45,983 1s. 7d. being for extra labour.

CHESS.

TO CORRESPONDENTS.

WALTER.—One of the first Oriental scholars of the age draws a different inference to yours from Major Jarrisch a interesting letter on the "Nonnestatore of the Russian Chess-men," as to the probable channel through which the Mussulmans derived the game and through Persia, but directly from the Hindus, through the Mogals and Tartars.

S. M., of Weymouth; and J. A. C., of Dublin.—Your Problems can be solved in a manner which exceeds all praise.

A DRAUGHT PLAYER, Pottochry. "The Chess-Players' Handbook," price 5s.; published by Bohn, of Covent-garden.

R. J., Halifax.—A collection of the whole in one volume has long been under consideration. See our Solution to last week's Number.

MATCH BETWEEN MESSRS. LOVEDEAY AND HARWITZ.—We have to acknowledge the receipt of £25 from some members of the Northern and Midland Counties Chess Association, towards Mr. Löwenthal's stake in this proposed contest, and shall be glad to hear from the Secretary, Mr. [illegible], what other steps are taken to make up the remainder of the stakes.

CHARLES DE LACHEVARDIERE.—Your new problems every Monday and Wednesday evening at Wheatley's Hotel, Leicester-square, will obtain for you all the particulars required.

F. D., Bruges.—We are obliged by your kind and prompt attention. A reply shall be forwarded by post.

E. P. C.—The numbers have been regularly forwarded, any misarriage, therefore, the Post-office authorities are chargeable for

12. Kt takes B	Castles on K side	26. Q to her Kt sq	Q to Q Kt 5th (ch)
		27. K to Q sq	B to Q Kt 5th

And White surrendered

(a) A needful precaution before playing the Q B to K Kt 5th, to prevent White from giving check with his K Bishop.

(b) The appears to give the adversaries too much time. K Kt to K R 4th would, we believe, have been better play.

(c) The best way to sustain the attack. Black has not a pleasant game at this point.

(d) It is doubtful if he have any better move, as White threatens to win the Q B for nothing.

(e) He should rather have played P to Q Kt 3rd. In that case Black would not have dared to take the Bishop, on account of the reply of R to K 8th.

(f) A move, strangely enough, overlooked by the Allies when they played their Queen to her 3rd

TESTIMONIAL TO THE RIGHT HON. C. T. D'EYNCOURT.

IT will be remembered that at the general election which took place last summer, Mr. D'Eyncourt, who had represented Lambeth since 1832, was unexpectedly defeated by Mr. Wilkinson, one of the present representatives of that borough. The friends of the right hon. gentleman then resolved not to allow his long connexion with the borough to terminate without some mark of their respect for his past services. Measures were accordingly adopted to present him with a testimonial, the result of which was a magnificent silver vase, of the value, we believe, of 400 guineas, which was presented to the right hon. gentleman on Wednesday night, at a public dinner, in the Horns Tavern, Kennington. There were present on the occasion about 150 gentlemen and between 30 and 40 ladies—the latter having been introduced after dinner, and accommodated with seats at the lower part of the room. Lord Dudley Stuart presided, supported on the right by the Right Hon. C. T. D'Eyncourt, Mr. T. Alcock, M.P., Mr. J. H. Palmer, &c; and on the left by Mr. W. Williams, M.P., Mr. H. R. Ellington, Mr. J. Doulton, Mr. T. Evans, M.D, Mr. H. J. Slack, Mr. T. Webber, Rev. H. Richards, Mr. K. Matthieson, and Mr. J. Doulton, jun. The testimonial was presented, in the name of the subscribers, by Mr. Ellington, who, in the course of his speech, reviewed the great services of Mr. D'Eyncourt to the cause of Parliamentary Reform. Lord D. Stuart proposed the health of Mr. D'Eyncourt, who having replied, several other toasts and speeches followed, and the meeting broke up at a late hour.

The Testimonial (which is engraved upon the next page) is from the manufactory of Messrs Hunt and Roskell, and is a magnificent richly-chased silver vase for flowers, composed of vine branches and bunches of open work, with ruby glass lining. On scrolls appear two shields, one exhibiting the D'Eyncourt coat of arms, and the other bearing the following inscription:—

Presented, on the 22nd June, 1853, by the Electors of the Metropolitan Borough of Lambeth, to the Right Hon. CHARLES TENNYSON D'EYNCOURT, their Representative for twenty years in the first five Parliaments after their enfranchisement in 1832: a Tribute of affectionate attachment and esteem for his private worth, of respect for his patriotic and independent character; and of gratitude for his able, consistent, and faithful services in the cause of Civil, Religious, and Commercial Freedom, throughout a Parliamentary career of thirty-four years.

We subjoin a brief political biography of Mr. D'Eyncourt:—

The Right Honourable Charles Tennyson D'Eyncourt, M.A., of Cambridge, F.R.S and F.A.S., High Steward of Louth, &c., is son of the late George Tennyson, Esq., of Bayons Manor and Usselby Hall, county Lincoln, who died in 1835. In the July of the same year, Mr. Charles Tennyson assumed, by Royal licence, the surname of D'Eyncourt, in compliance with the will of his father, who wished thus to commemorate his lineal descent from that ancient and noble family, and his representation in blood, as co-heir, of the Earls of Scarsdale and Barons D'Eyncourt.

The senatorial career of Mr. Tennyson D'Eyncourt continued through ten successive Parliaments, and may thus be briefly traced:—He represented Grimsby (where there is a very ancient family property) from 1818 to 1826, and Hechingley from 1826 to 1831. In 1830 and 1831 he had two severe contests at Stamford, in opposition to the influence of the Marquis of Exeter; contests undertaken entirely on public grounds. In 1831, he succeeded against the Cecil interest, and sat for Stamford in the last unreformed Parliament, to the end of 1832. In 1832, he was the first-named representative for the new metropolitan borough of Lambeth, for which he was returned during twenty years—that is, to the first five Parliaments after its enfranchisement in 1832, having had, on the whole, a Parliamentary career of thirty-four years, and having sustained no less than ten contested elections—in nine of which he proved successful. The last, however, in July, 1852, deprived him of his seat for Lambeth, but it was only by a majority of 133 in a constituency of 19,000 electors: his graceful farewell on the final declaration is still fresh on the public mind. He was sworn a Privy Councillor in 1832, as a tribute to his spirited public services. He accelerated, by exciting a more peremptory demand for, the great measure of Parliamentary Reform, by his bill to disfranchise East Retford, and confer the right of representation on Birmingham. The question of shorter Parliaments had been counted in the Reform Act of 1832. The advocacy of a return to the old constitutional principle was now confided to Mr. D'Eyncourt; and we find him bringing forward motions for a repeal of the Septennial Act in the years 1833, 1834, 1837, and 1849. He more than once failed of success only by a small majority. Indeed, up to the last attempt, in 1849, he actually obtained, on a division, leave to bring in the bill—the first time such a thing had happened since the passing of the Septennial Act, in 1715. It was, however, thrown out on the second reading.

Mr. D'Eyncourt is a very considerable landed proprietor: Bayons Manor, his seat in Lincolnshire, is one of the most stately castellated residences in England. Having retired from the stage of public life, he now devotes himself to literary avocations. Mr. D'Eyncourt married, in 1808, Frances Mary, only child of the late Rev. John Hutton, of Morton, county Lincoln, and has several children.

THE SCHOOL OF PRACTICAL ART FOR WOLVERHAMPTON AND SOUTH STAFFORDSHIRE.

THE ceremony of laying the foundation-stone of this building was performed at Wolverhampton on Wednesday last. The proceedings commenced by a procession of the local authorities and visitors, which moved from the Town-hall to the site of the School. Although the rain continued during the entire ceremony, the attendance of spectators was very numerous. Upon the procession reaching the site of the building, a suitable prayer was offered up by the Rev. W. Dalton, Rural Dean; immediately after which the platform upon which the rev. gentleman was standing, with the Mayor, Aldermen, and Councillors, and others engaged in the ceremony, gave way. Fortunately, no serious personal injury arose from this untoward accident; and immediately order was restored, Lord Hatherton proceeded to lay the stone with a handsome silver trowel, which had been provided for the occasion, and was handed to him by the architect, Mr. E. Banks. In a cavity underneath the stone was deposited a sealed bottle, containing a record of the date and ceremony, with the names of the architect, builder, and hon. secretary. His Lordship concluded the ceremony with an impressive address, which was received with great applause.

At half-past three o'clock about three hundred ladies and gentlemen sat down to an elegant luncheon at the Exchange, under the presidency of the Mayor (J. Wynn, Esq.) Amongst the company were Lord and Lady Hatherton, Lord Lewisham, M.P., Sir Robert Peel, Bart., Thomas Thornely, Esq., M.P., Dr. Lyon Playfair, and many of the leading inhabitants of the town and neighbourhood. The orchestra and gallery was filled by John Hartley, Esq. A number of loyal and appropriate toasts were given in the course of the entertainment; and speeches were delivered in connection with them by the several noblemen and gentlemen just named, as well as by Alderman Andrews, Nove, and Warner; the Rev. R. B. Owen, and Rev. Wm. Bevan; Lieut. Corser; R. A. Kettle and George Dawson, Esqrs; C. B. Mauder, Esq, the honorary secretary; and Messrs. Markland and Stanier, the treasurer and secretary of the Artisans' Committee. During the banquet, the band of the Royal Scots Greys performed a number of admired pieces of music, under the direction of Mr. D. Owen. Among the leading incidents of this banquet, the cordial invitation given to Sir Robert Peel was particularly remarked; and the handsome sum of £200 was contributed by parties present, in addition to the large sum previously subscribed.

The site of the building, of which the Illustration on the next page is a north-east view, is on the south side of Darlington-street, a position selected for two important desiderata, namely, north lights for the Elementary Room, and comparative freedom from smoke; so that, although it is but a very little way from the market-place and business centre of the town, it is in as clean a part as could possibly be desired—a very important matter as regards the preservation of the costly drawings and other works of arts which will be deposited within its walls. The general plan may be described as an oblong central part, with wings at the ends projecting in the front and in the rear. The principal, or centre façade, fronts Darlington-street; and the entrance, or east façade, is in a new street leading from thence to Salop-street.

On entering from this street into the vestibule and staircase, we have on one side a Committee-room, 18 feet by 14 feet; and, on the other, a Master's-room of the same dimensions. Proceeding onwards, we find the Elementary Room, 43 feet by 36 feet, occupying the central portion of the structure; and, beyond this, a Modelling-room, 30 feet by 18 feet. These, with some closets for hats, coats, &c., form the accommodation on the ground floor. Ascending the stairs—which, as before stated, are at the east end—we find on each side, and over the committee-room and master's room respectively, the Library and Painting-room; and over the whole of the elementary-room and modeling-room, the Antique Room, lighted entirely by skylights, and forming a noble room for the purpose. These several rooms comprise the one-pair floor. There is, besides, in the basement, a porter's residence. As regards the construction of the building it may be remarked that the windows of all the rooms where drawings, &c., will be deposited, are to be made perfectly air-tight; and, therefore, not to open; so as to prevent, as much as possible, the ingress of dust and similar impurities; while the ventilation of the several rooms is provided for by a large flue built for this purpose, surrounding a large stack of smoke flues, with which the several passages will be connected, and thus ensure a constant circulation in the ventilation flue.

If sufficient funds can be raised, it is intended to erect the building with white bricks and stone dressings, but, if not, cements is to be used. It is hoped, however, that a building specially devoted to the arts of design will not be allowed to set so bad an example in taste and construction as that at present contemplated instead of stone—the imitation instead of the reality. The style adopted, as will be seen, is Grecian, which the architect was led to adopt, independently of its intrinsic suitability and merits, by the important consideration that the Greeks were the most perfect masters of art, in nearly every phase of it, that the world has ever seen.

The several desks and fittings are intended to be of the most approved description. The cost of the whole of the building, land, fitting, &c., is expected to be about £2500. The architect of the building is Mr. Edward Banks, and the builder, Mr. John Elliot—both of Wolverhampton.

ST. JOHN'S COLLEGE, HURSTPIERPOINT.

THE ceremony of opening this institution, devoted to the education of the middle-classes on Church of England principles, took place on Tuesday, with a solemnity befitting the great cause which has thus made so important a step in advance. The day opened with an early communion in the parish church of Hurst, which was attended by a very numerous congregation. Morning prayers followed at half-past ten, when the efficient choir from St. Paul's, Brighton, assisted by others from the neighbourhood, performed the choral service most impressively. The sermon was preached by the Bishop of St. Davids, who took for his text, Proverbs xvi, 3—"Commit thy works unto the Lord, and thy thoughts shall be established."

Morning prayer concluded, the visitors made their way to the College, which stands on a beautiful and commanding spot, about two miles distant from the village of Hurstpierpoint, two miles distant from the Hassock's Gate station of the Brighton Railway. At the extremity of the principal broad gravel walk by which the first or outer quadrangle

ST JOHN'S COLLEGE, HURSTPIERPOINT.—OPENED ON TUESDAY LAST.

is entered, was erected a triple triumphal arch, under which the procession formed—the Provost, attended by his society and the choir, in their surplices, meeting the Bishop of the diocese and the assisting Bishops of Chichester, Exeter, and St. David's, at the College boundary.

The procession having entered the College gate, the appointed prayers were recited, and portions of the service were next offered up in the school-room and dormitory. The procession then advanced to the crypt under the dining-hall, fitted up as a temporary chapel, where the Litany was said.

The services being ended, the Bishops, and other assistants, retired for a short time to unrobe, and the whole company ascended to the dining-hall, where, at four long tables, covers had been laid for about 500. The hall was very tastefully decorated with flowers and evergreens, and the banners.

The Rev. N. Woodard, the Provost, presided; and, after the customary loyal toasts, proposed the health of the Bishop of Chichester, as visitor of the College. The Bishop returned thanks in a luminous address, wherein he expatiated upon the objects of the College; and, in conclusion, proposed the health of the Rev. Mr. Sewell. The health of the Provost was next drunk; the company were next addressed by the Bishop of St. David's; the health of the Bishop of Exeter was then drunk, for which the right rev. prelate returned thanks; and the proceedings terminated.

Hurst College, intended as a School for the Sons of Farmers and Tradesmen, and others of the middle classes, and a College for the Education of Commercial Schoolmasters, was originated by the Rev. N. Woodard, the Provost. The building has been erected from the designs of Mr. R. C. Carpenter, the architect of the churches of St. Mary Magdalene, Munster-square, Regent's-park; and St. Paul's, and All Saints, Brighton.

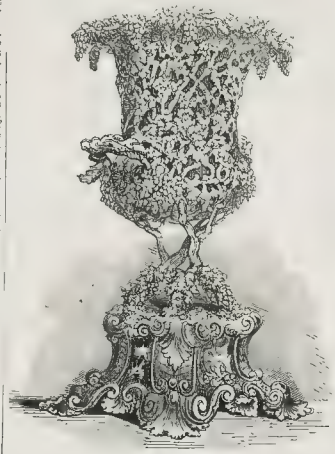
The foundation comprises accommodation for 300 boys; with six masters in holy orders, two chaplaincies, thirty-six sets of rooms for training masters, a chapel, a hall, a museum, a library (boys' and masters'), the Provost's lodgings, an infirmary, &c.

The works were commenced in June, 1851, and the foundation-stone was laid by the Bishop of the diocese on June 25th. The entire mass of the building, when completed, will cover an area of 8700 superficial yards, or nearly two acres. The chapel only remains to be erected. The plan consists of two courts, of which the first or entrance court is not a perfect quadrangle, but lies open to the road in front. The entrance-gate is in the centre of the range of buildings that separates the two courts. To meet the inconveniences of the climate, a double set of cloisters, upper and under, extends round the whole building; except that in front of the hall and chapel there are only lower cloisters, with a lean-to roof. The general arrangement is as follows:—On the upper story the sides of both courts are appropriated to one long dormitory, with its cloister, each such dormitory being intended for fifty boys, measuring one hundred feet by seventeen, and lighted by eight windows, alternately three and two lights. At the end of each is a lavatory. The two dormitories are separated by the central range of buildings, which projects beyond the side line of the court. Here are the sitting and bed-rooms of two masters; the bed-rooms communicate by a window with the dormitories, which are under the superintendence of their occupiers: thus each master, without leaving his room, has the full command of his respective boys, while the two are close to each other; and may have instant communication, in case of necessity, with the chief authorities of the college, by means of the passage in the central range. At the same time the masters' sitting-rooms, thrown out beyond the line, have a free view of the terraces, gardens, and country beyond. In the central range of buildings are the Provost's and chaplain's rooms; and a large wardrobe beyond each for the boys. On the ground-floor the eastern side of the College is arranged in precisely the same manner as the floor above. The western side of the exterior court is occupied by the general school-room, class-rooms, and the boys' library. The projection of the central range is appropriated to the museum. Following into the inner court are the master's library, more class-rooms, and the apartments for the pupil teachers. The central building, besides the porters' rooms, and those for the other chaplain, contains further accommodation for the pupil teachers, and a common parlour for their use. The western half of the north side is taken up by the hall. Beyond this to the left hand, and projecting beyond the line of the College walls, are the apartments for the matron, the kitchens, and other offices. Some idea of the great scale on which the building is arranged may be drawn from the fact that these last-named apartments form a block of about 120 feet by 50 feet. The matrons' rooms are in the centre. Around them are the domestic offices. In the kitchen is a lift or hoist, by which the dinner is raised to the buttery, from whence it is conveyed on wheeled trays into the hall. The water is supplied from a large well close at hand; it is pumped up by a steam-engine into six large tanks capable of supplying each person in the college with twenty gallons per day. The extensive and very complete cooking apparatus is the work of Mr. Jeakes, of Great Russell-street. The steam-engine and hydraulic pumps have been furnished by Messrs. Tylor, of Newgate-street, and the cleverly-contrived hoist for raising the dinner from the kitchen has been supplied by Messrs. Bennett and Corpe, of Lombard-street.

The hall is raised on a crypt: it measures 80 feet by 33 feet; is entered at the west end; is lighted by large three-light windows; and has a high pitched open roof, which carries a light louvre. A dais, as in the ancient college halls, is raised at the east end, on which is placed, parallel with the east wall, the "high table" for the masters, and fellows of the society, and their guests; whilst the body of the hall is occupied by four rows of tables placed longitudinally, and of sufficient extent to accommodate the whole of the boys at one time. To the east of the hall will be erected the intended chapel. Until this is built the crypt under the hall has been arranged as a chapel.

The material of the building is the squared flint locally used, with Caen stone for the masonry. The style throughout is Middle Pointed. The façades are of great extent—greater, probably, than those of any other modern building in this style. Care was therefore requisite to avoid monotony; and this has been simply but effectually gained by varying the windows according to the requirements of the apartments; and by the necessity of varying the general two-storied arrangement of the lofty walls of the hall, and the three-storied arrangement of portions. The entrance-gate in the central building, with the octagonal bell-turret, much heightens the effect.

The carcase of the building has been executed by Messrs. Cheeseman and Sons, of Brighton; and the finishings by Mr. Grimsdell, o London.



TESTIMONIAL PRESENTED TO THE RIGHT HON. C. TENNYSON D'EYNCOURT.—(SEE PRECEDING PAGE.)

WEST KENT POULTRY EXHIBITION.

MR. BAKER'S SPANGLED POLANDS. MR. RAWSON'S GOLD-SPANGLED POLANDS. MR. BAKER'S SILK FOWLS.

PRIZE FOWLS.

THE WEST KENT POULTRY EXHIBITION, AND FLOWER SHOW, AT FARNINGHAM.

THE West Kent Poultry Exhibition took place on Tuesday and three following days (last week); on the first two of which a Horticultural and miscellaneous Flower Show was also held in conjunction with it. Among the company were Lords Stanhope and Holmesdale C. R. C. Petley, Esq.; Sir Percival Hart Dyke, Bart., and lady; R. A. Murray, Esq., and lady; Rev. Thomas Dyke, Rev. George Murray; Thomas Cooper, Esq.; Captain Shepherd and lady; John Rider, Esq.; W. Waring, Esq.; Frederick Campbell, Esq. We abridge the following details from the *Dover Chronicle*:—

This was the first exhibition of Poultry in the county; and the most extensive arrangements were made by the people of Farningham for the comfort of the visitors. An archway, gaily decorated with flowers and evergreens, emblematical devices, flags, &c., was erected across the bridge.

Here, as in most of the recent shows of the kind, the Shanghaes or Cochin-Chinas were numerous: the first and second prizes for Cochin-China chickens were taken by Mr Isaac Jecks, of Newton Lodge, near Norwich. Of Dorkings, No. 52, Mr. Lowrry's, of Horley, Surrey (this gentleman was fortunate enough to gain three prizes as well as the gold medal), were very fine and large birds, of the grey variety, with rose combs, and all the points requisite for good Dorkings. These carried off the first prize.

Of Spanish there was only one variety shown, the white-faced black.

The Dutch every-day layers—or as they were here called Hamburgs—were few and generally very inferior. What were shown as golden, were all copper-coloured. The best pair of pencilled were beautifully marked, but wanted that peculiarity of the breed, the elongated tail to the comb

The Polands were an improving class; four pens were much admired for the beauty of their enormous top-knots, mostly without the least atom of comb. Messrs Baker's white Polands were very large and magnificent birds, carrying one back to the recollection of the old-fashioned Polands. The gold and silver-laced Polands, belonging to Mr. E. Rawson, of Walton-on-Thames were very fine and beautiful birds; as were also three handsome buff white-laced Poland hens, shown by Mr. A. Balls of Nasing, Essex

The Chickens that gained the gold medal were of the large would-be Dorking variety

Among the Bantams were some very fair gold-laced ones, and two beautiful pens of white—one clean-legged and rose-combed, the other feather footed and single combed. There was also a pretty pen of silk Bantams.

In the extra class was a very fine hen of that rare breed the Emu Fowl, which attracted much notice; being very large, and the fibres of the feathers being disunited, it seemed to be clothed in hair: she belonged to Mr. John Franklin, of Bexley-heath. There were also three splendid white Malays, very large and noble birds, sent by Messrs. Bakers.

Among the Ducks were some good Aylesburys; but nothing remarkable except the tufted hook-bills, belonging to Messrs. Baker.

Among the Pigeons, we noticed a beautiful pair of black mottled trumpeters, some excellent barbs, owls, and turbits, a few short-faced tumblers, some black fantails, a pair of young archangels, some bad por-

MR. JOHN MITCHELL'S SELF-COLOUR. MR. JOHN CLINTON'S TORTOISESHELL BUCK. MR. J. CLINTON'S BLUE AND WHITE DOE.

PRIZE RABBITS.

culsins, and tolerable Italian runts. There were also a pair of frill-backs, and a pair of lace pigeons, which were very curious.

Some very fine Rabbits were also exhibited—black and white, blue and white, tortoiseshell, &c.

We have engraved Portraits of Mr. Rawson's and Messrs. Baker's Polish Fowls; and a group of prize Rabbits. We understand that the former are, with but few exceptions, the finest in England, and are imported birds. We are happy to state that the Exhibition was very successful: the number of visitors great, and the sales were good. On Friday, all the school-children of the neighbourhood were admitted free; and Mr. Davis, of the Lion Inn, liberally gave a dinner to 150 of the labouring class, as a wind-up to the first—and, it is to be hoped, not the last—Poultry Exhibition at Farningham.

MUSIC.

SACRED HARMONIC SOCIETY.

Last night was the final performance of the season, when Handel's "Elijah" was repeated; under the masterly direction of Costa. Madame Viardot, Miss Louisa Pyne, Miss F. Rowland, Miss Dolby, Miss Bassano, Mr. Sims Reeves, Mr. J. A. Novello, and Herr Formes sustaining the principal parts. Of the execution of this great work, together with a glance at the past doings, we must defer our notice until next week; but a record of a presentation of a testimonial by the members, subscribers, and friends of the society to Mr. Bowley, the honorary librarian, must not be omitted here. This tribute of regard and esteem was presented on Wednesday evening, in the Minor Hall, by John Newman Harman, Esq., the President, in an appropriate address; which was seconded by an admirable review of the society's progress since its formation in 1832 down to the present period, by Mr Bowley, the duty, therefore, in part, thereon in former days the Londoners had to go to the provincial festivals to hear good performances of oratorios, now the provincials were compelled to come to town to listen to the grandest interpretation of sacred works. Mr. Bowley referred with proper pride to his share in securing the engagement of Costa, as Conductor, whose abilities had so raised the society's fame; and to the endeavours he (Mr. Bowley) had made to ensure the improvements in Exeter-hall. Amongst the amateurs and professors present on the occasion were Costa, Messrs. Anderson, Baumann, Chipp, Smithers, Brownsmith, Bartholomew, Black, D. Hill, Taylor, Winsor, Peacock, Whitehouse, &c.

MR. BENEDICT'S CONCERT.

No professor enjoys a higher character, either personally or artistically, than Mr. Benedict. He has resided many years in this country, and has won universal esteem. His annual concert is regarded as one of the events of the musical season, and the one he presented on Wednesday morning at the Hanover-square Rooms, presented no exception. The attendance was immense, the selection of music excellent from all schools, and the congregants of the "lions of the season" on the most liberal scale. To enter into details of his programme in our limits would be impossible. Mr. Benedict played with Miss Arabella Goddard and Herr Hiller, in J. S. Bach's triple concerto for three pianofortes; and he gave a selection from his MS. opera, "The Minnesinger." Besides the instrumentalists just named, vocal pensioners, Piccolomini, Piatti, Bottesini; M. Reichart, flautist; Sainton, Mdme. Viardot, Mdme. Marchesi, Madame Clara Novello, Madame R. Lablache, Fraulein Agnes Bury, Miss Dolby, Mrs. Lockey, Signori Gardoni, Ciabatta, Gagliera, Marchesi, F. Lablache, Herr Pischek, Mr. Burdini, Herr Reichart, Mr Sims Reeves, &c. The band of the Harmonic Union was engaged, and Benedict and Lindsay Sloper officiated as conductors and accompanists. The great hit in vocalisation was Viardot's marvellous execution of Balfe's Scherzo, which is one mass of intricacies. It was rapturously encored Benedict's composition was also much applauded, especially when he had "When weeping," sung with impassioned feeling by Mr. Sims Reeves

NOTES OF THE WEEK

The eighth and last concert of the Amateur Musical Society took place at the Hanover-square Rooms, last Monday, under the direction of Mr. Osborne, the pianist and composer.

The Choral Fund's annual concert took place at Exeter-hall, last Monday, under the direction of Mr. T. E. Bailey. Handel's "Messiah" was performed; the principal singers being Mad. Caterina Novello, Miss Louisa Pyne, Mdlle. Favanti, Miss Dolby, Mr. Lawler, Herr Reichart, &c. This excellent institution is entitled to the best support; but it is to be feared that the managers, as well as those of the Society of Female Musicians, cannot effect some arrangement with the Royal Society of Musicians, so that there should be one large institution, for the advantage of all classes of musicians.

Mr. and Mrs. John Roe gave their annual evening concert last Monday, at the Misses Isaacs's, Harley-street; aided by Mrs. W. Dixon, Misses E. Sheriff and Julia Worsley, Messrs. Worsley, Gladwin, S. Clifford, Grieves, Richardson, J. G. Boordman, Leffler, and Bottesini.

Herr Jansa, the Viennese, the clever violinist and composer, met his admirers at a morning concert last Monday, at the Hanover-square Rooms. he secured the assistance of Mdlle. Agnes Bury, Miss Hudsart, Herr Reichart, Herr Pischek, M. Tolbecque, Mdlle Clauss, Mr. Aguilar, M. Gratiann, &c.

Miss Watson had an evening concert last Tuesday, at the Eyre Arms, St. John's Wood, with the assistance of the Misses Poole, L. Sherrit, E. Lyon, R. Braham, Rudias, B. Williams, E. Badger; Messrs. Mattocks, G. Tedder, G. Gray, M. Smith, J. Howe, H. Barnby, and Barthen.

At Miss Edwards's Matinée Musicale last Tuesday, at the Queen-Anne-street Rooms, the programme included the names of Mdme. Marchesi, Miss Birch, Piatti, Marchesi, Fossi, and Herr Oberthür.

At Mr. Brinley Richards's second Matinée of Classical Pianoforte Music, his performance of Beethoven's Sonata, Op. 81, and of works by Hensett, Mendelsohn, and Sterndale Bennett, elicited marked tokens of approbation from the connoisseurs congregated at the Hanover-square Rooms: Garcia and Weiss were the vocalists.

The Orchestral Union terminated an interesting series of morning concerts, at the Hanover-square Rooms, last Saturday. Their playing of Meudelssohn's Symphony in A, and of the "Oberon" and "Masaniello" overtures, under Mr. Mellon's able direction, proved what may be achieved by professors constantly playing together. Mr. W. Sterndale Bennett's masterly rendering of his no less superb pianoforte concert in F minor, must be cited as one of the "great facts" of this season. He was deservedly cheered at the conclusion, and recalled. Mrs. Anderson and Mrs. Lockey (late Miss M. Williams) were the vocalists.

Mrs. Arthur Wellmore, the pianist—supported by Mrs. A. Newton, Mrs. Sutton, Mrs. Galton, Miss Pyne; Messrs. King and Lawler Jones, Piatti, Bottesini, and Bottesini had an agreeable soiree on Tuesday, at the Bore-street Rooms.

Mdlle. E. St. Marc, the accomplished pianist, assembled a goodly muster of friends and patrons, at the Hanover-square Rooms, on Tuesday last: and in the scheme the abilities of Mdme. Rudersdorff, Teresa, Milanollo, Parodi, Lablache, Piatti, Bottesini, Bazzini, Biletta, Pilotti, F. Wells, were put in requisition

The London Sacred Harmonic Society performed at Exeter-hall, on Wednesday night, under Mr. Surman's direction, Haydn's "Creation," which was preceded by Dr. Elvey's Royal Birthday Cantata: in aid of the funds for completing the new wing of Brompton Hospital the principal singers were Mrs. Harwood, Misses Birch and Dolby, Mr. M. Wells; Messrs. Lockey, Lawler, and Phillips.

Miss Rainforth repeated her Scottish musical entertainment at the Store-street Rooms, last Wednesday, the selection being from the "Lady of the Lake."

Mr. W. West and Miss Vaughan gave their musical entertainment at the Croydon Literary Institution, on Monday, to a crowded audience

The Cologne Choral Union, after giving ten most successful concerts, within a fortnight, left town last Wednesday, for Brussels, where they were to sing the same evening at a great assemblage of the Choral Societies, by special invitation from King Leopold. The Choral Union sang on Monday three times before the Queen—early in the morning at Buckingham Palace, in the afternoon at the St. James's Theatre, for the benefit of the German Hospital, and in the evening at Stafford House at the concert at the Palace, at which Viardot sang for the second time since her arrival The farewell performance of the Choral Union was at the Hanover-square Rooms last Tuesday, before an immense audience Mr. Mitchell has made quite a hit by this speculation; and the Teutonic Chorulists return to Cologne with £800, to be devoted to the Cathedral. Amongst the artists who performed at the Choral Union Concerts must be signalised Mdlle. Clauss and Mdlle. Graever, the accomplished pianists, and Madame Charlotte Dreyfus, a performer on the harmonium of great ability, who has been producing no little sensation in Paris.

"It never rains but it pours." Our musical budget ended yesterday, with a morning and two evening concerts: the first given by Herr Hildebrand Romberg, at Willis's Rooms, with the co-operation of Mdlle Jenny Bauer, Mdlle. Hermann, Herr Kumpel, Herr Fauer, Herr Graf, Herr Ries, and Vieuxtemps; the second by Mdlle. Coulon, a clever pianiste, at the Hanover-square Rooms, with Madame Doria, Madame and Signor Marchesi, Madame and Signor F. Lablache, Sainton, M. Jacquard, M. Wuille, M. Frelon, Benedict, F. Mori, Misses R. Fitzwilliam and Messent, Gardoni, Jules Lefort, F. Chatterton, &c., and the third by Mdlle. G. Dehotte, the pianiste, at Willis's Rooms, with Madame Doria, Mrs. Macdonnell, Vieuxtemps, Piatti, F. Mori, Lefort, Guglielme, &c.

The sixth and last performance of the Quartet Association took place at Willis's Rooms on Thursday. Sainton, Cooper, Piatti, Howell Fratten, Nicholson, Lazarus, Baumann, Jarrett, Benedict, and Tito Mattei, a pianist, twelve years of age, of prodigious talent. This excellent association has quite maintained the high character of its programmes, and of its admirable execution thereof, this season.

The anniversary dinner of the Choir Benevolent Fund, established in 1851 for the relief of widows and orphans of organists and lay clerks of cathedral and collegiate choirs, took place on Thursday, at the Freemasons' Tavern; Sir George Clerk in the chair. The choir consisted of about thirty voices, from her Majesty's Chapels Royal, St. Paul's Cathedral, Westminster Abbey, and St. George's Chapel (Windsor), under the direction of Dr. G. J. Elvey, of the Windsor Chapel Royal. Amongst the glees and madrigals, Dr. Benj. Cooke's Eptaph (for five voices) to Thomas Tallis—who was organist to Henry VIII., Edward VI., Queen Mary, and Queen Elizabeth—was not the least interesting item.

Next week will be the eighth and last Philharmonic Concert, the Director's matinée at the Musical Union, Mr. Howard Glover's grand annual concert at Exeter Hall, M. Jacques Blumenthal's fashionable matinée, &c.

THE THEATRES.

ROYAL ITALIAN OPERA.

The debut of Mdme. Medori on Saturday night in Donizetti's "Maria di Rohan," was evidently successful. She has a magnificent mezzo soprano voice, sings well, and has a most dramatic power. She cannot be pronounced at present to be a singer of genius, or an actress of power and impulse, but there are indications of a far superior order of lyric ability than has been met with of late years. Grisi and Viardot excepted indeed, it would be difficult to name the artisté who has finer attributes as a prima donna than Mdme. Medori. Combined with the vocalisation of Verrenes, by Ronconi, the expression and energy of Tamburlik as *Chalais*, Donizetti's opera created a marked sensation. Mdme. Medori was called before the curtain both at the end of the second and third acts. She has a good face and figure for the stage, moves with ease and grace, and is quite versed in the conventional by-play of the scene.

On Tuesday, Verdi's "Rigoletto" was played for the fourth time, the King and Queen of Hanover being present.

On Thursday, for the first time, "Lucrezia Borgia" was repeated, and Mdlle. Piunkett danced a *pas de deux* with M. Desplaces. The new divertissement of "Fleurette"—produced on Saturday night, with Beverly's pretty scenic effects—evidently pleases the subscribers. The groupings are picturesque and animated. Mdlle. Besson, persecuted by a magician, is pretty and sentimental, and pirouettes bravely, when *Fleurette* is restored to her own lover.

Berlioz's "Benvenuto Cellini" will be brought out to-night (Saturday).

HAYMARKET.

The spirited manager of this theatre is determined to "shoot folly as it flies;" and, under the title of "Rappings and Table-movings," has produced a lively farce, in which he and Mrs. Fitzwilliam perform the principal rôles. Mr. Rogers personates a sceptical man-about-town he perceives that the tables suddenly begin to move, is very amusing. The effect is produced by the entrance of sheriff's officers, to escape whom Mr Buckstone and another gentleman get under the tables, and bear them about the room. Mrs. Fitzwilliam, as the Medium, played the female charlatan to admiration, and expounded the conditions of her mystery with American coolness and unction. The little piece was given out for repetition with well-merited applause.

Her Majesty the Queen, his Royal Highness Prince Albert, and suite, attended this establishment on Tuesday evening, on the occasion of the performance of Mr. Planché's burlesque, "Mr. Buckstone's Ascent of Mount Parnassus," and Howard Paul's amusing farce, "Rappings and Table-movings." This was her Majesty's first visit to the Haymarket the present season

ADELPHI.

Mr. Boucicault's talents as an adapter of French dramas have again been put into requisition, by the production, on Monday, of M. Dumas' *drame* of "Le Chevalier de la Maison Rouge," under the title of "Genevieve; or, the Reign of Terror." Genevieve de Beaujeu (Mdme. Celeste) is the sister of the Chevalier, who is engaged in a plot to deliver *Marie Antoinette*. She is also, though married to *M Dixmer* (Mr. Wigan) fatally in love with *Maurice Lindey* (Mr. Leigh Murray), who had rescued her from the hands of the Sansculottes, and who follows her to her home. The result is, that the young man is well nigh seduced from his obligation to the Republic, and suffers from the agitations of doubt and love. *Lorin*, a Girondist (Mr. Webster), discovers the plot, and that *Maurice* has some share in it; but, being his friend, obtains a pass to enable him to fly from Paris. This, however, is prevented by the jealous interference of her husband, who commands Queen's escape, by substituting her person in prison—a scheme which, in turn, is frustrated by a sudden insurrection, in consequence of which *Genevieve* is brought before the revolutionary tribunal, by which she is condemned to death. But Lorin, who witnesses the scene from amidst the crowd, compels the gaoler to surrender to him two cards, which will enable him to enter the prison, and, on his exit, afford escape also to his wife. Here he is enabled to effect, having been served by *Jean*, who runs him through in a shed and carries away the cards intending to effect with them his own escape. *Monsieur*, also, loses the power, but has a card of entree for himself, however, somewhat doubtfully, in all wanting his friend to escape, suggested a respectable suit in the place of the tattered one which, however, he adopts as a means of a new insurrection for the doomed, an expedient perfect, satisfactory to an audience not over critical, and disposed to be pleased. The piece principally depends on groupings and *tableaux* the merit of the acting principally belongs to Mr Webster and Mr. Wigan while to Mr. and Mrs. Keeley have been given two extraneous comic characters, by way of relief to the general seriousness of the action. Mdme. Celeste was intensely melodramatic, but this was in keeping with her part. The play was enthusiastically received

ST. JAMES'S.

Mdlle. Rachel took her benefit on Wednesday, in the part of *Louise de Lignerolles*, in the *drame* so named, by MM. F. Dinaux and E. Legouve. It is an old play, in which Mdlle. Mars originally performed. Neither the play nor the character has much interest. *Louise* is the wife of a creole, who forms an attachment for the wife of a Colonel. *Louise* suspects and forgives, and engages also in a duel on grounds, and in language, unintelligible to the audience. The injured husband insists that the duel shall take place between *Louise* and himself, to the extreme horror of the latter's friends—a fact which, as the duelling is to be fought with fists, the creole finds out for the first time. Mdlle. Rachel does the part with a fine feeling of womanly dignity and sentiment; but, on the whole, it is not worthy of her talent.

WILLIS'S ROOMS.—We were admitted on Monday to a private rehearsal of Messrs. Macfarlane and Cunningham's new entertainment, entitled "The Budget." Both are well-known anecdote comprehending theatrical people, told by Mr. Cunningham, as introductory to some old songs by Mr. W. Adams; while Mr. Macfarlane gives an account of the orchestra, on which instrument he plays with and without the mute; and also performed the extraordinary feat of playing on that and the bugle at the same time. Mr. Adams's vocal powers were displayed in his singing Dibdin's song of "Poor Jack," unless intelligibly given, lost its charm. Mr. Macfarlane's part of the performance was admirable.—Mr. Frederick Webster, on Friday next, repeats his entertainment of Memory, with illustrations from the speeches of eminent British statesmen, and the advantages to be derived from the study of elocution in public and private life. In read ng the speeches Mr. Webster wisely abstained from any theatrical display; simply rendering the meaning with proper emphasis, and we may add "discretion."

THE OCEAN MAIL.—ROYAL GALLERY OF ILLUSTRATION.—A new diorama, painted by Messrs Grieve and Telbin, illustrative of the route of the ocean mail, *vid* the Cape to India and Australia, was opened on Monday, and consists of a series of as magnificent pictures as we ever witnessed. Every available point is touched. Some of the most interesting are the scenery of St. Helena, Cape Town, Paul and Virginia's Tomb, and the Maldive Islands. The Australian views are superb, and consist of Sydney, as seen from the shore, Sydney Cove, Mount Victoria, Ophir Diggings, Encampment of Exploring Party, Australian Alps, Sheep Station, and the Bathurst and Mount Alexander Diggings. The views are all admirably explained by Mr. Stocqueler, who has also prepared a Guide to the Dioramas, which contains full information on every particular.

THE NEW PENNY RECEIPT STAMP.—In answer to some inquiries relative to the penny stamp, official notice has been given, that any amount of stamps which any vendor may have on hand at the time when the new penny receipt stamp comes into operation will be exchanged for the new stamp, upon application to the stamp department at Somerset-house.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, JUNE 23.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind	Rain in Inches.
	Inches	°	°	°	°			Inches.
June 17	29.822	74·0	50·3	61·7	+ 2·9	70	S W	0·00
„ 18	29.675	69·2	51·1	57·5	- 2·3	87	S W	0·09
„ 19	29.689	63·1	50·4	57·9	- 2·0	81	S W	0·71

„ 21	29.573	64·1	45·9	53·3	- 7·0	83	N E	0·09
„ 22	29.750	63·8	45·4	53·4	- 7·0	83	N N E	0·01
„ 23	29.728	72·1	53·1	59·7	- 0·9	73	N	0·00

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer decreased from 30.12 inches at the beginning of the week to 29.00 inches by 9h. p.m. on the 20th; increased to 29.85 inches by 9h. a.m. on the 22nd; decreased to 29.79 inches by 9 h. p.m. on the same day; and increased to 29.83 inches by the end of the week. The mean reading for the week was 29.732 inches. The mean daily temperature of the 20th was 53·1°, and is the lowest mean daily temperature recorded on that day since the year 1843, when it was 52·9°; the mean temperature of the 21st was 53·3°, and is the lowest since the year 1823, when it was 50·9°; and the mean temperature of the 22nd was 53·4°, and is the lowest since the year 1839, when it was 49·5°; the mean temperature of these three days of the week was 53·9°, and they are the three coldest consecutive days for the corresponding period since the year 1823, when the mean temperature of the three corresponding days was 53·9°. The mean temperature of the week was 58·7°, being 3·4° below the average of the corresponding weeks in thirty-eight years. The highest reading of the thermometer (74·0°) occurred on the 17th, and the lowest (45·3°) on the 20th: their difference (28·7°) shows the range of temperature in the week. The greatest daily range occurred on the 17th, and the least (8·4°) on the 20th: their difference (28·7°) shows the range of temperature in the week. The greatest daily range occurred on the 17th was 24·2°, on the 17th; the smallest (8·4°) on the 18th: and the mean for the week 17·7°. Rain fell during the week to the depth of 0·80 inch.

Lewisham, June 24th, 1853 JAMES GLAISHER

HEALTH OF LONDON.—During the week ending June 18, the births of 1469 children were registered in the metropolitan districts: of these 742 were boys, and 667 were girls. In the eight corresponding weeks of the eight preceding years the average number was 1548. The number of deaths registered in the week was 1000, and the other organs of respiration, 197; to diseases of the nervous system, &c., 59; and to visceral obstruction, cold, and intemperance, 52 deaths are attributed. The number of fatal cases arising from typhus (which, in the week ending June 11, was 53) has declined, in the week ending June 18, to 30; smallpox, from 6 to 4; measles, from 20 to 20; consumption, from 163 to 131; and pneumonia, from 62 to 45. Scarlatina has risen from 20 to 39; hooping-cough, from 28 to 67; and bronchitis, from 54 to 55. Diseases of the respiratory organs have been consequently decreasing during the last seven weeks, but are still in excess of their corrected average

MEASURING LONDON FOR ITS CABS.—On account of the new Hackney Carriage Act coming into operation next month, the Metropolitan Police Commissioners have issued orders for a measurement of all the leading thoroughfares and principal streets in London. When the distance between a large number of principal points and the various cabstands shall have been ascertained, the result will be embodied in tables for the use of the public, as well as for cab-drivers, and the police at the stands.

WIDENING OF FENCHURCH-STREET.—Notices of removal have been served upon the occupiers of premises on the south side of Fenchurch street, between Mark-lane and London-street, required for widening this important thoroughfare; and the Improvement Committee of the Corporation of London have given instructions to sell the materials for the purpose of clearing the site. After this portion of the street has been completed, it is intended to carry out the improvement to the eastern extremity of the street.

LAUNCH OF AN IRON SCHOONER YACHT.—On Tuesday an iron schooner yacht, the *Vivanda*, built by Mr. J. Scott Russell for Robert Stephenson, Esq., M.P., was launched at Blackwall. This yacht is intended to replace the other of that name, which was destroyed by fire while undergoing repairs at Cowes, after her return from *America*. We understand that the *Scorpion*, belonging to Vice Com. Bartlett, R.L.Y.C., will meet the *Vivanda* at the forthcoming regatta at Lowestoft.

LAUNCH OF THE "CRUSADER."—This fine vessel, built by Mr. Mare, was launched on Tuesday from the same shipbuilding ground. Miss Rolt performed the ceremony of the christening. The following is an enumeration of her dimensions:—The length between her perpendiculars is 180 feet; dito of the keel for tonnage, 154 feet 6 inches; breadth for tonnage, 31 feet; depth in hold, 21 feet 6 inches; burden in tons, 250 7-94; with engines of 400-horse power. Mr. Mare entertained a select party on board the *Jupiter* steamer. The band of the 2nd Life Guards was in attendance; and, after a pleasant excursion down the river, his guests returned at an early hour to town.

THE WELLINGTON AND UNITED SERVICES' BENEVOLENT INSTITUTION.—On Saturday last, a meeting was held at Willis's Rooms, for the purpose of taking measures to promote a national testimonial to the late Duke of Wellington, in the form of an institution, for the relief of veteran non-commissioned and petty officers, soldiers, sailors, and marines of her Majesty's and the Hon. East India Company's service, and their widows and orphans. Lord Ebrington was in the chair. The secretary announced that there was already subscribed nearly £2000. Resolutions organising the society having been agreed to, the business terminated.

METROPOLITAN ASSOCIATION FOR IMPROVING THE DWELLINGS OF THE INDUSTRIOUS CLASSES.—On Thursday the ninth annual meeting of this association was held at the London Tavern; Sir R. Howard, Bart., M.P., in the chair. The report recommended a dividend of 4½ per cent. Dr. Southwood Smith, in addressing the meeting, stated that the per cent average mortality of adults in the metropolis at large was three times greater than that in apartments or model lodging-houses of the association, and that that of infants was five times greater.

BURIALS IN THE METROPOLIS.—By several orders in Council of the same date, and in pursuance of the powers given by 15 and 16 Victoria, from and after the days respectively set out therein, burials in the grounds attached to the churches therein named are to be discontinued. At the head of this list is the burial-ground of St. Clement Danes, on the 30th day of June. This ground is prominent in situation, being in the centre of the Strand—and prominent in its arrangement. Its condition was recorded eighty-six years since, in a vestry meeting called for taking into consideration the cleansing of the Great Vault under the Church," the smell of which was then "so offensive, that divers of the parishioners were prevented from attending Divine service." We are not aware how often the "cleansing" process has been resorted to; but we know that some very remarkable disclosures were made in reference to this and other places in the immediate locality before the Parliamentary Committee of 1849; and we have also been assured that in or about the year 1767, the Great Vault was on fire, and continued burning during many days! There are at the present moment a great number of bodies in the Great and Recter's Vaults under the church; they are piled one upon the other, and give off at times the most noisome effluvium; whilst every passer by must have noticed the oft-repeated "committing" to the earth of the departed, who, to the number of many thousands, have been disposed of in the "hallowed and pestilence-loading belt of land around the church. As our readers are aware, we have often pointed out the unfitness of this and similar sites as places of sepulture. To the present period, however, little practical good has been effected. With the exception of the closure of Enon Chapel, Clement's-lane, Strand; and Ellin Chapel, Fetter-lane; the shutting up of the Spa-fields receptacle, in Exmouth-street; and the ground in Russell-court, Drury-lane; the churchyards of this huge metropolis, in spite of warnings, remonstrances, and denunciations, have, with the exceptions above mentioned, defied public opinion, and survived the most vigorous attacks of the press; and, to the year 1853, the loathsome and destructive practice has continued of "depositing" (to use Mr. Walker's expressive term) some 50,000 dead bodies annually in the streets, lanes, and blind alleys—in cellars, and under human dwellings, in the midst of two millions and a half of the living inhabitants of the greatest city in the world. The ignorant, the superstitious, and the mercenary must be taught, however, by the strong arm of authority, if they will not acquire knowledge by experience, that they can no longer be permitted to offend public decency, injure the public health, or allowed to poison earth, air, and water, in order to satisfy sentiment. The remedy for this great evil is now within grasp; and it becomes every one to aid, both by precept and example, the wise resolve of the present Secretary of State for the Home Department, who has struck the first official and effectual blow at the abomination of intramural burials.

THE ACCESSION OF THE QUEEN TO THE THRONE.—Monday being the anniversary of her Majesty's accession to the throne, merry peals were rung from several of the City and West-end churches, and flags were raised on the different Government offices, as well as on Riding of the spires of the churches and other public buildings. The Park and Tower guns were fired, and there was an inspection of a portion of the household troops on the parade behind the Horse Guards.

THE CAMBRIDGE ASYLUM.—A grand fancy bazaar, in aid of the funds of this institution, was opened on Wednesday and Thursday at the Riding-house on the Victoria road, where they hastened to pay their respects to his Majesty the King of Hanover, the Queen of Hanover, and the Crown Prince and Princess of Hanover arrived, and were speedily followed by her Majesty and suite. Her Majesty, on entering the Riding School, where the booths were erected, immediately approached her cousin the King of Hanover, and kissed him on each cheek, the King of Hanover acknowledging this kindness by kissing her Majesty's hand. The same kind marks of affectionate regard were exchanged between the members of the Royal Family. The stalls were personally superintended by ladies of the highest rank, who have hitherto been very successful in effecting sales. The Duchess of Gloucester and the Duchess of Cambridge held one, the Duchess of Jersey another, and the Duchess of Norfolk a third; and their presence, combined with the visit from the Royal personages, attracted to the bazaar a large number of the aristocracy. The Queen purchased extensively, and a clean sweep was made of the contents of nearly all the stalls. The bands of the Royal Horse Guards and the Coldstream Guards were in attendance, and played various airs during the time, and the refreshments were of the best kind.

ROYAL BOTANIC SOCIETY.—The unsettled state of the weather had its effect in destroying the pleasure of the public who visited the display of rhododendrons on Monday afternoon in the gardens, Regent's-park. The exhibition if held was superb. Mr Waterer, of Bagshot, having apparently outdone himself in this exemplification of a flower which, when in full bloom, may be said to be without parallel in creation. The flowers were arranged, as usual, under the same tents thrown into one and the general *ensemble*, owing to the multitude of blossoms which each plant bears, is no less singular than alluring.

ADVERTISING DUTY.—Deputation to LORD JOHN RUSSELL. A memorial, numerously signed by influential citizens of London, was presented, on Tuesday, to Lord John Russell, at Whitehall, urging the total repeal, rather than the reduction, of the Advertisement duty, and pointing out that all the gross inequalities of the old tax would remain under the sixpenny rate, which would continue to cripple and extinguish cheap literature. His Lordship stated that one penny was the sum consideration for which the tax was retained, and denied any intention to control the press.

THE EAST INDIA BILL.—"At the very numerous meeting of members of the House of Commons, held on Tuesday last, at the Thatched House in St. James's-square, the unanimous feeling prevailed after the speech of the noble Earl—that the amendment of Lord Stanley should be supported."—*Morning Herald*. On this subject the *Globe* of the same day says:—"Not more than one hundred members accepted the ex-Premier's invitation, and the assemblage in St. James's-square showed to the eye of the most enthusiastic Derbyite, that desert one from, and decisions on the once great Conservative party, existed to an even greater extent than the rumours of the last few weeks indicated. The whole affair was tame, dull, and spiritless."

THE MIDDLESEX MAGISTRACY.—The Marquis of Salisbury, as Lord-Lieutenant of the county of Middlesex, gave his annual entertainment to the magistracy of the county and the officers of the East and West Middlesex Militia, on Saturday evening last, at the family mansion in Arlington-street.

THE NUNNERIES QUESTION.—On Monday a deputation from the Protestant Alliance had an interview with Lord Palmerston, at the Home-office, to present an address to her Majesty, from the general committee of that body, upon the subject of the inspection of nunneries. The deputation was very numerous, and several noblemen and gentlemen were members of it.

THE BAND IN KENSINGTON-GARDENS.—The band of the regiment of Horse Guards stationed at Knightsbridge-barracks have commenced their performances in Kensington-gardens, for the summer season. The band plays from half-past four until half-past six o'clock on Tuesday and Friday afternoons, at the south eastern point of the gardens, facing Rotten Row, and almost immediately opposite the Prince's-gate.

THE COMMISSION FOR THE CITY.—The Queen has been pleased to direct letters patent, dated Whitehall June 20, to be passed under the Great Seal, constituting and appointing the Right Hon. Henry Labouchere, the Right Hon. Sir John Patteson, Knight, and Sir Cornewall Lewis, Esq., to be her Majesty's Commissioners for inquiring into the existing state of the city of London.

THE NORTH LONDON COLLEGIATE SCHOOL.—Last week the annual distribution of prizes to the pupils in the North London Collegiate School, Camden-town, St. Pancras, took place in the spacious Vestry-hall. The Rev. Canon Dale presided, and many of the pupils and their parents, the report was read, which showed that the school had greatly progressed, and there had been an increase of scholars, the number now amounting to 240

HAMPSTEAD HEATH.—A meeting of the inhabitants of the parish of Hampstead was held at the Assembly Rooms, on Wednesday evening, for the purpose of considering measures to be taken for securing to the public the perpetual enjoyment of the Heath. The meeting was very numerously attended; and, the chair having been taken by the Incumbent, the Rev. J. Allen, a longer resolution were proposed, and unanimously carried, to the effect, that, in the opinion of the meeting, the inhabitants of the metropolis, of the parish, and of the neighbourhood generally, to secure the enjoyment of the Heath; and that the ways most open to the attainment of this object that the Heath, and certain of the adjoining land necessary for its protection from building, should be purchased by the Government; and a memorial to the Government to order the Woods and Forests was adopted, embodying the views of the meeting. Much stress was laid on the value to the public of the open ground, both as regarded health and recreation, and as a school of art to landscape painters. The threat of impending buildings on some of the most important sites in the neighbourhood of the Heath was urged as a ground for immediate measures. A plan, designed by Mr. E. Cockerell, R.A., the well-known architect, was exhibited, showing the facility with which an open area of 50 acres, with approaches from Primrose-hill, could be obtained. No material difficulties of ground seemed to exist as to the value of the enclosed land near the Heath; but the principal point at issue was the value to be attached to the interest of the Lord of the Manor in the Heath itself, which had been estimated by the promoters of the scheme on the basis of the annual revenue which it yielded, but which the solicitor of the Lord of the Manor estimated at £600 per acre—on the ground, of course, that it was grantable for building purposes—a position which was emphatically denied by the copyholders and others present. Assuming the copyholders to be correct on the last point, it seemed to follow that the scheme could be carried out, including approaches, at a cost of about £100,000.

INDIA AND THE NEW BILL.—The India Bill was again discussed by the Court of Proprietors on Monday. Mr Hume reiterated his opinion that the Board of Control, not the Directors, was the real power, all the bad measures that had been adopted respecting that empire. Mr. Sullivan strongly objected to the Government measure, and moved:—

That, having examined the correspondence laid before the Court, and the principles of the Government, the Court, confining itself to the question before it, the constitution of the Court of Directors, and considering in the most sad judgment of that body, were of opinion that the present administration of Indian affairs was essentially for the good of the government of India; and that the proposed change in the constitution of the Court of Directors was calculated to impair the principal checks which now interposed upon the Board of Control, and that the Court of Directors be requested to submit these views to the Government and to Parliament in such manner as they should think fit.

Mr H. Mackenzie seconded the resolution. Mr. Ayrton moved, by way of amendment, that the bill be referred to a committee, to be appointed by the Court of Directors out of the body of proprietors. He contended that the Government of India must finally come into the hands of the Crown, like every other portion of the British Empire; and said he hoped to see the day when even the name of the East India Company would be utterly abolished. Mr. Serjeant Gazelee said, rather than the amendment should drop, he would second it, though he should prefer having the committee appointed by the Court of Proprietors. The debate was adjourned.—The discussion was resumed on Tuesday, and, after a great many speeches, the amendment was negatived, and the original resolution carried.—A public meeting on this subject, in connexion with the Manchester Chamber of Commerce, was held in the Town-hall, Manchester, on Monday, Mr. T. Bazley in the chair. Mr. Bright was the principal speaker, and the following resolution was moved and carried:—

That this meeting cannot discover in the bill which her Majesty's Ministers have brought before Parliament even a latent hope that their project for the future government of India will provide any sufficient remedy for the glaring mistakes of the past, inasmuch as the system is not reformed in any essential degree, and no security can be found in it for an economical and efficient administration of the enormous portion of the revenue of India which is applied to the much-needed internal amelioration of the country, instead of being, as heretofore, wholly lavished on territorial aggrandisement

ON DIT.—An illustrious and youthful Princess, the youngest daughter of a deceased Royal Duke, it is rumoured in courtly circles, has just refused the hand of one of the most distinguished of the Sovereign Princes of Germany, on account of the difference of religion between the august parties.—*Atlas*.

SEED OF THE TOBACCO PLANT.—A discovery which may prove of some commercial importance appears to have been made by a British resident in Russia, namely, that the seed of the tobacco plant contains about fifteen per cent of an oil possessing peculiar drying properties, calculated to render it a superior medium, especially for paints and varnishes

NATIONAL SPORTS.

BIBURY CLUB MEETING.—WEDNESDAY.

Sweepstakes of 50 sovs each—Letus, 1. The Golden Power, 2.
Andover Stakes—Azael, 1. Calcedy, 2
Champagne Stakes—Rosalind, 1. Bay Celia, 2.
Plate of 50 sovs—Bloomsbury, 1. Miraboau, 2.
Bibury Stakes—Lancashire, 1. Horse-tail, 2.
Plate of 50 sovs—Provost Marshal, 1. Paltery, 2.

THURSDAY.

Third Triennial Stakes.—Kingston, 1. Marbinger, 2.
Match—Poetry beat St. Stephen.
Fifth Triennial Stakes.—Autocrat, 1. Ivan, 2
Handicap Sweepstakes—Thread beat Baroness Grapeshot and Malheureux.—The latter won the deciding heat.
Stewards' Plate.—Ratapian, 1. Ninnyhammer, 2.
Fourth Triennial.—Colonel, 1. Chanticleer, 2.
Mottisfont Stakes. Belus, 1. Marsyas, 2

LATEST BETTING ON THE COURSE.—Northumberland Plate: 6 to 1 agst Scotbrig. Liverpool Cup: 10 to 1 agst Grey Momus. Goodwood Stakes: 6 to 1 agst Little Harry. No betting at Tattersall's this evening.

WINCHESTER.—FRIDAY.

Original Hampshire Stakes—Antigone, 1. Black Doctor, 2.
Two-Year-Old Stakes—Bribery, 1. Austrey, 2.
Queen's Plate—Torrents were 6 to 4 on Ninnyhammer.
Sweepstakes of 5 sovs—Victorine, 1. C. by Emperor, 2.
Match.—Himalaya received forfeit from Little Gemmy.
Four Year Triennial.—Harbinger walked over.
Two Year Triennial.—Bribery walked over.
Members' Plate (First Heat).—Letterpress, 1. [illegible]

CRICKET.—One of the great matches of the year—[illegible] Marylebone Club and Ground began on Monday, and end 1 on Wednesday. Scores, 1st innings, 194; second, 108; total, 302. The Club, first innings, 185; second, 79: total, 264, and losing by 1 [illegible] the match between Eleven of England and Twenty two of Manchester (Broughton) Club, the latter won by two wickets

STRANGE PROCLAMATION.—There is a proclamation extant, addressed by Russia to the Circassian Chiefs in 1837, in which it is asked "Are you not aware, that if the heavens should fall, Russia could prop them with her bayonets? The English may be good mechanics and artisans, but power dwells only with Russia. No country ever waged successful war against her. Russia is the most powerful of all nations If you desire peace, you must be convinced that there is but two powers in existence—God in heaven, and the Emperor upon earth"

TEAS AT MANCHESTER.—Teas from the East Indies have been forwarded to the Manchester Commercial Association in sample, by order of the Hon. East India Co.; they have been given in the neighbourhood of the Himalaya mountains. These samples include gunpowder tea, valued at 2s. 6d. per lb. in bond; young hyson, at 1s. 11d.; and black, worth 1s. 9d. per lb. They are free of colouring matter, and it is believed they would meet with a good demand in the market here

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The market for National Securities has continued to be wholly governed by the advices received from Turkey. Since we last wrote, only a limited amount of business has been transacted in it; yet very little change has taken place in the quotations. The Government broker has made a few small purchases for the Reduction of the Debt. The quantity of Stock "accepted" at the Bank of England this week has been trifling, and the premium on Exchequer Bills and India Bonds has suffered a decline; the former having been 3s. to 6s.; the latter, 20s. Notwithstanding the late advance in the rate of discount, the demand for the Bank of England, money has continued very abundant and cheap. Advances have been made upon stock as low as 1½ per cent. The quotations in London-street have varied from 1½ to 2 per cent per annum.

On Monday Bank Stock was 229½ to 228½. The Three per Cents Reduced marked 96¾ ⅞; the New Three-and-a-Quarter per Cents, 101¾ ⅞. Long Annuities, 5⅞. The proprietors of South Sea Stock have also risen a point; South Sea Old Annuities, 1.0; Exchequer Bills, 3s. to 6s. prem.; Consols, for Account, 98¾ ⅞. No change worthy of particular notice took place in prices either on Tuesday or Wednesday, on which days the operations for the Account were comparatively trifling. On Thursday the market opened steadily, and the Three per Cents were 98¾ ⅞, at which figure they continued up to the close of business. The Three per Cents Reduced were 96¾ ⅞, and the New Three-and-a-Quarter per Cents, 101¾ ⅞. India Bonds, under £1000, were 20s.; Exchequer Bills, 4s. to 2s. prem.; Long Annuities, 5⅞. The proprietors of South Sea Stock have unanimously resolved to accept from Government the amount of their capital, viz., upwards of £3,500,000 sterling.

The demand for Foreign Bonds has been by no means active. Prices, however, have ruled tolerably firm. Austrian Five per Cents have been done at 99¾. Danish Five per Cents, 103 ½; Dutch Two per Cents, 64¾; Ecuador, 6 to 5⅞; Mexican Three per Cents, 29 to 27⅞; Portuguese Four per Cents, 39 to 39¾; Sardinian Five per Cents, 94¾; Spanish Three per Cents, 19 to 18⅝; the New Deferred, 5¾; Swedish Four per Cents, 98; Dutch Two-and-a-Half per Cents, 64⅞ to 65; and the Four per Cents, 95. We understand that an agent is coming over from Lisbon to see if terms can be made with the English bondholders, as the interest upon the Indian railway scheme shall be withdrawn. It is now acknowledged that the determination of the committee of the Stock Exchange not to allow any new Portuguese securities to be quoted in the list has been a most insuperable obstacle to the raising of capital for public works in Portugal. It is thought that some beneficial understanding will be come to with the Republic of Ecuador for the payment of the interest upon its debt.

Miscellaneous Shares have commanded only a moderate amount of attention. Australian Bank Shares, Australasian Bank, Australia, and Union Bank of Australia, 11⅛; Oriental, 7; South Australian, 5⅛; Union Bank of Australia, 11⅛; Australian Agricultural, 67 to 69; British American Land, 70; Crystal Palace, 7⅛; Ditto, of France, 1 prem.; North British Australasian, 1⅛; Peel River Land and Mineral, 7⅛; Ditto, second issue, 1 prem.; Royal Mail Steam, 73⅛; South Australian Land, 43 to 45½; Van Diemen's Land, 19. Victoria Dock, 6⅛; Hungerford Bridge, 12; Vauxhall, 23½; Albion Insurance, 80; Alliance Marine, 50. Atlas, 22½; Argus, 24½; County, 131; Globe, 136; Imperial Fire, 240; Ditto, Life, 10⅛; Indemnity Marine, 6½; Law Fire, 4½; Ditto, Life, 1. Marine, 20; Pelican, 43; Provident, 41; Royal Exchange, 2.9; Sun Life, 6; Berlin Waterworks, 1½; West London, 100; Grand Junction, 4 ¼; Kent, 94½; Southwark and Vauxhall, 88; West Middlesex, 134; London Docks, 137; Southampton, 7 to 6½; Canada Five per Cent Bonds, —; Ditto, Six per Cent, 1853, 1854, and Scotch Navigation, 81½; Hudson's Bay, 24 Peel River Land and Mineral, 7⅛ to ¼; Peninsular and Oriental Steam, 73½ to 76 ex div.; Ditto, 6 per Cent Reversionary, 106; Royal Mail Steam, 73½; South Australian Land, 45 to 43½.

The export of gold to the Continent has been comparatively small this week; there are several large parcels of silver have been sent to Paris and Holland. To India, £145,348 has been shipped. The arrivals have amounted to about £100,000 from Australia, and 400,000 dollars from New York. The exchanges, with the exception of those upon the city just mentioned, still continue adverse to this country.

On the whole, the Railway Share Market has been steady, and the general quotations have been fairly supported. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Caledonian, 73½; Ambergate, Nottingham, and Boston and Eastern Junction, 13; Bristol and Exeter, 101; Caledonian, 6⅝; Dublin and Belfast Junction, 40½; East Anglian, 5⅜; Edinburgh and Glasgow, 71; Great Northern Stock, 86½; Ditto, A Stock, 80½; Great Western, 66⅜; Lancashire and Yorkshire, 78⅜; Leeds and Bradford, 104½; London and North-Western, 115; Ditto, Fifths, 14⅜; London and South-Western, 86½; Manchester, Sheffield, and Lincolnshire, 23⅜; Midland, 72⅜; Newry and Enniskillen, 25; North British, 34; North Staffordshire, 12½; Scottish Central, 86; Scottish Midland, 69; Southeastern, 74⅜; Waterford and Kilkenny, 9½; York, Newcastle, and Berwick, 69½; Ditto, Extensions, 12½; York and North Midland, 85.

LINES LEASED AT FIXED RENTALS.—Midland Bradford, 107; London and Greenwich, 14.

PREFERENCE SHARES.—Caledonian, 103; Eastern Counties, No. 2, 1½ premium; Ditto, Six per Cent Stock, 15; Eastern Union Scrip, 20; Great Northern, 3 per Cent, 1854; Ditto, A Stock, 1 premium, transferable at ten per cent premium, 112; Ditto, Four-and-a-Half per Cent, Scrip, 5⅞; Great Southern and Western (Ireland) Eighths, 8⅜; Great Western irredeemable Four per Cents, 103⅜; Londonderry and Coleraine, Half-shares, 13⅜; Midland Consolidated, Six per Cent Stock, 152; North British, 11⅛; Oxford, Worcester, and Wolverhampton, 16⅜; South Devon, 14⅜; South-Eastern (Reading Ann.), 26⅜.

FOREIGN.—East India 25⅜; Great Indian Peninsula, 7⅜; Luxembourg, Six per Cent Preference, 5⅜; Northern of France, 35⅜; Paris and Lyons, 9⅛; Paris and Orleans, 41; Paris and Strasbourg, 30⅜; South-Eastern of France, 2⅛; Upper India Scrip, ¼ premium.

Mining Shares have had rather an inactive market. On Thursday Agua Fria were quoted at 2⅜; Australian 3; St. John del Rey, 32½ ex div.; Copiago, 10½ ⅛; English and Australian Copper Smelting Company, 5⅜; Marquita, ⅛; Nouveau Monde, ⅜; Rhymney Iron (New), 8⅛; South Australian, ⅛; Waller, 1; West Granada, 1.

FRIDAY EVENING.—The Consol Market has ruled firm to day, and prices have had an upward tendency. The Three per Cents for the Account have been done at 98⅝ ⅞; the Three per Cents, Reduced, 99⅝; and the New Three-and-a-Quarter per Cents, 101⅝ 102 to 102⅜. Bank Stock, 229. India Bonds, 20s.; Exchequer Bills, 2s. to 5s. prem. Long Annuities, 5⅝. Foreign Bonds and Railway Shares have been steady.

THE MARKETS.

CORN-EXCHANGE (Friday). During the present week the arrivals of English wheat up to our market constwise, have amounted to 3610 quarters, almost wholly from Essex and Kent. Fresh up-to-day the receipts were limited, and the show of samples was trifling. The demand, however, was somewhat inactive, at about Monday's prices. For forward delivery next to nothing was doing. The imports of foreign wheat here been only 6000 qrs, most Dantzic and Baltic parcels were in moderate request, at full quotations. In other kinds very little was doing, on former terms. Flooding cargoes were dull, yet several cargoes took place in prices. We offer very little to say with all kinds of barley, which moves off steadily, at very full prices. The sale for malt was firm, at fully last week's quotations. The oat trade ruled steady, and, in some instances, Monday's currencies were realised. Beans, peas, and flour were firm, at late rates.

Arrivals from [illegible]: 7810; barley, 20; malt, 3500; oats, 7200; flour, 5480. Irish: [illegible]

[illegible] Essex and Kent, red, 41s to 43s; [illegible] Norfolk and Suffolk, ditto, white, 43s to 45s; [illegible] Rye, 32s to 34s. Barley, 30s to 32s. Malting [illegible] Kingston and Ware, 54s to 56s; [illegible] Chevalier, 56s to 58s. Peas, maple, 34s to 36s; white, 34s to 36s. Beans, [illegible] Pollard, 22s to 24s. Flour, town made, 40s to 42s; [illegible] Stockton and Yorkshire, [illegible] Foreign wheat, 40s to 42s; [illegible] American, 37s to 39s per qr.

Generally speaking, the demand has ruled inactive but we have no alteration to notice in prices.

Linseed, hoghlds, sowing, 54s to 56s; Baltic crushing, 48s to 49s. Mediterranean and Odessa, 47s to 48s; hempseed, 38s to 40s per quarter. Rapeseed, English, [illegible] per last. Coarse mustard-seed, 8s to 10s; white ditto, 7s to 9s; brown ditto, 4s to 6s per bushel. English rapeseed new, £19 to £24 per last of ten quarters. Linseed cakes, £ 5s. to £ 0s; [illegible] ditto, 6s cwt, £7 10s to £9 0s. per ton. Rape cakes, £4 10s. to £5 per ton. Canary, 54s to [illegible]. Hempseed, 40s to 42s; white ditto, 38s to 40s per qr. Coriander, 24s to 26s per cwt.

Bread.—The [illegible] of wheaten bread in the metropolis are from 7d. to 8d.; of household [illegible] of the loaf.

Imports.—Wheat, 45s. 0d.; barley, [illegible] oats, 18s. 11d.; rye, 30s. 11d.; beans, [illegible] peas, [illegible] flour, 40s. 0d.

Prices Average.—Wheat, 44s. 1d.; barley, 30s. 3d.; oats, 18s. 10d.; rye, 32s. 6d.; beans, [illegible] peas, 33s. 6d.

Seeds.—Linseed, 53s.; cake, 1s.; rape, 1s.; beans, 1d.; peas, 1s.

Wool.—Since our last report a slight improvement [illegible] most kinds of raw native produce. Floating cargoes have sold at [illegible] Arrivals into the port of London continued at from 4s to 6s 6d per cwt. The total [illegible] up to the 16th inst were [illegible] 8,84,128 duty-paid.

Cotton.—In one for all kinds is in a sluggish state, yet prices are supported. [illegible] native produce is [illegible] from 6s. to 9s per cwt.

Hops.—Though parcels are tolerably firm; but cleaned qualities command very little attention.

[illegible] and 5s. to 4s. per cwt. lower. Foreign parcels have been [illegible] from 2s. to 3s. per cwt. lower. Prices weakly [illegible] 5s. to 7s. per cwt. [illegible] fresh, 6s. to 14s. per cwt. [illegible] Sussex, 4s. to 6s. per cwt. [illegible] Farnham, 8s. to 10s. per cwt. [illegible] Weald of Kent, 5s. to 7s. per cwt. [illegible] Mid and East Kent, 7s. to 9s. per cwt. [illegible] Farnham, 8s. to 10s. per cwt. [illegible] Weald of Kent, 10s. to 14s. per cwt. [illegible] Mid and East Kent, 12s. to 16

THE CAMP AT CHOBHAM.

The accompanying Illustrations of the Camp present so many sketches of its interior economy. It is astonishing how quickly the men appear to have become habituated to their novel position. A stranger, uninformed as to the real state of the case, would be ready to affirm that the regiments had been under canvas for a considerable time. There is not the slightest appearance of any confusion or irregularity, the men falling into their many and various duties without the least disorder. Here may be seen a fatigue party, in undress uniform, digging a trench, or levelling a road. On Thursday (last week) many were busily employed in completing the chain of sentry-boxes which encircle the positions of the different regiments. These are placed very close to one another, and erected after the most aboriginal fashion; they consist of a few slight poles driven into the ground, and joined by cross pieces, the interspaces being filled with gorse, cut within a few yards of the place. In other places will be seen small parties, congregated round little conical heaps of earth. These are the cooking places, which consist of trenches, or rather holes, dug around a heap. The fire is then lighted at the bottom, and the regimental pots, in great numbers, are placed on it, supported by a piece of wood, which runs through the handle of the vessel, and rests on either side of the top of the trench.—(*See the Illustration at page 513.*)

HUTS AND KITCHEN.—42ND HIGHLANDERS.

In the course of Thursday the men moved all their arms and traps outside the tents, which appear uncommonly small for twelve or fifteen men to sleep in, and were clustered in parties around their habitations, in all varieties of undress. The scene there was most perfect in its kind. The men were busily engaged in various occupations; some making straw-mats, some cleaning or mending their accoutrements, and others passing across to the canteen.

The Sappers and Miners—probably the most intelligent and the best educated men in our army—make the least show. They, with contingents from each regiment, prepared the ground for the purposes of an encampment. They have sunk wells, formed reservoirs, erected stables, and made kitchens. These kitchens, constructed by them, are a decided improvement on the old form in use during the Peninsular War, and which some of the regiments, we observe, still practise. They economise fuel, and enable cooking to be carried on more quickly, and in larger quantities. The experience and practice of the Camp were mainly centred on this point; for, of course, when the men came on the ground, after their tents were up, the first thing requisite was to feed them. Anything more rude and accordant with campaigning than the kitchens it is hardly possible to conceive. A trench is dug, with a short mud chimney at one end; a fire is lighted at the other; and, the top of the trench being covered over with turf, pots are stuck down into holes made for them in this covering to boil: this is the Sappers' mode. The earth kitchen approved of by the existing regulations is a still rougher contrivance.

We are reminded, by a well-timed "Guide to the Great Encampment" (published by Medhurst, at Chobham), that, within a few miles, in almost every direction, as well as on the Common itself, there appear to have been camps during the Roman period. "The remains of a very large camp may be seen at Wickham Bushes, on the borders of Berkshire, at a short distance from the Royal Military College at Sandhurst; and another close by, called '*Cæsar's Camp.*' There were others at Laleham, between Chertsey-bridge and Staines, which appear to have had the command of the river below the latter place; also near Weybridge, known as 'St. George's-hill.' Roman roads have also been discovered in various parts of the neighbourhood. The one at Wickham Bushes, called the *Devil's Highway*, has been traced across Bagshot Park into Surrey, through Egham passing Runnymead and the Thames, and from thence away to London."

HIGHLANDERS CLEANING ACCOUTREMENTS.

THE BAND OF THE 93RD HIGHLANDERS.

WATER TANKS.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, JUNE 25, 1853.

THE ILLUSTRATED LONDON NEWS

No. 630.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, JULY 2, 1853. [TWO NUMBERS, 1s.

THE CONDITION OF THE MULTITUDE.

THE present condition of the country is unexampled. Since the spring of 1848 not a breath of sedition, scarcely of discontent, has been heard in the land; there has hardly been a street row. Every one acquainted with our domestic history will be well aware that in no other period of our annals can five years be found so completely free from every kind of public disturbance. In this period the great multitude, as the rule, have been fully employed, and better paid than previously. The improvement in the condition of the people may be said to have begun in 1843, with the improvement in our commercial code, and the great extension of railway enterprise; but it suffered a great, though temporary, declension in 1846, from its failures; and in 1847, from the high price of food. We may, therefore, date from 1848 the commencement of the present, and, we hope, permanent improvement. "At no period during the last seventeen years," says Mr. Horner, one of the Inspectors of Factories, in the report for the spring of this year, just published, "that I have been officially acquainted with the manufacturing districts of Lancashire, have I known such general prosperity: the activity in every branch is extraordinary. In my last report I gave an account of the vast increase of factories during the two preceding years; and there is no cessation, for new mills are going up everywhere. It is not to be wondered at, therefore, that I should hear *of a great scarcity of hands; of much machinery standing idle from the want of people to work it; and of a rise of wages.*" That official testimony to the present and the recently past condition of the people — fully employed, and wages rising—confirms the statement that there is an intimate connection between the prosperity of the multitude and the absence of every kind of riot, disturbance, or sedition.

To illustrate further this connection, we will state that the year 1847, which was, to some extent, a bad year for England, was an extremely bad year for France. While in England the population annually increases, on the average, at the rate very nearly of 2 per cent, it increases in France only at the rate of 0·59 per cent, or little more than one-fourth as fast as the population of England; but in 1837 it increased less than 0·20 per cent. In that year the births and the marriages were 8 per cent less, and the deaths 5 per cent more, than the average; while the price of food was extraordinarily high;—and all these are signs of a suffering people. At the same time, the expenditure of the Government exceeded the average, and exceeded the estimate by more than £5,000,000. That terrible year brought the sufferings of the French—the bulk of whom have not been prosperous since 1806—to a climax; and the Revolution of 1848 was the consequence. So the Revolution of 1830 was the consequence of the continued poverty, misery, and great disappointment of the people; and had they been prosperous the Bourbons might have retained, with modifications, their power to this day. Prosperity and contentment ever go hand in hand; and the recent great tranquillity of England is due to that full employment and prosperity of the multitude which Mr. Horner records.

We must refer, however, to some further illustrations. He mentions that the number of children employed in his district—while the number of hours that they labour is lessened, and their education is well taken care of—has increased from 8153, in 1844, to 17,100 in the spring of the present year, or 110 per cent. He says, "the workpeople were never so well off as at present—constant employment, good wages, cheap food, and cheap clothing; many cheap, innocent, and elevating amusements brought within their reach;" and they "have time for mental improvement, healthful recreation, and the enjoyment of their families and friends." Mr. Howell, another factory-inspector, says, speaking of the present time, "the adult male spinners and piecers have availed themselves of the greater independence of their present position, as compared with periods when the demand for factory labour was scanty and the supply of it abundant, to decline prolonging their day's work beyond the hour of six," though heretofore the machinery had been kept running considerably later Factory operatives are now much better paid, and they work less than formerly.

In Stockport there has prevailed since 1840 an artificial scheme for regulating wages, by a kind of averages, as tithes are commuted, so that they do not follow the quick changes of the market This system suits very well for the men when the market is declining, for the average is then above the market rate; but they do not like it when the market is rising, because the average is then always below the market rate. Hence, the spinners and others at Stockport have struck for an advance of wages, and the masters still proposing to regulate their payments by the averages of years and of places, and not by the extreme market rate of the moment, have offered an increase of five per cent to the hand and self-actor spinners; and of eight per cent to the throstle-spinners. These terms do not, however, satisfy the men, and they stand out for an extreme rise of ten per cent, and remain on strike for the present. On the difference between them and the masters we give no opinion; but their demand for an increase of ten per cent, and the willingness of the masters to raise their wages five or eight per cent because the average of the district is raised to that extent, while the hours of labour are diminished, is another convincing testimony to the general well-being of the great body of the workpeople in the manufacturing districts.

Many similar facts are stated from various quarters. In the Wealds of Kent and Sussex, where a rise in the price of timber has led to cutting a greater quantity than usual this spring, hands cannot be got to perform the necessary work, and wages have risen from ten to fifteen per cent. It is the same throughout all the

THE CAMP AT CHOBHAM.—DRAGOONS RETREATING.—(SEE PAGE 527.)

rural districts. For the first time within the memory of the oldest people living, hands are deficient in them. The down-trodden peasants begin to walk erect; to taste the pleasure of jingling a little money in their pockets, and to have some of the ennobling feelings of independence and freedom.

Turning to other places, we have read within these few weeks, that the wages of all the skilled labourers concerned in ship-building in the North of England have been raised nearly thirty per cent; that in Wales the wages of painters and masons have been augmented 2s. and 3s. a week; that the wages of tailors have risen; that the Manchester police have generally resigned for an advance of payment, and have only consented to withdraw their resignation on an intimation that their request shall be favourably considered; and that the common porters of Liverpool, who receive 3s. 6d. a day, have stood out for 4s., though they have returned to their work without attaining it. Thus, throughout the country, in every branch of business, in the rural, in the manufacturing, and in the maritime districts, the people are all receiving large advances of wages, and "were never," to repeat the language of Mr. Horner, "so well off as at present."

We must except the Spitalfields weavers, who seem not to have an equal share in the general prosperity. At least, they complain so even. They work, as it were, alone, and they work comparatively, for the opulent few. The bulk of the people work rather in companies or factories, and they work, therefore, for the many. For their labour the market extends, as the whole population increases, and as its condition improves. When each one of a million families has 5s. additional in a week to lay out, it represents a sum of £250,000, to be expended in buying some species of production; but a hundred rich men, with each £100 to spend, only supply £10,000 to aliment the market. Those who work for the multitude, therefore, will, as the rule, be always better paid than those who work for the opulent few; and the increase, which it has been our chief business to point out, in wages, the rewards of the multitude, indicates the coming of a still greater and an accelerated increase in the general employment, and in the rewards of all.

We have only stated facts, and have no further adverted to the causes of this beneficial change than by referring to the changes in our commercial law, which came providentially to prepare the nation for the great discoveries of gold in California and Australia. They have given a wonderful impulse to the enterprise which the previous abolition of restrictions had awakened into life. Nearly the whole of the gold discovered became the property of the finders, and almost exclusively the reward of labour. The hope and the desire of sharing these rewards gave an instant stimulus to emigration, and both raised the standard of wages and diminished the number of hands, who in the old countries compete for them as they are distributed by employers. In this way, more than by affecting the currency—which has been, as yet, less affected than the hopes of some and the fears of others anticipated—the gold discoveries harmoniously dove-tailing in with the system (as yet very imperfectly carried out) of Free-trade—have led to a great increased demand for labour, to fewer hands being in the market to compete for employment, and to that general rise in wages which distinguishes the present period. We must not, however, fail to impress on all the fact—as labour is the source of wealth, the gold itself being obtained by much arduous toil—that the present improvement is, and all future improvement will be, the consequence only of well-regulated industry; and that the multitude will dash from their lips the cup of enjoyment, should they in union suspend labour, from an expectation that they can by this means compel other men to give them higher wages. That would be to imitate monopolists and extortioners, who are the enemies of honest industry, and would soon recall to a common poverty. For statesmen these facts are instructive, as well as for labourers. If they desire to promote peace and civilisation, as is their duty, they must take care not to interrupt the cheerful industry of the multitude, nor diminish its rewards.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

The principal events of the day are the various changes taking place in the Ministerial and diplomatic circles—changes which excite the more attention that, from Louis Napoleon's constant habit of concealing his intentions to the latest moment, they are, for the most part, unexpected, and by the persons concerned as by the public. Too announcement of so many important mutations at once, in the *Moniteur* of the 24th ult., took every one by surprise; and various are the reasons given or suggested for some of these alterations. We are told, on excellent authority, that the removal of M. Henri Chevreau, Secrétaire-Général of the Ministère de l'Intérieur, and the real head of the department in all that concerned the routine of daily work, to the post of Préfet de la Loire-Inférieure—a decided falling-off in position—is in consequence of his having ventured to oppose his *chef*, M. de Persigny, in some of his official arrangements. In order, however, to make the pill less bitter, the abolition of the office of Secrétaire Général is made the excuse for the removal of M. Chevreau. The decree relative to the wearing of the *Légion d'Honneur* and other orders, is also a topic of considerable interest; but it seems likely that, from certain irregularities, or rather from a want of sufficiently-defined rules in the subject of the military and civil grades of the Legion of Honour, it will be most difficult, if not impossible, fully to comprehend and carry out the new laws this decree contains. The tax to be paid by the wearers of this distinction, will, from their number, be a considerable addition to the revenue.

The expedition of the Emperor and Empress to the Pyrenées, which the agreeable state of affairs would, it was expected, defer, is again spoken of as likely shortly to take place. Considerable preparations are being made at the Château de Pau, and at the Eaux-Bonnes for their reception; and M. Cuvillier Bréville, one of the superior members of the Conseil de ponts et Chaussées, has been charged to examine into the state of the roads by which the Empress is to pass.

On Tuesday, the news that the Russians had crossed the Pruth, produced such a sensation as fall at the Bourse, which has before been rising independently of these fears from abroad, there is flowing on at home an under current of discontent and rebellion, that but wants the occasion to burst forth. Few weeks pass without innumerable arrests taking place, generally conducted with as much secrecy as possible; and it would form a curious and interesting study to learn all the means adopted to entrap suspected individuals into a betrayal of their sentiments and opinions.

It is stated that the Empress has decided on having an Exhibition of Fine Arts in the winter of 1855, at the same time as an Exhibition of Industry. It is also stated, among other reports, that the Garde Nationale is to be wholly re-organised, on the plan adopted under the Empire; and that considerable additions are to be made to the Gendarmerie.

The appearance of the "Almanach Impérial" for 1853, sets at rest, for a year, a question of no unimportant quantity, one which for many years has been a subject of dispute and discussion—the age of the Empress. Here we learn that Eugénie de Guzman, Comtesse de Téba, Impératrice des Français, was born the 5th of May 1826; she is now, consequently, twenty-seven.

The re-opening of the Exhibition of Modern Paintings, after a short close, has been marked by an unprecedented incident. In one of the first days in the season, is displayed an indifferent picture by a German named Diez, which was not admitted by the jury, and which is marked *Refusé par ordre*. This picture, which is in a Bonapartist style, it seems, proved offended. M. Fascher de la Pagerie to the *Chef de l'Etat*, who purchased it and gave orders for its admission to the Exhibition.

In the theatrical world there is little novelty. At The Palais Royal, a sufficiently amusing bagatelle, entitled, "Fraîchmont Décoré,"—partly *à propos* of the condition of the house, which has been wonderful enlarged and beautified—attracts a good audience. On Wednesday took place, the last representation, for the present, of the "Vieux Caporal," in order to afford Frédérick Lemaître the repose he so greatly needs. The piece which is to succeed this most popular one at the Porte St. Martin is entitled "La Famille Chenevières," a drama in five acts, written by M. Léon Battu. The first representation takes place to-morrow night. At the same theatre, a five-act piece in verse, "Philippe Auguste," from the pen of the well-known *feuilletoniste*, M. Amadée de Césena, is said to be in rehearsal.

We give in our Supplement of the present week ample details connected with the military Camp at St. Omer. A letter from St. Omer states that—

Prince Napoleon, on arriving at the Camp of Helfaut on Saturday evening, was received with loud acclamations of "Vive l'Empereur!" and with all the honours due to his rank. A salute of twenty one guns was fired as soon as the cortège appeared on the ground. The troops were drawn out in line to receive him, and on passing along the ranks, the cry of "Vive l'Empereur!" was loud and universal. This was repeated when the troops filed before him. The Prince then went through the Camp, which he visited in all its details, and afterwards retired to the tent which had been prepared for him."

The dividend of the Bank of France for the first quarter of the year 1853 has been fixed at 79f. per share.

The proprietors and editors of the Paris journals had an interview with M. de Persigny, Minister of the Interior, on Tuesday. The interview was at the request of the Minister. These gentlemen were informed by him that he had requested their attendance in order to disabuse them of an impression that it was the intention of the Government to impose greater restriction on the public press than had existed during the administration of M. de Maupas, the late Minister of Police. M. de Persigny assured them that such was not the case; the Government had no intention to restrict them; on the contrary, its desire was to enlarge their present sphere of action. The Government was well aware of the power of the press, and of the utility of that power, when used with moderation. The Government, instead of still further limiting the liberty it at present enjoyed, rather desired to increase it. It is said that a much satisfaction was expressed at these declarations. It is necessary to say that the direction of the press, which formed one of the branches of the late police department, is now attached to the Ministry of the Interior.

Rumours that the Russian army had passed the Pruth have been in daily circulation during the week, and without sufficient foundation. The Bourse, which has been much agitated during the week, on Wednesday opened rather firm, and the Three per Cents were first called at 77f. A report was shortly afterwards circulated, on the authority of a Paris banking-house, that firmans had been forwarded to the Admirals commanding the French and British fleets to permit them to enter the Dardanelles; the Three per Cents then fell to 76f. 50c., and closed at 76f. 60c. for the end of the month. The Four-and-a-Half per Cents closed at 101f. 40c.

A letter from Havre of the 27th ult. mentions that the levy of seamen in that port for the Imperial navy, has caused such a scarcity in the merchant service, that wages have risen from 60f. to 65f. per month.

The direct report of Agriculture and Commerce has decided that merchandise now prohibited shall be admitted at the Universal Exhibition of 1855; it will be allowed to be re-exported without charge at the close of the Exhibition, or sold in France on payment of a duty of 30 per cent.

Several officers have left Paris for the Camp at Chobham—namely, General the Duke de Montebello, aide-de-camp to the Emperor; Chef d'Escadron Rolle, orderly officer to the Minister of War; a Colonel of Infantry, and a Captain of Artillery.

RUSSIA AND TURKEY—OCCUPATION OF THE DANUBIAN PRINCIPALITIES.

We announced last week the definitive rejection of the Russian ultimatum by the Porte. It has since transpired that the ultimatum was accompanied by a communication of a haughty character. It informed the Divan, in the name of the Emperor of Russia, that if a single word were changed in the note of Prince Menschikoff—if that note were not accepted purely and simply as it stood, without alteration or modification of any sort, and within the delay specified—he, the Emperor of Russia, would command the immediate departure of the rest of the personnel of the Russian Embassy that had remained after Prince Menschikoff's departure—would break off all relations with the Porte—consider as broken all previous treaties with it—and give orders to the Russian army to pass the Turkish frontiers. The reply of the Porte was, moreover, to be communicated directly to the Emperor at St. Petersburg. The refusal of the Porte to this last peremptory summons is already known.

On the 17th ult., the reply of the Porte, rejecting the ultimatum, was sent on to St. Petersburg. It is as moderate in form as it is firm in substance. In it the Sultan appeals to the firmans lately issued by him, and granting full and complete toleration to his Christian subjects, as a proof of his goodwill, moderation, and desire to conciliate. But he refuses binding himself by a treaty to Russia to do that which he has already spontaneously done. The firman, guaranteeing the rights, immunities, &c., to the religious communities, was read on the 12th ult. in each of the Patriarchates at Constantinople, and in the Synagogue, in the presence of the principal members of the sect. It was well received, and an unanimous resolution was come to to present an address to the Sultan, thanking him for his paternal protection of the Christians and Israelites, his subjects. On the following day four metropolitans and four principal members of each of the Christian communities delivered to Redschid Pacha the address of thanks. It is stated that Lord Stratford, the English Ambassador, has paid a visit to the Patriarchs of Constantinople, who received him with the respect due to his rank, and expressed to him all their gratitude for the firman just granted to them by the Sultan, relating to the privileges and immunities of their religion.

It appears that M. De Bruck, the Austrian Envoy, advised the Divan to send forthwith the Sultan's brother-in law, Halil Pacha, as Envoy Extraordinary to St. Petersburg, to renew negotiations with Russia. Neither the Sultan nor his Government has any objection to do so, on the condition, however, that the Danubian Principalities are not occupied by the Russians. If they are occupied, the Porte will not only send no Envoy, but will resist by force that violation of the Ottoman territory, and at the same time appeal to the powers against the violation, on the part of Russia, of the treaties of 1841, which they, as well as that power, signed.

The denial of the French and English fleets in the Bay of Besika, and the good accord which prevails among them, inspire Turkey with the greatest confidence.

The Russians have sunk several boats loaded with stones in the canal of Sulina, to interrupt the navigation of the Danube.

A special courier from St. Petersburg passed through Jassy on the 15th ult on his way to Bucharest and Constantinople. After his departure the Russian Consul informed the Prince Ghika that unless the Porte accepted the ultimatum, the Russian General had orders to cross the Pruth and commence hostilities. He consequently desired the Hospodar to take the necessary measures for the victualling and the general comfort of the army. Detachments of Russian troops have detachments. Skulani, near Jassy, in which place a corps of 40,000 men is to be concentrated.

Meanwhile preparations for defence were actively going on. The old forts were being placed in a state of repair, new ones erected, and troops sent to man them. Detachments of the army continue to be forwarded with all possible speed to the frontier, and the whole of the effects of the staff had quitted, or were immediately to quit Constantinople for the frontier. Especial care was taken to forward those to the on the coast which were open to attack. Two *corps d'armée* of from 45,000 to 50,000 men are being formed in Bulgaria. A third *corps d'armée* of 40,000 or 45,000 men is being formed at Erzeroum. The staff of the engineering service had left for Schumla, where it was to be under the orders of the Commander-in-Chief. The staff of the artillery had also left Constantinople.

The Turkish fleet is concentrated at the northern extremity of the Bosphorus, from Therapia to the Black Sea. It is composed of three-and-five ships, two of them three-deckers, three two-decks, ten frigates, four corvettes, eight brigs, and eight steamers, four of which are of large dimensions. This force will be increased by ships recalled from different stations, and by eight others which are in course of equipment in the arsenal. Besides the Ottoman Pacha, the fleet will be under the special command of the Vice Admiral Achmet Pacha, who arrived from Montenegro expressly for that object.

The greatest activity prevails in the fleet. Rear-Admiral Slade is an Englishman, and, of course, "every inch a sailor." He is making the most strenuous exertions to increase the efficiency of the Turkish fleet. Within a few days he has engaged in the service no less than thirty English officers, who co-operate with him in the work with much energy and enthusiasm. On the 1st of June, no less than 2500 sailors were obtained from such merchant-vessels as happened to be in the port of Constantinople alone.

The Turks are concentrating their force in Trebizond, on the southern shore of the Black Sea, and an important place in the route between Constantinople and the Georgian and Circassian countries. A perfect understanding is said to exist between the Turkish Government and the Caucasian people. Express messengers (Tatars they are called) are constantly on the gallop between Constantinople, Georgia, and the Caucasus.

The late events at Constantinople have produced a profound sensation throughout Arabia. The numbers of pilgrims that are assembled at Mecca, and all the native tribes, wait but for the signal to commence the war. Religious fanaticism has reached the highest point.

Letters from Constantinople announce that an Ambassador from the King of Persia had arrived to offer to the Sultan his alliance and the assistance of his army against Russia. It is well known that Persia has not abjured less than Turkey its ancient ambition, and that the provinces near the Caspian Sea have fallen into the possession of the Czars. Thus, like Turkey, she has for years past made efforts which have been but too often interrupted by the internal dissensions of the country—to resist the encroachments of Russia.

RUSSIA.

The news from Russia connected with military matters is uniformly warlike. A letter, under date of the 17th, says:—"To judge from the reports which every day gain more substance, and from the unusual activity of the military authorities, it must be seriously meant to occupy the Danubian Principalities, indeed to undertake something more serious still, since the fleet in the Black Sea is fully equipped for war." The crews of these vessels are described as most martially disposed. Many Russian officers, however, better acquainted with the interior state of their own country than with foreign politics, and having a lively recollection of the late affair with the eleven generals, maintain that the whole thing is only got up by the Emperor to serve as a pretext for a gigantic inspection of the army; that the sending of marching orders to this, that, and the other regiment, is only a means of compelling the Colonels to fill up the vacant stalls in the stables. In the same way sealing orders have particular reference to the state of the rigging, in case &c. The vast number of Generals and Staff Officers flying to and fro between St. Petersburg and Moscow are represented by some of the way of thinking, as bringing orders "to make as much fuss as possible, but to get nothing ready."

DENMARK.

The Government bill for settling the succession to the crown of Denmark was read a third time and passed by the Diet, on Friday, the 24th ult. The Government has thus, at length, carried its point, and Russia gains as much at the Sound as it seems to be losing at the Bosphorus.

HANOVER

The Hanoverian Cabinet has just sustained a serious defeat in the Second Chamber. Its proposition for modifying the constitution so as to satisfy the quiescents, in the threaten an appeal to the Frankfort Diet, has been rejected by 42 to 35 votes.

AMERICA.

The Gavazzi excitement continued at Montreal at the date of the latest advices. On the 12th June a mob demolished all the windows of St. Stephen's Church, situate in the suburbs. Three more of those who were wounded at the time of the attack on Father Gavazzi in the Zion Church had died. The liberal-minded and well-informed Roman Catholics of Montreal, deeply deprecating the outrages, held a meeting on the 13th, at which they resolved not only to repair the damages, but to make every exertion to find out and bring to justice those who participated in the riots. It was reported at Montreal that Father Gavazzi was to return on the 15th, and conclude his lectures.

We have dates from Buenos Ayres to the 24th April. Letters by this arrival state that "all attempts to accommodate matters have been utterly foiled, and the most formidable preparations have been made on both sides—one to save, and the other to capture the city." The Buenos Ayrean Government have issued twelve millions additional paper money—have proclaimed martial law—closed the custom-house and other offices—and have required all able bodied men to bear arms in the army. Urquiza on the 16th recommenced the siege of the city, and on the 24th provisions had become scarce and in demand. He also threatened to blockade the port, but this the Buenos Ayreans hope to prevent, by means, probably, of the intervention of foreign powers. Another letter says—"From the preparations made, we are likely to have warm work and much bloodshed."

INDIA, CHINA, AND AUSTRALIA.

The following mes-ages has been received from Trieste, in anticipation of the Overland Mail:

"The Indian, Chinese, and Australian mails have arrived, with intelligence from Calcutta to the 16th of May; Hong Kong, 6th of May; Sydney, 2nd of April; and Melbourne, 6th of April.

"There was no definite news from Rangoon, but it was expected that either the treaty with the King of Ava would be signed at once, or that our troops would move on to Ava. The Governor-General is anxious to bring the war to a close.

"There was no mail from Shanghai, and no intelligence about the insurrection in China. At Canton a French Commodore had seized two English vessels, and forcibly conveyed them on board his ship, for walking near a French flag-staff on shore.

"In Australia things were proceeding prosperously. From the 1st of January to the 6th of April, 500,000 ounces of gold had been shipped; price of gold, £3 17s. 6d per ounce."

BATHS AND WASHHOUSES.—The Emperor of the French has determined to erect baths and washing establishments in Paris upon the precedent of the plans approved and published by the Committee for Promoting the Establishment of Baths and Washhouses for the Labouring Classes. Baths to the extent of 200,000 being furnished by his Majesty.

HER MAJESTY'S CORONATION.—Tuesday being the anniversary of her Majesty's coronation, merry peals were rung from the bells of the metropolitan churches, and the Royal standard was hoisted at the Tower, the principal Government offices and the Royal parish churches of St. Martin's-in-the-Fields, and St. Margaret's, Westminster; the Prince and the Docks presented a very gay appearance, the shipping being dressed from their respective yards with the flags of all nations, and double Royal salutes were fired from the Park and Tower guns.

THE NEW INCOME-TAX ACT.—This act, which received the Royal assent on Tuesday, will take effect from the 5th April last, from which day an income begins of £100 a year will be taxed at 6d in the pound. For the first two years the tax will be on incomes of £150 7d. in the pound; for the next two years, 6d. in the pound; and for the last three years, 5d. in the pound. With respect to lands and tenements, other than a dwelling-house occupied by a tenant, distinct from a farm of lands, the duty will be for the first two years, in England, 3½d.; and in Scotland and Ireland, 2½d.; for the second two years, in England, 3½, and in Scotland and Ireland, 2½d.; and for the last three years, in England, 2½d., and in Scotland and Ireland, 1½d. The act is to remain in force from the 5th April last to the 6th April, 1860, and "no longer," as expressed therein.

IRON SOVEREIGNS.—In addition to the recent discovery of counterfeit iron shillings, it has now been found that a quantity of sovereigns manufactured in a similar way, and five-shilling pieces, and half-crowns, are in circulation, so skilfully executed as to deceive the touch and the ringing test. The Queen's head on one of the sovereigns are covered with as much gold as would cost 4s. Among others who have been victimised are the metropolitan police, banks, and under pretence of paying for the printing up the banns, have obtained a considerable amount in change for their imitations.

ACCIDENT TO THE SYDENHAM CRYSTAL PALACE.—Messrs. Fox, Henderson, and Co., have sent out the following notice of the accident:—"The severe winds of Monday night and Tuesday morning have caused an accident to the scaffold for the large roof over central transept, a portion of which was fixed in part, and fell down between twelve and one o'clock. We are glad to tell you that no injury has occurred to life or limb, if no damage has been sustained by the frame-work of the building of the roof itself, which, we trust, will not be damaged staging will be immediately re-instated."

THE DUBLIN EXHIBITION.—Her Excellency the Countess of St. Germains, accompanied by the Dean of the Chapel Royal, visited the Exhibition on Monday, and remained upwards of an hour. The total number of visitors during the day was 7300, amongst whom were a considerable number of the working-classes. Amongst the distinguished persons present on Tuesday were Mr. Van Buren, ex-President of the United States, accompanied by his son, and Mr. Campbell, governor of one of the states

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

Lord LYNDHURST asked Lord Aberdeen if he had any objection to lay a copy of Count Nesselrode's manifesto before the House—a State paper which he declared to be most illogical and insulting. —The Earl of ABERDEEN replied that he had no objection to produce the document at present, but he hoped to be able to do so in a few days.

The Marquis of WESTMINSTER presented a petition from the inhabitants of Northwich, praying for the admission of salt free of duty into India.—Earl GRANVILLE admitted the objectionable nature of the tax, but did not think it could be entirely abolished without substituting for it some other tax

The Encumbered Estates (Ireland) Bill, after some discussion, passed through committee; clauses 2 and 11 having been struck out.

Addresses to the Crown for commissions of inquiry into the corrupt practices prevalent at recent elections for Barnstaple and Tynemouth were agreed to; although the alleged wholesale bribery at the latter of those borough occasioned considerable discussion, and the motion for a commission was only carried upon a division.

The order of the day for the third reading of the Income-tax Bill was then read, when Lord TAUNTON urged a variety of objections against the bill, his chief ground being, that it was a tax upon capital in a most injurious form. It had only been repealed, in 1816, by an amount of energy, constancy, and self-denial unequalled; but with the 42nd clause, which was also opposed, by a majority of 11 After these two divisions, the bill was passed; as was also the Charitable Trusts Bill; and then, at nearly one o'clock, their Lordships adjourned.

HOUSE OF COMMONS.—MONDAY.

Mr. WHALLEY took the oaths and his seat for the borough of Peterborough.

Captain VERNON took the oaths and his seat for the borough of Chatham.

Lord J. MANNERS gave notice that, on the order for the second reading of the Education Bill, he should move, as an amendment, that it be read a second time that day three months.

GOVERNMENT OF INDIA BILL.

The adjourned debate was resumed by

Mr. COBDEN, who said that the people of Lancashire and Yorkshire were in favour of a postponement of legislation on the subject until Parliament were in possession of further information. One of the great evils of the present government in India was, that the patronage was disposed of to Europeans in a great many instances where it ought to have been given to the natives. Nothing came out clearer but of the Select Committee than that, that the natives were well fitted to hold the higher class of offices. Indeed, in a judicial capacity, they already executed ninety-seven per cent of the cases disposed of. Let the natives be employed in some of the high offices—those with salaries of £500 or £2000 a year The only way of insuring their employment in the higher offices was to take away the patronage from the Court of Directors. The financial part of the question was that which most deeply affected the interests of the country; for, if any benefit were made in the finances of India, England must and would step in to repair it. The amount of defalcation in the last twenty or ninety years had been £25,000,000; and, if things were to go on in the same way for the next twenty years, there would be a debt very nearly approaching £100,000,000 In 1835, the number of troops, European and native, in India, was 184,700; and, in 1851, 238,500 Consequently, there had been an increase of upwards of 100,000 since 1835. In that time the European force had been increased from 30,800 to 40,000. He protested against the recent additions of territory and the embarrassments they were likely to cause

Sir J. GRAHAM said great stress upon the opinion of the present Governor-General of India, the Marquis of Dalhousie, who said, "The question is not what your measure is I make no inquiry into that subject; but I say this, make up your mind with regard to the course that ought to be pursued; and, having made up your mind, I think there is no safety in any de sy." The Government would have greatly failed in their duty if they had not acted upon an opinion thus expressed by so high an authority. The whole question resolved itself into some of the leading features of the change proposed to be made in the Indian Government by the Ministerial Bill.

We give a new character to the Legislative Council, which approaches very nearly to representation as regards the manner of appointing to the Legislative Council a representative from Bombay, a representative from Madras, and also one from a fourth presidency, whenever it may be established. We infuse new life and vigour into it by making *ex-officio* members of it men connected with the highest position in the Government. We also give to a person sent from this country a seat in that council. We propose to place the armies of the East India Company under the command of a general officer nominated by her Majesty We propose, as to the nomination of members of Council, hitherto exclusively in the Company, and now controlled by the Crown, to give a veto to her Majesty. We propose to bestow on the Governor General a great help, in the shape of a lieutenant-Governor of the Presidency of Bengal.

Lord Ellesborough and Lord Hardinge, Governors-General and Presidents of the Board of Control, were unanimous in declaring that there was danger in delay, and that Parliament ought to legislate at once for the Government of India. The right hon. gentleman defended the system of double government in India. The debt of India it was true, had increased forty per cent, but the revenue had increased fifty-five per cent. He warned the House against breaking down the demarcation between the covenanted and the uncovenanted service by employing the natives of India in the former service. He trusted that the House would consent to the second reading of the bill.

Sir H. MADDOCK was prepared to support the second reading of the bill, fearing as he did that, if it were rejected by the House, a prejudicial effect would be produced upon the minds of the people of India.

Mr. J. G PHILLIMORE denounced the present system of government in India, and its baneful influence upon the native population.

Mr. MILNES was of opinion that the House was in possession of sufficient information to enable it to legislate, and that no case had been made out for changing the present government of India

Sir. BRIGHT opposed the bill. If Parliament only deferred legislation for two years, in order to permit further inquiry to be made, not all the Dalhousies or Boards of Control in the world would persuade Parliament to pass a measure of this kind. The proprietors of India stock were dead for all purposes for which they were related as the governors of India, and yet they were proposing to keep up a system which was rotten and abhorrent to the feelings of the people of India The Court of Proprietors had no control over the Court of Directors, the Court of Directors had no control over the Secret Committee, and the Board of Control had no control over the Board of Control; the Press had no control over that body; and Parliament itself was deluded and baffled whenever it attempted to lay hold of anything connected with India. It was an unhappy circumstance that the measure had fallen into the hands of a Minister (Sir C Wood), who did not appear to be capable of comprehending the vastness of the question which belonged to his department

Sir J. HOGG defended the Court of Directors from the attacks made upon it. Up to the present moment, not one case had been adduced in which the patronage of the Company had been bestowed in a manner discreditable to them; and he defied any hon. member to bring forward a case in which any improper motive could be assigned for the bestowal of patronage. The principle of this bill, was the continuance of the East India Company as a governing body intervening between the Crown and India. He believed that it would be productive of more than the remedying influence of party conflicts. He believed in his conscience that the principle of the intervention of some body between the Crown and India was necessary for the advancement and improvement of the people of India, and was necessary to retain in security to the British Crown the greatest, the richest, and the mightiest of foreign empires.

WESTMINSTER-BRIDGE BILL.

Sir W. MOLESWORTH moved that the House go into committee on this bill. The bill had been carefully considered by the select committee. The navigation of the river would not be interfered with by the proposed bridge; and the traffic over the present bridge was so great, that no further delay ought to take place in the construction of a more convenient structure. The number of vehicles passing over the present bridge in an average of four days, from 8 a.m. to 8 p.m., was 9641 vehicles per day, drawn by 9600 horses. The traffic under the bridge was much less considerable, consisting, on an average of four days, of 468 vessels per day, 144 of which were steam boats, and 52 were sailing barges and hilly boats The only vessels likely to be affected by the diminished elevation of the proposed bridge were the straw-barges, of which these was but one a day. These barges would require either to have the sails cut down, or their mast, or would have to wait a short period for the falling of the tide. The gradients of the new bridge would exhibit a great improvement as compared with those of the present bridge, and would greatly diminish the load at present borne by the horses in crossing it.

The House then went into committee, when the several clauses of the bill were agreed to without discussion.

The House adjourned at a quarter-past two.

HOUSE OF LORDS.—TUESDAY.

The Income-tax Bill, the Metropolitan Hackney Carriage Bill, and other bills, received the Royal assent.

HOUSE OF COMMONS.—TUESDAY.

On the order for the second reading of the Universities (Scotland) Bill, the LORD ADVOCATE, in moving that it be deferred until after the next Easter, observed, that the bill did away with the existing test for professors, and substituted a declaration, which some, however, thought was a very objectionable one. He now, therefore, proposed to vary the declaration, which would pledge the party, in the discharge of his duties as professor, never to endeavour, directly or indirectly, to teach or inculcate any opinions opposed to the Divine authority of the Holy Scriptures or the Westminster Confession of Faith, and never to exercise the functions of his office to subvert or prejudice the Church of Scotland, as by law established—its doctrines or privileges

The House then went into committee on the Sheriff Courts (Scotland) Bill

At the evening sitting Mr BONHAM-CARTER moved for leave to bring in a bill to provide that, whenever a commission to inquire into the corrupt practices at any election in the United Kingdom shall have issued, the votes at the two elections next subsequent thereupon in any such place shall be taken by ballot. The motion was opposed by Mr. F. PEEL (on behalf of the Government), and by Mr. H. BERKELEY. The House adjourned at seven o'clock, to enable the Speaker to attend the Palace on the occasion of the infant Prince.

HOUSE OF COMMONS.—WEDNESDAY.

Mr J WILSON stated the intentions of the Government, with reference to the undischarged portions of the loans to the islands of Antigua, Nevis, and Montserrat—namely, to reduce the interest from 4 per cent to 2½ per cent, and to make the principal repayable by annual sums of 5 per cent per annum, instead of 10 per cent, upon certain conditions.

Mr. V. SCULLY moved the second reading of the Transfer of Land (Ireland) Bill, the object of which was to facilitate the transfer of land in Ireland, and to simplify the titles to charges upon the land The bill was short and simple; it provided that any owner of land might apply to a court, to be constituted under the name of the Land Tribunal of Ireland, which might direct a full investigation of the title, and if it were found good, might direct the estate to be brought under the operation of the act; after which it would not be in the power of the owner to encumber the land, except by means of debentures (the form of which was given in a schedule) to a limited amount, and which should be negotiable; and an owner of land so brought under the operation of the act would be entitled to transfer it by a simple entry in the record, which would confer a Parliamentary title. Sir J. YOUNG, on the part of the Government, offered no objection to the second reading of the bill, unders anding it would be referred to the Select Committee on the Registration of Assurances. The Government proposed to renew the Encumbered Estates Act for a time to be limited, with the view of appointing a commission of inquiry into the whole subject, which would take into consideration this and other measures, and examine all the bearings and difficulties of the question. The bill was read a second time.

The House then went into committee on the Courts of Common Law (Ireland) Bill, the remaining clauses of which were gone through.

The same course was taken with the Exchequer Bills Bill

The Seamen's Savings Banks Bill and the Public Libraries (Ireland) Bill were respectively read a second time.

The House then went into committee upon the remaining clauses of the Public Libraries (Scotland) Bill.

Mr FRESHFIELD moved the issue of a new writ for the election of two burgesses for Liverpool, in the room of Mr. Turner and Mr. Mackenzie, who had been unseated. Lord D. STUART moved, by way of amendment, that the writ be suspended until the 20th of July, to afford him an opportunity to bring forward a motion for taking the votes at the next election for this borough by ballot, considering that in so large a constituency the experiment might be advantageously tried. He continued to argue in support of this amendment, and for the ballot generally, until six o'clock, when the House adjourned.

HOUSE OF LORDS.—THURSDAY.

In reply to Lord Brougham, the Duke of NEWCASTLE said there was an existing arrangement—he could not say whether it was made by the Colonial office or not—with Messrs. Hythe and Hodges, by which they were enabled by a stipulated sum to introduce labourers from the coast of Africa to certain of the West India colonies. Though he believed that firm had carried out the arrangement in a most praiseworthy manner, he admitted that it might give rise to great evils, and, perhaps, degenerate in other hands into an encouragement of the slave-trade, and the matter would, therefore, be watched over most carefully by the Government. He had no objection to produce the contract with the parties in question, but it would be desirable to accompany it by other documents

Earl GREY explained that the contract was entered into by the Colonial office in 1848, when the greatest distress prevailed in the West India colonies, and when it was desirable to import free labourers into them from the coast of Africa. He bore testimony to the integrity with which Messrs. Hythe and Hodges had carried out the contract, and stated the precautions which he had taken, when in office, to prevent the amalgamation of these labourers becoming a means of trafficing in the slave-trade.

The subject then dropped

The Colonial Bishops Act Extension Bill and the Patronage Extension Bill were severally read a second time.

The Excise Duties on Spirits and the Juvenile Mendicancy Bills went through committee

The Duke of NEWCASTLE presented certain papers connected with the island of Jamaica and called the attention of the House to the subject. He said that the Government proposed to guarantee the credit of this country, under certain circumstances, for the payment of the debt of the colony; that Governor Barkly was to be sent out there, and he expected that, by mutual concessions, matters might be brought to a satisfactory settlement in Jamaica

The Earl of DERBY and Lord GREY severally approved of the line of policy to be pursued by the Government.

After some discussion, the papers were laid on the table. Adjourned

HOUSE OF COMMONS.—THURSDAY.

Mr HORSMAN took the oaths and his seat for Stroud, in the room of Lord Moreton, who has succeeded to the Earldom of Ducie.

Mr. BAILLIE asked the Chancellor of the Exchequer whether it was true that the Government had refused to allow British plantation sugars to be refined in bond; and whether the Government intends, when the duties upon all sugars are equalised, that the privilege of refining in bond, which was considered a bonus equal to 2s. per cwt., should be continued in favour of foreign slave-grown sugar, and refused to the produce of the British colonies

The CHANCELLOR OF THE EXCHEQUER said that the hon gentleman must be mistaken as to the facts, as the Government had given no decided or final refusal of the sort. With regard to the second part of the question, that was a matter for future consideration

In answer to Mr. Duncombe, Lord J. RUSSELL said he had no intention of bringing any measure before Parliament this session for the admission of Jews to Parliament.

Sir G. GOODMAN asked if there would be any objection to inform the public beforehand of the days on which reviews were to take place at Chobham?

Lord PALMERSTON said the main object of assembling the troops at Chobham was to prepare them by previous instruction for all the exigencies of war. One material point was that they should never be unprepared what they were to do the next day, whether they would be awakened in the middle of the night or at day-break. If the public were let into the secret, it would be difficult to keep the troops in the dark; but those who were anxious to witness those interesting evolutions, might be certain every day it did not rain of seeing things worthy of the trouble of going there.

Sir J. GRAHAM gave notice that, on Tuesday next, he should move for leave to bring in two bills, one to make better provision for the entry and services of seamen in the navy, and the other for the purpose of establishing a volunteer coast guard, to be transferred to the navy in cases of need.

Mr. WILSON stated, in reply to a question, that the perforated stamps would be ready for delivery to the public in a few days.

The CHANCELLOR of the EXCHEQUER said, if the debate on the second reading of the India Bill terminated in the course of to-night, he should take the resolutions relating to the Stamp-duties on Bill thing to-morrow evening, and after them to resume the committee on the succession duties Bill.

GOVERNMENT OF INDIA BILL.

On the order of the day for resuming the adjourned debate on the Government of India Bill, Mr. RICH rose and urged upon the House the necessity of delay. He thought under the circumstances, it was manifestly the duty of the House to pass a short continuation bill of the existing charter, in order that it might wait for the report of the India Committee before it proceeded to legislate permanently on this subject The Bill contained some points of useful reform; but unfortunately it left the constitution of the Court of Directors and the distribution of the patronage untouched, while its duration was not limited to any fixed period. This was a strong reason in favour of delay. At all events, however, if they were to have this bill, its operation should be limited to five years.

Mr C BRUCE and Mr. NAPIER severally addressed the House in opposition to the bill.

Mr. MAJORIBANKS and Mr. M'GREGOR spoke in favour of the bill

Mr. D. SEYMOUR supported the amendment, and animadverted in severe terms upon the administration of Indian affairs.

Sir C WOOD denied that the finances of India were in a state of bankruptcy as had been alleged, for the whole of its debt did not amount to two years of its income. He admitted that India to be well governed and should be governed in India, and he confessed that he relied for beneficial results much more on the changes made by the bill in the government of India in India, than upon the changes in the mode of government at home

Mr. DISRAELI dwelt upon the fact that the House of Commons was a house of party; and it did not follow that a question was unfairly discussed because it was discussed in a party spirit. He was surprised, therefore, that any great party in that House should attempt to take up a neutral position on a question of such importance. For his own part, he could not take the responsibility of assenting to the bill of the Government; and those who now held back would feel hereafter that they were justified in shrinking from stating their opinions, lest they should be damaging a particular party to which they belonged. He denied that the amendment of the noble Lord was unprecedented. His noble friend only asked for delay in order that in the ensuing recess the Government might mature a bill to be hereafter laid before both Houses of Parliament. In 1813, Lord Grenville and Earl Grey had advocated a continuance bill, with a view to give time for further consideration. In 1833, Mr. C. W. Wynn had advocated a similar course. For noble Lord (Lord Stanley) now only asked what had been unavailingly asked by the three distinguished individuals to whom he had referred. There were different statements as to who were the Government of India Was this a system to be perpetuated? Where, under such a system, rested the responsibility? They all remembered that the Earl of Ellenborough was recalled by the Court of Directors, by whom he was dismissed, while his Sovereign was so pleased with his conduct as to confer upon him the George, and to confer upon him a red ribbon. The right hon gentleman then went on to contend that, sooner or later, they must make an organic change in the Government of India.

Lord J. RUSSELL thought that nothing but danger would arise from delay He defended the provisions of the bill, and contrasted the present condition of India favourably against its condition under the native Princes—vindicated the administration of its affairs, and urged the House to reject the amendment

The House then divided, and the numbers were

For the second reading of the Bill	.. ..	322
Against it	.. ..	140
Majority	.. ..	—182

The bill was accordingly read a second time.—Adjourned

SUMMARY OF THE NEW CAB LAW,

AS ENACTED BY THE 16 AND 17 VIC. CAP. .

Just passed, June 28th, 1853, and to come into operation on July 10th next.

Section 1 directs that, after the 1st October next, every person desirous of obtaining a licence for a metropolitan stage or hackney coach or hackney carriage (*i.e.* a cab), must first have an inspection and certificate of the Commissioners of Police of the fitness of his vehicle.

By Sec. 2, the Commissioners of Police may cause an inspection, as often as they deem necessary, and may suspend licenses if carriages be unfit.

Sec. 3 inflicts a penalty, by fine or imprisonment, for having unfit carriages.

By Sec. 4 the fares are to be as set forth in Schedule A, thus:—

Carriages with Four or Two Wheels, drawn by One Horse.

For any *Distance* within and not exceeding One Mile		0	6
For any *Distance* exceeding One Mile—after the Rate of			
Sixpence for every Part of a Mile over and above any Number of Miles completed		0	6
For any *Time* within and not exceeding One Hour		2	0
And for every Hackney Carriage drawn by Two Horses mentioned			
The above fares to be paid according to distance or time, at the option of the hirer, in the event of a dispute arising between such hirer and the driver; if not otherwise expressed, the fare to be paid according to distance			

Provided, that no driver shall be compelled to hire his carriage for a fare to be paid according to time any time after eight o'clock in the evening and before six o'clock in the morning

Where more than two persons shall be carried in any hackney carriage, one sum of 6d. is to be paid for the whole hiring, in addition to the above fares. Two children under ten years of age to be counted as one adult person.

When more than two persons shall be carried inside any hackney carriage with more luggage than can be carried inside the carriage, a further sum of sixpence for every package carried outside the said carriage is to be paid by the hirer in addition to the above fares

When a hackney carriage is taken at a fixed distance fare, and the driver is requested by the hirer to stop for fifteen minutes or more, the driver may demand a further sum of sixpence (without further distance fare) for every fifteen minutes that he shall have been stopped.

No proprietor nor driver shall receive any sum as back fare.

By Sec. 5, the legal fare, as to distance and time, is to be painted inside and outside the carriage. The driver is to produce a book or table of fares when required

By Sec. 6, disputes as to distance fares are to be settled by the book signed by the Commissioners of Police, and the fares and other useful information are to be put up at standings.

By Sec. 7, the driver is compellable to drive to any place not exceeding six miles from the place where he is hired for any time not exceeding one hour from the time of hiring. More than four miles an hour shall be charged by distance

By Sec. 8, the driver must give the hirer a card with the number of his hackney carriage

Sec. 9 the proprietor must have painted on his carriages the name of the person he is by carry, and the driver must carry as many or less

By Sec. 10, the driver must, except as mentioned above, carry a reasonable quantity of luggage without further charge

Sec. 11 provides for the return of property found in carriages

Sec. 12 and 13 provide for the appointment and payment of persons to keep a good order at hackney carriage stands.

Sec. 14 directs lamps to be lighted in metropolitan stage carriages (*i.e.*, omnibuses) after sunset and before sunrise

Sec. 15 limits the number not to be put in or on metropolitan or hackney carriages, to obstruct light or air.

Sec. 16. advertising vehicles, and placards carried on foot or horseback to the obstruction or annoyance of inhabitants or passengers, are prohibited.

Sec. 17 enacts penalties, up to 40s., for offences against the Act, on the part of drivers or conductors.

The remaining six sections provide as to the hearing of complaints and their punishment; as to a complaint being lodged, at once, by the hirer, at the nearest police-office or station; and as to the Act including the whole metropolitan police district, and the city of London.

ELECTIONS.—On Saturday last the Earl of Dalkeith (eldest son of the Duke of Buccleuch) was returned, unopposed, for *Midlothian*, in the room of Mr Whitley who returned for *Peterborough* by a majority of 21 over Mr. Hankey And at *Durham* Mr. Mowbray obtained a majority of 86 over Sir Charles Douglas On Wednesday, Mr. Horsman was returned for *Stroud*, there being no opposition.

THE SEARCH FOR SIR JOHN FRANKLIN.—H.M.S. "DESPERATE" PARTING COMPANY WITH THE "PHŒNIX" AND "DILIGENCE," OFF CAPE FAREWELL.

THE SEARCH FOR SIR JOHN FRANKLIN.

EARLY in the month of May H.M. steam-vessels *Barracouta* and *Desperate*, received orders to repair, respectively, to Sheerness and Woolwich, to attend H.M. steam-vessel *Phœnix*, the *Diligence* and *Breadalbane*, transports, to the Arctic Regions, ordered to proceed to Beechey Island, on the eastern side of Baffin's Bay, there to form a dépôt for the use of the squadron under Sir Edward Belcher, C.B.; the *Phœnix* then to proceed to examine Smith's Sound, and the north-western side of the coast of Labrador.

The squadron got under way from Queenstown, on the 26th of May. The ships encountered rough stormy weather from the north-west, during which the *Barracouta* and *Breadalbane* parted company.

The expedition (*Phœnix*, *Desperate*, and *Diligence*) got up to the edge of the Polar ice, on the 14th of June. The early part of that day was lowering and gloomy, all around the horizon, except to windward, where a remarkably clear sky and bright light began gradually to show itself, from an early hour in the forenoon. A suspicion at once arose that the vessels were closing with the ice.

As the day advanced, everything grew still brighter. The sun shone out brilliantly and warmly. The horizon presented a sort of undulating outline, and seemed as if crested with foaming billows which were suddenly arrested in their course, and frozen up while glittering with spray.

When the ships got further in amongst the ice, the aspect was quite changed: the vessels appeared to be lying in a capacious basin, surrounded by ice—in some places running into long irregularly denticulated lines; while, in other quarters, the ice was floating in broken detached masses, with frosted summits, beautifully brilliant beneath a bright sun and azure sky, assuming the most extraordinary and grotesque appearances—from ships under full sail to whole squadrons of gun-boats, spires of churches, houses, &c.

Huge headlands and islands were seen at the southern point of Greenland; and about sunset, the outline of the islands, covered with snow, became more distinct. Their surfaces seemed crowned with towers, domes, and pinnacles, which lent a strange charm to these lonely regions.

Although amongst the ice-floes, the day was one of the warmest and most agreeable that was experienced during the voyage. The atmosphere was clear and rare, owing to the snow-blink, which was reflected towards the heavens, bringing the most distant objects within the range of vision.

The temperature of the external air, in the shadow, was not lower than 41°, that of the sea-water 40°. The sunset was rich and gorgeous. It did not take place until 9.30 p.m. There was very little night.

H.M.S. *Desperate* parted company with the *Phœnix* and *Diligence* in latitude 60° 18′ N., and longitude 41° 20′ W.; wishing them all farewell, and giving them hearty rounds of cheers on parting. In the accompanying Sketch, the middle ship is the *Desperate*.

LAUNCH OF THE "CRŒSUS."

THE launch of this splendid new steamer from the building-yard of Messrs. C. J. Mare and Co., of Blackwall, on Tuesday, the 21st ult., was briefly recorded in our Journal of last week. The name originally intended for the vessel was the *Jason*; but, from circumstances, this designation was changed to the *Crœsus*—a name of golden association as well as *Jason*. This steamer was built under contract for the General Screw Shipping Company by the Messrs Mare; the construction being from the designs and under the superintendence of Mr. Thomas Waterman, jun.

It is an artistic specimen of naval architecture. When a vessel is seen from the stocks, a better judgment can be formed of its proportions and contour than when it is afloat; and, judging of the *Crœsus* in this position, it seemed to present a graceful and somewhat novel outline from stem to stern, which our Artist has ably represented. It is a capacious and beautiful vessel, the length between the perpendiculars being 280 feet, or within about 40 feet as long as the *Great Britain*. The burden is 2500 tons, and there is a collective power of 400 horses. The engines are constructed by Messrs. G. and J. Rennie. Its first destination is Australia; and it is to be commanded by Captain Hall, late of the *Calcutta*. The Company have already several vessels, including the *Harbinger*, the *Hellespont*, and the *Argo*; but the *Crœsus* is the first vessel which has been built for them of so large a tonnage.

The ceremony of the naming was performed by Miss Holt, the daughter of Mr. Holt, M.P.; and consisted as usual, of dashing a bottle of wine against the iarboard bow of the vessel, an act which the young lady performed with becoming energy. The band immediately commenced the National Anthem, and the bonds which held the vessel having been unloosed, she glided or rather darted into her destined element, rapidly but gracefully—to the generally-expressed admiration of the spectators. The ceremony passed off with much éclat; and there was a wish from many that the *Crœsus* might, in illustration of her name, prove emblematical of riches to the Company, as well as be of convenience to the public.

HARBOUR OF REFUGE AT JERSEY.—The Government works at the harbour of refuge at St. Catherine's, Jersey, are rapidly progressing. The extent of the breakwater is 2500 feet. The head of the breakwater is to be formed of large blocks of granite, built up from the bottom of the sea. Divers are arriving at the works to prepare the foundation. The area of the harbour will be 70 acres; 30 of which will be 30 feet deep at the lowest tides.

ROYAL YORKSHIRE YACHT CLUB.—A silver cup of great beauty of design and appearance, one of the £100 prize cups, the gift of her Majesty to the Royal Yorkshire Yacht Club Regatta, is on view at Messrs. E. and E. Emanuel, silversmiths to the Queen, at Portsmouth. It is nearly two feet in height, the bowl representing a shell, with dolphins as handles, supported by a roef of coral, with figures of Neptune and Minerva, on sea-horses, in frosted silver, and holding tridents. The vase represents the sea in bright and frosted silver; dolphins, &c., issuing from the waves. The pedestal is of ebony; and on the front of the shell is engraved, "Presented by her Majesty the Queen to the Royal Yorkshire Yacht Club, 1853."

LAUNCH OF THE STEAM-SHIP "CRŒSUS," AT BLACKWALL.

THE IMPERIAL THEATRE, MOSCOW, ON FIRE.

DESTRUCTION OF THE IMPERIAL THEATRE, MOSCOW, BY FIRE.

AT half-past nine o'clock on the morning of the 11th of last March, a dense cloud of smoke was observed from one of the fire-station towers of Moscow, issuing from the roof of the large Imperial Theatre. Signals of alarm were immediately displayed; all the other fire-stations being telegraphed to send to the place of the fire the engines at their disposal. It was soon found that the immense building was burning inside, and that the fire had already spread itself with an amazing velocity in all directions of the interior. The flames burst forth from the fallen roof and from the windows; black smoke rose high in the air, and, sweeping over the northern vicinity of the theatre, obscured the light to such a degree that people could not well see what they were about. Innumerable firebrands flying in the air, threatened to set fire to the whole neighbourhood. Had there been more wind at the time, and had there not been snow lying deep on the ground and roofs of the houses, the catastrophe would have been inevitable. Notwithstanding an abundant supply of water, and the courageous exertions of the fire brigade, the whole building, one of the largest and best in Europe, presented at two o'clock in the afternoon a mass of ruins, which continued to burn for two days.

The cause of the fire is not known. It originated on the stage, where there was work going on preparatory to a concert and *tableaux vivans*, that were to take place in the evening of the same day. The flames were first observed by one of the mechanics, who, wanting to get some necessary instruments, opened the door of a small room, where they were deposited, and was scorched by the flames, that burst from this place, and which in an instant reaching the curtain, soon spread over the whole building.

From the suddenness of this melancholy occurrence, and from the number of *employés* permanently living with their families in the house, many lives were lost. Three skeletons were found in the ashes. Just at the commencement of the fire, three workmen, who had been engaged in the upper stories, finding no means to descend by the staircases—so rapid was the progress of the flames—jumped out of the windows to the lower roof, which, being of iron, soon became so intensely hot that two of the unfortunate beings, not capable of enduring the heat, threw themselves to the ground, and were killed by the fall. The third, with more presence of mind, made his way over protruding broad cornices to the front roof, and there remained for some minutes, till the greedy element, not content with the number of its victims, made its appearance close by him. The poor man cried loudly for help. Ladders were procured, but they did not reach the height at which he stood. He saw it; and, raising his arms to heaven, he made a sign of the cross, and began to approach the edge of the precipice before him. In an instant more he would have become a corpse. Thousands of people stood all around gazing with horror at the immense pile, upon which this poor man remained helpless and hopeless. Silence like that of the grave reigned among the multitude. His fate seemed inevitable. Suddenly was heard a voice, "Stay a moment, my good fellow! pray to God Almighty, and I'll endeavour to save you." All eyes were turned to the spot from which those sentences were uttered. A group of three men were observed—common peasants—two of them holding by the arms and shoulders a third, who was struggling hard to break from the hold of his friends. "Let me go, my lads," said he; "my heart is burning within me: I cannot bear the sight of a Christian soul thus perishing!" And with a powerful effort he broke loose and darted forward. The dense crowd gave way as he ran to the burning building, pulling from himself, and at the same time throwing away, his *shoul* (sheep skin) and his hat. In an instant he was at the foot of the ladder; here he took off his boots, attached a rope round his waist; and, seizing an oven-fork, which happened to lie close by, he began to ascend the ladder, which did not reach at the utmost to two thirds of the height at which stood the victim. Having attained the upper footstep, the generous man took hold of the rain-gutter; apparently it was not a very safe means of ascent, as it bent and rattled under his weight. But the man was resolved; he made the sign of the cross, and began to climb up. A cloud of suffocating smoke whirled around him; the flames were fast approaching; burning timber, red-hot sheets of roofing iron were falling down from every side; but what to him was all this? His heart was burning within his breast, he could not bear the sight of a Christian soul thus perishing.

It was a frosty day; the rain-gutter was cold as ice; his warm, sweaty palms and fingers stick and freeze to the iron tube; he tears them off, leaving bloody marks at every hole, and ascends higher and higher, till he puts his foot on a projecting cornice. From hence, by means of the oven-fork, he handed the rope to the poor man above him. "Tie it fast to the hook which supports the gutter. That's right. Now descend!" And he held the other end of the rope, and preceding the man, still supporting him down the gutter, placed him on the ladder. The man was saved.

During all this time the multitude stood breathless; but when they saw them both out of danger, all hats were taken off, and a sign of the cross at every breast testified a general thanksgiving, and a loud shout approved the act of generosity. Every one pressed forward to see the hero of this scene. The first who approached him, an officer in the army gave him twenty-five roubles silver (about £4). The example was followed: noblemen, merchants, peasants, took out their purses—some gave golden, some silver coins; some threw into his hat a few copper copeeks: all gave what they could. "God bless you, noble friend!" was heard from every side.

The name of this generous man is Bazil Marrin, a native of the Government of Taroslaff. Being a roofer by trade, he for many years lived in St Petersburg, pursuing his vocation; but afterwards engaged himself as a boiler-maker at the Government foundry of Kolpino. Last year he took leave of absence, and visited his native village. Having spent a few months with his friends, he was returning to St. Petersburg, by way of Moscow, to avail himself of the railways. He came to the ancient capital the day before the fire; and, not having caught the train, was obliged to remain till the next day. As this was his first arrival in Moscow, he took the opportunity of seeing the Kremlin, the old fortress, and to visit its venerable cathedrals. There, from some passers-by, he heard of the fire, and hastened to the spot, where he so nobly distinguished himself.

At three o'clock in the afternoon of the same day he took his seat in a railway carriage. On the 13th of the same month he reached St. Petersburg, and again entered himself in the number of workmen at Kolpino. In two days after, he was summoned to the office of the general police-master of the capital, where he was told that the Emperor desired to see him. He was accordingly taken to the palace. His Imperial Majesty received Marrin in his cabinet, and was pleased to say to him when he entered, "I thank you for a good action. Embrace me, and relate how you did it." In simple words Marrin told his story; and, when he finished, the Emperor dismissed him, saying, "Now you may go; but in case of need come to me at any time." Soon afterwards Marrin was rewarded with a medal and a sum of 150 roubles silver.

REMAINS OF THE IMPERIAL THEATRE, MOSCOW.—SKETCHED AFTER THE LATE FIRE.

The Imperial Theatre of Moscow was a magnificent building, nearly as large as San Carlos, at Naples. The interior was handsome, and the acting often excellent. Travellers who visit Russia expecting to see a people just emerging from barbarism, are often astonished to find themselves in scenes of Parisian elegance and refinement, and nowhere was this feeling more experienced than in the theatre at Moscow. The orchestra and chorus were exceedingly strong. Farce usually succeeded to opera. The Grand Opera was managed under Government superintendence and was a favourite place of resort of the Russian nobility, who usually wear their stars and ribbons at the opera.

CALENDAR FOR THE WEEK.

SUNDAY, July 3.—Sixth Sunday after Trinity. Rousseau died, 1778.
MONDAY, 4.—Trans. of St. Martin.
TUESDAY, 5.—Sovereigns first current, 1817.
WEDNESDAY, 6.—Adam Smith died, 1790.
THURSDAY, 7.—Thomas à Becket assassinated at Canterbury, 1170.
FRIDAY, 8.—Fire Insurance due. Edmund Burke died, 1797.
SATURDAY, 9. Oxford Term ends.

TO CORRESPONDENTS.

DIANA.—A portrait of "Teddington," the winner of the Gold Cup at Ascot, on Thursday, June 2, appeared in No. 439 of the ILLUSTRATED LONDON NEWS.
SCOTUS. The arms of the name, when spelt with a penultimate *i*, are the same.
G. T. C.—*Arms* of Crowther: "Gu. a bend wavy vair. *Crest*: On a tilting spear gu. a tiger passant or."
O. F. O.—*Arms* of Quaile: "Erm. on a canton vert, a cross Calvary en three pieces, or."
A. B.—The liveries should be "Blue coat turned up with white, red waistcoat and breeches."
A CONSTANT READER. To which family of Nicolls does our correspondent refer?
W. F.—1. A Judge of a County Court is not a county magistrate by virtue of his office: but, as he is a County Court Judge, the Government can make him a county justice without the usual qualification. 2. Neither a Bachelor nor a Doctor of Medicine is an Esquire as such.

*** In our Memoir of the Right Hon. C. Tennyson D'Eyncourt, last week, we erroneously stated that Mr. D'Eyncourt had "retired from the stage of public life." We meant to have said "had retired, for the moment, from public life." Mr. D'Eyncourt's name has, indeed, been mentioned in connection with the representation of Liverpool.

With the present Sheet is published a Supplement, containing a Series of Illustrations of her Majesty's Visit to the Camp at Chobham; also, Engravings of the French Camp near St. Omer; the Chasseurs de Vincennes; Paris Fashions for July; and other Illustrations. Price of the Two Numbers, One Shilling.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 2, 1853.

AT present we hear very little of the Irish. If it were not for the personalities between Mr. Keogh and Lord Naas, the Six-Mile Bridge affair, with other stale matters growing out of the last elections, and the Dublin Exhibition, we might almost ask, in the words of a contemporary recently applied to another party now almost silent, "what has become" of the Irish? An answer to the question, and an explanation of the fewness of the complaints that now come from Ireland may be found in the sixth report of the Irish Poor-Law Commissioners, of which the *Morning Chronicle* on Wednesday published an abstract. Not long ago the "big woes" of the people attracted universal attention, and called forth universal sympathy; but their calamity, the greatest that has befallen any modern nation, is now almost forgotten, and their regeneration seems at hand. The combined exertions of the State and of benevolent men of all creeds were insufficient to relieve the destitution of 1846. The bulk of the nation was reduced to pauperism; and continued for three years; till emigration and death arrived to its relief, to excite compassion and demand assistance. In the *year* ending September 29, 1851, the total number of paupers relieved, in-doors and out-doors, which had previously been counted by millions, was reduced to 755,557; and in the following *year* it fell to 519,775—a decrease in the whole number relieved in a year of 235,782. The reduction is still going on; and the total number relieved, in the workhouses and out of the workhouses, fell, from 190,433 in the *week* ending May 1, 1852, to 149,267 in the week ending April 23 of the present year; making the number 41,166 less than last year—a reduction of more than 21 per cent. As the number relieved is at its maximum generally in February, and declines through the summer the Commissioners expect that by next October the total number of persons receiving relief in Ireland will not exceed 80,000, or not more than one in 80 of the population—a proportion of pauperism far less than prevails in England at its present reduced amount. If the kindly process goes on, we may expect that pauperism will, ere long, be extinguished; and the expenditure for the poor, which fell from £1,141,647 in 1851, to £883,267 in 1852, will all go, as it already does in some small districts of England, to defray the expense of workhouses and officials, or what are called establishment charges. We must add that the manner in which the reduction of pauperism is taking place is as delightful as the reduction itself. There was a frightful mortality in some workhouses; but that has ceased; their inmates are still seriously afflicted with ophthalmia, and in two years no less than 400 persons lost the sight of both eyes, and 954 of one eye: so the reduction in the number of their inmates can not take place too fast for the best interests of humanity. It is no longer effected by premature deaths; but, by the withdrawal of the young, whose parents or friends find them subsistence outside the workhouse; by the inmates being summoned to join friends or relations in America or Australia—money, to the amount of £2379, having been transmitted last year, to enable 908 persons to go from the workhouses to independence; and by an increased demand for labour, which gives the people continual employment, and has slightly, but as yet only slightly, raised the rate of wages. In some measure, by their own exertion, the condition of the Irish is fast changing from that of miserable, destitute paupers, to that of independent, flourishing, industrious men, still living either in their native land, or finding a better home in other countries. The care of Government may do something to lessen a temporary evil; but, as the rule, individuals themselves must, and they only can, provide for their own welfare; and we form the best hopes, therefore, for the Irish, as we transcribe these records of their exertions to escape themselves, and enable their children, their friends, and relatives to escape from the horrors of workhouses and the degradation of pauperism.

THE dispute between Russia and Turkey continues, to some extent, to agitate the public mind, and to impede trade. Since last week no progress has been made towards a settlement. The Sultan has, indeed, given his answer officially to the last ultimatum of Russia; but the sense in which he would reply was previously known; and any further steps taken in consequence are not yet visible. We have nothing but the most vague reports. Sometimes we are told that the mediation of Austria has been accepted; at others, it is said that Austria has been required by the Czar to use its power to make the Sultan submit, and that Austria has refused. We are told, too, that the Russian armies are immediately to enter Moldavia, and that they will not enter for some time. It is further stated that, if they do enter, it will not be regarded as a *casus belli*; and that diplomacy, not the sword, will adjust the quarrel. The delay is undoubtedly favourable to peace. In the meantime, a new actor has come on the scene, and a new character has been given to the dispute. A son of Prince Woronzoff has arrived in Paris, with despatches for the Russian Ambassador there, and he "describes in ardent terms the excitement of the Russians to march to the Holy War." We knew before that the dispute between the Czar and the Sultan referred to the Holy Places, but the information is new that the population of Russia are enthusiastic in the cause as a matter of religion. A similar statement has before been made of the Turks, who are said to flock to the standard of the Sultan, and are eager to fight for their own faith. In this light the contest is between the Mahomedans and the Greek Christians, the embers of the quarrel having slumbered in the East for ages. In Russia an old religious party has a great deal of power. Prince Menschikoff belongs to it, and this party strenuously urges forward the Czar, who has acted, it is said, in this dispute, without consulting his customary adviser, Count Nesselrode. Now that matters have come to such an unfavourable issue, the Czar is said to be alarmed at his own position—to have fallen back on Nesselrode for advice—and to be personally, as well as his Minister, averse from war. Hence, persons here, who are well acquainted with the court of St. Petersburg—like the Russian Ambassador, Count Brunnow—are confident that there will be no war; but, when enthusiasm is kindled in a people, there is no answering for its results. It may affect the mind of the Czar—it has already exercised some influence over him; and hence, the introduction of the religious element into the quarrel on both sides removes it from the domain of ordinary politics, and renders it difficult to foresee, with any approximation to certainty, the possible result. The best-informed are at present doubtful whether the dispute will end in peace or war.

THE COURT.

The Court has been extremely gay this week. In addition to the Royal Christening, which took place on an unusually scale of splendour on Tuesday, there was a second State Ball at the Palace on Friday (yesterday). Her Majesty's guests have also been increased by the arrival of their Royal Highnesses the Prince and Princess of Prussia, accompanied by their youthful daughter, the Princess Louisa, and that of his Serene Highness the Prince of Hohenlohe-Langenbourg. The chief events of the week may be thus recorded:—

On Sunday her Majesty and Prince Albert, with the Princess Royal, the Princess Alice, and the Duchess of Kent, attended Divine service in the private chapel of Buckingham Palace. The King of Hanover was also present.

On Monday her Majesty received the Prince and Princess of Prussia at Buckingham Palace. The Royal party, with their illustrious guests, honoured the French Plays with their presence in the evening.

On Tuesday the Royal Christening took place.

On Wednesday morning her Majesty and Prince Albert, with the Prince and Princess of Prussia, the Duke and Duchess of Saxe-Coburg-Gotha, and the Prince of Hohenlohe-Langenbourg, visited the floricultural show at the Botanical Gardens, Regent's-park. In the evening the Queen and the illustrious party honoured the Princess's Theatre with their presence. The Princess Royal, the Princess Louise of Prussia, Prince Alfred and Princess Alice were in the evening to the French Play.

On Thursday morning Prince Albert, with the Prince of Prussia and the Duke of Saxe-Coburg-Gotha, went to Chobham, and accompanied the troops to Windsham Ridges, where they witnessed various evolutions. The Queen, with the Princess of Prussia and the Duchess of Saxe-Coburg-Gotha, went subsequently to Chobham, and were present on the return of the troops to the Camp. In the evening the Queen and Prince Albert, with the illustrious guests, went to Gloucester House, and dined with the Duchess of Gloucester.

ILLNESS OF THE PRINCE OF WALES.

His Royal Highness the Prince of Wales has been confined to his room by an attack of measles. The symptoms first showed themselves on Tuesday. Her Majesty has been unremitting in her attendances; and, with a kind precaution, has absented herself from all assemblies where a chance of contagion to other children might arise.

THE KING AND QUEEN OF HANOVER.

On Sunday afternoon, the King attended Divine service at Westminster Abbey. The Queen went to Kew, to visit the birthplace of her Royal Consort, where, in the village churchyard, she placed two garlands of *immortelles* upon the tomb of the late Duke of Cambridge. In the evening, the King and Queen dined with the Duchess of Cambridge, at St. James's Palace.

On Monday their Majesties received visits from the Prince and Princess of Prussia. His Majesty was entertained in the evening by the Earl and Countess of Jersey.

On Wednesday the King and Queen honoured the Duchess of Sutherland with their presence, at Stafford House, and in the evening, at a quarter to seven, proceeded in state to Buckingham Palace, to attend the Royal christening.

On Wednesday their Majesties, with the Royal children, accompanied by the Duchess of Cambridge, the Hereditary Grand Duchess of Mecklenburg-Strelitz, and the Princess Mary, visited Windsor Castle. They afterwards paid a visit to the Duchess of Kent, at Frogmore; and drove round Virginia Water before returning to London. It is understood that the date of their Majesties' departure is fixed for Tuesday next.

VISIT OF THE PRINCE AND PRINCESS OF PRUSSIA TO HER MAJESTY.—The Prince and Princess of Prussia left Aix-la-Chapelle on Sunday morning at an early hour, and arrived at Ostend between six and seven o'clock the same evening. At half past seven o'clock their Royal Highnesses, accompanied by the Princess Louise and a numerous suite, embarked on board her Majesty's steam-packet *Vivid*, which, after a very stormy passage, landed their Royal travellers at Dover half an hour after midnight. Their Royal Highnesses were received on the new landing-place by his Excellency the Prussian Minister, Count Flemming, and Mr. Ernest Bunsen, and conducted to the Ship Hotel, where their Royal Highnesses passed the night. On Monday morning their Royal Highnesses, accompanied by Chevalier Bunsen, left Dover by a special train, and arrived at the Bricklayers' Arms station at twelve o'clock. At this station Prince Albert was in attendance to receive his Royal guests. Their Royal Highnesses were conveyed to Buckingham Palace in the Queen's carriages.

The Countess de Neuilly and the Duke and Duchess de Nemours visited the Duchess of Kent on Saturday, at Clarence house, St. James's.

The Duchess of Montrose gave a magnificent ball on Tuesday night, at the family mansion, in Belgrave-square, in compliment to their Royal Highnesses the Duchess and Princess Mary of Cambridge and the Hereditary Grand Duke and Grand Duchess of Mecklenburg-Strelitz. The King and Queen of Hanover were graciously pleased to honour the Duchess with their presence at the fête.

RUSSIA AND TURKEY.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

I have taken some Sketches of the Turkish fleet at anchor in the Bosphorus; also of the combined English and French fleet at anchor in Basha Bay. I will forward them to you, with every explanation, if you should think them worthy of acceptance. A letter addressed to the Peninsular and Oriental Steam Navigation Company's Office, Southampton, will meet me on my arrival, where I expect to be about the 1st or 2nd of July. A Russian man-of-war steamer, under the merchant flag, arrived at Constantinople on the 10th of June, with the ultimatum, which if not signed within seven days, the declaration of war would then be given, and the Russians would pass the frontier, and take possession of Moldavia and Wallachia. They have an army of 150,000 men. The Russian Consul, with Russian subjects, were preparing to leave Constantinople on the 12th. The Turks have a large force on the frontier more than 150,000 men; this will soon be increased to nearly 300,000. Conscripts are arriving at Constantinople every day from the provinces. Great enthusiasm prevails amongst the Turks: they express great confidence in the result of the coming conflict. An Austrian steamer arrived at Constantinople on the 13th of June, having on board an Ambassador on an important mission to the Sultan personally.

The latest news arrived from Persia states the City of Sheraz to have been nearly destroyed by an earthquake—more than 15,000 people killed. The cholera is making great ravages at Teheran, and other towns in Persia.

I am, &c., JAMES SHOLTO, Surgeon, &c.,
Malta, June 20, 1853. Peninsular and Oriental Co.'s Service.

(We have replied to our Correspondent's obliging letter, and hope to engrave the above Sketches in our Journal of next week.)

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

The Encumbered Estates (Ireland) Act Continuance Bill was reported with amendments.

On the motion of Lord STANLEY of Alderley, the Soap-duties Bill, the Malicious Injuries (Ireland) Bill, and the Public Works Loan Bill were severally read a second time. Adjourned.

HOUSE OF COMMONS.—FRIDAY.

Lord Dalkeith took the oaths and his seat for the county of Edinburgh.

Mr. AGLIONBY brought up the report of the Plymouth Inquiry Committee, which stated that an idea was prevalent in Plymouth that persons might apply for and obtain situations in the dockyards after they had promised their votes; and that acting upon this, Mr. Mare and his agents had promised and obtained situations in the Dockyards for his supporters at the election. The committee concluded by reporting that the existing laws to prevent such practices were wholly inefficient; and that any inquiry, to be effectual, must be conducted on the spot.

In reply to Mr. Cranford, the Lord Advocate said that it was not the intention of the Government, during the present session, to propose any measure of education for Scotland.

In reply to Mr Layard, Lord J. RUSSELL said that the Government had received no official information of the Russians having blocked up the entrance of the Danube.

CUSTOMS, &c., ACTS.

The House having gone into Committee upon the Customs Acts,

The CHANCELLOR of the EXCHEQUER, in moving that the Advertisement-duty be reduced to 6d., intimated that with respect to the Stamp-duty on Supplements, it would be imposed whether such supplements contained news or advertisements. He also proposed that the supplement should mean a single sheet; or, in other words, an enlargement of fifty per cent.

Mr. M. GIBSON moved, as an amendment, "That all duties now chargeable on advertisements be repealed, in accordance with a resolution of the House on the 14th of last April."

After a short discussion, the committee divided, when the amendment was lost by a majority of 109 to 99.

Mr. CRAWFORD wished the resolution to be amended, in order to include all advertisements put up in omnibuses or other public conveyances, so as to free newspapers from unfair competition.

In reply to Mr. M. Gibson, the CHANCELLOR of the EXCHEQUER said that the tax would be levied only upon those advertisements which were at present liable to it. The advertising van system was about to be suppressed, and placards would not be allowed to be carried through the public streets.

Mr. M. GIBSON then moved that pamphlets and literary works be exempted from the operation of the tax.

Mr. NEWDEGATE thought that the whole duty ought to be retained, and condemned the change which was made with respect to newspaper supplements.

Mr. BRIGHT said that if the tax were altogether abolished the Chancellor of the Exchequer would receive more than the miserable sixpence from the increased number of letters passing through the Post-office containing advertisements.

Sir J. SHELLEY was surprised to hear the retention of the sixpence advocated on the ground of revenue when so much of the public money was lavished away in the "pomp and circumstance" of Chobham.

The CHANCELLOR of the EXCHEQUER consented to the amendment of Mr. M. Gibson relating to pamphlets and other literary works, provided they were not continued periodically.

Mr. CRAWFORD said, as he was not satisfied with the division against Mr. Gibson's first amendment, he should move that in place of "six-pence" in the resolution the cypher "0" be substituted.

Mr. HUME, Mr. BALL, Mr. COBDEN, and other members recommended the Chancellor of the Exchequer to accede to the proposal of Mr. Crawford.

The CHANCELLOR of the EXCHEQUER declined to do so.

Lord J. RUSSELL thought that the proposal of his right hon. friend to repeal two-thirds of the advertisement duty ought to have saved him from the reproaches which had been levelled at him. The attempt to produce a second division upon the same question was most unfair, especially in the absence of those who had previously voted. Should the amendment be carried, it would be necessary to bring in a bill for the entire repeal of the duty. The immediate effect of the amendment would be to retain the 1s. 6d. duty instead of the sixpence proposed by the resolution.

The Committee then divided, when the numbers were, for Mr. Crawford's amendment 68; against it 85: majority against the Government 5.

The CHANCELLOR of the EXCHEQUER then said he would take the sense of the committee upon the original resolution.

After a short discussion the committee again divided, when the numbers were, for the amended resolution 70; against it 61: majority against the Government 9.

The House then resumed, the chairman reported progress, and asked leave to sit again.

SUCCESSION DUTY BILL.

The House then went into committee upon the Succession Duty Bill, and the discussion of the clauses occupied almost the entire of the night. After several clauses had been agreed to, the House resumed, and the chairman reported progress.

The remaining business on the paper having been disposed of, the House adjourned.

THE CAMP AT CHOBHAM. FRIDAY.

This was a *dies non*. The troops were not even indulged with the ordinary morning parade, but were kept waiting in "constant readiness" (to borrow a term from the *restaurateurs*) in the expectation of some signal event. Noon, however, arrived, and the Magnet made no sign; and, to the great delight of men and horses, it became evident that the day was to be one of repose. The cavalry horses exhibited most unmistakeable symptoms of campaign fatigue. Picketed as they are, almost leaning against each other in the tent stables, they are afforded very little opportunity of enjoying a rest; still, however, each was the object of exhaustion to which many of them were reduced, that they threw themselves down, fully accounted as they were, to stretch their weary limbs. We speak now of the horses of the 1st Life Guards, for those belonging to the Carabineers and the 13th Light Dragoons, appeared to be a far more vigorous race of cattle, and endowed with much greater powers of endurance. Strange to say, however, mortality amongst the horses, especially those of the 1st Life Guards, has been exceedingly rare, and the men are in a more sanitary condition than even when in metropolitan quarters. The crowd yesterday was by no means numerous, owing, no doubt, to the precautions issued by our daily contemporaries with regard to the uncertainty of field-days; but Lord Palmerston's speech in the House of Commons on the previous evening, put this matter in its right light, and "every day" may ye regarded as an occasion when those who take an interest in military matters will receive, in some shape or other, an equivalent for the outlay dependent on their visit. To-day, however, was certainly an exception to this rule; but that may be accounted for in different ways, especially the visit of her Majesty on the previous day, the fatigue of the troops, and the necessity for relaxation previous to most numerous evolutions which are generally expected—but we think erroneously—to take place at Virginia Water to-morrow (Saturday). We are advised from an authoritative quarter, that the manœuvres to-morrow will be confined to the immediate neighbourhood of the Encampment. For several hours to-day the rain poured down in torrents; but about four o'clock the weather cleared up again, and the men were enabled to enjoy their usual rational relaxations out of doors. A Frenchman with two dancing wolves contributed amazingly to relieve the *ennui* of camp life, and he was commensurately rewarded by the officers.

With regard to the movements of the troops in future the utmost secrecy is observed.

MR. TUFNELL.—A decided improvement has recently taken place in the health of the Right Hon. Henry Tufnell, M.P., and it is to be hoped ere long he may be allowed to resume his parliamentary duties.

RETRENCHMENT OF WEST CORNWALL.—Mr. Michael Williams, of Trevine, has been mentioned as the probable successor to the late Mr. Pendarves. Mr. Williams is a Liberal.

ROYAL LONDON MILITIA.—This corps, with their officers, will attend St. Paul's Cathedral at a quarter before ten on Sunday (to-morrow).

THE CAMP AT CHOBHAM.—TROOPS PASSING IN REVIEW BEFORE HER MAJESTY.—(SEE PRECEDING PAGE.)

MUSIC.

PHILHARMONIC SOCIETY

The first [illegible] of Spohr's [illegible] a musical parody on the school of [illegible] in B flat, No. 6—Weber's Oberon overture and Lindpaintner's Vesuvius overture—Mozart's fine Vocal Quartette, "Come si scuota," and [illegible] Beethoven's Symphony in C minor.

Monday at [illegible] Lucas Rooms [illegible] Vocal [illegible] Concert, [illegible] Miss Dolby, Mr. Lockey, and Mr. Lucas. An extra concert will take place early [illegible] Queen and Stanley.

NEW PHILHARMONIC SOCIETY.

[illegible] Mr. Mellon [illegible] Mr. Benedict [illegible] Mr. Sims Reeves [illegible] Mr. Hobbs [illegible] Mr. Lucas [illegible] Mr. Weiss

THE ROYAL CHRISTENING.

The christening of the infant son of her Majesty and his Royal Highness Prince Albert took place on Tuesday evening, in Buckingham Palace. The sacred rite was performed in the private chapel in the Palace, which was duly prepared for the occasion. Two rows of chairs, of crimson satin and gold, were placed on each side of the centre, for the use of the Queen, the sponsors, and the Royal personages invited to be present. The altar was lined with crimson velvet, paneled with gold lace, and on the communion-table were placed the gold-en vessels used in the sacrament, with salvers, and two large candlesticks. Beside the former and gold were placed for the officiating clergy. The font was placed in advance of the *kant pos.* It was a most elegantly formed vase of a lyer gilt. The fine was formed of the leaves and flowers of the water lily, and the base from which its elegant stem sprung was composed with infant angels playing the lyre. In the front was the Royal arms. The font was placed on a fluted plinth of white and gold. The chapel was brilliantly illuminated by large globes of light.

The band and choir were placed in the gallery, and consisted of her Majesty's private band, strengthened by additions and the choir of the Chapel Royal. The Heralds and Kings of Arms were on duty to usher the distinguished personages to their places in the chapel, to conduct the Royal processions

Soon after six o'clock, the official personages invited to be present arrived, and took their places. Shortly before seven o'clock, the procession of the sponsors entered the chapel. The sponsors were

His Majesty the King of Hanover.
Her Royal Highness the Princess of Prussia.
Her Royal Highness the Princess Mary of Cambridge.
His serene Highness the Prince of Hohenlohe-Langenburg.
Attended by their Ladies and Gentlemen in Waiting.

Immediately as the procession entered the chapel, the band commenced playing the march in the occasional oratorio (Handel), and continued playing until the procession of the Queen had also entered.

Immediately after the sponsors had taken their stations on the right looking towards the altar, the procession of the Queen—attended by the Lords of Asia, Bristol, State Officers, and Officers of the Household—entered the chapel, when the Royal personages were ranged in the following order in the centre of the chapel.

H.R.H. the Prince of Prussia.	His Majesty the King of Hanover.
H.R.H. the Princess Helena.	H.S.H. the Prince of Leiningen.
Her Majesty the Queen	H.R.H. the Princess Mary of Cambridge.
H.R.H. the Prince Consort.	His Serene Highness the Prince of Hohenlohe-Langenburg.
H.R.H. the Prince Albert.	
Her Majesty the Queen of Hanover.	H.R.H. the Hereditary Grand Duke of Mecklenburg-Strelitz.
Their Royal Highnesses the Princess Louise of Prussia.	H.R.H. the Hereditary Grand Duke of Mecklenburg-Schwerin.
The Princess Royal.	
The Prince Alfred.	H.R.H. the Duchess of Nassau.
The Princess Adelaide.	His Serene Highness Prince Edward of Saxe-Weimar.
H.R.H. the Duchess of Kent.	
H.R.H. the Duke of Saxe-Coburg-Gotha.	H.R.H. the Duchess Dowager of Mecklenburg-Strelitz.
H.R.H. the Duke of Cambridge.	Her Serene Highness the Princess Adelaide of Hohenlohe-Langenburg.
H.R.H. the Duchess of Cambridge.	

The service then commenced with the performance of the 84th Psalm (composed by his Majesty the King of Hanover).

At the conclusion of the Psalm, the Marquis of Breadalbane, Lord Chamberlain, accompanied by Viscount Torrington, conducted the infant Prince into the chapel, his Royal Highness being attended by Lady Caroline Barrington, who having taken her station in front of the font, and the four illustrious sponsors having stepped up on one side, the Archbishop of Canterbury commenced reading the Baptismal Service.

On reaching that portion for the naming of the child, the Archbishop received deed of the sponsors how it should be named, when the King of Hanover answered, in a clear sonorous voice.

LEOPOLD GEORGE DUNCAN ALBERT,

and his Grace baptised it accord ng.

After having received the sacred symbol, his Royal Highness Prince Leopold was given in the arms of Lady Caroline Barrington, and remained in the chapel until after the exhortation.

An anthem and chorus were then performed; and the principal portion of the ceremony concluded with the "Hallelujah," from "The Mount of Olives" (Beethoven):—

Hallelujah! to the Father and the Son of God!
Praise to our Lord, to ever-living Glory, to holy songs of joy!
Worthy is the Lamb that slain, and lives, the exalted Son of God!

After the blessing had been given, the procession of the sponsors was again formed, and left the chapel, attended by the whole suite of His Majesty the King of Hanover, the band playing the march in "Judas Maccabæus."

In the midst of the afterwards her Majesty and the rest of the illustrious personages followed in the same order as they entered.

The Queen wore a dress of white lace, with silver stars trimmed with Honiton lace and white and silver ribbons. Her Majesty wore a diadem of diamonds with a round centre, in which was set the large diamond known as the Koh-i-noor. The Queen wore the ribbon of the Order of the Garter, with a diamond "George" suspended, and the "Garter" around her left arm.

His Royal Highness the Prince Royal and the Princess Alice, Helena, and Louise were dressed in white tulle, over a short, open skirt with deep flounces, and wore white silver hats.

Her Royal Highness the Princess Louise of Prussia had a dress of white crape over white silk, trimmed with white lace and white and silver ribbons. Her Royal Highness wore a pearl necklace and ornaments, and a diamond stomacher.

Her Royal Highness the Princess Royal of Prussia was of white silk, bordered with silver, over one of which the dress was over-laid with white flowers and diamonds. Her Royal Highness's head-dress was ornamented with feathers and diamonds.

Her Royal Highness the Princess Alice wore a dress of white crape over white, with two skirts of point lace, with white satin ribbon, and having the stomacher adorned with Honiton lace and bouquets of white flowers and diamonds. Her head-dress was of pearls and diamonds, and the cordon of a foreign order of knighthood.

Her Royal Highness the Duchess of Cambridge wore a dress of white silk, with five flounces of point lace, with white satin ribbon, and the stomacher and head-dress composed of white flowers and diamonds.

Her Royal Highness the Princess Mary of Cambridge wore a dress of white lace over white silk, the front having ornaments of pearls and diamonds, and the head-dress composed of white flowers and diamonds.

Her Royal Highness the Duchess Caroline of Mecklenburg-Strelitz wore a dress of white crape over white silk, the front having ornaments of pearls and diamonds, with white flowers, fastening the dress from the girdle to the flounce; the stomacher was ornamented with pearls and diamonds, the head-dress was formed of diamonds, white feathers, and pearls.

Her Serene Highness the Princess Adelaide of Hohenlohe-Langenburg wore a white silk dress, with a rich white lace. The Princess wore round her head a garland of flowers.

The Duke of Cambridge was habited in a Major-General's uniform, and wore the collar of the Order of the Garter.

His Royal Highness Prince Albert wore a Field-Marshal's uniform, with the collars and other insignia of three Orders of Knighthood.

His Royal Highness Prince Arthur wore a Highland dress.

The Duke of Cambridge and Prince Edward of Saxe-Weimar wore the uniform of the Foot Guards, and the latter wore the collar of the Order of the Garter.

The Ministers of State and the Officers of the Royal Household all wore their full dress uniforms, and the members of Queen Victoria's Privy Council wore the insignia of their respective Orders.

At eight o'clock the Queen was conducted, by the Lord Steward and the Lord Chamberlain, from the Throne-room to a State banquet in the Picture Gallery, accompanied by the Royal Family, the Royal sisters, the Cabinet Ministers, and the other aides and gentlemen who attended the ceremonial, the band playing "God save the Queen."

The Christening cake was placed in the centre of the table opposite to her Majesty's seat. It was raised in three portions or stages, the base being decorated with wreaths of white and red roses. The two upper divisions were incrusted with crimson satin, on which were displayed in white letters, the initials "P. L." surmounted by a crown, varied with ornaments of pearls and white roses. The cake was crowned with a rotunda, supplied with flowers; coral ornaments representing the four seasons were placed round the cake.

After the banquet, the Lord Steward gave the following toasts, viz.:—

"His Royal Highness the Prince Leopold"
"The King and Queen of Hanover."
"The Prince and Princess of Prussia"
"The Queen and the Prince."

Her Majesty then rose from the banquet and proceeded to the White Drawing-room, accompanied by the Queen of Hanover and the other ladies present, soon after which his Royal Highness Prince Albert, the King of Hanover, and the other guests, passed into the Grand Saloon, which was fitted up for music.

The Queen and the whole of the Royal and distinguished circle having been liked in the Grand Saloon, the following musical performance took place.—

Overture, "Masaniello"	Auber.
Fidelio, (Soprano, No. 8)	Beethoven.
Solo, violin, Signor Bazzini, on Themes from "La Sonnambula"	Bazzini.
Barbiere Marsch	Mendelssohn.
Concertante violoncello and contra-basso, Signori Piatti e Bottesini	Hause.
Slovenka, "Ukjenna"	Verdi.
Solo, trombone, Herr Nabich	Nabich.
Brindisi (8 strofe, No. 9)	Donizetti.

In addition to the dinner company, the following, among others, had the honour of receiving invitations for the evening party: His Highness Prince Louis Lucien Bonaparte, the Countess of Dorsburg, the Archbishop of York and the Hon. Mrs. Musgrave, the French Ambassador and the Countess Walewska, the Duchess of Norfolk, and a very numerous party of nobility and gentry.

A Guard of Honour of the Foot Guards, with the band of their regiment, mounted guard in front of the Palace during the ceremony.

CHESS.

TO CORRESPONDENTS.

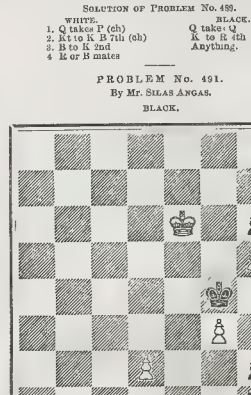
F. M. H., Rugeness.—It shall have every attention.
J. C., Camden.—Your letter, via Southampton, has arrived safely, and shall be replied to upon early the.
F. L. S.—If you will send an address, the information required at once will be given.
CLERK.—We addressing the communication to Mr. Newman at the Regency, secretary of the established Chess club at Leeds. we should have said Mr. J. C. Campion. The former gentleman is still one of your members.
RICARDO.—It shall be examined.
PHILIDOR.—The two correspondents have hit upon a very pretty mate in the position of *four* bishops of two moves. We will embellish their position and it next week.
E. H., Glasgow.—We have not again for your letter in Chess Scrolls. Send it to the *Chess-Player's Chronicle*, published soon by by Kent and Co., Paternoster-row.
R. B. L. S., and others.—It is clear that Problem 489 admits of three or four solutions in four moves. Try it by four.
R. H., Gainsborough.—Your Problems shall be reported on next week. 2. In the position given White castle to draw the game.
J. P.—Why do you not send an address?
CHAPTER.—Knight's No. 8.3 cannot be solved as you suggest. The other is right.
BRADFORD.—The notice referred to another mode of solving your Problem, which Raphicella discovered.
C. T. S.—Up to the standard, it shall have an early place.
JOHN ANDERSON.—A simply, well-fought game.
E. H. of Norwich.—What is he authority for changing you mention? We have no reply to any of existing to Nash's authority.
NORTH BRITAIN.—The Edinburgh achievement will of course take rank that he has due practice and training. It is very well for persons who do nothing else but play Chess to propose endless matches on the spur of the moment. Men of business and scholars, who keep the game scientific are to be desirous of less regular some rules as to arrange the time they would be days for games, both at the first and subsequent.
SOLUTIONS OF PROBLEMS, No. 486, by Lucien, M. N., Ricardo, L. L. D., Colonel A. J. M. of Shebbeare, E. B. of Norwich, R. Alfa, Jack of Worcester are correct.
SOLUTIONS OF PROBLEM No. 487, by J. of Sheffield, E. P. K., Ricardo, J. P., Ludovicus, Portlands, J. M. of Sherburn, E. H. of Norwich, Shebbeare, Dorcean, F. L. B. (in four moves) by J. B. of Gloucester, and R. B. M.), A. Alfa, R. A., R. A., G. O. of Cottingham, are correct.
SOLUTIONS BY THOMAS by Jack of Worcester, Rho, Miner, Punch, A. Z. Sigma, P., and C. are correct. All others are wrong.

SOLUTION OF PROBLEM No. 488.

WHITE.	BLACK.
1. Q takes P (ch)	Q take: Q
2. Kt to K B 7th (ch)	K to R 4th
3. B to K 2nd	Anything.
4. K or B mates	

PROBLEM No. 491.
By Mr. SILAS ANGAS.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN VIENNA.
Instructive Gambit between Mr. SZEN and Mr. FALKBEER.
(King's Bishop's Gambit.

WHITE (Mr. F.)	BLACK (Mr. S.)	WHITE (Mr. F.)	BLACK (Mr. S.)
1. P to K 4th	P to K 4th	23. K to K B 3rd	B to Q Kt 4th
2. P to B 4th	P takes P	(c)	
3. B to Q B 4th	Q to K R 5th (ch)	24. B takes B	P takes B
4. K to B sq	P takes P	25. P to Q R 3rd	K to Q 2nd
5. Kt to Q B 3rd	P to K Kt 4th	26. Q to Q 2nd	Kt to Q B 3rd
6. Kt to Q B 3rd	B to K Kt 2nd	27. B to K Kt 7th	K R to K B 2nd
7. P to Q 4th	Kt to K 2nd	28. B to K R 3rd	Q R to Q 5th
8. P to K 5th	P to Q 4th	29. B to K Kt 5th (ch)	Kt to Q 6th
9. Kt to K B 3rd	Q to K R 3rd	30. K R tks K B P	Kt to Q Kt 6th
10. Q to K sq (a)	Q Kt to Q B 3rd	(c)	
11. P to K 6th	P to K Kt 5th	31. K R takes Q (ch)	Kt takes Q (ch)
12. Kt to K R 2nd	P takes K P	32. K to his 2nd	K R takes R
13. Kt takes K B P	Q to K R 3rd	33. K takes Kt	Q R to Q 6th (ch)
14. Kt takes K P	B takes Kt	34. K to Q B 3rd	Q R to Q B 5th (ch)
15. P takes B	Q to K B 4th	35. K to his 3rd	Q R takes P
16. Q to K Kt 5th	Q takes B P	36. K to Kt 3rd	K to h 4th
17. Q to K B 5th	K to K B sq	37. K to K B 3rd	P to K R 3rd
18. Q to K B 2nd	B to K Kt 5th	38. Kt to K B 5th	Q R to Q 6th
19. R to Q B 3rd	P to Q R 3rd	39. B takes K R P	Q R to K R 7th
20. Kt to Q 4th	Kt takes Kt	40. R to Q B sq	Q R to K Kt 7th
21. B takes Kt	P to Q R 4th	41. K to B 3rd	P to Q B 5th
22. K to K R 3rd	B to Q 2nd	42. K to Kt 3rd	P to Q 4th

The game was protracted by White for some moves, but Mr. Szen finally won it.

(a) Q Kt to K 4th looks a better move.
(b) Anticipating White's playing his Q B to Q B 7th, and driving the Queen from her position of the Q P.
(c) The *Schachzeitung* remarks, lastly, that it would have been better for White to have retained his Kt P to the K. by which he would have avoided the exchange of Bishops.
(d) In the Magazine above ment oned, the following variation is given as be neat of White's playing 28. P to Q Kt 6th, instead of moving his Bishop:—

28. P to Q Kt 6th	Kt to K 4th	31. B to K 5th	Q R takes Q R P
29. B to Q B 4th	Q takes K B P		

But we believe White might have advanced the Pawn in perfect safety, and with great advantage. If he had played properly afterwards. For suppose—

29.	Kt to K 4th	30.	K R takes K B P

Instead of this move, White may play his Q to K 2nd, threaten ng to take the Q Kt Pawn, checking, and, if the kt be moved, to give mate at K 8th—

30.	Q to R 3rd	31.	Q Rtakes Kt

And surely Black can never save that game.
(e) A fine conception. Play the best way he can, it does not appear that White can escape mate, let one or other of force or situation.
(f) We should rather have played the Q to K 2nd as the less of two evils. In that case the following is a probable continuation:—

30.	Q to K 2nd	R takes R (ch)	
31.	K to his sq	Q to K 5th	

We do not at the moment see any better move for him

32.	Q takes Q	P takes Q	
33.	B takes R	R takes B	

And, although Black has an undoubted advantage, White may still make a good fight.

CHESS ENIGMAS.

No. 820.—By J. B. of Bridport.

White: K at Q R sq, Q at Q Kt 6th, Kts at K B 5th and Q B 6th, Ps at K Kt 2nd and Q 4th.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

A return has been issued showing that last year 3,745,345 tons of coals were brought into the port of London, against 3,490,963 tons of the preceding year.

The latest intelligence from St. Petersburg announces the fact that the commerce of that capital was beginning very seriously to feel the effect of the agitation going on upon the subject of Turkey.

At the Kingswood Coal Heries, near Bristol, about 260 of the men have struck work, owing, as they allege, to a resolution come to by their employers to lower the rate of wages.

Mdlle. Therese Ferencsy, of Presburg, the authoress of a great number of prose and Hungarian poems, is stated to have died in that city by her own hand.

The amount received at the treasury of the East India House for bills upon India from the 8th to the 22nd ult. was £241,000.

Mr. Henry Barkly, who has lately returned, after a most successful career as Governor of British Guiana, it is said will be appointed to succeed Sir Charles Grey as Governor of Jamaica.

The deposits received in the Paris savings banks on Sunday and Monday last amount to 455 25ff.; the deposits withdrawn, to 787,196f.

The following gentlemen will be called to the inner bar during the present term:—Messrs. Montague Smith, of the Western, Edward James, and Stephen Temple, of the Northern; and W. H. Grove, of the South Wales circuit.

Accounts received from Austria, Hungary, and Turkey announce that the overflow of the Danube increases every day. Near Lamlin the five arms of the river are almost entirely united, and form an immense lake, which inundates the adjoining country.

The *Arabia* has made the passage from New York to Liverpool in nine days and seventeen hours, being the quickest on record. She made the last passage to New York in ten days and one hour.

Mr. James Nagle has been appointed Clerk of the Crown in the Court of Queen's Bench, Dublin, in the room of Mr. P. Pye Mahony, deceased.

A letter from Nuremberg of the 21st ult. says:—"We receive by telegraph the intelligence that steam navigation on the Danube has been interrupted between Donauwerth and Lanx, probably in consequence of the height of the waters."

The public are large will be interested in knowing that a considerable number of iron shillings, neatly covered with silver by the electro-plating process, are in course of circulation. They will not bend, therefore there is the less hope of immediate detection.

The project of having a submarine telegraph across the Solent, for the purpose of extending a telegraphic communication with the Queen's marine residence, in the Isle of Wight, has been abandoned.

The Princess Charlotte, the only daughter of King Leopold, made her first communion on the 26th ult., in the Roman Catholic Church of Laeken, where her lamented mother lies buried.

The King of Prussia has ordered that the portrait of Jacob Grimm shall be placed in the Gallery of Contemporary Celebrities created by him in the Palace of Charlottenburg.

Edward Smirke, Esq., has been appointed Vice-Warden of the Stannaries; and W. J. Alexander, Esq., Attorney-General to the Prince of Wales.

The *Augsburg Gazette* states that the fortifications of Verona are being pushed on with unusual activity.

The Cork Town-council have agreed that an address be presented to Major-General Sir Joseph Thackwell, G.C.B., congratulating him on his arrival from India, and for his distinguished services in the late Indian wars.

Captain Leicester Vernon, the new M.P. for Chatham, and son-in-law to Sir F. Smith, received the name of Vernon on inheriting the considerable estates of Mr. Robert Vernon, well known by his present of the Vernon Gallery. Captain L. Vernon had previously taken the name of Harwell with the estate of Upton Hall, Northampton.

Vice-Admiral Bruce has been appointed to the chief command of the squadron of evolution of sea-going ships, and Rear-Admiral Charles will come and under him.

The Pasha, during her stay at Alexandria, was visited by many persons of note. There were his Excellency Khelil Pacha and his assistant, Arskul Bey, the Governor of Alexandria, and friends, besides gentlemen and officers from ships lying there.

On Saturday morning a very large warehouse in Dowgate, occupied by Nichol and Son as a warehouse for chemicals, &c., fell down with a tre mendous crash. The basement was used as a stable, and a horse there was crushed to death.

The Legislative Assembly of the free city of Frankfort, adopted on the 20th ult., by 74 votes to 9, the bill for extending the political rights of the Jews.

There will be *twenty-seven* Saturdays in the half-year ending December 31, 1853.

Madeira has this year been revisited by the grape blight, and the wretched inhabitants have been reduced to a still lower abyss of misery.

The *Valette*, new paddle-wheel steamer, for the Peninsular and Oriental Company, will have an average speed of sixteen and a half miles an hour.

An India paper states that a sum of £20,000 has been granted for church-building purposes in the Punjaub.

The directors of the South Wales Railway has enabled the local fishermen to send large quantities of fish to London, Birmingham, &c. Formerly there was only a local market, and the catch was restricted in consequence.

We find from several country papers that dogs are being massacred in consequence of the alteration in the assessed taxes, which includes all the canine species in the impost.

Wisconsin has sent to the American Exhibition a hog weighing 1269 lb. It is now twenty months old.

The Earl of Dalkeith (the new M.P. for Edinburghshire) left Edinburgh on Monday morning, to set off for York, and take leave of his brother, Lord Walter Scott, who is going to India with his Regiment (the 52nd). The Earl will afterwards take his seat in the Commons.

The cholera has broken out at Copenhagen. Several cases occurred on the 24th ult., some of them almost immediately fatal.

On Wednesday next the duty will be taken off soap, and not on Tuesday, as erroneously supposed.

By a late proclamation the Danish penny-post system has been extended to the whole monarchy, so that the penny stamp will now frank a letter to either Schleswig or Holstein.

In one district in Marylebone a body of shoemakers have struck work, which the guardians of the parish are resolved to resist, by refusing any assistance to the men or their wives should they apply for relief.

A goat belonging to the *Diamond* collier, now at Southampton, was cut to pieces on the South-Western Railway on Tuesday morning; he having, in a state of drunkenness, trespassed on the line near the Bevis-street station.

Lieut.-General Tenzek, commandant of the garrison of Warsaw, has been charged with the functions of military Governor-General of that city during the absence of Prince Gortschakoff.

The Scots Government has established bonding warehouses at Leipsic on the model of those existing at London. The dock-warrant will enable the owners or consignees to obtain advances on the goods.

On Saturday week, the silver arrow presented by the magistrates of Edinburgh to the Royal Company of Archers, was shot for in Hope-park, and gained by Douglas Maclagan, Esq., M.D.

The Duke of Genoa came from Dresden to Berlin on Friday week, and returned, after paying a visit to their Majesties at Bellevue.

The cholera has been very violent at Tehran, and an inundation had caused immense damages to that city. Locusts had devastated the whole of the flourishing plains of the province of Ispahan.

The visitors to the lake districts have not been very numerous hitherto. The backwardness of the season has doubtless had its influence. Several families have already visited Keswick, but the arrivals have not been as numerous as they are anticipated should fine weather continue.

During July the following ships will carry letters:—For Sydney, N.S.W., the *Riviera*, from Portsmouth, on the 20th; for Moreton Bay, the *Benjamin Rhodes*, from the London Docks, 14th; for Melbourne, the *Argyle*, from Plymouth, 6th; for Melbourne, &c., the *Great Britain*, from Liverpool, 23rd.

A very destructive fire occurred at 107, Hatton-garden, on Saturday evening last, by which two lives were lost, and much property destroyed.

A daring act of sacrilege has been committed at Ludwigslust, the summer residence of the Grand Duke of Schwerin. The mausoleum of the ducal family was broken open, the coffins stripped of their gold and silver ornaments, and the chapel robbed of all the sacred vases and other valuables.

The amount of railway calls falling due in July is £1,007,506, of which £311,250 is on account of the companies.

A letter from Hamburg of the 22nd ult. states that, on the previous day, 713 German emigrants embarked on board four vessels for America.

The Heyrow anniversary festival was celebrated this day (Saturday), at the Thatched House, under the presidency of Lord Palmerston.

"AFFECTION."

PAINTED BY J. JENKINS.

THIS pleasing little work is exhibited at the Water Colour Society's Rooms. It tells its own story—of a happy Italian peasant family, enjoying themselves under the shadow of their own vine-tree. The group of the two children gambolling on the ground is very prettily conceived, and as happily realised. The figure of the mother, too, who seems to hang over her children with delighted affection, is full of womanly grace. At the back we see the father, busily gathering grapes: and this figure, perhaps, is a little too large and prominent, disturbing the repose of the more interesting subject matter of the foreground. The colouring has all the delicacy and brilliancy for which Mr. Jenkins is so well known.

"YOKE OF DRAUGHT OXEN ON THE MOSELLE."

PAINTED BY G. COLE.

THERE are few more genuine landscapes in the present year's Exhibition at the Royal Academy than that named above, and of which we give an Engraving. The Valley of the Moselle—a mild sister to the bolder and more imperious Rhine—presents many most beautiful views, one of which the artist has very happily selected. The peasantry engaged in the operation of cutting timber, and the yoks of oxen constantly employed drawing immense loads of that valuable article of produce to the river-side, are well introduced, and serve to identify and give character to the scene.

DESSERT SERVICE,

ILLUSTRATIVE OF THE "MIDSUMMER NIGHT'S DREAM,"

AT THE DUBLIN EXHIBITION.

MESSRS KERR, BINNS, and Company (late Chamberlain and Company), of the Royal Porcelain Works, Worcester; and also of Dublin, Philadelphia, and New York; have produced, expressly for the Great Industrial Exhibition of Ireland, a Dessert Service, principally manufactured from Irish materials, and by Irish talent; the subjects being illustrative of Shakspeare's "Midsummer Night's Dream." The undertaking was an ambitious one, and creditable alike to the enterprising spirit and the patriotic feeling of those who projected, and have carried it out. It was Sir R. Kane who first pointed out the natural resources of Ireland available for the manufacture of porcelain; and, assisted by him and Professor Barker, of the Royal Dublin Society, Mr. W. H. Kerr, (one of the exhibiting firm) "procured the material in Ireland from which the service is principally manufactured, including the felspar and gold. Mr. R. W. Binns, another of the firm, designed the general arrangement, form, and decorations, of the objects; while Mr. W. B Kirk, associate of the Royal Hibernian Academy, designed and modeled the figures illustrating the play." Finally, so much importance do the exhibitors attach—and justly so, we think—to their work, that they have published, in a very handsome form, the "Midsummer Night's Dream" entire, with lithographic illustrations (by Day and Son); being copies of the several objects in the Dessert Service in question. The writer of the present notice, not having had an opportunity of seeing the Dessert Service itself, can only form his opinion of the artistic merit of the various pieces, in their decorative character, from the copies so placed before him; and, upon the whole, he is happy to report very favourably of them. Of course, the originals suffer many disadvantages in being thus transferred, through two successive processes—photography and lithography—to a different medium; and we accordingly observe, in the printed sketches, some crudities of execution, and occasional inaccuracies in outline and proportion, which we can well imagine may not be in the porcelain productions themselves. With this consideration, we shall now merely notice—and that generally—the designs of the various objects.

It were almost needless to observe upon the hazardous experiments of the artist who would seek to embody the various personages and incidents in the immortal Shakspeare's wildest poetical creation: the more especially when his works are intended to be reproduced by fictile art, and as objects of domestic use. To satisfy at the same time the expectations of the student of Shakspeare, and the requirements of the table-dresser, as well as to tickle the various tastes and fancies of the guests round the festive board, were a task for a genius as great and as versatile as that of Shakspeare himself. Let Mr Kirk, therefore, not be disappointed if he have not succeeded to the full extent of his aspirations. Besides the figures and scenes from the play, the Dessert Service comprises, first, a figure of Shakspeare, represented sleeping on a bank, supposed to be dreaming of the materials and structure of his comedy; the ass's head, with *Puck* flying through the tree, as well as the fairy heads proceeding from each branch, indicating how his thoughts are occupied; secondly, the apotheosis of the bard, illustrated by Fame with outstretched wings, holding his image graven on a star, and springing upward to heaven; thirdly and fourthly, figures of Melpomene and Thalia; and, fifthly, a large centre-piece, "illustrating all the fairy characters in the play; comprising the Jealousy, the Revenge, and the Reconciliation." The illustrations from the play consist of two figures each; some serious or sentimental; the others comic or burlesque. The former class of subjects appear to be most satisfactorily executed; being of sufficient variety, classic in costume, and displaying considerable gracefulness in their treatment; but, to attempt to realise the comic extravagancies of Shakspeare's spiriting, was a more dangerous experiment, besides that grotesque subjects are generally unsuitable to the plastic art. However, upon this point we

"AFFECTION." PAINTED BY J. JENKINS.—EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

"YOKE OF DRAUGHT OXEN, ON THE MOSELLE." PAINTED BY G. COLE.—EXHIBITION OF THE ROYAL ACADEMY.

till let the editor of the Illustrated "Midsummer Night's Dream" speak for the artist; he thus describes the burlesque characters, or rather their treatment by the latter:—

The groups of Athenian mechanics who are represented as rehearsing and acting the "Lamentable Comedy of Pyramus and Thisbe," have many points of expression and individuality, which it is only fair, in justice to the artist, not to pass over without some enlightening comment for those critickers of art who look for faults or beauties merely in the finish or formation of a limb, and thereby lose sight altogether of that which should be principally regarded—namely, the character of attitude and expression of countenance, which alone are the existing proofs that an artist can feel what he illustrates.

In the group of *Sweet Bully Bottom* and *Wall*: the self-satisfied earnest, and clownish manner in which *Bottom* is engaged in looking through the fingers of *Wall*, may first serve as an example of what we have just asserted; whilst he who plays the stony part has fixed himself straight, stiff, and immovable as that which he enacts, with his dull eye turned from his window-curret on the *Duke* and friends, to watch the effect produced by their inimitable performance.

Moonshine is represented by a thick, short, stout man, with a very full round face and bullet head, wearing a belt of stars around his moonship; his whole appearance bearing the aspect as if selected from amongst his compeers for a remarkable resemblance to that planet, which resemblance he endeavours to increase by standing in as circular a position as possible, with eyes upturned and face of comic gravity making him appear still more ludicrous and ridiculous: the dog (which by a string he holds), well suited to his master, is engaged earnestly watching a worm that has fallen from the faggots held by the *Moon*, and utterly regardless of the fair *Thisbe*, who is put into a great d sorder from the imagined danger, and is taking to her heels in a most inelegant and unladylike manner.

In another group we have *Quince* and *Flute*. *Quince* is an elderly, bony, skinny man, awkwardly standing in a position with his scroll of names, which evidently indicates, from his timid attitude, that reading is not an every-day task with him; whilst *Flute*, the bellows-mender, or the future *Thisbe*, is very naturally pointing out the budding hairs of puberty which are surely to incapacitate him from playing so fair a part.

The weaver is again introduced into another group, where he is represented in the wood with the ass's head. He stands in *his* most dignified attitude, to show his utter contempt for any fear of danger, whilst he turns round to address the wondering *Snout* with as much scarcity of countenance as the head of an ass is likely to assume. The tinker is one of those that previously ran away, frightened at the transformation; but he returns soon afterwards, as if for the purpose of convincing his eyesight of the startling fact. His face and phrenological development are just the class where ignorance, with wonder and incredulous amazement, would most naturally reside

Whatever may be the ultimate decisions upon nice points of criticism, there can be no doubt that this novel Dessert Service is entitled to regard both as a sample of native manufacture and as a Shakesperean curiosity.

"THE MAID OF SARAGOSSA." BY JOHN BELL.—EXHIBITION OF THE ROYAL ACADEMY

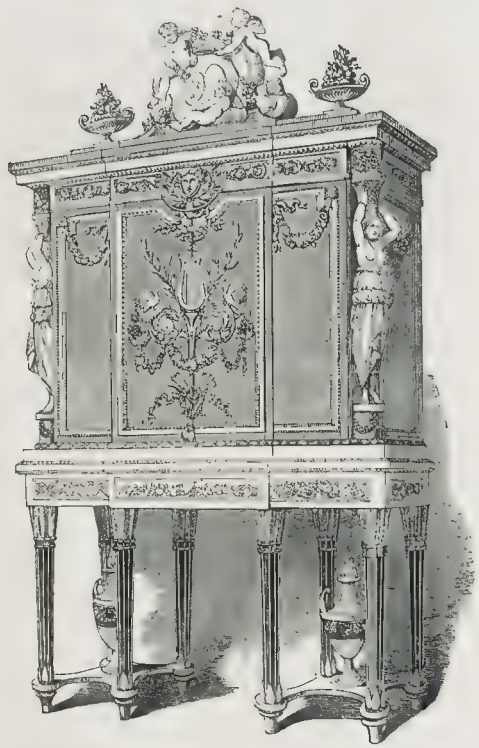
THE MAID OF SARAGOSSA. BY J. BELL.

THIS figure, exhibited at the Royal Academy, is a reminiscence of the Peninsular War, 1809, as described by Napier. The story of the heroine of Saragossa is well known, and will be ever remembered in the page of history. She is represented by the sculptor as standing on the ramparts of the devoted city; a lighted fusee is in her hand, with which she is about to fire a gun on the besiegers. A Monk has just been killed by her side; snatching up his crucifix, she holds it aloft, inciting the people to defend the walls. Mr. Bell has thrown a great deal of spirit into this figure.

CABINET IN MAHOGANY AND OR MOULU—

THE PROPERTY OF HER MAJESTY.

THIS magnificent piece of ornamental furniture, which is one of the objects graciously contributed by her Majesty to the Exhibition of Cabinet Work at Gore-house, is the work of the celebrated French cabinet-maker Gautier. It was produced some time between the years 1770-96, and is an excellent example of the style of Louis XVI.—the last modification of, or stage of decline from, the Renaissance. The curved lines, which were so much in vogue in the previous reign, and so absurdly out of place when the material is considered—to say nothing of convenience, which, in furniture, is best consulted by avoiding unnecessary projection of surfaces—this foolish style is, in the present object, entirely abandoned; the leading lines being rectilinear, and the surfaces even, the exceptions only consisting of applied ornament. The disposition of the various parts is somewhat architecturic, and is generally successful; the only exceptional feature being the supports, which consist of quivers of arrows; and which Mr. Redgrave, in his descriptive catalogue, very justly condemns—being utterly inconsistent with the idea of the strength required for the support of so large a mass of furniture. The applied ornaments, in or molu, consisting of festoons of flowers, are arranged with the utmost taste and propriety. The execution of the various details is the perfection of metal casting. On the lower part is a fringe, on which are bas-reliefs, admirably wrought, of Cupids learning the arts and sciences. The armorial bearings upon the escutcheons which surmount the top consist of the arms of France and of Sardinia, and indicate this piece of furniture to have been made either for the Comte de Provence (afterwards Louis XVIII.), or the Comte de Artois (afterwards Charles X.), both of these princes having married, and about the same time (1771 and 1773) Princesses of Sardinia.



MAHOGANY AND OR MOULU CABINET, THE PROPERTY OF HER MAJESTY, IN THE GORE-HOUSE EXHIBITION.

THE ARCHITECTURAL MUSEUM.

On the evening of Wednesday week, a *conversazione* was held at this institution, in Canon-row, Westminster; the Right Hon. Earl De Grey in the chair, when Mr. George Gilbert Scott, the treasurer and secretary *pro tem.*, read a very interesting report, wherein he recorded the origin and progress of the Museum. For many years past there had been a strong and increasing desire that a public collection should be formed, illustrative of our Mediæval Antiquities, and of that wonderful branch of art which they display. The plan was strongly advocated by the late Marquis of Northampton; was ably advocated by Mr. Godwin, in the *Builder*; and so long ago as 1847, Mr. Scott brought forward the subject; but in each case the difficulties appeared insurmountable. In 1853, the purchase of Mr. Cottingham's Museum was strongly urged upon the Government, but without effect. This would have been a valuable nucleus for the Architectural Museum; but the chance was lost, and the Cottingham Collection was dispersed for half its worth. In spite of this discouragement, a small body of architects, headed by Mr. Scott, formed themselves into a committee; and, early in 1852, hired a portion of the premises in Canon-row, wherein the Museum is now located. With "no funds whatever, the committee commenced the formation of their Museum with gifts from their own private collections, which were soon followed by similar contributions from other friends to the plan; so that, in a few months, the assemblage had outgrown the premises. Additional space was then engaged; and hence has resulted the Museum as exhibited on Wednesday week. Its object, we gather from the report, is to place within reach of the workman and the student faithful representations of the more artistic portions of a building, such as carving, sculpture, and other decorations, which their means and opportunities do not permit them to visit. The purpose, it should be mentioned, is purely a practical one; the committee not wishing to make their Museum merely an attractive exhibition, but a place of study for the workman, which he may frequent in his working dress; sketching, modeling, or studying amongst some of the finest examples of his art.

"Allied to it, and in intimate connection with our Museum," says the Report, "is Mr. Bruce Allen's School for Art for Architectural Work-

THE ARCHITECTURAL MUSEUM, CANON-ROW, WESTMINSTER.

men," which will, doubtless, be of great service in enabling the younger carvers, and other artist workmen, to obtain a clear insight into the beauties and the real merits of ancient work; and in giving them facility both in drawing, and in actually carrying into execution their respective branches of decorative art.

The leading classes of objects desirable for the Museum are: 1. Plaster casts from the architectural details of sculpture, as foliage, figures, &c. 2. Casts or impressions of ancient seals and gems. 3. Tracings of stained glass, wall decorations, ornamental pavements, &c. 4. Rubbings of brasses and incised st nes, &c. 5. Actual specimens or casts of ancient metal work, in all its branches; from wrought iron work to church plate and jewellery; also, specimens of ancient pottery in all its branches. 6. Photographs and other faithful drawings of architectural objects; architectural books, prints, &c.

The following are a few of the objects already contained in the Museum:—

Cast of the chief of the figures filling the spandrils of the triforium arches in the Angel Choir Lincoln Cathedral.

Two full-length figures, representing the Annunciation, from the Chapter House, Westminster.

A complete compartment of the Screen at the back of the Altar, Winchester Cathedral.

Magnificent fragments from Ely Cathedral.

The Effigies of Queen Eleanor (Westminster), Edward III., Henry III., Richard II. and his Queen.

Two magnificent Effigies of Bishops from Hereford Cathedral.

Very curious and beautiful Effigies of Bishop Northwold, from Ely Cathedral.

Effigies of St. Simion, from the Church at Venice of that name, contributed by Mr. Ruskin.

Casts of Ivories from Ascot College, from Mr. Pugin's Collection.

A full-sized copy of a large Altar Tomb, with three Effigies, belonging to the family of De Ford at Shrewsbury.

Details from the Cathedrals of Lincoln, Hereford, Salisbury, Wells Chichester, Canterbury, St. Albans Abbey (church) Dunstable Priory Church; Westminster Abbey, including a beautiful coloured tomb from the Chapter-house; St. Mary's, Leicester, Southwell Minster; Ely-place Chapel; St. Stephen's Chapel, Westminster; Llandaff Cathedral; Jew-sbury Abbey; Worksop Priory; Stone Church, &c.

Panels from the Gates of the Baptistery, Florence, by Andrea Pisano and Ghiberti; with beautiful details of the tombs.

Several exquisite full-length figures, with a number of details, from the French cathedrals *eg.* Chartres, the Sainte Chapelle, Notre Dame, &c., with beautiful details of Embroidery from the carved figures at Chartres. Besides these are a set of Engravings, about 250 in number, from the Government Collection at Munich, a magnificent collection of Brass Rubbings, presented by Mr. Roach Smith, a fine collection of Photographs from details of French Cathedrals; an extensive collection of Impressions of Ancient Seals; and a large number of Classic Casts, and Miscellaneous objects. Likewise a series of duplicates from very interesting casts, brought from Venice, by Mr. Ruskin.

The proceedings of the *conversazione* were opened by an appropriate address from the noble Chairman, the Earl de Grey.

The report having been read by Mr. Scott, a vote of thanks was proposed by the Dean of Ely, and seconded by Mr. Godwin, who bore testimony to the efficiency of the collection. Archdeacon Thorp then proposed a vote of thanks to Mr. Scott, the organizer of the museum. The vote was carried by acclamation; and Mr Scott returned thanks, modestly disclaiming the honour. A vote of thanks to Earl de Grey was then proposed by Mr. Hardwick, R.A., seconded by the Rev. Mr. Petit, and carried by acclamation.

Earl de Grey returned thanks; and suggested that the Museum was for the benefit of the workman, and he must apply himself, not to one class of art, but to all, according to the style and occupation which he might be employed. The object, therefore, should be to render the best specimens of all periods and styles accessible to him.

Mr. S. Cundy stated that the greater number of the workmen who had yet studies in the Museum had been those employed by himself; and, although some of them had been entirely uneducated when they commenced their studies, they had already made a very great and marked improvement.

About 600 gentlemen were present at the *conversazione*, in addition to those who took part in the proceedings.

NATIONAL SPORTS.

NEWCASTLE RACES.—TUESDAY.

The Third Year of the Triad Triennial Produce.—Evadne walked over.
Trial Stakes.—Feld Duvie, 1. King David, 2.
Members' Plate.—Evadne, 1. Sir Robert, 2.
North Leazes Handicap.—Honeydew, 1. Audubon, 2.
Selling Stakes.—Solyman, 1. Lucy, 2.

WEDNESDAY.

Produce Sweepstakes.—Harkaway, 1. Lord Fauconberg, 2.
Free Handicap.—Gulcowar, 1. Agnes Wakefield, 2.
Northumberland Plate.—Kingston, 1. Goorkah, 2.
Tyro Stakes.—Neville, 1. Conte, 2.
Queen's Plate.—Derrywheut, 1. Audubon, 2.

THURSDAY.

Gateshead Lottery Stakes.—Honeywood, 1. Lord Fauconberg, 2.
Grand Steeple Stakes.—Hurraanuna, 1. Brown Brandy, 2.

A very little attendance, and little business.

CRICKET.—One of the great matches of the season—Kent *v.* England—was played out on Monday and Tuesday last, at Lord's Ground. England went in first, and obtained 13 runs; Kent followed, and scored 82. England's second innings was 76; Kent's, 88: the latter losing by 1 run.

THE UNITED FLEETS.—At the present moment, the following correct list of the combined fleets at Besika Bay will be read with interest:—

BRITISH.

Ships of the Line—Britannia, flag-ship of Vice-Admiral Dundas, 120 guns, Trafalgar, 120; Albion, Windsor Castle, Hogue, Sanspareil, 90 each.

Frigate—Auckland, 50 guns.

Steam, Frigates—Retribution, 28 guns; Sampson, 16, Firebrand, 6; Tiger, 16.

Steam Sloops—Niger, 16 guns, Furious, 16; Fury, 8; Inflexible, 8; Wasp, 14; Medusa, 14.

Steam-Packet—Caradoc, 2 guns. Total: 18 vessels, 776 guns.

FRENCH.

Ships of the Line. Vice de Paris, flag-ship of Vice-Admiral de la Susse, 112 guns; Valmy, 100; Jupiter, 86.

Screw Ships of the Line—Montebello, 120 guns; Henry IV., 100, Napoleon, 90. Rapid 60. Cleopatra 60

Mogador, 16 guns; Alger, 16. Mandarin, 1.

Lance—Cube 6 guns

Dragonner—Chapeau, 2 guns. Total: 13 vessels, 844 guns.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

During nearly the whole of the week the Consol Market has been in a very inactive state. Business, in fact, was almost entirely by no means large, yet the quotations have tended downwards. The supply of stock in the hands of the jobbers is far from extensive, and, should the Eastern question become settled, we may confidently anticipate an improvement in the value of the National Securities. The leading figure for the Three per Cents for the Account has been 98¾. The latest advices from Australia state that the produce of gold was on the decrease; but those from California are to the effect that the supply was in excess of some former periods.

In the manufacturing districts, great activity is still apparent; and the orders and the limits of manufactures continue to increase, especially to Australia and the United States. On the 4th instant an immense amount of paper now in the hands of the London Bankers, will become due; yet no fears are entertained of the result. The corn trade has become very active; and upwards of 100,000 quarters of wheat on passage from the Black Sea have already changed hands on French and Belgian account, at an advance in the quotations of from 2s. to 4s per quarter. These purchases will have the effect of checking the export of gold to the Continent.

On Monday Bank Stock was done at 229½; the Three per Cents Reduced were 98⅝; and the New Three and-a-Quarter per Cents, 101¾ to 102; and Consols for Account, 98⅝. India Bonds marked 28s. to 32s., and Exchequer Bills, 1s. to 3s. prem. Stocks were a shade easier on the two following days. On Thursday the business doing was trifling. The Three per Cents Reduced were 98⅛; the New Three-and a Quarter per Cents, 101⅝; and the Three per Cents for the Account, 98⅝. India Bonds, 28s. 32s., 29s.; Exchequer Bills 2s to 5s. prem.; South Sea Old Annuities, 100½; Bank Stock, 229½ to 229¾.

Although there has been a considerable demand for money, the leading bankers in Lombard-street have made large advances, and first-class bills have, in some instances, been done as low as 3 per cent per annum the Bank rate still remains at 3½ per cent. The discount houses are very full of cash.

The Continental exchanges continue to show a drain of bullion from this country; but those with New York are favourable, and the remittance we have to make will not exceed 620,000 dollars from the United States, and £167,000 from Australia.

The market for Foreign Stocks has been devoid of animation; nevertheless, no material change has taken place in the quotations. The Holders of Portuguese Bonds are holding out as a body against the further reduction in the interest on the Debt. The tendency in the American revenue have led some parties to conclude that a new loan is in contemplation; but we understand that the Government have made arrangements to cover the deficit. Brazilian Five per Cents have marked 100 to 101; the Four and-a-Half per Cents, New, 98½; Buenos Ayres, 82 to 83; Chilian Six per Cents, 106; Danish Five per Cents, 103; Ecuador, 3½; Grenada Deferred, 9½; Mexican Three per Cents, 28; Portuguese Four per Cents, 39½; Spanish Three per Cents, 49 to 48¾; Dutch Two-and-a-Half per Cents, 61; and the Four per Cents, 96⅞.

There has been only a moderate inquiry for Miscellaneous Shares. Australasian Bank have sold at 80 to 81. British North American, 61¼; Chartered Bank of India, Australia, and China, 38; Eastern, Scottish, and Australian Chartered, 10½; London Chartered of Australia, 14½; South Australian, 20 to 21; Union of Australia, 50; Ditto, New, 48½; Canada Company, 70 to 71; British American Land, 70 to 72; Crystal Palace, 7¾; Ditto of Freehold, 1 prem.; Netherlands Land, 72 to 3; North British Australian Loan, 1½; Peel River Land and Mineral, 1½; Tasmania, 6 to 7; Van Diemen's Land, 6½; Ditto, New, 2½ to 3; Royal Mail Steam, 72½; Scottish Australian Investment, 2½ to 3; South Australian Railway Advances has been generally firm, and the fluctuations in prices have not been extensive. The total sales for the present month have amounted to 4,067,546, against £1,867,858 in July, 1852, and £1,474,187 in July, 1851. The total amount called in the first call of 5 cents of this year is £2,673,721, against £4,464,043 in 1852, and £2,252,846 in 1851. The traffic receipts continue good. Last week they were £242,209 19s. 10d., being an average of £31 0s. 9d. per mile. As the same period in 1852 they amounted to £281,921, or an average of £36 6s. 7½ per mile. The total number of miles now open is 6710½. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Caledonian, 67½; Eastern Union, Base C, 2½; Edinburgh, 77½; Edinburgh and Glasgow, 70½; Great North of England, Original Shares, 96½; Ditto, New, 93½; Great Northern, 86; Great Western, 89; Lancashire and Yorkshire, 77½; Leeds Northern, 46½; London and North-Western, 102; London and South Western, 86½; Midland, 71½; Ditto, Birmingham and Bristol, 84½; North Staffordshire, 10½; Oxford, Worcester, and Wolverhampton, 48½; South-Eastern, 70½; York, Newcastle, and Berwick, 49½; Ditto, Extensions, 12½; Lotto, G.N.E. Investment Shares and Scrip, 1 to 1½ Midland, 2 prem.

LINES LEASED AT FIXED RENTALS.—Midland Bradford, 107; South Staffordshire, 8½.

PREFERENCE SHARES.—Chester and Holyhead, 29; Eastern Union, 2½; Great Northern, Five per Cent, 125½; Ditto Five per Cent, redeemable at Ten per Cent prem., 111½; Ditto Four and-a-Half per Cent Scrip, 84; Lancashire and Yorkshire, Ditto, 5 to 5½; Lee Conservancy, 45; Western Thirds, 85; Londonderry, and Enniskillen, 14½; Manchester, Sheffield, and Lincolnshire, New Four per Cents, 80½; North British, 11½; South Devon, 14½; South-Eastern, 20½; Ditto Four-and-a-Half per Cents, 113; York, Newcastle, and Berwick, Four per Cent Preference, 103½.

FOREIGN.—Great Indian Peninsular, 3½; Hamburg, 2½; Scottish Central & Perthshire, 8½; Paris and Lyons, 20½; Paris and Strasbourg, 33½; Southern of France, 2½.

Mining Shares have met a dull market. On Thursday, Agua Frias were 2½; St. John del Rey, 39½; Colonial Gold, 2½; English and Australian Co. per Smelting Company, 5½; General, 17½; Lake Bathurst, 1½; Nouveau Monde, 9½ to 9; Port Phillip, 1; United Mexican, 4; West Mariposas, ½.

FRIDAY EVENING.—During the whole of the day Consols have ruled very inactive, and the quotations have given one eighth per cent. The Three per Cents for the Account have marked 98⅝ ⅜; the Three per Cents Reduced, 98¼ to 98; and the New Three and-a-Quarter per Cents, 101⅜ ⅝. Bank Stock, 229½ to 229¾. India Bonds, 27s. to 30s. Exchequer Bills, 5s. premium. In Foreign Bonds and Railway Shares very little has been doing.

THE MARKETS.

CORN EXCHANGE (Friday).—The present week's arrival of English wheat coastwise has been confined to 125 quarters almost wholly from Essex and Kent. Fresh up to-day the receipts by inland carriage were moderate; hence the supply of both red and white was limited. The attendance of buyers being to an increase, the demand ruled active, at an advance in the prices of Monday of from 1s. to 2s. per quarter, and a similar rise was readily effected. For forward delivery a large business was done, at the above improvement. The imports of foreign wheat are 30,720 quarters. Spot is progressing steadily, and 5s to 6s. more money is asking; cargoes have been in active request, on French and Baltic account, and nearly 150,000 qrs have from the Black Sea have changed hands this week, at from 3s to 4s. per quarter more money. We were scarcely supplied with both English and foreign barley, the sale for which was firm, at very full prices. Malt—the show of which was bare—found a ready sale, at quite an advance on Monday. The demand for oats was limited, at previous quotations. Beans and peas were steady, at late rates. The flour trade was active, at a rise of 1s per barrel, and nearly cleared.

ARRIVALS.—English wheat, 1320 quarters; barley, 320; malt, 2730; oats, 60, flour, 1190. Irish oats, 2460. Foreign wheat, 16,720 qrs.; barley, 2840; oats, 7970; flour, 1090 barrels.

Wheat—Essex and Kent, red, 41s. to 50s; ditto, white, 43s. to 54s., Norfolk and Suffolk, red, 38s. to 46s; ditto, white, 42s. to 52s.; rye, 28s to 30s.; grinding barley, 24s. to 26s.; distil ing ditto, 27s. to 29s.; malting ditto, 30s. to 32s.; Lincoln and Norfolk malt, 54s. to 56s.; Brown ditto 47s. to 54s.; Ingram and Ware, 56s. to 60s.; Chevalier, 58s. to 62s.; Essex and Lincolnshire feed oats 19s to 22s.; potato ditto, 22s. to 28s.; Kingstal and Cork, 18s. to 19s.; ditto, white, 20s. to 22s.; Dublin and Waterford, 20s. to 21s.; Galway, 19s. to 20s.; Sligo, 18s. to 19s.; Limerick, 19s. to 20s.; tick beans, 34s. to 36s.; harrow ditto, 36s. to 38s.; pigeon ditto, 36s. to 38s.; Egyptian, 32s. to 34s. per quarter. Town-made flour, 45s. to 47s. per sack; Essex and Suffolk, 42s. to 44s.; Norfolk and Lincolnshire, 40s. to 42s.; Devonshire and Somerset, 40s. to 42s.; Irish, 38s. to 40s. per 280 lb. *Foreign*, French, 34s. to 38s. per 280 lbs; American flour, 22s. to 26s. per barrel.

Seeds.—The demand for all kinds of seeds has been in a sluggish state, at unaltered quotations. Cakes are tolerably firm.

Linseed, English, sowing, 52s. to 56s.; Baltic, crushing, 43s. to 43s.; Mediterranean and Odessa, 44s. to 46s.; Bombay, 44s. to 46s. per quarter; coriander, 8s. to 9s. per cwt. Brown mustard-seed, 6s. to 11s.; white ditto, 7s. to 9s.; and tares, 4s. to 5s. 6d. per bushel. English rapeseed, new £21 to £24 per last of ten quarters. Linseed cakes, English, £8 6s. to £9 5s.; ditto, foreign, £7 10s. to £8 5s. per ton. Rapeseed, £4 15s. to £5 0s. per cwt. Canary, 50s. to 54s. per quarter. English clover seed, new, 44s. to 64s.; white ditto, 62s to 68s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d. to 8d. per 4lb. loaf of household; do. 6d. to 6½d. per 4 lbs. loaf.

Imperial Weekly Average.—Wheat, 46s. 11d.; barley, 29s. 3d.; oats, 20s. 1d.; rye, 32s. 6d.; beans, 34s. 5d.; peas, 34s. 9d.

The Cattle Trade.—Wheat, 44s. 6d.; barley, 29s. 10d.; oats, 19s. 11d.; rye, 32s. 6d.; beans, 33s. 8d.; peas, 32s. 9d.

Leiths.—Wheat, 44s.; barley, 30s.; oats, 18s.; rye, 34s.; beans, 34s.; peas, 34s.

Tees.—For all kinds, the demand has ruled very inactive, and prices have a downward tendency. Cow-house and grazing stock, 2s per head per lb. Up to Monday's market was last year 2 5,513 lb., against 30,857,149 stirks, in 1852. The stock in the United Kingdom is now 6,09 .,000 lb.

Sugar.—The market has become somewhat firmer, and most of the parcels offered have changed hands at very full prices. The yellow Barbadoes, 2s. to 2s. 3d.; fine ditto, 2s. 4d.; good to fine brown Grenada, 22s. to 22s 6d.; good yellow, 23s. 6d.; low to fine Manilla, 22s. 6d. to 23s. per cwt. Bengal remains low and at 23s. 6d., and low to fair grocery, 24s. to 25s. per cwt. The total clearances to the 23rd of June were 2,971,877 cwts., against

Oils.—Linseed oil is firm, at 32s. 6d. per cwt. Rape steady, at full prices. Olive and palm unchanged.

Spirits.—Rum is quite firm in active, and prices are on the advance. Proof Leewards is 10d. to 10½d.; East India, 1s. 1d. to 1s. 1½d.; and Jamaica, is. 10d. per gallon. Brandy is in good, and somewhat dearer.

Lloyd and Stock-Exchange.—Monday, 43 fs. to 44 fs.; clover ditto, 54 6s. to 45 10s.; and straw, 21 5s to 41 10s. per load.

Hops.—At about late rates.

Potatoes.—Old potatoes are now out of season. Now ones in supply of which is fair quality—are firm, at from 10s. to 22s. per cwt. The imports from the Channel have been to a very limited extent.

Hops (Friday).—We continue to have a very firm market for all kinds of hops, at prices full equal to those paid last week. The duty is called £135,000. About 170 bales have come to hand from the Continent. 100 and East Kent pockets, 130s. to 180s.; Weald of Kent, 120s. to 140s.; Sussex, 110s. to 130s. per cwt.

Coals (Friday).—Our Tyne, 18s. 6d.; Hetwell, 19s. 9d.; Tanfield Moor, 12s.; Towneley, 19s.; Hetton, 19s. 9d.; Johnson, 19s.; Lambton, 18s.; Russell's Hilton, 18s 3d.; Cap. 19s. 6d.; Wear Relton, 18s. 6d. per ton.

Smithfield, Friday.—To-day's market was very moderately supplied with beasts but in fair condition for quality. For all kinds we had a steady inquiry, at full Monday's prices. Calves good, yet the demand for sheep, were nearly clear from Spain. The number of sheep was moderately good, yet the demand for that description of stock was rather active, at very full currencies. The pigmarket was without alteration. Prime lambs were scarce, and quick sale done on Monday. Inferior beasts and a slow inquiry. Calves, the supply of which was also slightly extensive, moved off readily, at re mene quotations. In pigs very little was doing. Milch cows were firm, at from £15 to £19 10s. each, including their small calf.

Per stone, to sink the offals—Coarse and inferior beasts, 3s. 2d. to 3s. 4d.; second quality ditto, 3s. 6d. to 3s. 8d.; prime large ones, 3s. 10d. to 4s. 2d.; prime Scots, &c., 4s. 4d. to 4s. 6d.; coarse and inferior sheep, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 0d.; prime large ones, 4s. 2d. to 4s. 4d.; prime small ditto, 4s. 4d. to 4s. 6d.; large lambs, 5s. 4d. to 5s. 8d.; coarse and inferior calves, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 0d.; prime small ditto, 4s. 2d. to 4s. 6d.; large pigs, 3s. 4d. to 3s. 6d.; small ditto, 3s. 8d. to 4s. 0d.

Newgate and Leadenhall (Friday).—The general demand ruled steady, at very full prices—

Per 8lbs. by the carcase—Inferior beef, 3s. 10d. to 4s. 2d.; middling ditto, 4s. 4d. to 4s. 6d.; prime large ditto, 4s. 8d. to 5s. 0d.; prime small ditto, 5s. 2d. to 5s. 4d.; large pork, 3s. 4d. to 3s. 6d.; inferior mutton, 3s. 2d. to 3s. 8d.; middling ditto, 3s. 10d. to 4s. 2d.; prime ditto, 4s. 4d. to 4s. 6d.; veal, 3s. 10d. to 4s. 10d.; small pork, 3s. 10d to 4s. 2d., prime Scots, &c., 4s. 6d. to 4s. 8d.; coarse and inferior sheep, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 0d.; prime large ones-spotted ditto, 4s. 2d. to 4s. 6d.; prime Scots ditto, 4s. 8d to 4s. 10d.; large coarse calves, 4s. 2d. to 4s. 6d.; prime small ditto, 4s. 8d. to 5s. 0d.; large lambs, 5s. 4d. to 5s. 8d.; coarse and inferior porkers, 3s. 10d. to 4s. 2d.; middling ditto, 4s. 4d. to 4s. 6d.; prime ditto, 4s. 8d. to 5s.; and quarter-old store pigs, 19s. to 20s. each. Total supplies: Beasts, 2,000; sheep and lambs, 14,000; calves, 640; pigs, 370. Foreign: Beasts, 300; sheep and lambs, 980; calves, 40

AMUSEMENTS, &c.

ROYAL PRINCESS'S THEATRE, Oxford-street.—Under the Management of Mr. CHARLES KEAN. BARBARAPALUS will be performed EVERY EVENING during the week, Wednesday excepted, when MACBETH will be repeated for the 30th time, with other Entertainments. Doors open at half-past Six to the boks of the Day.

THEATRE ROYAL, HAYMARKET.—Under the management of Mr. Buckstone.—Miss KATHERINE BELL, pupil of Mr. Sheridan Knowles, will have the honour of making her debut on TUESDAY next, on which occasion Mr. Buckstone has celebrated play of the HUNCHBACK. G. TUNY, Box Book-keeper

Kuhe, Mr. Lucas, Mr. Pratten, Mr. Nicholson, Mr. Reed, Mr. Baumann, Mr. Harper, Mr. Thomas Harper, and Mr. Lazarus. Vocalists—Mdlle. Lucile Grahn, Mdlle. Rosati, Mdlle. Adeline Plunkett, Mdlle. Nau, Mdlle. Rosalie Duvernay, Mdlle. Augusta Leroux, Mdlle. Bianca Rosati, Mdlle. Rosa Rosati, Mdlle. Adeline Rosati, Mdlle. Emma Rosati, Mdlle. Caroline Rosati, Mdlle. Marie Rosati, Mdlle. Louise Rosati, Mdlle. Antonia Rosati, Mdlle. Fanny Rosati, Mdlle. Pauline Rosati, Mdlle. Josephine Rosati, Mdlle. Virginia Rosati, Mdlle. Elise Rosati, Mdlle. Mathilde Rosati, Mdlle. Caroline Rosati, Mdlle. Sophie Rosati, Mdlle. Eugenie Rosati, Mdlle. Clotilde Rosati, Mdlle. Leontine Rosati, Mdlle. Alexandrine

THE EXCAVATIONS AT CUMA.

OBJECTS FOUND AT CUMA, AND NOW IN THE POSSESSION OF HIS ROYAL HIGHNESS THE PRINCE OF SYRACUSE.

(*Continued from page 534.*)

periods, whilst other fragments display the compact diamond brick-work of the Romans. Modern Cuma is nothing more than a cultivated district of land, with a few farm-houses scattered about and tenanted only by the labourers of the soil. When you come upon the field where the excavations are taking place, there is really little to see beyond the entrance to the tombs, which are constructed of *tufo* rock cut in large

ARCO FELICE.—ENTRANCE TO CUMA.

square blocks, without any external ornaments. Within, they are sometimes painted red, green, and white,* and contain niches for urns. In one of these tombs the WAX heads were found (published in the ILLUSTRATED LONDON NEWS, Feb. 26th). Some 150 of these resting-places of the ancients have been exposed, and the antiquities found therein are now in the private museum of his Royal Highness the Prince of Syracuse.

Leaving the site of the Necropolis, we proceeded to the spot where a temple has been excavated. Here, scattered about in a vacuum some seven feet below the surface, may be seen a few noble marble blocks and columns of a building of the Roman period. The greater portion of these fragments have already been removed to Naples. The marble looks as fresh as when it left the hands of the mason. In the vicinity of this spot other excavations have taken place, and the marble steps of an important building lately discovered, would lead to an idea that this is the site of the Forum. At present, however, as little has been done, we can only come to the conclusion that future exertions will bring to light a store of antiquarian treasure, judging from what has been already found.

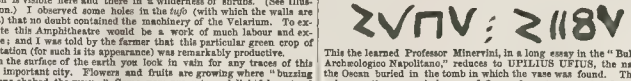
Some hundred yards from this spot is the Amphitheatre of Cuma. The whole of the area is filled up; and flourishing vine fields, with large trees interspersed, occupy the arena and seats up to the top of the wall, which is visible here and there in a wilderness of shrubs. (See Illustration.) I observed some holes in the *tufo* (with which the walls are built) that no doubt contained the machinery of the Velarium. To excavate this Amphitheatre would be a work of much labour and expense; and I was told by the farmer that this particular green crop of vegetation (for such is its appearance) was remarkably productive.

On the surface of the earth you look in vain for any traces of this once important city. Flowers and fruits are growing where "buzzing nations choked the ways:" Cuma now presents a delightful pastoral scene:—

Through the grass
The quick-eyed lizard rustles, and the hills
Of summer-birds sing welcome as ye pass;
Flowers fresh in hue and many in their class
Implore the passing step, and with their dyes
Dance in a soft breeze in a fairy mass.

Finding so little material for my pencil at the site of the excavations I returned to the Arco Felice, and sketched this picturesque object.

We must now turn to the cabinet of his Royal Highness the Prince of Syracuse, with whose permission I send you drawings of the accompanying group of small objects found in the tombs at Cuma. In the centre is an inkstand; on the right and left are small bottles, of elegant form. The basso relievo tablet is part of an ivory box: circular object, an Etruscan mirror. The rest of the group is composed of dice, rock-crystal beads, a dagger, bone pins, rings, &c. The Prince's Cumean Cabinet is already very rich. There are many Etruscan vases (some illuminated with gold), terra-cotta objects, gems, Greek glass, colours for painting, a lock, coat of Diocletian, a scrap of linen, combe, painted glass, spear-heads, Etruscan mirrors, fragments of musical instruments—in fact, an endless variety of antiquarian wealth. Amongst the vases is one of great rarity and interest—viz., with Oscan characters thereon, thus:—



This the learned Professor Minervini, in a long essay in the "Bulletino Archeologico Napolitano," reduces to UPILIUS UFIUS, the name of the Oscan buried in the tomb in which the vase was found. There is only one other example known of Oscan characters on painted vases.

I have every reason to suppose that much interesting treasure will from time to time be brought to light at Cuma, a report of which shall be forwarded to the ILLUSTRATED LONDON NEWS.

E. N. B.

WALLS OF THE AMPHITHEATRE, AT CUMA.

* These colours happen to form the tricolor of Italy; the Neapolitan police, therefore, will not allow any coloured drawings of these tombs to be published!

THE ILLUSTRATED LONDON NEWS.

No. 631.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, JULY 2, 1853. [TWO NUMBERS, 1s.

THE ENGLISH AND FRENCH CAMPS.

THE military displays which are simultaneously proceeding at Chobham and at St. Omer naturally suggest reflections upon the military genius of the British and French nations. In England a large Encampment is a novelty; but in France it is an occurrence of almost every day. In the one country, the "pomp, pride, and circumstance" of mimic warfare would not be popular unless they were rare; in the other, their frequency but increases their attraction. The English are a busy people, and would not tolerate a constant succession of such armed assemblages. Not so the French, who are a show-loving and tumultuous nation, and as fond of their "panem and circenses" as the ancient Romans. The more frequent their military spectacles the more they admire them, and the more necessary is their recurrence to keep the multitude in good humour. An innate love of soldiering pervades them from the highest to the lowest; while the swarming millions of a discontented and underfed peasantry constantly supply the material from which armies can be made. War has thus become their glory and their shame, their favourite vice and their appropriate punishment.

But in England the case is different. Soldiers have never been in any high degree popular in the British isles. The naval service has been our right hand of defence. Our main reliance in days of peril, it is one that has never been known to fail us. The seafaring propensities of our Danish and Norwegian ancestors have always been strong amongst us: they are a portion of the national mind, and are not to be eradicated by either time or circumstance. Our sea-captains are the true Vikinger of the nineteenth century. While our military annals show but the two transcendant names of Marlborough and Wellington, we have scores of naval heroes, from the days of Raleigh and Blake, to those of Howe and Nelson, whose names are household words, hallowed by the respect and affection of the people. Splendid as was the career and immortal as were the services of Wellington, he scarcely stands so high as Nelson in the estimation of his countrymen. There is not a reflecting Englishman who does not feel that the sea made us great, and keeps us so. Our most terrible triumphs in war, and our most splendid achievements in peace, are due to it. We owe to it, not only our security and independence as a nation, but our private and public wealth, and our preponderance in the great councils of the world. The army never has been, and never can be, so popular. We endure an army as we do a police, because we consider it to be necessary, but take no particular pride or satisfaction in it. At every period of our history we would rather have diminished than increased it, if we could have done so with safety. A standing army is the national abhorrence. Plain, practical, and observant, the bulk of the people know how mighty a machine an armed host may become to oppress and to enslave them. They feel that public liberty is always exposed to peril where military leaders become predominant. Our statesmen, of all parties, share this instinct: they know that we must have soldiers, but they know, at the same time, that the fewer we have the better.

France is less happily situated. She has none of the old Scandinavian spirit about her. She has a navy, but she neither understands nor loves it. She does not send her ships to the remotest corners of the earth to extend her laws and her language; to plant colonies and to lay the foundations of kingdoms and empires. If she establish a colony she cannot keep it. Driven from America, both North and South, her only hold upon either is amid the swamps of Cayenne. Her footing in Asia is about as weak and precarious. Fortune has not favoured her with a California or an Australia, because she has not had the genius to push forward and "replenish the earth." No countless isles of the ocean pour their treasures into her lap. She possesses, it is true, the colony of Algeria—acquired at great cost, and retained with great difficulty. Nothing shows more strongly than the history of that dependency how indisposed the French are to tempt the salt water in search of new homes. They have no love for colonising, and but imperfectly understand the process. Algeria is not a colony in the ordinary sense of the word, but a great exercise-ground, or college for soldiers, where the art of war may be learned in all its details; where aspiring corporals may fight themselves up to the rank of Captains; where Captains may become Generals; and where Generals, musing upon the eventful story of Napoleon Bonaparte, may learn to look upon a settled Government and a contented people as impediments in the path of their ambition. With two such splendid lines of sea-coast as the French possess, they could not be so unmaritime unless a dislike of the sea had been inherent in their nature. But all the Celtic

THE CAMP AT CHOBHAM.—HER MAJESTY AND THE ROYAL VISITORS WITNESSING THE REVIEW.—(SEE PAGE 552.)

races are bad sailors. Irishmen would rather starve upon potatoes by the sea-shore than brave the dangers of the deep in search of the abundant fish which the Danish, Dutch, and Norwegian fishermen catch under their very noses. The Scotch Highlanders of the western coast and islands have the same antipathy; and Frenchmen send their letters to America in English packets, because they have not the inclination or the enterprise to establish a direct communication of their own. It is because the French love the military life and all that relates to it so much, that they love the glories of the sea service so little. A great army is their hobby. They must have it; and are willing to pay for it both in purse and person. The mania, for such it is, makes France a dangerous neighbour. Surrounding states and kingdoms grow jealous and distrustful, and arm themselves against her. Thus she lives in a perpetual state of offence and defence; is proud, sensitive, and quarrelsome; and becomes at last the Ishmael of Europe.

It is gratifying, however, to perceive that the French are becoming more imbued with English notions on the subject of the wealth and happiness of nations. The commercial spirit has increased among them. The *bourgeoisie* is the dominant class; and the reproach of being a nation of shopkeepers, which Napoleon I. launched against the heads of the English, now applies to themselves. The shopkeeping spirit has been of as much use to Louis Napoleon as the army. Quiet above all things is that which shopkeepers require. An orderly despotism is far more to their taste than an unruly liberty. The Genius of the Till has taken its place among their *Lares* and *Penates*, and they have begun to inquire what the vaunted "glory" of Napoleon has done for them. The more they reflect upon this subject the more they will be convinced that a military nation is as great a curse to itself as to its neighbours; and the more they will learn to value those arts of peace, which in modern times constitute the true greatness and the most stable power of nations. Sixty miserable years—during which the people have struggled for liberty of speech and writing, and for the inestimable privilege of self-government—have ended in a stringent despotism. The military mania has produced this result. Whenever they shall finally conquer their fighting spirit, and apply themselves, as earnestly as Englishmen have done, to the great works of labour and commerce, their ardently-cherished liberty will return, and they will become more fitted to enjoy and retain it.

But, though the English are not smitten with the military madness, there is no reason why they should neglect the comfort, and avoid taking proper means for the elevation of the physical, social, and moral condition, of the brave men who serve in their armies. If we do not laud our soldiers as heroes or demigods, and place them above all other classes, we do not depreciate their calling. As a national police, they require the national care. Their food, their accoutrements, their education, demand—but have not always received—the paternal supervision of the Government and the people. The assemblage at Chobham is likely to attract far more attention to these subjects than they have hitherto commanded; and, if the result of the grand display be no other than this, the sham battles and real hard work of officers and men will not have been fought and undertaken in vain.

THE FEJERVARY ARCHÆOLOGICAL COLLECTION.

A VERY interesting collection of objects of antique art, made by M. Fejérvary, a Hungarian gentleman, is now exhibiting at the rooms of the Archæological Institute, 26, Suffolk street, Pall-mall East. The chronological arrangement and *catalogue raisonnée* of the collection has been made by Dr. Henszlmann; and the leading objects have been employed by M. Pulszky, a learned archæologist and member of the Institute at Rome, in illustration of a series of lectures, delivered at Willis's Rooms.

One of the oldest, if not actually the oldest work of Greek plastic art (the original 11¾ inches long, 14½ inches high) we have selected first for its antiquity, and because it is contrary to the accustomed view that gives to every Greek work the charm of the forms which we find in the products of the latter Athenian schools. This work is the more interesting as it is of the school of Magna Græcia, which is proved by the place Grumento—in the kingdom of Naples—where it was found; and as it shows evidently in what way the ancient or archaic Greek art was influenced both by those of Egypt and Assyria; thus especially the features of the horse, with his striking length, the full pose of his hoofs on the ground (the uprifted hoof being the work of an inexact later restoration), the large eyes, the long tail broken at a right angle, and the manner in which the details are chiseled into the body—all these particularly remind us of the horses occurring on Egyptian and Assyrian reliefs; and even so, if these, as products of a more advanced art, must be considered far superior to this Greek horse. The figures sitting on the horse are better respecting their features, which circumstance leads to the inference that the horse was not yet a very familiar object with the Greeks in Italy at the time of the execution of our group; so much the more as the six lions which belong to it are also of better workmanship than the horse himself. Respecting the human figures, the Assyrian influence is striking, in the sort of peruke worn by the female. The intention of the whole group is, as the catalogue states, to symbolise in the female the spring or flower-goddess, carried back after winter-time by the male, who stands for the young god of the sun, regaining the power which he lost in his unequal strife with the winter. Even this manner of symbolising originated in Egypt, where we find a special god of the winter sun, Osiris, who was dismembered by the winter god Typhon; another god for the spring-sun, the infant Harpo Krates, with only small power, represented by one single hair lock; and a third, for the summer-sun viz., the powerful hawk-headed Ra or Phre.

ANTIQUE GREEK WORK FOUND AT NAPLES.

The ivory tablet (engraved above) representing the English King, Henry VI., seated on the throne under a rich canopy, is very fit to show what degree of art the carving had reached in England towards the beginning of the fifteenth century. That Henry VI. is here represented will be plain, when we consider the inscription:—"Hinricus dei gra (tia) ang (lie) & fra (ncie rex) domi (nus) hibern (ie)," and in conjunction comparing the arms, the architecture, the costume, and the sceptre in the present ivory, with the same objects which occur, exactly like the former, on seals of Richard and Edward, kings next in time to that of Henry VI., and when we find that these objects have the same shape also on the seals of Henry VI. himself.

A bronze Cat, of the grand style of the eighteenth dynasty (contemporary with the exodus of the Hebrews), and a rich statuette of Imouth, the Esculapius of Egypt, inlaid with gold, of the Ptolemaic period, attracted considerable attention for the beauty and peculiarity of the execution.

IVORY CARVING OF KING HENRY VI. OF ENGLAND.

In his first lecture, being that treating of Egyptian art, Mr. Pulszky aimed to show the influence of the geographical position of a country on the development of the character of the nation and on its institutions, art being always the expression of the national character. Egyptian art was characterised as earnest, gloomy, and bound by some types, which remained unchanged from the time of Menes to the epoch of the Romans, through thirty centuries. The eras of Egyptian art were described as going parallel with its political history. The oldest Egyptian statue was of the time of the Pyramid builders, or the fourth dynasty (3200 B.C.); this was the time of the beginning of sculpture. The era of the twelfth dynasty (2100 B.C.) under which Joseph the Hebrew became Minister of a Pharaoh, was distinguished by elegance in sculpture, and by the invention of the column in architecture. The next artistical period was that of the eighteenth and nineteenth dynasty—Amenophis, Thuthies, Rameses (1600 B.C.)—after the expulsion of the nomad Hyksos: it was characterised by grandeur. The temples of Thebes belong to that period. Art declined with the next dynasties, but revived again under the twenty sixth dynasty (600 B.C.): it was more natural, but less grand—the prototype of the early Greek sculpture. Under the Ptolemies (300 B.C.), Greek influence began to modify Egyptian sculpture, under the Roman sway art declined. The lecturer dwelt upon the intimate connection of Egyptian sculpture and Egyptian

BRONZE CAT (18TH DYNASTY).

architecture; all the statues of this people being subordinated to architectural purposes, and the aim of the reliefs being to fill an architectural space. He characterised the peculiarities of Egyptian reliefs as a kind of hieroglyphics rather than an independent branch of art. They have no pretension to artistical illusion. The historical reliefs are more free, and show more movement than the sacred ones; but they are nearly always exaggerated. M. Pulszky concluded by saying, that "Egyptian art has, in spite of its defects, something charming and attractive—a secret instinct attaches us to those first beginnings of western civilisation. It is the spirit of the childhood of mankind which pervades the relics of Egypt, and our present age has not been ashamed of the humble beginnings. What Egyptian art promised, Greece, Rome, Italy, and Germany have fulfilled; and England, with

STATUETTE OF IMOUTH, THE ESCULAPIUS OF EGYPT.

her unrivalled monuments of antiquity stored up in the British Museum, with her genius and material prosperity, may yet rise higher. This country has grown rich enough to attach importance to paintings and sculpture: the necessities of life have been provided for; it is time now to embellish life by art."

THE GREAT EXHIBITION OF PARIS.—A note from Paris tells us that the proposed Palace of Industry there is at last in a fair way of being carried out—an English company, with a Mr. York at its head, having undertaken it. The plans of Messrs. Viel and Desjardins, the architects of those who first obtained the "concession," are to be used in a modified form. The improvements of the Bois de Boulogne are being proceeded with, and include a lake and river, with waterfall, and good roads about them. Islands in the lake will be connected with the main land by ornamental bridges. Our correspondent further says that the sum of £2000 has been voted by the municipal council for four statues in bronze to embellish the Pont des Arts; and that M. Duret, having undertaken to produce them, has chosen for subjects, Architecture, Painting Sculpture, and Music.—*The Builder.*

JENNY LIND.—If there be any truth in an assertion of the Dresden *Echo*, the prophecy of Meyerbeer the composer, to the effect that Madame Lind Goldschmidt would again appear on the stage, is likely to be realised. The *Echo* says that Jenny is to take the heroine's part in Goldschmidt's *Tochterlein* (Little Daughter). Upwards of a year since, the great composer alluded to observed to a friend, "The Lind is sure to return to the stage, and from two opposite causes, love and revenge." "How so?" demanded the other. "Why," retorted the maestro, "if she should be disappointed in her husband, and not find the domestic happiness she anticipates, she will seek for consolation and revenge in public applause; whereas, if she be happy, and continue to love her husband, who has a turn for composition, she will seek to satisfy her vanity and affection by urging him to write an opera, and she will appear in the first part, in order to ensure its success, be it good or bad."

A NORWEGIAN PANTHEON.—From Christiana we learn that a Norwegian Pantheon is about to be erected, to receive the portraits, statues, or busts, of all men who have illustrated Norway by their virtues or their talents. The building will be erected at Eidsvold—a town not far from the capital. Among the earliest to be enshrined in the new temple will be the King (St. Olaus), who introduced Christianity into Norway; Queen Margaret, surnamed the Great; Christian IV., King of Denmark and Norway—the Henri Quatre of the North; Prince Christian Frederick (afterwards Christian VIII.), who accepted and sanctioned the constitution; and Charles XIV. (John Bernadotte), the regenerator of the agriculture, commerce, and industry of Norway.

RUSSIA AND TURKEY.—THE DANUBIAN PRINCIPALITIES *

THESE volumes are ushered into the world with an inviting title, nor is it a false lure. A residence of twenty years in the East has afforded the author abundant opportunities for the study of his subject, and he has turned them to excellent account. He is not an ordinary tourist, but a keen and profound politician; and while he amuses us as a traveller, he instructs us as a statesman. The territories of the Lower Danube were the scenes of his excursion, and in the present disturbed relations between Russia and Turkey our legislators would do well to peruse thoughtfully the chapters on Bulgaria and Wallachia, in which the subtle policy of the Czar is ably described. In this division of the work our merchants and manufacturers will learn how deeply their commercial interests are injured in the trade of the Danubian provinces, owing to Russia having raised a barrier between the commerce of the two banks of the river. Justice is done to the Turks, whose moderation is highly praised, and very marked improvements are pointed out in their morals and domestic manners. Austria, with its spies, its passports, and its police, is strongly condemned; and its mean and subservient intrigues with Russia against the prosperity and independence of the Ottoman Empire are clearly demonstrated. As a philosophic traveller, the author of the "Frontier Lands" may be compared with Mr. Laing; he possesses the same acuteness and discrimination, and an equal grasp of mind. We must also add that he is extremely well versed in ancient history, and connects the past with the present with fullness of knowledge and clearness of narration.

In his journey through the Austrian dominions, our traveller speaks in the highest terms of the Louisentrasse, the famous road called after Maria Louisa, subsequently Empress of France. It runs from Fiume to Carlovacz, a distance of seventy-two English miles. "I have crossed," he says, "the Simplon, the St. Gothard, and the Ampezzo, all of which passages of the Alps are celebrated for the masterly style in which the greatest obstacles are surmounted; but I do not think that any one of them displays such a degree of skill in the tracing of the line, or of perfection in its execution, as the Louisentrasse." The Kapella Gebirge, he considers, far superior to any scenery in Switzerland or the Tyrol. There is a long, learned, and interesting disquisition on the Sclavonic race, traced to the ancient Assyrians, whose numbers are computed at one hundred millions, but "they are nowhere ruled by a native dynasty, for the Emperors of Russia are more Germans than Sclavonians, while there exists but one reigning family of Sclavonic origin -the Grand Duke of Mecklenburg—and they govern another people." The traveller reaches the river Save, the banks of which are described as enchanting; and on the Turkish side, opposite to the Austrian town of Gradiska, is the tomb of a Mahometan prophet, "who predicted, when dying here, that the Ottoman dominions would never extend beyond this spot, notwithstanding that their career of conquest was then in its zenith. A mausoleum has been erected over his remains, and pilgrims from the south and east come continually to honour them." When our author arrives in Hungary, he displays his ethnological lore, and gives an animated picture of the recent struggle for independence. The Finns on the shores of the Baltic, the Basques of Spain, and the Magyars of Hungary, are altogether foreign to the great races of the Continent "The latter dispute their being a cognate people with the other two, and claim descent from the Huns of Attila, contending that they are a Tatar tribe which inhabited the western slope of the Ural chain in about sixty-five degrees of N. latitude. They say that they received their name from the waggons, called in their language *madjar*, in which they travelled when they came to the banks of the Danube, by traversing the shores of the sea of Azof and the Crimea. The Magyars are the nobles of Hungary, while the Sclavonians and Roumans are the yeomen. The former is one of the most vigorous races of Europe, and, except the nobility of Poland and that of Great Britain, it is the only aristocracy in Europe which has not merited and earned the contempt of their respective fellow-countrymen. In numbers they surpass every other existing particular race, their people are counted to each individual who has killed a Turk in battle." The narrative of the Hungarian war is derived from materials furnished by those who took a part in the struggle. Though the Pragmatic Sanction of Charles VI. attached Hungary inseparably to Austria, the constitution of 1790 stipulated that the former should continue a free state, independent in its legislative and administrative system. The Imperial Cabinet attempted to destroy this independence, and hence broke out the insurrection. Had Georgey obeyed the orders of Kossuth, and pursued the Austrians to the walls of Vienna, which he might have done, the House of Hapsburgh would have been annihilated before the Russian troops could have been brought into the field. When that General accepted the dictatorship, it is known that he surrendered unconditionally to the Russians, though he had under his standard thirty thousand men, 144 pieces of cannon, and 8000 horses. Of his treason there can be no doubt. "Of the Magyar chiefs who had not become voluntary exiles, only one man remained unscathed—that man was Arthur Georgey, who is now living in a town in Austria, on a pension from the Emperor."

Bucharest, the capital of Wallachia, contains 100,000 inhabitants. The streets are narrow, irregular, and badly paved; but many of the houses are large and handsome, with extensive gardens attached to them. Trees are visible in every quarter of the town, which enliven its appearance. The circumference of its boundaries is said to be twelve English miles. It is crossed by rude wooden bridges, scarcely raised above the surface of the water, and embellished by 200 churches with tin-covered steeples. A full and interesting account is given of the Danubian provinces in this, from the earliest period to the present time. They formed the ancient kingdom of Dacia; and, though they successfully combated the armies of Darius and Alexander the Great, they were conquered by Trajan, and ancient Molda-Wallachia was annexed to the territory of the Roman empire. From the time of Peter the Great Russia has desired to possess this fertile territory; and that policy has been carried out by the most perfidious measures. The treaty or convention of Balta-Liman sanctions the armed occupation of the principalities by Russia. The interference of the Czar in the Danubian trade is most vexatious; and our author shows that Moldavia, Wallachia, and Bulgaria, are all losers by his selfish policy, as well as the Porte. In every direction Russia strives to impede the material progress of Turkey. One part of its obstructive machinery is quarantine; and England is injured by the mode in which it is applied. It is stated that the Russian practice is in contradiction with itself, "by receiving ships at Odessa, which come from Constantinople, on better terms than are allowed to them at Ibrailla and Galatz; for, at the Russian port they perform only four days quarantine, while at those of the Danube they must submit to fourteen." And our author asks, "If Russia admits the right of British ships to receive a clean bill of health at Constantinople, how can she deny them free pratique? And, if Great Britain participates in the act of granting such documents, how does she suffer that they should not be respected? Every Government, being a member of the Sanitary Commission at Constantinople, has an incontestible right to claim free pratique in the Danube. We have that right, and yet our ships are are subjected to quarantine."

The Treaty of Vienna, in 1815, declared that all the navigable rivers in Europe should be considered as "the highways of nations." The treaty of Adrianople, in 1829, authorised Russia to maintain a quarantine station on one of the banks of the Danube, which forms the boundary between the Turkish and Russian dominions, and bears the name of Sulina; and it is the only passage now practicable for shipping. Austria, in 1840, became a party to this occupation, consenting to pay a tax or toll on all vessels crossing the bar of Sulina, provided Russia kept the water deep enough for navigation. While the Turks had the charge of Sulina, there were always sixteen feet of water over the bar, and now there are barely nine. It is, therefore, evidently the intention of Russia to allow the channel to be gradually closed, and to destroy the Danubian corn trade in favour of Odessa. "It is even said that bags of stones have been sunk for the purpose or consolidating the bar, and of creating a permanent obstacle." It also appears that all British goods entering the Danubian provinces must be sealed by the Russian consul, the seals and certificates of the consuls of no other country are being respected; and it is shown that the Danubian quarantine inflicts annually heavy losses on British merchants, and causes serious inconvenience to our shipmasters. On all these subjects the fullest information is commun cated. Our traveller had a personal interview with the Hospodar of Wallachia, Prince Stirbey, who requested his free and reserved opinion on the state of the province, and on its relations with Russia and the Ottoman Porte; and, when the conversation terminated, the Prince significantly said, "Study the country before you write; and when you do write, I hope you will do me justice."

To do justice to these instructive volumes would require several columns, but we can now only urge statesmen and merchants to study this valuable addition to modern literature. The countries visited are little known, and hence it is that their natural capabilities are not duly appreciated. In these districts, sooner or later, the battle will be fought which must decide the balance of political power. Russia perfectly well understands their value, and may already have marched her armies across the Pruth. We should no longer remain in ignorance of the immense importance of the Danubian provinces, not only to trade, but to the ind spendence of Europe; and, for these reasons, we commend the work before us, not as the production of a tourist in search of pleasure, but as the profound and comprehensive reflections of an accomplished scholar and a far-sighted statesman

* "The Frontier Lands of the Christian and Turk: comprising Travels in the Regions of the Lower Danube in 1850-51." By a British Resident of Twenty Years in the East. 2 vols., 8vo. Bentley.

THE FRENCH CAMP AT HELFAUT.

THE encampment of English troops at Chobham has been preceded by the formation of a French camp at the village of Helfaut, near St. Omer, at which military manœuvres on a grand scale are being executed. The Camp at Helfaut is situated on the right bank of the little river Aa, about three English miles from St. Omer. The *plateau* on which the Camp is formed is of the extent of sixty-five English acres, and commands the valley of the Aa. The plain of Bruyères, where the grand manœuvres usually take place, is situated mid-way between St. Omer and the Camp of Helfaut: this plain covers an extent of nearly 400 English acres. The situation is admirably adapted for a camp, being a large plain or table land formed on the heights which overhang the valley of the river Aa, having on its banks the beautiful and rich villages of Wizernes and Blandecques. The soil is gravelly, and there are close to the Camp three excellent springs of water, the river being near enough for the cavalry and artillery horses. The air is healthy and bracing, not even too hot under a mid-day sun. The Bruyères is a large, extensive plain, quite flat, and as clear of obstacles as a billiard-table, being exactly on a level with the top of the highest steeple in the St. Omer. Charles X. and the Duke of Orleans often manœuvred from 20,000 to 30,000 men on the Bruyères; but some part has been cultivated; there is still, however, sufficient space for 10,000 men to execute every sort of movement. The troops now assembled consist of about 7000 of all arms, including a battalion of Chasseurs à Pied (Chasseurs de Vincennes). The whole are commanded by General Canrobert, an Aide-de-Camp of the Emperor; the two brigades being commanded by Generals Motterouge and Bisson, formerly Captains in the Chasseurs de Vincennes. All these officers have served for more than ten years with great distinction in Africa, and none of the three has attained the age of fifty. This Camp has been formed at the wish of Marshal St. Arnaud, as well for the general instruction of the troops, as for the purpose of making experiments to what extent infantry of the line can be trained to the exercise and duties of the Chasseurs de Vincennes.

We must guard our English readers at the outset against supposing that the French Camp has been formed in rivalry or defiance of our own. The *plateau* of Helfaut, and the vast plain of Bruyères, have served from remote times as camps of instruction for the French army. At the time of the American War of Independence a permanent camp was formed here, whose numbers reached 9500 men in 1779. From 1826 to 1827 a camp of 12,000 was established, and from 1827 to 1830 the camp was each year occupied by various troops. In 1833 a new camp was formed, under the command of General Sebastiani. In 1834 military manœuvres were executed under the orders of General Roguet. In 1840 the Camp of Helfaut served for the organisation of the foot chasseurs (Chasseurs de Vincennes). In 1841 the ten battalions of this arm of the service were assembled here. From 1842 to 1846 there have been some gatherings of troops at Helfaut, but no encampment in the proper sense of the word. The last occupation of the *baraques* dates from the month of August, 1847.

The troops assembled at Helfaut on the present occasion, under the command of General Canrobert, consist of:—Artillery, the 4th battery of the 14th regiment; Engineers, a company of miners of the first battalion of the first regiment of engineers. Infantry, 1st brigade: 20th battalion of foot chasseurs (Chasseurs de Vincennes), 82rd regiment of the line (2nd and 3rd battalions), 48th regiment of the line (1st and 3rd battalions). Second brigade: 27th regiment of the line (2nd and 3rd battalions), 73rd regim ent of the line (2nd and 3rd battalions). Cavalry. 3rd and 4th squadrons of the 8th regiment of hussars.

On the 18th May, the greater part of the troops had marched into the Camp. Three days afterwards General Canrobert arrived, and inspected the troops, who were drawn up in line, without arms, and in fatigue dress. The battalions were successively presented to him, and among the officers and soldiers the General recognised many of his brethren in arms during the campaigns in Africa. He addressed each regiment in a soldier-like manner, explaining to them that, as he would do his best to provide for their wants and comforts, in return he expected from them the strictest discipline and at tention to their duties. As French soldiers understand manœuvres, even when stated in technical language, he gave a sketch of what movements he proposed to make during the summer. Though a little man, he sits high on horseback; and his manner and style are remarkably well adapted for catching the attention and gaining the affections of the soldiers. The soldiers saw how determined he was to fulfil his promise to them; for, dismounting, he went through their huts—in one moment saw what was amiss—and the suggestions he made, and the questions he asked, showed the men he was a thorough soldier. This knowledge of the most minute details of a soldier's life—of his equipment—is as familiar to a French General as it can be to the best non-commissioned officer never absent from the men. The responsibility of a French officer commanding a regiment is very great.

The Camp is divided into two parts—the Old and the New Camp—separated by a space of about 200 yards. The rude building devoted to General Canrobert is constructed behind the centre of the ancient camp; and near this is a similar erection for Marshal St. Arnaud, the Minister of War. At 100 yards in front of the Camp is a chapel, in which mass is performed on each Sunday. On the right of the chapel a building is erected for the accommodation of Prince Jerome. From this point the eye embraces a wide landscape, which includes the towns of St. Omer and Cassel; and, farther off, the rich valley in which was situated the French city of Thérouanne—besieged, taken, and destroyed by Charles V., and the ruins of which have served to build the neighbouring villages. All the *baraques*—as well for officers as men—are of wood and clay, covered with thatch. Those of the troops are in three parallel lines, and occupy the front of the Camp. The *baraques* of the officers come next, and then those of the officers of superior rank. In the rear, but completely isolated, are the *baraques* of the Generals of Brigade.

A more detailed description of this *Camp baraqué* will be acceptable to our military readers. The Camp is situated about 150 yards to the rear of the edge of the cliff, and occupies a frontage of about 1640 yards, or rather less than an English mile. Along the whole front runs a road, on the outer side of which is a line of white canvas tents, about seven feet in height, for the purpose of placing the firelocks during the night or bad weather, but otherwise they always remain piled in the open air. The tents are mustered and formed in front of these tents. Exactly in the centre of the Camp, and close to the edge of the heights, is the temporary chapel. To the left centre of the Camp are placed the batteries of the artillery. There is sufficient space between the Camp and the cliffs for the formation of the regiments; their private drill ground being on an extensive moor at each flank of the huts.

The word Camp generally suggests to the mind the notion or pitched tents, marquées of gay colours, &c.; but the visitor who expected to see these accessories of campaigning would be sadly disappointed; there is no such thing as a tent to be seen here. The soldier at Helfaut does not sleep under canvas, but in well-constructed cabins, which the French call *baraque* (a word, the meaning of which widely differs from our *barrack*), whence the name of *Camp baraqué*. This Camp was constructed some twenty-five years ago. Each barrack contains twelve men. There are no windows, but as there are two doors facing each other there is no great want of ventilation. On each side of the *baraques* is constructed a reclined *lit de Camp*, like those in our guard-rooms, except that, instead of planks, the beds are made of wattled branches of trees by the soldiers themselves, with materials supplied by an adjoining wood, lying behind the Camp. The beds are canvas sacks, filled with straw, which every morning, weather permitting, are taken outside to be aired. Each soldier has a comfortable substantial blanket, of a grey colour. The non-commissioned officers are close in rear of the men; in their rear are the huts of the company officers, while in their rear are the huts for the field officers, divided one-half for himself, the other as a stable; completely in the rear are those of the general officers and staff; near to them are no many temporary restaurans, where the officers are messed at a moderate rate. Scattered through the Camp are the kitchens and bakeries for the men. The officers' *baraques* differ very little in exterior appearance from those of the men. The lieutenants (*ensignes*) have one hut for two of them; a captain has one for himself; a major, a hut for himself with a stable for a horse and a room for his servant; a colonel has in addition a reception-room, a servant's hut, and a stable for three horses; a general of brigade has still better accommodation. There are two large huts, with six windows in front—one at the back of the Camp—for the general staff.

The manœuvres may be said to be carried on without cavalry. The two squadrons of hussars (that have been sent to St. Omer) only fulfil the duties of *ordonnances*, &c., and escort to generals and staff officers, and to join the grand manœuvres for the service of *tirailleurs*) are in the *baraques casernes* in St. Omer; their number does not exceed 250. The artillery horses for the service of the six batteries are in stables constructed on the same principles as the *baraques*

French soldiers are allowed greater latitude is embellishing their encampment than will probably be conceded to the English troops at Chobham. The instinct of the arts, never developed in the English peasant, characterises the French solder as much as his passion for warlike exercises. The order, industry, and taste, with which the French troops at Helfaut immediately set themselves to embellish their Camp, were truly remarkable. They found in their ranks Macadams to mark out their streets, architects to construct symbolic monuments, gardeners to design parterres and raise seats of turf, decorators and poets to ornament with emblems and devices the pediments of their improvised monuments. Before the barracks of the 27th is a parterre, representing on one side an eagle, supporting the Cross of the Legion of Honour, and on the other the tomb of the Emperor at St. Helena. The voltigeurs of the 3rd battalion occupied themselves in modelling a large medal in plaster, representing the Emperor and Empress. The 3rd battalion of the 48th have designed, among other emblems, an escutcheon, containing the initials of the Emperor and a bouquet for the Empress, artistically designed. The same battalion has built a pyramid surmounted by the military medal in plaster, and have inscribed upon the pyramid the names of the battles in which the regiment has taken a part; among which are Jemappes, Zurich, Marengo, Moskowa, Staouéli, Isly. Lower down are the names of two colonels, killed under the colours of the regiment—Colonel Lebland, October 5, 1842; Colonel Regnault, June 26, 1848. In front of the *baraques* of the 9th battalion is a construction of turf representing the donjon of the Castle of Vincennes, and a fountain rising from a basin sur ounded by flowers. Near this is an obelisk to the memory of Marshal Bugeaud, with two inscriptions, Tiffour and Isly; then a column in plaster, surmounted by a bust of the Emperor. This column and bust are executed by a young Parisian artist, a soldier in the battalion. We trust we shall be pardoned for these details; but it appears to us that a whole chapter of national characteristics may be read in the contrast between the French and English encampments at St. Helfaut and Chobham.

For a short period after his arrival at St. Omer, General Canrobert left to the superior officers of the regiments to continue and complete the instruction in details under the direction of the two Generals of Brigade. But a few days ago a grand review and sham-battle were ordered to take place, which attracted a large crowd of spectators

Ten o'clock a.m. the troops were drawn up in readiness to march for Bruyères. At noon they were formed in order of battle on the vast plain—the infantry in the first line, and the cavalry and horse and foot-artillery in the second. At half past twelve General Canrobert arrived on the field, and rode with his staff along the line, which was about half a mile in length. On the extreme right were a small body of the mounted gendarmerie—a splendid corps. Next to them a company of engineers. On their left was the 1st Brigade, commanded by General Motterouge, consisting of a battalion of Chasseurs de Vincennes, ranks two deep, with a numerous supernumerary rank, with band and bugles in rear of right. Then two battalions of the 73rd of the line, in ranks three deep, with a numerous supernumerary rank, with music and band of both battalions in rear of right. A similar formation of five battalions of 27th of the line. The space be tween the brigades was filled up by a battery of artillery of 8-pounders (equal to our nine), in beautiful fighting order and admirably horsed: six horses to a gun. Then to their left the 2nd Brigade, under General Bisson, composed of two battalions 48th, and two of 73rd of the line—similar order to 1st Brigade. Next to them a party of well-equipped waggon trains (*train des equipages militaires*), and on the extreme left the crack corps of the 8th Hussars, who are about to be completely mounted on grey horses. The sight of this corps would have given pleasure to a soldier of any nation.

The manœuvres immediately commenced after the plan indicated by the General. It was supposed that the enemy had occupied St Omer, and that he wished to turn the French right in arriving by the route of Hesdin. To prevent the execution of this intention, the General ordered a change of front to the right of each brigade, to be made under the protection of the artillery. This movement was covered by a strong line of sharpshooters and riflemen, both infantry and cavalry While this movement was being executed, it was supposed that several of the infantry battalions were attacked in their march by the enemy's cavalry. The battalions thereupon threw themselves with great rapidity and precision into squares of battalion, to resist the cavalry. the riflemen were called in, and the Hussars executed a charge. The cavalry being repulsed, the front was entirely changed; and the 1st Brigade was formed into line, with the second in the rear, at about eighty yards distance. The artillery was on the right of the 1st Brigade, and the cavalry on rear of the left of the 2nd Brigade. The 1st Brigade advanced, covered by the Chasseurs in skirmishing order, with the artillery placing themselves on the inner flank, so as to rake the cavalry at their charge. The cavalry were thus repulsed, and were followed sharply by the Hussars. The manœuvres of passing the line and the movement of the troops in columns, crossing and intersecting each other at various angles is the immense plain, presented a *coup d'œil* of the most interesting character. The movements were executed by the troops in a manner which elicited the admiration of the military men present. A violent storm which suddenly broke out compelled the General to suspend further operations, and the troops received the order to return to the Camp

The military manœuvres just described were followed, a few days afterwards, by a grand review of the troops, in the presence of the Minister of War, Marshal de St. Arnaud, who arrived at the St. Omer

THE CAMP AT HELFAUT, NEAR ST. OMER.

railway station, by a special train, from Lille; and at nine o'clock was received by all the civil and military authorities of the town and Camp. At noon he proceeded to the Camp, where he found the troops drawn up in line in full dress. They looked remarkably well. The inspection finished, the troops were marched to the extensive, but rough and uneven ground to the right of the Camp, there to be manœuvred. The manœuvres consisted principally of change of front, and forming into line from column of battalions. As the ground was very difficult, of course, though the regiments worked beautifully, there were some mistakes and confusion. The French troops are not so silent under arms as the British. This arises from the non-commissioned officers understanding company and battalion drill as well as their officers; thus there are too many commanding officers Each sergeant expects to be a general at least, and consequently does not like to "hide his knowledge under a bushel" The charges of the Hussars were very well executed; and it was astonishing to see the speed with which they gallopped up and down the small but very steep hills. After a charge or a repulse they sprang into their proper places so quickly, that it is clear each man knows his duty. The manœuvres finished, the regiments marched past the Marshal in open column of divisions (two companies)

During each week there is company and battalion drill at the Camp—a most instructive school for all officers. The general inspection of a regiment in the French service is quite a different affair from that of a British regiment. The latter is usually finished in less than two days, but in the French service seven days are generally occupied in the inspection of one battalion. In the field, in the barracks, or in examination of the officers, non-commissioned officers, and soldiers, in theory and practice of military matters, eight hours at least are daily spent. These examinations are most useful. A soldier or non-commissioned officer is called out to write a sentence on the board, dictated by the office schoolmaster, and to construe it; another to demonstrate a problem in Euclid; another, a problem in algebra; another to sketch on the board a fortification, explaining aloud the peculiar uses of each work. The general then puts questions to the officers under the rank of captain and to the non-commissioned officers, and the man must indeed be master of his profession to put such questions. The answers and the reasons given by the young men are quite enough to puzzle a Wellington or a Soult. Lord Frederick Fitzclarence (now at Bombay), when in command at Portsmouth, established a school for non-commissioned officers, having seen the benefit of such an establishment in the French army; and many officers are of opinion that the sooner his Lordship's example is followed through the British army, the better for the United Kingdom.

Few of the officers on the French staff (*état major*), are under the age of thirty, and all are highly professionally educated—being, in fact, the hinge upon which an army moves. The corps of the *état major* is as distinct in service as that of the artillery or engineers. No young man can become a candidate for a commission in the French army without having studied at a Government college. On leaving this, he is subjected to a severer public examination than that undergone by our cadets at, Woolwich when seeking their commissions in the artillery or engineers, before he can be admitted to the Military School of St. Cyr. There he remains two years; and if he passes his examination well he is appointed as an officer; but, if he cannot pass, he is sent to the army as a non-commissioned officer. He who passes the best examination, has the choice of entering the school of the *état major*, where, for two years, he is instructed in those branches most necessary for staff-officers. He must then do one year's duty with a regiment of infantry one year with the cavalry, and one with the artillery; and he is then eligible to do the duty of the staff of the army, and is appointed, not by or to any particular general officer, but to be employed wherever his services are required. If three vacancies take place among the ensigns in a French regiment, the non-commissioned officers have a right to one of these vacancies; another is appointed from St. Cyr; and the Emperor appoints the third, either from St. Cyr or from a non commissioned officer of any other regiment; but all the three are subjected to a severe examination before the appointments are confirmed.

The most friendly feeling is evinced by the officers of all ranks at the Camp to the English; and any British officer (in undress) visiting them and attending their reviews, may confidently anticipate a cordial reception.

We present our readers with two Illustrations of the Camp at Helfaut. In the Sketch, taken from a spot near the park of artillery fronting the first line, horses may be seen tied to pickets planted on the ground. These are the horses of soldiers on duty; a certain quantity of them being always there, night and day, and relieved successively, like sentries. Behind the line of officers' *baraques* there is another, close to the wood, formed of mess-rooms for officers, cafés, restaurants, little cabarets for the men, and shops of every description.

Prince Napoleon left Paris on Saturday morning for the Camp at Helfaut, after having spent part of the previous day at St. Cloud, to take leave of the Emperor. The Prince will remain several days under canvass at the Camp, in the midst of the troops, and be present at all the grand manœuvres.

THE CAMP AT HELFAUT.—PARK OF ARTILLERY.

THE CHASSEURS DE VINCENNES.

CHASSEURS DE VINCENNES ATTACKING A BLOCK-HOUSE.

GYMNASTIC PACE.—180 STEPS IN ONE MINUTE.

THE Chasseurs de Vincennes will probably play so important a part in the next European war, that we, this week, present our readers with some illustrations, taken at Vincennes by one of our Artists, from which an accurate idea of the manual and platoon exercise of French riflemen can be formed.

We have adverted in another article to the experiments now being made at the French Camp, near St. Omer, with the view to solve the question whether, and to what extent, infantry of the line can be trained to the exercise and duties of the Chasseurs de Vincennes

THE CHASSEURS DE VINCENNES.

1. To resist Cavalry (Fourth position) Point.
2. To resist Cavalry (third position) Point.

11. To fire standing on the spot
12. Detached skirmishers To fire lying
13. Rush of Arabian Cavalry Rallying square, back to back

SIGNALS BY BUGLE.

These experiments will probably bring to the test the new system of drill of General Lourmel, who has written a pamphlet, in which he plausibly contends that all the line ought to be drilled and armed as the Chasseurs de Vincennes. General Lourmel's pamphlet has been answered by Captain Fernot (the author of the celebrated work upon fire arms). These two pamphlets, and the new system of fortification proposed by Mr. Fergusson, the author of the "Perils of Portsmouth," are at present causing great discussion among the French military. The superior officers, who have served with the Chasseurs de Vincennes in Africa and at Rome, speak with great contempt of all fortifications, as they say the new fire-arms must always be able to destroy artillerymen at their guns; but the officers of the French artillery and engineers, like our own, are not inclined to listen to such ideas. A discussion is also taking place as to the efficacy of the new fire-arm (Minié rifle) against a charge of cavalry; one party agreeing with the remarks of a "Contributor" to the *Quarterly Review*, that the movements of cavalry are so rapid, that in their attack such confusion

CHASSEURS' ACCOUTREMENTS.

would arise, that the riflemen in action could neither calculate the proper distance, nor have time to raise or lower the sights of their rifles to the proper distance. But such ideas are not shared by those who have served in the Chasseurs de Vincennes. A military correspondent of the *Morning Chronicle*, adverting to this discussion says :—

It appears to me that there is a simple method of preventing all charges of cavalry, and perhaps of getting quit of that at all times complicated and difficult movement—"formation of squares under fire." Give columns of infantry can now be wheeled quickly and correctly. Cavalry at the walk clear about 450 yards in five minutes; at the trot the same distance in about half the time; and at the gallop about 400 yards in one minute. But it must be borne in mind that these movements must be on favourable ground, and no cavalry would commence the gallop with chance of success at a greater distance from the square (or column) than 300 yards. A close column of infantry of eight companies, discover cavalry, say at a distance of 1000 yards; thus the commanding officer of the column has time to examine and judge on what ground the cavalry can approach him. He wheels his column to face this ground, having more than five minutes to do this, but he can wheel and dress his column in less than two minutes. He orders the rear company, or No. 8, to adjust their sight to 1000 yards distance; No. 7 to 900; No. 6 to 800; No. 5 to 700; No. 4 to 600; and No. 3 to 500; Nos. 2 and 1 placing their sights at the point blank. At the moment the commanding officer sees the cavalry at 1000 yards distance he give the order "Commence firing from the rear." The seven front companies drop on their knees, and No. 8 deliver their fire, knocking down a number of the cavalry. The smoke of No. 8 having cleared away, the cavalry are now at 900 yards; No. 7 spring up, fire, and bring down their quota, and the same is done by 6, 5, 4, 3—2 and 1 always being in reserve—and the companies which have fired lowering their sights to about half their former distances. But what cavalry, exposed to such a murderous, continuous fire, would be in a fit state to begin a charge at the gallop at 400 yards distance from the square? Let any officer look at the angle formed by the rifles firing at 1000 yards, and the other distances, and he will see those in front on their knees are exposed to no danger from the fire of their comrades in their rear.

The Chasseurs de Vincennes are in some measure chosen men. When the conscripts are drawn and assembled, a commission appoints these men to the different corps. The tallest and strongest men are put aside for the cuirassiers; the next in strength to the dragoons; next, artillery and engineers; next, light dragoons and hussars. Those for the chasseurs are then picked out—being thick, large chested, short, active men, and what remains are sent to the line; and this is the reason why the French regiments of the line can never be compared with the men of the British regiments of the line as to appearance. The Chasseurs de Vincennes, at their *pas gymnastique* (quicker than our double quick), move beautifully in column, and form square with surprising rapidity, and are off again in a moment at their rapid pace.

UNIFORM OF THE CHASSEURS DE VINCENNES.

A sketch of the successive improvements, by means of which the weapon for which the Chasseurs de Vincennes are so celebrated has attained to its highly effective state, may be acceptable at the present moment. For the subjoined particulars we are indebted to a Correspondent at Paris :—

The French rifleman (*tirailleur*) is a gallant offspring of the Revolution which took place towards the end of the last century, both in America and France. Such a name had hardly ever been mentioned before on the European battle fields.

With the exception both of Gustavus Adolphus and Louis XIV., whose plan was to detach, previous to the general firing, a company or companies of forlorn soldiers (*enfants perdus*), pushing on or falling back from post to post, governed by circumstances or situation, there was little enough in the European armies of what the modern tactician is accustomed to associate with our regular riflemen.

Frederick II. made no account of scattered fusiliers, whose independent firing was not connected with the systematic manœuvres he had previously decided on. What was a man advancing at will, hard pressed in retreating, to him? A mere superfetation; and, at all events, a nuisance: the retreat of a company of skirmishers being the advance of opponents—that is, discouragement to the bulk, confusion in the lines, with gloomy forebodings. The fact is, that, in nine cases out of ten, neither judgment on the part of the leaders, nor individual intelligence and correctness of eye in the skirmishers, were able to protect the Austrians, when held in check by the Prussian tactics.

The Anglo-American people are believed to have been the first who organised corps of light infantry armed with rifled musketry; and during the American struggle for independence, the fire from the rifle men too often took effect with fatal precision against the officers and in the ranks of British forces.

In 1792, when the French revolution began with a clap of thunder, Walloons, Belgians, and Liegemen offered to the Committee of Public Safety the levies of their numerous skirmishers armed with rifle musketry. The offer, we may conceive, was accepted with enthusiasm. Indefatigable hunters at home, the Walloons possessed on the field the great requisites in skirmishing -sure, quick, and steady aim, together with ready tact in seizing at a glance local advantages. As this coincided with the French mode of fighting, there was not much difficulty in convincing them of its propriety. Besides, of all nations, France is the one which best knows how to profit by an innovation in warfare. So, in 1793, no less than thirty corps of French riflemen bivouacked within range of the cannons of the Austro-Russian advanced guards.

It was one of those epochs of exciting interest, when every French soldier considered himself as a responsible agent, and as a corps by himself. The circumstances were, besides, too urgent, and time too valuable to take the trouble of regulating and drilling such a patriotism. Skirmishing became a passion, and a rifle musket fashionable.

But the evil days soon came, the French enthusiasm began to abate, the individual energy disappeared, and, what is more, the experience of the Allied armies improved every day. At last, General Bonaparte, resuming a more scientific strategy, put a stop to separate attacks. It was thus that he vanquished in Italy the soldiery of his Imperial Majesty after a few days' campaign.

So much for the Imperial riflemen

The Government of the Restoration, although at peace, felt instinctively that it was but the calm which precedes the storm. At the period now described, all the Governments were engaged in researches for a new system of strategy—an occupation of the utmost importance, and the result of which was the introduction of a certain number of horse riflemen in the Prussian, Austrian, Russian, and English armies. In consequence, the French Minister of War directed a committee, composed of clever artillerymen, to lay down various regulations for drilling and training the riflemen, in order that a perfect uniformity of system under these heads should be maintained throughout the service. And as it was, at the same time, of no less importance that the soldiers should be accustomed to judge of distances correctly, that they should know how far their firelocks would carry point blank, also the exact degree of elevation that is required in order to hit objects at different distances beyond the point blank range, and should finally be trained to the knowledge of distances on every kind of ground, the Castle and the Park of Vincennes were transformed into a school for ball firing and target practice.

The Royal ordonnance of March, 1831, is the abstract of the aforesaid regulations, as well as a guide for the officers and non-commissioned officers.

But a weapon fitted for the purpose of a regular and systematic warfare was wanted in France; the rifle was disregarded as awkward, owing to the inconvenience of laying the bullet on the muzzle of the musket, and forcing it down by blows of a mallet. Besides, it is well known that when falling on the ground this rifle was easily damaged, and in service it often happened that it could neither be repaired nor replaced. M. Delvigne, a celebrated gunmaker in Paris, invented, twenty years ago, the simple mode of forcing down the bullet, without any other trouble than the ramrod itself. He made a new rifle musket, so as to admit of its being loaded at the opposite extremity of the barrel, a sort of *chamber* being formed for that purpose by an enlargement of the bore at that place; the powder and bullet were introduced in it through a perforation made in the side of the barrel; and this, after the piece was loaded, was closed up by a screw which fitted it

The inventions of M. Delvigne suggested many experiments, the results of which were successive improvements and high correctness in the hits at long distances. There is not a sportsman who is not aware that, on firing the charge of a rifled musket, the bullet, yielding to the compression in the bore, acquires projections where the grooves allow it to expand, and thus it passes into the air with a rotatory motion on its axis.

The resistance of the air is the cause of the projectiles going to the left or to the right, and of diminishing the range.

Different methods have been employed for the purpose of enabling the bullet to acquire, by means of the rifle grooves in the barrel, the intended rotation on its axis

1st. In order to increase the quickness of the rotation, the line of the screw was shortened; the consequence was that a smaller quantity of powder was used, but the quickness of transmission was found greatly diminished; and, besides, beyond a certain charge, the grooves in the bullets being destroyed, the bullet lost all its power of rotation.

In the rifle muskets of the Chasseurs de Vincennes, Colonel Thierry took a medium; he consented to sacrifice something in the correctness of the shot, in order to give to the bullet a greater rapidity.

After him, Colonel Thouvenin suppressed the chamber of M. Delvigne, and substituted a steel verge of his own invention: it is screwed in the bottom of the musket, stretching on the axis of the piece, in such way as to maintain between the verge and the walls a space more than sufficient to lodge the powder.

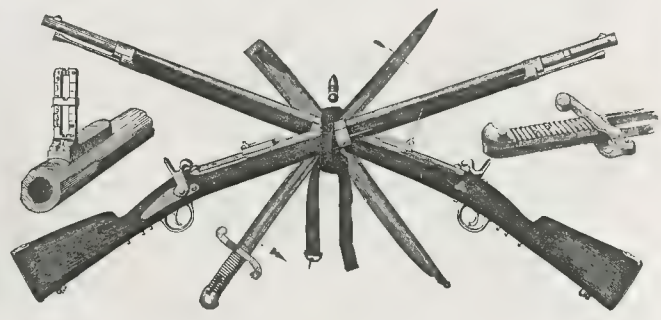
Such an innovation was a great improvement. It enabled the person firing to force down the ball, without causing it to deviate from the axis of the bore.

When it was ascertained that the rotation of the bullet was as rapid in the new carbine as in the Delvigne rifle, Captain Minié thought proper to alter the form of the bullet itself, for it is well known that there is a great difference between the rotatory motion of a spherical or cylindrical body. The Captain Minié bullet is rather sharp at one of its extremities; the centre of gravity being in the rear.

It weighs 47 French *grammes* (about 1½ English ounce), instead of 27 *grammes* (a little less than 1 ounce), which is the weight of the spherical bullet.

The advantage afforded by the conical Minié ball is to offer a less resistance to the air, and to possess a more efficient rapidity and range than any spherical bullet of the same density.

The new process of using a less quantity of powder in the charge, without in any way diminishing the range, enables the bullet, which is propelled with less force, to escape from the barrel, without causing any material damage to the grooves. But it was useless to put in the soldier's hands such a perfect rifle without the chasseur being carefully habituated in taking aim, that is, taught to fire with precision, or in other words, to kill his enemy. Indeed, all his other instructions in marshing and manœuvring can do no more than place him in the best situation for using his weapons with effect; besides, his safety depends upon that efficient use.



MINIÉ'S IMPROVED CARBINE AND BULLET, SWORD, AND BAYONET-SWORD.

Our correspondent visited Vincennes, in order to see the Chasseurs at their exercise. He says :—"During my conversations with the Chasseurs de Vincennes, a tolerably large party of curious congregated around the broken *gabion* on which was seated, as on a throne, a picturesque *vivandière*. The *vivandière* was a nice little brunette, admirably well made. She had her hair simply but most becomingly dressed, and a sort of military cap on, with a small peak, ornamented with the number of the regiment, and a tricolor ribbon—the whole gently placed a little on one side of her head. Besides, she wore the regimental trousers, and a short cloth gown of blue colour with tight body, like the upper part of a riding-habit, and decorated with silken brandebourgs to match. Her features were impressed with melancholy, for, a few days before, she had received tidings of a domestic affliction. Her brother, a brave youth of nineteen, a gallant chasseur de Vincennes, had been mortally wounded, when forming the rallying square against a sudden rush of cavalry in Africa. To face the danger with firmness and steadiness is, in the gallant corps of Chasseurs, even in the worst emergencies, a common course. But, notwithstanding his individual firmness and that of his "comrades of combat" (a squad of four chasseurs are called comrades of combat); the Arabian cavalry made so terrible a charge that the *vivandière's* brother, shut up between two walls of steel, and hard pressed in retiring, devoted himself to death, in order to cover the retreat of the squad. The four comrades of combat could not have long withstood the impetuosity of forces thirty times their own, had they not been taught to know and feel that, individually, a man on foot with a loaded carbine and a 'sword-bayonet' in his hand, is a match for any horseman."

The following report of the target average practice will enable any person to judge of the proficiency of the ball firing, on the celebrated practice-ground, at Vincennes :—

Target 8 feet by 4.		Target 10 feet by 6.	
Hits (out of 10	Distance (in yards).	Hits (out of 10).	Distance (in yards).
81	400	30	1000
64	500	32	1100

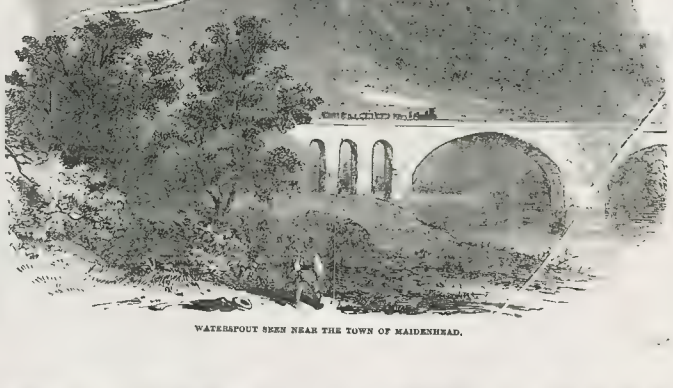
33	800		
36	900		

WATERSPOUT IN BERKSHIRE.

(From a Correspondent.)

At Maidenhead, on Tuesday, the 14th ult., I witnessed the following, from the hotel at the foot of the bridge. The day was fine, with occasional showers; and a rather heavy thunder-cloud had just passed over, moving, as nearly as I could judge, in a north western direction. The shower was abating when my attention was drawn to this appearance



WATERSPOUT SEEN NEAR THE TOWN OF MAIDENHEAD.

HER MAJESTY, ROYAL VISITORS, AND STAFF, AT THE CAMP AT CHOBHAM.

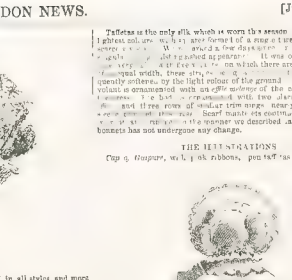
PARIS FASHIONS FOR JULY

The closing Paris season has left a few eccentricies which are worthy of [illegible] almost remember the excess of [illegible] for their delightful freshness and [illegible] appropriate to the season. The dark-coloured dresses of the winter assemblies had given place to fresh and charming light colours all the real dresses were of satara, flowers a [illegible] ornaments of [illegible] shoes and bouquets of straw- [illegible] enormously wide plain hats.

The new white is made worn for summer dress, not only for bals but also for [illegible] morning dresses. In the morning, a peignoir of

white jaconet, festooned all round with *ecrue Anglaise festooné*, or jaconet stripes, lengthways or across or in squares, is worn. For walking dress the peignoir is worked on each side where [illegible] and has the large sleeves of [illegible] The body is trimmed with Mechlin or Valenciennes lace in an elegant dress. The bodice is [illegible] open in front and trimmed with small volants, like the petticoat, the volant of the basque appearing to form the last volant of the petticoat. Organdie, barlatane, and tulle are also employed in the same manner as muslin. The embroideries are [illegible] flowers spread over the dress or scattered on the borders of the volants. For persons who do not require such juvenile dresses, printed jaconets in muslin worn. The grounds are generally white, with very small bouquets or patterns, but there is a [illegible] The body, sleeves, and the basque are ornamented with plain bands. When the petticoats are [illegible] the back of the basque is festooned, and appears to make another volant to the petticoat. These are also trimmed with a [illegible]

Foulard dresses, discarded of late years appear likely to come into



vogue a little this year. They are worn printed in all styles, and more covered with patterns than other dresses. This material has an advan-

tage for ladies who travel, as it can be pocked in trunks without being spoiled or rumpled.

Taffetas is the only silk which is worn this season. It is made of the lightest colours, and is [illegible] a rose or [illegible] very thin, and [illegible] and suspended appearance. Its use of taffetas [illegible] the progress of the heart to which it was attached, and as a proof [illegible] a calm day would float from the mast of a steamer in slow motion. The [illegible] he formed itself the water was clearly apparent, and the blade of [illegible] however, the Waterspout preserved its general shape during the whole time of its existence. The lower end appeared to be but a few hundred yards distant from me. I judged that it could not have been much farther away from the receding flat between which and which I could discern the spiral movement of every part of the Spout. In about a quarter of an hour from the moment when I first observed it, the Spout became [illegible] and from the moment when I first observed it, the Spout became [illegible] the cloud at its upper end, and so remained floating by itself still whirling round in the same manner, and without changing its form, until, by [illegible] degree it dissipated, the thinner portion [illegible] the ground being the last to disappear.

During the whole time of its continuance the air seemed still and I could detect no motion underneath where the waterspout appeared to terminate. There were, occasionally, slight flashes of lightning and low thunder, and when the waterspout disappeared, the rain seemed to be falling tremendously from that part of the cloud to which the [illegible] had been attached, but was then drifted to some distance [illegible] There was no sound audible, though the Waterspout moved round with great velocity; and this motion was plainly perceptible even where it joined the cloud. I have seen waterspouts at sea, and elsewhere, but none which presented so extraordinary an appearance as the above, against the dark background of cloud. I observed a temperature of [illegible] colour, and its prodigious size and rapid spiral motion, while in [illegible] respects it remained stationary produced an imposing effect which I despair of being able by any description to convey. The strong impression which its appearance gave me was that the passage of some fluid through [illegible] produced the rotary action of the surface, for the absolute still- [illegible] of the air negatived the supposition that the whirling motion could have been occasioned by the meeting of adverse currents of wind. What increases the probability of this supposition is that the hollow portion of the tube was of converging dimensions, so long as the Waterspout existed. The time at which the phenomenon occurred was about three o'clock p.m. Soon afterwards the rain ceased, and the evening was fair and calm.

I send with this a sketch made from memory, which the testimony of four or five persons who were at Haddenham, with me pronounces to be accurate.

I am, sir, your obedient servant

Gloucester terrace, Hyde-park. E. H. RAY.

(Another account of this phenomenon has been forwarded to Mr. Glaisher, by W. C. Medford, Esq., closely agreeing with the above.)

AN ACCOUNT OF THE WONDERFUL ESCAPE OF THE BARQUE "ADELAIDE" FROM BEING TOTALLY DESTROYED BY FIRE

BY EDWARD W. D. HERFIELD PASSENGER

In this splendid vessel (A. R. N. Tremearne, commander), with a fair wind we left the Lyll Ship, off Port Adelaide, for London, on the morning of [illegible] 1853, with the following cabin passengers Mrs Crawford (the widow of the late George Crawford, Esq., one of the judges at Adelaide), four children, and servant; the Rev. T. P. Wilson, child, and servant, Mrs Matheson and two children, Mr and Mrs Mackie, Mr. T. Gilbert, Mr. Benn, T. A. Hunt, Peter Skinner, and the writer. Our valuable cargo consisted of 40 867 ounces of gold, 4226 cakes of copper, 5694 ingots of tin, twenty three bags of lead ore 1271 bales of wool, 2207 horns, hoofs, bones, whalebone, &c. We were highly favoured in our voyage until we arrived in lat. 49 33 S., lat. 25 18 S., on the 4th February, when, at thirty minutes past three a.m., it was discovered that the wool had ignited from spontaneous combustion. This discovery naturally created much alarm especially among the ladies, but in a short time they recovered their presence of mind, and to their praise be it spoken, kept themselves quiet and out of the way, and to the general comfort and safety of each and every one on board. Captain Tremearne's excellent arrangements for subduing the fire. The smoke was first seen issuing from the after-hatchway, and every precaution was immediately adopted to keep the [illegible] under. The deck was speedily [illegible] pump-ladders, and immense quantities of water poured down; the pump-boxes were drawn, and chain thrown below. At four o'clock the captain headed up for the island of Rodriguez, but was obliged to bear off again, at dusk, short time on account of the fearful heat and smoke. Eleven a.m. Breeze light. The launch was got into the tackles, and provisions and water got ready for her. At noon the island of Rodriguez was found to be distant six miles. The flames burst through the cover of the after-hatchway, but we fortunately succeeded in extinguishing them. Lowered the launch into the water, and provisioned and watered her, and saw the quarter-boats which were kept ready for *lowering* at a moment's notice. All hands employed pouring water down the scuttles. Three p.m. Observed much smoke about the main-mast; at four p.m. the flames broke out round it, but were extinguished. Kept on pouring water down the scuttles, and [illegible] every minute, so the [illegible] carried over, children, and servants were put into the launch, which towed astern. The Rev. T. P. Wilson then read prayers. Being in charge, with three hands. The captain, however encouraged [illegible] on board to continue their efforts that had been made to save the ship, and the water was kept as abundantly supplied as previously. In the steward's cot in and pantry the smoke and heat were very great. At midnight the [illegible] was encouraged, and the [illegible] found to be [illegible] forward the [illegible] which [illegible] Sunday, 6th Feb.—Hove to, to make a select on to which the Academy of [illegible] and impart we gift and not error. M Howard, the [illegible] by his work fit for the [illegible] and [illegible] [illegible] proficiency, I became [illegible] [illegible] Thursday, French [illegible] [illegible] [illegible]

The nations of our Continent and the United States of America manifested a justifiable pride in selecting delegates worthy to take their places by the side of those of England and France.

The result was the memorable assemblage of three hundred representatives of science and art, collected together as a general jury, in the name of the civilised nations of the world.

Amongst these three hundred delegates, the Royal Commission selected, according to their renown, the Presidents of the thirty special Juries and the six groups between which the principal sections of human industry had been allotted.

The thirty Chairmen of Juries, thus appointed, constituted the superior tribunal which was to determine the conditions upon which the different prizes should be awarded.

The deliberations of this body were worthy of the clients and judges. It was a marvellous spectacle of concord and good-will to behold these presidents, the most illustrious of which represented in so striking a manner the discoveries of science and the inventions of industry. Each of these superior minds was happy to find in the fellows a power of knowledge and of truth, which the others found in him. Some of the most eminent amongst the number were surrounded by the halo of a well-earned renown; the fame which had preceded them to the Crystal Palace, added to the authority of the language in which they enacted the degrees of esteem and honour obtained by the worthiest competitors at the universal Exhibition. They expounded with no less revelty than superiority the original merit and the intrinsic value of the most admirable products, and the fresh results which might be expected to accrue from them to industry. The merits of the creators of these choice productions were enhanced in the eyes of the judges by the very talent of the expounders. We can only compare such meetings to those conferences of our first grand and normal school, wherein a Monge, a Fourcroy, a Lacépède, an Obiny, a Lagrange, and a Laplace, revealed to the best professors of France, transformed into pupils, a superior and new mode of tuition. The discussions arising from such expositions carried to the mind general convictions, which nearly always manifested themselves by imposing majorities in the votes of the Council of Chairmen.

When the prizes to be awarded were discussed by such high authority, the general feeling was to bestow them for the intrinsic merit of the competitors, without regard to the country to which they might belong. No malevolent imputations were levelled at decisions conceived in so liberal a spirit, even at the moment when the rivals became acquainted with the results in detail, and when they found themselves in the presence of each other.

If any nation had a right to complain, was it not the French? Injured, I might almost say personally, by a decision of the Royal Commission, notified to the body of the juries, that they should revise their final awards upon the following basis:—That the first class medals to be proposed to the Council of Chairmen were not to be conferred for beauty, elegance, and perfection of production, or workmanship only, however eminent.

It was for invention that the palm was mainly reserved. It will be seen that, even in this point of view, France has exhibited a degree of fertility which her rivals do not even seem to have expected. After the labours of the juries were terminated, and the competitors had returned to their respective countries, when the English published the official list of the awards made, the following result was seen with surprise:—For the entire of the foreign nations the proportion of prizes awarded for the highest order of merit, more especially accorded for invention, was eight out of a thousand exhibitors; whilst for France the proportion amounted not to eight, but to thirty.

Struck by such a result, the most eminent men amongst the Royal Commissioners have endeavoured to trace from its various portions the secret of so glaring an inequality. They have studied—we may especially mention Dr. Lyon Playfair—our schools of artistic drawing and geometry, at Lyons, at Nimes, and at Paris; our central and private school of arts and manufactures; and particularly the Conservatoire des Arts et Metiers, which now offers the richest collections and the most complete system of instruction in the sciences applied to the useful arts.

The surplus funds of the £460,000 received at the doors of the Crystal Palace are about to be applied to the imitation of the establishments which we have enumerated.

Others have endeavoured to attribute the great success of our national industry in London to the extraordinary influence, the almost magic, it was said, of the French Commission. We decline this honour. The Commission, far from increasing through its influence the number of our awards, has, from the very nature of its composition, been the means of several being lost to France.

We should have obtained six medals for important branches of industry, if MM. Arnoux, Didot, Fauler, Gaussen, Randoing, and Sallandrouze had not been jurors. We should have obtained others, and higher ones, if French machine-makers had sent inventions—such as the hydraulic wheel of M. Poncelet, who had not even thought of exhibiting.

(To be Continued.)

THE CAMP AT CHOBHAM.

(Continued from page 543.)

only the result of a general order which is intended to impress upon the officers the necessity of cautioning the men to be always in constant readiness every night, so that they may be ready to turn out under arms at the first beat of tattoo. The order book which is issued every evening did not contain any programme of the following day's proceedings, but merely stated that twenty rounds of ammunition were to be issued to the men in addition to what was already in their pouches, making a total of thirty-five rounds per man. This was considered by the uninitiated a strong circumstantial proof of a surprise being contemplated; but old campaigners were of a different opinion; for they knew that after the surprise it was intended to have a grand field day in Windsor Park, and that the men could not return to Camp until next evening; and that, therefore, it was as necessary for the Commissariat to supply powder for the teeth of both men and horses as it was to create a volley of musketry or a roar of artillery. It was quite clear, however, that there were to be some extraordinary movements next day; and so the men prepared for the coming event, as British soldiers generally do, with "a heart for any fate."

His Royal Highness Prince Albert entertained the Duke of Cambridge, Lord Seaton, and a number of other distinguished officers, in the Royal marquee. The men amused themselves by various athletic games in front of their encampments; and at sunset, when the Royal standard was struck, the scene was truly picturesque. At half-past nine o'clock the signal for the night-watch was given, and at ten o'clock the troops had retired for the night.

SATURDAY.

The morning dawned most inauspiciously, but at the hour of sunrise, although the glorious orb was obscured by a dense mass of clouds, the Royal standard was hoisted on Magnet-hill. The troops were ordered to muster at half-past eight o'clock, but the rain was so incessant that it was impossible to do more than go through the routine of a brief parade in front of the encampments. About eleven o'clock, however, the weather cleared up a little, and the troops, in obedience to command, again appeared in what is called "light marching order." At half-past eleven o'clock his Royal Highness Prince Albert, accompanied by his Royal Highness the Duke of Cambridge and General Lord Seaton, followed by a numerous and brilliant staff, including several officers of distinction in the service of his Majesty the King of Hanover, left head-quarters, and rode along the line; Prince Albert, who was attired in the uniform of the Grenadier Guards, of which he took the command during the day, being saluted with the customary honours. The cavalry formed in contiguous close columns, and the infantry in open columns. The troops then proceeded to take up their position on the ground called Caterns Valley, which we have already described as the scene of Thursday's operations. The infantry occupied the centre, with the cavalry and Horse Artillery on the left, and the field batteries on the right. The enemy consisted of a body of the Sappers and Miners, a detachment of the 23rd Regiment, and the farriers of the 6th Dragoon Guards or Carabineers. The whole of the remainder of the forces on the ground formed the attacking party. The movement began by the Lancers proceeding to take possession of the bridge at the western end of Caterns Valley, adjoining Col. Challoner's plantation, supported by the flank. The enemy, who formed a long line of skirmishers, immediately opened fire as soon as this force began its march. The Horse Artillery now moved up to the support of the advancing columns, and opened a heavy cannonade; under cover of which the cavalry and Rifles effected the passage of the bridge, followed in rapid succession by the remainder of the forces. The cavalry, after crossing the bridge, formed into two lines, whilst the infantry formed by companies in the order of battle. The batteries of the artillery were also pushed forward to support the left flank, and occupy a height under which the forces might retreat if hard pressed. After some fighting the enemy retreated, the whole of the forces following in rapid pursuit, the infantry and Rifles leading, being formed in close column, with the cavalry and Flying Artillery on the right. In this order the army reached Bagshot Heights, where the Rifles broke up into skirmishing parties, and returned the fire of the enemy's light infantry companies with great rapidity. The enemy now took up a strong position on the hill, from which they were at length routed by a charge of the Life Guards and Lancers, accompanied by the Horse Artillery, which poured a tremendous fire against the enemy's right flank. When the smoke had cleared away, the 1st Life Guards and Dragoons might be seen deploying into line; and immediately afterwards, supported by the Lancers and the Carabineers, they performed a splendid charge, which had the effect of driving in the enemy's light companies and turning his right flank. This movement completely changed the whole of the manœuvres; as the enemy, after a hurried flight, was compelled to change his front, which was so cleverly effected, that it threatened to out-flank the right of the attacking force. To counteract this movement, the attacking troops were also obliged to change their front—which involved a series of brilliant manœuvres, than which nothing could be more admirable. The movements and counter-movements now became more rapid, and the order and precision with which they were effected, appeared to the unprofessional eye perfectly marvellous. The object of the attacking party was evidently to force in the enemy and force them up the hill in their rear; which was at last accomplished, although with a great deal of difficulty, for the enemy appeared to evince amazing tact; but the skill and rapidity with which the cavalry and Horse Artillery acted prevented the escape of the enemy's troops through the valley. The enemy made a stand upon the hill; but they were charged with such precipitation by the 55th, 56th, and 50th Regiments, together with the three battalions of Guards, that they seemed to give way; but, in a moment, again the tide of war turned, and the attacking party, after sustaining and returning a tremendous fire, which lasted for half an hour, received orders to retreat.

The next series of movements consisted of covering the retreat, which involved numerous masterly manœuvres. Each regiment successively deployed into line, and commenced file firing, to cover the retreat of the rest of the force. The enemy, however, pressed so hard upon the rear, that they drove in the light companies, and, at one time, threatened the attacking force with total rout. A halt was then sounded, and the whole of the troops once more formed in order of battle. By far the finest movement of the day was reserved for this point of the action, when the Camp forces were again driven back to the little bridge across which, at the commencement, they had driven the enemy. The cavalry formed in the rear of the infantry in masses of columns, and thus recrossed the bridge, protected by the fire of the artillery and Rifles; and finally each regiment formed into line, and retired, protected by the field batteries placed on an adjoining height. The Rifles were the last to retreat. After crossing the bridge, the infantry formed again on the right of the hill, and, supported by the artillery, commenced a tremendous fire from both heights. At this moment the scene was awfully grand; the roar of artillery mingled with the trumpet-calls of the cavalry, the incessant discharge of musketry, and the hoarse shouts of commanding-officers, leaving little for the imagination to add to the realities of war. It was now nearly half-past three o'clock, and, the operations for the day being ended, the troops marched back to their respective encampments.

His Royal Highness Prince Albert, accompanied by his suite, rode up to the Pavilion, where he divested himself of his uniform, and partook of luncheon. He appeared again for a moment at one of the entrances, where he took leave of Lord Seaton, his Royal Highness the Duke of Cambridge, and the other Generals commanding, who, during the interview, continued on horseback. His Royal Highness wore a blue frock coat and white hat, and looked in fine health and spirits, evidently unaffected by the fatigues of the day. He then entered an open carriage, drawn by four grey horses, with outriders, and, accompanied by Lord de Ros and Colonel Phipps, drove off through the lines of the Grenadier encampment towards Staines by the public road. His Royal Highness arrived in town at half-past five, and afterwards honoured the officers of the Grenadier Regiment of Foot Guards, of which he is Colonel, with his presence at their annual festival at the London Tavern. Later in the evening his Royal Highness accompanied her Majesty to the Italian Opera.

SUNDAY.

The morning broke again unfavourably; and the rain descended in heavy showers. At ten o'clock the troops were paraded for Divine service. The brigade of cavalry, the Royal Sappers and Miners, and the 42nd Highlanders, mustered opposite the head-quarter camp, between the flag staff and the Pavilion. The troops formed on three sides of a square, facing inwards, the cavalry on the right, the Guards opposite to them, and the 42nd Highlanders facing head-quarters. The Rev. Mr. Langmead, Vicar of Sunninghill, was in attendance, and performed the appointed service in a very impressive manner.

At half-past eleven o'clock the Royal Artillery and the first brigade of infantry, consisting of the 50th and 55th Regiments, mustered in rear of the hill at Chobham-place, and formed in position similar to the other regiments.

The singing of the appointed psalms by the assembled multitude of voices had a very fine effect from the neighbouring hills. Each of the battalions had a good choir of singers, the treble voices of the drum-boys greatly assisting the harmony.

This imposing scene was witnessed by a great many spectators, all of whom were allowed to approach the troops and take part in the devotions of the day. Apart from the interesting nature of the service, this sight was one of the most gratifying features yet witnessed at the Camp.

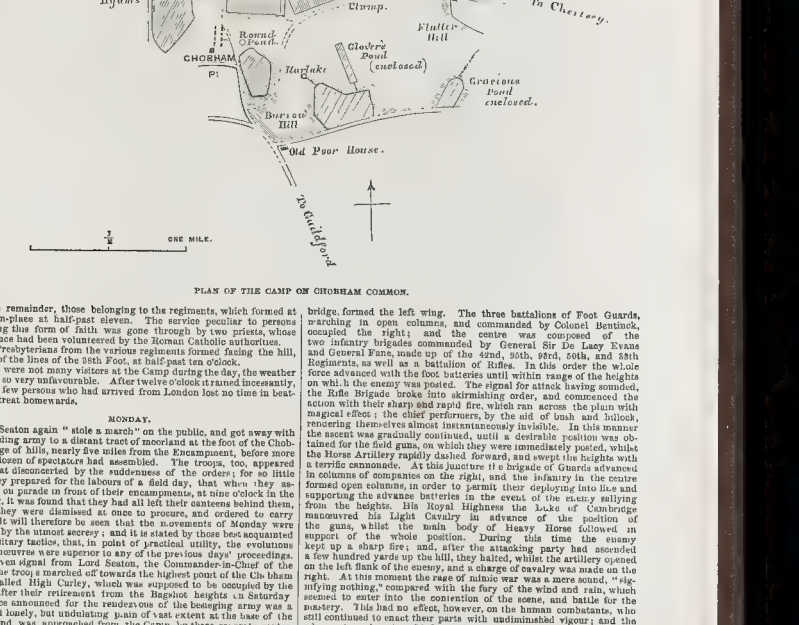
The Roman Catholic section of the troops was marched to the rear of Staple-hill, in two detachments; the first consisting of the Roman Catholics belonging to the troops, formed at head-quarters at ten o'clock; and the remainder, those belonging to the regiments, which formed at Chobham-place at half-past eleven. The service peculiar to persons professing this form of faith was gone through by two priests, whose attendance had been volunteered by the Roman Catholic authorities.

The Presbyterians from the various regiments formed facing the hill, in rear of the lines of the 38th Foot, at half-past ten o'clock.

There were not many visitors at the Camp during the day, the weather proving so very unfavourable. After twelve o'clock it rained incessantly, and the few persons who had arrived from London lost no time in beating a retreat homewards.

MONDAY.

Lord Seaton again "stole a march" on the public, and got away with his invading army to a distant tract of moorland at the foot of the Chobham ridge of hills, nearly five miles from the Encampment, before more than a dozen of spectators had assembled. The troops, too, appeared somewhat disconcerted by the suddenness of the orders; for so little were they prepared for the labours of a field day, that when they assembled on parade in front of their encampments, at nine o'clock in the morning, it was found that they had all left their canteens behind them, which they were dismissed at once to procure, and ordered to carry filled. It will therefore be seen that the movements of Monday were marked by the utmost secrecy; and it is stated by those best acquainted with military tactics, that, in point of practical utility, the evolutions and manœuvres were superior to any of the previous days' proceedings. At a given signal from Lord Seaton, the Commander-in-Chief of the Camp, the troops marched off towards the highest point of the Chobham ridge, called High Curley, which was supposed to be occupied by the enemy after their retirement from the Bagshot heights on Saturday. The place announced for the rendezvous of the besieging army was a wild and lonely, but undulating plain of vast extent at the base of the ridge, and was approached from the Camp by three separate routes. Lord Seaton and his Staff, with the Royal Artillery, the 17th Lancers, the 6th Dragoon Guards (Carabineers), and the Rifles, proceeded by the Bagshot road as far as the village of Windlesham, where they turned off towards the scene of action. The other regiments of cavalry took the road by Burrow-hill and Hookgreen. The brigade of Guards marched by Chobham, followed by the regiments of the line until they reached the main road leadin from the extreme north of the Common to Chobham ridge where a junction of the forces was effected, and thus the whole army marched forward with the van and rear-guard parties detached, and occupied the battle-field in front of the enemy who occupied the central and northern heights. The ground was exceedingly marshy, and fit only for the Highlanders, who pushed through it *con amore*; but it was most uncomfortable for the other regiments of infantry. The enemy was efficiently represented by a company of Sappers and Miners, a troop of Carabineers, a few Guards, and some farriers. The disposition for attack having been made, the forces advanced in three columns, the four regiments of cavalry supported and preceded by the Royal Horse Artillery batteries, under the command of his Royal Highness the Duke of Cambridge, formed the left wing. The three battalions of Foot Guards, marching in open columns, and commanded by Colonel Bentinck, occupied the right; and the centre was composed of the two infantry brigades commanded by General Sir De Lacy Evans and General Pane, made up of the 42nd, 95th, 93rd, 50th, and 58th Regiments, as well as a battalion of Rifles. In this order the whole force advanced with the foot batteries until within range of the heights on which the enemy was posted. The signal for attack having sounded, the Rifle Brigade broke into skirmishing order, and commenced the action with their sharp and rapid fire, which ran across the plain with magical effect; the chief performers, by the aid of bush and hillock, rendering themselves almost instantaneously invisible. In this manner the scene was gradually continued, until a desirable position was obtained for the field guns, on which they were immediately posted, whilst the Horse Artillery rapidly dashed forward, and swept the heights with a terrific cannonade. At this juncture the brigade of Guards advanced in columns of companies on the right, and the infantry in the centre formed open columns, in order to permit their deploying into line and supporting the advance batteries in the event of the enemy rallying from the heights. His Royal Highness the Duke of Cambridge manœuvred his Light Cavalry in advance of the position of the guns, whilst the main body of Heavy Horse followed in support of the whole position. During this time the enemy kept up a sharp fire; and, after the attacking party had ascended a few hundred yards up the hill, they halted, whilst the artillery opened on the left flank of the enemy, and a charge of cavalry was made on the right. At this moment the rage of mimic war was a mere sound, "signifying nothing," compared with the fury of the wind and rain, which seemed to enter into the contention of the scene, and battle for the mastery. This had no effect, however, on the human combatants, who still continued to enact their parts with undiminished vigour; and the advanced regiments of infantry in the centre having arrived within range, they deployed from open column into line, and the 93rd and 58th commenced a tremendous discharge of musketry by file firing, which was taken up by the right wing of the Guards, who fired in companies. As the wind increased in violence, and the nature of the ground became still more harassing, no further advance was made; and it was taken for granted that the enemy was repulsed, and their position occupied by the besieging troops. The enemy having been thus gallantly dislodged from their vantage ground on the heights, were still supposed to be pressing hard on the rear; and the ground being unfit for the operations of cavalry, it was deemed prudent to concentrate the troops on the low ground; and, accordingly, the retreat was sounded; when one of those movements so essential and important in the art of war, and which equally marks the generalship of the commander, was executed with a most finished and soldierlike precision and steadiness. No sooner had the bugles sounded, than the waving plumes of the aides-de-camp were seen dashing across the field, ordering the light companies to the aid of the skirmishers, who were thrown out in line at the rear of the whole retiring force. The cavalry, in retiring, took up their position on the right; the



PLAN OF THE CAMP ON CHOBHAM COMMON.

THE CAMP AT CHOBHAM

ROYAL HORSE ARTILLERY COVERING THE RIFLES SKIRMISHING.

Horse Artillery keeping up a rapid fire during the time. While the main body of the foregoing army was retreating, the two regiments of Highlanders formed in lines, and allowed the retiring troops to march through them, then forming in the rear, retired in succession the whole division being covered by Rifle skirmishers, and flanked by the fire of the Horse Artillery on the right. The pursuing enemy being now supposed to be moving rapidly up in large bodies, the usual dropping fire practised by skirmishers was not adopted, but the whole of the light companies from each regiment, dropping on their knees, poured in rapid volleys on the advancing foe. Thus, under cover of the cannonade of the artillery, and the volleys of the skirmishers the troops reached the plain below in the most beautiful and orderly manner, where the comparative evenness of the ground gave an opportunity to bring the cavalry into action. The whole four regiments having formed, now rushed to grand charge—sweeping over the wild moor "like the" sound of many waters," and almost silencing its feathering din the loud thunder of the cannon. The charge, however, though apparently irresistible was unavailing against the unyielding foe. For, after advancing in the most gallant style to break the lines of the enemy, they were seen to falter, halt, and fall back up on the left and centre. This was a moment of intense interest, the flight disorder of the cavalry seemed to extend to the infantry, and threatened to produce one universal panic, when a general halt was sounded, and one of the most splendid manœuvres of the day was magnificently executed. The flanks upon the right advanced in double quick time, and formed their squares, with intervals between, upon the right and left of which, the Horse Artillery, advancing at their usual tremendous pace, instantly took up position. The whole force of the routed cavalry instantaneously rushed through the intervals left between the squares for their admission; and, while they were re-forming, the whole body of infantry with the artillery on right and left poured in three awful and astounding volleys. The brilliant movement retrieved the honours of the day, and ensured a safe retreat, which was beautifully executed by each regiment in turn forming in line, and firing in file till they reached the Chobham road, which seemed to form the neutral ground between the contending armies. The plans of these interesting rehearsals as laid down by Lord Seaton, have been the theme of admiration not only amongst our own military men, but amongst the distinguished foreigners who visited the Camp, and had the gratification to be present on those occasions. The orderly precision of the troops, the quickness with which they responded to each signal of the bugle, appeared to the uninitiated to approach the miraculous. The evolutions, notwithstanding the unfavourable state of the weather, lasted for three hours. After which each regiment formed into sections of fours and marched homewards to the Camp, each brigade returning by a different route to that by which it had arrived. The wind continued to blow with increased violence during the evening and the men had the additional duty imposed on them of labouring to preserve the stability of the tents.

(Continued on the Number with which the present Sheet is published.)

RIFLES' CAMP.

The Illustrations upon the present page show one of the principal manœuvres of Saturday, and the Camp of the Rifles, in praise of which all parties are agreed: they certainly are a most efficient looking force.

The first Engraving upon the next page shows another of Saturday's manœuvres. Beneath is a General View of the Camp.

Next is an historical record of the Camp formed on Bagshot Heath in 17[illegible] and already referred to in the account of the present display. It shows the Camp at the moment of King George III coming up to view the troops, the Royal Standard, Park of Artillery, and Advanced Guard. On the left are the Arms' Tents, the common Men's Tents, Tents of the subaltern Officers, behind which are the Field Officers' Tents and Mess-room. This view is copied from a print of the period.

CAMP ON BAGSHOT HEATH, IN 1798.—ARRIVAL OF GEORGE III.—(FROM A PRINT OF THE PERIOD.

LITERATURE.

A Memoir of Charles Mordaunt, Earl of Peterborough and Monmouth; with Extracts from his Correspondence. By the author of "Hochelaga," the "Conquest of Canada," &c. Longman and Co.

The famous Earl of Peterborough sided with William of Orange, and made one in the last expedition which can be called a regular invasion of this island. He knew well the theory both of aggressive and of defensive war, and practised both with extraordinary reputation. The history of his romantic and devious career, which would at any time be instructive as well as entertaining, is likely to command no little attention now when so many military proceedings engage the public mind. Among the fighting Englishmen of the last two centuries Peterborough was the most scholarly; among the scholars he was the greatest warrior. His life was adventurous, eventful, and long; he figured as a wit and a diplomatist, an admiral and a general, a writer and a traveller; a courtier, a gardener, a maker of kings, and a planner of revolutions; a man of undoubted honour, who, nevertheless, could steal a canary-bird, a scoffing infidel, who desired to preach Christian sermons; a cook, whose skill would have astonished Ude; the author of fatigues, which would have worn out Cadilhac; patient under the greatest reverses, unruffled amid the most terrible dangers; yet trembling at the vain and idle remarks of the vainest and idlest portion of a society which, by his own account, he despised. He carefully concealed from all men his marriage with his own wife; but, he could horsewhip within very little of death the wight who had failed to treat her with the respect due to that character—the respect which Peterborough refused to her practically himself by ignoring the real for honouring them. The singularities of his private character and the marvels of his public career render his life an interesting and even exciting subject.

It is as nearly as possible half a century since the last Camp, on a large and regular scale of military practice, was held in England. To the present English generation the sight of one at home is entirely novel; and the operations at Chobham, which in some continental countries, would be esteemed rather limited in their range, have an air of considerable magnitude. Certainly the army is not a very large army which is there collected: but the defensive resources of which it forms a part, would, we think, be amply sufficient for a country so enclosed and so intersected as the England of the present day, against twice as great a hostile force as any that could be landed on our shores. But we will not stay to expatiate on the military capabilities of hedge and ditch, of fence and of road-side, in case of actual invasion.

At the period of the last well-organized descent upon our shores, there were two Englishmen living, either of whom, had he taken part with the old, instead of joining the new dynasty, was capable of repelling that attack, and of giving, perhaps, a very different termination to the war. One was John Churchill, "the great Duke of Marlborough;" the other was Charles Mordaunt, seventh Baron of that name, and third Earl of Peterborough. His title of Monmouth he owed to a desire on the part of the incoming powers to break the spell which still hung around that name in the imagination and love of the common people, to whom the memory, or rather the supposed survival, of the unfortunate son of Charles II. was still so dear, throughout the south-west counties. It was hoped that, if the beloved name was worn by an adherent of the House of Orange the danger of the association would be averted, and perhaps the influence of it even rendered advantageous.

The Earl of Peterborough, of whom we speak, one of the most mixed, perplexing, and peculiar characters that ever became eminent in history, was born, as nearly as can be ascertained (for the exact date is not proved), in the year 1658. He first saw the light during the Commonwealth, against which his family had struggled, with no little zeal, among the foremost and most fervent of the Cavalier party, and in the second last year of that thoroughly absolute reign which Cromwell "Angel of the North-West Principality" (to borrow the words of Cowley), termed a Protectorate. The death of that mighty ruler, the feeble Government of Richard Cromwell, and the mad rejoicings and festivities of the Restoration—producing as violent and as sudden a change as if there had been some vast masquerade in England—were among the earliest recollections of Peterborough's childhood. He grew up in the luxurious court of Charles II.; from which he broke loose while yet a boy; and, carrying into military duties the enthusiasm of a knight-errant, the tact of a man of the world, the feelings of a poet, the tastes of an idler, and the energy and capacity of a heaven-born soldier, he started, in his seventeenth year, upon his first warlike service. This was the expedition of 1674, which Charles II., rousing himself to one of his transient exertions of ability and spirit, despatched against the pirates of the Mediterranean. The boy Peterborough was, of course, in a subordinate position, and fought under Sir John Narborough's command. Beneath the guns of the fort of Tripoli lay the fleet of the buccaneers; and it was to attack and destroy this fleet, of which Cloudesley Shovel, afterwards so eminent in our naval history, had the management, and in which Peterborough fought with rapturous enjoyment and mercurial valour. Our navy was then in this time best proved to show its wonderful superiority, under the zealous and able management of one to whom, because he was subsequently so unfortunate and feeble a King, justice has never been fully or willingly done, in his unquestionable character of a great administrator of the Admiralty, and one of the very founders and fathers of the maritime pre-eminence of England. Whatever we might say of James II., we have this, in common honesty, to say of James Duke of York, that the country owes to his exertions some of its glory and some of its prosperity; and that, before he did things which lost him the allegiance of his subjects, he did other things by which their childrens' children were to benefit, and which are worthy of the gratitude due to honest service, of the respect due to wise foresight, of the admiration due to unflinching intrepidity.

Not a little of Peterborough's renown was gained in the navy, among the matchless seamen, of whom and of whose successes a true poet was destined, in after ages, to sing—"The deck, it was their field of fame." The young Earl, then Charles Mordaunt, intoxicated with animal spirits, and almost mad with a sort of wild ability and impish wit, had hardly set foot on board, before he began to give signs of the eccentricity with which his surprising talents were interwoven and impaired. He was the last person of whom it could be said that he was protected by a cold temperament from the allurements which lead astray; and if not protected by temperament, he certainly was still less guarded by principle. Of all the distinguished men that ever lived, he was, perhaps, the least inclined to walk by rule, and the most ready to yield to every successive impulse. Unbridled and wild in his natural disposition, he had imbibed not the precepts which could have restrained him in the second instance. He was neither rigid in maxim, nor frigid in blood: but at once untameable by inclination, and free from the drags and checks of any system, received or self imposed, of interior government. This being the man and the character formed in the Court of Charles II., and considering within his own mind that he disbelieved in Christianity, and utterly rejected every part of revealed truth, it struck him forcibly on Saturday, that it would, on the next day, be highly proper in itself, and, indeed, very decent in him upon him, to relieve the chaplain of the ship in which he was sailing, from the duty of performing the religious services and especially of preaching the sermon. On this he was bent, and he sat up all night to compose the impressive discourse which would be necessary for the moral and religious improvement of the ship's company. Many years afterwards—when he was armed at all points with the most perplexing sophisms of unbelief, a subtle disputant, an accomplished debater, the friend of Bolingbroke, confident in practised ability, and accustomed to sneer in bitter disdain at the prejudices of Christians whom he could not convince, and might have puzzled—he was attracted by the great fame of Tillotson, Archbishop of Canterbury—not only as a finished scholar, an eloquent writer, and a zealous and powerful preacher, but as a minister who set an example of the virtues which he inculcated, and as a divine and theologian whom he would find well able, men said, "to render a reason for the faith that was in him." Peterborough thought it would be equally glorious and delightful to overthrow such an adversary, and he started forthwith for Cambray, and was entertained by the amiable character and exquisite manners of the Archbishop, whom he quickly, however, put on his defence and drew into a duel of argument. The result is laughably implied in a letter which Peterborough wrote from that town to a friend—"On my word," says he, "I must quit this place as soon as possible; for, if I stay now another week, I shall be a Christian in spite of myself."

In course of time the Earl became estranged from the Court, and disgusted with the House of Stuart. He started, on leave, for Holland, and vehemently urged William to invade England, and make himself King. It was done long afterwards much in the manner which Peterborough, with his usual keenness, had suggested. We need not pause upon the revolution. Peterborough, after the short reigns of Mary and William, was soon employed upon the service which procured him the greatest glory of his life, and his chief title to present remembrance. Just one century before the last Peninsular war, there was another Peninsular war. The former, like the latter, was about a disputed succession to the Spanish throne, vacant in the one case, however, by death; and, in the other, by violence and fraud. In both wars England took part, in both an English general obtained the chief glory, and performed the principal achievements; in both the inordinate ambition, arrogant pretensions, and overpowering power of a Sovereign of France, provoked the arms of this country. But, here the parallel stops. The victories of Wellington decided the state of Europe, while those of Peterborough decided nothing, or very little, in the end.

The Earl returned great renown, and returned to England. In the intrigue of the *lemon-juice letters*, and in another and still darker transaction (both occurring before his Spanish expedition), some suspicion, to say the least, had attached itself to his political rectitude; and both Mary and William seem to have regarded him with disproportionately large. His biting wit never spared the great General. During Marlborough's unpopularity, Peterborough was once mistaken for the Duke, and surrounded by an angry mob, who were going to maltreat him. "There are two proofs," said he, "which will convince you that I am not the person you take me for. First, I have only five guineas at my command; secondly, they are very much at your service;" and he threw his purse among the crowd.

Passing through the era of unparalleled social depravity which characterised the "best circles" in the reign of George I., Peterborough, who had been gradually taking a less and less active share in politics, quitted them altogether when Sir Robert Walpole rose to power. The corruption by which that Minister maintained his position revolted the proud man, and he retired to his cookery and his books. His correspondence forms some of the best writing of the time in which he lived. At length, without having completed a refutation which he had intended to publish of Burnett's account of Queen Anne's reign, Peterborough died, in 1735, seventy-seven years old. He had seen eight Sovereigns of England, including Oliver Cromwell, and without counting Richard: he had lived under and with the Republic—had witnessed the Restoration had assisted at the Revolution. He had been present at the last civil war but one—that which expelled James II.; and died only seventy years before Walter Scott wrote "Waverley; or, 'tis Sixty Years Since." He was the friend of almost every eminent personage in the latter part of the seventeenth and the first half of the eighteenth century, whether at home or abroad. With Locke he was very intimate; Pope and Swift he knew well; Bolingbroke, of course, was among his acquaintances; Montesquieu and Voltaire admired his literary and political, and Prince Eugene his military genius. His curiosity and admiration carried him to the camp of Marlborough, who treated him with marked consideration, and who had early penetrated the profound abilities which his vagrant habits, the levity of his manners, and the abruptness and errantry of his movements, might have concealed from a less competent judge, or a less studious observer. Marlborough's opinion was that such a person's talents and energies should be secured for the public service, and constantly employed. But this was not likely to be. Marlborough, while even in a still greater degree superior to the generality of people, was far less obnoxious to their instinctive prejudices than Peterborough. To avoid shocking those prejudices unnecessarily was the care of the one; to startle and buffet them on all occasions was the delight of the other. To both it was an unavoidable necessity to be singular in this respect—that both could do, and of course desired to do, great acts, which very few men in any age are able to attempt with a chance of success. But if Marlborough was doomed to be unintelligible to the performance of extraordinary services, he compensated for it by being as like them as he could in all the minor transactions which occupy far the largest portion of every man's social existence. Unless he was charged to act on his own responsibility, he had a timid respect for general opinions, and even for received and established hallucinations. He would gain a victory and manage a campaign well, no matter how much he wounded the self-love of mediocrity. But he would not remind the world that he could plan battles, except by the one unavoidable insult of gaining them, when he actually had to fight them. Rather than hurt the feelings of respectable people, he would be almost content, where no business required transaction, to appear a blockhead: but he would hurt their feelings rather than be a blockhead in act and truth. He knew that nothing could overwhelm the power of the majority except the power of events; and he remembered in what a large majority dull people always are. Peterborough had no lack of this negative or instinctive hypocrisy. He feared numbers as little in civil life as he feared them in war. But in civil life they are far more to be feared. He never propitiated by his modesty those whom he had made his enemies by his splendid genius: he unlocked by a single stroke success. Had Peterborough been a commoner, he would not have obtained a Dukedom by a score of such victories as those of Oudenarde, Ramillies, Malplaquet, and Blenheim. Marlborough would have founded a great family by the campaign of the Lysons of Valentia, and some poet, probably, would have sung his capture of Montjuich. Is it not strange? Certainly for many hundred years, there has not figured among cowled men such a hero of romance, such a subject for the bard, as this Charles Mordaunt. Yet he occupies but a secondary place in the history, and no place in the poetry of his country. "The Campaign" extols a more solid and a more prosaic character. Peterborough took many great fortified cities, made many thousands of efficient regular soldiers fly before him for months; and won the rich, populous, and venerable old kingdom in the east of Spain with a hundred and fifty famished, horseless, and bewildered dragoons. His brain supplied the place of commissariat and magazines—of artillery, of ammunition, of arms, and of numbers. Marlborough was a greater man; but he was not fit for these marvels. He would have thought it an insult to have been appointed to the command of a force so small for the conduct of such expeditions. He would not have answered for the reduction of a village. He would not be the chief in absurd enterprises on the chance of becoming the subject of true fairy tales. On the other hand—much as Marlborough was counselled and thwarted in his means of action—to give Peterborough a chance of doing the half of what Marlborough did, it would have been necessary to control him and thwart him much more still; to deny him all rational supplies; to throw him exclusively on his own resources; to force the genius of a head much more shrinkable than that of Eumenes; to make it incumbent on him to exert the last energies of a mind more than Punic in its expedients, and yet more than knightly, more than chivalrous, in the divine fervency of its daring. Marlborough amassed an enormous fortune, and acquired immense dignities, in the service of the public; and yet he was a better and a safer public servant than the lavish peer who nearly ruined himself by equipping, out of his private purse, the expeditions needed or commanded by his country.

It is Peterborough's peculiar fortune to have suggested comparisons with Marlborough in war, and with Bolingbroke in eloquence, wit, and literature; while he devoted himself constantly neither to the profession of the one, nor to that of the other of the two illustrious men whom he thus rivalled in their several and exclusive pursuits. How great and how versatile must have been his mind! This reflection alone would be enough to compel us to peruse the work before us no adequate life of Charles Mordaunt, Earl of Peterborough: it is only a light, amusing, superficial "memorial," which may serve as a useful help to some more complete and more appreciating biography hereafter.

The English Humourists of the Eighteenth Century. A Series of Lectures delivered in England, Scotland, and the United States of America. By W. M. Thackeray. Smith, Elder, and Co.

From a humourist writing on humourists we naturally expect some humour. But there is none of that kind: there is humour, but not that makes us laugh, and there is the humour that makes us grave. Mr Thackeray, as we have before had occasion to tell our readers, in reporting his lectures, has chosen the latter kind of humour. He has elected to contemplate his subject from ascetic, instead of æsthetic grounds, and has given an exceedingly gloomy picture of the wits of Queen Anne's reign, the manners of which came under his sublime disapprobation and all presents to him a melancholy wreck of morals and a waste of intellectual wealth. In the world, Mr. Thackeray plays the part of Hermit, and preaches against its follies. To the author of "Esmond"—such as it was when Esmond lived, that world was but a "Vanity Fair;" he seems to think, however, that it has become something other and better since; but we cannot be sure of that. We sustain a mental reservation—some secretion of humour somewhere, which will declare itself somehow, and at some time. Such a view has the fault of one sidedness; but, if it had not, perhaps it would not be humourous.

A humorist upon humour? We think it requires self-reflection to render the subject possible. But is the self-reflection itself so

> Tell me, good Brutus, can you see your face?
> No, Cassius; for the eye sees not itself,
> But by reflexion, by some other things.

We have the same difficulty that *Brutus* felt, and that *Cassius* enlarged upon when he added what we would fain address to Mr. Thackeray—

> —It is very much lamented, Brutus,
> That you have no such mirrors as will turn
> Your hidden worthiness into your eye,
> That you might see your shadow.

But our Humorist *has* selected mirrors in which he might see all his concealed *faults* reflected, if not his virtues. We have, in these sketches by Mr. Thackeray, the meanness of great men, rather than their mightiness displayed. We are conciliated by a fellow-feeling of infirmity; and are called upon rather to compassionate their common frailty than to admire their extraordinary genius. Our modern Humourist has placed himself on a pedestal, where he stands apart, like a statue of immaculate workmanship—or on a dais, whereon he enacts the seated judge, the ermined censor of all who occupy the lower floor. He subdues even Swift to his supremacy. The invincible wit bows to the stern Minos of the lecture-table: he is found guilty: forsooth, of ambition, and of being a member of the intellectual condottieri of the day. Surely, in this there is more than lies on the surface—a concealed satire on the beliefs and institutions attacked, rather than on the "gentlemen of the road," bearing the name of Swift, Congreve, Addison, Steele—of whom the attack, not in all cases justly, is predicated. Who "grasps not at a prize"? who "makes not his spring at opportunity"? Why should Swift be censured for what every man is free to do? Why should such a man, seeking to better his condition by force of his talents, be regarded as of "the aggressive turn"?—as by "nature warlike, predatory, eager for fight, plunder, dominion"? These figures of speech probably mean "more than meets the ear." But a reserve was needed in fashionable lecture-rooms, and a defence pretended of conventions that, in the order of events, are necessarily evanescent. The memory of the men by whom they were superseded in favour of better, remains for ever. Society forgets not the names of its literary reformers.

Mr. Thackeray also ventures on polemical ground with Swift, and attacks his theology. We give the mysterious passage, without presuming to interpret the oracle:—

> Ah, man! you, educated in Epicurean Temple's library, you whose friends were Pope and St. John—what made you to swear to fatal vows, and bind yourself to a life-long hypocrisy before the heaven which you adored with such real wonder, humility, and reverence? For Swift's was a reverent, was a pious spirit—for Swift could love and could pray. Through the storms and tempests of his furious mind, the stars of religion and love break out in the blue, shining serenely, though hidden by the driving clouds and the maddened hurricane of his life.
>
> It is my belief that he suffered frightfully from the consciousness of his own scepticism, and that he had bent his pride so far down as to put his apostasy out to hire. The paper left behind him, called "Thoughts on Religion," is merely a set of exercises for men professing disbelief. He says of his sermons that he preached pamphlets: they have scarce a Christian characteristic; they might be preached from the steps of a synagogue, or the floor of a coffee-house almost. There is little or no unction—he is too great and too proud for that; and, in so far as the badness of his sermons goes, he is honest. But having put that cassock on, it pollowed him: he was strangled in his hands. He goes through life, tearing, like a man possessed with a devil. Like Abudah in the Arabian story, he is always looking out for the Fury, and knows that the night will come and the inevitable hag with it. What a night, my God, it was! what a lonely rage and long agony what a vulture that tore the heart of that giant! It is awful to think of the great sufferings of this great man. Through life he always seems alone, and to be so. I can't fancy Shakspeare otherwise. The giants must live apart. The kings can have no company. But this man suffered so; and deserved so to suffer. That lurid light reads anywhere of such pain.

Somewhat in the same mysterious oracular style, Mr. Thackeray talks of the Paganism of Congreve's dramas, and sides with Jeremy Collier, in his attack on "that godless, reckless Jezebel, the English comedy of his time"—that "Evil Genius" which, he said, disheveled Lais with eyes bright with wit and wine" Hear him still further on this theme:—

> I have read two or three of Congreve's plays over before speaking of him; and my feelings were rather like those, which I dare say most of us here have had, at Pompeii, looking at Sallust's house and the relics of an orgy, a dried wine-jar or two, a charred supper table, the breast of a dancing girl pressed against the ashes, the laughing skull of a jester, a grisly fullness round a bunch of bones, which once was mirth and the blue sky shines calmly over the ruin. The Congreve muse is dead, and her song choked in Time's ashes. We gaze at the skeleton, and wonder at the life which once revelled in its vast halls. We take the skull up, and muse over the frolic and daring, the wit, scorn, passion, hope, desire, with which that empty bowl once fermented. We think of the glances that allured, the tears that melted, of the hearts that beat in those vacant sockets; and of lips whispering love, and cheeks dimpling with smiles, that once covered yon ghastly yellow framework. They used to call those cup the grave-mould, once. See! there's the cup she drank from, the gold chain she wore on her neck, the vase which held the rouge for her cheeks, her looking glass, and the harp she used to dance to. Instead of a feast we find a grave-mould, and in place of a mistress, a few bones!
>
> Reading in these plays now, is like shutting your ears and looking at people dancing. What does it mean? the measures, the grimaces, the bowing, shuffling, and retreating, the cavalier seul advancing upon those ladies—those ladies and men twirling round at the end in a mad galop, after which everybody bows, and the quaint rite is celebrated. Without the music we can't understand that comic dance of the last century—its strange gravity and gaiety, its decorum or its indecorum. It has a jargon of its own quite unlike life; a sort of manual of its own quite unlike life too. I'm afraid it's a Heathen mystery, symbolising a Pagan doctrine; protesting, as the Pompeians very likely were, assembled at their theatre and laughing at their games—as Sallust and his friends, and their mistresses protested—crowned with flowers, with cups in their hands against the new hard, ascetic pleasure-hating doctrine, whose gaunt disciples, later or earlier from the Asian shore or the Mediterranean were for breaking the fair images of Venus, and flinging the altars of Bacchus down.

This is stimulating writing. Under this veil of allegory, we may enjoy the fun of the dry humour, proceeding into a laugh, and the rogue's twinkling eyes suggesting unutterable things. What a piece of mystification, too, is that Jeremiad on that "weakness for wine, which the great and good Joseph Addison notoriously possessed, in common with sometimes gentlemen of his cloth;" bringing this same weakness out into distinct relief, the lecturer redeems the demigod into perfect humanity. Mr. Thackeray is determined that the Humourists of the eighteenth century shall not be demi-gods. They are all mortal men; and, like Falstaff's ragged regiment, "food for powder."

To Steele, Mr. Thackeray tells us, Mr Addison was always, through life, "the head boy." For him, therefore, we must not expect better treatment than he has received at the lecturer's hands. For the "erring, wayward, affectionate" urchin, however, the lecturer evinces especial sympathy; but he seems to rejoice that, while "Dick was writing his ardent devotional work," called the "Christian Hero," he "was deep in debt, in drink, and in all the follies of the town." The antithetical in conduct is a jest as good as that in words. That there may be no mistake about the matter, the picture is elaborately painted. The writer is exhibited as "a theologan in liquor;" and it is added that such an object "is not a respectable" one. "A hermit, though he may be out at elbows, must not be in debt to the tailor." One virtue, however, Mr. Thackeray justly credits poor Steele with: he writes of women with respect, esteem, and admiration; and, in our satirist's opinion, was the first of our authors who did so. In this he seems to concur with those who think that Shakspeare has been wanting in regard to the sex; but no real student of his works will subscribe to this opinion

The lectures on Prior, Gay, and Pope, is more genial in its tone, as it is less patronising in its air. Hogarth, Smollett, and Fielding, also are, we think, admitted as the author's equals; some unconscious foibles excepted; but, in treating of Sterne and Goldsmith, Mr. Thackeray feels his superiority again, condemns the one of artificiality, and pities the other for his simplicity. The author of the "Sentimental Journey" manifests forsooth (in this, how unlike the lecturer!) a "deliberate propensity to make points, and seek applause." Let it be accepted as a harmless vanity in both. Mr Thackeray has, at all events, succeeded in painting a picture of the time; and what he ascribes to his individual portraits belongs much more to it than to them. The picture is artfully composed, and high-coloured; original in its style of treatment, and uncommonly effective. With these merits, the book must become popular; and, if properly understood, must prove instructive.

NEW BOOKS, &c.

THE NATIONAL ILLUSTRATED LIBRARY.—VOL. XXIX. FOR JULY.
WANDERINGS in SPAIN. Translated from the French of Théophile Gautier. Illustrated with numerous authentic drawings, by MR. QUOIN, of Spanish architecture, scenery, and Costume. Crown 8vo, cloth, 3s. 6d.; morocco extra, 7s. 6d

THE ILLUSTRATED LONDON LIBRARY.—VOL. VIII.
To be ready early in July.
THE THREE PRESIDENCIES of INDIA—Their Rise, Progress, and Present Condition; a complete Review of the British Indian Possessions from the earliest period to the year 1853. By JOHN CAPPER, Esq., F.R.A.S. Demy 8vo, with numerous Engravings, and a Map. Cloth, 6s.; calf, marbled edges, 10s. 6d.; morocco, extra gilt edges, 12s.

TALES of the CITY of LONDON.—VOL. IV. FOR JULY.
THE BRIDE of BUCKLERSBURY. A Tale of the Great Fire. By MAC L. STEWART. With Six Page Illustrations. Fcap. 8vo. Ornamental boards, 1s.; cloth, 1s. 6d.

THE UNIVERSAL LIBRARY.—PART 18. FOR JULY 1st.
MICHELET'S LIFE of MARTIN LUTHER. With Frontispiece and Vignette. 1s

NEW EDUCATIONAL BOOKS for JULY.
Just Ready.
THE ILLUSTRATED LONDON ARCHITECTURAL, ENGINEERING, and MECHANICAL DRAWING BOOK. By E. S. HUNT, Architect, Surveyor, and Engineer. Demy 8vo, cloth, 7s.
ELECTRIC SCIENCE: its History, Phenomena, and Applications. By J. NETTLE, Esq., Author of "Lectures on Chemistry," &c. Cheap edit. Illustrated. Demy 8vo, cloth, 7s.
THE ILLUSTRATED LONDON ASTRONOMY, for the use of Schools and Students. By J. R. HIND, F.R.S. (of Mr. Bishop's Observatory, Regent's Park), with numerous illustrative Drawings and Diagrams. 7s
THE ELEMENTS of NATURAL PHILOSOPHY. Double Volume. 4s.

RECENTLY PUBLISHED.
THE ILLUSTRATED HANDBOOK to LONDON and its ENVIRONS. With Fifty Engravings, Two Maps, and a Panorama of the River Thames, from the Nore to London Bridge. Crown 8vo. In wrapper, 1s.; cloth, 1s. 6d

Second Edition, completely revised,
THE THREE COLONIES of AUSTRALIA: New South Wales, Victoria, South Australia, their Pastures, Goldfields, and Copper-mines
By SAMUEL SIDNEY, author of "The Australian Handbook," &c. Illustrated with numerous authentic Engravings and a Map. Demy 8vo. Cloth, 6s.; calf, marbled edges, 10s. 6d.; morocco, extra, gilt edges, 12s.
"This work, of which an edition of five thousand has been exhausted since the list of September, has been carefully revised by the author, and contains a complete social and political history of the rise and progress of the three colonies, and description of their resources

NOTICES OF THE PRESS
"Mr. Sidney is no plainsong writer, pur-mutting a sale of land sharps no prospectus of a mine-and-colony system of colonisation, but several practical * * * A useful and readable volume."—Times, Dec. 22 last
"The best and most complete picture of Australia, past and present, that we know."—Athenæum
"The book of books for the emigrant, and for all who feel interested in antipodal affairs. We have read many, we may say nearly all the books that have been published on that country, but for a clear, comprehensive, succinct overview of its political progress, the fullness of information about its various products and resources, and for graphic sketches of social life, we know no book equal to this."—Westminster Review
"Pretty well everything a man may wish to know will be found in this modest green, in a great many cases very handily brought up, but in also noble practical illustrations."—British Quarterly Review
"Every emigrant should carefully make an effort to obtain a sight of this most excellent book. A profusion of illustrations in wood engravings in the value and its pages are interspersed with a number of anecdotes which while they enliven the reader, bear out the author on his moral, important observations."—Morning Advertiser

IMPORTANT TO EMIGRANTS.
THE DOMESTIC MEDICAL and SURGICAL GUIDE for the NURSERY, the COTTAGE, and the BUSH. Written at the request of Mrs. Caroline CHISHOLM, by JABEZ HOGG, M.R.C.S. With Advice on the Outfit and Voyage, and Hints on the Orders of the Government relating thereto. Crown 8vo. In wrapper, 1s.; cloth, 1s. 6d.

London: INGRAM, COOKE, and Co., and sold by all Booksellers

HOLIDAY PRESENTS FOR THE YOUNG.
EVENINGS at HOME. By Dr. AIKIN and Mrs. BARBAULD. The whole complete and unabridged, and a new Frontispiece by John Gilbert. Fcap. 3s. 6d., cloth lettered
JOYCE'S SCIENTIFIC DIALOGUES. By Dr. GREGORY and C. V. WALKER, Esq. New and much enlarged Edition, embracing all the recent Additions to Science, and many new Engravings. Fcap., 6s., cloth lettered.
Also, uniform in size, 5s. 6d., cloth lettered,
A Companion to the Above: containing Questions and Exercises for the examination of Pupils.
THE HISTORY of LITTLE GOODY TWO-SHOES. Edited by CHARLES WELSH. With Illustrations by JOHN GILBERT. Fcap. 3s. 6d., cloth lettered
THE HISTORY of DENMARK.—Norway and Sweden. Maps. Post 8vo. 1s.
THE HISTORY of RUSSIA.—Finland and Iceland. Maps. Post 8vo. 1s.

Also, Nearly Ready,
HANDBOOK for SICILY and NAPLES. Maps. Post 8vo.
HANDBOOK for CENTRAL ITALY and ROME.—The Papal States, and Cities of Etruria. New Edition. Map. Post 8vo.
HANDBOOK for GREECE.—The Ionian Islands, Albania, Thessaly, and Macedonia. New Edition. Maps. Post 8vo.

HANDBOOK for NORTH ITALY.—Florence, Sardinia, Piedmont, Genoa, Syria, Margery, and the Danube. Maps. Post 8vo. 9s.
HANDBOOK for SWITZERLAND.—The Alps of Savoy and Piedmont. Map. Post 8vo. 7s. 6d.
HANDBOOK for FRANCE.—The Pyrenees, Normandy, Brittany, the French Alps, Dauphine, and Provence. Maps. Post 8vo. 9s

THE CAMP AT CHOBHAM.—HER MAJESTY'S CHARGER.

HER MAJESTY'S VISIT TO THE CAMP.

THE Visit of the Queen on the 21st ult.—the great event of last week—has been already fully detailed in our Journal (see pages 513, 513, and 514). In the present Sheet we engrave three Illustrations of the Royal Visit. That immediately above shows the superbly-caparisoned Royal charger and her Majesty preparing to view the troops. The large Engraving which fills the two central pages portrays her Majesty, Prince Albert, the Royal visitors, and staff; the King of Hanover being immediately next her Majesty, and wearing a bear-skin cap, with a shade or the King's eyes. Following immediately in the route of the Royal visitors was a brilliant suite, amongst whom were several officers of the Hanoverian service; Prince Felix Salm, of the 11th Prussian Hussars; Colonels Jackson, Oliver, Chatterton, Colonel Challoner, &c. Her Majesty was attended by Lord Charles Fitzroy and the Hon. Dudley de Ros. The time selected by the Artist is when the Queen is passing along the Infantry; the Highlanders saluting with the usual honours.

The last Illustration shows the close of the attack on the day of the Royal visit, when the crowds of people who had collected on Flutter's hill found themselves, to their great astonishment, in the thick of the fight. The close fire of blank cartridge from the Grenadiers, the Artillery, and the Light Horse, soon made very familiar faces—coming at their position with fixed bayonets and at a charge—they felt uncomfortable, but did not give way much. The Artillery and Light Horse, however, put them completely to the rout; and with their discomfiture all traces of resistance disappeared.

The Engraving upon the front page portrays her Majesty, the Prince Albert, and the Royal visitors, immediately before the tents, witnessing the attack, which has been fully described at page 514.

THE CAMP AT CHOBHAM.—THE ATTACK ON FLUTTER'S HILL.

London: Printed and Published at the Office, 198, Strand, in the parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand aforesaid. SATURDAY, JULY 2, 1853.
